Question 05-01:

Helicopter staging

Reference: PEA, 3.0 Project Description, Table 3-7

In response to Q.14 SCE added three additional staging yards that may be used during construction. The PEA states that "helicopters may use the potential staging yard locations, as needed." Please confirm whether SCE may use any of the additional staging areas to stage helicopters for sock line threading.

Response to Question 05-01:

Helicopters would not be staged at or operate out of any of the additional staging yards. Helicopters were identified as having the potential to utilize the staging yards identified in the PEA for sock line threading because those yards are located adjacent to/within construction work areas and are within the transmission right-of-way.
