

Michael Clayton & Associates

A **visual simulation** of the Modified Route D Star Valley Option from Key Viewpoint 70 on Star Valley Road, just north of the transition structures. This view to the south captures the Star Valley Option that would extend west from the Modified Route D Substation and then turn north to transition underground beneath Star Valley Road. As shown in the simulation, the transition structures and connecting 230 kV transmission line would be prominently visible to residents along Star Valley Road. The transition structures would add considerable industrial character to the landscape.
