 Mission Viejo, California 92692
 March 25, 2004

California Public Utilities Commission
 ATTN: Mr. Mike Rosauer, Project Manager
 C/O Aspen Environmental Group
 30423 Canwood Street, Suite 215
 Agoura Hills, California 91301

To Whom It May Concern:

Please count our household of five and our large extended family and friends who often visit our home to the hundreds, if not thousands, of our neighbors' voices urging you to require Southern California Edison to bury the current and proposed towers and transmission wires along the 3.1 miles of its corridor running from Lake Forest to Mission Viejo.

11-1

As parents, my husband and I are teaching our children that if you wish to do something, do it well. If you weren't able to do something right the first time, make it right as soon as possible. We believe this principle holds true in every aspect of our lives and in the dispute between Southern California Edison and most members of our community. We do not believe that our suburban community should be further blighted by the addition of more unsightly and possibly unhealthy power lines for the benefit of millions of others. We understand that the power lines were here before our neighborhood was built. We are not asking anyone to remove the lines from the corridor. We are simply asking that the commission requests that Edison do the job right this time and bury the lines.

11-2

As Mission Viejo residents for almost 24 years, we have chosen to raise our three children here because our community is safe, clean, attractive, and offers many public and private amenities that encourage a healthy and happy family life. Burying the power lines, existing and proposed, will provide the electricity needed by our Southern California neighbors and better living conditions for everyone at a tiny cost to all concerned.

11-3

Please don't make our community pay the price for electricity generated for millions of others. Please don't damage our home values and threaten our healthy, happy way of life. Please do the right thing and require Southern California Edison to serve all the people by burying these power lines. Thank you for your time and concern.

Sincerely,

(Mrs.) Sue R. Willett
