

Source: Southern California Edison

<p>A visual simulation of the proposed project from Key Viewpoint 9 from neighborhoods east of the proposed project. This view encompasses the proposed 66 kV H-Frame HF-08 as well as the existing 220 kV tower M22-21. As shown in the simulation, the proposed H-Frame would be larger than the existing 66 kV pole, but distinctly smaller than the existing 220 kV tower. Just out of view, three existing 66 kV poles (M1-P3, -P4, and P6) would be removed and not replaced.</p>	<p>Key Viewpoint 9 Palma</p> <hr/> <p>Visual Simulation</p>	<p>VIEJO SYSTEM TRANSMISSION LINE PROJECT AESTHETICS</p> <p>Figure 28</p>
