The units listed in the table are defined as "facility points" within PacifiCorp's inspection system. For overhead facilities, a facility point is a pole including all equipment installed on the pole. The span of wire between poles or service drops spanning from poles to customer's facilities are associated to the nearest facility point for inspection purposes. For underground facilities a facility point is the location associated with ground mounted equipment, including all equipment at that individual location such as a padmount transformer or switch cabinet.

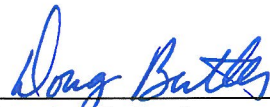

One underground patrol, one underground detail and one wood pole intrusive test are outstanding due to inability to access the physical location of the facility. One underground patrol shown as outstanding was completed on May 24, 2014. Two wood pole intrusive inspections and one overhead detail inspection shown as outstanding are believed to have been removed from service and will be verified by field staff.

VERIFICATION

I am Vice President of Operations for the Transmission and Distribution Business Unit of Pacific Power, and am authorized to make this verification on its behalf. I am informed and believe that the matters stated in the foregoing document are true.

I declare under penalty of perjury that the foregoing is true and correct.

Executed this 1st day of July, 2014 at Portland, Oregon.
