

Southern California Edison
RTRP A.15-04-013

DATA REQUEST SET A.15-04-013 RTRP-CPUC Deficiency Report-SCE-004
Supplemental 2

To: ENERGY DIVISION
Prepared by: Gary Busted
Title: Senior Environmental Project Manager
Dated: 09/23/2016

Question 19:

Provide a revised Field Management Plan, which includes EMF modeling and analysis of potential “low cost” and “no cost” measures for the revised alignment including the underground transmission line segment.

Response to Question 19:

The Field Management Plan previously filed with Southern California Edison Company's (SCE) Application for a Certificate of Public Convenience and Necessity (CPCN) on or about April 30, 2015, has been revised to account for the proposed revised alignment containing the underground transmission line segment. The attached file supplements the originally filed Field Management Plan with a preliminary EMF analysis showing low cost and no cost measures for the current engineering designs for underground transmission line circuits. The Field Management Plan may be updated as more refined engineering designs for the proposed Riverside Transmission Reliability Project (RTRP) route alignment become available in the future.
