

Appendix D

Public Involvement

NOTICE OF PROPOSED PROJECT

Ivanpah-Control

Anticipated Construction Period
2021 - 2024

About the Project

The Ivanpah-Control Project will enhance the safety of Southern California Edison's (SCE's) sub-transmission system, controlled by the California Independent System Operator (CAISO). The project is now in the initial planning phase. SCE anticipates filing a project application with the California Public Utilities Commission (CPUC) in 2019. If approved by the CPUC, the project is anticipated to begin construction by the end of 2021.

The project will follow CPUC safety standards and include remediation activities such as replacing existing structures with taller structures and increasing conductor (wire) ground clearances. Most of the construction will take place in the existing transmission line rights-of-way to minimize environmental impacts. The estimated project completion date is 2024.

The Ivanpah-Control Project will enhance safety in portions of Mono, Inyo, Kern, and northern San Bernardino counties.

The project, which is in initial planning, will follow standards of the California Public Utilities Commission.

SCE will work with the Bureau of Land Management to protect environmental and recreational resources during construction.

NOTICE OF PROPOSED PROJECT

Ivanpah-Control

Project Location

The project has north-south and east-west segments. The north-south portion is located within unincorporated San Bernardino, Kern, Inyo and Mono counties, between the cities of Bishop and Ridgecrest. The east-west segments are located within the city of Barstow and unincorporated Kern and San Bernardino counties.

Potential Project Activities and Impacts

Prior to construction, crews will be in the area performing survey work and testing. Once construction begins, crews may be performing the following work in your area:

- Replacing existing structures with steel poles
- Replacing conductors (wires) and associated infrastructure on portions of existing transmission lines
- Scheduling temporary power outages during construction
- Establishing temporary construction staging areas for crews and construction equipment, including crane and helicopter pads
- Trimming or removing vegetation, when necessary, in and around construction
- Maintaining or improving access roads in and around construction
- Scheduling temporary street closures, as needed, for safety
