**SOUTHERN CALIFORNIA EDISON COMPANY'S (U 338-E)
ANNUAL REPORT OF 2007 ACTIVITIES FILED
PURSUANT TO GENERAL ORDER NO. 165**

Pursuant to General Order No. 165 (“GO 165”) and Decision No. 97-03-070 issued by the California Public Utilities Commission (the “Commission”), Southern California Edison Company (“SCE”) respectfully files its 2007 Annual Compliance Report for distribution inspections and corrective action activities completed in 2007 and planned for 2008 (“Report”). The data for this Report is drawn from SCE’s Work Management System (“WMS”).

The numbers in this Report are based on SCE’s WMS at a single point in time. Due to the large and dynamic nature of SCE’s overhead and underground electric system, we have found that equipment quantities, system configurations, and system conditions are continually changing as a result of factors such as: (1) customer-related issues or constraints; (2) weather and environmental conditions; (3) the addition and/or removal of equipment to accommodate new customer connections and load growth; (4) requests from customers, cities, and governmental agencies to relocate facilities; (5) the sale and/or acquisition of existing distribution systems; and (6) the retirement and replacement of aging plant. As with any very large and complex data entry and

management system for field data, a certain range of errors may occur in the entry of data into WMS. For example, a large amount of technical data is entered into WMS by linemen, troublemen, and other field personnel that work on our electrical system. Although these field personnel receive training on the field tools (such as laptop computers), virtually none of these individuals are experts or specialists in data entry. Over the last three years, SCE has continued to strengthen its quality controls, improve its processes, and take corrective action where appropriate to try to minimize errors.

I.

INTRODUCTION

In 2007, SCE completed 4,163 circuit patrols, 654,078 streetlight patrols, 3,859 overhead detailed inspection grids, 139,436 underground and pad-mounted equipment detailed inspections, and 46,644 corrective actions on facilities subject to GO 165. SCE also completed 14,283 intrusive wood pole inspections or record corrections.

This Report includes Attachments A and B, which are incorporated herein by this reference. Attachment A is a table containing summary data of SCE's inspection, condition rating, and corrective action information, presented on a system-wide basis. Attachment B contains a series of tables providing a specific and detailed presentation of SCE's inspection, condition rating, and corrective action information with work location breakdowns.

II.

SUMMARY OF NEW INSPECTION AND MAINTENANCE PROGRAM, DEVELOPED IN COLLABORATION WITH CPSD

On April 22, 2004, the Commission issued D.04-04-065 (Maintenance OII Decision), in Order Instituting Investigation I.01-08-029 (Maintenance OII). In the Maintenance OII Decision, the Commission, among other things, directed that SCE refine

its five-level maintenance priority system. The Commission directed that SCE do so in consultation with the Commission's Consumer Protection and Safety Division (CPSD).

To comply with the requirements of the Maintenance OII Decision, SCE partnered with CPSD to develop a three-level common platform from which SCE could modify its maintenance program. On August 13, 2005, CPSD and SCE signed a Memorandum of Understanding (MOU) that memorialized the agreed-upon principles between SCE and CPSD concerning the development of SCE's new Inspection and Maintenance program. In the MOU, CPSD and SCE formally acknowledged that SCE should continue its current maintenance and inspection ("M&I") program while the new Inspection and Maintenance program was being developed.¹

On December 21, 2006, SCE met with the CPSD team (led by CPSD Executive Director Richard Clark) to review in detail, and obtain concurrence for, the proposed new Inspection and Maintenance program. At the conclusion of this meeting, SCE gained CPSD's full support for the new program. In April and May of 2007, SCE and CPSD jointly briefed all five Commissioners to update them on our progress toward addressing the Maintenance OII Decision.

SCE's prior M&I prioritization has been driven by an environment of strict compliance to every aspect of the General Orders ("GOs"), regardless of a given item's significance to, or effect on, safety and reliability. SCE's prior M&I practices evolved to identify and record, during routine inspections, all existing conditions that did not conform to the as-built state and that could be considered a violation by CPSD. Safety and reliability risk of the condition only served as two among many of the criteria for evaluation. Some conditions were GO infractions, some were safety and reliability conditions, and some were aging conditions that did not appear to pose any safety or

¹ SCE filed the MOU in its Test Year 2006 General Rate Case (A.04-12-014). In the Commission's General Rate Case Decision, the Commission expressed support for the MOU. *See D.06-05-016*, p. 353, Finding of Fact No. 27.

reliability risk. Ratings were assigned on a five-tier priority scale, with Priority 1 being the highest priority, and Priority 5 being opportunity maintenance. Under this approach, SCE's program resulted in the identification of more work than could reasonably be completed with our level of resources.

SCE's new Distribution Inspection and Maintenance Program (DIMP) places emphasis on a condition's risk to safety and reliability from a much broader perspective, and reduces the need to allocate resources on those conditions that pose little or no safety or reliability risk. Under this approach, SCE will be concentrating its resources and work on safety and reliability condition risks to achieve a higher value for each dollar spent, consistent with the Commission's direction found in the Maintenance OII Decision.

As outlined in the MOU, SCE's new DIMP will have three priority levels. Items will be rated under the three priority levels based on the specifics of each condition and its probability for impact on safety or reliability, taking into account several factors. These factors include facility or equipment type, loading, location, accessibility, climate, and direct or potential impact on safety or reliability. A description of the three priorities follows:

Priority 1 (Highest)

- Immediate safety and/or reliability risk with high probability for significant impact. Respond by taking action immediately, and fully repairing the item, or temporarily repairing and then reclassifying the condition to a lower priority.

Priority 2

- Variable safety and/or reliability risk. Respond by taking action to correct within a specified time period (fully repair, or temporarily repair and reclassify to lower priority).

Priority 3

- Acceptable safety and/or reliability risk. Respond by taking action at or before the next detailed inspection (re-inspect, re-evaluate, reassess, repair or address).

Accordingly, those maintenance items that pose the greatest public safety or system reliability risks will either: (a) be repaired immediately, or (b) if the repair proves too complex or requires materials that are simply unavailable, a temporary fix will occur to address the risks, and we will reprioritize the item for repairs that we will complete at a later date.

The schedule outlined in the MOU contemplated that the new program would be implemented and launched in the January 2009 timeframe.² SCE worked diligently to develop and test the new program during the course of 2007, and found the opportunity to launch the program one year earlier than originally scheduled. SCE began implementing the new DIMP in January 2008. This accomplishment of shared purpose between utility and regulator was acknowledged on April 16, 2008, in a joint management meeting between SCE and CPSD, led by CPSD Executive Director Clark.

As SCE continues to transition to the new program, the first step the Company has taken is to convert all existing conditions under the five-priority system to the new three-priority system. As we reported in SCE's GO 165 filing last year, in early 2007 SCE implemented some of the tenets from the development of the new program, such as the reprioritization of existing work according to the principles of the new program. During this time of transition between the existing and new program, some items in the GO 165 report have been temporarily deferred until they can be reassessed under the new program. For example, some conditions affecting secondary conductors were identified

² SCE notes that this Report is not intended to serve as an exhaustive description and discussion of the DIMP. SCE's TDBU testimony in its Test Year 2009 General Rate Case contains a more detailed discussion of the DIMP and the process that led to its design and implementation. That DIMP General Rate Case testimony is found at A.07-11-011, Exhibit SCE-03E, Chapter XIII, pp. 84-96.

as GO 95 infractions, but are not considered safety or reliability conditions under the new program; these items will not be scheduled for immediate replacement. To the extent possible, we will discuss these impacts in more detail in the specific sections for each activity in the following section.

III.

SUMMARY OF SCE'S INSPECTIONS AND CORRECTIVE ACTION

ACTIVITIES DURING CALENDAR YEAR 2007

GO 165 requires annual inspection performance data, condition ratings, and corrective action information. SCE includes below a narrative summary of the required data. In addition, Attachment A contains a tabular summary of data, and Attachment B provides a detailed breakdown of data for each distribution work location.

A. Patrols

As defined in GO 165, a patrol is a simple visual inspection of applicable utility equipment and structures that is designed to identify obvious structural problems and hazards. Patrols may be carried out in the course of performing other company business.

1. Circuit Patrols (Urban and Rural)

GO 165 requires annual patrols of all urban circuits and biennial patrols of all rural circuits. In 2007, SCE completed 4,163 circuit patrols, which comprised 100% of its circuits due for inspection.

Beginning in 2008, the method of scheduling, performing, and tracking patrols will be changed from a circuit-based approach to a grid-based approach. Attachment A includes a total of 20,161 scheduled grid patrols for all urban and rural areas in 2008.

2. Streetlight Patrols (Urban and Rural)

GO 165 requires annual patrols of all urban streetlights, and biennial patrols of all rural streetlights. In 2007, SCE patrolled 654,078 streetlights, which comprised 100% of its streetlight inventory due for inspection.

B. Intrusive and Detailed Inspections

1. Generally

In 2007, SCE completed 3,859 overhead detailed grid inspections, 139,436 underground and pad-mounted equipment detailed inspections, and completed 14,283 wood pole intrusive inspections or record corrections. This comprised 100% of the intrusive and detailed inspections due, with the exception of poles due for intrusive inspection that are held up by third-party constraints, such as access and customer issues. Per the GO 165 requirements for specific types of equipment, SCE assigned condition ratings based on those detailed and intrusive inspections, as discussed in Section C below.

2. Intrusive Wood Pole Inspections

GO 165 requires that those wood poles over 15 years in age, which have not been subject to intrusive inspection, be inspected within 10 years. Furthermore, wood poles which have passed intrusive inspection must be inspected again within 20 years. During 2007, SCE completed a total of 14,283 intrusive inspections through actual inspections or record corrections. Overall, our GO 165 compliance plan was to have all poles older than 15 years (as of 1997) receive their first intrusive inspection within 10 years (2007), which is the end of the first cycle of intrusive inspections under GO 165. As we ended the first cycle, many of the pending intrusive inspections were completed through a record correction. (An example of a record correction occurs when an inspector goes to a

location to complete an inspection and determines that the pole in question has in fact been removed, replaced, or previously inspected.)

By the end of 2007, we completed the first cycle of intrusive inspections under GO 165, with the exception of poles that are held up by third-party constraints, such as access and customer issues.

3. Overhead Detailed Inspections

As part of a work levelization strategy, SCE completed 3,859 overhead detailed grid inspections, or 222% of the 1,737 that were due in 2007. As reflected in Attachment A, there was a zero balance in grid inspections due in 2007. Attachment B contains overhead detailed inspection information by work location. Viewed on a grid approach basis, 180 grids are due for inspection in 2008 as shown on Attachment A. However, as a continuing part of SCE's work levelization strategy, the Company plans to complete more grid inspections than are actually due in 2008.

4. Underground and Pad-Mounted Equipment Detailed Inspections

SCE completed 139,436 underground and pad-mounted equipment detailed inspections, or 106% of the 132,136 that were due in 2007. As reflected in Attachment A, there was a zero balance in grid inspections due in 2007. Attachment B provides the underground and pad-mounted detailed inspections by work location. SCE plans to complete 146,381 underground and pad-mounted equipment detailed inspections in 2008.

C. Condition Ratings

Under SCE's condition rating system, established in 2001, equipment and structure repairs are rated from level 1 to level 5, with level 1 being the highest priority. During inspections conducted in 2007, SCE assigned 6,137 Level 1 condition ratings, 13,774 Level 2 condition ratings, 11,715 Level 3 condition ratings, 8,948 Level 4 condition ratings, and 3,025 condition Level 5 condition ratings. Attachment A provides

a summary of SCE's condition ratings for transformers, switches, regulators and capacitors, conductors, and wood poles according to the existing M&I program.

Attachment B provides a detailed breakdown of the condition rating information under the existing M&I program by work location.

As discussed in Section II, all of these items were converted from the five-priority system to the new three-priority system as we transitioned to the new DIMP program at the end of 2007. Going forward, SCE's planned corrective actions for 2008 will reflect the new three-priority system.

D. 2008 Planned Corrective Actions

In the 2006 Annual Report, SCE outlined its plan to complete a total of 37,168 planned corrective actions during 2007. In the time period following the 2006 Annual Report, the actual number of corrective actions due in 2007 grew to a total of 64,082. Based on the data contained in its WMS, SCE completed a total of 46,644 corrective actions in 2007. While this total number of corrective actions completed by SCE in 2007 represented 125% of the original plan in aggregate, SCE was not able to complete all of the scheduled corrective actions. As reflected in Attachment A, there was a balance of 27,793 corrective actions due in 2007 that were not completed as of the end of the year.

Over the past few years, SCE has experienced significant and unforeseen increases in both customer and load growth, which has exceeded our authorized spending levels and caused a strain on workforce capacities, leading to an over-reliance on contract resources and unacceptable levels of overtime. To meet this unanticipated growth we have reallocated funding from portions of our infrastructure replacement and

maintenance programs. These conditions have impacted SCE's ability to complete all of its maintenance work.³

Additionally, as mentioned above, SCE began implementing some of the principles from the new DIMP in 2007, such as the reprioritization of existing work according to the principles of the new program. During this time of transition between the existing and new program, some items in the GO 165 report (specifically, those items that were identified as infractions of GO 95 and GO 128 under the existing program but would not be considered safety or reliability conditions under the new program) were temporarily deferred until they can be reassessed according to the principles of the new program.

With the exception of 546 transformers, 323 switches, 26 regulator/capacitors, 19,556 conductor items, and 7,342 wood poles, the balance of corrective actions from 2007 have either been completed as of the filing of this Report or are being deferred according to the new DIMP principles. Of the remaining items, all of these are either awaiting environmental clearance, are associated with customer access/permitting issues, or are current work in progress. All of these remaining corrective actions are included in SCE's 2008 work scope, with the possible exception of any constrained poles and associated corrective actions.

³ In SCE's Test Year 2009 General Rate Case, we have requested a sufficient level of funding to complete all pending maintenance by the end of 2011. SCE hopes to have a Commission Decision in the General Rate Case proceeding by the end of 2008.

Respectfully submitted,
