Notes:

Numbers may not add due to rounding.

Cells marked in red correspond to values presented in Table 3.1-3.

¹ Mapped vegetation communities include areas that are not habitat resources (i.e., Non-Resource). Non-Resource designations include Disturbed Habitat (DIST), Developed Lands (DEV), Ornamental (ORN), and Bare Ground (BG).

² Permanent disturbance would occur at proposed structure pad locations (including retaining walls) and splice vault covers. Structure pads include any spur roads that would be constructed to structure locations.

³ Permanent impacts are anticipated when existing access roads are reestablished and "refreshed" prior to construction. To conservatively account for potential permanent impacts, existing access road improvements were determined using an additional 2-foot buffer around all existing 14-foot access roads, which accounts for potential widening as a result of construction activities. The impacts within that 2-foot buffer are considered permanent.

⁴ Temporary impacts include the temporary access roads required to access P20 and P21 and avoid road rut vernal pools in the areas of P45 and P46. Temporary impacts also include passing areas for large machinery and vehicles. This acreage was previously included in temporary impacts.

⁵ The NCCP baseline roadway defined existing access road widths as 14 feet.

Notes:

Numbers may not add due to rounding.

Cells marked in red correspond to values presented in the Table 3.1-5.

- ¹ Mapped vegetation communities include areas that are not habitat resources (i.e., Non-Resource). Non-Resource designations include Disturbed Habitat (DIST), Developed Lands (DEV), Ornamental (ORN), and Bare Ground (BG).
- ² Permanent disturbance would occur at proposed structure pad locations (including retaining walls) and splice vault covers. Structure pads include any spur roads that would be constructed to structure locations.
- ³ Permanent impacts are anticipated when existing access roads are reestablished and "refreshed" prior to construction. To conservatively account for potential permanent impacts, existing access road improvements were determined using an additional 2-foot buffer around all existing 14-foot access roads, which accounts for potential widening as a result of construction activities. The impacts within that 2-foot buffer are considered permanent.
- ⁴ The temporary impacts to baccharis scrub were included in the vegetation mapping prepared for the Draft EIR but were inadvertently excluded from the vegetation community impact Table 4.1-14 in the Draft EIR. The vegetation mapping was generated using data from surveys conducted by Helix conducted in September 2015. The impact acreage was calculated as Disturbed habitat in the Draft EIR.
- ⁵ Temporary impacts include the temporary access roads required to access P20 and P21 and avoid road rut vernal pools in the areas of P45 and P46. Temporary impacts also include passing areas for large machinery and vehicles. This acreage was previously included in temporary impacts.
- ⁶ The NCCP baseline roadway defined existing access road widths as 14 feet.
