# Decision 84 08 123 AUG 7 1984

BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIF

In the Matter of the Application of SAN DIEGO GAS & ELECTRIC COMPANY for Authority to Decrease its Gas Rates and Charges Pursuant to its Filed Consolidated Adjustment Mechanism (CAM).

Application 84-03-57 (Filed March 19, 1984)

27

(See Decision 84-07-071 for appearances.)

### <u>O P I N I O N</u>

On March 19, 1984 San Diego Gas and Electric Company (SDG&E) filed this application for authority to increase its gas rates under its Consolidated Adjustment Mechanism (CAM) tariff clause. This application was consolidated for hearing with Southern California Gas Company (SoCal) Application (A.) 84-03-30. Hearings were held on April 26, 1984 in San Francisco and submitted subject to briefs due on June 22, 1984.

Because SDG&E buys all of its gas from SoCal at the rate determined in the SoCal offset proceedings, its revenue requirement is generally without controversy. This proceeding presented only two revenue requirement issues which were not contested--(1) The cost of gas from SoCal and (2) sales quantity for electric generation (GN-5).

The rate SDG&E pays SoCal is calculated by a previously established formula based on SoCal's average cost of gas. We will adopt the rate calculated by SoCal (40.121 cents/therm) as reasonable.

The staff's GN-5 sales volumes will be adopted. The staff has reduced the GN-5 sales volumes estimated by both SoCal and San Diego. The basis for the reduction is higher estimated performance factors for SONGS Units II and III.

1

A.84-03-57 ALJ/rr/jc

Line No.

The following table illustrates the development of the revenue requirement which is a decrease of \$16,429,000 for 12 months beginning May 1, 1984. This revenue decrease is computed after the baseline rate reduction provided in D.84-04-041 was implemented.

#### TABLE 1

San Diego Gas & Electric Company Gas Department 12 Months Beginning May 1, 1984 CAM Revenue Requirement

Item

16			394
	IV.	CAM Revenue Requirement (L9+L14+L15)	502,569
17	۷.	Revenue at Present Rates	518,998
18	VI.	Increase (L16-L17)	_16,429

Based on the PGA revenue requirement, the PGA rates are: GN-5 = .43738 \$/therm Retail = .44674 \$/therm

- 2 -

### <u>Rate Design</u>

With the revenue requirement determined, rate design is the next major subject area. The broad rate design issue is how the CAM revenue requirement of \$502,569,000 (Table I, line 16) will be recovered. Another way of discussing this issue is how will the revenue requirement decrease be allocated to the various customer classes.

ALTIC

SDG&E's position is provided in the following quote from its testimony in this case:

"SDG&E recommends that, at this time, any change in the CAM requirements result in a direct change to the residential baseline rates, provided that the baseline rates do not drop below 85% of the system average rate."

TURN argues that if it is possible to have baseline equal 85% of the system average rate without increasing rates to customers in the fuel switching category (low priority) Code Section 739 allows no other result. TURN's position would have us hold the Tier I rate at 85% of the SAR without regard to the level of Residential Tier II and Commercial rates.

2

A.84-03-57 ALJ/mra

In this proceeding, the staff position is that all customers should participate in the rate reduction. The standard applied by the staff to arrive at this position is not clear. However, in terms of Code Section 739, the staff apparently believes that the industrial rates must be lowered to prevent fuel switching and maintain or increase the industrial contribution to margin. The staff failed to elaborate on this contention or to present any evidence other than historical fuel switching figures. The staff did, however, present reasonable current fuel price data.

ALTIC

The company on the other hand, takes the position that the total rate reduction be allocated to baseline rates. The standard applied by the company to arrive at its position is also unclear. However, inherent in the company's position is that it believes that the industrial low priority rates do not require reduction to prevent further margin contribution loss.

Based on a comparison of the fuel price data supplied by the staff and SDG&E's current rates we cannot make a finding that low priority rates must be reduced to prevent further fuel switching. However, it is also apparent that the low priority rates are near their highest limit in terms of the alternate fuel price.

-4-

### A.84-03-57 ALJ/mra

If the entire decrease is allocated only to baseline, the resulting baseline rate is equal 50.573 cents/therm which is 87% of SAR. We agree with TURN that such a result is consistent with Code Section 739, and adopt this allocation method. The following Table 2 shows (1) current rates and (2) adopted rates. We find that the adopted rates bring baseline as close as possible to 85% of SAR while maintaining reasonable commercial and Residential Tier II rates.

## A.84-03-57 ALJ/rr/jc/bg \*

The last table is included to show the progress of bringing baseline closer to 85% of the system average rate since the general rate case rates went into effect in January 1984. We show on this table the rate structures adopted for January 1984, May 1984 and the adopted structure. The elements compared in each column reflects what we consider to be the most enlightening relationships:

- 1. Baseline to SAR
- Baseline to Residential Tier II 2.
- 3.
- Residential Average Rate to SAR Commercial Average Commodity Rate to SAR 4.

	January 1984	<u>May 1984</u>	Adopted	
	¢/th %	<u>¢/th</u> <u>%</u>	<u>¢/th</u> <u>%</u>	
Baseline Compared to SAR	62.426 103.5	57.896 96	50.572 87.0	
Baseline to Res. Tier II	94.139 156.1	94.139 156.1	94.139 161.9	
Residential Avg. Rate to SAR	67.426 112	67.462 112	61.720 106.2	
Commercial Avg. Commodity to SAR	77.484 128.5	77.484 128.5	77.484 133.3	
System Avg. Rate	60-310	60-310	58.144	

#### TABLE 3

A.84-03-57 ALJ/mra/bg \*

#### Findings of Fact

1. By this application SDG&E seeks authority to decrease its rates and charges from those presently in effect.

2. The revenue requirement decrease is \$16,429,000 from rates in effect May 15, 1984.

3. The present low priority industrial rates (all rates except Residential and GN-1 and 2) will not cause further fuel switching to reduce its present contribution to margin.

4. Reducing baseline rates to 85% of the SAR results in unreasonable Residential Tier II and commercial (GN-1 and 2) rates.

5. The rates shown in Table 2 are just and reasonable. Conclusions of Law

1. Baseline rates may be greater than 85% of the system average rates in order that other high priority rates be reasonable.

2. The revenue requirement decrease should be allocated to baseline rates since the resulting rates are reasonable and the resulting baseline rates are still over 85% of the system average rate.

3. The application to reduce rates should be granted to the extent discussed herein.

4. The rates shown in Table 2 are just and reasonable.

A.84-03-57 ALJ/rr/jc/bg \*

## $O \underline{R} \underline{D} \underline{E} \underline{R}$

IT IS ORDERED that on or after the effective of this order, SDG&E is authorized to file revised tariff schedules reflecting rates shown in Table 2. The new rate shall be effective no sooner than 5 days after the date of filing and shall apply only to service rendered on or after their effective date.

> This order becomes effective 10 days from today. Dated August 7, 1984, at San Francisco, California.

> > LEONARD M. GRIMES, JR. President VICTOR CALVO DONALD VIAL WILLIAM T. BAGLEY Commissioners

A\_84-03-57 ALJ/rr/jc

#### Rate Design

With the revenue requirement determined, rate design is the next major subject area. The broad rate design issue is how the CAM revenue requirement of \$502,569,000 (Table I, line 16) will be recovered. Another way of discussing this issue is how will the revenue requirement decrease be allocated to the various customer classes.

SDG&E's position is provided in the following quote from its testimony in this case:

"SDG&E recommends that, at this time, any change in the CAM requirements result in a direct change to the residential baseline rates, provided that the baseline rates do not drop below 85 % of the system average rate."

TURN argues that if it is possible to have baseline equal 85% of the system average rate without increasing rates to customers in the fuel switching category (low priority) Code Section 739 allows no other result.

We tend to agreé with TURN, however, we also believe that a standard of reasonableness governs the rate relationships among the following customer class rates:

- 1. Residential Tier I
- 2. Residéntial Tier II
- 3. Commercial GN-1
- 4. Commercial GN-2
- 5. Residential Average Rate
- 6. System Average Rate (SAR)

TURN'S position would have us hold the Tier I rate at 85% of the SAR without regard to the level of Residential Tier II and Commercial rates. While it is certainly our goal that baseline rates be no more than 85% of the SAR, we also believe that the other high

- 3 -

#### A\_84-03-57 ALJ/rr/jc

priority rates must be held within some limits of reason. We note two factors which have prevented this result thus far. The first is the low price of fuel oil. The second is the very high proportion of baseline sales to total residential sales (74.4%). With this high ratio it is very difficult to lower the baseline average while maintaining a set of reasonable rate ralationships among the other high priority rates. We hope to reexamine the baseline quantities in SDG&E's next general rate case.

In this proceeding, the staff position is that all customers should participate in the rate reduction. The standard applied by the staff to arrive at this position is not clear. However, in terms of Code Section 739, the staff apparently believes that the industrial rates must be lowered to prevent fuel switching and maintain or increase the industrial contribution to margin. The staff failed to elaborate on this contention or to present any evidence other than historical fuel switching figures. The staff did, however, present reasonable current fuel price data.

The company on the other hand, takes the position that the total rate reduction be allocated to baseline rates. The standard applied by the company to arrive at its position is also unclear. However, inherent in the company's position is that it believes that the industrial low priority rates do not require reduction to prevent further margin contribution loss.

Based on a comparison of the fuel price data supplied by the staff and SDG&E's current rates we cannot make a finding that low priority rates must be reduced to prevent further fuel switching. However, it is also apparent that the low priority rates are near their highest limit in terms of the alternate fuel price. We will, thus, allow the low priority rates to remain at their present levels and spread the rate decrease among the high priority residential and commercial customers. The method we choose is to hold the Residential Tier II at the current level and spread the decrease to Baseline and Commercial rates on an equal cents per therm basis.

## A.84-03-57 ALJ/rr/jc

The following Table 2 shows - (1) current rates and (2) adopted rates. If the entire decrease were allocated only to baseline, the resulting baseline rate would equal 50.573 ¢/therm which would be 87% of SAR. We find that the adopted rates bring baseline as close as possible to 85% of SAR while maintaining reasonable commercial and Residential Tier JI rates.
