

A visual simulation of the **Modified Route D Alternative PCT Option C/D**, which would span the Pacific Crest Trail once. The lattice structure is shown painted in an olive drab color per USFS requirements and Mitigation Measure V-45a. Although the olive drab color blends well with a dark, mottled background, the darker color tends to appear more prominent when backdropped by a light-colored sky, such as shown in the image above. From this viewing perspective, the structure pad would be partially visible.
