Decision No. 48712

BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA

In the Matter of the Investigation )  
 into the rates, rules, regulations, )  
 charges, allowances and practices )  
 of all common carriers, highway )  
 carriers and city carriers relating )  
 to the transportation of property. )

Case No. 4808

Appearances

Herbert Cameron and E. O. Blackman, for California Dump Truck Owners Association, petitioner.

Leonard F. Schempp, Lloyd E. Hendrickson, Leo Chwastek, Fernando Hernandez, J. E. McGrath, Michael Chwastek, Sam Beniche, Walter Gage, John N. Daniel, Francis W. Walker, George H. Crawford, Nick Heinen, Eugene Spruell, D. A. Pearce, L. F. Hotchkin, Harold F. Ward, E. A. Wood, Don G. Gray, J. Oscar Castra, Ansel Tate, Walter R. Dyer, Lawrence L. Sanders, Walter E. Baldwin, Maurice E. Miller, Pete Bonsangue, Norman Serotsky, C. A. Cox, A. T. Miller, Leroy I. Stanvick, F. J. Schlagel, John N. Dean, D. L. McConnell, Gustavo Katal, G. R. McConnell, Philip Garfield, Ernest Di Peso, Frank De Masi, F. L. George, Kenneth C. Erickson, Jim T. Winget, Louis D. Bonsangue, Frank Christian, Edward A. Reichardt, and Raymond Scott, for various highway carriers, respondents.

Austin H. Peck, Jr., H. G. Feraud, Harold Easton and Frank B. Hagan for various shippers and organizations, interested parties.

Grant L. Malquist, of the staff of the Public Utilities Commission of the State of California.

SUPPLEMENTAL OPINION

This opinion relates to the petition filed in this proceeding on March 19, 1952, by the California Dump Truck Owners Association seeking revision of minimum rates, rules and regulations governing the transportation of asphaltic concrete and cold road oil mixture in dump truck equipment by radial highway common carriers, highway

contract carriers and city carriers between points within southern California.

Public hearings of the matters involved were held in May and June, 1952. An examiner's proposed report was issued and exceptions thereto were filed. Subsequently, upon the Commission's own motion and also in response to request from petitioner, this phase of Case No. 4808 was reopened for the receipt of additional evidence. Further hearings were held before Examiner Abernathy on March 2 and March 6, 1953. The matters are ready for decision.

Petitioner's proposals relate principally to the rates for movements of asphaltic concrete and cold road oil mixture between specified production areas and delivery zones in Los Angeles, Orange, San Diego and Ventura counties.<sup>1</sup> Petitioner alleges that the present zone rates do not reflect the costs applicable to the transportation of asphaltic concrete. Evidence in the form of studies of vehicle running times, mileages and costs involved in the delivery of asphaltic concrete in dump truck equipment was submitted by petitioner in support of its proposals.

Granting of the petition was opposed by the Southern California Rock Products Association, representing the principal producers of rock, sand and gravel in Los Angeles and Orange counties, and by two producers of asphaltic concrete. Generally speaking, these parties contended that petitioner's cost allegations were not substantiated by its cost studies and that the studies of vehicle running times do not disclose sufficient differences in operating conditions, as compared to the operating conditions upon which the

---

<sup>1</sup> For convenience the term "asphaltic concrete" will be used hereinafter to designate both asphaltic concrete and cold road oil mixture.

present zone rates are based, to justify the sought revisions.<sup>2</sup>

In his proposed report the Examiner concluded that the record did not justify adoption of petitioner's proposals. He recommended, however, an increase of 7 percent in the zone and distance rates for the transportation of asphaltic concrete to compensate for increases in wage and insurance costs which the carriers have experienced since October, 1950, when hearings in the matter of those rates were previously held.<sup>3</sup>

Petitioner and an asphaltic concrete producer took exception to the increase recommended by the Examiner. Petitioner asserted that the circumstances require a general revision of the zone rates to remove inequities in the present rate structure and that a horizontal increase in the rates as recommended by the Examiner would only aggravate those inequities, would prompt discriminatory practices by the carriers, and would cause serious disadvantage and loss to shippers and carriers alike. In respect to the Examiner's evaluation of petitioner's cost evidence and vehicle time studies, petitioner also took exception to the conclusions reached.<sup>4</sup> The exceptions of the producer of asphaltic concrete were confined to a recommendation

---

<sup>2</sup>

Studies of vehicle running times were submitted also by the Southern California Rock Products Association and by the Sully Miller Contracting Company, producers of asphaltic concrete. The running times which were developed in these studies differ in numerous respects from the corresponding data submitted by petitioner.

<sup>3</sup>

In arriving at the conclusions set forth in his report, the Examiner discussed in detail the evidence submitted at the hearings in May and June, 1952. Further discussion of the evidence is unnecessary except with respect to matters to which exceptions were taken.

<sup>4</sup>

The Southern California Rock Products Association replied to petitioner's exceptions, asserting that in various respects said exceptions are not supported by the record.

that no increase be effected in the rates for that product until the minimum rates for sand, rock and gravel should be increased correspondingly. Allegedly, establishment of the increased rates recommended by the Examiner without a corresponding increase in the rates for sand, rock and gravel would unduly discriminate against the transportation of asphaltic concrete. The exceptions to the Examiner's report and the replies to the exceptions have all been considered carefully but will not be discussed further herein inasmuch as the record adduced at the further hearings on March 2 and 6, 1953, provides basis for disposing of the issues raised in the exceptions and replies.

At the further hearings evidence was submitted by petitioner's manager and by a transportation engineer of the Commission's staff. Petitioner's manager introduced and explained a study which he had made to show present costs of operating dump truck equipment and the extent that such costs have increased since the zone rates for asphaltic concrete and for certain other commodities were last considered in October, 1950. According to the manager's figures present hourly costs of operating 3-axle dump trucks are \$6.76 per hour. This figure represents an increase of between 13 and 14 percent over corresponding cost data which were submitted in evidence in this proceeding by petitioner and by a Commission engineer in October, 1950.<sup>5</sup>

The Commission engineer submitted figures representing averages of the time studies introduced earlier by petitioner, by the Southern California Rock Products Association and by the Sully-Miller

---

<sup>5</sup> The manager's cost figures include an allowance for profit (before provision for income taxes) as indicated by an operating ratio of 93 percent.

Contracting Company. The averages were developed in accordance with a suggestion in the Examiner's report that averaging of the three studies would result in figures more representative of normal running times between production areas and delivery zones than the figures shown in any of the studies separately. In explaining the development of his figures, the engineer stated in effect that although the procedures followed had mainly been to make the numerous calculations necessary to average the three time studies the reasonableness of individual times was also tested. Where abnormal differences between the studies were observed in the running times for the same trips, field trips were made to ascertain the reason for the differences and how to resolve them most reasonably. In some instances revisions in routes were made where it was found that the running times had been developed over streets closed to truck traffic. The engineer also submitted a formula which he said would provide an equitable basis for the distribution of costs and the establishment of rates to the various delivery zones. This formula was developed from an analysis of the time involved in the transportation of more than 750,000 tons of asphaltic concrete, about 25 percent of the total quantity of asphaltic concrete produced and delivered in Los Angeles County during 1952.

A representative of the Sully-Miller Contracting Company, which produces asphaltic concrete at various plants in Los Angeles and Orange counties, took exception to the time data submitted by the Commission engineer. He said that he had developed similar figures on the basis of the current time studies, that he had compared his figures with those of the Commission engineer and with corresponding time studies made in 1946, and that he had found various differences which indicated to him error in the compilation of the engineer's data.

Also, he pointed out that the figures submitted by the engineer do not reflect running times over a portion of a main route from his company's plant at Long Beach or over a portion of a route south from his company's plant at El Monte.

Petitioner's proposals involve three principal matters for determination: (a) whether a specific scale of rates for asphaltic concrete should be established in lieu of the present rates which are based on the rates for sand, rock and gravel; (b) the costs currently applicable to the transportation of asphaltic concrete and (c) the times required to make deliveries of that commodity to the various delivery zones.

The propriety of basing rates for asphaltic concrete on those for sand, rock and gravel has been a matter in issue several times in previous phases of this proceeding. Although proposals to establish rates specifically for asphaltic concrete have not been shown to be justified hitherto, the present extensive record supports different conclusions. The transportation of asphaltic concrete is performed under substantially different conditions than those applicable to transportation of the other commodities. The evidence shows that the movements are in truckload quantities predominantly whereas a large portion of the transportation of sand, rock and gravel is in truck and trailer combinations which permit economies not attained in the use of the smaller units. The movements of asphaltic concrete are subject to different time factors than those applicable to sand, rock and gravel. In the light of these and related rate-making elements it is concluded that revision of the asphaltic concrete rates to reflect specifically the applicable elements would be appropriate at this time.

As to the level of the costs the evidence is clear that since October, 1950, the costs applicable to the transportation of asphaltic concrete have increased substantially. With exceptions relating to vehicle usage and to depreciation the cost data which petitioner submitted at the further hearings appear to set forth reasonably the extent of the increases and the present costs of the transportation service. In the development of its figures petitioner used a lesser vehicle use factor than was used in previous studies. In justification of the reduced use-factor figure the witness explained that heavy rains and labor strikes during 1952 had resulted in lower usage of carrier equipment. However, there was no showing that the adverse operating circumstances during 1952 are reasonably representative of future conditions. Accordingly it does not appear that the development of costs on the lower use-factor figure provides a fair base for the establishment of rates for the future. In arriving at its allowance for depreciation expense petitioner employed an expected vehicle service life of six years. In the previous decision in this proceeding relating to the rates for asphaltic concrete (Decision No. 45175 dated December 1950) the Commission found seven years to be the proper service life for 3-axle dump truck equipment. Inasmuch as no specific evidence was advanced by petitioner to cause the Commission to alter its conclusions heretofore with respect to the propriety of the seven-year figure, that figure will be adopted for the purposes of modifying petitioner's data. Adjustment of petitioner's data to give effect to the indicated modifications will result in a reduction of the hourly cost figure shown to be \$6.64. It appears that charges based on this amount will reasonably compensate the carriers for their services in transporting asphaltic concrete and that the zone rates for

asphaltic concrete should be revised accordingly. The formula which the Commission engineer advocated for developing the costs and the rates to the various zones appears reasonable for those purposes and will be adopted. The distance rates for asphaltic concrete should be adjusted also in order to reflect increases in operating costs which have become effective since the rates were last revised. In his proposed report the Examiner recommended an increase of 7 percent in the distance rates. In view of the additional evidence adduced at the further hearings, it appears that present costs justify a greater increase than 7 percent and that an increase of 10 percent in the distance rates will be reasonable and proper.

For the purposes of developing just, reasonable and nondiscriminatory zone rates for asphaltic concrete, the delivery time data which were submitted by the Commission engineer are preferable to any of the other time studies of record in the present phase of this proceeding. Since the engineer's data are largely averages of the studies of petitioner, of the Southern California Rock Products Association and of Sully-Miller Contracting Company, it appears that they are less subject to distortion from extremes in the variables affecting the times required to make deliveries of asphaltic concrete. His figures, moreover, have been adjusted to eliminate the effect of abnormal variations in the reported times or of the use of non-legal routes. As compared with the studies which resulted in the time factors upon which the present rates are based, which studies were conducted about seven years ago, his figures in their entirety represent a summation of extensive and intensive efforts by the carriers, by

the shippers and by the Commission's staff to arrive at representative delivery times under current traffic conditions. The engineer's data will be used in the development of the zone rates to be hereinafter prescribed.

These conclusions with respect to the time data of the Commission engineer are reached notwithstanding the contentions of the witness of the Sully-Miller Contracting Company that the data are not fully representative of the delivery times from the plants of his company. The contentions have as their basis the fact that in one case no determination of the vehicle running-times over a route from one of the company's plants was made in any of the time studies and that in the other case time data over another route was omitted. Adjustment of the figures to reflect these omissions would result in reductions in the delivery times shown for some of the zones served by the Sully-Miller Company. However, it does not appear that the changes are of such consequence that establishment of rates on the data of record should be withheld pending adjustment thereof or that the rates which would be established on such data would be unduly adverse to the Sully-Miller Contracting Company. Although the engineer's figures will be used without modification for the development of the rates prescribed by the order which follows, it will be the Commission's purpose to have its staff submit at the earliest possible moment supplementary time studies concerning the routes in question to the end that any necessary adjustments in the rates may be made with the minimum of delay.

Upon consideration of all of the facts and circumstances of record we are of the opinion and find that the proposed modifications of the existing zone and distance rates for the transportation

of asphaltic concrete have been justified to the extent provided by the order herein. To this extent the petition filed March 19, 1952, by the California Dump Truck Owners Association will be granted and in all other respects it will be denied.

In the publication of the revised rates for asphaltic concrete, the tariff pages in City Carriers' Tariff No. 6 - Highway Carriers' Tariff No. 7 setting forth rates applicable to the transportation of rock, sand, gravel and related products will be revised to incorporate the increases in the rates for those products provided by Supplement No. 9 to the tariff.

The tariff will be amended also to correct the numbering assigned to one of the rules therein. The rule "Alternative Application of Distance Rates in Section No. 2 with Combination Rates Based Upon Zone Rates," through inadvertence was designated Item No. 210 on Page 10-A. It should have been designated Item No. 208.

O R D E R

Based upon the evidence of record and on the conclusions and findings set forth in the preceding opinion,

IT IS HEREBY ORDERED that City Carriers' Tariff No. 6 - Highway Carriers' Tariff No. 7 (Appendix "A" to Decision No. 32566, as amended) be and it is hereby further amended by incorporating therein Supplement No. 10 Cancels Supplement No. 9 and the original and revised pages attached hereto and listed in Appendix "A" also attached hereto, which pages and appendix by this reference are made a part hereof.

IT IS HEREBY FURTHER ORDERED that in all other respects Decision No. 32566, as amended, shall remain in full force and effect.

IT IS HEREBY FURTHER ORDERED that except to the extent provided herein the petition of the California Dump Truck Owners Association, filed March 19, 1952, be and it is hereby denied.

This order shall become effective July 6, 1953.

Dated at San Francisco, California, this 16th day of June, 1953.
