Thank you for sending me the Notice of Availability.

I wonder if the La Rumorosa Wind Options could be sited on the "Proposed Wind Resource Energy Area per Sempra's Permit" in Figure 1 and a connection made to the "Existing CFE 230 kV Tijuana/Mexicali Transmission Line, new parallel line analyzed in DEIR/S" rather than connecting to the "Potential 230 kV Transmission Route to Mexican Wind Farms in La Rumorosa Area as analyzed in DEIR/S"?

Also, I wonder if there has been any consideration of the effects of a major earthquake on plans for the Sunrise Powerlink. Seems to me we should be encouraging solar panels on ALL rooftops ASAP so we have electricity from many sources when "The Big One" strikes. Might SDG&E be given exclusive rights to leasing of panels to homeowners, schools, and businesses?
