## **EXECUTIVE SUMMARY**

ERM-West, Inc. (ERM) completed a geophysical survey and the subsurface soil and groundwater investigation for the Martin Extension Property located at 1755 Egbert Avenue, San Francisco, San Francisco County, California. This preliminary investigation was scoped to identify any potential significant environmental impact due to historical site operations at the site, which is being considered as a potential location of a PG&E infrastructure improvement.

A Phase I Environmental Site Assessment identified a potential underground storage tank and fueling island previously present within the central portion of the site. The results of the geophysical survey suggest that the tank and associated distribution piping were removed. The soil results do not indicate significant impact of the site due to historical site activities. Fuel compounds, volatile organic compounds, semivolatile organic compounds, polychlorinated biphenyls, pesticides, and metals in soil samples were either not detected or generally detected at low concentrations below applicable screening levels.

The groundwater results indicate that the site groundwater is impacted with fuel-related compounds and metals. Fuel compounds and several metals were detected in groundwater samples exceeding their applicable screening levels. The lack of exceedances of these compounds in site soil samples suggest that the occurrence of these compounds in site groundwater may be from offsite sources.

## **1.0**

### **INTRODUCTION**

ERM-West, Inc. (ERM) is pleased to provide this report to Pacific Gas and Electric Company (PG&E) presenting the results of a geophysical survey and the subsurface soil and groundwater investigation for the Martin Extension Property located at 1755 Egbert Avenue, San Francisco, San Francisco County, California (the “site” or “subject property”; Figure 1). The investigation area and sampling locations are shown on Figure 2. The purpose of the sampling and analysis was to provide information on the environmental condition of soil and groundwater at the site that is being considered as a potential location of a PG&E infrastructure improvement. The following subsections provide an executive summary, description of the field activities completed, the analytical strategy, the results of the investigation, and the conclusions based on the analytical results.

## **2.0**

### **SCOPE OF WORK**

The scope of work involved a limited subsurface sampling of soil at the site to determine general soil and shallow groundwater conditions at the site. To achieve this objective, Cascade Drilling LP (Cascade) completed four soil borings (SB-1 through SB-5) to first groundwater using a direct push rig. Boring depths ranged from 15 to 19 feet below ground surface (bgs). The boring locations are presented on Figure 2. Prior to any subsurface activities, the proposed boring locations were marked and Underground Service Alert was contacted a minimum of 48 hours prior to subsurface work. In addition, a private utility locating service was used to screen the proposed locations for underground utilities; none were found during the private utility screening.

The Phase I Environmental Site Assessment identified a potential underground storage tanks (UST) and fueling island on the property in the past. To determine if the UST and distribution piping were still present on site, a geophysical survey was conducted by Ground Penetrating Radar Systems, Inc. (GPRS) within the area shown on the map. GPRS used two separate detection equipment to assist in the survey. Ground Penetrating Radar (GPR) was used by sending pulses of energy into a material and recording the strength and the time required for the return of the reflected signal. Reflections are produced when the energy pulses enter into a material with different electrical conduction properties from the material it left. This GPR unit, which used a 40 megahertz (mhz) antenna, achieved a total depth of as much as 5 feet bgs. An RD7000 pipe locator was used to detect electromagnetic fields from line power or radio frequency signals. It is also used in conjunction with a transmitter to connect directly to accessible, metallic, pipes, risers or tracer wires. The GPRS survey report is included as Appendix A.

Limited subsurface sampling of soil and groundwater was completed by Cascade to evaluate general soil and shallow groundwater conditions at the site.

Five soil borings (SB-1 through SB-5) were completed to first groundwater using a direct push rig, with boring depths ranging from 15 to 19 feet bgs. The boring locations are presented on Figure 2.

The soil cores were logged by an ERM geologist using the Unified Soil Classification System and an organic vapor analyzer with a photoionization detector (PID) was used to screen each soil core recovered during the sampling activities. The results are presented on the boring logs provided as Appendix B.

Up to five soil samples were collected from each soil boring with two of the samples collected in the top five feet. Additional soil samples were collected between approximately 5 and 10 feet bgs and/or 1 foot above the vadose zone. If potential impacts were observed in vadose zone soils (either staining or elevated PID readings), additional samples were collected at depths where impacts were observed. Once groundwater was encountered within each boring, a temporary groundwater monitoring point was installed, consisting of dedicated threaded polyvinyl chloride casing with a five-foot slotted-screen. A grab groundwater sample was collected from each temporary groundwater monitoring point utilizing low-flow sampling techniques including dedicated polyethylene tubing and a peristaltic pump. Grab groundwater samples were collected in laboratory-provided sample containers necessary for the analytical parameters specified below.

Following completion of the sampling, each borehole was backfilled with neat cement consistent with county regulations and the boring locations were located using a global positioning system (GPS) unit.

Soil and groundwater samples were labeled, placed in sealed plastic bags, stored in an iced cooler, and transported to Curtis & Tompkins Ltd., a California state-certified laboratory in Berkeley, California. All samples were recorded on a chain-of-custody form that accompanied the samples to the laboratory. The two shallowest samples from each boring were analyzed for the following constituents:

- Total petroleum hydrocarbons (TPH) as diesel and motor oil (TPH-d and -mo) by U.S. Environmental Protection Agency (USEPA) Method 8015M;
- Volatile organic compounds (VOCs) and TPH-gasoline (TPH-g) by USEPA Method 8260;
- Semivolatile organic compounds (SVOCs) by USEPA Method 8270C; and

California Title 22 Metals by USEPA Methods 6010 and 7000 series.

In addition, the uppermost sample in each boring was analyzed for polychlorinated biphenyls (PCBs) by USEPA Method 8082 and organochlorine pesticides by USEPA Method 8081. The remaining soil samples were submitted

to the laboratory for potential analysis if the evaluation of the shallower analytical results warranted additional characterization.

Groundwater samples collected during the investigation were analyzed for the following constituents:

- TPH-d and TPH-mo by USEPA Method 8015M;
- VOCs and TPH-g by USEPA Method 8260; and
- SVOCs by USEPA Method 8270C; and
- California Title 22 Metals by USEPA Methods 200.7 and 6010 series.

Based on initial analytical results, additional analyses were requested for select samples to further characterize site soil. One soil sample had high reporting limits above the appropriate screening levels (San Francisco Bay Regional Water Quality Board's [RWQCB] Environmental Screening Levels [ESLs] for commercial industrial sites) for SVOCs. In order to confirm that SVOCs were not present at this location, the deeper soil sample collected was analyzed for SVOCs using USEPA Method 8270C and extractable TPH. In addition, the 7-foot soil sample from SB-3, near the presumed UST site, was analyzed to provide information on the condition of native soil beneath the potential UST backfill in this area.

### **3.0**

### ***GEOLOGY AND HYDROGEOLOGY***

Shallow soils encountered during the limited investigation consisted of a sand and gravel fill layer from approximately 0 to 5 feet bgs. Below the fill layer, site soils were primarily clay and silty clay up to approximately 10 feet bgs. A fine moist to wet sand layer was observed from approximately 10 feet bgs to total depth in all borings. Detailed descriptions of site soils are included on the boring logs provided as Appendix B. Saturated soil was encountered between 9.5 and 12.5 feet bgs in each of the soil borings and the initial water levels measured in the boreholes ranged between 7.86 and 9.01 feet bgs.

### **4.0**

### ***GEOPHYSICAL SURVEY RESULTS***

Based on the GPR survey activities, there were no indications that the UST and the associated piping are still in place. The former UST area as seen in Figure 2 was noted by GPRS to have softer soil and appeared to be a possible excavation area. Personnel at the site further explained that the area with softer soil was covered with plywood at the surface, as depicted in photographs seen in GPRS's report, due to the tendency of the area to cave in. Underground scans of the former excavation area are provided in Appendix A.

## 5.0

## ANALYTICAL RESULTS

ERM performed a data quality assurance/quality control (QA/QC) review of the analytical results in accordance with the USEPA *Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and USEPA *Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, July 2004. The data quality review evaluated holding times, preservation methods, method blank sample results, laboratory control sample recoveries, and matrix and surrogate spike recoveries. Based on ERM's data quality review, the quality of the data generated during this investigation is acceptable for the preparation of technically defensible documents. The laboratory data packages and the QA/QC review are provided in Appendix C.

### 5.1

### *Soil Analytical Results*

The soil analytical results are provided on Tables 1 through 5. These soil results were compared to the Tier 1 screening levels set by the RWQCB in their February 2016 Interim Final ESL Workbook (Revision 3), which are the most conservative available screening levels and take into account all prospective exposure pathways including residential exposure. This evaluation also includes a comparison to the lowest applicable ESL based on the property's usage as commercial/industrial, which is consistent with the current and future use of the property. Detections below the ESLs are generally not considered threats to human health or the environment under the relevant land use.

As seen in Table 1, all shallow soil samples had detections of TPH-d, TPH-mo, and TPH-g. All TPH detections in shallow soil were below their respective Tier-1 ESL. In addition, low concentrations of acetone, 2-butanone and methylene chloride were detected in a number of the shallow soil samples; however, all of these VOC detections were below their respective Tier 1 ESL. Other VOCs were not detected in site soil samples analyzed.

Table 2 shows the results for SVOCs in shallow soil; only SVOCs with detectable concentrations are presented. As seen in Table 2, all detections of SVOCs were detected at low levels below their applicable ESLs. The sample collected from SB-5 at 5 feet bgs had reporting limits above the applicable ESLs for SVOCs. To evaluate this potential data gap, the next deeper sample collected from SB-5 (9 feet bgs) was analyzed for SVOCs and extractable TPH (TPH-d and TPH-mo). This sample was non-detect for all SVOCs, TPH-d, and TPH-mo with lower detection limits for these compounds.

Given the lack of TPH, VOCs, and SVOC concentrations in excess of their applicable ESLs, none of the other deeper soil samples were analyzed.

Table 3 shows the results for metals in shallow soil. As shown, all metals except for selenium were detected in at least one soil sample above laboratory reporting

limits. All metals detections were below ESLs with the exception of arsenic and one lead concentration. As seen in Table 2, arsenic was detected in all 10 soil samples with concentrations above the applicable ESL and Tier 1 ESL; however, the concentrations, which range from 0.82 to 12 milligrams per kilogram (mg/kg), are within the accepted background levels for Bay Area soil (Duverge, 2011) and do not show evidence of impact from onsite activities. Lead was detected above the direct exposure ESL of 320 mg/kg in the shallow sample (0.5 to 1 foot bgs) at SB-5 with a concentration of 790 mg/kg. The deeper soil sample collected at this location had a lead concentration of 14 mg/kg, which is below both the Tier 1 and applicable ESLs for lead. Given the lack of metals concentrations within the deeper soil samples analyzed in excess of their applicable ESL, or background concentrations in the case of arsenic, none of the deeper soil samples were analyzed.

The results of PCB and organochlorine pesticides analyses in shallow soil are provided in Tables 4 and 5, respectively. As seen in the tables, PCBs and organochlorine pesticides were not detected in any soil sample above Tier-1 ESLs. Given the lack PCBs and organochlorine pesticide concentrations in excess of their applicable ESL, none of the deeper soil samples were analyzed.

## 6.0

### **GROUNDWATER ANALYTICAL RESULTS**

Groundwater analytical results are presented in Tables 6 through 8. The results of the groundwater analyses are compared to Tier-1 ESLs and applicable ESLs based on current and future site use as a commercial/industrial site.

As seen in Table 6 and Figure 3, all site groundwater samples collected had detections of TPH-d above laboratory reporting limits. Three groundwater samples had TPH-d concentrations above the Tier-1 ESL of micrograms per liter ( $\mu\text{g}/\text{L}$ ) and at or above the applicable direct exposure ESL of 150  $\mu\text{g}/\text{L}$ . These detections ranged from 150  $\mu\text{g}/\text{L}$  at SB-3 to 16,000  $\mu\text{g}/\text{L}$  at SB-2.

As seen in Table 6 and Figure 3, TPH-mo was detected in three of the five site groundwater samples collected ranging from 400 (SB-3-GW) to 85,000  $\mu\text{g}/\text{L}$  (SB-2-GW). The detection at SB-2-GW (85,000  $\mu\text{g}/\text{L}$ ) was above the ESL of 50,000  $\mu\text{g}/\text{L}$  set for TPH-mo.

Only one groundwater sample (SB-2-GW) contained a detectable concentration of TPH-g of 9.2  $\mu\text{g}/\text{L}$ , which is well below the Tier-1 ESL of 100  $\mu\text{g}/\text{L}$ . As seen in Table 6, MTBE was detected in all site groundwater samples collected ranging from 0.8 to 1,200  $\mu\text{g}/\text{L}$ . Three of the groundwater samples had MTBE detections above the applicable ESL of 5  $\mu\text{g}/\text{L}$  and the California Maximum Contaminant Level from drink water set at 13  $\mu\text{g}/\text{L}$ . These detections ranged from 560  $\mu\text{g}/\text{L}$  at SB-3 to 1,200  $\mu\text{g}/\text{L}$  at SB-5. As seen in Table 6, low concentrations of other VOCs

were detected in site groundwater samples. The detected concentrations of other VOCs were well below their respective Tier-1 ESLs.

As presented on Table 7, groundwater samples from all five borings were analyzed for SVOCs by USEPA Method 8270. Only one groundwater sample (SB-2-GW) contained a low concentration of phenol at 19 µg/L, which is well below the applicable ESL of 4,200 µg/L.

Table 8 and Figure 4 present the results of the metals analyses on the five groundwater samples collected during the investigation. All metals except for barium, cadmium, copper, mercury, molybdenum, silver, and zinc were detected above ESLs in at least one site groundwater sample. A summary of metals above applicable ESL is as follows:

- Antimony was detected at or above its applicable ESL of 6 µg/L at four of the five groundwater samples collected at concentrations ranging from 6.0 µg/L (SB-3-GW) to 48 µg/L (SB-1-GW).
- Arsenic was detected above its applicable ESL of 10 µg/L in all five groundwater samples collected at concentrations ranging from 12 µg/L (SB-2-GW) to 37 µg/L (SB-4-GW).
- Beryllium was detected in all groundwater samples collected, with one detection (4.5 µg/L at SB-1-GW) above its applicable ESL of 4 µg/L.
- Chromium was detected above its applicable ESL of 50 µg/L in all five groundwater samples collected at concentrations ranging from 160 µg/L (SB-3-GW) to 1,100 µg/L (SB-1-GW).
- Cobalt was detected above its applicable ESL of 6 µg/L in all five groundwater samples collected at concentrations ranging from 32 µg/L (SB-3-GW) to 120 µg/L (SB-1-GW).
- Lead was detected above its applicable ESL of 15 µg/L in all five groundwater samples collected at concentrations ranging from 17 µg/L (SB-3-GW and SB-4-GW) to 90 µg/L (SB-1-GW).
- Nickel was detected above its applicable ESL of 100 µg/L at four of the five groundwater samples collected at concentrations ranging from 150 µg/L (SB-3-GW) to 500 µg/L (SB-5-GW).
- Selenium was detected above its applicable ESL of 50 µg/L in one groundwater sample collected at SB-2-GW (150 µg/L).
- Thallium was detected above its applicable ESL of 2 µg/L in two groundwater samples collected, SB-2-GW (3.4 µg/L) and SB-5-GW (5.1 µg/L).
- Vanadium was detected above its applicable ESL of 50 µg/L in all five groundwater samples collected at concentrations ranging from 210 µg/L (SB-3-GW) to 810 µg/L (SB-1-GW).

The presence of elevated concentrations of metals in groundwater may be due to the historical presence of a leather tanning facility on the property directly west of the site.

## 7.0

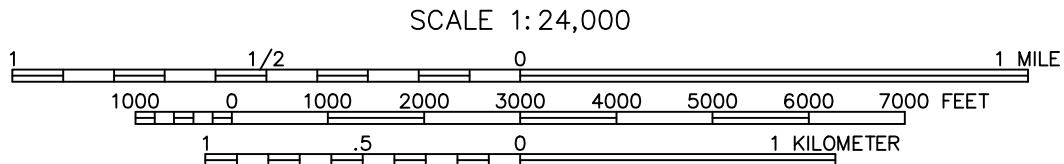

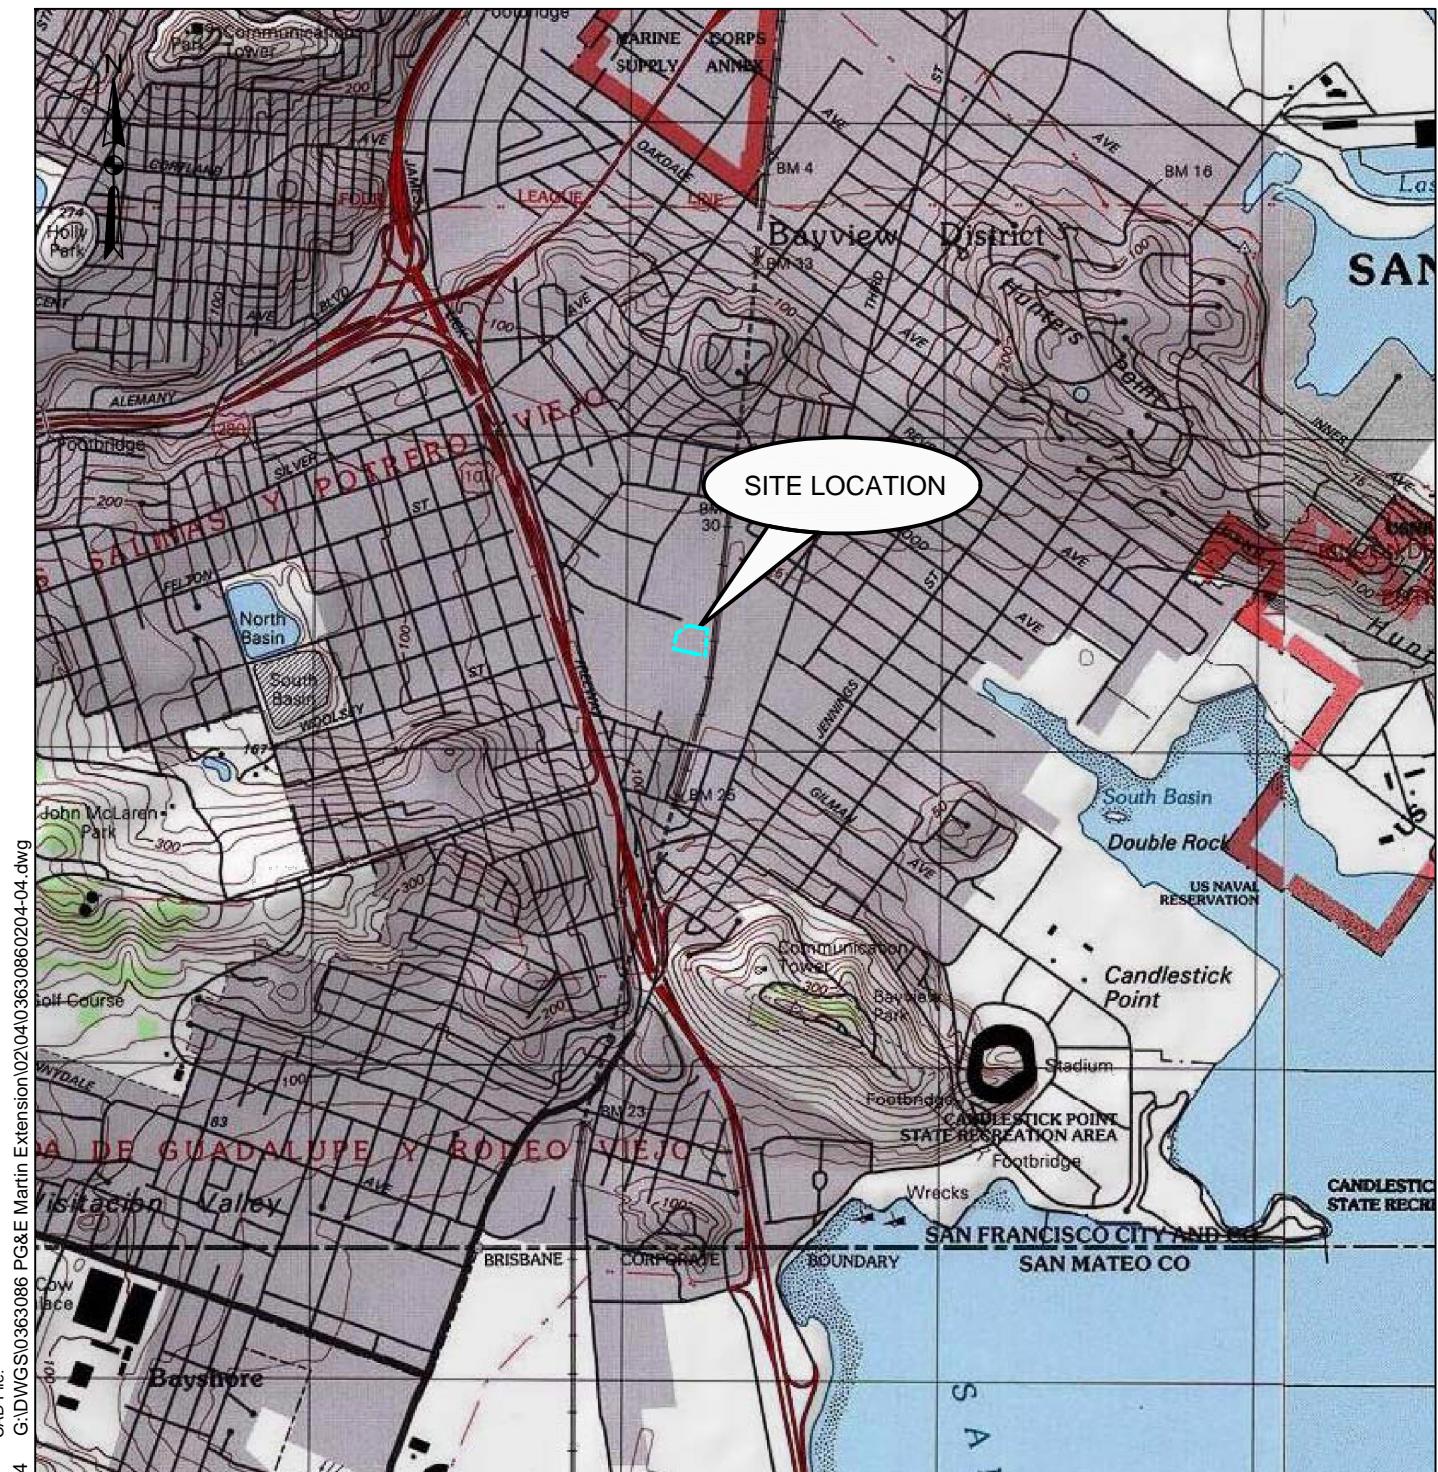

### CONCLUSIONS

This soil and groundwater investigation was completed to determine the subsurface conditions at the site. The results of the investigation were as follows:

- The results of the GPR survey suggest that the former UST and associated piping at the site has been removed.
- TPH-d, TPH-mo, TPH-g, VOCs, SVOCs, PCBs, and organochlorine pesticides in soil samples were either non-detect or detected at low concentrations below applicable ESLs.
- With the exception of selenium, all metals analyzed were detected above laboratory reporting limits in one or more site soil samples. The concentrations of metals were generally detected at relatively consistent concentrations in all the samples indicating background concentrations and, with the exception of arsenic and one lead concentration discussed below, at concentrations below their applicable ESLs. The arsenic concentrations detected at the site fall within the accepted background levels for Bay Area soil (Duverge, 2011). Therefore, detections of arsenic in soil appear to be naturally-occurring background concentrations and are not due to historic site operations.
- Lead was detected at a concentration of 790 mg/kg in the sample collected at 0.5 to 1 foot bgs from SB-5, which is above its applicable ESL of 320 mg/kg. The deeper soil sample (4.5 to 5 feet bgs) collected from this location had a lead concentration well below its applicable ESL. None of the other soil samples analyzed contained concentrations above its applicable ESL.
- Groundwater at the site contained concentrations of TPH-d, TPH-mo, and MTBE in excess of their applicable ESLs. The lack of exceedances of these compounds in samples of site soil collected during this investigation suggest that the occurrence of these compounds in site groundwater may be from offsite sources.
- The occurrence of numerous metals in groundwater, including antimony, arsenic, beryllium, chromium, cobalt, lead, nickel, selenium, thallium, and vanadium, at concentrations above their applicable ESLs indicates that the site's groundwater has been impacted. However, due to the lack of elevated concentrations of metals in site soils, it is unlikely that historical operations at the site are the source of the elevated metals concentrations. It appears that the source of metals in shallow groundwater is due to an offsite source and may be related to the former tannery operated on the property west of the site that was identified during the Phase I ESA.

The soil results of this limited subsurface investigation do not indicate significant impact of the subject property due to historic site activities. However, the groundwater results indicate that the site groundwater is impacted with fuel-related compounds and metals that appear to be due to migration of compounds of concern from nearby properties.

**Re: GPR Investigation to Locate underground storage tanks (UST's)**

Site: 1755 Egbert Ave, San Francisco, CA

**Purpose**

The purpose of the survey was to scan for potential UST's.

**Equipment**

- **Ground Penetrating Radar (GPR), Manufacturer: GSSI, Model: SIR-3000 processing unit with 400 MHz antenna.** GPR works by sending pulses of energy into a material and recording the strength and the time required for the return of the reflected signal. Reflections are produced when the energy pulses enter into a material with different electrical conduction properties from the material it left. The strength of the reflection is determined by the contrast in conductivity between the two materials. The total depth achieved can be as much as 8' with this antenna but can vary widely depending on the dielectric properties of the materials.
- **RD7100 pipe locator, Manufacturer: Radiodetection.** The RD7100 can detect the electromagnetic fields from live power or radio frequency signals. It can also be used in conjunction with a transmitter to connect directly to accessible, metallic pipes, risers, or tracer wires. A tone is sent through the pipe or tracer wire at a specific frequency which can then be detected by the receiver.

**Process**

Our process begins with collecting scans with GPR across the areas in a grid pattern. Scans are typically spaced 3'-10' apart depending on the size of the targets being searched for. The GPR data is interpreted in real time and anomalies in the data are located and marked on the surface with chalk, spray paint, pin flags, etc.

### **Findings**

During the scanning process, GPRS found no anomalies that appear to be underground storage tanks. We found one area with softer soil that appears to be a previous dig site. See pictures in following pages.

### **Limitations**

Please keep in mind that there are limitations to any subsurface investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, layers of reinforced concrete, and a variety of other factors. No subsurface investigation or equipment can provide a complete image of what lies below. Our results should always be used in conjunction with as many methods as possible including consulting existing plans and drawings, exploratory excavation or potholing, visual inspection of above ground features, and utilization of services such as Dig Alert/Underground Service Alert. Maximum GPR depth at this site was between 4 and 5 feet.

The following pages will further explain the findings.

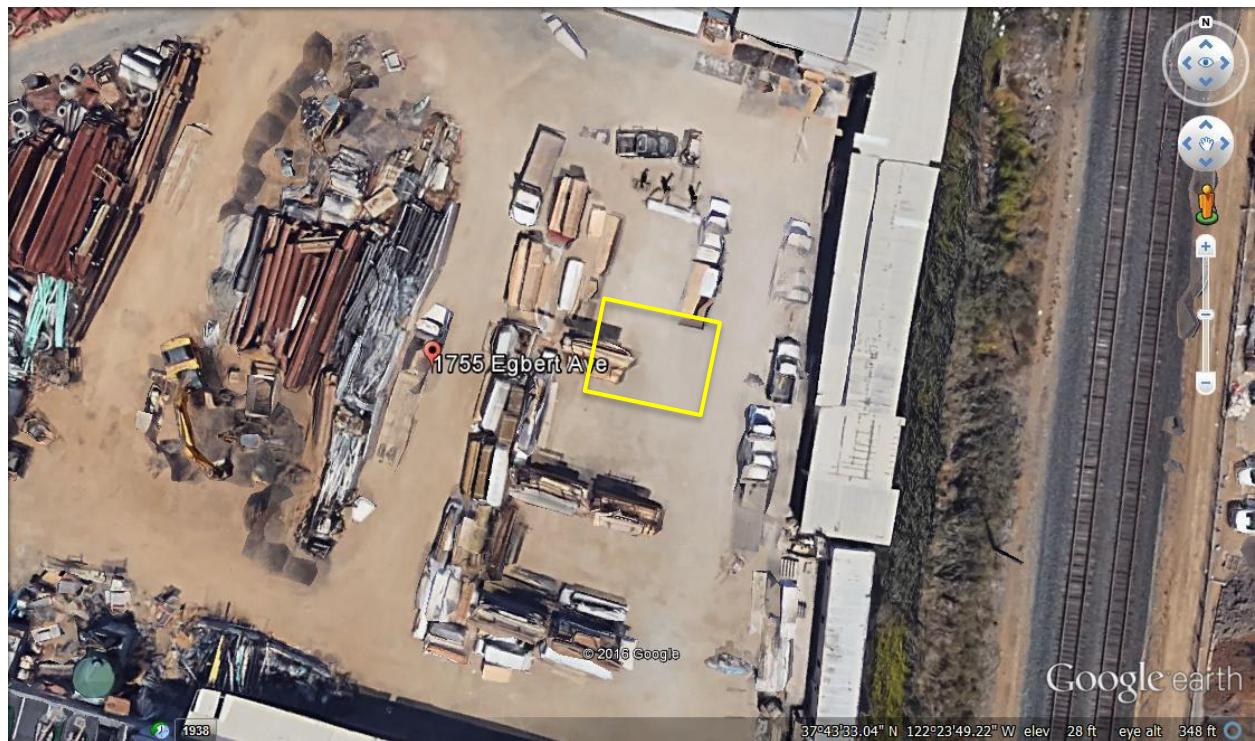

I appreciate the opportunity to have worked with you on this project. Please feel free to contact me if you have any additional questions.

Regards,

Jim Barney

## GPR Data

PLAYBACK - FILE 030.DZT

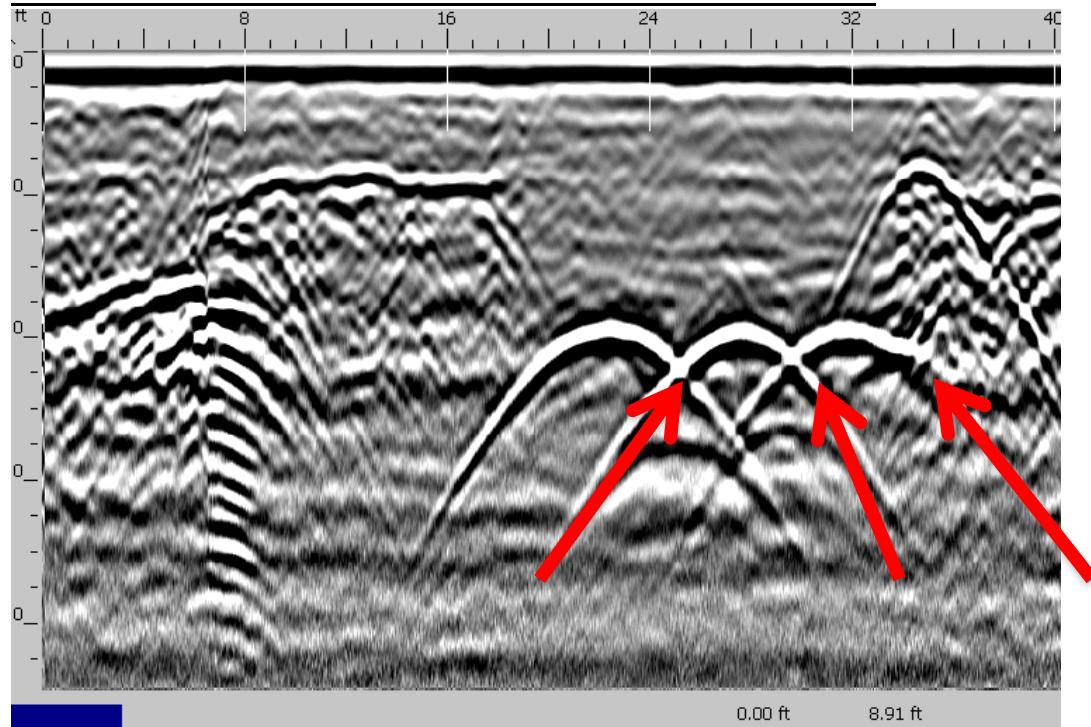

Here is a GPR scan of the soft soil area covered with plywood; no UST's were found, however, the area highlighted above appears to be disturbed soil.

Other scans in the area show no evidence of UST's. See Example below.

### EXAMPLE UNDERGROUND STORAGE TANK DATA

Here is an EXAMPLE of GPR data from a DIFFERENT project where UST's were found. The red arrows are pointing to three UST's.

(916) 920-3978 (fax)

The quality of the data was assessed and any necessary qualifiers were applied following the *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, September 2016 and *USEPA National Functional Guidelines for Inorganic Superfund Data Review*, September 2016.

## HOLDING TIME AND PRESERVATION EVALUATION

The samples were prepared and analyzed within the method-prescribed time period from the date of collection with limited exceptions. One sample, SB-5-9, was analyzed for EPA 8015B and 8270C outside of the holding time. The samples were non-detect and have been qualified as estimated (UJ). The qualified samples are listed in Table 1.

The sample shipments were received at the laboratory within the method-prescribed temperature and preservation requirements with limited exceptions. Several samples for metals did not meet the pH requirements and nitric acid was added to achieve the appropriate pH. In addition, several VOA vials had headspace present. However, these affected vials did not represent all of the submitted vials for any one sample, therefore, it was presumed that the laboratory would select a vial that did not have bubbles for analysis. The affected samples are identified in Table 2. None of the data were qualified based on preservation exceedances.

## BLANK EVALUATION

The method blank and trip blank sample results were nondetected for each of the target analytes with limited exceptions. VOCs and metals

were detected in method blanks, however, no detected results were within five or ten times the blank concentration, respectively. The method blank detections are listed in Table 3.

### ***BLANK SPIKE EVALUATION***

The laboratory control sample (LCS) recoveries were within the laboratory's limits of acceptance. The LCS recoveries indicate acceptable laboratory accuracy and precision.

### ***MATRIX SPIKE EVALUATION***

The matrix spike (MS) and matrix spike duplicate (MSD) recoveries were within the laboratory's limits of acceptance with limited exceptions. No data were qualified if the sample concentration was greater than four times the spike concentration, if an outlying recovery is accompanied by an in-control recovery, or if the sample used for MS/MSD analysis was a non-project sample. The outliers are listed in Table 4.

### ***SURROGATE SPIKE EVALUATION***

The surrogate recoveries were within acceptable limits with several exceptions. The laboratory noted several recoveries were diluted out. No data were qualified if the dilution factor was 10-fold or greater. In addition, one surrogate recovery from an 8270C analysis was below the lower control limit. For the 8270C analysis, no samples are qualified if only one surrogate recovery is outside control limits. The outliers are presented in Table 5.

### ***FIELD DUPLICATE EVALUATION***

No samples were submitted in duplicate.

### ***TPH EVALUATION***

The laboratory noted that the hydrocarbon patterns present in several samples were atypical of a standard fuel pattern. ERM qualified the affected sample as tentatively identified and estimated (NJ) as shown in Table 6.

### ***COLUMN DIFFERENCES***

The laboratory noted that there were significant differences between the concentrations reported on the two columns for two samples. These results have been qualified as estimated (J). The qualified results are presented in Table 7.

### ***CONTINUING CALIBRATION VERIFICATION EXCEEDENCES***

The laboratory reported a drift in the continuing calibration verification (CCV) associated with several analytes for one sample. The affected results are qualified as estimated (UJ). The associated results are presented in Table 8.

### ***OVERALL ASSESSMENT***

No data were determined to be unusable. All of the data, including qualified data, can be used for decision-making purposes. The quality of the data generated during this investigation is acceptable for the preparation of technically-defensible documents.

## CASE NARRATIVE

Laboratory number: **282148**  
Client: **ERM**  
Project: **0363086**  
Location: **Martin Extension**  
Request Date: **10/13/16**  
Samples Received: **10/13/16**

This data package contains sample and QC results for six soil samples and four water samples, requested for the above referenced project on 10/13/16. The samples were received on ice and intact, directly from the field.

**TPH-Purgeables and/or BTXE by GC (EPA 8015B):**

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 240171; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

**TPH-Extractables by GC (EPA 8015B) Water:**

No analytical problems were encountered.

**TPH-Extractables by GC (EPA 8015B) Soil:**

A number of samples were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

**Volatile Organics by GC/MS (EPA 8260B) Water:**

N-butylbenzene was detected above the RL in the method blank for batch 240282; this analyte was not detected in the sample at or above the RL. Many analytes were detected between the MDL and the RL in the method blank for batch 240282; these analytes were not detected in the sample at or above the RL. No other analytical problems were encountered.

**Volatile Organics by GC/MS (EPA 8260B) Soil:**

High recovery was observed for trichloroethene in the MSD for batch 240161; the parent sample was not a project sample, the BS/BSD were within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

**Semivolatile Organics by GC/MS (EPA 8270C) Water:**

Low surrogate recovery was observed for terphenyl-d14 in SB-1-GW (lab # 282148-013). No other analytical problems were encountered.

**Semivolatile Organics by GC/MS (EPA 8270C) Soil:**

Matrix spikes QC855939, QC855940 (batch 240222) were not reported because the parent sample required a dilution that would have diluted out the spikes. A number of samples were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

## CASE NARRATIVE

Laboratory number: **282148**  
Client: **ERM**  
Project: **0363086**  
Location: **Martin Extension**  
Request Date: **10/13/16**  
Samples Received: **10/13/16**

### **Pesticides (EPA 8081A):**

All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. Matrix spikes QC855949, QC855950 (batch 240225) were not reported because the parent sample required a dilution that would have diluted out the spikes. SB-1-1 (lab # 282148-001), SB-3-1 (lab # 282148-005), and SB-4-1 (lab # 282148-009) were diluted due to the color of the sample extracts. No other analytical problems were encountered.

### **PCBs (EPA 8082):**

All samples underwent sulfuric acid cleanup using EPA Method 3665A. All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. SB-4-1 (lab # 282148-009) was diluted due to foaming. No other analytical problems were encountered.

### **Metals (EPA 6010B and EPA 7471A):**

High recovery was observed for mercury in the MS for batch 240776; the parent sample was not a project sample, and the BS/BSD were within limits. High RPD was also observed for mercury in the MS/MSD for batch 240776; the RPD was acceptable in the BS/BSD. Low recovery was observed for mercury in the MS of SB-1-1 (lab # 282148-001); the BS/BSD were within limits, and the associated RPD was within limits. No other analytical problems were encountered.

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO N/A

3. Were custody papers dry and intact when received? \_\_\_\_\_ YES NO

4. Were custody papers filled out properly (ink, signed, etc)? \_\_\_\_\_ YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) 5.8, 5.1

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# A

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO

If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? \_\_\_\_\_ YES NO

10. Are there any missing / extra samples? \_\_\_\_\_ YES NO

11. Are samples in the appropriate containers for indicated tests? \_\_\_\_\_ YES NO

12. Are sample labels present, in good condition and complete? \_\_\_\_\_ YES NO

13. Do the sample labels agree with custody papers? \_\_\_\_\_ YES NO

14. Was sufficient amount of sample sent for tests requested? \_\_\_\_\_ YES NO

15. Are the samples appropriately preserved? \_\_\_\_\_ YES NO N/A

16. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES NO N/A

17. Did you document your preservative check? (pH strip lot# 80BDH1461) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? \_\_\_\_\_ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES NO N/A

21. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## COMMENTS

15 Added HVO, (#140712) to pH <2 on 10/13/16 @ 20:30 for sample 13, 14, 15

20. 3/6 VOAs received w/ bubble >6mm for sample 13  
1/3 " 16

## CASE NARRATIVE

Laboratory number: **282196**  
Client: **ERM**  
Project: **0363086**  
Location: **Martin Extension**  
Request Date: **10/14/16**  
Samples Received: **10/14/16**

This data package contains sample and QC results for four soil samples and three water samples, requested for the above referenced project on 10/14/16. The samples were received on ice and intact.

**TPH-Purgeables and/or BTXE by GC (EPA 8015B):**

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 240218; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

**TPH-Extractables by GC (EPA 8015B) Water:**

SB-2-GW (lab # 282196-010) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

**TPH-Extractables by GC (EPA 8015B) Soil:**

Matrix spikes QC856004, QC856005 (batch 240237) were not reported because the parent sample required a dilution that would have diluted out the spikes. Matrix spikes QC855894, QC855895 (batch 240208) were not reported because the parent sample required a dilution that would have diluted out the spikes. SB-5-5 (lab # 282196-002), SB-2-1 (lab # 282196-005), and SB-2-3 (lab # 282196-006) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

**Volatile Organics by GC/MS (EPA 8260B) Water:**

No analytical problems were encountered.

**Volatile Organics by GC/MS (EPA 8260B) Soil:**

Methylene chloride was detected between the MDL and the RL in SB-2-3 (lab # 282196-006); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

**Semivolatile Organics by GC/MS (EPA 8270C) Water:**

SB-5-GW (lab # 282196-004) and SB-2-GW (lab # 282196-010) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

**Semivolatile Organics by GC/MS (EPA 8270C) Soil:**

Matrix spikes QC855939, QC855940 (batch 240222) were not reported because the parent sample required a dilution that would have diluted out the spikes. A number of samples were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

## CASE NARRATIVE

Laboratory number: **282196**  
Client: **ERM**  
Project: **0363086**  
Location: **Martin Extension**  
Request Date: **10/14/16**  
Samples Received: **10/14/16**

### **Pesticides (EPA 8081A):**

All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. Matrix spikes QC855949, QC855950 (batch 240225) were not reported because the parent sample required a dilution that would have diluted out the spikes. SB-5-1 (lab # 282196-001), SB-2-1 (lab # 282196-005), and SB-2-3 (lab # 282196-006) were diluted due to the color of the sample extracts. No other analytical problems were encountered.

### **PCBs (EPA 8082):**

All samples underwent sulfuric acid cleanup using EPA Method 3665A. All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. No analytical problems were encountered.

### **Metals (EPA 6010B and EPA 7470A) Water:**

No analytical problems were encountered.

### **Metals (EPA 6010B and EPA 7471A) Soil:**

Low recovery was observed for mercury in the MS of SB-1-1 (lab # 282148-001); the BS/BSD were within limits, and the associated RPD was within limits. High recovery was observed for copper in the MSD of SB-5-1 (lab # 282196-001); the BS/BSD were within limits, and the associated RPD was within limits. High RPD was observed for antimony in the MS/MSD of SB-5-1 (lab # 282196-001); the RPD was acceptable in the BS/BSD. Zinc was detected above the RL in the method blank for batch 240331; this analyte was detected in samples at a level at least 10 times that of the blank. Silver and nickel were detected between the MDL and the RL in the method blank for batch 240331; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Login # 282196 Date Received 10/14/16 Number of coolers 1  
 Client ERM Project Martin Extension

Date Opened 10/14 By (print) CB (sign) CB  
 Date Logged in ✓ By (print) DTN (sign) DTN  
 Date Labeled ✓ By (print) CB (sign) CB

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES  NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO  N/A

3. Were custody papers dry and intact when received? \_\_\_\_\_ YES NO

4. Were custody papers filled out properly (ink, signed, etc)? \_\_\_\_\_ YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) 4.1

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# B

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO

If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? \_\_\_\_\_ YES NO

10. Are there any missing / extra samples? \_\_\_\_\_ YES NO

11. Are samples in the appropriate containers for indicated tests? \_\_\_\_\_ YES NO

12. Are sample labels present, in good condition and complete? \_\_\_\_\_ YES NO

13. Do the sample labels agree with custody papers? \_\_\_\_\_ YES NO

14. Was sufficient amount of sample sent for tests requested? \_\_\_\_\_ YES NO

15. Are the samples appropriately preserved? \_\_\_\_\_ YES NO  N/A

16. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES NO  N/A CB

17. Did you document your preservative check? (pH strip lot# 80BDH1461) YES NO  N/A CB

18. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES NO N/A  CB

19. Did you change the hold time in LIMS for preserved terracores? \_\_\_\_\_ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES NO N/A

21. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## CASE NARRATIVE

Laboratory number: **282764**  
Client: **ERM**  
Project: **0363086**  
Location: **Martin Extension**  
Request Date: **10/28/16**  
Samples Received: **10/14/16**

This data package contains sample and QC results for one soil sample, requested for the above referenced project on 10/28/16. The sample was received on ice and intact.

**TPH-Extractables by GC (EPA 8015B):**

282764-001 was prepared outside of hold time; affected data was qualified with "b". No other analytical problems were encountered.

**Semivolatile Organics by GC/MS (EPA 8270C):**

Matrix spikes QC858366, QC858367 (batch 240829) were not reported because the parent sample required a dilution that would have diluted out the spikes.  
282764-001 was prepared outside of hold time; affected data was qualified with "b". No other analytical problems were encountered.

Dina,

Please also run SB-5-9 for extractable TPH.

Thanks,

Shannon

**CASE NARRATIVE**

Laboratory number: **282898**  
Client: **ERM**  
Project: **0363086**  
Location: **Martin Extension**  
Request Date: **11/01/16**  
Samples Received: **10/13/16**

This data package contains sample and QC results for three water samples, requested for the above referenced project on 11/01/16. The samples were received on ice and intact.

**Metals (EPA 6010B, EPA 6020, and EPA 7470A):**

No analytical problems were encountered.

**Subject:** RE: Martin Extension--0363086 - C&T Final Data Package (282148)  
**From:** Shannon Martin <Shannon.Martin@erm.com>  
**Date:** 11/1/2016 3:31 PM  
**To:** "dina.ali@ctberk.com" <dina.ali@ctberk.com>

282898

Hi Dina,

I don't know how I didn't see this until now, but SB-1-GW, SB-3-GW, and SB-4-GW should have also been analyzed for Title 22 metals. It looks like I made a mistake on the COC. Is it still possible to run these samples?

Thanks,

Shannon

## Batch QC Report

## California Title 22 Metals

Lab #:	282898	Location:	Martin Extension
Client:	ERM	Prep:	METHOD
Project#:	0363086	Analysis:	EPA 7470A
Analyte:	Mercury	Diln Fac:	1.000
Type:	BLANK	Batch#:	240988
Lab ID:	QC858987	Prepared:	11/04/16
Matrix:	Water	Analyzed:	11/04/16
Units:	ug/L		

Result	RL	MDL
ND	0.20	0.040

ND= Not Detected at or above MDL

RL= Reporting Limit

MDL= Method Detection Limit
