Re: Data Request #11 for the SCE West of Devers Upgrade Project - Application No. A.13-10-020

Dear Mr. Stevenson:

The California Public Utilities Commission's (CPUC) Energy Division has reviewed all of the documents and materials that SCE has provided, including the Application and Proponent's Environmental Assessment (PEA; dated October 25, 2013), the PEA deficiency response items submitted in late 2013 and early 2014, and SCE's data responses to date. During the analysis of the aforementioned materials, we have identified additional information items needed from SCE.

Attached please find Data Request No. 11, with a follow-up to SCE's response to Data Request 10, question ALT-17c only. Additional data requests may be necessary to address other CEQA or NEPA topics as we move forward with EIR/EIS preparation.

We would appreciate your prompt responses to these data requests, which will allow us to maintain our current schedule. Given our desire to maintain an aggressive schedule, we request that responses be provided to us within one week if possible (by January 5, 2015). If this is not possible, please provide me with an estimated response date for any information that can't be provided within a week.

Please submit one set of responses to me in both hard copy and electronic format and one to Susan Lee at Aspen Environmental Group in electronic format (unless there are hardcopy-only documents). Any questions on this data request should be directed to me at (415) 703-2068.

Sincerely,

Billie Blanchard

Billie Blanchard
Project Manager for West of Devers Upgrade Project

SCE West of Devers Upgrade Project Data Request No. 10

ALT-22 SCE's December 24, 2014 response to DR10, ALT-17(c) states that the revised engineering has again changed the locations of proposed transmission structures, at least in Segment 4. This would be the 3rd set of preliminary structure locations that SCE has developed since the CPUC started work on the project. The original preliminary data was submitted in January 2014, and an entirely new set of design data was submitted in July 2014.

(a) Because EIR/EIS maps and consideration of alternatives are based on preliminary structure locations, we request that SCE provide updated GIS data for tower center points and ROW centerlines for its current design. If any segments have not changed, please state that the July 2014 data remains accurate as the preliminary engineering.

(b) Please explain the status of SCE's ongoing preliminary design review process by segment, including the anticipated timing of additional changes to preliminary design.
