**Subject:** SCE's viejo system porject

My family and I are totally against the construction SCE's Viejo Project. It is incredible that on this day and century we have an electrical Co. insisting on building powerlines overhead. Please bury the lines. Aesthetically towers and cables are ugly. These towers and lines will be located right on top of our most beautiful children's park, the Flo Jo park and many baseball field. Toddlers will play right under those lines. You do not see this happening in Europe but yet why here?. The prices of our homes will go down at least 30%. There will be a sudden dump my house on the marked and our City will loose lots of tax dollars in revenue for our schools and other project very much needed City survival What about the EMF emission to all of us who live here?. The City of Mission Viejo is against this project and so are its residents. STOP the project, I urge you.

50-1 Thank you for sharing your concerns. For information regarding EMF please see General Response GR-1. General Response GR-2 address property values and General Response GR-3 contains information regarding the undergrounding of electrical transmission lines. In addition, please see Appendix 8, which discusses various route options considered by the CPUC.
