

Source: South Bay Replacement Project AFC

A **visual simulation** of the In-Area All-Source Generation Alternative South Bay Replacement Project from the parking lot off of Marina Way, near the Chula Vista Marina View Park and Bayfront Park, adjacent to the Chula Vista Harbor. The simulation illustrates the removal of the existing SBPP and replacement with a lower profile combined cycle power plant that occupies a substantially reduced field of view. The enclosed structure design of the new plant would reduce the substantial structural complexity that is characteristic of the existing facility.
