

A **visual simulation** of the I-8 Alternative from Key Viewpoint 47 on eastbound I-8, north of In-Ko-Pah Gorge and south of Sugarloaf Mountain (the hill visible in the center of the image). This view is to the north and shows the existing SWPL line and the I-8 Alternative crossing over Sugarloaf Mountain and spanning the westbound I-8 lanes (in front of Sugarloaf Mountain) before beginning the ascent up In-Ko-Pah Gorge, parallel to the existing SWPL line. The structures would be paired and conductor spans would be matched to the extent allowable by terrain.
