

Good Ladies and Employees of The California Energy Commission ,

One excellent reason to avoid high tension lines is the fact that we rate-paying citizens are paying for OLD outdated TECHNOLOGY using foreign oil, gas etc. All this is a substantial drain on our economy. By not investigating and supporting natural renewable sources of energy and because all the money has been funneled into high tension lines ALL of us and our children are deprived of a healthier future.

Did you realize this ?

As it rests upon your capable administrative shoulders - please be aware of the **lack** of scientific study on the deleterious effects of high tension wires ? Has anyone asked the right questions ? What forethought in this plan for high tension wires ? There are more people moving out of California at this time. Is there a future need for MORE electricity- when there is less population to use it ?

You spend HOW MANY MILLIONS OF DOLLARS OF OUR MONEY for something that the general population do not want or need. What is your justification ?
Could it be the stockholders and not the rate payers?

WOULD YOU (personally) AND YOUR FAMILY CONSENT TO LIVE UNDER THE HIGH TENSION WIRES PROPOSED ?

I would like to hear your truthful answer to these questions.

Sincerely Yours,

Teresa Travis
