After all of the effort our Banning (Sun Lakes) community has gone thur in presenting the strong case for Underground, it would be a terrable loss to our community if the final decision about undergrounding the transmission lines did not happen. When there is a chance to improve our community for both safety and environment it does not take a million dollar study to make a common sense decision. I hope the CPUC can demonstrate their support for our human community which I hope has more value than the amount of time spent worrying about the insects and rodents in the environmental report.

Cordially, Marvin Friedman
