To Whom It May Concern,

This letter is to stress my opposition to the sunrise powerlink. There are other alternatives that are more efficient and environmentally friendly. The scripps ranch community that I live in already has a huge ugly eye sore on the community with power wires going throughout the community. The sunrise powerlink would further ruin the beautiful vista views of the mesa. This also holds with it a high fire danger with these powerlines above a high fire zone area that is in close proximity to homes. The most recent fire only reminded us of how dangerous this could be. The only alternative that I would make me support the powerlink, is if it followed the environmentally superior northern alternative. Specifically the the SDG&E revisions with reroutes from the sycamore canyon substation to the scripps substation, this would at least displace the powerlines that run through our community.

Thank you, Dwight and Cara Baker
