

February 25, 2008

Hello Mr. Weissman

As your neighbor, I am here to support alternative forms and sources of energy for San Diego County.

The project proposed by Sunrise Powerlink would have an enormously detrimental effect on our land, our homes and our communities. There are far-reaching consequences that will affect the health of our environment, including but not limited to:

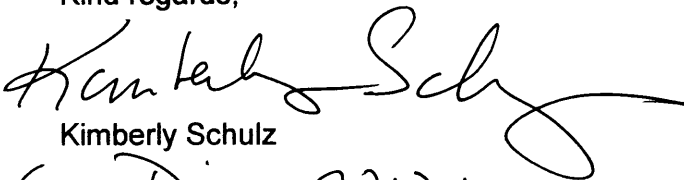

- Tremendous pollutants released, deteriorating our Air Quality
- Significant loss of native vegetation, wildlife and wildlife habitat
- Permanent deformation of our landscape
- Horrible noise pollution

These concerns are on-going well beyond the construction phase of the project.

Given the accelerated development and implementation of technology, we now have far better tools with which to construct the energy sources needed for San Diego.

Let's set the example and move into the 21<sup>st</sup> century by exploiting all forms of Green energy, throughout the construction process, and include all aspects of our environment into our planning stages before we irrevocably destroy our greatest heritage: Our Community.

Kind regards,

  
Kimberly Schulz
