

Michael Clayton & Associates

A **visual simulation** of the BCD South Option Revision, which would diverge from the BCD Alternative and turn southwest, parallel to La Posta Truck Trail down La Posta Valley. The I-8 bridge over La Posta Road is faintly visible near the right edge of the image above. This view to the south is from Key Viewpoint 87 on Las Posta Truck Trail. The simulation illustrates the lattice structures in a dark gray galvanized color per USFS requirements and Mitigation Measure V-45a. The simulation also illustrates the effect of structure pad clearings and a distant access road.
