

1. EMF + ELL electromagnetic force fields disfunction (stop) pacemaker batteries such as Vice-President Cheney's. White House doctors mandated he can not be near any.

\*\* Would be elimination of serious usage of entire areas.

2. Negative yearly high powdered hydro wash down of lines by over head helicopters contaminates any where wash down water touches with anyone contaminates, etc. \*\* is

(a) EMF + ELL noise of lines stops bee usage; affects bees.

(b) Electromagnetic radiation penetrates through buildings, cars, trailers; human + animal penetrated by magnetic field; exploding ozone dust propelled 1000 to 1500 feet into air from the transformers travels up to 7 miles away. The exploding physics of the ozone dust can penetrate human/animal bodies with radicals into their bodies.

3. 500KV high power lines known to break with age, in wind, cause fires.

a. of heavy soot in air from a fire the lines arc down directly into the ground dumping energy load. \* fire fighters can not

go under lines if soot from fire under lines or around; firemen would be electrocuted. If near buildings on fire can not go under lines in soot air conditions

4. Know EMF - ERM electromagnetic force fields can electrocute humans or animals standing on wet grounds, habitat or agricultural fields.

Ⓐ Cattle known to stop milking near lines. Pregnant women and/or animals known to abort fetuses/embryos (embryos) by lines.

Ⓑ Lines known to block phone services, computer services and television due to magnetic force field negatives

Ⓒ In order for emergency phones to work near lines, requires special expensive phone units to be purchased by flight for life, planes + fire units (engines, fire stations, etc), 911 police and ambulance unit vehicles + support systems and the Borrego officers.

Ⓓ Extended exposure to 500KV and high power lines known to have cancer clustering mapping along the lines.

⑥ Physical <sup>geographical</sup> valleys <sup>features</sup> of mountain ranges may hold ozone dust in the convection layers of the Anza Borrego air basin causing health hazards to humans & mammals. Santa Ana wind conditions also hold ozone contaminants upon/within an area.

Sempia / SDG+E pays nothing for lines.

⑦ Rate payers pay for the line costs & installations. The request to protect their environment mandates under ground installation.

⑧ 500kV lines raise the temperature of any areas they are installed within.

⑨ Known to cause breathing difficulty in young children, seniors (elderly) and asthmatics. Actually can burn your lungs after long time exposure.

⑩ If BLM reviewing this DOE:ER, then there is a Federal permit application as well as a Cd PUC EIR application to duplicate this process + your statements concerns.

⑪ Lines known to drop 17% of their energy into bodies of water: lakes, ponds, etc. Known to kill wildlife ~~eco~~ eco systems of lakes to level 4 acid level.

⑩ \* Children known to get specific cancers after extended periods of exposure: lines near schools, homes, etc. Read Paul Boudier (Sp)

⑪ Nat'l Agency for protection statement modified in late 1980's / early 1990.

The complete scientific studies not included. New found finds and UCLA studies confirm what exposure to lines does to human / animal / living things.

⑫ Particulate soot matter (from cars, diesel in smog) -- carbon monoxide) each particle when propelled with ozone dust is a carcinogenic anogen into living things. (Food crop contaminated??)

⑬ Lines are very noisy.

\* 14 Governor Arnold Schwarzenegger + CPUC in last week of Jan placed into law that NO energy company may import "ang" energy generated under dirty air standards into California due to global warming greenhouse dangers.

Thus, the Baja + Mexcellis plants are built to old dirty standards can not be imported.

This application process DOE: ER + EIR: NEPA are now voided due to

The Mexicali obsolete standards.  
Alternative energy sources are now preferred as well as Cal Pine clean energy making of less than 10% pollution. Ca now prefers to build a clean plant where the energy is needed.

On Sunrise Powerlink Project Fig 10 System  
alternatives  
notice of Preparation

Sept. 2006 - NOP = 30 day scoping period

BLM publication: Federal Register: a NOI

(notice of intention - following the NOP +  
NOI -- meetings held Oct 2, 2006 + Scoping  
Report: [www.cpuc.ca.gov/environment/  
info/asper/sunrise/sunrise.htm](http://www.cpuc.ca.gov/environment/info/asper/sunrise/sunrise.htm)

if allowed, needs to be placed under  
ground as 2-330 kH.

\*Saves 50 years of maintenance

Signed,

Adrian McGregor
