Subject: Viejo system project

To whom it may concern,

I would like to let you know that I am opposed to the power lines that Edison wants to add. When I moved here in 1991 one concern I had was the power line's. We decided that a few line's were ok. Over the years Edison has added line's without any warning to the city or homeowner's. If I would have known that Edison could add line's anytime they wanted to, I probably would have moved. Therefore I believe they were dishonest.

42-1

Second point, I have worked for a local government for the past 23 years and have seen Edison bury High power line's many times. Some as recent as a year ago. I'm not buying that it's too expensive to bury the line's. If so how can they afford to bury the line's in the city that I work for? In talking to Frank Wasko about a year ago, he said these line's were needed for the new housing in south orange county. If that's the case let them pay for the underground installation. In closing I believe that these wire's they want to add is not in the best interest of the homeowners and the people of the city of Mission Viejo. Thank you for your time

42-2

- 42-1 Thank you for sharing your concerns.
- 42-2 Comment noted. Cost issues related to the proposed project and/or the possibility of underground lines is an issue considered in the Commission proceeding, but is not an element of CEQA review.
