

A **visual simulation** of the Proposed Project from Key Viewpoint 6 on westbound SR 78, just east of the Narrows Substation. This view is to the southwest toward The Narrows and proposed structures SP115 through SP117 (closest). As shown in the simulation, the project would be located to the north (right in the image) of SR 78 and would appear as a prominent feature in the landscape as the transmission line passes through The Narrows. As shown in the simulation, the existing 69 kV transmission line would be relocated underground.
