

Michael Clayton & Associates

A visual simulation of the proposed project from Key View Point 2 on eastbound Melinda Road, just west of the span over Melinda Road. This view is to the northeast toward proposed tower locations HF-06 and HF-07. As shown in the simulation, with the proposed increase in height and the more structurally complex, double-pole H-Frame design with horizontal cross-members, the proposed structures would be noticeably more prominent than the existing single-pole towers that are to be replaced.
