Now that you have found in your (PUC) EIR that the Powerlink is destructive and detrimental in its route through the Anza Borrego desert and environs, I urge you to put an end to this costly and lengthy debate that SDG&E is sponsoring and focus on another environmental initiative. There are all sorts of other energy options available as you well know and it's time to get past this.

Furthermore, do not let the Federal government intervene in this decision under the auspices of National Safety and Security. This is crazy.

Now go do the right thing and let's spend all our time creating a legacy for California and the environment!

Thank you, Elena and John Thompson
