

Michael Clayton & Associates

A **visual simulation** of the I-8 Alternative as it passes north of El Monte County Park at the base of El Cajon Mountain. This view to the north-east is from KVP 54 located in the park. As illustrated in the simulation, the 230 kV tubular steel pole structures would be noticeable though not prominent additions to the landscape because of the dominance of El Cajon Mountain in the background and the apparent blending of the structures and conductors with the mottled background land and vegetative forms.
