

Dec 23<sup>rd</sup>

DECISION NO. 301

## BEFORE THE RAILROAD COMMISSION OF THE STATE OF CALIFORNIA.

**ORIGINAL**

Case No. 233.

In the matter of the application  
of the COWELL PORTLAND CEMENT  
COMPANY, a corporation, and BAY  
POINT & CLAYTON RAILROAD COMPANY,  
a corporation, for the establishment  
of through route and joint rates in  
connection with the Southern Pacific  
Company, a corporation.

George D. Squires, for Southern Pacific Company.

John S. Partridge, for complainants.

Seth Mann, for intervenors.

Pacific Portland Cement Company and  
Cement Tolenes and Tidewater Railway  
Company.

**OPINION**

LOVELAND and GORDON, Commissioners.

This case was brought by the Cowell Portland Cement Company and the Bay Point and Clayton Railroad Company against the Southern Pacific Company asking for through route and joint rates with that company, a similar complaint being filed at the same time against the Atchison, Topeka & Santa Fe Railway Company, which case was No. 232, and reference is hereby made to the general remarks found in the opinion in Case No. 232 on the subject of through route and joint rates between industrial or tap line roads and large steam roads.

At the hearing, the Pacific Portland Cement Company and the Cement Tolenes and Tidewater Railway Company, through Attorney Seth Mann, asked for, and were granted, leave to file a petition in intervention.

Case No. 232, against the Atchison, Topeka & Santa Fe Railway Company, was heard first and it was then stipulated by counsel that this case should be submitted upon the evidence adduced in Case No. 232. Mr. Squires, Attorney for defendant in this case, asking as a part of such stipulation that he should be permitted to file two statements as exhibits in this case.

In the opinion in the case at bar, it is necessary to refer to general conditions obtaining in cement rates, as disclosed by defendant's published tariffs as was done in the opinion in Case No. 232.

Complainant bases its right to through route and joint rates upon the allegation in the complaint which was supported by testimony in Case No. 232, effective by stipulation in this case.

First: That it is a public carrier transporting for the public generally considerable tonnage in addition to the moving of cement from its plant, for which reason it is entitled to through route and joint rates with defendant; and

Secondly: In extending rates from main line junction points to the door of the Santa Cruz Portland Cement Company at Davenport on a branch line constructed for the sole purpose of transporting cement, and refusing to extend the main line rates from junction points to the plant served by separately operated properties, constitutes an unjust and unreasonable discrimination against the plants served by such separately operated railroads, and that this discrimination amounts to the cost of transporting cement from the plants located on these separately operated railroads to the junction points from which the main line rates apply.

Considerable testimony was offered as to the volume of business done by the Bay Point & Clayton Railroad Company for the public generally other than transporting its own product, the total earnings of the road being given as Fifty-five Thousand Five Hundred Twenty-five and 99/100 (55,525.99) Dollars for the fiscal year ending June 30, 1911, Four Hundred and Twelve (412) Dollars of which resulted from passenger traffic and the remainder from freight traffic.

As was stated in Case No. 232, the Commission is of the opinion that large steam roads should not in all cases be required to give through route and joint rates with industrial or tap line roads but that each case coming before the Commission must be considered upon the merits of that particular case, and in granting the prayer of complainant in this case and ordering the defendant to publish through route and joint rates with complainants and intervenors on cement the opinion of the Commission is not based upon the right of complainants and intervenors to through route and joint rates by reason of the volume of the traffic other than the movement of cement, but upon the circumstances disclosed in the case relating to the charge of discrimination and the reasonableness of the rate, which we believe has been sustained.

As shown by the tariffs of defendant company, of which the Commission is entitled to take judicial notice, the Southern Pacific Company extended its tracks from its main line to the Colton plant, and receives the product of the company there at the door of the plant, making its rates to destination from the plant. It, also, as is shown by its tariffs, receives the product of the Santa Cruz Portland Cement Company at the door of the plant at Davenport making its rates to destination from that plant.

In considering the claim of discrimination against the plants served by separately operated railroads, we must consider all of the circumstances surrounding the construction of the branch line railroad.

A witness for the intervenors testified that request was made on the Southern Pacific Company to construct a branch line from Tolonas to the cement plant of the Pacific Portland Cement Company, but the defendant positively refused to do so.

There is on file with this Commission a copy of a contract entered into on the 17th day of August, 1905, between

the Santa Cruz Portland Cement Company and the Southern Pacific Company, showing that the Southern Pacific Company built the railroad from Santa Cruz to Davenport for the Santa Cruz Portland Cement Company, receiving for such construction a certain sum which was to be returned to the Santa Cruz Portland Cement Company after a certain amount of money had been received by the Southern Pacific Company for the transportation of cement from the plant of the Santa Cruz Portland Cement Company.

Tariffs on file with this Commission also disclose the fact that a few years ago when a cement company was about to be established at San Juan, known as the San Juan Portland Cement Company, the Southern Pacific Company published joint through rates in connection with the San Juan Pacific Railway Company which was an adjunct of the San Juan Portland Cement Company, and that under such through route and joint rates there was a considerable movement of equipment for the construction of a plant at San Juan on which the San Juan Pacific received a division of the through rate, which through rates were the main line rates extended to apply to San Juan.

The defendant maintains joint rates in connection with the Iron Mountain Railway, an adjunct of the Mountain Copper Company, which joint rates are the rates applying to Kewick, the main line junction point on the Southern Pacific and from which joint rates the Iron Mountain Railway receives a division for its services.

The defendant has extended its main line rates to industries served by the Richmond Belt Railroad and allows that line a division of such rates.

Numerous cases could be cited where main line rates on various commodities have been extended to apply on branch lines and on separately operated lines. We would not be understood as contending that in every case junction point rates should be extended to apply to branch line points, but when it has been voluntarily done by the carriers, the presumption must be entertained that the rates are at least reasonable from carriers' standpoints.

In receiving the product of the cement plant at Colton at the door of the plant, making its rates therefrom to destination, and in receiving the product of the Santa Cruz Portland Cement Company at the door of the plant with rates therefrom to destination, while it compels the Cowell Portland Cement Company to deliver its product at the junction at Bay Point and the Pacific Portland Cement Company to deliver its product at junction at Toleras, the defendant is discriminating against complainants and intervenors. It must be apparent that the only obligation of the defendant in naming rates for the cement plant at Davenport or at Colton was to name rates from the main line junction points if it was to be consistent with its policy towards other plants, but instead the defendant has chosen to extend its main line rates to the door of these other plants while declining to do so for the complainants and intervenors.

We find as a fact from the evidence in this case that no satisfactory through route and joint rates for the transportation of cement now exist between Cowell, California, and points on the line of the Southern Pacific Company within the State of California and between Cement, California, and points on the lines of the Southern Pacific Company within the State of California and that public convenience and necessity demand the establishment of through routes and joint rates for the transportation of cement between said points.

We find further than the rates on cement which are now in effect between Bay Point, California, and points on the lines of the Southern Pacific Company in California would be at least reasonable joint rates for the transportation of cement between Cowell and said points on the lines of the Southern Pacific Company within the State of California.

We also find that rates on cement which are now in effect between Toleras, California, and points on the lines of the Southern Pacific Company in California would be at least reasonable

Joint  
rates for the transportation of cement between Cement and points  
in California on the lines of the Southern Pacific Company.

We are of the opinion that the cement rates generally  
in California, owing to the rapid growth of the cement industry  
and the largely increased demand for cement, are in need of revis-  
ion and that a revision of the joint rates herein established will  
probably be necessary.

If the parties cannot agree upon the divisions between  
them of the joint rates herein established by the Commission,  
they shall apply to the Commission for a supplemental order estab-  
lishing such divisions.

We recommend that the following form of order be issued:

O R D E R

THE COWELL PORTLAND CEMENT COMPANY, a corporation, and  
the BAY POINT & CLAYTON RAILROAD COMPANY, a corporation, having  
applied to this Commission for through route and joint rates with  
the Southern Pacific Company on shipments of cement from the plant  
of the complainant at Cowell, California, to various destinations  
and the Pacific Portland Cement Company, a corporation, and the  
Cement Tolomas Tidewater Railroad Company, a corporation, having  
intervened and asked for a similar order on shipments of cement  
from Cement, California, to various destinations, and the Commission  
finding as a fact that no satisfactory through route and joint  
rates for the transportation of cement now exist between Cowell,  
California, and points on the lines of the Southern Pacific Company  
within the State of California and from Cement, California, to  
points on the lines of the Southern Pacific Company within the State  
of California, and the Commission further finding that public con-  
venience and necessity demand the establishment of through routes  
and joint rates for the transportation of cement between said points  
and that the rates on cement now in effect between Bay Point and  
points on the lines of the Southern Pacific Company in California

will be at least just and reasonable joint rates for transportation of cement between Cowell, California, and said points on the lines of the Southern Pacific Company within the State of California and that the rates on cement now in effect between Tolenes, California, and points on the lines of the Southern Pacific Company in California will be at least just and reasonable joint rates for transportation of cement between Cement and said points on the lines of the Southern Pacific Company within the State of California, and basing its findings upon the foregoing findings of fact and upon the further statement of facts which appear in the opinion which precedes this order.

IT IS HEREBY ORDERED as follows:

First: Through routes and joint rates for the transportation of cement are hereby established between Cowell, California, and all points in California on the lines of the Southern Pacific Company; said joint rates shall be the rates which are now charged by the Southern Pacific Company for the transportation of cement from Bay Point to such points on its said line of railway.

Second: Through routes and joint rates for the transportation of cement are hereby established between Cement, California, and all points in California on the lines of the Southern Pacific Company; said joint rates shall be the rates which are now charged by the Southern Pacific Company for transportation of cement from Tolenes to such points on its said line of railway.

Third: The Southern Pacific Company is hereby ordered to publish and file with the Commission within twenty (20) days from the service upon it of this order tariffs showing such through routes and joint rates.

Fourth: The parties hereto shall seek to agree upon the proper division of the joint rates herein established, but in event such agreement cannot be reached on or before fifteen (15) days from the service of this order upon the parties hereto, this Commission will proceed to establish the division of said joint

rates as provided by law.

The foregoing opinion and order are hereby approved and ordered filed as the opinion and order of the Railroad Commission of the State of California.

Dated at San Francisco, California, this 25th  
day of October, 1912.

John M. Eschelman  
H. Loveland  
Lee Gordon  
Max Thelen  
Edwin O. Edgerton  
Commissioners.

RECOMMENDATIONS OF THE COMMISSION IN CONNECTION  
WITH THE DECISIONS IN CASE 232 and CASE 233.

---

It is apparent to the Commission that main points in controversy in these cases are the divisions or allowances to be made complainants and intervenors for delivery of cement to main line junction points of the defendants.

The Commission desires to dispose of this controversy, if possible, at this time and the recommendations hereafter made have this object in view. We, therefore, recommend the following:

1. That the Southern Pacific Company and the Atchison, Topeka & Santa Fe Railway Company arrange to publish divisions of the joint rates established in the decisions in Case No. 232 and Case No. 233 on the following basis:

(a) When rate from Cement or Cowell to destination is \$1.00 per ton of 2000 lbs., or less, the Bay Point & Clayton Railroad and the Cement Tolenes & Tidewater Railroad shall receive ten cents (10%) per ton, maximum five (5.00) dollars per car.

(b) When the rate from Cowell or Cement to destination is in excess of \$1.00 per ton of 2000 lbs. the Bay Point and Clayton Railroad and the Cement Tolenes and Tidewater Railroad shall receive twenty (20) cents per ton.

2. That the Southern Pacific Company and the Atchison, Topeka & Santa Fe Railway Company arrange to publish rates through from the plant of the Riverside Portland Cement Company on the same basis as now apply from the Colton plant and arrange for the same allowance for the railroad operated by the Riverside Portland Cement Company as we recommend for the Bay Point & Clayton Railroad and the Cement Tolenes and Tidewater Railroad, whenever the railroad operated by the Riverside plant brings itself within the requirements

of the Public Utilities Act governing common carriers.

3. That the Atchison, Topeka & Santa Fe Railway Company and the Southern Pacific Company establish in connection with their cement rates and the joint rates established by the Commission in Case 232 and Case 233 the following minimum carload weights:

(a) When the rate from point of origin to destination is 75 cents per ton, or less, minimum carload weight shall be the marked capacity of the car.

(b) When the rate from point of origin to destination is in excess of 75 cents per ton minimum carload weight shall be 60,000 pounds.

4. Many informal complaints have been made to the Commission concerning excessive cement rates between the mills of northern and southern California and San Joaquin Valley points. We have made a careful study of this situation and suggest to the carriers that the following rates from various cement plants to points in the San Joaquin Valley be published:
