**RE: Data Request for the Talega-Escondido/Valley-Serrano 500-kV Interconnect Project. CPUC Docket A.07-10-005 and FERC Project P-11858**

Dear Lawren and Rodney,

The California Public Utilities Commission, in connection with the above proceeding, has directed us to request maps for some of the facilities at which upgrades associated with the above project will occur. These facilities includes upgrades at SDG&E's Peñasquitos Substation and Vista Substation and SCE's Serrano, Valley, San Bernardino and Mira Loma Substations, the Etiwanda Generating Station, and SCE's Santiago Peak Communications Site.. We have been directed to obtain maps from SCE and SDG&E through a data request, indicating that the CPUC environmental document is required to have maps for these facilities.

Specifically, the Commission is requesting plot plans, elevations and single line diagrams for each facility. Finally please locate where the required upgrades are to occur.

As the PUC allows for a 10-day response turnaround for such requests, please have this information back to us no later then Monday, September 8, 2008.

Thank you very much. Please let me know if you have questions

Very truly yours,

David Kates
