

The **existing view** to the southeast from Key Viewpoint 79 on eastbound Old Highway 80, west of the proposed Jacumba Substation site. This view encompasses the proposed substation site, the existing SWPL 500 kV transmission line passing north of the site, and the northern end of the Sierra de Juárez Mountains in the background (with communication facilities on the ridge top). The rugged landscape is predominantly natural in appearance though the existing SWPL transmission line is a visually prominent industrial feature with structurally complex, lattice towers.
