

Aviation Balls

Currently there no aviation balls on the existing towers that are located on Black Mountain. The EIR now shows aviation balls between towers 38 and 39. This view — the flanks of Black Mountain — is visible from all of North County. Many new homes are being built right now that offer a view of the flanks of Black Mt. and of course many homes — including my own — already have a view of Black Mt. Personally I believe the lines should all be underground here, for a variety of reasons, however I know that is a battle that can't be won. The aviation balls though have to go. Having a string of orange balls across this landmark view is not acceptable under any conditions or requirements.

Thank you,

Med Dyer
