

Source: Southern California Edison

A visual simulation of the proposed project from Key Viewpoint 6 from the southwestern portion of the Canyon Crest neighborhood. This view encompasses the proposed 66 kV H-Frame HF-02, as well as the existing 220 kV tower M20-T3. As shown in the simulation, the proposed structure would appear taller and more massive than the existing 220 kV tower. While actually shorter by 29 feet, its close proximity makes it appear taller.
