Re: Sunrise Power link - Modified Route D Alternative

As residents of Potrero we were shocked to find out that this alternative was planned for our area. We should have been notified when this alternative was first proposed and we should have been included in the scoping process!

We object strongly to another transmission line in our area. The existing one is a visual blight and we should not have to put up with another one.

The fact that this is an unnecessary line to bring cheap, dirty power to Los Angeles and trash San Diego County in the process (and make larger profits for SDG&E) makes it an even worse project.

If another line is of *critical importance to San Diego County* then it should be placed on the existing towers and not allowed to cause additional environmental damage.

Please put us on the mailing list to receive any new information including the Draft EIR/EIS.

Sincerely,

Barbara Chamberlain, Chairman
