

- A** The **existing view** to the east-southeast down SR 67 and toward the Proposed Project's span location over SR 67. The landscape is predominantly natural in appearance though existing utility lines and SR 67 are prominent built features.
- B** This image presents a **visual simulation** of the Proposed Project's span over SR 67. The skylining of structures (extending above the horizon) would exacerbate the project's visual prominence in the landscape.
