Resolution No. STD- 1141

TRANSPORTATION DIVISION
TARIFF & LICENSE BRANCH
Tariff Section

Before the Public Utilities Commission of the State of California

RESOLUTION ORDERING DISPOSITION OF SPECIAL TARIFF DOCKET REQUESTS

Requests as identified hereinafter have been filed on the Special Tariff Docket for authority to make tariff changes for which permission of the Commission is requisite under provisions of the Public Utilities Code or orders of the Commission. Due consideration has been given to the representations contained in the verified requests, and good cause appearing, the following findings and order are made:

The Commission finds that the following requests are justified and should be granted subject to conditions specified in the orders which are attached hereto and by this reference made a part hereof:

Request and Order No.	*Request Filed By:*
STD-9972	Lopes Trucking Service, Inc.

The Commission finds that the following requests do not contain sufficient justification for the authority sought, and therefore should be denied without prejudice:

Request and Order No.	*Request Filed By:*
NONE	

The Commission finds that the following requests are of a nature not suitable for processing on the Special Tariff Docket, and therefore should be dismissed without prejudice:

Request and Order No.	*Request Filed By:*
NONE	

IT IS ORDERED that the aforesaid requests are granted, denied or dismissed, as the case may be, in accordance with the findings hereinbefore set forth, and as specified in the orders which are attached hereto and by this reference made a part hereof.

I certify that the foregoing resolution was duly introduced, passed and adopted at a conference of the Public Utilities Commission of the State of California, held on the 11th day of January, 1989, the following Commissioners voting favorably thereon.

G. MITCHELL WILK
President
FREDERICK R. DUDA
JOHN B. OHANIAN
Commissioners

Executive Director of the
Public Utilities Commission of the State of California

Order No. STD-9972

Before the Public Utilities Commission of the State of California

Request filed by:

Lopes Trucking Service, Inc.

Special Tariff Docket
Request Numbered Same as
Order Number Above.

In conformity with the findings and order made by the Commission in a resolution entered this day, the request, copy of which is attached hereto and by this reference made a part hereof, is granted, subject to the following conditions:

The authority herein granted is limited strictly to its terms, and shall expire unless the tariff provisions authorized herein are published and filed in the San Francisco office of this Commission within ninety days after the date hereof. The item of tariff or supplement issued pursuant to this order shall bear reference to this order in substantially the following form:

"Authorized by Cal. P.U.C. Order No. STD-9972."

This order issued January 11, 1989, by the Public Utilities Commission of the State of California by the adoption of the resolution of which this order is a part.

Executive Director of the
Public Utilities Commission of the State of California

BEFORE THE PUBLIC UTILITIES COMMISSION
OF THE STATE OF CALIFORNIA

Application of Lopes Trucking Service, Inc. (T-110663) under Shortened Procedure Tariff Docket for authority to cancel its participation in Pacific Motor Tariff Bureau, Inc., Local Freight Tariff No. 14 naming commodity rates for the transportation of cement and other commodities and in lieu thereof concurrently publish rates in an individual tariff.	)	SPT Docket No. 9972

APPLICATION

The application of Lopes Trucking Service, Inc. hereinafter referred to as Lopes or applicant, respectfully shows:

I

Applicant is a corporation. Applicant's mailing address is 2127 S. Carpenter Rd., Modesto, California 95351. Applicant's telephone number is (209) 537-8901. A certified copy of the applicant's Articles of Incorporation is on file with the Commission under file T-110663.

II

Correspondence and communications in regard to this application are to be addressed to:

Rod Logan
Sam Miles, Inc.
2124 F Street
Bakersfield, California 93301
Telephone (805) 324-1663

III

Applicant operates as a cement carrier with authority authorized by Decision 84809. Applicant has authority to engage in the transpor-

SPTD #4

tation of portland or similar cements, either alone or in combination with lime or powdered limestone, in bulk or in packages, from any and all points of origin to any and all points within the following counties, namely: Merced, San Joaquin, Solano, and Stanislaus. Applicant also holds highway common carrier authority as well as the following permits: Tank Truck Carrier, Highway Contract Carrier, Agricultural Carrier, Dump Truck Carrier, Livestock Carrier, Heavy-Specialized Carrier, and Vacuum Truck Carrier. This application concerns only applicant's operation as a cement carrier.

IV

Applicant currently has on file with the Commission participation in Pacific Motor Tariff Bureau issues including Local Freight Tariff No. 14 which contains rates for the transportation of cement. By this application, applicant requests authority to cancel its participation in Local Freight Tariff No. 14 and to publish concurrently rates in an individual tariff at the same rate level. In the new publication, certain provisions would be deleted such as exceptions to the distance table and arbitrary charges. These items do not apply to delivery points where applicant has authority to transport shipments and consequently their deletion would not affect the rates of applicant. Also, the format of the individual tariff would be somewhat different than Local Freight Tariff No. 14 in that the individual tariff is based on the format established by former Minimum Rate Tariff 10 published by the California Public Utilities Commission. However, the substance of each item and its affect on applicant's rates would be no

different from what is currently in effect in Pacific Motor Tariff Bureau Local Freight Tariff No. 14. Concurrently with the filing of the proposed individual tariff, applicant also intends to file under General Order 147-A, Rule 7.7, an individual tariff containing rates on general commodities to replace applicant's current participation in Pacific Motor Tariff Bureau. With the filing of the cement carrier tariff and the general commodities tariff, applicant would then be completely withdrawn from Pacific Motor Tariff Bureau.

V

Since the new individual tariff proposed by applicant would contain the same rules and rates to which applicant is currently subject in Pacific Motor Tariff Bureau Local Freight Tariff No. 14, in no event would an increase in revenue resulting from this publication be as much as one percent.

VI

Applicant avers that this application is intended to simplify tariff publication and reduce tariff filing costs by allowing applicant to publish an individual tariff at the same rate level it now uses.

VII

This is not a major action under Sections 3502.1 and 3502.2 of the California Public Utilities Code.

VIII

Applicant alleges that the cost of reproducing and distributing copies of this application to all carriers operating in the state of

California would be excessive and that adequate notice of the intent of applicant will be accomplished through routine publication in the Commission's Daily Calendar. Therefore, in order to secure just, speedy and inexpensive determination of the issues present, waiver of Rule 21F of the Rules of Practice and Procedure is respectfully requested under Rule 87 of the Rules of Practice and Procedure. Applicant knows of no opposition to this application. A copy of this application will be served by first-class mail to any party upon request.

WHEREFORE applicant prays that relief sought by this application be granted; and that the Commission issue its ex parte order permitting applicant to publish its individual tariff; that increases resulting in an increase in applicant's gross revenue as a cement carrier of not more than one percent be authorized; that said order provide that the tariff be made effective within five days of its publication; that departure from Sections 460 and 461.5 of the Public Utilities Code be authorized to the extent necessary to apply the increase granted; and that the Commission grant such other order and further relief as may be reasonable and proper.

Executed on November 28, 1988, at Modesto, California.

By: /s/ Gerald V. Lopes, Pres.
Gerald V. Lopes, President
Lopes Trucking Service, Inc.
2127 S. Carpenter Rd.
Modesto, CA 95351

VERIFICATION

I am an officer of the applicant and am authorized to make this Verification on its behalf. The statements in the foregoing document are true of my own knowledge, except as to matters therein stated on information and belief, and as to those matters, I believe them to be true.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on November 28, 1988, at Modesto, California.

Title 49 United States Code

CHAPTER 27—HAZARDOUS MATERIALS

TRANSPORTATION

SEC. 1801. Congressional declaration of policy.

It is declared to be the policy of Congress in this chapter to improve the regulatory and enforcement authority of the Secretary of Transportation to protect the Nation adequately against the risks to life and property which are inherent in the transportation of hazardous materials in commerce.

SEC. 1802. Definitions

As used in this chapter, the term—

(1) "commerce" means trade, traffic, commerce, or transportation, within the jurisdiction of the United States, (A) between a place in a State and any place outside of such State, or (B) which affects trade, traffic, commerce, or transportation described in clause (A);

(2) "hazardous material" means a substance or material in a quantity and form which may pose an unreasonable risk to health and safety or property when transported in commerce;

(3) "Secretary" means the Secretary of Transportation, or his delegate;

(4) "serious harm" means death, serious illness, or severe personal injury;

(5) "State" means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, or Guam;

(6) "transports" or "transportation" means any movement of property by any mode, and any loading, unloading, or storage incidental thereto; and

(7) "United States" means all of the States.

SEC. 1803. Designation of hazardous materials

Upon a finding by the Secretary, in his discretion, that the transportation of a particular quantity and form of material in commerce may pose an unreasonable risk to health and safety or property, he shall designate such quantity and form of material or group or class of such materials as a hazardous material. The materials so designated may include, but are not limited to, explosives, radioactive materials, etiologic agents, flammable liquids or solids, combustible liquids or solids, poisons, oxidizing or corrosive materials, and compressed gases.

SEC. 1804. Regulations governing transportation of hazardous materials

General

(a) The Secretary may issue, in accordance with the provisions of section 553 of Title 5, including an opportunity for informal oral presentation, regulations for the safe transportation in commerce of hazardous materials. Such regulations shall be applicable to any person who transports, or causes to be transported or shipped, a hazardous material, or who manufactures, fabricates, marks, maintains, reconditions, repairs, or tests a package or container which is represented, marked, certified, or sold by such person for use in the transportation in commerce of certain hazardous materials. Such regulations may govern any safety aspect of the transportation of hazardous materials which the Secretary deems necessary or appropriate, including, but not limited to, the packing, repacking, handling, labeling, marking, placarding, and routing (other than with respect to pipelines) of hazardous materials, and the manufacture, fabrication, marking, maintenance, reconditioning, repairing, or testing of a package or container which is represented, marked, certified, or sold by such person for use in the transportation of certain hazardous materials.

Cooperation

(b) In addition to other applicable requirements, the Secretary shall consult and cooperate with representatives of the Interstate Commerce Commission and shall consider any relevant suggestions made by such Commission, before issuing any regulation with respect to the routing of hazardous materials. Such Commission shall, to the extent of its lawful authority, take such action as is necessary or appropriate to implement any such regulation.

Representation

(c) No person shall, by marking or otherwise, represent that a container or package for the transportation of hazardous materials is safe, certified, or in compliance with the requirements of this Act, unless it meets the requirements of all applicable regulations issued under this Act.

SEC. 1805. Handling of hazardous materials

Criteria

(a) The Secretary is authorized to establish criteria for handling hazardous materials. Such criteria may include, but need not be limited to, a minimum number of personnel; a minimum level of training and qualification for such personnel, type and frequency of inspection; equipment to be used for detection, warning, and control of risks posed by such materials; specifications regarding the use of equipment and facilities used in the handling and transportation of such materials; and a system of monitoring safety assurance procedures for the transportation of such materials. The Secretary may revise such criteria as required.

Registration

(b) Each person who transports or causes to be transported or shipped in commerce hazardous materials or who manufactures, fabricates, marks, maintains, reconditions, repairs, or tests packages or containers which are represented, marked, certified, or sold by such person for use in the transportation in commerce of certain hazardous materials (designated by the Secretary) may be required by the Secretary to prepare and submit to the Secretary a registration statement not more often than once every 2 years. Such a registration statement shall include, but need not be limited to, such person's name; principal place of business; the location of each activity handling such hazardous materials; a complete list of all such

For explanation of abbreviations and reference marks, see last page of this tariff.

hazardous materials handled, and an averment that such person is in compliance with all applicable criteria established under subsection (a) of this section. The Secretary shall by regulation prescribe the form of any such statement and the information required to be included. The Secretary shall make any registration statement filed pursuant to this subsection available for inspection by any person, without charge, except that nothing in this sentence shall be deemed to require the release of any information described by subsection (b) of section 552 of title 5, United States Code, or which is otherwise protected by law from disclosure to the public.

Requirement

(c) No person required to file a registration statement under subsection (b) of this section may transport or cause to be transported or shipped hazardous materials, or manufacture, fabricate, mark, maintain, recondition, repair, or test packages or containers for use in the transportation of hazardous materials, unless he has on file a registration statement.

SEC. 1806. Exemptions

General

(a) The Secretary, in accordance with procedures prescribed by regulation, is authorized to issue or renew, to any person subject to the requirements of this chapter, an exemption from the provisions of this chapter, and from regulations issued under section 1804 of this chapter, if such person transports or causes to be transported or shipped hazardous materials in a manner so as to achieve a level of safety (1) which is equal to or exceeds that level of safety which would be required in the absence of such exemption, or (2) which would be consistent with the public interest and the policy of this title in the event there is no existing level of safety established. The maximum period of an exemption issued or renewed under this section shall not exceed 2 years, but any such exemption may be renewed upon application to the Secretary. Each person applying for such an exemption or renewal shall, upon application, provide a safety analysis as prescribed by the Secretary to justify the grant of such exemption. A notice of an application for issuance or renewal of such exemption shall be published in the Federal Register. The Secretary shall afford access to any such safety analysis and an opportunity for public comment on any such application, except that nothing in this sentence shall be deemed to require the release of any information described by subsection (b) of section 552 of title 5, United States Code, or which is otherwise protected by law from disclosure to the public.

Vessels

(b) The Secretary shall exclude, in whole or in part, from any applicable provisions and regulations under this chapter, any vessel which is excepted from the application of section 201 of the Ports and Waterways Safety Act of 1972 by paragraph (2) of such section (46 U.S.C. 391a (2)), or any other vessel regulated under such Act, to the extent of such regulation.

Firearms and Ammunition

(c) Nothing in this chapter, or in any regulation issued under this chapter, shall be construed to prohibit or regulate the transportation by any individual, for personal use, of any firearm (as defined in paragraph (4) of section 232 of title 18, United States Code) or any ammunition therefor, or to prohibit any transportation of firearms or ammunition in commerce.

Limitation on Authority

(d) Except when the Secretary determines that an emergency exists, exemptions or renewals granted pursuant to this section shall be the only means by which a person subject to the requirements of this chapter may be exempted from or relieved of the obligation to meet any requirements imposed under this chapter.

SEC. 1807. Transportation of radioactive materials on passenger-carrying aircraft

General

(a) Within 120 days after the date of enactment of this section, the Secretary shall issue regulations, in accordance with this section and pursuant to section 1804 of this chapter, with respect to the transportation of radioactive materials on any passenger-carrying aircraft in air commerce, as defined in section 1301(4) of this title. Such regulations shall prohibit any transportation of radioactive materials on any such aircraft unless the radioactive materials involved are intended for use in, or incident to, research, or medical diagnosis or treatment, so long as such materials as prepared for and during transportation do not pose an unreasonable hazard to health and safety. The Secretary shall further establish effective procedures for monitoring and enforcing the provisions of such regulations.

Definition

(b) As used in this section, "radioactive materials" means any materials or combination of materials which spontaneously emit ionizing radiation. The term does not include materials in which (1) the estimated specific activity is not greater than 0.002 microcuries per gram of material; and (2) the radiation is distributed in an essentially uniform manner.

SEC. 1808. Powers and Duties of the Secretary

General

(a) The Secretary is authorized, to the extent necessary to carry out his responsibilities under this chapter, to conduct investigations, make reports, issue subpoenas, conduct hearings, require the production of relevant documents, records, and property, take depositions, and conduct, directly or indirectly, research, development, demonstration, and training activities. The Secretary is further authorized, after notice and an opportunity for a hearing, to issue orders directing compliance with this chapter or regulations issued under this chapter; the district courts of the United States shall have jurisdiction, upon petition by the Attorney General, to enforce such orders by appropriate means.

Records

(b) Each person subject to requirements under this chapter shall establish and maintain such records, make such reports, and provide such information as the Secretary shall by order or regulation prescribe, and shall submit such reports and shall make such records and information available as the Secretary may request.

Inspection

(c) The Secretary may authorize any officer, employee, or agent to enter upon, inspect, and examine, at reasonable times and in a reasonable manner, the records and properties of persons to the extent such records and properties relate to—

(1) the manufacture, fabrication, marking, maintenance, reconditioning, repair, testing, or distribution of packages or containers for use by any person in the transportation of hazardous materials in commerce; or
(2) the transportation or shipment by person of hazardous materials in commerce.
Any such officer, employee, or agent shall, upon request, display proper credentials.

Facilities and duties; contract limitations

(d)(1) The Secretary shall—
(A) establish and maintain facilities and technical staff sufficient to provide, within the Federal government, the capability of evaluating risks connected with the transportation of hazardous materials and materials alleged to be hazardous;
(B) establish and maintain a central reporting system and data center so as to be able to provide the law enforcement and firefighting personnel of communities, and other interested persons and government officers, with technical and other information and advice for meeting emergencies connected with the transportation of hazardous materials; and
(C) conduct a continuing review of all aspects of the transportation of hazardous materials in order to determine and to be able to recommend appropriate steps to assure the safe transportation of hazardous materials.
(2) Nothing in this subsection shall be construed to limit the authority of the Secretary to enter into a contract with a private entity for use of a supplemental reporting system and data center operated and maintained by such entity.

Annual Report

(e) The Secretary shall prepare and submit to the President for transmittal to the Congress on or before June 15 of each year a comprehensive report on the transportation of hazardous materials during the preceding calendar year. Such report shall include, but need not be limited to—
(1) a thorough statistical compilation of any accidents and casualties involving the transportation of hazardous materials;
(2) a list and summary of applicable Federal regulations, criteria, orders, and exemptions in effect;
(3) a summary of the basis for any exemptions granted or maintained;
(4) an evaluation of the effectiveness of enforcement activities and the degree of voluntary compliance with applicable regulations;
(5) a summary of outstanding problems confronting the administration of this title, in order of priority; and
(6) such recommendations for additional legislation as are deemed necessary or appropriate.

SEC. 1809. Penalties

Civil

(a)(1) Any person (except an employee who acts without knowledge) who is determined by the Secretary, after notice and an opportunity for a hearing, to have knowingly committed an act which is a violation of a provision of this title or of a regulation issued under this chapter, shall be liable to the United States for a civil penalty. Whoever knowingly commits an act which is a violation of any regulation, applicable to any person who transports or causes to be transported or shipped hazardous materials, shall be subject to a civil penalty of not more than $10,000 for each violation, and if any such violation is a continuing one, each day of violation constitutes a separate offense. Whoever knowingly commits an act which is a violation of any regulation applicable to any person who manufactures, fabricates, marks, maintains, reconditions, repairs, or tests a package or container which is represented, marked, certified, or sold by such person for use in the transportation in commerce of hazardous materials shall be subject to a civil penalty of not more than $10,000 for each violation. The amount of any such penalty shall be assessed by the Secretary by written notice. In determining the amount of such penalty, the Secretary shall take into account the nature, circumstances, extent, and gravity of the violation committed and, with respect to the person found to have committed such violation, the degree of culpability, any history of prior offenses, ability to pay, effect on ability to continue to do business, and such other matters as justice may require.
(2) Such civil penalty may be recovered in an action brought by the Attorney General on behalf of the United States in the appropriate district court of the United States or, prior to referral to the Attorney General, such civil penalty may be compromised by the Secretary. The amount of such penalty, when finally determined (or agreed upon in compromise), may be deducted from any sums owed by the United States to the person charged. All penalties collected under this subsection shall be deposited in the Treasury of the United States as miscellaneous receipts.

Criminal

(b) A person is guilty of an offense if he willfully violates a provision of this chapter or a regulation issued under this title. Upon conviction, such person shall be subject, for each offense, to a fine of not more than $25,000, imprisonment for a term not to exceed 5 years, or both.

SEC. 1810. Specific relief

General

(a) The Attorney General, at the request of the Secretary, may bring an action in an appropriate district court of the United States for equitable relief to redress a violation by any person of a provision of this chapter, or an order or regulation issued under this chapter. Such district courts shall have jurisdiction to determine such actions and may grant such relief as is necessary or appropriate, including mandatory or prohibitive injunctive relief, interim equitable relief, and punitive damages.

Imminent Hazard

(b) If the Secretary has reason to believe that an imminent hazard exists, he may petition an appropriate district court of the United States, or upon his request the Attorney General shall so petition, for an order suspending or restricting the transportation of the hazardous material responsible for such imminent hazard, or for such other order as is necessary to eliminate or ameliorate such imminent hazard. As used in this subsection, an "imminent hazard" exists if there is substantial likelihood that serious harm will occur prior to the completion of an administrative hearing or other formal proceeding initiated to abate the risk of such harm.

SEC. 1811. Relationship to other laws

General

(a) Except as provided in subsection (b) of this section, any requirement, of a State or political subdivision thereof, which is inconsistent with any requirements set forth in this chapter, or in a regulation issued under this chapter, is preempted.

State Laws

(b) Any requirement, of a State or political subdivision thereof, which is not consistent with any requirement set forth in this chapter, or in a regulation issued under this chapter, is not preempted if, upon the application of an appropriate State agency, the Secretary determines, in accordance with procedures to be prescribed by regulation, that such requirement (1) affords an equal or greater level of protection to the public than is afforded by the requirements of this chapter or of regulations issued under this chapter and (2) does not unreasonably burden commerce. Such requirement shall not be preempted to the extent specified in such determination by the Secretary for so long as such State or political subdivision thereof continues to administer and enforce effectively such requirement.

Other Federal Laws

(c) The provisions of this chapter shall not apply to pipelines which are subject to regulation under the Natural Gas Pipeline Safety Act of 1968 (section 1671 et seq. of this title) or to pipelines which are subject to regulation under Hazardous Liquid Pipeline Safety Act of 1979 [49 U.S.C.A. §2001 et seq.]

SEC. 1813. Evaluation of training programs for incident prevention and response

Evaluation

(a) The Secretary and the Director of the Federal Emergency Management Agency (hereinafter in this section referred to as the "Director"), in coordination with other Federal, State, and local agencies with responsibilities relating to transportation of hazardous materials (including but not limited to the Environmental Protection Agency, the Department of Energy, and the Nuclear Regulatory Commission), shall each evaluate—

(1) programs conducted by Federal, State, and local agencies and private organizations which provide training to shippers, carriers, inspectors, and enforcement personnel involved in the transportation of hazardous materials with respect to compliance with and enforcement of rules, regulations, standards and orders promulgated by the Secretary under the authority of this title;

(2) programs conducted by Federal, State, and local agencies and private organizations which provide training to agencies or organizations responsible for responding to incidents involving transportation of hazardous materials; and

(3) planning programs conducted by Federal, State, and local agencies and private organizations for responding to incidents involving transportation of hazardous materials.

Report

(b) Not later than five months after October 30, 1984, enactment of this section, the Secretary and the Director shall each submit an interim report to the Congress on the results of their respective evaluations under subsection (a) of this section. Not later than 10 months after October 30, 1984, the Secretary and the Director shall complete such evaluations and submit the results of such evaluations to the Congress. Such reports shall include, but not be limited to—

(1) a description of existing planning programs for responding to incidents involving transportation of hazardous materials;

(2) a description of Federal, State, and (to the extent feasible) local training programs for responding to incidents involving transportation of hazardous materials and for compliance with and enforcement of rules, regulations, standards, and orders promulgated by the Secretary under the authority of this title;

(3) the amounts of funds expended per fiscal year in fiscal years 1980, 1981, 1982, 1983, and 1984 by Federal and State agencies on training programs described in paragraph (2); and

(4) recommendations concerning methods of funding such training programs, including but not limited to methods which assure long-term funding for such programs.

RESEARCH AND SPECIAL PROGRAMS ADMINISTRATION, DEPARTMENT OF TRANSPORTATION

Subchapter A—Transportation Programs Bureau

Part
100 (Reserved)
101 Office of Transportation Security - Cargo Security Advisory Standards
102-105 (Reserved)

Subchapter B—Hazardous Materials Transportation and Pipeline Safety

106 Rulemaking Procedures
107 Hazardous materials program procedures
108-109 (Reserved)

Subchapter C—Hazardous Materials Regulations

110-170 (Reserved)
171 General information, regulations, and definitions
172 Hazardous materials tables and hazardous materials communications regulations
173 Shippers—General requirements for shipments and packagings
174 Carriage by rail
175 Carriage by aircraft
176 Carriage by vessel
177 Carriage by public highway
178 Shipping container specifications
179 Specifications for tank cars
180-189 (Reserved)

Subchapter D—Pipeline Safety

PART 106—RULEMAKING PROCEDURES

Subpart A

GENERAL

§ 106.1 Scope. This part prescribes general rulemaking procedures for the issue, amendment, and repeal of regulations of the Research and Special Programs Administration of the Department of Transportation.

§ 106.3 Delegations. For the purposes of this part, Administrator means the Administrator, Research and Special Programs Administration or any of the following to whom he has delegated authority to conduct rulemaking proceedings:

(a) Director, Office of Hazardous Materials Transportation.
(b) Director, Office of Pipeline Safety.

§ 106.5 Regulatory dockets. (a) Information and data considered relevant by the Administrator relating to rulemaking actions, including notices of proposed rulemaking; comments received in response to notices; petitions for rulemaking and reconsideration; denials of petitions for rulemaking and reconsideration; records of additional rulemaking proceedings under § 106.25; and final regulations are maintained by the Research and Special Programs Administration at 400 7th St., SW, Washington, D.C. 20590.

(b) Any person may examine any docketed material at the offices of the Research and Special Programs Administration at any time during regular business hours after the docket is established, except material which the Administrator determines should be withheld from public disclosure under applicable provisions of any statute administered by the Administrator and section 552(b) of Title 5, United States Code, and may obtain a copy of it upon payment of a fee.

§ 106.7 Records. Records of the Research and Special Programs Administration relating to rulemaking proceedings are available for inspection as provided in section 552(b) of Title 5, United States Code, and Part 7 of the Regulations of the Office of the Secretary of Transportation (Part 7 of this title).

§ 106.9 Where to file petitions. Petitions for extension of time to comment submitted under § 106.19, petitions for hearings submitted under § 106.27, petitions for rulemaking submitted under § 106.31, and petitions for reconsideration submitted under § 106.35 must be submitted to: Administrator, Research and Special Programs Administration, U.S. Department of Transportation, 400 7th St., SW, Washington, D.C. 20590.

Subpart B

PROCEDURES FOR ADOPTION OF RULES

§ 106.11 General. Unless the Administrator, for good cause, finds that notice is impracticable, unnecessary, or contrary to the public interest, and incorporates that finding and a brief statement of the reasons for it in the rule, a notice of proposed rulemaking is issued and interested persons are invited to participate in the rulemaking proceedings with respect to each substantive rule.

§ 106.13 Initiation of rule making. The Administrator initiates rulemaking on his own motion. However, in so doing, he may, in his discretion, consider the recommendations of other agencies of the United States or of other interested persons including those of any technical advisory body established by statute for that purpose.

§ 106.15 Contents of notices of proposed rulemaking. (a) Each notice of proposed rulemaking is published in the *Federal Register*, unless all persons subject to it are named and are personally served with a copy of it.

(b) Each notice, whether published in the *Federal Register* or personally served, includes:

(1) A statement of the time, place, and nature of the proposed rulemaking proceeding;
(2) A reference to the authority under which it is issued;
(3) A description of the subjects and issues involved or the substance and terms of the proposed regulation;
(4) A statement of the time within which written comments must be submitted; and
(5) A statement of how and to what extent interested persons may participate in the proceeding.

§ 106.17 Participation by interested persons. (a) Any interested person may participate in rulemaking proceedings by submitting comments in writing containing information, views or arguments.

(b) In his discretion, the Administrator may invite any interested person to participate in the rulemaking proceedings described in § 106.25.

(c) For the purposes of this part, an interested person includes any Federal or State government agency or any political subdivision of a State (as defined in §107.201(b) of this subchapter).

§ 106.19 Petitions for extension of time to comment. A petition for extension of the time to submit comments must be received not later than 10 days before expiration of the time stated in the notice. It is requested, but not required, that three copies be submitted. The filing of the petition does not automatically extend the time for petitioner's comments. A petition is granted only if the petitioner shows good cause for the extension, and if the extension is consistent with the public interest. If an extension is granted, it is granted to all persons, and it is published in the *Federal Register*.

§ 106.21 Contents of written comments. All written comments must be in English. It is requested, but not required, that five copies be submitted. Any interested person must submit as part of his written comments all the material that he considers relevant to any statement of fact made by him. Incorporation of material by reference is to be avoided. However, if such incorporation is necessary, the incorporated material shall be identified with respect to document and page.

§ 106.23 Consideration of comments received. All timely comments and the recommendations of any technical advisory body established by statute for the purpose of reviewing the proposed rule concerned are considered before final action is taken on a rulemaking proposal. Late filed comments are considered so far as practicable.

§ 106.25 Additional rulemaking proceedings. The Administrator may initiate any further rulemaking proceedings that he finds necessary or desirable. For example, interested persons may be invited to make oral arguments, to participate in conferences between the Administrator or his representative and interested persons at which minutes of the conference are kept, to appear at informal hearings presided over by officials designated by the Administrator at which a transcript of minutes are kept, or participate in any other proceeding to assure informed administrative action and to protect the public interest.

§ 106.27 Hearings. (a) If a notice of proposed rulemaking does not provide for a hearing, any interested person may petition the Administrator for an informal hearing. The petition must be received by the Administrator not later than 20 days before expiration of the time stated in the notice. The filing of the petition does not automatically result in the scheduling of a hearing. A petition is granted only if the petitioner shows good cause for a hearing. If a petition for a hearing is granted, notice of the hearing is published in the *Federal Register*.

(b) Sections 556 and 557 of Title 5, United States Code, do not apply to hearings held under this part. Unless otherwise specified, hearings held under this part are informal, nonadversary, fact-finding proceedings, at which there are not formal pleadings or adverse parties. Any regulation issued in a case in which an informal hearing is held is not necessarily based exclusively on the record of the hearing.

(c) The Administrator designates a representative to conduct any hearing held under this part. The Chief Counsel designates a member of his staff to serve as legal officer at the hearing.

§ 106.29 Adoption of final rules. Final rules are prepared by representatives of the office concerned and the Office of the Chief Counsel. The regulation is then submitted to the Administrator for his consideration. If the Administrator adopts the regulation, it is published in the *Federal Register*, unless all persons subject to it are named and are personally served with a copy of it.

§ 106.31 Petitions for rulemaking. (a) Any interested person may petition the Administrator to establish, amend, or repeal a regulation.

(b) Each petition filed under this section must:

(1) Set forth the text or substance of the regulation or amendment proposed, or specify the rule that the petitioner seeks to have repealed, as the case may be;

(2) Explain the interest of the petitioner in the action requested; and

(3) Contain any information and arguments available to the petitioner to support the action sought.

§ 106.33 Processing of petition. (a) General. Unless the Administrator otherwise specifies, no public hearing, argument, or other proceeding is held directly on a petition before its disposition under this section.

(b) Grants. If the Administrator determines that the petition contains adequate justification, he initiates rulemaking action under this Subpart B.

(c) Denials. If the Administrator determines that the petition does not justify rulemaking, he denies the petition.

(d) Notification. Whenever the Administrator determines that a petition should be granted or denied, the Office of the Chief Counsel prepares a notice of that grant or denial for issuance to the petitioner, and the Administrator issues it to the petitioner.

§ 106.35 Petitions for reconsideration. (a) Any interested person may petition the Administrator for reconsideration of any regulation issued under this part. It is requested, but not required, that three copies be submitted. The petition must be received not later than 30 days after publication of the rule in the *Federal Register*. Petitions filed after that time will be considered as petitions filed under §106.31. The petition must contain a brief statement of the complaint and an explanation as to why compliance with the rule is not practicable, is unreasonable, or is not in the public interest.

(b) If the petitioner requests the consideration of additional facts, he must state the reason they were not presented to the Administrator within the prescribed time.

(c) The Administrator does not consider repetitious petitions.

(d) Unless the Administrator otherwise provides, the filing of a petition under this section does not stay the effectiveness of the rule.

§ 106.37 Proceedings on petitions for reconsideration. (a) The Administrator may grant or deny, in whole or in part, any petition for reconsideration without further proceedings. In the event he determines to reconsider any regulation he may issue a final decision on reconsideration without further proceedings, or he may provide such opportunity to submit comment or information and data as he deems appropriate. Whenever the Administrator determines that a petition should be granted or denied, the Office of Chief Counsel prepares a notice of the grant or denial of a petition for reconsideration, for issuance to the petitioner, and the Administrator issues it to the petitioner. The Administrator may consolidate petitions relating to the same rules.

(b) It is the policy of the Administrator to issue notice of the action taken on a petition for reconsideration within 90 days after the date on which the regulation in question is published in the *Federal Register* unless it is found impracticable to take action within that time. In cases where it is so found and the delay beyond that period is expected to be substantial, notice of that fact and the date by which it is expected that action will be taken is issued to the petitioner and published in the *Federal Register*.

APPENDIX A

Pursuant to § 106.3, the following officials of the Research and Special Programs Administration are authorized to conduct rule-making proceedings under this part, as specified in this appendix:

(a) The Director, Office of Hazardous Materials Transportation, is authorized to conduct all rule-making proceedings except the issuance of final rules and the grant or denial of petitions for reconsideration, under:

(1) [Reserved]

(2) Section 902(h)(1) of the Federal Aviation Act, as amended, 49 U.S.C. 1472(h)(1), and

(3) The Hazardous Materials Transportation Act, 49 U.S.C. 1801 et seq., except to the extent it relates to (i) Ship's stores or supplies, (ii) the bulk transportation of hazardous materials which are loaded or carried onboard a vessel without benefit of containers or labels, and received and handled by the vessel without mark or count, or (iii) pipelines.

(b) The Director, Office of Pipeline Safety is authorized to conduct all rule-making proceedings, except the issuance of final rules and the grant or denial of petitions for reconsideration, under:

(1) The Hazardous Liquid Pipeline Safety Act of 1979 (Title II of Pub. L. 96-129, 93 Stat. 1003, 49 U.S.C. 2001 et seq.);

(2) The Natural Gas Pipeline Safety Act of 1968, as amended, 49 U.S.C. 1671 et seq.;

(3) Section 21(a) of the Deepwater Port Act of 1974, 33 U.S.C. 1520(a).

PART 107—HAZARDOUS MATERIALS PROGRAM PROCEDURES

Subpart A

GENERAL PROVISIONS

§ 107.1 Purpose and scope. (a) This part prescribes procedures utilized by the Research and Special Programs Administration, the Office of Hazardous Materials Transportation and the Office of Chief Counsel in carrying out their duties under the laws pertaining to the transportation of hazardous materials.

(b) This subpart defines certain terms and prescribes procedures that are applicable to each proceeding described in this part.

§ 107.3 Definitions. As used in this part—

8700 "Act" means the Hazardous Materials Transportation Act.

"Approval Agency" means an organization or a person designated by the RSPA to certify packagings as having been designed, manufactured, tested, modified, marked or maintained in compliance with applicable DOT regulations.

"Competent Authority" means a national agency responsible under its national law for the control or regulation of a particular aspect of the transportation of hazardous materials (dangerous goods). The term "Appropriate authority", as used in the ICAO Technical Instructions, has the same meaning as "Competent Authority". The Director, Office of Hazardous Materials Transportation, Research and Special Programs Administration, is the United States Competent Authority for purposes of this part.

"OHMT" means the Office of Hazardous Materials Transportation.

"MTB" means the Materials Transportation Bureau.

"Person" includes a corporation, company, association, firm, partnership, society, and joint stock company, joint venture, sole proprietorship, as well as any officer, director, owner or duly authorized representative of any such unit or an individual.

"Respondent" means a person upon whom the RSPA has served a notice of probable violation.

"State" means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, or Guam.

§ 107.5 Request for confidential treatment. (a) If any person filing a document with the OHMT claims that some or all the information contained in the document is exempt from the mandatory public disclosure requirements of the Freedom of Information Act (5 U.S.C. 552 (1970)), is information referred to in 18 U.S.C. 1905 (1970), or is otherwise exempt by law from public disclosure, and if that person requests the OHMT not to disclose the information, that person shall file together with the documents a second copy of the document from which has been deleted the information for which confidential treatment is claimed. The person shall indicate in the original document that it is confidential or contains confidential information and may file a statement specifying the justification for which confidential treatment is claimed. If the person states that the information comes within the exception in 5 U.S.C. 552 (b)(4) for trade secrets and commercial or financial information, that person must include a statement as to why the information is privileged or confidential. If the person filing a document does not submit a second copy of the document with the confidential information deleted, the OHMT may assume that there is no objection to public disclosure of the document in its entirety.

(b) The OHMT retains the right to make its own determination with regard to any claim of confidentiality. Notice of a decision by the OHMT to deny the claim, in whole or in part, and an opportunity to respond shall be given to a person claiming confidentiality of information no less than five days prior to its public disclosure.

§ 107.7 Service of process on non-residents of the United States. (a) **Designation of agent for service.** When a person who is not a resident of the United States is required by this subchapter or Subchapter C of this chapter to designate a permanent resident of the United States as his agent upon whom service of process may be made for him and on his behalf, the agent may be an individual, a firm, or a domestic corporation. Any number of principals may designate the same person as agent. A designation is binding on a principal even if the designation is not in compliance with all the requirements of this section, until rejected by the OHMT. A designated agent may not assign performance of his functions under the designation to another person.

(b) **Form and contents of designation.** The designation shall:

(1) Be in writing and dated;

(2) Be made in the legal form required to make it valid and binding on the principal under the laws, corporate bylaws, or other requirements governing the making of the designation by the principal at the place and time where it is made and the person or persons signing the designation shall certify that it is so made;

(3) State the full legal name, principal name of business and mailing address of the principal;

(4) Provide that it remains in effect until withdrawn or replaced by the principal;

(5) State the legal name and mailing address of the agent, and

(6) Bear a declaration of acceptance duly signed by the designated agent.

(c) **Method of service.** Service of any process, notice, order, decision, or requirement of the OHMT may be made by registered or certified mail addressed to the agent with return receipt requested or in any other manner authorized by law. If service cannot be effected because the agent has died (or, if a firm or a corporation ceases to exist) or moved, or otherwise does not receive correctly addressed mail, service may be made by publication in the *Federal Register*.

§ 107.9 Public docket room. There is established in the RSPA offices at 400 7th Street, SW, Washington, D.C., a public docket room in which there is available for public inspection and copying:

(a) Copies of notices of proposed rulemaking issued by the RSPA or OOE or its predecessor agency, including advance notices, together with the comments received thereon during rulemaking proceedings, copies of any related *Federal Register* notices, final rules, petitions for reconsideration, and decisions issued in response to petitions for reconsideration;

(b) Applications for exemptions from the Department of Transportation's regulations governing the transportation of hazardous materials, including supporting data, memoranda of any informal meetings with applicants, related *Federal Register* notices, comments received thereon during the public comment period and copies of decisions issued granting or denying applications for exemptions;

(c) Applications for inconsistency rulings and nonpreemption determinations under Subpart C of this part, together with the comments received thereon, related documents filed with the RSPA, copies of related Federal Register notices, and rulings, determinations and orders issued in response to those applications;

(d) Records of compliance order proceedings and copies of RSPA compliance orders;

(e) Appeals filed under this part and RSPA decisions issued in response to those appeals; and

(f) Such other information pertaining to the RSPA hazardous materials program required by statute to be made available for public inspection and copying and any information which the RSPA determines should be made available to the public.

§ 107.11 Service. (a) Each order, notice, or other document required to be served under this part shall be served personally or by registered or certified mail, except as otherwise provided.

(b) Service upon a person's duly authorized representative constitutes service upon that person.

(c) Service by registered or certified mail is complete upon mailing. An official United States Postal Service receipt from the registered or certified mailing constitutes prima facie evidence of service.

§ 107.13 Subpoenas; witness fees. (a) The Administrator, RSPA, the Chief Counsel, Research and Special Programs Administration, or the Official designated to preside over a hearing convened in accordance with this part, may sign and issue subpoenas either on his own initiative or, upon an adequate showing that the information sought will materially advance the proceeding, upon the request of any person participating in that proceeding.

(b) A subpoena may require the attendance of a witness, or the production of documentary or other tangible evidence in the possession or under the control of the person served, or both.

(c) A subpoena may be served personally by any person who is not an interested person and is not less than 18 years of age, or by certified or registered mail.

(d) Service of a subpoena upon the person named therein shall be made by delivering a copy of the subpoena to such person and by tendering the fees for one day's attendance and mileage as specified by paragraph (f) of this section. When a subpoena is issued at the instance of any officer or agency of the United States, fees and mileage need not

For explanation of abbreviations and reference marks, see last page of this tariff.

be tendered at the time of service. Delivery of a copy of a subpoena and tender of the fees to a natural person may be made by handing them to the person, leaving them at his office with the person in charge thereof, leaving them at his dwelling place or usual place of abode with some person of suitable age and discretion then residing therein, by mailing them by registered or certified mail to him at his last known address, or by any method whereby actual notice is given to him and the fees are made available prior to the return date. When the person to be served is not a natural person, delivery of a copy of the subpoena and tender of the fees may be effected by handing them to a registered agent for service, or to any officer, director, or agent in charge of any office of the person, or by mailing them by registered or certified mail to that representative at his last known address or by any method whereby actual notice is given to the representative and the fees are made available prior to the return date.

(e) The original subpoena bearing a certificate of service shall be filed with the RSPA official having responsibility for the proceeding in connection with which the subpoena was issued.

(f) A witness subpoenaed by the RSPA shall be paid the same fees and mileage as would be paid to a witness in a proceeding in the district courts of the United States. The witness fees and mileage shall be paid by the person at whose instance the subpoena was issued.

(g) Notwithstanding the provisions of paragraph (f) of this section, and upon request, the witness fees and mileage may be paid by the RSPA if the RSPA official who issued the subpoena determines on the basis of good cause shown, that:

(1) The presence of the subpoenaed witness will materially advance the proceeding; and

(2) The person at whose instance the subpoena was issued would suffer a serious hardship if required to pay the witness fees and mileage.

(h) Any person to whom a subpoena is directed may, prior to later than 10 days after service thereof, to the person who issued the subpoena, to quash or modify it. The application shall contain a brief statement of the reasons relied upon in support of the action sought therein. The person who issued the subpoena may:

(1) Deny the application;

(2) Quash or modify the subpoena; or

(3) Condition denial of the application to quash or modify the subpoena upon the satisfaction of certain just and reasonable requirements. The denial may be summary.

(i) If there is a refusal to obey a subpoena served upon any person under the provisions of this section, the RSPA may request the Attorney General to seek the aid of the United States District Court for any District in which the person is found to compel that person, after notice, to appear and give testimony, or to appear and produce the subpoenaed documents before the RSPA, or both.

Subpart B

EXEMPTIONS

§ 107.101 Purpose and scope. This subpart prescribes procedures by which persons who are subject to the requirements of this subchapter, Subchapter C or this chapter, 46 CFR Part 64 or Part 146 may obtain administrative relief therefrom on the basis of equivalent levels of safety or levels of safety consistent with the public interest and the policy of the Hazardous Materials Transportation Act.

§ 107.103 Application for exemption. (a) Any person who is subject to the requirements of this subchapter, Subchapter C of this chapter, 46 CFR Part 64 or Part 146 may apply to the Director, OHMT, for an exemption from those requirements.

(b) Each application filed under this section for an exemption must—

(1) Be submitted in triplicate to: Office of Hazardous Materials Transportation, U.S. Department of Transportation, Washington, D.C. 20590, Attention: Exemptions Branch;

(2) Set forth the text or substance of the regulation from which the exemption is sought;

(3) State the name, address, and telephone number of the applicant;

(4) Include a detailed description of the proposal, including when appropriate, drawings, plans, calculations, procedures, test results, previous exemptions, approvals or permits, a list of specification containers, if any, to be used, a list of modified specification containers, if any, to be used, and a description of the modifications, and any other supporting information;

(5) State the chemical name, common name, hazard classification, form, quantity, properties, and characteristics of the material covered by the proposal, including composition and percentage (specified by volume or weight) of each chemical, of a solution or mixture;

(6) Describe all relevant shipping and accident experience;

(7) Specify the proposed mode of transportation, identify any increased risks that are likely to result if the exemption is granted, and specify the safety control measures which the applicant considers necessary or appropriate to compensate for those increased risks;

(8) Specify the proposed duration or describe the proposed schedule of events for which the exemption is sought;

(9) State why the applicant believes the proposal including any safety control measures specified by the applicant will achieve a level of safety which:

(i) Is at least equal to that specified in the regulation from which the exemption is sought, or

(ii) If the regulations do not contain a specified level of safety, will be consistent with the public interest and will adequately protect against the risks to life and property which are inherent in the transportation of hazardous materials in commerce;

(10) If the applicant seeks to have the application processed on a priority basis, set forth the supporting facts and reasons and

(11) If the applicant is not a resident of the United States, include a designation of a permanent resident of the United States as his agent for service of process in accordance with §107.7.

(c) Unless the Director, OHMT, finds that there is good reason for priority processing of an application, each application is processed in the order in which it is received. To permit timely consideration, an application should be submitted at least 120 days before the requested effective date.

(d) If the applicant wishes to claim confidential treatment for any information contained in the application, the procedures set forth in §107.5 apply.

§ 107.105 Application for renewal. (a) Each application for the renewal of an exemption issued under this subpart must:

(1) Be submitted in triplicate to: Office of Hazardous Materials Transportation, U.S. Department of Transportation, Washington, D.C. 20590, Attention: Exemptions Branch;

(2) Identify the exemption for which a renewal is requested;

(3) State the name, address, and telephone number of the applicant;

(4) Include (i) a certification by the applicant that the descriptions, technical information and safety assessment submitted in the original application, or as may have been updated by any subsequent application for renewal, remain accurate and correct, or (ii) such amendments to the previously submitted descriptions, technical information and safety assessment as is necessary to update them and assure their accuracy and correctness;

(5) A statement describing all relevant shipping and all accident experience that has occurred in connection with the exemption since its issuance or most recent renewal or, if no accidents have been experienced, a certification to that effect. This statement must include the approximate number of shipments made or packages shipped, as the case may be, and the number of shipments or packages involved in any loss of contents, including loss by venting when transporting a compressed or cold temperature gas.

(b) To permit timely consideration, an application for renewal should be submitted at least 60 days before the expiration date of the exemption.

(c) If, at least 60 days prior to the expiration of an existing exemption of a continuing nature, the holder files an application for renewal which is complete and conforms with the requirements of this section, the exemption will not be considered to have expired until the application for renewal has been finally determined.

§ 107.107 Administrative review. In the case of a written application for an exemption submitted as provided in §107.103(b) or the renewal of an exemption submitted as provided in §107.105, the Direc-

for, OHMT, reviews it to determine whether it is complete and conforms with the requirements of this subpart. This determination will be made within 30 days of the receipt of an exemption application and within 15 days of the receipt of a renewal application. If it is not returned to the applicant by the end of that period, it will be processed as provided in §107.109. If an application is returned, the applicant will be informed in what respects the application is incomplete.

§ 107.109 Processing of application. (a) After an application for an exemption or renewal of an exemption is determined to be complete, the Director, OHMT, dockets the application and publishes a notice in the *Federal Register* affording an opportunity for interested persons to comment. All comments received before the close of the comment period are considered before final action is taken on an application.

(b) No public hearing, argument, or other formal processing is held directly on an application filed under this subpart before its disposition under this section. However, during the processing of an application the Director, OHMT, may require the applicant to supply additional information.

(c) The Director, OHMT denies an application in accordance with the following:

(1) The application is denied if it does not contain adequate justification or if it contains any materially false or materially misleading statements, or fails to state a material fact.

(2) If the Director, OHMT denies an application under this paragraph, he notifies the applicant in writing of his reason therefore and publishes notice of the denial in the *Federal Register*.

(d) If the Director, OHMT, determines that the application contains adequate justification, he grants it subject to the conditions set forth in Appendix B to this subpart and such other terms as he considers necessary, and notifies the applicant in writing. He also publishes in the *Federal Register* a notice of the grant.

(e) If the Director, OHMT determines that an application concerns a matter of such general applicability and future effect as to warrant being made the subject of rule making, he may initiate rule making under Part 106 of this chapter in addition to or in lieu of granting or denying the application.

§ 107.111 Party to an exemption. (a) Any person who is eligible to apply under §107.103 for an exemption may apply to the Director, OHMT, to be made a party to an application filed under that section or §107.105 or to an exemption or renewal granted under §107.109(d).

(b) Each application filed under this section must:

(1) Be submitted to: Office of Hazardous Materials Transportation, U.S. Department of Transportation, Washington, D.C. 20590, Attention: Exemptions Branch;

(2) Identify the exemption application or exemption to which the applicant seeks to become a party;

(3) State the name, address and telephone number of the applicant; and

(4) If the applicant is not a resident of the United States, include a designation of a permanent resident of the United States as his agent for service of process in accordance with §107.7.

(c) The applicant becomes a party to an exemption application or exemption if the Director, OHMT, determines that:

(1) The applicant is a person who is eligible to apply under §107.103 for an exemption; and

(2) The exemption application or exemption to which the applicant seeks to become a party concerns a matter of a continuing nature and does not depend upon information entitled to confidential treatment.

(d) The Director, OHMT, publishes in the *Federal Register* a notice of each application received, each initial determination made and each renewal granted under this section.

(e) A person who becomes a party to an exemption under this section is subject to terms of that exemption, including the expiration date stated therein. If a party to an exemption wishes to renew his status as a party to an exemption, the procedures set forth in §§107.105 through 107.109 with respect to an application for renewal of an exemption apply.

§ 107.113 Application for and processing of emergency exemption. (a) Any person who is subject to the requirements of this subchapter, Subchapter C of this chapter, 46 CFR Part 64 or Part 146 who seeks an exemption from any of those requirements on the basis of an existing emergency shall apply for that exemption through the appropriate Department of Transportation official listed in Appendix A to this subpart.

(b) An application submitted under this section must include such supporting information with respect to each of the topics specified in §107.103(b)(2) through (11) as the receiving Department of Transportation official considers necessary for processing the application.

(c) Upon receipt of all of the information necessary for processing the application, the receiving Department of Transportation official shall transmit to the Director, OHMT, by the most rapid available means of communication, his evaluation as to whether an emergency exists and his recommendations with respect to the conditions to be included in the exemption. If the Director, OHMT, determines that an emergency exists and that there is adequate justification for the exemption, he grants the exemption subject to the applicable conditions set forth in Appendix B to this subpart and such other terms as he considers necessary, and immediately notifies the applicant. If the Director, OHMT, cannot determine that an emergency exists or determines that there is not adequate justification for the exemption, he immediately so notifies the applicant.

§ 107.115 Determination of existing emergency. (a) The Director, OHMT, shall determine that an emergency exists if, on the basis of information submitted in the application and his own investigation, he finds that:

(1) Existing conditions require the hazardous material concerned to be transported in commerce for the protection of life or property (other than the hazardous material to be transported); and

(2) The protection of life or property to be provided by the hazardous material would not be possible if the application is processed on a routine basis.

(b) The Director, OHMT, may determine that an emergency exists if, on the basis of information submitted in the application he finds that:

(1) Existing conditions require the hazardous material concerned to be transported in commerce to prevent or minimize serious economic loss; and

(2) The prevention or minimizing of serious economic loss to be provided by the hazardous material would not be possible if the application is processed on a routine basis.

(c) In determining what constitutes serious economic loss under paragraph (b) of this section, the Director, OHMT, considers the nature and extent of the expected loss.

§ 107.117 Withdrawal. (a) An applicant may withdraw an application at any time prior to it being finally determined. When an application is withdrawn after publication of the notice of application in the *Federal Register*, the Director, OHMT, publishes a notice of withdrawal in the *Federal Register*.

(b) Except for documents for which confidential treatment was requested by the applicant, withdrawal of an application does not authorize the removal of any related records from the dockets or files of the RSPA.

§ 107.119 Amendment, suspension, termination, and referral for enforcement action. (a) An exemption and any renewal thereof terminates according to its terms but not later than two years after the date of issuance unless terminated sooner under paragraph (c) of this section.

(b) The Director, OHMT may suspend an exemption if:

(1) He determines that an activity under the exemption is not being performed in accordance with the terms of the exemption; or

(2) On the basis of information not available at the time the exemption was granted or renewed, such action is necessary to protect against risks to life or property.

(c) The Director, OHMT may terminate an exemption if:

(1) He determines that the exemption is no longer consistent with the public interest;

(2) The exemption is no longer necessary because of an amendment to the regulations; or

(3) The exemption was granted on the basis of false or misleading material information.

(d) Unless the Director, OHMT determines that immediate amendment, suspension or termination of an exemption is necessary to abate the risk of an imminent hazard, he notifies the holder of the exemption or a party thereto in writing of the reasons therefore and provides that person an opportunity to show cause why the exemption should not be amended, suspended, or terminated under paragraph (b) or (c) of this section.

(e) Notwithstanding paragraphs (b), (c) and (d) of this section, the Director, OHMT may refer an exemption to the Office of Chief Counsel for initiation of an enforcement case under Subpart D of this part. If, as the result of the enforcement proceeding, the holder of the exemption or a party thereto is determined to have violated the terms of the exemption, the Director, OHMT may amend, suspend, or terminate the exemption.

§ 107.121 Appeal. Any applicant for an exemption or the renewal of an exemption aggrieved by an action taken by the Director, OHMT or OE under this subpart and any holder of an exemption suspended or terminated by the Director, OHMT or OE under §107.119 (b) or (c) may file an appeal with the Associate Administrator, RSPA. The appeal must be filed within 30 days of service of notification of that action, suspension or termination. There has not been an exhaustion of administrative remedies until an appeal has been filed and the applicable process is completed by the issuance of an order by the Associate Administrator, RSPA, granting or denying the appeal.

§ 107.123 Availability for public inspection. (a) Information relevant to an application under this part, including the application and supporting data, memoranda of any informal meetings with the applicant, and the grant or denial of the application is available for public inspection, except as specified in paragraph (b) of this section, at the

For explanation of abbreviations and reference marks, see last page of this tariff.

Office of Hazardous Materials Transportation, 400 7th Street, SW, Washington, D.C. 20590. Copies of available information may be obtained, as provided in Part 7 of this title.

(b) Information made available for inspection does not include materials which the Director, OHMT, determines should be withheld from public disclosure under § 107.5 and in accordance with the applicable provisions of section 552 (b) of Title 5, United States Code, and Part 7 of this title.

APPENDIX A

LIST OF DEPARTMENT OF TRANSPORTATION OFFICIALS THROUGH WHOM APPLICATION FOR EXEMPTIONS SEEKING PRIORITY TREATMENT ON THE BASIS OF EXISTING EMERGENCIES MAY BE INITIATED BY TELEPHONE

CERTIFICATE HOLDING AIRCRAFT OPERATIONS

The Federal Aviation Administration Civil Aviation Security Office which serves the place where the flight(s) will originate or which is responsible for the operators overall aviation security program.

NONCERTIFICATE HOLDING AIRCRAFT OPERATORS (OPERATORS OPERATING UNDER FAR PART 91)

The Federal Aviation Administration Civil Aviation Security Office which serves the place where the flight(s) will originate. The nearest Civil Aviation Security Office may be located by calling the FAA Duty Officer. Day or Night, 202-863-5100.

MOTOR CARRIERS

Chief, Field Programs Division, Office of Motor Carrier Safety Field Operations, Federal Highway Administration, Department of Transportation, Washington, DC 20590. Day 202-366-1975 and Night 202-267-2100.

RAIL CARRIERS

Associate Administrator for Safety, Federal Railroad Administration, Department of Transportation, Washington, D.C. 20590. Day 202-366-9178 or 366-0483 and Night 202-267-2100.

WATER CARRIERS

Chief, Hazardous Materials Branch, Marine Technical and Hazardous Materials Division, United States Coast Guard, Washington, D.C. 20590. Day 202-267-1577 or Night 202-267-2100.

APPENDIX B

STANDARD CONDITIONS APPLICABLE TO EXEMPTIONS

PACKAGES, CONTAINERS, SHIPMENTS

Exemptions from the regulations governing packages, containers, and the preparation and offering of hazardous materials for shipment are subject to the following conditions.

(1) The outside of each package must be plainly and durably marked "DOT-E" followed by the number assigned. On portable tanks, cargo tanks and tank cars, the markings must be in letters at least two inches high on a contrasting background.

(2) Each shipping paper issued in connection with a shipment made under an exemption must, in association with the entries required by 49 CFR 172.203, bear the notation "DOT-E" followed by the number assigned.

(3) When an exemption issued to a shipper contains special carrier requirements, the shipper shall furnish a copy of the exemption to the carrier before or at the time a shipment is tendered.

FLIGHTS OF CARGO-ONLY AIRCRAFT

Exemptions from the regulations governing the transportation of hazardous materials on cargo-only aircraft are subject to the following conditions.

(1) No person other than a required flight crewmember, an FAA inspector, the shipper or consignee of the material or a representative of the shipper or consignee so designated in writing, or a person necessary for handling the material may be carried on the aircraft.

(2) The operator of the aircraft must have advance permission from the owner or operator of each manned airport where the material is to be loaded or unloaded or where the aircraft is to land while the material is on board.

(3) At any airport where the airport owner or operator or authorized representative thereof has designated a location for loading or unloading the material concerned, the material may not be loaded or unloaded at any other location.

(4) If the material concerned can create destructive forces or have lethal or injurious effects over an appreciable area as a result of an accident involving the aircraft or the material, the loading and unloading of the aircraft and its operation in takeoff, enroute, and in landing must be conducted at a safe distance from heavily populated areas and from any place of human abode or assembly.

(5) If the aircraft is being operated by a holder of a certificate issued under Part 121 or Part 135 of Title 14, CFR, operations must be conducted in accordance with conditions and limitations specified in the certificate holder's operations specifications or operations manual accepted by the FAA. If the aircraft is being operated under Part 91 of Title 14, CFR, operations must be conducted in accordance with an operations plan accepted and acknowledged in writing by the Civil Aviation Security Office responsible for the operator's overall Aviation Security Program.

(6) Each crewmember of the aircraft must be provided written instructions on the conditions and limitations of the operation being conducted.

(7) The aircraft and the loading arrangement to be used must be approved for safe carriage of the particular materials concerned by the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the FAA Civil Aviation Security Office serving the place where the material is to be loaded.

(8) When Class A explosives are carried aboard a cargo aircraft under the provisions of Subchapter C, the aircraft operator shall take all possible action to insure that routes over heavily populated areas are avoided commensurate with considerations of flight safety. During the approach and landing phase, the aircraft operator shall request appropriate vectors when under radar control to avoid heavily populated areas.

SUBPART C

PREEMPTION

§ 107.201 Purpose and scope. (a) This subpart prescribes procedures by which (1) a State or a political subdivision of a State having a requirement pertaining to the transportation of hazardous materials or any person affected by the requirement may obtain an administrative ruling as to whether the requirement is inconsistent with the Act or regulations issued under the Act, and (2) a State or a political subdivision of a State may obtain a determination as to whether a requirement of that State or political subdivision, which is inconsistent with the Act or regulations issued under the Act and therefore preempted by section 112(a) of the Act is not so preempted.

(b) For purposes of this subpart "political subdivision" includes a municipality; a public agency or other instrumentality of one or more States, municipalities, or other political subdivisions of a State; or a public corporation, board, or commission established under the laws of one or more States.

(c) For purposes of this subpart regulations issued under the Act means the regulations contained in this subchapter, Subchapter C of this chapter and 46 CFR Part 146.

(d) Unless otherwise ordered by the Director, OHMT, an application for an inconsistency ruling which includes an application for a determination that the requirement is not preempted will be treated and processed solely as an application for an inconsistency ruling.

INCONSISTENCY RULINGS

§ 107.203 Application. (a) Any State or political subdivision or any person affected by a requirement of a State or political subdivision may apply to the OHMT for an administrative ruling as to whether a particular existing requirement of the State or political subdivision concerned is inconsistent with a requirement of the Act or the regulations issued under the Act.

(b) Each application filed under this section for a ruling must:

(1) Be submitted to the Office of Hazardous Materials Transportation, Research and Special Programs Administration, U.S. Department of Transportation, Washington, D.C. 20590. Attention: Hazardous Materials Preemption Docket;

(2) Set forth the text of the State or political subdivision requirement for which the determination is being sought;

(3) Specify each requirement of the Act or the regulations issued under the Act with which the applicant seeks the State or political subdivision requirement to be compared for consistency; and

(4) State why the applicant believes the State or political subdivision requirement to be consistent or inconsistent with the requirements of the Act or the regulations issued under the Act.

(c) The filing of an application for a ruling under this section does not constitute grounds for noncompliance with any requirement of the Act or a regulation issued under the Act.

§ 107.205 Notice. (a) If the applicant is other than a State or political subdivision, the applicant shall mail a copy of the application to the State or political subdivision concerned accompanied by a statement that the State or political subdivision may submit comments regarding the application to the OHMT within 45 days. The application filed with the OHMT must include a certification that the applicant has complied with this paragraph and must include the names and addresses of each State or political subdivision official to whom a copy of the application was sent.

(b) The OHMT may by serving notice on any other persons readily identifiable by the OHMT as persons who will be affected by the ruling sought or by publication in the *Federal Register* afford those persons an opportunity to file written comments on the application.

(c) Each person submitting written comments to the OHMT with respect to an application filed under this section shall send a copy of the comments to the applicant and certify to the OHMT that he has complied with this requirement. The OHMT may notify other persons participating in the proceeding of the comments and provide an opportunity for those other persons to respond.

§ 107.207 Processing. (a) The Director, OHMT, may initiate an investigation of any statement in an application and utilize in his evaluation any relevant facts obtained by that investigation. The Director, OHMT may solicit and accept submissions from third persons relevant to an application and will provide the applicant an opportunity to respond to all third person submissions. In evaluating an application, the Director, OHMT, may consider any other source of information. The Director, OHMT, on his own initiative may convene a hearing or conference, if he considers that a hearing or conference will advance his evaluation of the application.

(b) The Director, OHMT may dismiss the application without prejudice if:

(1) He determines that there is insufficient information upon which to base a ruling; or

(2) He requests additional information from the applicant and it is not submitted.

§ 107.209 Ruling. (a) Upon consideration of the application and other relevant information received or obtained during the proceeding, the Director, OHMT, issues his ruling.

(b) Notwithstanding that application for a ruling has not been filed under § 107.203, the Director, OHMT, on his own initiative, may issue a ruling as to whether a particular State or political subdivision requirement is inconsistent with the Act or the regulations issued under the Act.

(c) In determining whether a State or political subdivision requirement is inconsistent with the Act or the regulations issued under the Act, the Director, OHMT, considers:

(1) Whether compliance with both the State or political subdivision requirement and the Act or the regulations issued under the Act is possible; and

(2) The extent to which the State or political subdivision requirement is an obstacle to the accomplishment and execution of the Act and the regulations issued under the Act.

(d) The ruling includes a written statement setting forth the relevant facts and the legal basis for the ruling and provides that any person aggrieved thereby may file an appeal with the Administrator, RSPA.

(e) The OHMT serves a copy of the ruling upon the applicant, any other person who participated in the proceeding and upon any other person readily identifiable by the OHMT as one who is affected by the ruling. A copy of each ruling is placed on file in the public docket. The OOE may publish the ruling or notice of the ruling in the *Federal Register*.

(f) A ruling issued under this section constitutes an administrative determination as to whether a particular requirement of a State or local subdivision is inconsistent with the Act or the regulations issued under the Act. The fact that a ruling has not been issued under this section with respect to a particular requirement of a State or political subdivision carries no implication as to the consistency or inconsistency of that requirement with the Act or any regulations issued under the Act.

§ 107.211 Appeal. Any person aggrieved by a ruling issued under § 107.209 may file an appeal with the Administrator, RSPA. The appeal must be filed within 30 days of service of the ruling. There has not been an exhaustion of administrative remedies until an appeal has been filed and the appellate process is completed by the issuance of an order by the Administrator, RSPA, granting or denying the appeal.

NON PREEMPTION DETERMINATIONS

§ 107.215 Application. (a) Any State or political subdivision may apply to the OHMT for a determination that a particular existing requirement of that State or political subdivision which is inconsistent with the Act or the regulations issued under the Act is not preempted.

(b) Each application filed under this section for a nonpreemption determination must:

(1) Be submitted to the Office of Hazardous Materials Transportation, Research and Special Programs Administration, U.S. Department of Transportation, Washington, D.C. 20590. Attention: Hazardous Materials Preemption Docket.

(2) Set forth the text of the State or political subdivision requirement for which the determination is being sought;

(3) Include a copy of any court order and any ruling issued under § 107.209 having a bearing on the application;

(4) Contain an express acknowledgment by the applicant that the State or political subdivision requirement is inconsistent with one or more requirements of the Act or the regulations issued under the Act, unless it has been so determined by a court of competent jurisdiction or in a ruling issued under § 107.209;

(5) Specify each requirement of the Act or the regulations issued under the Act with which the State or political subdivision requirement is acknowledged or has been determined to be inconsistent;

(6) State why the applicant believes the State or political subdivision requirement affords an equal or greater level of protection to the public than is afforded by the requirements of the Act or the regulations issued under the Act;

(7) State why the applicant believes the State or political subdivision requirement does not unreasonably burden commerce; and

(8) Specify what steps the State or political subdivision is taking to administer and enforce effectively its inconsistent requirement.

§ 107.217 Notice. (a) The applicant State or political subdivision shall mail a copy of the application and any subsequent amendments or other documents relating to the application to each person who is reasonably ascertainable by the applicant as a person who will be affected by the determination sought. The copy of the application must be accompanied by a statement that the person may submit comments regarding the application to the OHMT within 45 days. The application filed with the OHMT must include a certification that the application has complied with this paragraph and must include the names and addresses of each person to whom the application was sent.

(b) Notwithstanding the provisions of paragraph (a) of this section, if the State or political subdivision determines that compliance with paragraph (a) of this section would be impracticable, the applicant shall:

(1) Comply with the requirements of paragraph (a) of this section with regard to those persons whom it is reasonable and practicable to notify; and

(2) Include with the application filed with the OHMT a description of the persons or class or classes of persons to whom notice was not sent.

(c) The OHMT may require the State or political subdivision to provide notice in addition to that required by paragraphs (a) and (b) of this section, or may determine that the notice required by paragraph (a) of this section is not impracticable, or that notice should be published in the *Federal Register*.

(d) The OHMT may serve notice on any other persons readily identifiable by the OHMT as persons who will be affected by the determination sought and may afford those persons an opportunity to file written comments on the application.

(e) Any person submitting written comments to the OHMT with respect to an application filed under this section shall send a copy of the comments to the applicant. The person shall certify to the OHMT that he has complied with the requirements of this paragraph. The OHMT may notify other persons participating in the proceeding of the comments and provide an opportunity for those other persons to respond.

§ 107.219 Processing. (a) The Director, OHMT, may initiate an investigation of any statement in an application and utilize in his evaluation any relevant facts obtained by that investigation. The Director, OHMT, may solicit and accept submissions from third persons relevant to an application and will provide the applicant an opportunity to respond to all third person submissions. In evaluating an application, the Director, OHMT, on his own initiative, may convene a hearing or conference, if he considers that a hearing or conference will advance his evaluation of the application.

(b) The Director, OHMT, may dismiss the application without prejudice if:

(1) He determines that there is insufficient information upon which to base a determination;

(2) Upon his request, additional information is not submitted by the applicant; or

(3) The applicant fails to provide the notice required by § 107.217.

(c) Except as provided in § 107.201(c), the Director, OHMT, will only consider an application for a non-preemption determination if—

(1) The applicant State or political subdivision expressly acknowledges in its application that the State or political subdivision requirement

for which the determination is sought is inconsistent with the requirements of the Act or the regulations issued under the Act; or

(2) The State or political subdivision requirement has been determined by a court of competent jurisdiction or in a ruling issued under § 107.209 to be inconsistent with the requirements of the Act or the regulations issued under the Act.

(d) When the OHMT has received all substantive information it considers necessary to process an application for a non-preemption determination, it serves notice of that fact upon the applicant and all other persons who received notice of the proceeding pursuant to § 107.217.

(e) To the extent possible, each application for a non-preemption determination will be acted upon in a manner consistent with the disposition of previous applications for non-preemption determinations.

§ 107.221 Determination and order. (a) Upon consideration of the application and other relevant information received or obtained during the proceeding, the Director, OHMT, issues an order setting forth his determination.

(b) The Director, OHMT, may issue a non-preemption order only if he finds that the State or political subdivision requirement affords to the public a level of safety at least equal to that afforded by the requirements of the Act and the regulations issued under the Act and does not unreasonably burden commerce. In determining whether the State or political subdivision requirement unreasonably burdens commerce, the Director, OHMT, considers the following factors:

(1) The extent to which increased costs and impairment of efficiency result from the State or political subdivision requirement.

(2) Whether the State or political subdivision requirement has a rational basis.

(3) Whether the State or political subdivision requirement achieves its stated purpose.

(4) Whether there is need for uniformity with regard to the subject concerned and if so, whether the State or political subdivision requirement competes or conflicts with those of other States and political subdivisions.

(c) The order includes a written statement setting forth the relevant facts and the legal basis for the determination. The order provides that any person aggrieved thereby may file an appeal with the Administrator, RSPA.

(d) The OHMT serves a copy of the order upon the applicant, any other person who participated in the proceeding and upon any other person readily identifiable by the OHMT as one who is affected by the order. A copy of each order is placed on file in the public docket. The Director, OHMT, may publish the order or notice of the order in the *Federal Register*.

(e) An order issued under this section constitutes an administrative determination as to whether a particular requirement of a State or local subdivision of a State, which is inconsistent with the requirements of the Act or the regulations issued under the Act is not preempted.

§ 107.223 Timeliness. If the OHMT fails to take action on the application within 90 days of serving the notice required by § 107.219(d), the applicant may treat the application as having been denied in all respects and may appeal therefrom as provided in § 107.225.

§ 107.225 Appeal. Any person aggrieved by an order issued under § 107.221 may file an appeal with the Administrator, RSPA. The appeal must be filed within 30 days of service of the order. There has not been an exhaustion of administrative remedies until an appeal has been filed and the appellate process is completed by the issuance of an order by the Administrator, RSPA, granting or denying the appeal.

SUBPART D

ENFORCEMENT

§ 107.299 Definitions. In this subpart, and in enforcement actions initiated thereunder, "Investigation" includes investigations authorized under 49 U.S.C. 1809(a) and inspections authorized under 49 U.S.C. 1809(c).

"Knowledge" or "knowingly" means that a person who commits an act which is a violation of the Act or of the requirements of this subchapter or Subchapter C of this chapter commits that act with knowledge or knowingly when that person (1) has actual knowledge of the facts that give rise to the violation, or (2) should have known of the facts that give rise to the violation. A person knowingly commits an act if the act is done voluntarily and intentionally. Knowledge or knowingly means that a person is presumed to be aware of the requirements of the Act and this subchapter and Subchapter C of this chapter. Knowledge or knowingly does not require that a person have an intent to violate the requirements of the Act or the requirements of this subchapter or Subchapter C of this chapter.

§ 107.301 Delegated authority for enforcement. Under redelegation from the Administrator, Research and Special Programs Administration, the OHMT and the Office of the Chief Counsel exercise their authority for enforcement of the Act, this subchapter, and Subchapter C of this subchapter, in accordance with § 1.53 of this title.

§ 107.303 Purpose and scope. This subpart describes the various enforcement authorities exercised by the OHMT and the Office of Chief Counsel and the associated sanctions and prescribes the procedures governing the exercise of those authorities and the imposition of those sanctions.

§ 107.305 Investigations. (a) General. In accordance with its delegated authority under Part 1 of this title, the OHMT may initiate investigations relating to compliance by any person with any provisions of this subchapter or Subchapter C of this chapter, or any exemption, approval, or order issued thereunder, or any court decree relating thereto. The OHMT encourages voluntary production of documents in accordance with and subject to § 107.13, and hearings may be conducted, and depositions taken pursuant to section 109(a) of the Act. The OHMT may conduct investigative conferences and hearings in the course of any investigation.

(b) Investigators. Investigations under Section 109(a) of the Act are conducted by OHMT personnel duly authorized for that purpose by the Director, OHMT. Inspections under Section 109(b) of the Act, are conducted by OHMT Hazardous Materials Enforcement Specialists who are duly designated for that purpose. Each official so designated may administer oaths and receive affirmations in any matter under investigation by the OHMT.

(c) Notification. Any person who is the subject of an OHMT investigation and who is requested to furnish information or documentary evidence is notified as to the general purpose for which the information or evidence is sought.

(d) Termination. When the facts disclosed by an investigation indicate that further action is unnecessary or unwarranted at that time, the person being investigated is notified and the investigative file is closed without prejudice to further investigation by the OHMT.

(e) Confidentiality. Information received in an investigation under this section, including the identity of the person investigated and any other person who provides information during the investigation, shall remain confidential under the investigatory file exception, or other appropriate exception, to the public disclosure requirements of 5 U.S.C. 552.

COMPLIANCE ORDERS AND CIVIL PENALTIES

§ 107.307 General.

(a) When the OHMT has reason to believe that a person is knowingly engaging or has knowingly engaged in conduct which is a violation of the Act or any provision of this subchapter or Subchapter C of this chapter, or any exemption, or order issued thereunder, for which the OHMT exercises enforcement responsibility, and if time, the nature of the violation, and the public interest permit, the OHMT may conduct proceedings to assess a civil penalty or to issue an order directing compliance, or both, or seek any other remedy available under the Act.

(b) In the case of a proceeding initiated for failure to comply with an exemption, the allegation of a violation of a term or condition thereof is considered by the OHMT to constitute an allegation that the exemption holder or party to the exemption is failing, or has failed to comply with the underlying regulations from which relief was granted by the exemption.

§ 107.309 Warning letters.

(a) In addition to the initiation of proceedings under § 107.307 for the imposition of sanctions or other remedies, the OHMT may issue a warning letter to any person whom the OHMT believes to have committed a probable violation of the Act or any provision of this subchapter, Subchapter C of this chapter, or any exemption issued thereunder.

(b) A warning letter issued under this section includes:

(1) A statement of the facts upon which the OHMT bases its determination that the person has committed a probable violation;

(2) A statement that the recurrence of the probable violations cited may subject the person to enforcement action; and

(3) An opportunity to respond to the warning letter by submitting

pertinent information or explanations concerning the probable violations cited therein.

§ 107.311 Notice of probable violation.

(a) The Office of Chief Counsel begins an enforcement action under § 107.307, by serving a notice of probable violation on a person alleging the violation of one or more provisions of the Act, this subchapter, or Subchapter C of this chapter, or any exemption issued thereunder.

(b) A notice of probable violation issued under this section includes the following information:

(1) A citation of the provisions of the Act, this subchapter, Subchapter C of this chapter, or the terms of any exemption issued thereunder which the Office of Chief Counsel believes the respondent is violating or has violated.

(2) A statement of the factual allegations upon which the demand for remedial action, a civil penalty, or both, is based.

(3) A statement of the respondent's right to present written or oral explanations, information, and arguments in answer to the allegations and in mitigation of the sanction sought in the notice of probable violation.

(4) A statement of the respondent's right to request a hearing and the procedures for requesting a hearing.

(5) In addition, in the case of a notice of probable violation proposing a compliance order, a statement of the proposed actions to be taken by the respondent to achieve compliance.

(6) In addition, in the case of a notice of probable violation proposing a civil penalty:

(i) A statement of the maximum civil penalty for which the respondent may be liable;

(ii) The amount of the preliminary civil penalty being sought by the Office of Chief Counsel, constitutes the maximum amount the Chief Counsel may seek throughout the proceedings; and

(iii) A description of the manner in which the respondent makes payment of any money due the United States as a result of the proceeding.

(c) The Office of Chief Counsel may amend a notice of probable violation at any time before issuance of a compliance order or an order assessing a civil penalty. If Office of Chief Counsel alleges any new material facts or seeks new or additional remedial action or an increase in the amount of the proposed civil penalty, it issues a new notice of probable violation under this section.

§ 107.313 Reply.

(a) Within 30 days of receipt of a notice of probable violation, the respondent must either:

(1) Admit the violation under § 107.315;

(2) Make an informal response under § 107.317; or

(3) Request a hearing under § 107.319.

(b) Failure of the respondent to file a reply as provided in this section constitutes a waiver of the respondent's right to appear and contest the allegations and authorizes the Chief Counsel, without further notice to the respondent, to find the facts to be as alleged in the notice of probable violation and issue an order directing compliance or assess a civil penalty, or, if proposed in the notice, both. Failure to request a hearing under paragraph (a)(3) of this section constitutes a waiver of the respondent's right to a hearing.

(c) Upon the request of the respondent, the Office of Chief Counsel may, for good cause shown and filed within the 30 days prescribed in the notice of probable violation, extend the 30-day response period.

§ 107.315 Admission of violations.

(a) In responding to a notice of probable violation issued under § 107.311, the respondent may admit the alleged violations and agree to accept the terms of a proposed compliance order or to pay the amount of the preliminarily assessed civil penalty, or, if proposed in the notice, both.

(b) If the respondent agrees to the terms of a proposed compliance order, the Chief Counsel issues a final order prescribing the remedial action to be taken by the respondent.

(c) Payment of a civil penalty must be made by certified check or money order payable to the "Department of Transportation" and sent to the Chief, General Accounting Branch (M–86.2), Accounting Operations Division, Office of the Secretary, Room 2228, Department of Transportation, 400 Seventh Street, S.W., Washington, D.C. 20590.

§ 107.317 Informal response.

(a) In responding to a notice of probable violation under § 107.311, the respondent may submit to the official who issued the notice, written explanations, information, or arguments in response to the allegations, the terms of a proposed compliance order, or the amount of the preliminarily assessed civil penalty.

(b) The respondent may include in his informal response a request for a conference. Upon the request of the respondent, the conference may be either in person or by telephone. A request for a conference must set forth the issues the respondent will raise at the conference.

(c) Upon receipt of a request for a conference under paragraph (b) of this section, the Chief Counsel's Office, in consultation with the OHMT, arranges for a conference as soon as practicable at a time and place of mutual convenience.

(d) The respondent's written explanations, information, and arguments as well as the respondent's presentation at a conference are considered by the Chief Counsel in reviewing the notice of probable violation. Based upon a review of the proceeding, the Chief Counsel may dismiss the notice of probable violation in whole or in part. If he does not dismiss it in whole, he issues an order directing compliance or assessing a civil penalty, or, if proposed in the notice, both.

§ 107.319 Request for a hearing.

(a) In responding to a notice of probable violation under § 107.311, the respondent may request a formal administrative hearing on the record before an Administrative Law Judge (ALJ) obtained by the Office of the Chief Counsel.

(b) A request for a hearing under paragraph (a) of this section must:

(1) State the name and address of the respondent and of the person submitting the request if different from the respondent;

(2) State which allegations of violations, if any, are admitted; and

(3) State generally the issues to be raised by the respondent at the hearing. Issues not raised in the request are not barred from presentation at the hearing; and

(4) Be addressed to the official who issued the notice.

(c) After a request for a hearing that complies with the requirements of paragraph (b) of this section, the Chief Counsel assigns an ALJ to preside over the hearing and notifies the respondent of this fact. Upon assignment of an ALJ, all further matters in the proceeding are conducted by and through the ALJ.

§ 107.321 Hearing.

(a) To the extent practicable, the hearing is held in the general vicinity of the place where the alleged violation occurred or at a place convenient to the respondent. Testimony by witnesses shall be given under oath and the hearing shall be recorded verbatim.

(b) Hearings are conducted in accordance with the Federal Rules of Evidence and Federal Rules of Civil Procedure; however, the ALJ may modify them as he determines necessary in the interest of a full development of the facts. In addition, the ALJ may:

(1) Administer oaths and affirmations;

(2) Issue subpoenas as provided by § 107.13;

(3) Adopt procedures for the submission of motions, evidence, and other documents pertinent to the proceeding;

(4) Take or cause depositions to be taken;

(5) Rule on offers of proof and receive relevant evidence;

(6) Examine witnesses at the hearing;

(7) Convene, recess, reconvene, adjourn and otherwise regulate the course of the hearing;

(8) Hold conferences for settlement, simplification of the issues, or any other proper purpose; and

(9) Take any other action authorized by, or consistent with, the provisions of this subpart and permitted by law which may expedite the hearing or aid in the disposition of an issue raised therein.

(c) The official who issued the notice of probable violation, or his representative, has the burden of proving the facts alleged therein.

(d) The respondent may appear and be heard on his own behalf or through counsel of his choice. The respondent or his counsel may offer relevant information including testimony which he believes should be considered in opposition to the allegations or which may bear on the sanction being sought and conduct such cross-examination as may be required for a full disclosure of the facts.

§ 107.323 ALJ's decision.

(a) After consideration of all matters of record in the proceeding, the ALJ shall issue an order dismissing the notice of probable violation in whole or in part or granting the sanction sought by the Office of Chief Counsel in the notice. If the ALJ does not dismiss the notice of probable violation in whole, he issues an order directing compliance or assessing a civil penalty, or, if proposed in the notice, both. The order includes a statement of the findings and conclusions, and the reasons therefore, on all material issues of fact, law, and discretion.

(b) If, within 20 days of receipt of an order issued under paragraph (a) of this section, the respondent does not submit in writing his acceptance of the terms of an order directing compliance, or, where appropriate, pay a civil penalty, or file an appeal under § 107.325, the case may be referred to the Attorney General with a request that an action be brought in the appropriate United States District Court to enforce the terms of a compliance order or collect the civil penalty.

§ 107.325 Appeals.

(a) *Hearing proceedings.* A party aggrieved by an ALJ's decision and order issued under § 107.323, may file a written appeal in accordance with paragraph (c) of this section with the Administrator, Research and Special Programs Administration (RSPA), 400 Seventh Street, S.W., Washington, D.C. 20590.

(b) *Non-Hearing proceedings.* A respondent aggrieved by an order issued under § 107.317, may file a written appeal in accordance with paragraph (c) of this section with the Administrator, RSPA, 400 Seventh Street, S.W., Washington, D.C. 20590.

(c) An appeal of an order issued under this subpart must:

(1) Be filed within 20 days of receipt of the order by the appealing party; and

For explanation of abbreviations and reference marks, see last page of this tariff.

(2) State with particularity the findings in the order that the appealing party challenges, and include all information and arguments pertinent thereto.

(d) If the Administrator, RSPA, affirms the order in whole or in part, the respondent must comply with the terms of the decision within 20 days of the respondent's receipt thereof, or within the time prescribed in the order. If the respondent does not comply with the terms of the decision within 20 days of receipt, or within the time prescribed in the order, the case may be referred to the Attorney General for action to enforce the terms of the decision.

(e) The filing of an appeal stays the effectiveness of an order issued under § 107.317 or § 107.323. However, if the Administrator, RSPA, determines that it is in the public interest, he may keep an order directing compliance in force pending appeal.

§ 107.327 Compromise and settlement.

(a) At any time before an order issued under § 107.317 or § 107.323 is referred to the Attorney General for enforcement, the respondent or the Office of Chief Counsel may propose a compromise as follows:

(1) In civil penalty cases, the respondent or the Chief Counsel may offer to compromise the amount of the penalty by submitting an offer for a specific amount to the other party. An offer of compromise by the respondent shall be submitted to the Chief Counsel who may, after consultation with Office of Chief Counsel, accept or reject it.

(i) A compromise offer stays the running of any response period then outstanding.

(ii) If a compromise is agreed to by the parties, the respondent is notified in writing. Upon receipt of payment by Office of Chief Counsel, the respondent is notified in writing that acceptance of payment is in full satisfaction of the civil penalty proposed or assessed, and Office of Chief Counsel closes the case with prejudice to the respondent.

(iii) If a compromise cannot be agreed to, the respondent is notified in writing and is given 10 days or the amount of time remaining in the then outstanding response period, whichever is longer, to respond to whatever action was taken by the Office of Chief Counsel or the Administrator, RSPA.

(2) In compliance order cases, the respondent may propose a consent agreement to the Associate Director for OE. If the Chief Counsel accepts the agreement, he issues an order in accordance with its terms. If the Chief Counsel rejects the agreement, he directs that the proceeding continue. An agreement submitted to the Chief Counsel must include:

(i) A statement of any allegations of fact which the respondent challenges;

(ii) The reasons why the terms of a compliance order or proposed compliance order are or would be too burdensome for the respondent, or why such terms are not supported by the record in the case;

(iii) A proposed compliance order suitable for issuance by the Chief Counsel;

(iv) An admission of all jurisdictional facts; and

(v) An express waiver of further procedural steps and all right to seek judicial review or otherwise challenge or contest the validity of the order.

(b) Notwithstanding paragraph (a)(1) of this section, the respondent or Office of Chief Counsel may propose to settle the case. If the Chief Counsel agrees to a settlement, the respondent is notified and the case is closed without prejudice to the respondent.

§ 107.329 Maximum penalties.

(a) A person who knowingly violates a requirement of the Act, this chapter or an exemption issued under Subchapter B of this chapter applicable to the transporting of hazardous materials or the causing of them to be transported or shipped is liable for a civil penalty of not more than $10,000 for each violation. When the violation is a continuing one, each day of the violation constitutes a separate offense.

(b) A person who knowingly violates a requirement of the Act, this chapter or an exemption issued under Subchapter B of this Chapter applicable to the manufacture, fabrication, marking, maintenance, reconditioning, repair, or testing of a packaging or container which is represented, marked, certified or sold by that person as being qualified for use in the transportation of hazardous materials in commerce is liable for a civil penalty of not more than $10,000 for each violation.

§ 107.331 Assessment considerations.

In assessing a civil penalty under this subpart, the Chief Counsel takes into account:

(a) The nature and circumstances of the violation;
(b) The extent and gravity of the violation;
(c) The degree of the respondent's culpability;
(d) The respondent's history of prior offenses;
(e) The respondent's ability to pay;
(f) The effect on the respondent's ability to continue in business; and
(g) Such other matters as justice may require.

CRIMINAL PENALTIES

§ 107.333 Criminal penalties generally.

Section 110(b) of the Act (49 U.S.C. 1809(b)) provides a criminal penalty of a fine of not more than $25,000 and imprisonment for not more than five years, or both, for any person who willfully violates a provision of the Act or a regulation issued under the Act.

§ 107.335 Referral for prosecution.

If the OHMT becomes aware of a possible willful violation of the Act, this chapter, Subchapter C of this chapter, or any exemption, or order issued thereunder, for which the OHMT exercises enforcement responsibility, it shall report it to the Office of the Chief Counsel, Research and Special Programs Administration, U.S. Department of Transportation, Washington, D.C. 20590. If appropriate, the Chief Counsel refers the report to the Department of Justice for criminal prosecution of the offender.

INJUNCTIVE ACTION

§ 107.337 Injunctions generally.

Whenever it appears to the Office of Chief Counsel that a person has engaged, or is engaged, or is about to engage in any act or practice constituting a violation of any provision of the Act, this subchapter, Subchapter C of this chapter, or any exemption, or order issued thereunder, for which the Office of Chief Counsel exercises enforcement responsibility, the Administrator, RSPA, or his delegate, may request the Attorney General to bring an action in the appropriate United States District Court for such relief as is necessary or appropriate, including mandatory or prohibitive injunctive relief, interim equitable relief and punitive damages as provided by section 111(a) of the Act.

§ 107.339 Imminent hazards.

Whenever it appears to the Office of the Chief Counsel that there is a substantial likelihood that death, serious illness, or severe personal injury will result from the transportation of a particular hazardous material or hazardous material's container, before a compliance order proceeding or other administrative hearing or formal proceeding to abate the risk of that harm can be completed, the Administrator, RSPA, or his delegate, may bring an action under section 111(b) of the Act in the appropriate United States District Court for an order suspending or restricting the transportation of that hazardous material or those containers or for such other equitable relief as is necessary or appropriate to ameliorate the hazard.

SUBPART E—DESIGNATION OF APPROVAL AGENCIES AND CERTIFICATION AGENCIES

§ 107.401 Purpose and scope.

(a) This subpart establishes procedures for the designation of agencies to issue approval certificates and certifications for types of packagings designed, manufactured, tested, or maintained in conformance with the requirements of this subchapter, Subchapter C of this chapter, and standards set forth in the United Nations (U.N.) Recommendations (Transport of Dangerous Goods). Except for certifications of compliance with U.N. packaging standards, this subpart does not apply unless made applicable by a rule in Subchapter C of this chapter.

(b) The Associate Director for HMR may issue approval certificates and certifications addressed in paragraph (a) of this section.

§ 107.402 Application for designation as an approval or certification agency. (a) Any organization or person seeking designation as an approval or certification agency shall apply in writing to the Director, Office of Hazardous Material's Transportation (DMT-20), Department of Transportation, 400 Seventh Street, S.W., Washington, D.C. 20590. Each application must be signed and certified to be correct by the applicant or, if the applicant is an organization, by an authorized officer or official representative of the organization. Any false statement or representation, or the knowing and willful concealment of a material fact, may subject the applicant to prosecution under the provisions of 18 U.S.C. 1001, result in the denial or termination of a designation.

(b) Each application for designation must be in English and include the following information:

(1) Name and address of the applicant, including place of incorporation if a corporation. In addition, if the applicant is not a resident of the United States, the name and address of a permanent resident of the United States designated in accordance with § 107.7 to serve as agent for service of process.

(2) If the applicant's principal place of business is in a country other

than the United States, a copy of the designation from the Competent Authority of that country delegating to the applicant an approval or designated agency authority for the type of packaging for which a DOT designation is sought, and a statement that the Competent Authority also delegates similar authority to U.S. Citizens or organizations having designations under this subpart from the RSPA.

(3) A listing, by DOT specification (or exemption) number, or UN designation, of the types of packagings for which approval authority is sought.

(4) A personnel qualifications plan listing the qualifications that the applicant will require of each person to be used in the performance of each packaging approval or certification function. As a minimum, these qualifications must include—

(i) The ability to review and evaluate design drawings, design and stress calculations;

(ii) A knowledge of the applicable regulations of Subchapter C of this chapter and, when applicable, U.N. standards; and

(iii) The ability to conduct or monitor and evaluate test procedures and results; and

(iv) The ability to review and evaluate the qualifications of materials and fabrication procedures.

(5) A statement that the applicant will perform its functions independent of the manufacturers and owners of the packagings concerned.

(6) A statement that the applicant will allow the Director, OHMT or his representative to inspect its records and facilities in so far as they relate to the approval or certification of specification packagings and shall cooperate in the conduct of such inspections.

(c) The applicant shall furnish any additional information relevant to the applicant's qualifications, if requested by the Director, OHMT.

§ 107.403 Designation of approval agencies. (a) If the Director, OHMT determines that an application contains all the required information, the applicant is sent a letter of designation and assigned an identification code.

(b) If the Director, OHMT determines that an application does not contain all the required information, the application is denied and the applicant is sent a written notice containing all the reasons for the denial.

(c) Within 30 days of an initial denial of an application under paragraph (b) of this section, the applicant may file an amended application. If after considering the amended application, the Director, OHMT determines that it should be denied, he notifies the applicant, and the denial constitutes the final action of the Director, OHMT on the application. Within 60 days of receipt of the final denial the applicant may appeal the denial to the Administrator, RSPA, setting forth in writing where the Director, OHMT erred in this determination.

§ 107.404 Conditions of designation. (a) Each designation made under this subpart contains the following conditions:

(1) The designated approval or certification agency may use only testing equipment that it has determined, through personal inspection, to be suitable for the purpose.

(2) Each approval certificate and certification issued by the designated approval agency must contain the name and identification code of the approval agency.

(3) Each approval certificate and certification must be in a format acceptable to the Director, OHMT.

(b) The designated approval agency shall notify the Director, OHMT within 20 days after the date there is any change in the information submitted under § 107.402.

(c) The designated approval agency shall comply with all of the terms and conditions stated in its letter of designation under the subpart.

(d) Nothing in this part relieves a manufacturer or owner of a packaging of responsibility for compliance with any of the applicable requirements of this title.

§ 107.405 Termination of designation. (a) Any designation issued under § 107.403 of this subchapter may be suspended or terminated if the Director, OHMT determines that:

(1) The application for designation contained a misrepresentation, or the applicant willfully concealed a material fact.

(2) The approval agency failed to comply with a term or condition stated in the agency's letter of designation.

(3) The Competent Authority of an approval agency of a country outside the United States has failed to initiate, maintain or recognize a qualified U.S. approval agency.

(b) Before a designation is suspended or terminated, the Director, OHMT shall give to the approval agency:

(1) Written notice of the facts or conduct believed to warrant suspension or termination of the designation.

(2) Sixty days in which to show in writing why the designation should not be suspended or terminated.

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

§ 171.1 Purpose and scope. This subchapter prescribes the requirements of the Department of Transportation governing: (a) The transportation of hazardous materials by, and their offering to:

(1) Carriers by rail car, aircraft and vessel (except as delegated at §1.46(t) of this title);

(2) Interstate and foreign carriers by motor vehicle; and

(3) Intrastate carriers by motor vehicle so far as this subchapter relates to:

(i) Hazardous waste.

(ii) Hazardous substances

(iii) Flammable cryogenic liquids in portable tanks and cargo tanks.

(b) The manufacture, fabrication, marking, maintenance, reconditioning, repairing, or testing of a packaging or container which is represented, marked, certified, or sold for use in such transportation as specified in paragraph (a) of this section.

§ 171.2 General requirements. (a) No person may offer or accept a hazardous material for transportation in commerce unless that material is properly classed, described, packaged, marked, labeled, and in condition for shipment as required or authorized by this subchapter (including §§171.11, 171.12 and 176.11), or

(b) No person may transport a hazardous material in commerce unless that material is handled and transported in accordance with this subchapter, or an exemption issued under Subchapter B of this chapter.

(c) No person may represent, mark, certify, sell, or offer a packaging or container as meeting the requirements of this subchapter or an exemption issued under Subchapter B of this chapter, governing its use in the transportation in commerce of a hazardous material, whether or not it is used or intended to be used for the transportation of a hazardous material, unless the packaging or container is manufactured, fabricated, marked, maintained, reconditioned, repaired, or retested, as appropriate, in accordance with this subchapter, an approval issued thereunder, or an exemption issued under Subchapter B of this chapter.

(d) The representations, markings, and certifications subject to the prohibitions of paragraph (c) of this section include:

(1) Specification identifications that include the letters "DOT" or "UN";

(2) Exemption, approval, and registration numbers that include the letters "DOT;" and

(3) Test dates displayed in association with specification, registration, approval, or exemption markings indicating compliance with a test or retest requirement of this subchapter, an approval issued thereunder, or an exemption issued under Subchapter B of this chapter.

§ 171.3 Hazardous waste. (a) No person may offer for transportation or transport a hazardous waste (as defined in §171.8 of this subchapter) in interstate or intrastate commerce except in accordance with the requirements of this subchapter.

(b) No person may accept for transportation, transport, or deliver a hazardous waste for which a manifest is required unless that person:

(1) Has marked each motor vehicle used to transport hazardous waste in accordance with §397.21 or §1058.2 of this title even though placards may not be required;

(2) Complies with the requirements for manifests set forth in §172.205 of this subchapter; and

(3) Delivers, as designated on the manifest by the generator, the entire quantity of the waste received from the generator or a transporter to:

(i) The designated facility or, if not possible, to the designated alternate facility;

(ii) The designated subsequent carrier; or

(iii) A designated place outside the United States.

Note: Federal law specifies penalties up to $25,000 fine and 5 years imprisonment for the willful discharge of hazardous waste at other than designated facilities. 49 U.S.C. 1809

(c) With regard to hazardous waste subject to this subchapter, any requirement of a state or its political subdivision is inconsistent with this subchapter if it applies because that material is a waste material and applies differently from or in addition to the requirements of this subchapter concerning:

(1) Packaging, marking, labeling, or placarding;

(2) Format or contents of discharge reports (except immediate reports for emergency response); and

(3) Format or contents of shipping papers, including hazardous waste manifests.

Note: See § 172.205, each manifest must be prepared in accordance with 40 CFR 262.20 including the instructions and limitations specified for preparation of a manifest.

(d) If a discharge of hazardous waste or other hazardous material occurs during transportation, and an official of a State or local government or a Federal agency, acting within the scope of his official responsibilities, determines that immediate removal of the waste is necessary to prevent further consequence, that official may authorize the removal of the waste without the preparation of a manifest. [NOTE: In such cases, EPA does not require carriers to have EPA identification numbers.]

(e) If a hazardous material that is a hazardous waste is required by this subchapter to be shipped in a closed head DOT specification drum, and the hazardous waste contains solids or semisolids that would make its placement in a closed head drum impracticable (e.g., a drum with a 2.3 inch bung opening), an equivalent specification open head drum (except for closure) may be used for such a waste.

Note 1: EPA requires shippers (generators) and carriers (transporters) of hazardous wastes to have identification numbers which must be displayed on hazardous waste manifests. See 40 CFR 262.20(a) and 263.11. (Identification number application forms (EPA Form 8700-12) may be obtained from EPA Regional Offices.)

Note 2: The following EPA regulation is set forth in 40 CFR Part 263:

§263.31 Discharge clean up. A transporter must clean up any hazardous waste discharge that occurs during transportation or take such action as may be required or approved by Federal, State, or local officials so that the hazardous waste discharge no longer presents a hazard to human health or the environment.

§ 171.4 Changes in specifications for tank cars. (a) See §179.4 of this subchapter.

§ 171.5 Procedure covering tank car construction. (a) See §179.3 of this subchapter.

§ 171.6 [Reserved]

§ 171.7 Matter incorporated by reference. (a) There is incorporated by reference in Parts 170–189 of this subchapter all matter referred to that is not specifically set forth. These materials are hereby made a part of the regulations in Part 170–189 of this subchapter. Unless the reference provides otherwise, matter subject to change is incorporated only as it is in effect on the date of issuance of the regulation referring to that matter.

(b) All incorporated matter is available for inspection in the Dockets Branch, Room 8426, Nassif Building, 400 7th Street SW., Washington, D.C. 20590.

(c) Matter incorporated by reference is available for distribution as follows:

(d) The full title and application of the matter incorporated by reference in Parts 170-189 of this chapter are as follows:

(1) ASME Code means Sections II (Parts A and B), V, VIII (Division 1), and IX of the 1986 edition of the "American Society of Mechanical Engineers Boiler and Pressure Vessel Code," and addenda thereto through June 30, 1985."

(2) AAR Specifications for Tank Cars means the 1985 edition of the "Association of American Railroads Specifications for Tank Cars, Specification M-1002".

(3) Compressed Gas Association:
(i) CGA Pamphlet C-3 is titled, "Standards for Welding and Brazing on Thin Walled Containers," 1968 edition;
(ii) CGA Pamphlet C-6 is titled, "Standards for Visual Inspection of Steel Compressed Gas Cylinders," 1984 edition;
(iii) CGA Pamphlet C-7 is titled, "Guide to the Preparation of Precautionary Labeling and Marking of Compressed Gas Containers," 1983 edition including Appendix A issued April 15, 1983.
(iv) CGA Pamphlet C-8 is titled, "Standard for Requalification of DOT-3HT Seamless Steel Cylinders," 1985 edition.
(v) CGA Pamphlet S-1.2 is titled, "Pressure Relief Device Standards, Part 2—Cargo and Portable Tanks for Compressed Gases," 1980 edition.
(vi) CGA Pamphlet S-1.1 is titled, "Pressure Relief Device Standards Part 1—Cylinders for Compressed Gases," 1979 edition.
(vii) CGA Pamphlet C-12 is titled, "Qualification Procedure for Acetylene Cylinder Design," 1979 edition.
(viii) CGA Pamphlet C-14 is titled "Procedures for Fire Testing of DOT Cylinder Pressure Relief Device Systems," 1979 edition.
(ix) CGA Pamphlet G-4.1 is titled, "Cleaning Equipment for Oxygen Service," 1985 edition.
(x) CGA Pamphlet G-2.2 is titled, "Guideline Method for Determining Maximum of 0.2% Water in Anhydrous Ammonia", 1985 edition.
(xi) CGA Technical Bulletin TB-2 is titled, "Guidelines for Inspection and Repair of MC-330 and MC-331 Cargo Tanks", 1980 edition.
(xii) CGA Pamphlet C-6.1 is titled, "Standards for Visual Inspection of Aluminum Compressed Gas Cylinders", 1984 edition.

(4) American National Standards:
(i) American National Standard B9.1, is titled, "Safety Code for Mechanical Refrigeration," 1964 edition.
(ii) American National Standard B16.5 is titled, "Steel Pipe Flanges and Fittings," 1968 edition.
(iii) American National Standard N14.1 is titled, "Packaging of Uranium Hexafluoride for Transport," 1982 edition.

(5) American Society for Testing and Materials:
(i) ASTM D1310 is titled, "Standard Method of Test for Flash Point of Volatile Flammable Materials By Tag Open-Cup Apparatus," 1967 edition;
(ii) ASTM D323 is titled, "Test for Vapor Pressure of Petroleum Products (Reid Method)," 1968 edition.
(iii) ASTM D1056 is titled, "Sponge and Expanded Cellular Rubber Products, Spec. and Tests for," 1968 edition.
(iv) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure of Nonmetallic Materials," 1969 edition (reapproved 1975).
(v) ASTM G 26-70 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Xenon-Arc Type) for Exposure of Nonmetallic Materials," 1970 edition.
(vi) ASTM D-638 is titled, "Test for Tensile Strength of Plastics", 1976 edition.
(vii) ASTM D-1505 is titled, "Test for Density of Plastics by the Density Gradient Technique", 1968 edition.
(viii) ASTM C148-77 is titled, "Standard Methods of Polariscopic Examination of Glass Containers," 1977 edition.
(ix) ASTM E437-74 is titled, "Standard Test Method for Constant-Temperature Stability of Chemical Materials," 1974 edition.
(x) ASTM B 557-79 is titled "Tension Testing Wrought and Cast Aluminum and Magnesium—Alloy Products" 1979 Edition.
(xi) ASTM B-221-76 is titled "Standard Specification for Aluminum Alloy Extruded Bars, Rods, Shapes and Tubes," 1976 Edition.
(xii) ASTM E 290-77 is titled "Semi-Guided Bend Test for Ductility of Metallic Materials," 1977 edition.
(xiii) ASTM D56-79 is titled "Standard Method of Test for Flash Point by Tag Closed Tester," 1979 edition.
(xiv) ASTM D3278-78 is titled "Standard Methods of Test for Flash Point of Liquids by Setaflash Closed Tester," 1978 edition.
(xv) ASTM D93-80 is titled "Standard Method of Test for Flash Point by Pensky-Martens Closed Tester," 1980 edition.
(xvi) ASTM 88-56 is titled "Standard Method of Test for Saybolt Viscosity" 1956 edition (reapproved 1968).
(xvii) ASTM D2161-79 is titled "Standard Method for Conversion of Kinematic Viscosity to Saybolt Universal Viscosity or to Saybolt Furol Viscosity," 1979 edition.
(xviii) ASTM D445-79 is titled "Standard Test Method for Kinematic Viscosity of Transparent and Opaque Liquids (and the Calculation of Dynamic Viscosity," 1979 edition.
(xix) ASTM A 20-81 is titled, "Standard Specification for General Requirements for Steel Plates for Pressure Vessels," revision C, 1982 edition.
(xx) ASTM A 240-82 is titled, "Standard Specification for Heat Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet and Strip for Fusion-Welded Unfired Pressure Vessels," revision A, 1982 edition.
(xxi) ASTM A 370-77 is titled, "Standard Methods and Definition for Mechanical Testing of Steel Products," 1982 edition.
(xxii) ASTM A 516-79b is titled, "Standard Specification for Pressure Vessel Plates, Carbon Steel, for Moderate- and Lower-Temperature Service," 1982 edition.
(xxiii) ASTM A 537-80 is titled "Standard Specification for Pressure Vessel Plates, Heat-Treated, Carbon-Manganese Silicon Steel," 1982 edition.
(xxiv) ASTM A 242-81 is titled "Standard Specification for High-Strength Low-Alloy Structural Steel," 1981 edition.
(xxv) ASTM A 441-81 is titled "Standard Specification for High-Strength Low-Alloy Structural Manganese Vanadium Steel," 1981 edition.
(xxvi) ASTM A 514-81 is titled "Standard Specification for High-Yield-Strength, Quenched and Tempered Alloy Steel Plate, Suitable for Welding," 1981 edition.
(xxvii) ASTM A 572-82 is titled "Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Steels of Structural Quality," 1982 edition.
(xxviii) ASTM A 588-81 is titled "Standard Specification for High-Strength Low-Alloy Structural Steel with 50 ksi Minimum Yield Point to 4 in. Thick," 1981 edition.
(xxix) ASTM A 606-75 (Reapproved 1981) "Standard Specification for Steel Sheet and Strip, Hot-Rolled and Cold Rolled, High-Strength, Low-Alloy, with Improved Atmospheric Corrosion Resistance," 1981 edition.
(xxx) ASTM A 607-75 is titled "Standard Specification for Sheet and Strip, Hot-Rolled and Cold-Rolled, High-Strength, Low-Alloy Columbium and or Vanadium," 1975 edition.
(xxxi) ASTM A 633-79a is titled "Standard Specification for Normalized High-Strength Low-Alloy Structural Steel," 1979 edition.
(xxxii) ASTM A 715-81 is titled "Standard Specification for Steel Sheet and Strip, Hot-Rolled, High-Strength, Low-Alloy, with Improved Formability," 1981 edition.
(xxxiii) ASTM B 580-79 is titled "Standard Specification for Anodic Oxide Coatings on Aluminum," 1979 edition.
(xxxiv) ASTM D4359-84 is titled, "Standard Test Method for Determining Whether a Material is a Liquid or a Solid", 1984 edition.

(6) NFPA Pamphlet No. 58 is titled, "Standard for the Storage and Handling of Liquefied Petroleum Gases," 1979 edition.

(7) Bureau of Explosives, Association of American Railroads:
(i) Bureau of Explosives Pamphlet No. 6 is titled, "Illustrating Methods for Loading and Bracing Carload and Less Than Carload Shipments of Explosives and Other Dangerous Articles," 1962 edition.
(ii) Bureau of Explosives Pamphlet No. 6A (includes appendix No. 1, October 1944, and appendix No. 2, December 1945) is titled, "Illustrating Methods for Loading and Bracing Carload and Less Than Carload Shipments of Loaded Projectiles, Loaded Bombs, etc.," 1943 edition.
(iii) Bureau of Explosives Pamphlet No. 6C is titled, "Illustrating Methods for Loading and Bracing Trailers and Less-Than Trailer Shipments of Explosives and Other Dangerous Articles via Trailer-on-Flat-Car (TOFC) or Container-on-Flat-Car (COFC)," September 1968.
(iv) Bureau of Explosives Pamphlets 1 and 2 titled "Emergency Handling of Hazardous Materials in Surface Transportation", April 1981.

For explanation of abbreviations and reference marks, see last page of this tariff.

(8) NACE Standard TM 01-69 is titled, "Test Method Laboratory Corrosion Testing of Metals for the Process Industries," 1969 edition.
(9) IME Safety Library Publication No. 22 (IME Standard 22) is titled, "Recommendations for the Safe Transportation of Detonators in a Vehicle With Certain Other Explosive Materials." Revised January 1, 1985.
(10) IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)."
(11) United States Nuclear Regulatory Commission (USNRC) 10 CFR Part 71, "Packaging of Radioactive Materials for Transport and Transportation of Radioactive Material Under Certain Conditions."
(12) Federal Standard 1128 is titled "Screw-Thread Standards for Federal Services," March 31, 1978, edition.
(13) National Wooden Box Association's Specification 1-1B is titled "Specifications for Nailed Wooden and Lock Corner Boxes for Industrial Use" May 1958. Amended in part October 1961.
(14) American Water Works Association (AWWA) Standard C207-55 is titled, "AWWA Standard for Steel Pipe Flanges," 1955 edition.
(15) American Welding Society (AWS):
(i) AWS Code B-3.0 is titled, "Standard Qualification Procedure," 1972 edition.
(ii) AWS Code D-1.0 is titled, "Code for Welding in Building Construction," 1966 edition.
(16) USDC, CAPE-1662, one of the series of "Civilian Applications Program Engineering Drawings" which is a package of information including drawings and bills of material, describing phenolic-foam insulated, protective overpacks
(i) USDC, USDOE Material and Equipment Specification No. SP-9, Rev. 1, and Supplement, is titled, "Fire Resistant Phenolic Foam."
(ii) USDC, ORO-651 is titled, "Uranium Hexafluoride Handling Procedures and Container Criteria," Revision 3, 1972 edition.
(17) "International Maritime Dangerous Goods Code (IMDG Code)," Volumes I, II, III, and IV, 1977 Edition, and Amendments 14-76, 15-77, 16-78, 17-79, 18-79, 19-80, and 20-82 thereto.
(18) "Uniform Freight Classification 11."
(19) Federal Specification RR-C-901b is titled "Cylinders, Compressed Gas: With Valve or Plug and Cap; ICC 3AA, August 1, 1967."
(20) NIOSH Registry is titled, "Registry of Toxic Effects of Chemical Substances," 1978 edition, available from the Superintendent of Documents.
(21) United Nations Recommendations (UN Recommendations) is titled, "Recommendations on the Transport of Dangerous Goods" (Fourth revised edition 1986).
(22) SADT is titled, "Self Accelerating Decomposition Temperature Test," published by the OPPSD.
(23) USDOT, "Guidelines for Selecting Preferred Highway Routes for Highway Route Controlled Quantity Shipments of Radioactive Materials."
(24) "ISO 82-1974(e) Steel-Tensile Testing." First Edition 1974-08-01.
(25) Aluminum Associations' Handbook is titled "Aluminum Standards and Data," Sixth Edition, 1979.
(26) National Motor Freight Classification, NMF 100-I, 1982.
(27) International Civil Aviation Organization Technical Instructions for the Safe Transport of Dangerous Goods by Air, DOC 9284-AN 905 (ICAO Technical Instructions), 1987-88 edition.
(28) "Transportation of Dangerous Goods Regulations" of Transport Canada (TDG Regulations), amended as of July 1, 1985. (Incorporating Registration Numbers SOR 85-77, SOR 85-585 and SOR 85-609).
(e) Matters referenced by footnote are included as part of the regulations of this subchapter.
(f) The material listed in this section has been approved for incorporation by reference by the Director of the Federal Register. These materials are incorporated as they exist on the date of the approval and a notice of any change in these materials will be published in the *Federal Register*. The material incorporated by reference is available for inspection at the Office of the Federal Register Information Center, Room 8301, 1100 L Street, NW, Washington, D.C. 20408.

§ 171.8 Definitions and abbreviations. In this subchapter,
"Approved" means approval issued or recognized by the Department unless otherwise specifically indicated in this subchapter.
"Atmospheric gases" means gases that are commercially derived through an air separation process. For purposes of this subchapter, "atmospheric gases" means argon, krypton, neon, nitrogen, oxygen and xenon.
"Away from" See § 176.83.
"Barge" means a non-self-propelled vessel.
"Bottle" means a container having a neck of relatively smaller cross section than the body and an opening capable of holding a closure for retention of the contents.
"Break-bulk" means packages of hazardous materials that are handled individually, palletized, or unitized for purposes of transportation as opposed to bulk and containerized freight.
"Btu" means British thermal unit.
"Bulk packaging" means a packaging, other than a vessel or a barge, including a transport vehicle or freight container, in which hazardous materials are loaded with no intermediate form of containment and which has: (1) An internal volume greater than 450 liters (118.9 gallons) as a receptacle for a liquid; (2) a capacity greater than 400 kilograms (881.8 pounds) as a receptacle for a solid; or (3) a water capacity greater than 1000 pounds (453.6 kilograms) as a receptacle for a gas as defined in § 173.300.
"Bureau of Explosives" means the Bureau of Explosives (BOE) of the Association of American Railroads.
"C" means Celsius or Centigrade.
"Captain of the Port" means the Officer of the Coast Guard, under the command of a District Commander, so designated by the Commandant for the purpose of giving immediate direction to Coast Guard law enforcement activities within his assigned area or, with respect to remaining areas in his District not assigned to officers designated by the Commandant, the District Commander.
"Carfloat" means a vessel that operates on a short run on an irregular basis and serves one or more points in a port area as an extension of a rail line or highway over water, and does not operate in ocean, coastwise, or ferry service.
"Cargo aircraft only" means an aircraft that is used to transport cargo and is not engaged in carrying passengers.
"Cargo tank" means any tank permanently attached to or forming a part of any motor vehicle or any bulk liquid or compressed gas packaging not permanently attached to any motor vehicle which by reason of its size, construction, or attachment to a motor vehicle, is loaded or unloaded without being removed from the motor vehicle. Any packaging fabricated under specifications for cylinders is not a cargo tank.
"Cargo vessel" means: (1) Any vessel other than a passenger vessel, and
(2) Any ferry being operated under authority of a charge of character certificate issued by a Coast Guard Officer-in-Charge, Marine Inspection.
"Carrier" means a person engaged in the transportation of passengers or property by: (1) Land or water, as a common, contract, or private carrier, or
(2) Civil aircraft.
"CC" means closed-cup.
"Character of vessel" means the type of service in which the vessel is engaged at the time of carriage of a hazardous material
"Class A explosives" See § 173.53.
"Class B explosives" See § 173.88.
"Class C explosives" See § 173.100.
"COFC" means container-on-flat-car.
"Combustible liquid" See § 173.115.
"Competent authority" means a national agency responsible under its national law for the control or regulation of a particular aspect of the transportation of hazardous materials (dangerous goods). The term "Appropriate authority", as used in the ICAO Technical Instructions, has the same meaning as "Competent Authority". The Director, Office of Hazardous Materials Transportation, Research and Special Programs Administration, is the United States Competent Authority for purposes of this subchapter and 46 CFR Parts 64 and 146.
"Compressed gas" See § 173.300.
"Consumer commodity" means a material that is packaged and distributed in a form intended or suitable for sale through retail sales agencies or instrumentalities for consumption by individuals for purposes of personal care or household use. This term also includes drugs and medicines.
"Containership" means a cargo vessel designed and constructed to transport, within specifically designed cells, portable tanks and freight containers which are lifted on and off with their contents intact.
"Corrosive material" See § 173.240.
"Crewmember" means a person assigned to perform duty in an aircraft during flight time.
Cryogenic liquid. See § 173.300(f).
"Cylinder" means a pressure vessel designed for pressures higher than 40 psia and having a circular cross section. It does not include a portable tank, multi-unit tank car tank, cargo tank, or tank car.
"DOD" means the U.S. Department of Defense.
"Designated facility" means a hazardous waste treatment, storage, or disposal facility that has been designated on the manifest by the generator.
"District Commander" means the District Commander of the Coast Guard, or his authorized representative, who has jurisdiction in the particular geographical area.
"Engine" means a locomotive propelled by any form of energy and used by a railroad.
"EPA" means U.S. Environmental Protection Agency
"Etiologic agent" See § 173.386.
"F" means degree Fahrenheit.
"Ferry vessel" means a vessel which is limited in its use to the carriage of deck passengers or vehicles or both, operates on a short run on a frequent schedule between two points over the most direct water route, other than in ocean or coastwise service, and is offered as a public service of a type normally attributed to a bridge or tunnel.
"Filling density" has the following meanings:
(1) For compressed gases in cylinders, see § 173.304(a)(2) Table Note 1.
(2) For compressed gases in tank cars; see § 173.314(c) Table Note 1.
(3) For compressed gases in cargo tanks and portable tanks, see § 173.315(a) Table Note 1.
(4) For cryogenic liquids in cylinders, except hydrogen, see § 173.316(c)(1).
(5) For hydrogen, cryogenic liquid in cylinders, see § 173.316(c)(3) Table Note 1.
(6) For cryogenic liquids in cargo tanks, see § 173.318(f)(1).
(7) For cryogenic liquids in tank cars see § 173.319(d)(1).
"Flammable gas" See § 173.300(b).

"Flammable liquid" See §173.115(a)(1).

"Flammable solid" See §173.150.

"Flash point" means the minimum temperature at which a substance gives off flammable vapors which in contact with spark or flame will ignite. For liquids, see §173.115 and for solids, see §173.150.

"Freight container" means a reusable container having a volume of 64 cubic feet or more, designed and constructed to permit being lifted with its contents intact and intended primarily for containment of packages (in unit form) during transportation.

"Fuel tank" means a tank other than a cargo tank, used to transport flammable or combustible liquid, or compressed gas for the purpose of supplying fuel for propulsion of the transport vehicle to which it is attached, or for the operation of other equipment on the transport vehicle.

"Gross weight" means the weight of a packaging plus the weight of its contents.

"Hazardous material" means a substance or material, including a hazardous substance, which has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and which has been so designated.

"Hazardous substance" for the purposes of this subchapter, means a material, including its mixtures and solutions, that—

(1) Is listed in the Appendix to §172.101 of this subchapter;

(2) Is in a quantity, in one package, which equals or exceeds the reportable quantity (RQ) listed in the Appendix to §172.101 of this subchapter; and

(3) When in a mixture or solution, is in a concentration by weight which equals or exceeds the concentration corresponding to the RQ of the material, as shown in the following table:

RQ pounds (kilograms)	Concentration by weight	
	Percent	PPM
5000 (2270)	10	100 000
1000 (454)	2	20 000
100 (45.4)	0.2	2 000
10 (4.54)	0.02	200
1 (0.454)	0.002	20

This definition does not apply to petroleum products that are lubricants or fuels (see 40 CFR 300.6).

"Hazardous waste", for the purposes of this chapter, means any material that is subject to the Hazardous Waste Manifest Requirements of the U.S. Environmental Protection Agency specified in 40 CFR Part 262.

"Hermetically sealed" means closed by fusion, gasketing, crimping, or equivalent means so that no gas or vapor can enter or escape.

"IAEA" means International Atomic Energy Agency.

"IATA" means International Air Transport Association.

"IMO" means International Maritime Organization.

"ICAO" means International Civil Aviation Organization.

"IM Tank Table" means the table (with preface) listing hazardous materials approved by the Director, OHMT for carriage in IM portable tanks under special conditions specified therein.

"Intermodal container" means a freight container designed and constructed to permit it to be used interchangeably in two or more modes of transport.

"Intermodal portable tank" or "IM portable tank" means a specific class of portable tanks designed primarily for international intermodal use.

"Irritating material" See §173.381.

"Limited quantity," when specified as such in a section applicable to a particular material with the exception of Poison B materials, means the maximum amount of a hazardous material for which there is a specific labeling and packaging exception.

"Liquid" means a material that has a vertical flow of over 2 inches (50 mm) within a three minute period, or a material having one gram (lg) or more liquid separation, when determined in accordance with the procedures specified in ASTM D 4359-84, "Standard Test Method for Determining whether a Material is a Liquid or Solid", 1984 edition.

"Magnetic materials" See §173.21(f).

"Magazine vessel" means a vessel used for the receiving, storing, or dispensing of explosives.

"Marking" means applying the descriptive name, instructions, cautions, weight, or specification marks or combination thereof required by this subchapter to be placed upon outside containers of hazardous materials.

"Mixture" means a material composed of more than one chemical compound or element.

"Mode" means any of the following transportation methods: rail, highway, air, or water.

"Motor vehicle" includes a vehicle, machine, tractor, trailer, or semitrailer, or any combination thereof, propelled or drawn by mechanical power and used upon the highways in the transportation of passengers or property. It does not include a vehicle, locomotive, or car operated exclusively on a rail or rails, or a trolley bus operated by electric power derived from a fixed overhead wire, furnishing local passenger transportation similar to street-railway service.

"Name of contents" means the proper shipping name as specified in §172.101 or §172.102 (when authorized).

"Navigable waters" means, for the purposes of this subchapter, waters of the United States, including the territorial seas.

"Net weight" means a measure of weight referring only to the contents of a package, and does not include the weight of any packaging material.

"N.O.S." means not otherwise specified.

"Non-bulk packaging" means a packaging which has (1) an internal volume of 450 liters (118.9 gallons) or less as a receptacle for a liquid, (2) a capacity of 400 kilograms (881.8 pounds) or less as a receptacle for a solid, or (3) a water capacity of 1000 pounds (454.0 kilograms) or less as a receptacle for a gas as defined in §173.300.

"NPT" means an American Standard taper pipe thread in compliance with the requirements of Federal Standard H28, Part II, Section VII. See §171.7(d)(12).

"NRC (non-reusable container)" means a container whose reuse is restricted in accordance with the provisions of §173.28.

"Occupied caboose" means a rail car being used to transport non-passenger personnel.

"Officer in Charge, Marine Inspection" means a person from the civilian or military branch of the Coast Guard designated as such by the Commandant and who under the supervision and direction of the Coast Guard District Commander is in charge of a designated inspection zone for the performance of duties with respect to the enforcement and administration of Title 52, Revised Statutes, acts amendatory thereof or supplemental thereto, rules and regulations thereunder, and the inspection required thereby.

"Operator" means a person who controls the use of an aircraft, vessel, or vehicle.

"Organic peroxide" See §173.151.

"ORM" means Other Regulated Materials.

"Outage" or "ullage" means the amount by which a packaging falls short of being liquid full, usually expressed in percent by volume.

"Outside container" means the outermost enclosure used in transporting a hazardous material other than a freight container.

"Overpack" except when referenced to a packaging specified in Part 178 of this subchapter, means an enclosure that is used by a single consignor to provide protection or convenience in handling of a package or to consolidate two or more packages. "Overpack" does not include a freight container.

"Oxidizer" or "Oxidizing material" See §173.151.

"Package" or "Outside Package" means a packaging plus its contents. For radioactive materials, see §173.403 of this subchapter.

"Packaging" means the assembly of one or more containers and any other components necessary to assure compliance with the minimum packaging requirements of this subchapter and includes containers (other than freight containers or overpacks), portable tanks, cargo tanks, tank cars, and multi-unit tank car tanks. For radioactive materials, see §173.403 of this subchapter.

"Passenger" (With respect to vessels and for the purposes of Part 176 only) means a person being carried on a vessel other than:

(1) The owner or his representative,

(2) The operator;

(3) A bona fide member of the crew engaged in the business of the vessel who has contributed no consideration for his carriage and who is paid for his services; or

(4) A guest who has not contributed any consideration directly or indirectly for his carriage.

"Passenger-carrying aircraft" means an aircraft that carries any person other than a crewmember, company employee, an authorized representative of the United States, or a person accompanying the shipment.

"Passenger vessel" means—(1) A vessel subject to any of the requirements of the International Convention for the Safety of Life at Sea, 1960, which carries more than 12 passengers;

(2) A cargo vessel documented under the laws of the United States and not subject to the Convention, which carries more than 16 passengers;

(3) A cargo vessel of any foreign nation that extends reciprocal privileges and is not subject to the Convention and which carries more than 16 passengers; and

(4) A vessel engaged in a ferry operation and which carries passengers.

"Person" means an individual, firm, co-partnership, corporation, company, association, or joint-stock association, and includes any trustee, receiver, assignee, or personal representative thereof.

"Placarded car" means a rail car which is placarded in accordance with the requirements of Part 172 of this subchapter except those cars displaying only the FUMIGATION placards as required by §172.510.

"Poison A" See §173.326.

"Poison B" See §173.343.

"Portable tank" means a bulk packaging (except a cylinder having a water capacity of 1000-pound or less) designed primarily to be loaded onto, or on, or temporarily attached to a transport vehicle or ship and equipped with skids, mountings, or accessories to facilitate handling of the tank by mechanical means. It does not include a cargo tank, tank car, multi-unit tank car tank, or trailer carrying 3AX, 3AAX, or 3T cylinders.

"Preferred route" or "Preferred highway" is a highway for shipment of "highway route controlled quantities" of radioactive materials so designated by a State routing agency, and any Interstate System highway for which an alternate highway has not been designated by such State agency as provided by §177.825(b) of this subchapter.

"Private track" or "Private siding" means track located outside of a carrier's right-of-way, yard, or terminals where the carrier does not own

the rails, ties, roadbed, or right-of-way and includes track or portion of track which is devoted to the purpose of its user either by lease or written agreement, in which case the lease or written agreement is considered equivalent to ownership.

"Proper shipping name" means the name of the hazardous material shown in Roman print (not italics) in §172.101 of this subchapter.

"Ps I." or "psi" means pounds per square inch.

"Ps I a. or psia" means pounds per square inch absolute.

"Ps I g. or psig" means pounds per square inch gauge.

"Public vessel" means a vessel owned by and being used in the public service of the United States. It does not include a vessel owned by the United States and engaged in a trade or commercial service or a vessel under contract or charter to the United States.

"Pyrophoric liquid" See §173.115.

"Pyrophoric solid" See §173.150.

"Radioactive material's" See §173.403 of this subchapter for definitions relating to radioactive material's.

"Railroad" means a person engaged in transportation by rail.

"Rail freight car" means a car designed to carry freight or non-passenger personnel by rail, and includes a box car, flat car, gondola car, hopper car, tank car, and occupied caboose.

"Reportable quantity (RQ)" for the purposes of this subchapter means the quantity specified in Column 3 of the Appendix to §172.101 for any material identified in Column 1 of the Appendix.

"Research" means investigation of experimentation aimed at the discovery of new theories or laws and the discovery and interpretation of facts or revision of accepted theories or laws in the light of new facts.

"Residue" means the hazardous material remaining in a packaging, including a tank car, after its contents have been unloaded to the maximum extent practicable and before the packaging is either refilled or cleaned of hazardous material and purged to remove any hazardous vapors.

"RSPA" means the Research and Special Programs Administration, U.S. Department of Transportation, Washington, D.C. 20590.

"SCF" (standard cubic foot) means one cubic foot of gas measured at 60° F. and 14.7 psia.

"Separated by a complete hold or compartment from" See §176.83.

"Separated from" See §176.83.

"Separated longitudinally by a complete hold or compartment from" See §176.83.

"Sheathing" means a covering consisting of a smooth layer of wood placed over metal and secured to prevent any movement.

"Shipping paper" means a shipping order, bill of lading, manifest or other shipping document serving a similar purpose and containing the information required by §§172.202, 172.203 and 172.204.

"STC (single-trip container)" means a container that may not be refilled and reshipped after having been previously emptied, except as provided in §173.28.

"Solid" means a material which has a vertical flow of two inches (50 mm) or less within a three minute period, or a separation of one gram (lg) or less of liquid when determined in accordance with the procedures specified in ASTM D 4359-84 "Standard Test Method for Determining Whether a Material is a Liquid or Solid", 1984 edition.

"Solution" means any homogeneous liquid mixture of two or more chemical compounds or elements that will not undergo any segregation under conditions normal to transportation.

"Spontaneously combustible material (solid)" means a solid substance (including sludges and pastes) which may undergo spontaneous heating or self-ignition under conditions normally incident to transportation or which may upon contact with the atmosphere undergo an increase in temperature and ignite.

"State-designated route" means a preferred route selected in accordance with U.S. DOT "Guidelines for Selecting Preferred Highway Routes for Highway Route Controlled Quantity Shipments of Radioactive Materials" or an equivalent routing analysis which adequately considers overall risk to the public. Designation must have been preceded by substantive consultation with affected local jurisdictions and with any other affected States to ensure consideration of all impacts and continuity of designated routes.

"State routing agency" means an entity (including a common agency of more than one State such as one established by interstate compact) which is authorized to use State legal process pursuant to §177.825 of this subchapter to impose routing requirements, enforceable by State agencies, on carriers of radioactive material's without regard to intra-state jurisdictional boundaries. This term also includes Indian tribal authorities which have police powers to regulate and enforce highway routing requirements within their lands.

"Stowage" means the act of placing hazardous material's on board a vessel.

"Strong outside container" means the outermost enclosure which provides protection against the unintentional release of its contents under conditions normally incident to transportation.

"Technical name" means a recognized chemical name currently used in scientific and technical handbooks, journals, and texts. Generic descriptions authorized for use as technical names are, Organic phosphate compound, Organic phosphorus compound, Organic phosphate compound mixture, Organic phosphorus compound mixture, Methyl parathion, and Parathion.

"TOFC" means trailer-on-flat-car.

"Trailership" means a vessel other than a carfloat, specifically equipped to handle highway vehicles, and fitted with installed securing devices to tie down each vehicle.

"Train" means one or more engines coupled with one or more rail cars, except during switching operations or where the operation is that of classifying and assembling rail cars within a railroad yard for the purpose of making or breaking up trains.

"Trainship" means a vessel other than a rail car ferry or carfloat, specifically equipped to transport railroad vehicles, and fitted with installed securing devices to tie down each vehicle.

"Transport vehicle" means a cargo-carrying vehicle such as an automobile, van, tractor, truck, semitrailer, tank car or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, rail car, etc.) is a separate transport vehicle.

"UFC" means Uniform Freight Classification.

"Unit load device" means any type of freight container, aircraft container, aircraft pallet with a net, or aircraft pallet with a net over an igloo.

"United States" means the fifty States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, or Guam.

"Vessel" includes every description of watercraft, used or capable of being used as a means of transportation on the water.

"Viscous liquid" means a liquid material which has a measured viscosity in excess of 2500 centistokes at 25° C (77° F) when determined in accordance with the procedures specified in ASTM Method D 445–72 "Kinematic Viscosity of Transparent and Opaque Liquids (and the Calculation of Dynamic Viscosity)" or ASTM Method D 1200-70 "Viscosity of Paints, Varnishes, and Lacquers by Ford Viscosity Cup".

"Volatility" refers to the relative rate of evaporation of material's to assume the vapor state.

"Water reactive material (solid)" means any solid substance (including sludges and pastes) which, by interaction with water, is likely to become spontaneously flammable or to give off flammable or toxic gases in dangerous quantities.

"Water resistant" means having a degree of resistance to permeability by and damage caused by water in liquid form.

"W.T." means watertight.

§ 171.9 Rules of construction. (a) In this subchapter, unless the context requires otherwise:

(1) Words imparting the singular include the plural,

(2) Words imparting the plural include the singular; and

(3) Words imparting the masculine gender include the feminine;

(b) In this subchapter, the word:

(1) "Shall" is used in an imperative sense;

(2) "Must" is used in an imperative sense;

(3) "Should" is used in a recommendatory sense;

(4) "May" is used in a permissive sense to state authority or permission to do the act described, and the words "no person may * * *" or "a person may not * * *" means that no person is required, authorized, or permitted to the act described; and

(5) "Includes" is used as a word of inclusion not limitation.

§ 171.10 Flammable or combustible liquids in bulk on board vessels. (a) Nothing in Parts 170–189 of this subchapter shall be construed as affecting the transportation of flammable or combustible liquids in bulk on board vessels which transportation is governed by the rules and regulations promulgated under R.S. 4417a; 46 U.S.C. 391a (46 CFR Part 146).

§ 171.11 Use of ICAO Technical Instructions. Notwithstanding the requirements of Parts 172 and 173 of this subchapter, a hazardous material may be transported by aircraft, and by motor vehicle either before or after being transported by aircraft, in accordance with the ICAO Technical Instructions if the hazardous material—

(a) Is packaged, marked, labeled, classified, described and certified on a shipping paper and otherwise in a condition for shipment as required by the ICAO Technical Instructions;

(b) Is within the quantity limits prescribed for transportation by either passenger-carrying or cargo aircraft, as appropriate, as specified in the ICAO Technical Instructions;

(c) Is not a forbidden material or package according to §173.21 or Column (3) of the Table to §172.101 of this subchapter; and,

(d) Fulfills the following additional requirements as applicable:

(1) When a hazardous material, which is subject to the requirements of the ICAO Technical Instructions, is also a hazardous substance as defined in this subchapter—

(i) One of the following additional descriptions shall be entered, in parentheses, in association with the basic description on shipping papers and in association with the proper shipping name required to be marked on packages:

(A) The name of the hazardous substance as shown in the appendix to §172.101 of this subchapter, unless the proper shipping name required by the ICAO Technical Instructions already includes the name of the hazardous substance; or

(B) For waste streams, the waste stream number; or

(C) For wastes which exhibit an EPA characteristic of ignitability, corrosivity, reactivity, or EP toxicity, the letters "EPA" followed by the word "ignitability", or "corrosivity", or "reactivity", or "EP toxicity", as appropriate or the corresponding "D" number, as appropriate.

(ii) The letters "RQ" shall be entered on the shipping paper either before or after the basic description required by the ICAO Tech-

nical Instructions and in association with the proper shipping name required to be marked on the package.

(2) When a hazardous material, which is subject to the requirements of the ICAO Technical Instructions, is also a hazardous waste as defined in this subchapter:

(i) The word "Waste" must precede the proper shipping name on shipping papers and package markings; and

(ii) It must comply with §172.205 with respect to the hazardous waste manifests.

(3) When a hazardous material is not subject to the requirements of the ICAO Technical Instructions, it must be transported as required by this subchapter.

(4) When a hazardous material, that is regulated by this subchapter for transportation by highway, is transported by motor vehicle on a public highway under the provisions of this section, the motor vehicle must be placarded in accordance with Subpart F of Part 172 of this subchapter and the shipping paper must include:

(i) With the exception of hazardous materials in ICAO Class 6.1, Packaging Group III, and in ICAO Class 9, the name of the DOT hazard class most closely corresponding to the ICAO class in association with the basic description required by the ICAO Technical Instructions unless the shipping name contains the key word or words of the hazard class of the material;

(ii) The letters "OFUM-E" in association with the basic description for a material in ICAO Class 6.1, Packing Group III or in ICAO Class 9, that is also a hazardous substance;

(iii) The words "Dangerous When Wet" in association with the basic description when the Class 4, Division 4.3 label is required to be applied by the ICAO Technical Instructions; and

(iv) Should include an indication that the shipment is being made under the provisions of this section or the letters "ICAO."

(5) If a liquid or solid material in a package meets the definition of a poison according to this subchapter, and the fact that it is a poison is not disclosed in the shipping name or by a class entry, an indication that the material is a poison shall be entered on the shipping paper in association with the basic description. For transportation by motor vehicle, this indication must be made by entering the word "Poison" on the shipping paper in association with the basic description.

(6) For radioactive materials:

(i) Shipping papers for highway route controlled quantity radioactive materials shipments must meet the requirements of §172.203(d)(1)(iii) of this subchapter.

(ii) Competent authority certification and any necessary revalidation for Type B, Type B(U), Type B(M), and fissile material's packages must be obtained from the appropriate authorities as specified in §§173.471, 173.472 and 173.473 of this subchapter, and all requirements of the certificates and revalidations must be met.

(iii) The provisions of §§172.204(c)(4), 173.448(e)(f) and (g)(3) of this subchapter apply.

(iv) Limited quantities of radioactive materials must meet the provisions of §173.421, §173.422 or §173.424, of this subchapter, as appropriate, and

(v) Type A package contents shall be limited in accordance with §173.431 of this subchapter.

(7) If a United States variation is indicated in the ICAO Technical Instructions for any provision governing the transport of the hazardous material, the hazardous material is transported in conformance with that variation.

(8) Abbreviations may not be used in shipping paper entries or package markings unless they are specifically authorized by this subchapter. ICAO class or division numbers are not considered to be abbreviations.

(9) When a hazardous material, which is subject to the requirements of the ICAO Technical Instructions, falls within the inhalation hazard criteria described in §173.3a(b)(2):

(i) The shipping description must include the words "Poison-Inhalation Hazard", except that only the word "Poison" is required when the material is shipped in a combination packaging with inner packagings containing one liter or less;

(ii) The material must be packaged in accordance with the requirements of §173.3a; and,

(iii) The package must be marked and labelled in accordance with the requirements of §§172.301(a) and 172.402(a)(10).

§ 171.12 Import and export shipments. (a) Except in the case of a shipment from Canada conforming to §171.12a, each person importing a hazardous material into the United States shall provide the shipper and the forwarding agent at the place of entry into the United States timely and complete information as to the requirements of this subchapter that will apply to the shipment of the material within the United States. The shipper, directly or through the forwarding agent at the place of entry, shall provide the initial carrier in the United States the certificate of compliance required by §172.204 of this subchapter. The carrier may not accept the material for transportation unless the required certification is provided.

(b) Except for Class A and Class B explosives and radioactive materials, a hazardous material which is classed and labeled in accordance with the conditions and limitations specified in §172.102 of this subchapter when being imported into or exported from the United States, or passing through the United States in the course of being shipped between places outside the United States, may be offered and accepted for transportation and transported within the United States if it is otherwise offered, accepted, and transported in accordance with this subchapter. In addition, an appropriate shipping name specified for a material in §172.102 may be substituted for its proper shipping name in §172.101 (subject to the conditions and limitations of this paragraph and §172.102) if all or a portion of the transportation of the material is by vessel.

(c) The requirements of §171.2 with respect to specification identification markings on packages notwithstanding, a package of hazardous materials (other than a compressed gas cylinder or a package of more than 110 gallons capacity) being imported into or exported from the United States or passing through the United States in the course of being shipped between places outside the United States may be offered and accepted for transportation and transported within the United States if the package specification identification markings required by Part 178 are clearly and legibly displayed on the surface of the package or on decals or tags securely affixed to the package, and the package is otherwise offered, accepted, and transported in accordance with this subchapter.

(d) Section 171.2 notwithstanding, a hazardous material (other than Class A or B explosives or radioactive materials) being imported into or exported from the United States or passing through the United States in the course of being shipped between places outside the United States may be offered and accepted for transportation and transported by motor vehicle within a single port area (including contiguous harbors) when packaged, marked, classed and labeled in accordance with the IMDG Code, if the hazardous material is offered and accepted in accordance with the requirements of Subparts C and F of Part 172 of this subchapter pertaining to shipping papers and placarding. (See §176.11 of this subchapter for exceptions applicable to vessels.)

(e) Radioactive materials being imported into or exported from the United States, or passing through the United States in the course of being shipped between places outside the United States, may be offered and accepted for transportation when packaged, marked, labeled and otherwise prepared for shipment in accordance with IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)", if:

(1) Highway route controlled quantities (see §173.403 of this subchapter) are shipped in accordance with §§172.203(d)(1)(iii), 172.507, 173.22(c), and 177.825 of this subchapter;

(2) For fissile materials and Type B packages, the competent authority certification and any necessary revalidation is obtained from the appropriate competent authorities as specified in §§173.471, 173.472 and 173.473 of this subchapter; and all requirements of the certificates and revalidations are met;

(3) Type A package contents shall be limited in accordance with §173.431 of this subchapter; and

(4) The country of origin for the shipment has adopted the IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)"; and

(5) The requirements of §173.448(e), (f), and (g)(3) of this subchapter are fulfilled, when applicable.

(f) The provisions of paragraphs (b) and (d) of this section also apply to transportation, a portion of which includes transportation by vessel, between points in a State or between States.

§ 171.12a Canadian shipments and packagings.

(a) Notwithstanding the requirements of Part 172 and 173 of this subchapter, and except as provided in paragraph (b) of this section, a hazardous material that is classed, packaged, marked, labeled, placarded and described on a shipping paper in accordance with the Regulations Respecting the Handling, Offering for Transport and Transporting of Dangerous Goods (the Transportation of Dangerous Goods Regulations of TDG Regulations), issued by the Government of Canada, may be transported by rail or highway from the point of entry in the United States to its destination in the United States, or through the United States en route to a point in Canada, provided that it fulfills the following additional requirements as applicable:

(1) When a hazardous material is not subject to the requirements of the TDG Regulations, it must be transported as required by this subchapter.

(2) When a hazardous material, that is subject to this subchapter for transportation by rail or highway is transported under the provisions of this section, the shipping paper must include the following:

(i) The words "Dangerous When Wet" in association with the basic description when the Class 4, Division 4.3 label is required to be applied by the TDG Regulations.

(ii) The words "Poison" in association with the basic description if a liquid or solid material in a packaging meets the definition of a poison according to this subchapter, and the fact that it is a poison is not disclosed in the shipping name or by a class entry.

(3) When a hazardous material which is subject to the requirements of the TDG Regulations is also a hazardous substance as defined in this subchapter, the additional description requirements for hazardous substances in §§172.203(c) and 172.324 are applicable.

(4) When a hazardous material, which is subject to the requirements of the TDG Regulations, is also a hazardous waste as defined in this subchapter:

(i) The word "Waste" must precede the proper shipping name on shipping papers and package markings; and

(a) It must be accompanied by a hazardous waste manifest executed as required by §172.205 of this subchapter.

(5) Required shipping paper entries and package markings must be in English. Abbreviations may not be used in shipping paper entries or package markings unless they are specifically authorized by this subchapter. TDG Regulations class or division numbers are not considered to be abbreviations. Hazardous material's identification numbers must be preceded by "UN" or "NA". The use of an identification number preceded by "PIN" is not authorized.

(6) Shipments of radioactive materials must conform to the requirements of §171.12(e).

(b) This section does not apply to:

(1) A material which is a forbidden material according to §173.21 of this subchapter, or as indicated in Column (3) of the Table §172.101 of this subchapter;

(2) A material or article meeting the definition of a Class A, B or C explosive according to this subchapter, except that, notwithstanding the requirements of Part 172 of this subchapter—

(i) For transportation between the United States and Canada, a package may be labeled and a freight container, motor vehicle or rail car placarded, with the label or placard required by the TDG Regulations provided that label or placard also indicates the appropriate DOT hazard class in accordance with Schedule V of the TDG Regulations;

(ii) Explosives may be transported from the point of entry in the United States to their destination in the United States, or through the United States en route to a point in Canada, when described on a shipping paper in accordance with the TDG Regulations provided the shipping paper also includes the letters "DOT," followed by the proper shipping name and hazard class prescribed for explosives in this subchapter.

(c) Notwithstanding the requirements of Part 172 of this subchapter, a hazardous material included in Division 3 or 4 of Class 2 of the TDG Regulations may be transported from its point of origin in the United States to Canada, or through the United States en route to a point in Canada, if—

(1) The package is marked with the proper shipping name and identification number, and the freight container is marked, when appropriate, with the identification number, as required by the TDG Regulations;

(2) The package is labeled, and the freight container, motor vehicle or rail car is placarded, as required by the TDG Regulations; and

(3) The shipping paper contains an indication that these markings, labels and placards have been applied in conformance with this paragraph for the purpose of transport to Canada.

(d) Except as specified in 173.301(i) of this subchapter, specification packagings made and maintained in full compliance with the corresponding specifications prescribed by the Railway Transport Committee of the Canadian Transport Commission (formerly the Board of Transport Commissioner for Canada), in its Regulations for the Transportation of Dangerous Commodities by Rail, and marked in accordance therewith (e.g., BTC, CTC, etc.) may be used for the shipment of hazardous material's within the United States.

(e) For transportation by rail, hazardous material's transported in accordance with paragraph (a) of this section may, in addition, be packaged and otherwise transported in conformance with the regulations of the Canadian Transport Commission from the point of entry in the United States to their destination in the United States, or through the United States en route to a point in Canada. Subject to the conditions and limitations of paragraphs (a) and (b) of this section, empty rail tank cars may be transported in conformity with Canadian Transport Commission regulations from point of origin in the United States to point of entry into Canada.

(f) Except as provided in paragraphs (a) and (d) of this section, hazardous material's transported by highway in accordance with this section must be packaged and otherwise transported as required by this subchapter. Subject to the conditions and limitations of paragraphs (a) and (b) of this section, empty cargo tanks may be returned to Canada in conformance with TDG Regulations provided they are otherwise transported as required by this subchapter.

§ 171.13 Emergency regulations. (a) Until further order of the Department, shipments of explosives may be made upon requests of the Departments of the Army, Navy, and Air Force of the United States Government complying with the following:

(1) Shippers' and carriers' regulations; handling detonating agents and explosives and explosive ammunition in same car or vehicle. Detonating fuzes, class A explosives, primer-detonator assemblies or other detonating elements containing explosive components, if of a safe type, may be shipped either assembled in bombs, depth charges, mines, projectiles, or torpedoes (torpedo warheads) or in properly packed containers in the same car or vehicle with bombs, depth charges, mines, projectiles, boosters, or torpedoes (torpedo warheads) when separated from the explosive bombs, depth charges, mines, projectiles, boosters, or torpedoes (torpedo warheads) by not less than 3 feet. The intervening space of 3 feet must be filled with dry sand or dry earth in bags or in a crib so constructed or lined as to prevent sifting of the sand or earth. The crib must be secured against movement.

(2) When bomb fuzes are packed with bomb fin assemblies, either crated or boxed in wooden or metal containers, the sand or earth filled space between bombs and the fuzes may be omitted provided adequate blocking and bracing is supplied to prevent the bombs from crushing and injuring the detonating fuzes due to ordinary shocks incident to transportation.

§ 171.14 Specification markings. (a) Notwithstanding any other requirements of Parts 170–189 of this subchapter, the letters "ICC" may continue to be placed on any packaging requiring specification markings until January 1, 1970.

(b) Packagings with the specification markings "ICC" placed thereon before January 1, 1970, may be continued in service as marked.

§ 171.15 Immediate notice of certain hazardous materials incidents. (a) At the earliest practicable moment, each carrier who transports hazardous materials (including hazardous wastes) shall give notice in accordance with paragraph (b) of this section after each incident that occurs during the course of transportation (including loading, unloading and temporary storage) in which as a direct result of hazardous materials:

(1) A person is killed,

(2) A person receives injuries requiring his hospitalization;

(3) Estimated carrier or other property damage exceeds $50,000;

(4) Fire, breakage, spillage, or suspected radioactive contamination occurs involving shipment of radioactive material. (See also §§174.45, 175.45, 176.48, and 177.807 of this subchapter); or

(5) Fire, breakage, spillage, or suspected contamination occurs involving shipment of etiologic agents; or

(6) A situation exists of such a nature that, in the judgment of the carrier, it should be reported in accordance with paragraph (b) of this section even though it does not meet the criteria of paragraph (a)(1), (2), or (3) of this section; e.g., a continuing danger of life exists at the scene of the incident.

(b) Each notice required by paragraph (a) of this section shall be given to the Department by telephone (toll-free) on 800-424-8802. Notice involving etiologic agents may be given the Director, Center for Disease Control, U.S. Public Health Service, Atlanta, Ga., Area Code (404) 633-5313, in place of the notice to the Department or (toll call) on 202-267-2675. Each notice must include the following information:

(1) Name of reporter.

(2) Name and address of carrier represented by reporter.

(3) Phone number where reporter can be contacted.

(4) Date, time, and location of incident.

(5) The extent of injuries, if any.

(6) Classification, name, and quantity of hazardous materials involved, if such information is available.

(7) Type of incident and nature of hazardous material involvement and whether a continuing danger to life exists at the scene.

(c) Each carrier making a report under this section shall also make the report required by §171.16.

Note.—Under 40 CFR 302.6 EPA requires persons in charge of facilities (including transport vehicles, vessels, and aircraft) to report any release of a hazardous substance in a quantity equal to or greater than its reportable quantity, as soon as that person has knowledge of the release, to the U.S. Coast Guard National Response Center at (toll free) 800-424-8802 or (toll) 202-267-2675.

§ 171.16 Detailed hazardous materials incident reports. (a) Each carrier who transports hazardous materials shall report in writing in duplicate on DOT Form F 5800.1* to the Department within 15 days of the date of discovery, each incident that occurs during the course of transportation (including loading, unloading, or temporary storage) in which, as a direct result of the hazardous materials, any of the circumstances set forth in §171.15(a) occurs or there has been an unintentional release of hazardous materials from a package (including a tank) or any quantity of hazardous waste has been discharged during transportation. If a report pertains to a hazardous waste discharge—

(1) A copy of the hazardous waste manifest for the waste must be attached to the report, and

(2) An estimate of the quantity of the waste removed from the scene, the name and address of the facility to which it was taken, and the manner of disposition of any unremoved waste, must be entered in Part H of the report (Form F 5800.1).

(b) Each carrier making a report under this section shall send that report to the Information Systems Manager, Research and Special Programs Administration, Department of Transportation, Washington, D.C. 20590.

(c) Except as provided in paragraph (d) of this section, the requirements of paragraph (a) of this section do not apply to incidents involving the unintentional release of hazardous materials being transported under the following proper shipping names:

(1) Consumer commodity

(2) Battery, electric storage, wet, filled with acid or alkali

(3) Paint and paint related material when shipped in packagings of five gallons or less.

*Filed as part of the original document.

(d) The exceptions to incident reporting provided in paragraph (c) of this section do not apply to:
(1) Incidents required to be reported under § 171.15(a);
(2) Incidents involving transportation aboard aircraft; nor
(3) Incidents involving the transportation of hazardous waste.

§ 171.17 [Reserved]

§ 171.18 Continuation of effectiveness of existing Bureau of Explosives registrations. A registration filed with the Bureau of Explosives in compliance with a requirement of this subchapter, which is valid at the time that registration function is assumed by RSPA remains valid to the same extent as if it had been filed originally with RSPA.

§ 171.19 Approvals or authorizations issued by the Bureau of Explosives. Unless otherwise specifically restricted by other requirements of this subchapter, any written approval or authorization issued by the Bureau of Explosives that is valid at the time the Bureau of Explosives authority to issue that approval or authorization is withdrawn or assumed by the Director, OHMT and which is available for inspection by representatives of the Department of Transportation, will be considered as having the same validity as if issued by the Director, OHMT, and remains valid under the conditions and for the period established by the Bureau of Explosives.

§ 171.20 Submission of Examination Reports. (a) When it is required in this subchapter that the issuance of an approval by the Director, OHMT be based on an examination by the Bureau of Explosives (or any other test facility recognized by RSPA), it is the responsibility of the applicant to submit the results of the examination to the Director, OHMT.

(b) Applications for approval submitted under paragraph (a) of this section, must be submitted to the Director, Office of Hazardous Materials Transportation, Research and Special Programs Administration, Washington, D.C. 20590.

(c) Any applicant for an approval aggrieved by an action by the Director, OHMT, under this subpart may file an appeal with the Administrator, RSPA within 30 days of service of notification of a denial.

PART 172—HAZARDOUS MATERIALS TABLES AND HAZARDOUS MATERIALS COMMUNICATIONS REGULATIONS

Subpart A

General

§ 172.1 Purpose and scope. This Part lists and classifies those materials which the Department of Transportation has designated as hazardous materials for purposes of transportation and prescribes the requirements for shipping papers, package marking, labeling, and transport vehicle placarding applicable to the shipment and transportation of those hazardous materials.

§ 172.3 Applicability. (a) This Part applies to—

(1) Each person who offers a hazardous material for transportation, and

(2) Each carrier by air, highway, rail, or water who transports a hazardous material.

(b) When a person, other than one of those provided for in paragraph (a) of this section, performs a packaging labeling or marking function required by this part, that person shall perform the function in accordance with this Part

Subpart B

Tables of Hazardous Materials, Their Description, Proper Shipping Name, Class, Label, Packaging, and Other Requirements

§ 172.101 Purpose and use of hazardous materials table. (a) The hazardous materials table (Table) in this section designates the materials listed therein as hazardous materials for the purpose of transportation of those materials in commerce. The Table identifies the class of each listed material, and specifies or references requirements in this subchapter pertaining to its packaging, labeling, and transportation. However, those references do not include other requirements having general applicability such as those specified in Parts 171 and 172, and Subparts A and B of Part 173, of this Subchapter.

(b) Column 1 contains the three symbols as appropriate: Plus (+) and the letters "A" and "W"

(1) The plus (+) fixes the proper shipping name and the hazard class for that entry without regard to whether the material meets the definition of that class. An alternate proper shipping name and hazard class may be authorized by the Director, Office of Hazardous Materials Transportation, RSPA.

(2) A letter "A" restricts the application of this subchapter to materials offered or intended for transportation by aircraft unless the material is a hazardous substance or a hazardous waste.

(3) The letter "W" restricts the application of this subchapter to materials offered or intended for transportation by vessel unless the material is a hazardous substance or a hazardous waste.

(c) Column 2 lists the proper shipping name of materials designated as hazardous materials. Modification of a proper shipping name may otherwise be required or authorized by this section (see Paragraphs (c)(10), (c)(11), (c)(12) and (c)(13) of this section). Proper shipping names are limited to those shown in Roman type (not italics).

(1) Shipping names may be used in the singular or plural and in either capital or lower case letters.

(2) The words in italics are not part of the proper shipping name but may be used in addition to the proper shipping name. The word "or" in italics indicates that any terms in the sequence may be used as the proper shipping name as appropriate.

(3) The abbreviation "n.o.i.", which means "not otherwise indexed", or "n.o.i.b.n.", which means "not otherwise indexed by name", may be used interchangeably with "n.o.s.".

(4) Except for hazardous wastes, when qualifying words are used as part of proper shipping name, their sequence on the package markings and shipping paper descriptions is optional. However, the entry in the Table reflects the preferred sequence.

(5) Except for organic peroxides, when one entry references another entry by use of the word "see", if both names are in Roman type, either name may be used as the proper shipping name (e.g., Carbolic acid. *See* Phenol). For an organic peroxide, the technical name shall be used as the proper shipping name.

(6) The words "poison" or "poisonous" in this column refer to materials that would cause death by systemic poisoning rather than by corrosive destruction of tissue.

(7) When a shipping name includes a concentration range as part of the shipping description, the actual concentration being shipped, if it is within the range stated, may be used in place of the concentration range. For example, a hydrogen peroxide solution containing 30% peroxide may be shipped as either "Hydrogen peroxide solution (8% to 40% peroxide)" or "Hydrogen peroxide solution, 30% peroxide".

(8) The use of the prefix "mono" is optional in any shipping name when appropriate. Thus, Monoethanolamine may be used interchangeably with Ethanolamine. In "Difluoromonochloroethane" the term "mono" is considered to be a prefix to the term "chloroethane" and may be deleted.

(9) *Hazardous substance.* The Appendix to this section lists materials which are listed or designated as hazardous substances under section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Proper shipping names for hazardous substances (See Appendix and § 171.8 of this subchapter) shall be determined as follows:

(i) If the hazardous substance appears in the table by technical name, then the technical name is the proper shipping name.

(ii) If the hazardous substance does not appear in the table and is not a forbidden material (See §§ 173.21, 173.51, 173.66, and 173.114a of this subchapter), then an appropriate generic shipping name must be selected corresponding to the hazard class of the material as determined by the defining criteria of this subchapter and the hazard precedence prescribed in § 173.2 of this subchapter. For example, a hazardous substance which meets the definition of a flammable liquid might be described as "Flammable liquid, n.o.s." or other appropriate shipping name corresponding to the flammable liquid hazard class.

(10) If the word "Waste" is not included in the hazardous material description in the Table, the proper shipping name for a hazardous waste must include the word "Waste" preceding the shipping name of the material. For example: Waste acetone.

(11) A mixture or solution comprised of a hazardous material identified in the Table by technical name and nonhazardous material may be described using the proper shipping name of the hazardous material, if:

(i) The mixture or solution is not specifically identified in the Table;

(ii) The hazard class of the mixture or solution is the same as that of the hazardous material, and

(iii) The qualifying word "mixture" or "solution", as appropriate, is added as part of the proper shipping name. For example, a solution of Acetone, mineral oil, and water, meeting the definition of a flammable liquid, may be described under this optional provision as "Acetone solution, Flammable liquid, UN 1090."

(12) A material for which the hazard class is to be determined by testing or a material that is a hazardous waste may be assigned a

tentative shipping name, hazard class and identification number, based on the shipper's tentative determination according to:

(i) Defining criteria in this subchapter;

(ii) The hazard precedence prescribed in § 173.2 of this subchapter; and

(iii) The shipper's knowledge of the material.

This paragraph does not apply to a material subject or to prohibited by §§ 173.21, 173.51, 173.86(d), 173.86(e)(1), and 173.114a(g)(2) of this subchapter.

(13) Except for proper shipping names in the Table that are preceded by a plus (+):

(i) If it is specifically determined that a material meets the definition of a hazard class other than the class shown in association with the proper shipping name, the material must be described by an appropriate shipping name listed in association with the correct class for the material or,

(ii) If an appropriate technical name is not shown in the Table, selection of a proper shipping name must be made from the general descriptions or n.o.s. entries corresponding to the specific hazard class of the material being shipped. The name that most appropriately describes the material must be used, e.g. an alcohol not listed by name in the Table must be shipped as "Alcohol, n.o.s." rather than "Flammable liquid, n.o.s." Some mixtures may be more appropriately described according to their application, such as "Compound, cleaning, liquid" or "Compound rust removing," rather than by an n.o.s. entry, such as "Corrosive liquid, n.o.s."

(iii) If a material meets the definition of more than one hazard class, and is not specifically identified in the Table, the hazard class of the material must be determined by using the precedence specified in § 173.2 of this subchapter, and an appropriate shipping description must be selected as described in paragraph (c)(13)(ii) of this section.

(iv) If it is specifically determined that a material is not a forbidden material and does not meet the definition of any hazard class, the material is not a hazardous material.

(d) Column 3 contains a designation of the hazard class corresponding to each proper shipping name, or the word "Forbidden".

(1) A material for which the entry in this column is "Forbidden" is prohibited from being offered or accepted for transportation. This prohibition does not apply if these materials are diluted, stabilized, or incorporated in devices and they are classed in accordance with the definitions of hazardous materials contained in Part 173 of this subchapter.

(2) When re-evaluation of test data or new data indicates a need to modify the "Forbidden" designation or the hazard class specified for a material specifically identified in the Table, this data should be submitted to the Director, Office of Hazardous Materials Transportation, RSPA.

(3) Notwithstanding the ORM class shown for a material in Column 3, such a material having a flash point of 100 F. to 200 F. is classed as Combustible liquid when in a packaging having a rated capacity of more than 110 gallons.

(e) Column 3(a) lists the identification numbers assigned to hazardous materials. Those preceded by a "UN" are associated with descriptions considered appropriate for international shipments as well as domestic shipments. Those preceded by an "NA" are associated with descriptions that are not recognized for international shipments, except to and from Canada. If an identification number is in the "NA9000" series, it is either associated with the description of a material that is not appropriately covered by international hazardous materials (dangerous goods) shipping standards or not appropriately addressed by such standards for emergency response information purposes, except for transportation between the United States and Canada.

(f) Column 4 specifies the labels required to be applied to each package, subject to the additional labeling requirements in § 172.402.

(g) Column 5 references the applicable packaging section of Part 173 of this subchapter. Exceptions from some of the requirements of this subchapter are noted in column 5(a); others are contained in §§ 173.3, 173.4, and 173.5 of this subchapter in addition to those contained in Parts 174, 175, 176, and 177 of this subchapter. References to specific packaging requirements and certain additional exceptions are noted in column 5(b).

(1) Each reference to a section in Column 5(b) for an ORM-A, B, or C that is a hazardous waste or a hazardous substance is modified to read § 173.510 if the section referenced is applicable only to a particular mode (or modes) and the material is transported by a mode not addressed in the section.

(h) Column 6 specifies the maximum net quantity in one package for transportation by aircraft or passenger railcar. In this column, "Forbidden" means the material may not be offered or carried and is limited in its applicability only to the types of transportation covered by the column. In addition, an exception for certain flammable liquids is provided in § 173.118 of this subchapter.

(1) Column 6(a) specifies the maximum net quantity permitted in one package for transportation by passenger-carrying aircraft or passenger railcar. For transportation by aircraft, any material forbidden on passenger-carrying aircraft but permitted on cargo aircraft, or which exceeds the maximum quantity authorized on passenger carrying aircraft, must be shipped by cargo-only aircraft and bear the CARGO AIRCRAFT ONLY label as described in § 172.448.

(2) Column 6(b) specifies the maximum net quantity permitted in one package for transportation by cargo-only aircraft. When offered for transportation by aircraft, a package must bear the CARGO AIRCRAFT ONLY label when the quantity of hazardous material in one package exceeds that authorized on passenger-carrying aircraft, or is forbidden on passenger-carrying aircraft.

(i) Column 7 specifies each of the authorized locations on board cargo vessels and passenger vessels and certain additional requirements for shipments of each listed hazardous material. Section 176.63 of this subchapter sets forth the physical requirements for each of the authorized locations listed in Column 7. (For bulk shipments by vessel see 46 CFR Parts 30 to 40, 70, 98, 148, 151, 153, and 154.)

(1) "1" means the materials must be stowed "on deck" subject to the requirements of § 176.63(b) of this subchapter. When both "on deck" and "under deck" are authorized, "under deck" should be used if available.

(2) "1,2" means the material must be stowed either "on deck" or "under deck"; however, "under deck" should be used if available.

(3) "1,3" means the material must be stowed either "on deck" or "under deck away from heat"; however, "under deck away from heat" stowage should be used if it is available.

(4) "2" means the material must be stowed "under deck" in a compartment or hold subject to the requirements of § 176.63(c). When both "on deck" and "under deck" are authorized, "under deck" should be used if available.

(5) "3" means the material must be stowed "under deck away from heat" in a ventilated compartment or hold subject to the requirements of § 176.63(d) of this subchapter.

(6) "4" means the material is authorized to be transported in only the limited quantities specified in the CFR section listed in column 5 and is subject to the stowage requirements specified for a cargo vessel for the same material.

(7) "5" means the material is forbidden and may not be offered or accepted for transportation.

(8) "6" means the material is authorized to be transported in a magazine subject to the requirements of §§ 176.135 through 176.144 of this subchapter.

(j) Unless specifically stated otherwise in the amendment or the "Effective date" entry in its preamble, if any entry in this Table is changed by an amendment to this subchapter:

(1) Such a change does not apply to the shipment of any package filled prior to the effective date of the amendment, and

(2) Stocks of preprinted shipping papers and package markings may be continued in use, in the manner previously authorized, until depleted or for a one year period, whichever is less.

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.101 Hazardous Materials Table

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
49 CFR ref.	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements

	Ammonium hydroxide (*containing not less than 12% but not more than 44% ammonia*)	Corrosive material	NA2672	Corrosive	173.244	173.245	2 gallons	2 gallons	1	4	
AW	Ammonium hydroxide (containing less than 12% ammonia)	ORM A	NA2672	None	173.505	173.510	10 gallons	55 gallons	1	1	
	Ammonium nitrate-carbonate mixture	Oxidizer	UN2068	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	
	Ammonium nitrate fertilizer, containing no more than 0.2% carbon	Oxidizer	UN2067	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	
	Ammonium nitrate - fuel oil mixture (*containing only prilled ammonium nitrate and fuel oil*)	Blasting agent		Blasting agent	None	173.114a	Forbidden	100 pounds	1.2	1.2	
	Ammonium nitrate - fuel oil mixture. See High explosive										
	Ammonium nitrate mixed fertilizer	Oxidizer	UN2069	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	
	Ammonium nitrate (no organic coating)	Oxidizer	UN1942	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	
	Ammonium nitrate (organic coating)	Oxidizer	NA1942	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	
	Ammonium nitrate-phosphate	Oxidizer	UN2070	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	
	Ammonium nitrate, solution (*containing not less than 15% water*) *See 173.154,a)(17) and 173.154,a)(18)*	Oxidizer	UN2426	Oxidizer							

§ 172.101 Hazardous Materials Table—Continued

(1) 49 A/W	(2) Hazardous materials descriptions and proper shipping names	(3) Hazard class	(3A) Identification number	(4) Label(s) required (if not excepted)	(5) Packaging (a) Exceptions	(5) Packaging (b) Specific requirements	(6) Maximum net quantity in one package (a) Passenger-carrying aircraft or railcar	(6) Maximum net quantity in one package (b) Cargo aircraft only	(7) Water shipments (a) Cargo vessel	(7) Water shipments (b) Passenger vessel	(7) Water shipments (c) Other requirements
	Ammonium nitrite	Forbidden									
A	Ammonium oxalate	ORM A	NA2449	None	173.505	173.510	50 pounds	200 pounds	1,2	1,2	
	Ammonium perchlorate	Oxidizer	UN1442	Oxidizer	173.153	173.239a	25 pounds	100 pounds	1,2	4	Stow away from powdered metals
	Ammonium perchlorate. See High explosive										
	Ammonium permanganate	Oxidizer	NA3100	Oxidizer	None	173.154	Forbidden	Forbidden	1,2	1,2	Separate from ammonium compounds and hydrogen peroxide. This material may be forbidden in water transportation by certain carriers
	Ammonium persulfate	Oxidizer	UN1444	Oxidizer	173.153	173.154	50 pounds	200 pounds	1,2	1,2	
	Ammonium picrate, dry. See High explosive										
	Ammonium picrate, wet (with 10% or more water)	Flammable solid	UN1310	Flammable solid	173.192		1 pound	1 pound	1	4	Stow away from heavy metals and their compounds
	Ammonium picrate, wet, with 10% or more water, over 16 ounces in one outside packaging. See High explosive										
A	Ammonium polysulfide solution	ORM A	UN2818	None	173.505	173.505	10 gallons	55 gallons			
A	Ammonium silicofluoride	ORM B	UN2854	None	173.505	173.510	25 pounds	100 pounds	1,2	1,2	
W	Ammonium sulfide nitrate	ORM C	NA1477	None	173.505	173.510			1,2	1,2	Must not be accepted for transportation while hot. Separate by an intervening hold or compartment from Class A explosives. Separate from other explosives, combustible materials, flammable solids, liquids, or gases, oxidizing materials, organic peroxides or organic materials
	Ammonium sulfide solution	Flammable liquid	UN2683	Flammable liquid	173.118	173.118	1 quart	10 gallons	1,2	1,2	
	Ammunition, chemical (containing a Poison A liquid or gas). See Chemical ammunition, nonexplosive (containing a Poison A material)										
	Ammunition, chemical (containing a Poison B material). See Chemical ammunition, nonexplosive (containing a Poison B material)										
	Ammunition, chemical (containing an irritating liquid or solid). See Chemical ammunition, nonexplosive (containing an irritating material)										
	Ammunition, chemical, explosive, with Irritant	Class A explosive		Explosive A and Irritant	None	173.58	Forbidden	Forbidden	6	5	No other cargo may be stowed in the same hold with these items
	Ammunition, chemical, explosive, with Poison A material	Class A explosive		Explosive A and Poison gas	None	173.58	Forbidden	Forbidden	6	5	No other cargo may be stowed in the same hold with these items
	Ammunition, chemical, explosive, with Poison B material	Class A explosive		Explosive A and Poison	None	173.58	Forbidden	Forbidden	6	5	No other cargo may be stowed in the same hold with these items
	Ammunition for cannon with empty projectile	Class B explosive		Explosive B	None	173.89	Forbidden	Forbidden	1,2	5	
	Ammunition for cannon with explosive projectile	Class A explosive		Explosive A	None	173.54	Forbidden	Forbidden	6	5	
	Ammunition for cannon with gas projectile	Class A explosive		Explosive A	None	173.54	Forbidden	Forbidden	6	5	
	Ammunition for cannon with illuminating projectile	Class A explosive		Explosive A	None	173.54	Forbidden	Forbidden	6	5	
	Ammunition for cannon with incendiary projectile	Class A explosive		Explosive A	None	173.54	Forbidden	Forbidden	6	5	
	Ammunition for cannon with inert loaded projectile	Class B explosive		Explosive B	None	173.89	Forbidden	Forbidden	1,2	5	
	Ammunition for cannon without projectile	Class B explosive		Explosive B	None	173.89	Forbidden	Forbidden	1,2	5	
	Ammunition for cannon with smoke projectile	Class A explosive		Explosive A	None	173.54	Forbidden	Forbidden	6	5	
	Ammunition for cannon with solid projectile	Class B explosive		Explosive B	None	173.89	Forbidden	Forbidden	1,2	5	
	Ammunition for cannon with tear gas projectile	Class A explosive		Explosive A	None	173.54	Forbidden	Forbidden	6	5	
	Ammunition for cannon with tear gas projectile	Class B explosive		Explosive B	None	173.89	Forbidden	Forbidden	1,2	5	
	Ammunition for small arms with explosive projectile	Class A explosive		Explosive A	None	173.58	Forbidden	Forbidden	6	5	
	Ammunition for small-arms with incendiary projectile	Class A explosive		Explosive A	None	173.58	Forbidden	Forbidden	6	5	
	Ammunition, non-explosive. See 173.55

	Cyanogen bromide	Poison B	UN1889	Poison	None	173.379	Forbidden	25 pounds	1	5	Shade from radiant heat. Segregation same as for corrosive materials
	Cyanogen chloride containing less than 0.9% water	Poison A	UN1589	Poison gas and Flammable gas	None	173.328	Forbidden	Forbidden	1	5	Shade from radiant heat
	Cyanogen gas	Poison A	UN1026	Poison gas and Flammable gas	None	173.328	Forbidden	Forbidden	1	5	Segregation same as for flammable gases
	Cyanuric triazide	Forbidden									
	Cyclohexane	Flammable liquid	UN1145	Flammable liquid	173.118	173.119	1 quart	10 gallons	1.3	4	
	Cyclohexanone peroxide, 50 to 85% peroxide	Organic peroxide	UN2119	Organic peroxide	173.157	173.158	Forbidden	25 pounds	1	1	
	Cyclohexanone peroxide, as a paste with not more than 9% by weight active oxygen. See Cyclohexanone peroxide, 50 to 85% peroxide		UN2935								
	Cyclohexanone peroxide, in solution with not more than 9% by weight active oxygen. See Cyclohexanone peroxide, 50 to 85% peroxide		UN2118								
	Cyclohexanone peroxide, not over 50% peroxide	Organic peroxide	UN2936	Organic peroxide	173.153	173.154	2 pounds	25 pounds	1.2	1.2	
	Cyclohexanone peroxide and di-(1-hydroxy cyclohexyl) peroxide mixture. See appropriate cyclohexanone peroxide entry										
	Cyclohexenyl trichlorosilane	Corrosive material	UN1762	Corrosive	None	173.280	Forbidden	10 gallons	1	1	Keep dry
	Cyclohexylamine	Flammable liquid	UN2357	Flammable liquid	173.118	173.119	1 quart	10 gallons	1.2	1	
	Cyclohexyl trichlorosilane	Corrosive material	UN1763	Corrosive	None	173.280	Forbidden	10 gallons	1	1	Keep dry
	Cyclopentane	Flammable liquid	UN1145	Flammable liquid	173.118	173.119	1 quart	10 gallons	1.3	4	
	Cyclopentane, methyl	Flammable liquid	UN2298	Flammable liquid	173.118	173.119	1 quart	10 gallons	1.3	4	
+	Cyclopropane	Flammable gas	UN1027	Flammable gas	173.306	173.304	Forbidden	300 pounds	1.2	1	
	Cyclotetramethylene tetranitramine (dry) (HMX)	Forbidden									
	Cyclotetramethylene tetranitramine, wet with not less than 10% water. See High explosive										
	Cyclotrimethylene trinitramine desensitized. See High explosive										
	Cyclotrimethylene trinitramine, wet with not less than 10% water. See High explosive										

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
49 A/W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Cylinder, empty, including bin to it must be classed for the hazardous material previously contained in cylinder. See 173.29										
A	2,4-D. See 2,4-Dichlorophenoxyacetic acid										
A	DDT or Dichlorodiphenyltrichloroethane	ORM A	NA2761	None	173.505	173.510	No limit	No limit	12	12	
	Decaborane	Flammable solid	UN1868	Flammable solid and Poison	None	173.236	Forbidden	25 pounds	12	12	
	Decahydronaphthalene	Combustible liquid	UN1147	None	173.118a	None	No limit	No limit	12	12	
	Decalin. See Decahydronaphthalene										
	Decanoyl peroxide, technically pure See Organic peroxide, solid, n.o.s.		UN2120								
	Delay connectors. See Detonators, Class A or Class C explosives and Detonating primers, Class A or Class C explosives										
	Delay electric igniter	Class C explosive		Explosive C	None	173.108	50 pounds	150 pounds	13	13	
	Denatured alcohol	Flammable liquid	NA1986	Flammable liquid	173.118	173.125	1 quart	10 gallons	12	1	
	Depth bomb. See Explosive bomb										
	Detonating fuze, Class A, with or without radioactive components	Class A explosive		Explosive A	None	173.89	Forbidden	Forbidden	6	5	
	Detonating fuze, Class C explosive	Class C explosive		Explosive C	None	173.113	50 pounds	150 pounds	13	13	
	Detonating primers, Class A explosives. See 173.53	Class A explosive		Explosive A	None	173.58	Forbidden	Forbidden	6	5	Do not stow detonating primers Class A explosives with any high explosives. Do not handle at the same time high explosives are being loaded
	Detonating primers, Class C explosives. See 173.100	Class C explosive		Explosive C	None	173.58	173.103(d)	150 pounds	12	12	The maximum net quantity in one package for this material shipped aboard passenger vessel is limited to 50 pounds. Must not be stowed in portable magazine or metal locker. Do not stow detonating primers Class C explosives with high explosives. Do not handle at the same time high explosives are being loaded
	Detonators, Class A explosives. See 173.53	Class A explosive		Explosive A	None	173.58	Forbidden	Forbidden	6	–	Do not stow detonators Class A with any high explosives. Do not handle at the same time high explosives are being loaded
	Detonators, Class C explosives. See 173.100	Class C explosive		Explosive C	None	173.56	173.103(d)	150 pounds	12	12	The maximum net quantity in one package for this material shipped aboard passenger vessel is limited to 50 pounds. Must be stowed in portable magazine or metal locker. Do not stow detonators Class C explosives with high explosives. Do not handle at the same time high explosives are being loaded
	Detonators, commercial. See Detonators, Class A or Class C explosives										
	Diacetone alcohol	Flammable liquid	UN1148	Flammable liquid	173.118	173.119	1 quart	10 gallons	12	1	
	Diacetone alcohol	Combustible liquid	UN1148	None	173.118a	None	No limit	No limit	12	12	
	Diacetone alcohol peroxide, not more than 57% in solution with not more than 9% hydrogen peroxide, not less than 26% diacetone alcohol and not less than 9% water, total active oxygen content not more than 9%. See Organic peroxide, liquid or solution, n.o.s.		UN2163								
	Diacetone alcohol peroxides, more than 57% in solution with more than 9% hydrogen peroxide, less than 26% diacetone alcohol and less than 9% water, total active oxygen content more than 9% by weight	Forbidden									
	Diacetyl	Flammable liquid	UN2346	Flammable liquid	173.118	173.119	1 quart	10 gallons	12	1

	1,2-Dioxolane	Forbidden									
A	Dioxon	ORM A	NA2783	None	173.505	173.519	No limit	No limit	1,2	1,2	
	1,1'-Dioxamino-ethylene	Forbidden									
	Dioxammonium azide (dry)	Forbidden									
	Dioxodinitrophenol. See Initiating explosive										
	Dioxodinitrophenol (dry)	Forbidden									
	Dioxodiphenylmethane	Forbidden									
	Dioxonium nitrate (dry)	Forbidden									
	Dioxonium perchlorate (dry)	Forbidden									
	1,3-Dioxopropane	Forbidden									
	Dibenzyl peroxydicarbonate, not more than 87% with water. See Organic peroxide, solid, n.o.s.		UN2149								
	Dibenzyl peroxydicarbonate, more than 87% with water	Forbidden									
+	Diborane or diborane mixtures	Flammable gas	UN1911	Flammable gas and Poison	None	173.302	Forbidden	Forbidden	1	5	Separate from Oxidizing and materials bearing the oxidizer label
	Dibromoacetylene	Forbidden									
A	Dibromodifluoromethane	ORM A	UN1941	None	173.505	173.505	10 gallons	55 gallons			
AW	1,2-Dibromoethane. See Ethylene dibromide										
	Di-(4-tert-butylcyclohexyl)peroxydicarbonate, technically pure. See Organic peroxide, solid, n.o.s.		UN2154								
	Di-(4-tert-butylcyclohexyl)peroxydicarbonate, not more than 42%, stable dispersion, in water. See Organic peroxide, liquid or solution, n.o.s.		UN2894								
	Di-tert-butyl peroxide, technically pure. See Organic peroxide, liquid or solution, n.o.s.		UN2102								
	2,3-Di-(tert-butylperoxy)butane, not more than 55% in solution. See Organic peroxide, liquid or solution, n.o.s.		UN2118								
	2,2-Di-(tert-butylperoxy) butane, more than 55% in solution	Forbidden									
	1,1-Di-(tert-butylperoxy)cyclohexane, technically pure. See Organic peroxide, liquid or solution, n.o.s.		UN2179								
	1,1-Di-(tert-butylperoxy)cyclohexane, not more than 72% in solution. See Organic peroxide, liquid or solution, n.o.s.		UN2180								
	1,1-Di-(tert-butylperoxy)cyclohexane, not more than 42% with inert inorganic solid with not less than 13% phlegmatizer. See Organic peroxide, solid, n.o.s.		UN2585								
	1,1-Di-(tert-butylperoxy)cyclohexane, not more than 50% with phlegmatizer. See Organic peroxide, liquid or solution, n.o.s.		UN2897								
	1,2-Di-(tert-butylperoxy)cyclohexane, not more than 77% in solution. See Organic peroxide, liquid or solution, n.o.s.		UN2181								
	Di-sec-butyl peroxydicarbonate, technically pure. See Organic peroxide, liquid or solution, n.o.s.		UN2150								
	Di-sec-butyl peroxydicarbonate, not more than 52% in solution. See Organic peroxide, liquid or solution, n.o.s.		UN2151								
	1,4-Di-(2-tert-butylperoxyisopropyl) benzene, technically pure or more than 40% with inert solid. See Organic peroxide, solid, n.o.s.		UN2112								
	1,3-Di-(2-tert-butylperoxyisopropyl) benzene, technically pure or more than 40% with inert solid. See Organic peroxide, solid, n.o.s.		UN2112								

For explanation of abbreviations and reference marks, see last page of this tariff.

	Diethylzinc. *See* Pyrophoric liquid, n.o.s.										
	Difluoroethane (A-152a)	Flammable gas	UN1030	Flammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1,2	1,2	
	Difluorophosphoric acid, anhydrous	Corrosive material	UN1768	Corrosive	None	173.275	Forbidden	1 gallon	1,2	1,2	
	2,3-Dihydroperoxy propane, not more than 25% with inert organic solid. *See* Organic peroxide, solid, n.o.s.		UN2178								
	Dihydropyran	Flammable liquid	UN2376	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	4	
	Di-(1-hydroxycyclohexyl) peroxide, technically pure. *See* Organic peroxide, solid, n.o.s.		UN2149								
	1,8-Dihydroxy-2,4,5,7-tetranitroanthraquinone (chrysamminic acid)	Forbidden									
	Di-(1-hydroxytetrazole) (dry)	Forbidden									
	Diiodoacetylene	Forbidden									
	Diisobutyl ketone	Combustible liquid	UN1157	None	173.118a	None	No limit	No limit	1,2	1,2	
	Diisobutyryl peroxide, not more than 52% in solution. *See* Organic peroxide, liquid or solution, n.o.s.		UN2182								
	Diisooctyl acid phosphate	Corrosive material	UN1902	Corrosive	173.244	173.296	1 quart	1 quart	1,2	1,2	Glass carboys in hampers not permitted under deck
	Diisopropylamine	Flammable liquid	UN1158	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Diisopropylbenzene hydroperoxide, not more than 72% in solution. *See* Diisopropylbenzene hydroperoxide solution, not more than 72% peroxide		UN2171								
	Diisopropylbenzene hydroperoxide, more than 72% in solution	Forbidden									
	Diisopropylbenzene hydroperoxide solution, not over 72% peroxide	Organic peroxide	UN2171	Organic peroxide	173.153	173.224	1 quart	1 quart	1,2	4	
	Diisopropyl ether	Flammable liquid	UN1159	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,3	4	
	Diisobidecyl peroxydicarbonate, technically pure. *See* Organic peroxide, liquid or solution, n.o.s.		UN2683								
♦	Dimethylamine, anhydrous	Flammable gas	UN1032	Flammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1,2	4	
	Dimethylamine, aqueous solution	Flammable liquid	UN1160	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Di-(2-methylbenzoyl)peroxide, not more than 85% with water. *See* Organic peroxide, solid, n.o.s.		UN2593								
	2,3-Dimethylbutane	Flammable liquid	UN2457	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,3	4	
	Dimethyl carbonate	Flammable liquid	UN1161	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Dimethyl chlorothiophosphate	Corrosive material	NA2922	Corrosive	173.244	173.245	1 quart	1 quart	1,2	1,2	
	1,4-Dimethylcyclohexane	Flammable liquid	UN2263	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	2,5-Dimethyl-2,5-di-(benzoylperoxy)hexane, technically pure. *See* Organic peroxide, solid, n.o.s.		UN2172								

§ 172.101 Hazardous Materials Table—*Continued*

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
49 A W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(i) Passenger-carrying aircraft or railcar	(ii) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	2,5-Dimethyl-2,5-di-(benzoylperoxy)hexane, *not more than 82% with inert solid. See* Organic peroxide, solid, n.o.s.		UN2135								
	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexane, technically pure *See* Organic peroxide, liquid or solution, n.o.s.		UN2156								
	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexane, *not more than 52% with inert solid. See* Organic peroxide, solid, n.o.s.		UN2158								
	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexyne-3, technically pure *See* Organic peroxide, liquid or solution, n.o.s.		UN2159								
	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexyne-3, *not more than 52% with inert solid. See* Organic peroxide, solid, n.o.s.		UN2160								
	Dimethyldichlorosilane	Flammable liquid	UN1162	Flammable liquid	None	173.135	Forbidden	5 pints	1,2	1	
	2,5-Dimethyl-2,5-di-(2-ethylhexanoylperoxy)hexane, technically pure *See* Organic peroxide, liquid or solution, n.o.s.		UN2157								
	2,5-Dimethyl-2,5-dihydroperoxy hexane, *not more than 82% with water. See* Dimethylhexane dihydroperoxide, with 18% or more water.		UN2174								
	2,5-Dimethyl-2,5-dihydroperoxy hexane, more than 82% with water	Forbidden									
	Dimethyl ether	Flammable gas	UN1033	Flammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1,2	1	
	Dimethylhexane dihydroperoxide (dry)	Forbidden									
	Dimethylhexane dihydroperoxide, (with 18% or more water)	Organic peroxide	UN2174	Organic peroxide	None	173.157	Forbidden	25 pounds	1	1	
	Dimethylhydrazine, unsymmetrical (UDMH)	Flammable liquid	UN1163	Flammable liquid and Poison	None	173.145	Forbidden	5 pints	1,2	1	Keep dry. Segregate from corrosive and oxidizing materials and organic peroxides
	Dimethyl phosphorochloridothioate. *See* Dimethyl chlorothiophosphate										
	Dimethyl sulfate	Corrosive material	UN1595	Corrosive	None	173.255	Forbidden	1 quart	1	5	Keep cool
	Dimethyl sulfide	Flammable liquid	UN1164	Flammable liquid	None	173.119	Forbidden	10 gallons	1,2	5	
	Dimyristyl peroxydicarbonate, technically pure *See* Organic peroxide, solid, n.o.s.		UN2595								
	Dimyristyl peroxydicarbonate, *not more than 22% stable dispersion in water. See* Organic peroxide, liquid or solution, n.o.s.		UN2892								
	Di-(1-naphthyl)-peroxide	Forbidden									
	Dinitrobenzene, solid, or Dinitrobenzol, solid	Poison B	UN1597	Poison	173.364	173.371	50 pounds	200 pounds	1,2	1,2	
	Dinitrobenzene solution	Poison B	UN1597	Poison	173.345	173.346	1 quart	55 gallons	1,2	1,2	
	Dinitrochlorobenzene	Poison B	UN1577	Poison	173.364	173.365	50 pounds	200 pounds	1,2	1,2	
A	Dinitrocyclohexylphenol	ORM A	NA3026	None	173.505	173.510	No limit	No limit			
	Dinitro-7,8-dimethylglycoluril (dry)	Forbidden									
	1,3-Dinitro-5,5-dimethyl hydantoin	Forbidden									
	1,3-Dinitro-4,5-dinitrosobenzene	Forbidden									
	1,2-Dinitroethane	Forbidden									
	1,1-Dinitroethane (dry)	Forbidden									
	Dinitroglycoluril	Forbidden									
	Dinitromethane	Forbidden									
	Dinitrophenol solution	Poison B	UN1599	Poison	173.345	173.362a	1 quart	65 pounds	1,2	1,2	Stow away from heavy metals and their compounds. If flash point is 141 deg F or less segregation same as for flammable liquids
	Dinitropropylene glycol	Forbidden									
	4,6-Dinitroresorcinol (heavy metal salts of) (dry)	Forbidden									
	2,4-Dinitroresorcinol (heavy metal salts of) (dry)	Forbidden									

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments

	Ethyl methyl ketone	Flammable liquid	UN1193	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Ethyl nitrate (nitric ether)	Flammable liquid	NA1993	Flammable liquid	173.118	173.119	Forbidden	Forbidden	1,2	1	
	Ethyl nitrite (nitrous ether)	Flammable liquid	UN1194	Flammable liquid	None	173.119	Forbidden	Forbidden	1,3	5	
	Ethyl perchlorate	Forbidden									
	Ethyl phenyl dichloroarsine	Corrosive material	UN2435	Corrosive	None	173.290	Forbidden	10 gallons	1	5	
	Ethyl phosphonothioic dichloride, anhydrous	Corrosive material	NA1760	Corrosive	173.244	173.245 173.245a	1 quart	1 quart	1	4	
	Ethyl phosphonous dichloride. See Pyrophoric liquid, n.o.s.										
	Ethyl phosphorodichloridate	Corrosive material	NA1760	Corrosive	173.244	173.245 173.245a	1 quart	1 quart	1	4	
	Ethyl propionate	Flammable liquid	UN1195	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	

§ 172.101 Hazardous Materials Table—Continued

(1) 47 AV W	(2) Hazardous materials descriptions and proper shipping names	(3) Hazard class	(3A) Identification number	(4) Label(s) required (if not excepted)	(5) Packaging (a) Exceptions	(5) Packaging (b) Specific requirements	(6) Maximum net quantity in one package (a) Passenger-carrying aircraft or railcar	(6) Maximum net quantity in one package (b) Cargo aircraft only	(7) Water shipments (a) Cargo vessel	(7) Water shipments (b) Passenger vessel	(c) Other requirements
	Ethyl silicate (tetraethyl orthosilicate)	Combustible liquid	UN1292	None	173.118a	None	No limit	No limit	12	12	
	Ethyl trichloroacetate	Flammable liquid	UN1196	Flammable liquid	None	173.135	Forbidden	5 pints	12	1	
	Etiologic agent, A 6 8	Etiologic agent	NA2814	Etiologic agent	173.386	173.387	See 173.386	4 liters			Not permitted except under specific conditions approved by the Department
	Explosive auto alarm	Class C explosive		Explosive C	None	173.111	50 pounds	150 pounds	12	12	
	Explosive bomb	Class A explosive		Explosive A	None	173.56	Forbidden	Forbidden	12	5	Magazine stowage authorized. No other cargo may be stowed in the same hold with these items
	Explosive cable cutter	Class C explosive		Explosive C	None	173.102	50 pounds	150 pounds	13	13	
	Explosive, forbidden. See Sec. 173.51	Forbidden									
	Explosive mine	Class A explosive		Explosive A	None	173.56	Forbidden	Forbidden	12	5	Magazine stowage authorized. No other cargo may be stowed in the same hold with these items
	Explosive, new approval, and exemption. See 173.86										
	Explosive pest control devices	Class C explosive		Explosive C	None	173.100	50 pounds	150 pounds	13	13	
	Explosive power device, Class B	Class B explosive		Explosive B	None	173.94	Forbidden	150 pounds	12	5	
	Explosive power device, Class C	Class C explosive		Explosive C	None	173.102	50 pounds	150 pounds	13	13	
	Explosive projectile	Class A explosive		Explosive A	None	173.56	Forbidden	Forbidden	12	5	Magazine stowage authorized. No other cargo may be stowed in the same hold with this material
	Explosive release device	Class C explosive		Explosive C	None	173.102	50 pounds	150 pounds	13	13	
	Explosive rivet	Class C explosive		Explosive C	None	173.100	50 pounds	150 pounds	12	12	
	Explosive, sample for laboratory examination				173.86		Forbidden	See 173.86			
	Explosive torpedo	Class A explosive		Explosive A	None	173.56	Forbidden	Forbidden	12	5	Magazine stowage authorized. No other cargo may be stowed in the same hold with this material
	Extract, liquid, flavoring	Flammable liquid	UN1197	Flammable liquid	173.118	173.119	1 quart	10 gallons	12	1	
	Ferric arsenate, solid	Poison B	UN1606	Poison	173.364	173.365	50 pounds	200 pounds	12	12	
	Ferric arsenite, solid	Poison B	UN1607	Poison	173.364	173.365	50 pounds	200 pounds	12	12	
A	Ferric chloride, solid, anhydrous	ORM B	UN1773	None	173.505	173.510	25 pounds	100 pounds	12	12	
	Ferric chloride solution	Corrosive material	UN2582	Corrosive	173.244	173.245	1 quart	10 quarts	12	12	
	Ferric nitrate	Oxidizer	UN1466	Oxidizer	173.153	173.182	25 pounds	100 pounds	12	12	
W	Ferrochrome, exothermic	ORM-C		None	173.505	173.965			1	1	
W	Ferromanganese, exothermic. See Ferrochrome, exothermic										
W	Ferrophosphorus	ORM A		None	173.505	173.635			12	12	Keep dry. Stow away from living quarters
AW	Ferrosilicon, containing 30% or more but not more than 70% silicon	ORM A	UN1408	None	173.505	173.645	Forbidden	25 pounds	12	12	Keep dry. Stow away from living quarters. Segregation same as for flammable solids labeled Dangerous When Wet
	Ferrous arsenate, solid	Poison B	UN1608	Poison	173.364	173.365	50 pounds	200 pounds	12	12	
A	Ferrous chloride, solid	ORM B	NA1759	None	173.505	173.510	No limit	No limit	12	12	
	Ferrous chloride, solution	Corrosive material	NA1760	Corrosive	173.244	173.245	1 quart	5 gallons	12	12	
	Fertilizer ammoniating solution containing free ammonia (more than 25.3 psig)	Nonflammable gas	UN1043	Nonflammable gas	173.306	173.304 173.314	Forbidden	300 pounds	12	4	
W	Fibers (jute, hemp, flax, sisal, coir, kapok, and similar vegetable fibers)	ORM-C	NA1372	None	173.505	173.965			12	12	Stow away from animal or vegetable oils. Segregation same as for flammable solids
	Film (nitrocellulose)	Flammable solid	NA1324	Flammable solid	None	173.177	50 pounds	200 pounds	13	13	Stow away from all flammable cargo or substances
	Firecracker. See Fireworks, common or special										
	Firecracker salute. See Fireworks, common or special										
	Fire extinguisher	Nonflammable gas	UN1044	Nonflammable gas	173.306		150 pounds	300 pounds	12	12	
	Fire extinguisher charge containing not more than 50 grains of propellant explosive per unit. Not subject to requirements of this subchapter										

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5) Packaging		(6) Maximum net quantity in one package		(7) Water shipments		
+/A/W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Fire extinguisher charge containing sulfuric acid	Corrosive material	UN1774	Corrosive	173.261		1 quart	1 gallon	1,2	1,2	
	Fireworks, common	Class C explosive		Explosive C	None	173.100 173.108	50 pounds	200 pounds	1,3	1,3	Passenger vessels in metal lockers only
	Fireworks, exhibition display piece. See Fireworks, special										
	Fireworks, special	Class B explosive		Explosive B	None	173.88 173.91	Forbidden	200 pounds	3	3	Passenger vessels in metal lockers only. Toy torpedoes must not be packed with other special fireworks
W	Fish meal or fish scrap containing 6% to 12% water	ORM C	NA2216	None	173.505	173.995			1,2	1,2	Segregation same as for flammable solids. Separate from flammable gases or liquids, oxidizing materials, or organic peroxides. Use double strip stowage for cargo, 6-12 percent moisture containing not more than 12 percent fat. Use single strip stowage for cargo 6-12 percent moisture containing 12-15 percent fat
	Fish meal or fish scrap containing less than 6% or more than 12% water	Flammable solid	NA1374	Flammable solid	None	173.174	Forbidden	Forbidden	1,2	1,2	Separate from flammable gases or liquids, oxidizing materials, or organic peroxides
	Fissile radioactive material. See Radioactive material, fissile										
	Flame retardant compound liquid	Corrosive material	NA1760	Corrosive	173.244	173.291	1 quart	10 gallons	1,2	1,2	
	Flammable gas n.o.s. See Compressed gas, n.o.s.										
	Flammable liquid, corrosive, n.o.s.	Flammable liquid	UN2924	Flammable liquid and Corrosive	None	173.119	1 quart	1 quart	1,2	1	
	Flammable liquid, n.o.s.	Flammable liquid	UN1993	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Flammable liquid, poisonous, n.o.s.	Flammable liquid	UN1992	Flammable liquid and Poison	None	173.119	1 quart	10 gallons	1,2	1	
	Flammable solid, corrosive, n.o.s.	Flammable solid	UN2925	Flammable solid and Corrosive	173.153	173.154	25 pounds	25 pounds	1	4	
	Flammable solid, n.o.s.	Flammable solid	UN1325	Flammable solid	173.153	173.154	25 pounds	25 pounds	1,2	1,2	
	Flammable solid, poisonous, n.o.s.	Flammable solid	UN2926	Flammable solid and Poison	173.153	173.154	25 pounds	25 pounds	1,2	1	
	Flare. See Fireworks, common										
	Flare, airplane. See Fireworks, special										
	Flash cartridge. See Fireworks, special or Low explosives										
	Flash cracker. See Fireworks, common or special										
	Flash powder. See Fireworks, special or Low explosives										
	Flexible linear shaped charge, metal clad	Class C explosive		Explosive C	None	173.104	50 pounds	300 pounds	1,3	1,3	
	Flowers of sulfur. See Sulfur										
	Flue dust, poisonous	Poison B	NA2811	Poison	173.364	173.368	50 pounds	200 pounds	1,2	1,2	
	Fluoboric acid	Corrosive material	UN1775	Corrosive	173.244	173.283	1 quart	1 gallon	1,2	1,2	
	Fluoric acid. See Hydrofluoric acid										
	Fluorine	Nonflammable gas	UN1045	Poison and Oxidizer	None	173.302	Forbidden	Forbidden	1	5	Stow in well ventilated space away from organic materials
	Fluorophosphoric acid, anhydrous. See Monofluorophosphoric acid, anhydrous										
	Fluorosilicic acid. See Hydrofluorosilicic acid										
	Fluorosulfonic acid or Fluosulfonic acid	Corrosive material	UN1777	Corrosive	None	173.274	Forbidden	1 gallon	1	5	Keep dry
	Fluosilicic acid	Corrosive material	UN1778	Corrosive	None	173.265	1 quart	1 gallon	1,2	1,2	
	Forbidden explosives. See 173.51	Forbidden									
	Forbidden materials. See 173.21	Forbidden									
AW	Formaldehyde solution (*flash point more than 141 deg F, in containers of 110 gallons or less*)	ORM A	UN2209	None	173.505	173.510	10 gallons	55 gallons	1,2	4	

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5) Packaging		(6) Maximum net quantity in one package		(7) Water shipments		
49 A/W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Formaldehyde solution (flash point not more than 141 deg F, in containers over 110 gallons)	Combustible liquid	UN1198	None	173.118a	None	10 gallons	55 gallons	1,2	1,2	
A/W	Formaldehyde solution (flash point not more than 141 deg F, in containers of 110 gallons or less)	ORM A	UN1198	None	173.505	173.510	10 gallons	55 gallons	1,2	4	
	Formaldehyde solution (flash point more than 141 deg F, in containers over 110 gallons)	Combustible liquid	UN2209	None	173.118a	None	10 gallons	55 gallons	1,2	1,2	
	Formalin. See Formaldehyde solution										
	Formic acid	Corrosive material	UN1779	Corrosive	173.244	173.289	1 quart	5 gallons	1,2	1,2	Glass carboys in hampers not permitted under deck
	Formic acid solution	Corrosive material	UN1779	Corrosive	173.244	173.289	1 quart	5 gallons	1,2	1,2	
	Fuel, aviation, turbine engine	Flammable liquid	UN1863	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Fuel, aviation, turbine engine	Combustible liquid	UN1863	None	173.118a	None	No limit	No limit	1,2	1,2	
	Fuel oil	Combustible liquid	NA1993	None	173.118a	None	No limit	No limit	1,2	1,2	
	Fuel oil, diesel. See Fuel oil										
	Fuel oil, No. 1, 2, 4, 5 or 6	Combustible liquid	NA1993	None	173.118a	None	No limit	No limit	1,2	1,2	
	Fulminate of mercury (dry)	Forbidden									
	Fulminate of mercury wet. See Initiating explosive										
	Fulminating gold	Forbidden									
	Fulminating mercury	Forbidden									
	Fulminating platinum	Forbidden									
	Fulminating silver	Forbidden									
	Fulminic acid	Forbidden									
	Fumaryl chloride	Corrosive material	UN1780	Corrosive	173.244	173.245	1 quart	1 quart	1	1	Glass carboys not permitted
	Fumigant. See 173.153(a) Note 8										
	Furan	Flammable liquid	UN2389	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
	Furfural	Combustible liquid	UN1199	None	173.118a	None	No limit	No limit	1,2	1	
	Fuse (safety or highway)	Flammable solid	NA1325	Flammable solid	None	173.154a	50 pounds	200 pounds	1,3	1,3	
	Fuse igniter	Class C explosive		Explosive C	None	173.106	50 pounds	150 pounds	1,3	1,3	
	Fuse, instantaneous	Class C explosive		Explosive C	173.100		50 pounds	150 pounds	1,2	1,2	
	Fuse lighter	Class C explosive		Explosive C	None	173.106	50 pounds	150 pounds	1,3	1,3	
	Fuse oil	Combustible liquid	UN1201	None	173.118a	None	No limit	No limit	1,2	1,2	
	Fuse, mild detonating, metal clad	Class C explosive		Explosive C	None	173.104	50 pounds	300 pounds	1,2	1,2	
	Fuse, safety	Class C explosive		Explosive C	173.100	173.100	50 pounds	300 pounds	1,2	1,2	
	Fuze, combination	Class C explosive		Explosive C	None	173.105	50 pounds	150 pounds	1,3	1,3	
	Fuze, detonating	Class A explosive		Explosive A	None	173.89	Forbidden	Forbidden	6	5	
	Fuze, detonating, Class C explosive	Class C explosive		Explosive C	None	173.113	50 pounds	150 pounds	1,3	1,3	
	Fuze, detonating, radioactive	Class A explosive		Explosive A	None	173.89	Forbidden	Forbidden	6	5	
	Fuze, percussion	Class C explosive		Explosive C	None	173.105	50 pounds	150 pounds	1,3	1,3	
	Fuze, time	Class C explosive		Explosive C	None	173.105	50 pounds	150 pounds	1,3	1,3	
	Fuze, tracer	Class C explosive		Explosive C	None	173.105	50 pounds	150 pounds	1,3	1,3	
	Gelatinan trinitrate	Forbidden									
	Gallium metal, liquid	ORM-B	UN2803	None	None	173.861	Forbidden	Forbidden	1	5	None
	Gallium metal, solid	ORM-B	UN2803	None	None	173.862	40 pounds	40 pounds	1,3	1	Shade from radiant heat
	Gas cylinder, empty. See Cylinder, empty										
	Gas drips, hydrocarbon	Combustible liquid	UN1864	None	173.118a	None	No limit	No limit	1,2	1,2	

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5) Packaging		(6) Maximum net quantity in one package		(7) Water shipments		
	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Gas drips, hydrocarbon	Flammable liquid	UN1864	Flammable liquid	173.118	173.119	1 quart	10 gallons	1 2	1	
	Gas identification set	Poison A	NA3035	Poison gas	None	173.331	Forbidden	Forbidden	1	5	
	Gas identification set	Irritating material	NA3035	Irritant	None	173.331	Forbidden	Forbidden	1	5	
	Gas mine. See Explosive mine										
	Gasohol (gasoline mixed with ethyl alcohol containing 20% maximum alcohol). See Gasoline										
	Gasoline (including casing head and natural)	Flammable liquid	UN1203	Flammable liquid	173.118	173.119	1 quart	10 gallons	1 2	1	
	Gelatine Dynamite. See High explosive										
	Germane	Poison A	UN2192	Poison gas and Flammable gas	None	173.328	Forbidden	Forbidden	1	5	Segregation same as for flammable gases
	Glyceryl 1,3-dinitrate	Forbidden									
	Glyceryl mononitrate trinitrate	Forbidden									
	Glyceryl nonitrate trinitrate	Forbidden									
	Grenade without bursting charge (With incendiary material)	Class B explosive		Explosive B	None	173.91	Forbidden	Forbidden	3	3	Passenger vessels on metal lockers only
	Grenade without bursting charge (With smoke charge) (Smoke grenade)	Class C explosive		Explosive C	None	173.108	50 pounds	150 pounds	1 3	1 3	
	Grenade without bursting charge (With Poison A gas charge)	Poison A	NA2016	Poison gas	None	173.330	Forbidden	Forbidden			See correct shipping name of applicable Poison A material for storage, special handling, and special segregation requirements
	Grenade without bursting charge (With Poison B charge)	Poison B	NA2016	Poison	None	173.350	Forbidden	Forbidden			See correct shipping name of applicable Poison B material for storage, special handling, and special segregation requirements
	Grenade, empty, primed	Class C explosive		None	None	173.107	50 pounds	150 pounds	1 3	1 3	
	Grenade, hand or rifle, explosive (with or without gas, smoke, or incendiary material)	Class A explosive		Explosive A	None	173.56	Forbidden	Forbidden	1 2	5	No other cargo may be stowed in the same hold with these items
	Grenade, tear gas	Irritating material	NA2017	Irritant	None	173.385	Forbidden	75 pounds	1 2	1	
	Guanidine nitrate	Oxidizer	UN1467	Oxidizer	173.153	173.182	25 pounds	100 pounds	1 2	1 2	Separate from nitro-compounds, chlorates, and acids
	Guanyl nitrosamino guanylidene hydrazine. See Initiating explosive										
	Guanyl nitrosamino guanylidene hydrazine (dry)	Forbidden									
	Guanyl nitrosamino guanyl tetrazene. See Initiating explosive										
	Guided missile, without warhead. See Rocket motor, Class A explosive or Rocket motor, Class B explosive										
	Guided missile with warhead. See Rocket ammunition with explosive, illuminating, gas, incendiary, or smoke projectile										
	Guncotton. See High explosive										
	Guthion. See Azinphos methyl										
	Guthion mixture, liquid. See Azinphos methyl mixture, liquid										
	Hafnium metal, dry (*See 173.214 Note 3*)	Flammable solid	UN2545	Flammable solid	None	173.214	Forbidden	75 pounds	1	5	
	Hafnium metal, wet	Flammable solid	UN1326	Flammable solid	None	173.214	Forbidden	150 pounds	1 2	5	
	Hand signal device	Class C explosive		Explosive C	None	173.108	50 pounds	200 pounds	1 2	1 2	
	Hazardous substance, liquid or solid, n.o.s. or ORM-E, liquid or solid, n.o.s.	ORM-E	NA9188	None	None	173.1300	No limit	No limit	1 2	1 2	
	Hazardous waste, liquid or solid, n.o.s.	ORM-E	NA9189	None	None	173.1300	Forbidden	550 pounds	1 2	1 2	
	Hazardous waste, meeting the definition of a hazard class other than ORM-E. See 172.101(c)(10)										
	Heater for refrigerator car, liquid fuel type (containing fuel)	Flammable liquid	NA1993	Flammable liquid	173.148		Forbidden	Forbidden	1 2	1	
	Helium or Helium, compressed	Nonflammable gas	UN1046	Nonflammable gas	173.306	173.302 173.314	150 pounds	300 pounds	1 2	1 2	
	Helium-oxygen mixture	Nonflammable gas	NA1980	Nonflammable gas	173.306	173.302	150 pounds	300 pounds	1 2	1 2	

§ 172.101 Hazardous Materials Table—Continued

	Hexaldehyde	Flammable liquid	UN1207	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1,2	
	Hexamethylenediamine, solid	Corrosive material	UN2280	Corrosive	173.244	173.245b	25 pounds	100 pounds	1,2	1,2	
	Hexamethylenediamine, solution	Corrosive material	UN1783	Corrosive	173.244	173.292	1 quart	10 gallons	1,2	1,2	
	Hexamethyleneimine	Flammable liquid	UN2493	Flammable liquid and corrosive	None	173.119	1 quart	1 gallon	1,2	1	
	Hexamethylene triperoxide diamine (dry)	Forbidden									
	Hexamethyl benzene hexanitrate	Forbidden									
	3,3,6,6,9,9-Hexamethyl-1,2,4,5-tetraoxacyclononane, technically pure. See Organic peroxide, solid, n.o.s.		UN2165								
	3,3,6,6,9,9-Hexamethyl-1,2,4,5-tetraoxacyclononane, not more than 52% with inert solid. See Organic peroxide, solid, n.o.s.		UN2166								
	3,3,6,6,9,9-Hexamethyl-1,2,4,5-tetraoxacyclononane, not more than 52% in solution. See Organic peroxide, liquid or solution, n.o.s.		UN2167								
	Hexane	Flammable liquid	UN1208	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,3	1	
	Hexanitroazoxy benzene	Forbidden									
	2,2',4,4',6,6'-Hexanitro-3,3'-dihydroxyazobenzene (dry)	Forbidden									
	2,2',4,4',6,6'-Hexanitrodiphenylamine	Forbidden									
	2,3',4,4',6,6'-Hexanitrodiphenylether	Forbidden									
	Hexanitrodiphenyl urea	Forbidden									
	Hexanitroethane	Forbidden									
	Hexanitrooxanilide	Forbidden									
	Hexanoic acid	Corrosive material	NA1760	Corrosive	173.244	173.245	1 quart	10 gallons	1,2	1,2	
	Hexyltrichlorosilane	Corrosive material	UN1784	Corrosive	None	173.290	Forbidden	10 gallons	1	1	Keep dry
	High explosive	Class A explosive		Explosive A	173.55	173.61 to 173.87	Forbidden	Forbidden	6	5	
	High explosive, liquid	Class A explosive		Explosive A	None	173.62	Forbidden	Forbidden	6	5	

§ 172.101 Hazardous Materials Table—*Continued*

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
★ A/W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Hydraulic accumulator. See Accumulator, pressurized										
	Hydrazine, anhydrous	Flammable liquid	UN2029	Flammable liquid and Poison	None	173.276	Forbidden	5 pints	1	5	Segregation same as for corrosives
	Hydrazine, aqueous solution	Corrosive material	UN2030	Corrosive	None	173.276	Forbidden	5 pints	1	5	
	Hydrazine azide	Forbidden									
	Hydrazine chlorate	Forbidden									
	Hydrazine dicarbonic acid diazide	Forbidden									
	Hydrazine perchlorate	Forbidden									
	Hydrazine selenate	Forbidden									
	Hydriodic acid	Corrosive material	UN1787	Corrosive	173.244	173.245	1 quart	1 gallon	1	1	Glass carboys *not permitted* on passenger vessel
	Hydrobromic acid, more than 49% strength	Corrosive material	UN1788	Corrosive	None	173.262	Forbidden	Forbidden	1	1	Glass carboys *not permitted* on passenger vessel
	Hydrobromic acid, anhydrous. See Hydrogen bromide										
	Hydrobromic acid not more than 49% strength	Corrosive material	UN1788	Corrosive	173.244	173.262	1 quart	1 gallon	1	1	Glass carboys *not permitted* on passenger vessel
★	Hydrocarbon gas, liquefied	Flammable gas	UN1965	Flammable gas	173.306	173.304 173.314	Forbidden	300 pounds	1,2	1	
★	Hydrocarbon gas, nonliquefied	Flammable gas	UN1964	Flammable gas	173.306	173.302	Forbidden	300 pounds	1,2	1	
	Hydrochloric acid	Corrosive material	UN1789	Corrosive	173.244	173.263	1 quart	1 gallon	1	1	Glass carboys *not permitted* on passenger vessel
	Hydrochloric acid, anhydrous. See Hydrogen chloride										
	Hydrochloric acid mixture	Corrosive material	NA1789	Corrosive	173.244	173.263	1 quart	1 gallon	1	1	Glass carboys *not permitted* on passenger vessel
	Hydrochloric acid solution, inhibited	Corrosive material	UN1789	Corrosive	173.244	173.263	1 quart	1 gallon	1	1	Glass carboys *not permitted* on passenger vessel
	Hydrocyanic acid, liquefied	Poison A	NA1051	Poison gas and Flammable gas	None	173.332	Forbidden	Forbidden	1	5	Segregation same as for flammable gases
	Hydrocyanic acid (prussic) unstabilized	Forbidden									
	Hydrocyanic acid solution (5% or more hydrocyanic acid)	Poison A	UN1613	Poison gas and Flammable gas	None	173.332	Forbidden	Forbidden	1	5	Shade from radiant heat. Aqueous solutions containing more than 20 percent hydrogen cyanide are not permitted in transportation by water. Segregation same as for flammable gases
★	Hydrocyanic acid solution, less than 5% hydrocyanic acid	Poison B	UN1613	Poison	None	173.351	Forbidden	25 pounds	1	5	Shade from radiant heat
	Hydrofluoric acid, anhydrous. See Hydrogen fluoride										
	Hydrofluoric acid solution	Corrosive material	UN1790	Corrosive	173.244	173.264	1 quart	1 gallon	1	4	
	Hydrofluoric and sulfuric acid mixture	Corrosive material	UN1786	Corrosive	None	173.290	Forbidden	1 gallon	1	5	
	Hydrofluoroboric acid. See Fluoboric acid										
	Hydrofluorosilicic acid or Hydrofluosilicic acid	Corrosive material	NA1778	Corrosive	None	173.265	1 quart	1 gallon	1,2	1,2	
	Hydrogen bromide	Nonflammable gas	UN1048	Nonflammable gas	173.306	173.304	Forbidden	300 pounds	1	4	
	Hydrogen chloride or Hydrogen chloride, anhydrous	Nonflammable gas	UN1050	Nonflammable gas	173.306	173.304	Forbidden	300 pounds	1	4	Stow away from foodstuff and living quarters
	Hydrogen chloride, refrigerated liquid	Nonflammable gas	UN2186	Nonflammable gas	None	173.314 173.315	Forbidden	300 pounds	1,2	4	Stow in well ventilated space
	Hydrogen fluoride	Corrosive material	UN1052	Corrosive	None	173.264	Forbidden	110 pounds	1	5	Segregation same as for nonflammable gases
	Hydrogen iodide solution. See Hydriodic acid										
★	Hydrogen or Hydrogen, compressed	Flammable gas	UN1049	Flammable gas	173.306	173.302 173.314	Forbidden	300 pounds	1,2	4	Stow away from living quarters
	Hydrogen peroxide solution (40% to 52% peroxide)	Oxidizer	UN2014	Oxidizer	173.244	173.256	Forbidden	Forbidden	1	4	Shade from radiant heat. Separate from permanganates. Keep away from powdered metals
	Hydrogen peroxide solution (8% to 40% peroxide)	Oxidizer	UN2014	Oxidizer	173.244	173.256	1 quart	1 gallon	1,2	1	Shade from radiant heat. Separate from permanganates. Keep away from powdered metals
	Hydrogen peroxide solution (over 52% peroxide)	Oxidizer	UN2015	Oxidizer and Corrosive	None	173.256	Forbidden	Forbidden	1	5	Shade from radiant heat. Separate from permanganates. Keep away from powdered metals. Concentrations greater than 86% hydrogen peroxide not permitted on any vessel except under conditions approved by the Department

	Quebrachitol pentanitrate	Forbidden									
	Quicklime. See Calcium oxide										
	Radioactive material, articles, manufactured from natural or depleted uranium or natural thorium	Radioactive material	UN2909	None	173.421-1 173.424	173.421-1 173.424			1,2	1,2	
	Radioactive material, empty packages	Radioactive material	UN2908	Empty	173.421-1 173.427	173.421-1 173.427			1,2	1,2	
	Radioactive material, fissile, n.o.s.	Radioactive material	UN2918	Radioactive	173.453	173.417			1,2	1,2	
	Radioactive material, instruments and articles	Radioactive material	UN2911	None	173.421-1 173.422	173.421-1 173.422			1,2	1,2	
	Radioactive material, limited quantity, n.o.s.	Radioactive material	UN2910	None	173.421 173.421-3	173.421 173.421-3			1,2	1,2	
	Radioactive material, low specific activity or LSA, n.o.s.	Radioactive material	UN2912	Radioactive	173.421 173.422 173.424	173.425			1,2	1,2	
	Radioactive material, n.o.s.	Radioactive material	UN2982	Radioactive	173.421 173.422 173.424	173.415 173.416			1,2	1,2	
	Radioactive material, special form, n.o.s.	Radioactive material	UN2974	Radioactive	173.421 173.422	173.415 173.416			1,2	1,2	
	Railway Fusee. See Fusee										
	Railway torpedo. See Torpedo, railway										
	Refrigerant gas, n.o.s. or Dispersant gas, n.o.s.	Nonflammable gas	UN1078	Nonflammable gas	173.306	173.304 173.314 173.315	150 pounds	300 pounds	1,2	1,2	
	Refrigerant gas, n.o.s. or Dispersant gas, n.o.s.	Flammable gas	NA1954	Flammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1,2	1,2	
	Refrigerating machine	Nonflammable gas	UN2857	Nonflammable gas	173.306 173.307		No limit	No limit	1,3	1,3	
	Refrigerating machine	Flammable gas	NA1954	Flammable gas	173.306		No limit	No limit	1,3	1,3	
	Refrigerating machine	Flammable liquid	NA1993	Flammable liquid	173.130 173.306		No limit	No limit	1,2	1	
	Resin solution (resin compound liquid)	Flammable liquid	UN1866	Flammable liquid	173.118	173.119	1 quart	55 gallons	1,2	1	
	Rifle grenade. See Grenade, hand or rifle, explosive										
	Rifle powder. See Propellant explosive or Black powder										

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
** A W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Road asphalt or tar, liquid. See Asphalt, cut back										
	Road asphalt or tar (when heated to or above its flash point). See Asphalt										
	Rocket ammunition with empty, inert, or solid loaded projectile	Class A explosive		Explosive A	None	173.57	Forbidden	Forbidden	6	5	
	Rocket ammunition with empty projectile	Class B explosive		Explosive B	None	173.90	Forbidden	Forbidden	1.3	5	
	Rocket ammunition with explosive projectile	Class A explosive		Explosive A	None	173.57	Forbidden	Forbidden	6	5	
	Rocket ammunition with gas projectile	Class A explosive		Explosive A	None	173.57	Forbidden	Forbidden	6	5	
	Rocket ammunition with illuminating projectile	Class A explosive		Explosive A	None	173.57	Forbidden	Forbidden	6	5	
	Rocket ammunition with incendiary projectile	Class A explosive		Explosive A	None	173.57	Forbidden	Forbidden	6	5	
	Rocket ammunition with inert loaded projectile	Class B explosive		Explosive B	None	173.90	Forbidden	Forbidden	1.3	5	
	Rocket ammunition with smoke projectile	Class A explosive		Explosive A	None	173.57	Forbidden	Forbidden	6	5	
	Rocket ammunition with solid projectile	Class B explosive		Explosive B	None	173.90	Forbidden	Forbidden	1.3	5	
	Rocket body, with electric primer or electric squib. See 173.55										
	Rocket engine, liquid	Class B explosive		Explosive B	None	173.95	Forbidden	Forbidden	1.2	5	Magazine storage authorized
	Rocket fireworks. See Fireworks, common										
	Rocket head. See Explosive projectile										
	Rocket motor	Class A explosive		Explosive A	None	173.79	Forbidden	Forbidden	6	5	
	Rocket motor	Class B explosive		Explosive B	None	173.92	Forbidden	550 pounds	1.3	5	
	Roman candle. See Fireworks, common										
	Rubidium metal	Flammable solid	UN1423	Flammable solid and Dangerous when wet	None	173.206	Forbidden	225 pounds	1.2	5	Segregation same as for flammable solid labeled Dangerous When Wet
	Rubidium metal, in cartridges	Flammable solid	UN1423	Flammable solid and Dangerous when wet	173.206		1 pound	25 pounds	1.2	4	Segregation same as for flammable solid labeled Dangerous When Wet
	Safety fuse. See Fuse, safety										
	Safety squib	Class C explosive		Explosive C	None	173.106	50 pounds	150 pounds	1.3	1.3	
	Salute. See Fireworks common or special										
	Samples. See 172.101(c)(12)										
	Sand acid. See Hydrofluorosilicic acid										
	Selenic acid, liquid	Corrosive material	UN1905	Corrosive	None	173.245	Forbidden	5 pints	1.2	1.2	
	Selenium nitride	Forbidden									
	Selenium oxide	Poison B	NA2811	Poison	173.364	173.365	50 pounds	200 pounds	1.2	1.2	
	Self-lighting cigarette	Flammable solid	UN1867	Flammable solid	173.21		Forbidden	Forbidden	1.2	1.2	Keep dry
	Self propelled vehicle. See Motor vehicle										
	Shaped charge, commercial. See High explosive (173.65(N))										
	Shaped charges (commercial) containing more than 8 ounces of explosives	Forbidden									
	Shell, fireworks. See Fireworks, common or special										
	Ship distress signal. See Fireworks, special										
	Signal flare	Class C explosive		Explosive C	None	173.108	50 pounds	200 pounds	1.2	1.2	
	Silicofluoric acid. See Hydrofluorosilicic acid										
	Silicon chloride or Silicon tetrachloride	Corrosive material	UN1818	Corrosive	173.244	173.247	1 quart	1 gallon	1	1	Keep dry. Glass carboys not permitted on passenger vessels
	Silicon chrome, exothermic. See Ferrochrome, exothermic										
◆	Silicon tetrafluoride	Nonflammable gas	UN1859	Nonflammable gas	173.306	173.302	Forbidden	300 pounds	1	4	Stow away from foodstuffs

§ 172.101 Hazardous Materials Table—*Continued*

(1) A W	(2) Hazardous materials descriptions and proper shipping names	(3) Hazard class	(3A) Identification number	(4) Label(s) required (if not excepted)	(5) Packaging (a) Exceptions	(5) Packaging (b) Specific requirements	(6) Maximum net quantity in one package (a) Passenger-carrying aircraft or railcar	(6) Maximum net quantity in one package (b) Cargo aircraft only	(7) Water shipments (a) Cargo vessel	(7) Water shipments (b) Passenger vessel	(7) Water shipments (c) Other requirements
	Silver acetylide (dry)	Forbidden									
	Silver azide (dry)	Forbidden									
	Silver chlorate (dry)	Forbidden									
•	Silver cyanide	Poison B	UN1684	Poison	173.370	173.370	25 pounds	200 pounds	1.2	1.2	Stow away from acids
	Silver fulminate (dry)	Forbidden									
	Silver nitrate	Oxidizer	UN1493	Oxidizer	173.153	173.182	25 pounds	100 pounds	1.2	1.2	Stow away from foodstuffs
	Silver oxalate (dry)	Forbidden									
	Silver picrate (dry)	Forbidden									
	Small arms ammunition	ORM-D		None	173.101	173.1201	65 pounds gross	65 pounds gross			
	Small arms ammunition	Class C explosive		None	173.101		50 pounds	150 pounds	1.3	1.3	
	Small arms ammunition, irritating (tear gas) cartridge	Class C explosive		Irritant	None	173.101	Forbidden	150 pounds	1.3	1.3	
	Small arms primer	Class C explosive		None	None	173.107	50 pounds	150 pounds	1.3	1.3	
	Smoke candle	Class C explosive		Explosive C	None	173.108	50 pounds	200 pounds	1.3	1.3	
	Smoke generator. See Chemical ammunition, nonexplosive (containing a Poison A, Poison B, or irritating material, as appropriate)										
	Smoke grenade	Class C explosive		Explosive C	None	173.108	50 pounds	150 pounds	1.3	1.3	
	Smokeless powder for cannon or small arms. See Propellant explosive, Class A or B, as appropriate										
	Smokeless powder for small arms (100 pounds or less)	Flammable solid	NA1325	Flammable solid	173.88	173.197a	Forbidden	Forbidden	1.3	1.3	Segregation same as for explosives
	Smoke pot	Class C explosive		Explosive C	None	173.108	50 pounds	200 pounds	1.3	1.3	
	Smoke projectile with bursting charge. See Explosive projectile										
	Smoke projectile with expelling charge but without bursting charge. See Fireworks, special										
	Smoke signal	Class C explosive		Explosive C	None	173.108	50 pounds	200 pounds	1.3	1.3	
	Soda amide. See High explosive										
	Soda lime, solid	Corrosive material	UN1907	Corrosive	173.244	173.245b	25 pounds	100 pounds	1.2	1.2	Keep dry
	Sodium acid sulfate, solid or solution. See appropriate Sodium hydrogen sulfate entry										
A	Sodium aluminate, solid	ORM-B	UN2812	None	173.505	173.800	25 pounds	100 pounds			
	Sodium aluminate solution	Corrosive material	UN1819	Corrosive	173.244	173.243	1 quart	5 gallons	1.2	1.2	
	Sodium aluminum hydride	Flammable solid	UN2835	Flammable solid and Dangerous when wet	None	173.206	Forbidden	25 pounds	1.2	5	Segregation same as for flammable solids labeled Dangerous When Wet
	Sodium amide	Flammable solid	UN1425	Flammable solid and Dangerous when wet	None	173.206	Forbidden	25 pounds	1.2	5	Segregation same as for flammable solids labeled Dangerous When Wet
	Sodium arsenate	Poison B	UN1685	Poison	173.364	173.365 173.368	50 pounds	200 pounds	1.2	1.2	
	Sodium arsenite, liquid (solution)	Poison B	UN1686	Poison	173.345	173.346	1 quart	55 gallons	1.2	1.2	
•	Sodium azide	Poison B	UN1687	Poison	173.364	173.375	50 pounds	100 pounds	1.2	1.2	Stow away from heavy metals, especially lead and its compounds. Stow separate from acids
	Sodium bifluoride, solid	Corrosive material	UN2439	Corrosive	173.244	173.245b	25 pounds	100 pounds	1.2	1.2	
	Sodium bifluoride, solution	Corrosive material	UN2439	Corrosive	173.244	173.245	1 quart	5 gallons	1.2	1.2	
	Sodium bisulfate, solid or solution. See Sodium hydrogen sulfate, solid or solution										
	Sodium bisulfite, solid or solution. See Sodium hydrogen sulfite, solid or solution										
	Sodium bromate	Oxidizer	UN1494	Oxidizer	173.153	173.154	25 pounds	100 pounds	1.2	1.2	Stow separate from ammonium compounds. Stow away from powdered metals
	Sodium chlorate (*soda chlorate*)	Oxidizer	UN1495	Oxidizer	173.153	173.183	25 pounds	100 pounds	1.2	1.2	Stow separate from ammonium compounds. Stow away from powdered metals

For explanation of abbreviations and reference marks, see last page of this tariff.

	Strychnine, solid	Poison B	UN1692	Poison	173.364	173.365	Forbidden	200 pounds	1.2	1.2	
	Styphnate of lead. See Initiating explosive										
	Styrene monomer, inhibited	Flammable liquid	UN2055	Flammable liquid	173.118	173.119	1 quart	10 gallons	1.2	1.2	
	Substituted nitrophenol pesticide, liquid, n.o.s. (compounds and preparations)	Flammable liquid	UN2780	Flammable liquid	173.118	173.119	1 quart	10 gallons	1.2	1	
	Substituted nitrophenol pesticide, liquid, n.o.s. (compounds and preparations)	Poison B	UN2779	Poison	173.345	173.348	1 quart	55 gallons	1.2	1.2	
	Substituted nitrophenol pesticide, solid, n.o.s. (compounds and preparations)	Poison B	UN2778	Poison	173.364	173.365	50 pounds	200 pounds	1.2	1.2	
	Succinic acid peroxide	Organic peroxide	UN2135	Organic peroxide	173.153	173.157 173.158	Forbidden	25 pounds	1	1	
	Succinic acid peroxide, technically pure. *See* Succinic acid peroxide.		UN2135								
	Sucrose octanitrate (dry)	Forbidden									
	Sulfur and chlorate, loose mixtures of	Forbidden									
	Sulfur chloride (*S*)	Corrosive material	UN1828	Corrosive	None	173.247	Forbidden	1 gallon	1	1	Keep dry. Glass carboys not permitted on passenger vessels
	Sulfur chloride (mono)	Corrosive material	UN1828	Corrosive	None	173.247	Forbidden	1 gallon	1	1	Keep dry. Glass carboys not permitted on passenger vessels
	Sulfur dioxide	Nonflammable gas	UN1079	Nonflammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1.2	1	Stow away from living quarters
	Sulfur flower. *See* Sulfur, solid										
	Sulfur hexafluoride	Nonflammable gas	UN1080	Nonflammable gas	173.306	173.304	150 pounds	300 pounds	1.2	1.2	
	Sulfuric acid (*For fuming sulfuric acid, see* Oleum)	Corrosive material	UN1830	Corrosive	173.244	173.272	1 quart	1 gallon	1	1	Keep dry. Under deck stowage is permitted on cargo vessels only in metal drums
	Sulfuric acid, spent	Corrosive material	UN1832	Corrosive	None	173.243	Forbidden	1 quart	1	1	Under deck stowage is permitted on cargo vessels only in metal drums
	Sulfuric anhydride. *See* Sulfur trioxide										
	Sulfurous acid	Corrosive material	UN1833	Corrosive	173.244	173.245	2 gallons	2 gallons	1.2	1	Glass carboys in hampers not permitted under deck
W	Sulfur, solid	ORM-C	UN1350	None	173.505	173.1060			1.2	1.2	Protect from sparks and open flame. Stow separate from oxidizing materials. Segregation same as for flammable solids
	Sulfur trioxide	Corrosive material	UN1829	Corrosive	173.244	173.273	Forbidden	1 gallon	1.2	1.2	Keep dry. Glass bottles not permitted under deck
	Sulfuryl chloride	Corrosive material	UN1834	Corrosive	173.244	173.247	1 quart	1 quart	1	1	Keep dry. Glass carboys not permitted on passenger vessels
	Sulfuryl fluoride	Nonflammable gas	UN2191	Nonflammable gas	173.306	173.304 173.314	150 pounds	300 pounds	1.3	1	
	Sulphur. *See* Sulfur, solid										
	Supplementary charge (explosive)	Class A explosive		Explosive A	None	173.89	Forbidden	Forbidden	5	5	
A	2,4,5-T. *See* 2,4,5-Trichlorophenoxyacetic acid.										
	Tank car, containing residue of phosphorus and filled with water or inert gas. See 173.190										
	Tank car, empty (previously used for a hazardous material). See 173.29										
	Tank car, empty (previously used for a Poison A material). See 172.510 and 173.29										
	Tank, portable, empty (previously used for a hazardous material). See 172.510, 172.514 and 173.29										
	Tank truck, empty. See 172.510, 172.514 and 173.29										

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
S / A / W	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
A	TDE (1,1-Dichloro-2,2-bis(p-chlorophenyl) ethane)	ORM A	NA2761	None	173.505	173.510	50 pounds	No limit	1,2	1,2	
	Tear gas ammunition. See Chemical ammunition, nonexplosive (containing an irritant material)										
	Tear gas candle	Irritating material	UN1700	Irritant	None	173.385	Forbidden	75 pounds	1	5	Stow away from living quarters
	Tear gas cartridge. See Small arms ammunition, irritating (tear gas) cartridge										
	Tear gas device	Irritating material	NA1693	Irritant	None	173.385	Forbidden	75 pounds	1	5	Stow away from living quarters
	Tear gas grenade. See Grenade, tear gas										
	Tertiary alcohol. See Alcohol, n.o.s.										
	Tetrazole benzene quinone	Forbidden									
AW	Tetrachloroethane	ORM A	UN1702	None	173.505	173.820	1 quart	10 gallons	1,2	1,2	
A	Tetrachloroethylene or Perchloroethylene	ORM A	UN1897	None	173.505	173.805	10 gallons	55 gallons			
	Tetraethylammonium perchlorate (dry)	Forbidden									
	Tetraethyl dithiopyrophosphate and compressed gas mixture	Poison A	UN1703	Poison gas	None	173.334	Forbidden	Forbidden	1	5	Shade from radiant heat. Stow away from living quarters. Segregation same as for nonflammable gases
	Tetraethyl dithiopyrophosphate, liquid	Poison B	UN1704	Poison	None	173.358	Forbidden	1 quart	1	5	
	Tetraethyl dithiopyrophosphate mixture, dry	Poison B	UN1704	Poison	None	173.377	Forbidden	200 pounds	1	5	
	Tetraethyl dithiopyrophosphate mixture, liquid	Poison B	UN1704	Poison	None	173.359	Forbidden	1 quart	1	5	
	Tetraethyl lead, liquid (including flash point for export shipment by water)	Poison B	NA1649	Poison	None	173.354	Forbidden	55 gallons	1	5	If flash point is 141 deg F or less segregation must be the same as for flammable liquids
	Tetraethyl pyrophosphate and compressed gas mixture	Poison A	UN1705	Poison gas	None	173.334	Forbidden	Forbidden	1	5	Shade from radiant heat. Stow away from living quarters. Segregation same as for nonflammable gases
	Tetraethyl pyrophosphate, liquid	Poison B	NA2783	Poison	None	173.358	Forbidden	1 quart	1,2	5	
	Tetraethyl pyrophosphate mixture, dry	Poison B	NA2783	Poison	None	173.377	Forbidden	200 pounds	1,2	5	
	Tetraethyl pyrophosphate mixture, liquid	Poison B	NA2783	Poison	None	173.359	Forbidden	1 quart	1,2	5	
+	Tetrafluoroethylene, inhibited	Flammable gas	UN1081	Flammable gas	173.306	173.304	Forbidden	300 pounds	1,2	1,2	Stow away from living quarters
	1,2,3,6-Tetrahydrobenzaldehyde	Corrosive material	UN2498	Corrosive	173.244	173.245	1 quart	10 gallons	1,2	1,2	
	Tetrahydrofuran	Flammable liquid	UN2056	Flammable liquid	None	173.118	Forbidden	10 gallons	1,3	5	
	Tetralin hydroperoxide, technically pure. See Organic peroxide, solid, n.o.s.		UN2136								
	Tetramethylammonium hydroxide, liquid	Corrosive material	UN1835	Corrosive	173.244	173.245	1 quart	10 gallons	1,2	1,2	
	1,1,3,3-Tetramethylbutyl hydroperoxide, technically pure. See Organic peroxide, liquid or solution, n.o.s.		UN2160								
	1,1,3,3-Tetramethylbutyl peroxy-2-ethylhexanoate, technically pure. See Organic peroxide, liquid or solution, n.o.s.		UN2161								
	Tetramethylene diperoxide dicarbamide	Forbidden									
A	Tetramethylmethylenediamine	ORM A	NA3069	None	173.505	173.510	No limit	No limit			
	Tetranitro diglycerin	Forbidden									
	Tetranitromethane	Oxidizer	UN1510	Oxidizer	None	173.203	Forbidden	Forbidden	1	5	Shade from radiant heat. Stow away from foodstuffs
	2,3,4,6-Tetranitrophenol	Forbidden									
	2,3,4,6-Tetranitrophenyl methyl nitramine	Forbidden									
	2,3,4,6-Tetranitrophenylnitramine	Forbidden									
	Tetranitroresorcinol (dry)	Forbidden									
	2,3,5,6-Tetranitroso-1,4-dinitrobenzene	Forbidden									
	2,3,5,6-Tetranitroso nitrobenzene (dry)	Forbidden									
	Tetrazene (guanyl nitrosamino guanyltetrazene). See Initiating explosive										
	Tetrazine (dry)	Forbidden									

For explanation of abbreviations and reference marks, see last page of this tariff.

	Vanadium tetrachloride	Corrosive material	UN2444	Corrosive	173.244	173.247a	Forbidden	1 quart	1	4	Shade from radiant heat
	Very signal cartridge	Class C explosive		Explosive C	None	173.108	50 pounds	200 pounds	1,3	1,3	
	Vinyl acetate	Flammable liquid	UN1301	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
+	Vinyl chloride	Flammable gas	UN1086	Flammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1,2	4	Stow away from living quarters
	Vinyl ethyl ether, inhibited	Flammable liquid	UN1302	Flammable liquid	None	173.119	Forbidden	1 gallon	1,3	5	
	Vinyl fluoride, inhibited	Flammable gas	UN1860	Flammable gas	173.306	173.304 173.314 173.315	Forbidden	300 pounds	1	4	
	Vinylidene chloride, inhibited	Flammable liquid	UN1303	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,3	4	
	Vinyl isobutyl ether	Flammable liquid	UN1304	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
+	Vinyl methyl ether	Flammable gas	UN1087	Flammable gas	173.306	173.304 173.314	Forbidden	20 pounds	1,2	1	Stow away from living quarters

§ 172.101 Hazardous Materials Table—Continued

(1)	(2)	(3)	(3A)	(4)	(5)		(6)		(7)		
					Packaging		Maximum net quantity in one package		Water shipments		
49 CFR	Hazardous materials descriptions and proper shipping names	Hazard class	Identification number	Label(s) required (if not excepted)	(a) Exceptions	(b) Specific requirements	(a) Passenger-carrying aircraft or railcar	(b) Cargo aircraft only	(a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Vinyl nitrate polymer	Forbidden									
	Vinyl trichlorosilane	Flammable liquid	UN1305	Flammable liquid	None	173.135	Forbidden	10 gallons	1,2	1	
	Vitriol, oil of. See Sulfuric acid										
	War head. See Explosive projectile										
	Waste, hazardous. See Hazardous waste, liquid or solid, n.o.s.										
	Water pump system tank charged with compressed air or nitrogen	Nonflammable gas	NA1956	None	173.306		Forbidden	Forbidden	1,2	1,2	
	Water reactive solid, n.o.s.	Flammable solid	UN2813	Flammable solid and Dangerous when wet	173.153	173.154	Forbidden	25 pounds	1,2	4	Segregation same as for flammable solids labeled Dangerous When Wet
	Wheelchair, battery equipped. See Battery, electric storage, wet, with wheelchair										
	White acid (ammonium bifluoride and hydrofluoric acid mixture)	Corrosive material	NA1760	Corrosive	173.244	173.254	1 quart	1 gallon	1	1	
	Xenon	Nonflammable gas	UN2036	Nonflammable gas	173.306	173.302	150 pounds	300 pounds	1,2	1,2	
	X-ray film. See Film										
	Xylene (xylol)	Flammable liquid	UN1307	Flammable liquid	173.118	173.119	1 quart	10 gallons	1,2	1	
A	Xylenol	ORM A	UN2261	None	173.505	173.510	100 pounds	No limit	1,2	1,2	
	Xylyl bromide	Irritating material	UN1701	Irritant	None	173.382	Forbidden	75 pounds	1	5	Stow away from living quarters
	Zinc ammonium nitrite	Oxidizer	UN1512	Oxidizer	None	173.228	25 pounds	100 pounds	1,3	5	This material may be forbidden in water transportation by certain countries
	Zinc arsenate	Poison B	UN1712	Poison	173.364	173.365	50 pounds	200 pounds	1,2	1,2	
	Zinc arsenite, solid	Poison B	UN1712	Poison	173.364	173.365	50 pounds	200 pounds	1,2	1,2	
	Zinc chlorate	Oxidizer	UN1513	Oxidizer	173.153	173.163	25 pounds	100 pounds	1,2	1,2	Stow separate from ammonium compounds and away from powdered metals
	Zinc chloride solution	Corrosive material	UN1840	Corrosive	173.244	173.245	1 quart	1 quart	1,2	1,2	
	Zinc cyanide	Poison B	UN1713	Poison	173.370	173.370	25 pounds	200 pounds	1,2	1,2	Stow away from acids
	Zinc ethyl. See Pyrophoric liquid, n.o.s.										
A	Zinc hydrosulfite	ORM A	UN1931	None	173.505	173.510	50 pounds	100 pounds	1,2	1,2	Keep dry. Stow away from acids and oxidizers
	Zinc muriate solution. See Zinc chloride solution										
	Zinc nitrate	Oxidizer	UN1514	Oxidizer	173.153	173.182	25 pounds	100 pounds	1,2	1,2	
	Zinc permanganate	Oxidizer	UN1515	Oxidizer	173.153	173.154	25 pounds	100 pounds	1,2	1,2	Separate from ammonium compounds and hydrogen peroxide
	Zinc peroxide	Oxidizer	UN1516	Oxidizer	173.153	173.154	25 pounds	100 pounds	1,2	1,2	Keep dry
	Zinc phosphide	Poison B	UN1714	Poison	173.364	173.365	25 pounds	100 pounds	1,2	1,2	Stow away from acids and oxidizers
	Zirconium hydride	Flammable solid	UN1437	Flammable solid and Dangerous when wet	None	173.256	Forbidden	150 pounds	1,2	5	Segregation same as for flammable solids labeled Dangerous When Wet
	Zirconium metal, dry, chemically produced, finer than 20 mesh particle size	Flammable solid	UN2008	Flammable solid	None	173.214	Forbidden	75 pounds	1	5	Separate from flammable gases or liquids, oxidizing materials or organic peroxides
	Zirconium metal, dry, mechanically produced, finer than 270 mesh particle size	Flammable solid	UN2008	Flammable solid	None	173.214	Forbidden	75 pounds	1	5	Separate from flammable gases or liquids, oxidizing materials or organic peroxides
	Zirconium, metal, liquid, suspensions	Flammable liquid	UN1308	Flammable liquid	None	173.140	Forbidden	5 gallons	1	5	
	Zirconium metal, wet, chemically produced, finer than 20 mesh particle size	Flammable solid	UN1358	Flammable solid	None	173.214	Forbidden	150 pounds	1,2	5	
	Zirconium metal, wet, mechanically produced, finer than 270 mesh particle size	Flammable solid	UN1358	Flammable solid	None	173.214	Forbidden	150 pounds	1,2	5	
	Zirconium nitrate	Oxidizer	UN2728	Oxidizer	173.153	173.182	25 pounds	100 pounds	1,2	1,2	
	Zirconium picramate, wet with at least 20% of water	Flammable solid	UN1517	Flammable solid	None	173.216	Forbidden	25 pounds	1	1	Stow away from heavy metals and their salts
	Zirconium scrap (borings, clippings, shavings, sheets, or turnings)	Flammable solid	UN1932	Flammable solid	173.153	173.220	Forbidden	Forbidden	1	4	Separate from flammable gases or liquids, oxidizing materials, or organic peroxides
A	Zirconium sulfate	ORM B	NA3163	None	None	173.510	100 pounds	No limit	1,2	1,2	
	Zirconium tetrachloride, solid	Corrosive material	UN2503	Corrosive	173.244	173.245b	25 pounds	100 pounds	1,2	1,2	

For explanation of abbreviations and reference marks, see last page of this tariff.

Appendix to § 172.101—List of Hazardous Substances and Reportable Quantities

1. This Appendix lists materials and their corresponding reportable quantities (RQs) which are listed or designated as "hazardous substances" under section 101(14) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA; Pub. L. 96–510). A material in this list is regulated as a hazardous material and a hazardous substance under this subchapter if it meets the definition of a hazardous substance in § 171.8 of this subchapter.

2. Column 1 of the list, entitled "Hazardous substances", contains the names of hazardous substances. Elements and compounds are listed first, in alphabetical sequence. Following the listing of elements and compounds is a listing of waste streams. These waste streams appear on the list in numerical sequence and are referenced by the appropriate "F" or "K" numbers. Column 2 of the list, entitled "Synonyms", contains the names of synonyms for certain elements and compounds listed in Column 1. No synonyms are listed for waste streams. Synonyms are useful in identifying hazardous substances and in identifying proper shipping names. Column 3 of the list, entitled "Reportable quantity (RQ)", contains the reportable quantity (RQ) in pounds and kilograms, for each hazardous substance listed in Column 1.

3. The procedure for selecting a proper shipping name for a hazardous substance is set forth in § 172.101(c)(9).

4. A series of notes is used throughout the list to provide additional information concerning certain hazardous substances. These notes are explained at the end of the list.

List of Hazardous Substances and Reportable Quantities

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Acenaphthene		100 (45.4)
Acenaphthylene		5000 (2270)
Acetaldehyde *	Ethanal	1000 (454)
Acetaldehyde, chloro-	Chloroacetaldehyde	1000 (454)
Acetaldehyde, trichloro-	Chloral	1 (0.454)
Acetamide, N-(aminothioxomethyl)-	1-Acetyl-2-thiourea	1000 (454)
Acetamide, N-(4-ethoxyphenyl)-	Phenacetin	1 (0.454)
Acetamide, N-9H-fluoren-2-yl-	2-Acetylaminofluorene	1 (0.454)
Acetamide, 2-fluoro-	Fluoracetamide	100 (45.4)
Acetic acid *		5000 (2270)
Acetic acid, ethyl ester	Ethyl acetate	5000 (2270)
Acetic acid, fluoro-, sodium salt	Fluoroacetic acid, sodium salt	10 (4.54)
Acetic acid, lead salt	Lead acetate	5000 (2270)
Acetic acid, thallium(I) salt	Thallium(I) acetate	100 (45.4)
Acetic anhydride *		5000 (2270)
Acetimidic acid, N-[(methylcarbamoyl)oxy]thio-,methyl ester	Methomyl	100 (45.4)
Acetone *	2-Propanone	5000 (2270)
Acetone cyanohydrin *	Propanenitrile, 2-hydroxy-2-methyl- 2-Methyllactonitrile	10 (4.54)
Acetonitrile	Ethanenitrile	5000 (2270)
3-(alpha-Acetonylbenzyl)-4-hydroxycoumarin and salts	Warfarin	100 (45.4)
Acetophenone	Ethanone, 1-phenyl-	5000 (2270)
2-Acetylaminofluorene	Acetamide, N-9H-fluoren-2-yl-	1 (0.454)
Acetyl bromide *		5000 (2270)
Acetyl chloride *	Ethanoyl chloride	5000 (2270)
1-Acetyl-2-thiourea	Acetamide, N-(aminothioxomethyl)-	1000 (454)
Acrolein *	2-Propenal	1 (0.454)
Acrylamide	2-Propenamide	5000 (2270)
Acrylic acid *	2-Propenoic acid	5000 (2270)
Acrylonitrile *	2-Propenenitrile	100 (45.4)
Adipic acid		5000 (2270)
Alanine, 3-[p-bis(2-chloroethyl)amino]phenyl]-, L-	Melphalan	1 (0.454)
Aldicarb	Propanal, 2-methyl-2-(methylthio)-, O-[(methylamino)carbonyl]oxime	1 (0.454)
Aldrin *	1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4,5,8-endo,exo-dimethanonaphthalene	1 (0.454)
Allyl alcohol *	2-Propen-1-ol	100 (45.4)
Allyl chloride *		1000 (454)
Aluminum phosphide *		100 (45.4)
Aluminum sulfate *		5000 (2270)
2-Amino-1-methyl benzene	o-Toluidine	1 (0.454)
4-Amino-1-methyl benzene	p-Toluidine	1 (0.454)
5-(Aminomethyl)-3-isoxazolol	3(2H)-Isoxazolone, 5-(aminomethyl)-	1000 (454)
4-Aminopyridine	4-Pyridinamine	1000 (454)
Amitrole	1H-1,2,4-Triazol-3-amine	1 (0.454)
Ammonia *		100 (45.4)
Ammonium acetate		5000 (2270)
Ammonium benzoate		5000 (2270)
Ammonium bicarbonate		5000 (2270)
Ammonium bichromate	Ammonium dichromate (6)	1000 (454)
Ammonium bifluoride *		100 (45.4)
Ammonium bisulfite *		5000 (2270)
Ammonium carbamate *		5000 (2270)
Ammonium carbonate *		5000 (2270)
Ammonium chloride		5000 (2270)
Ammonium chromate		1000 (454)
Ammonium citrate, dibasic		5000 (2270)
Ammonium dichromate (6)	Ammonium bichromate	1000 (454)
Ammonium fluoborate *		5000 (2270)
Ammonium fluoride *		100 (45.4)
Ammonium hydroxide *		1000 (454)
Ammonium oxalate *		5000 (2270)
Ammonium picrate *	Phenol, 2,4,6-trinitro-, ammonium salt	10 (4.54)
Ammonium silicofluoride *		1000 (454)
Ammonium sulfamate		5000 (2270)
Ammonium sulfide *		100 (45.4)
Ammonium sulfite		5000 (2270)
Ammonium tartrate		5000 (2270)
Ammonium thiocyanate		5000 (2270)
Ammonium thiosulfate		5000 (2270)
Ammonium vanadate	Vanadic acid, ammonium salt	1000 (454)
Amyl acetate *		5000 (2270)
iso-Amyl acetate		
sec-Amyl acetate		
tert-Amyl acetate		
Aniline *	Benzenamine	5000 (2270)
Anthracene		5000 (2270)
Antimony c		5000 (2270)

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Antimony pentachloride *		1000 (454)
Antimony potassium tartrate *		100 (45.4)
Antimony tribromide *		1000 (454)
Antimony trichloride *		1000 (454)
Antimony trifluoride *		1000 (454)
Antimony trioxide		1000 (454)
Aroclor 1016	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Aroclor 1221	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Aroclor 1232	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Aroclor 1242	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Aroclor 1248	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Aroclor 1254	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Aroclor 1260	POLYCHLORINATED BIPHENYLS (PCBs)	10 (4.54)
Arsenic * §		1 (0.454)
Arsenic acid *		1 (0.454)
Arsenic disulfide *		5000 (2270)
Arsenic(III) oxide	Arsenic trioxide *	5000 (2270)
Arsenic(V) oxide	Arsenic pentoxide *	5000 (2270)
Arsenic pentoxide *	Arsenic(V) oxide	5000 (2270)
Arsenic trichloride *		5000 (2270)
Arsenic trioxide *	Arsenic(III) oxide	5000 (2270)
Arsenic trisulfide *		5000 (2270)
Arsine, diethyl-	Diethylarsine	1 (0.454)
Asbestos * ‡‡		1 (0.454)
Auramine	Benzenamine, 4,4-carbonimidoylbis [N,N-dimethyl-	1 (0.454)
Azaserine	L-Serine, diazoacetate (ester)	1 (0.454)
Aziridine	Ethylenimine	1 (0.454)
Azinphos-methyl @	Guthion *	1 (0.454)
Azirino[2',3':3,4]pyrrolo[1,2-a]indole-4,7-dione,6-amino-8-[[(aminocarbonyl)oxy]methyl]-1,1a,2,8,8a, 8b-hexahydro-8a-methoxy-5-methyl-,	Mitomycin C	1 (0.454)
Barium cyanide *		10 (4.54)
Benz[ace]anthrylene, 1,2-dihydro-3-methyl-	3-Methylcholanthrene	1 (0.454)
Benz[c]acridine	3,4-Benzacridine	1 (0.454)
3,4-Benzacridine	Benz[c]acridine	1 (0.454)
Benzal chloride	Benzene, dichloromethyl-	5000 (2270)
Benz[a]anthracene	Benzo[a]anthracene	1 (0.454)
	1,2-Benzanthracene	
1,2-Benzanthracene	Benz[a]anthracene	1 (0.454)
	Benzo[a]anthracene	
1,2-Benzanthracene, 7,12-dimethyl-	7,12-Dimethylbenz[a]anthracene	1 (0.454)
Benzenamine	Aniline *	5000 (2270)
Benzenamine, 4,4-carbonimidoylbis [N,N-dimethyl-	Auramine	1 (0.454)
Benzenamine, 4-chloro-	p-Chloroaniline	1000 (454)
Benzenamine, 4-chloro-2-methyl-, hydrochloride	4-Chloro-o-toluidine, hydrochloride	1 (0.454)
Benzenamine, N,N-dimethyl-4-phenylazo-	Dimethylaminoazobenzene	1 (0.454)
Benzenamine, 4,4-methylenebis(2-chloro-	4,4-Methylenebis(2-chloroaniline)	1 (0.454)
Benzenamine, 2-methyl-, hydrochloride	o-Toluidine hydrochloride	1 (0.454)
Benzenamine, 2-methyl-5-nitro-	5-Nitro-o-toluidine	1 (0.454)
Benzenamine, 4-nitro-	p-Nitroaniline	5000 (2270)
Benzene *		1000 (454)
Benzene, 1-bromo-4-phenoxy-	4-Bromophenyl phenyl ether	100 (45.4)
Benzene, chloro-	Chlorobenzene *	100 (45.4)
Benzene, chloromethyl-	Benzyl chloride *	100 (45.4)
Benzene, 1,2-dichloro-	o-Dichlorobenzene *	100 (45.4)
	1,2-Dichlorobenzene	
Benzene, 1,3-dichloro-	m-Dichlorobenzene	100 (45.4)
	1,3-Dichlorobenzene	
Benzene, 1,4-dichloro-	p-Dichlorobenzene *	100 (45.4)
	1,4-Dichlorobenzene	
Benzene, dichloromethyl-	Benzal chloride	5000 (2270)
Benzene, 2,4-diisocyanatomethyl-	Toluene diisocyanate *	100 (45.4)
Benzene, dimethyl-	Xylene * (mixed)	1000 (454)
m-	m-	
o-	o-	
p-	p-	
Benzene, hexachloro-	Hexachlorobenzene	1 (0.454)
Benzene, hexahydro-	Cyclohexane *	1000 (454)
Benzene, hydroxy-	Phenol *	1000 (454)
Benzene, methyl-	Toluene *	1000 (454)
Benzene, 1-methyl-2,4-dinitro-	2,4-Dinitrotoluene	1000 (454)
Benzene, 1-methyl-2,6-dinitro-	2,6-Dinitrotoluene	1000 (454)
Benzene, 1,2-methylenedioxy-4-allyl-	Safrole	1 (0.454)
Benzene, 1,2-methylenedioxy-4-propenyl-	Isosafrole	1 (0.454)
Benzene, 1,2-methylenedioxy-4-propyl-	Dihydrosafrole	1 (0.454)
Benzene, 1-methylethyl-	Cumene	5000 (2270)
Benzene, nitro-	Nitrobenzene *	1000 (454)
Benzene, pentachloro-	Pentachlorobenzene	10 (4.54)
Benzene, pentachloronitro-	Pentachloronitrobenzene	1 (0.454)
Benzene, 1,2,4,5-tetrachloro-	1,2,4,5-Tetrachlorobenzene	5000 (2270)
Benzene, trichloromethyl-	Benzotrichloride	1 (0.454)
Benzene, 1,3,5-trinitro-	s-Trinitrobenzene *	10 (4.54)
Benzeneacetic acid, 4-chloro-alpha-(4-chlorophenyl)-alpha-hydroxy-, ethyl ester	Ethyl 4,4'-dichlorobenzilate	1 (0.454)
1,2-Benzenedicarboxylic acid anhydride	Phthalic anhydride	5000 (2270)
1,2-Benzenedicarboxylic acid, bis(2-ethylhexyl) ester	Bis(2-ethylhexyl)phthalate	1 (0.454)
1,2-Benzenedicarboxylic acid, dibutyl ester	Di-n-butyl phthalate	10 (4.54)
	Dibutyl phthalate	
	n-Butyl phthalate	
1,2-Benzenedicarboxylic acid, diethyl ester	Diethyl phthalate	1000 (454)
1,2-Benzenedicarboxylic acid, dimethyl ester	Dimethyl phthalate	5000 (2270)
1,2-Benzenedicarboxylic acid, di-n-octyl ester	Di-n-octyl phthalate	5000 (2270)
1,3-Benzenediol	Resorcinol	5000 (2270)
1,2-Benzenediol,4-[1-hydroxy-2-(methylamino)ethyl]-	Epinephrine	1000 (454)
Benzenesulfonic acid chloride	Benzenesulfonyl chloride	100 (45.4)
Benzenesulfonyl chloride	Benzenesulfonic acid chloride	100 (45.4)
Benzenethiol	Phenyl mercaptan ‡‡	100 (45.4)

For explanation of abbreviations and reference marks, see last page of this tariff.

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Benzidine *	Thiophenol	
1,2-Benzisothiazolin-3-one,1,1-dioxide, and salts	(1,1'-Biphenyl)-4,4-diamine	1 (0.454)
Benz[a]anthracene	Saccharin and salts	1 (0.454)

Benzo[a]pyrene	3,4-Benzopyrene	1 (0.454)
3,4-Benzopyrene	Benzo[a]pyrene	1 (0.454)
p-Benzoquinone	1,4-Cyclohexadienedione	10 (4.54)
Benzotrichloride	Benzene, trichloromethyl-	1 (0.454)
Benzoyl chloride *		1000 (454)
1,2-Benzphenanthrene	Chrysene	1 (0.454)
Benzyl chloride *	Benzene, chloromethyl-	100 (45.4)
Beryllium &	Beryllium dust &	1 (0.454)
Beryllium chloride *		5000 (2270)
Beryllium dust &	Beryllium &	1 (0.454)
Beryllium fluoride		5000 (2270)
Beryllium nitrate *		5000 (2270)
alpha - BHC		1 (0.454)
beta - BHC		1 (0.454)
delta - BHC		1 (0.454)
gamma - BHC	Hexachlorocyclohexane (gamma isomer)	1 (0.454)
	Lindane *	
2,2-Bioxirane	1,2,3,4-Diepoxybutane	1 (0.454)
(1,1'-Biphenyl)-4,4'-diamine	Benzidine *	1 (0.454)
(1,1'-Biphenyl)-4,4'-diamine,3,3'-dichloro-	3,3'-Dichlorobenzidine	1 (0.454)
(1,1'-Biphenyl)-4,4'-diamine,3,3'-dimethoxy-	3,3'-Dimethoxybenzidine	1 (0.454)
(1,1'-Biphenyl)-4,4'-diamine,3,3'-dimethyl-	3,3'-Dimethylbenzidine	1 (0.454)
Bis(2-chloroethoxy) methane	Ethane, 1,1'-[methylenebis(oxy)]bis[2-chloro-	1000 (454)
Bis(2-chloroethyl) ether	Dichloroethyl ether	1 (0.454)
	Ethane, 1,1'-oxybis[2-chloro-	
Bis(2-chloroisopropyl) ether	Propane, 2,2'-oxybis[2-chloro-	1000 (454)
Bis(chloromethyl) ether	Methane, oxybis[chloro-	1 (0.454)
Bis(dimethylthiocarbamoyl) disulfide	Thiram	10 (4.54)
Bis(2-ethylhexyl)phthalate	1,2-Benzenedicarboxylic acid, bis(2-ethylhexyl)ester	1 (0.454)
Bromine cyanide	Cyanogen bromide *	1000 (454)
Bromoacetone *	2-Propanone, 1-bromo-	1000 (454)
Bromoform	Methane, tribromo-	100 (45.4)
4-Bromophenyl phenyl ether	Benzene, 1-bromo-4-phenoxy-	100 (45.4)
Brucine	Strychnidin-10-one, 2,3-dimethoxy-	100 (45.4)
1,3-Butadiene, 1,1,2,3,4,4-hexachloro-	Hexachlorobutadiene *	1 (0.454)
1-Butanamine, N-butyl-N-nitroso-	N-Nitroso-n-butylamine	1 (0.454)
Butanoic acid, 4-[bis(2-chloroethyl)amino]benzene-	Chlorambucil	1 (0.454)
1-Butanol	n-Butyl alcohol *	5000 (2270)
2-Butanone	Ethyl methyl ketone &	5000 (2270)
	Methyl ethyl ketone *	
2-Butanone peroxide	Methyl ethyl ketone peroxide *	10 (4.54)
2-Butenal	Crotonaldehyde *	100 (45.4)
2-Butene, 1,4-dichloro-	1,4-Dichloro-2-butene	1 (0.454)
Butyl acetate *		5000 (2270)
iso-Butyl acetate		
sec-Butyl acetate		
tert-Butyl acetate		
n-Butyl alcohol *	1-Butanol	5000 (2270)
Butylamine *		1000 (454)
iso-Butylamine		
sec-Butylamine		
tert-Butylamine		
Butyl benzyl phthalate		100 (45.4)
n-Butyl phthalate	Di-n-butyl phthalate	10 (4.54)
	Dibutyl phthalate	
	1,2-Benzenedicarboxylic acid, dibutyl ester	
Butyric acid *		5000 (2270)
iso-Butyric acid		
Cacodylic acid	Hydroxydimethylarsine oxide	1 (0.454)
Cadmium &		1 (0.454)
Cadmium acetate		100 (45.4)
Cadmium bromide		100 (45.4)
Cadmium chloride		100 (45.4)
Calcium arsenate *		1000 (454)
Calcium arsenite *		1000 (454)
Calcium carbide *		10 (4.54)
Calcium chromate	Chromic acid, calcium salt	1000 (454)
Calcium cyanide *		10 (4.54)
Calcium dodecylbenzene sulfonate		1000 (454)
Calcium hypochlorite *		10 (4.54)
Camphene, octachloro-	Toxaphene *	1 (0.454)
Captan		10 (4.54)
Carbamic acid, ethyl ester	Ethyl carbamate (Urethan)	1 (0.454)
Carbamic acid, methylnitroso-, ethyl ester	N-Nitroso-N-methylurethane	1 (0.454)
Carbamide, N-ethyl-N-nitroso-	N-Nitroso-N-ethylurea	1 (0.454)
Carbamide, N-methyl-N-nitroso-	N-Nitroso-N-methylurea	1 (0.454)
Carbamide, thio-	Thiourea	1 (0.454)
Carbanimidoselenoic acid	Selenourea	1000 (454)
Carbamoyl chloride, dimethyl-	Dimethylcarbamoyl chloride	1 (0.454)
Carbaryl *		100 (45.4)
Carbofuran *		10 (4.54)

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Carbon bisulfide *	Carbon disulfide *	100 (45.4)
Carbon disulfide *	Carbon bisulfide *	100 (45.4)
Carbonic acid, dithallium (I) salt	Thallium(I) carbonate	100 (45.4)
Carbonochloridic acid, methyl ester	Methyl chlorocarbonate *	1000 (454)
	Methyl chloroformate (R	
Carbon oxyfluoride	Carbonyl fluoride	1000 (454)
Carbon tetrachloride *	Methane, tetrachloro-	5000 (2270)
Carbonyl chloride	Phosgene *	10 (4.54)
Carbonyl fluoride	Carbon oxyfluoride	1000 (454)
Chloral	Acetaldehyde, trichloro-	1 (0.454)
Chlorambucil	Butanoic acid, 4 [bis(2-chloroethyl)amino]benzene-	1 (0.454)
Chlordane *	Chlordane, technical *	1 (0.454)
Chlordane, technical *	4,7 Methanoindan, 1,2,4,5,6,7,8,8-octachloro-3a,4,7,7a-tetrahydro-	1 (0.454)
	Chlordane *	
	4,7 Methanoindan, 1,2,4,5,6,7,8,8-octachloro-3a,4,7,7a tetrahydro-	
Chlorine *		10 (4.54)
Chlorine cyanide	Cyanogen chloride *	10 (4.54)
Chlornaphazine	2-Naphthylamine, N,N-bis(2-chloroethyl)-	1 (0.454)
Chloroacetaldehyde	Acetaldehyde, chloro-	1000 (454)
p-Chloroaniline	Benzenamine, 4-chloro-	1000 (454)
Chlorobenzene *	Benzene, chloro-	100 (45.4)
4-Chloro-m-cresol	p-Chloro-m-cresol	5000 (2270)
	Phenol, 4-chloro-3-methyl-	
p-Chloro-m-cresol	Phenol, 4-chloro-3-methyl-	5000 (2270)
	4-Chloro-m-cresol	
Chlorodibromomethane		100 (45.4)
1-Chloro-2,3 epoxypropane	Epichlorohydrin *	1000 (454)
	Oxirane, 2-(chloromethyl)-	
Chloroethane	Ethyl chloride (R	100 (45.4)
2-Chloroethyl vinyl ether	Ethene, 2-chloroethoxy-	1000 (454)
Chloroform *	Methane, trichloro-	5000 (2270)
Chloromethane	Methane, chloro-	1 (0.454)
	Methyl chloride *	
Chloromethyl methyl ether	Methane, chloromethoxy-	1 (0.454)
	Methylchloromethyl ether (R	
beta-Chloronaphthalene	Naphthalene, 2-chloro-	5000 (2270)
	2-Chloronaphthalene	
2-Chloronaphthalene	beta-Chloronaphthalene	5000 (2270)
	Naphthalene, 2-chloro-	
2-Chlorophenol	o-Chlorophenol	100 (45.4)
	Phenol, 2-chloro-	
o-Chlorophenol	Phenol, 2-chloro-	100 (45.4)
	2-Chlorophenol	
4-Chlorophenyl phenyl ether		5000 (2270)
1-(o-Chlorophenyl)thiourea	Thiourea, (2-chlorophenyl)-	100 (45.4)
3-Chloropropionitrile	Propanenitrile, 3-chloro-	1000 (454)
Chlorosulfonic acid *		1000 (454)
4-Chloro-o-toluidine, hydrochloride	Benzenamine, 4-chloro-2-methyl, hydrochloride	1 (0.454)
Chlorpyrifos *		1 (0.454)
Chromic acetate		1000 (454)
Chromic acid *		1000 (454)
Chromic acid, calcium salt *	Calcium chromate	1000 (454)
Chromic sulfate		1000 (454)
Chromium (I		1 (0.454)
Chromous chloride		1000 (454)
Chrysene	1,2-Benzphenanthrene	1 (0.454)
Cobaltous bromide		1000 (454)
Cobaltous formate		1000 (454)
Cobaltous sulfamate		1000 (454)
Coke Oven Emissions		1 (0.454)
Copper (I		5000 (2270)
Copper cyanide *		10 (4.54)
Coumaphos *		10 (4.54)
Creosote		1 (0.454)
Cresols *	Cresylic acid	1000 (454)
m-Cresols	m-Cresylic acid	
o-Cresols	o-Cresylic acid	
p-Cresols	p-Cresylic acid	
Cresylic acid	Cresols *	1000 (454)
m-Cresols	m-Cresylic acid	
o-Cresols	o-Cresylic acid	
p-Cresols	p-Cresylic acid	
Crotonaldehyde *	2-Butenal	100 (45.4)
Cumene	Benzene, 1-methylethyl-	5000 (2270)
Cupric acetate		100 (45.4)
Cupric acetoarsenite *		100 (45.4)
Cupric chloride *		10 (4.54)
Cupric nitrate *		100 (45.4)
Cupric oxalate		100 (45.4)
Cupric sulfate		10 (4.54)
Cupric sulfate ammoniated		100 (45.4)
Cupric tartrate		100 (45.4)
Cyanides (soluble cyanide salts), not otherwise specified *		10 (4.54)
Cyanogen *		100 (45.4)
Cyanogen bromide *	Bromine cyanide	1000 (454)
Cyanogen chloride *	Chlorine cyanide	10 (4.54)
1,4-Cyclohexadienedione	p-Benzoquinone	10 (4.54)
Cyclohexane *	Benzene, hexahydro-	1000 (454)
Cyclohexanone		5000 (2270)
1,3-Cyclopentadiene, 1,2,3,4,5,5-hexachloro-	Hexachlorocyclopentadiene *	1 (0.454)
Cyclophosphamide	2H-1,3,2-Oxazaphosphorine 2-[bis(2-chloroethyl)amino] tetrahydro-2-oxide	1 (0.454)
2,4-D Acid	2,4-D *, salts and esters	100 (45.4)

For explanation of abbreviations and reference marks, see last page of this tariff.

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
	2,4-Dichlorophenoxyacetic acid *, salts and esters	
2,4-D Esters		100 (45.4)
2,4-D *, salts and esters	2,4-D Acid	100 (45.4)
	2,4-Dichlorophenoxyacetic acid *, salts and esters	
Daunomycin	5,12-Naphthacenedione, (8S-cis)-8-acetyl-10-[3-amino-2,3,6-trideoxy-alpha-L-lyxo-hexopyranosyl)oxy]-7,8,9,10-tetrahydro-6,8,11-trihydroxy-1-methoxy-	1 (0.454)

	Ethane, 1,2-dichloro-	
Ethylene glycol monoethyl ether *	2-Ethoxyethanol	1 (0.454)
Ethylene oxide *	Oxirane	1 (0.454)
Ethylenebis(dithiocarbamic acid)	1,2-Ethanediylbiscarbamodithioicacid	5000 (2270)
Ethylenediamine *		5000 (2270)
Ethylenediamine tetraacetic acid (EDTA)		5000 (2270)
Ethylenethiourea	2-Imidazolidinethione	1 (0.454)
Ethylenimine	Aziridine	1 (0.454)
Ethyl ether *	Ethane, 1,1'-oxybis-	100 (45.4)
Ethylidene dichloride	Ethane, 1,1-dichloro-	1000 (454)
	1,1-Dichloroethane	
Ethyl methacrylate	2-Propenoic acid, 2-methyl-, ethyl ester	1000 (454)
Ethyl methanesulfonate	Methanesulfonic acid, ethyl ester	1 (0.454)
Ethyl methyl ketone #	2-Butanone	5000 (2270)
	Methyl ethyl ketone *	
Famphur	Phosphorothioic acid, O,O-dimethyl O-[p-[(dimethylamino)-sulfonyl] phenyl] ester	1000 (454)
Ferric ammonium citrate		1000 (454)
Ferric ammonium oxalate		1000 (454)
Ferric chloride		1000 (454)
Ferric dextran	Iron dextran	5000 (2270)
Ferric fluoride		100 (45.4)
Ferric nitrate *		1000 (454)
Ferric sulfate		1000 (454)
Ferrous ammonium sulfate		1000 (454)
Ferrous chloride *		100 (45.4)
Ferrous sulfate		1000 (454)
Fluoranthene	Benz[j,k]fluorene	100 (45.4)
Fluorene		5000 (2270)
Fluorine *		10 (4.54)
Fluoroacetamide	Acetamide, 2-fluoro-	100 (45.4)
Fluoroacetic acid, sodium salt	Acetic acid, fluoro-, sodium salt	10 (4.54)
Formaldehyde *	Methylene oxide	1000 (454)
Formic acid *	Methanoic acid	5000 (2270)
Fulminic acid, mercury(II) salt	Mercury fulminate	10 (4.54)
Fumaric acid		5000 (2270)
Furan *	Furfuran	100 (45.4)
Furan, tetrahydro-	Tetrahydrofuran *	1000 (454)
2-Furancarboxaldehyde	Furfural *	5000 (2270)
2,5-Furandione	Maleic anhydride *	5000 (2270)
Furfural *	2-Furancarboxaldehyde	5000 (2270)
Furfuran	Furan *	100 (45.4)
D-Glucopyranose, 2-deoxy-2-(3-methyl-3-nitrosoureido)-	Streptozotocin	1 (0.454)
Glycidylaldehyde	1-Propanol, 2,3-epoxy-	1 (0.454)
Guanidine, N-nitroso-N-methyl-N'-nitro-	N-Methyl-N'-nitro-N-nitrosoguanidine	1 (0.454)
Guthion *	Azinphos methyl #	1 (0.454)
Heptachlor	4,7-Methano-1H-indene, 1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-	1 (0.454)
Heptachlor epoxide		1 (0.454)
Hexachlorobenzene	Benzene, hexachloro-	1 (0.454)
Hexachlorobutadiene *	1,3-Butadiene, 1,1,2,3,4,4-hexachloro-	1 (0.454)
Hexachlorocyclohexane (gamma isomer)	gamma - BHC	1 (0.454)
	Lindane *	
Hexachlorocyclopentadiene *	1,3-Cyclopentadiene, 1,2,3,4,5,5-hexachloro-	1 (0.454)
1,2,3,4,10,10-Hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-endo,endo-1,4,5,8-dimethanonaphthalene.	Endrin *	1 (0.454)
1,2,3,4,10,10-Hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-endo,exo-1,4,5,8-dimethanonaphthalene.	Dieldrin *	1 (0.454)
Hexachloroethane *	Ethane, 1,1,1,2,2,2-hexachloro-	1 (0.454)
Hexachlorohexahydro-endo,endo-dimethanonaphthalene	1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4,5,8-endo,endo-dimethanonaphthalene.	1 (0.454)
1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4,5,8-endo,endo-dimethanonaphthalene.	Hexachlorohexahydro-endo,endo-dimethanonaphthalene	1 (0.454)
1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4,5,8-endo,exo-dimethanonaphthalene.	Aldrin *	1 (0.454)
Hexachlorophene	2,2'-Methylenebis(3,4,6-trichlorophenol)	100 (45.4)
Hexachloropropene	1-Propene, 1,1,2,3,3,3-hexachloro-	1000 (454)
Hexaethyl tetraphosphate *	Tetraphosphoric acid, hexaethyl ester	100 (45.4)
Hydrazine *	Diamine	1 (0.454)
Hydrazine, 1,2-diethyl-	N,N'-Diethylhydrazine	1 (0.454)
Hydrazine, 1,1-dimethyl-	1,1-Dimethylhydrazine	1 (0.454)
	Dimethylhydrazine, unsymmetrical #	
Hydrazine, 1,2-dimethyl-	1,2-Dimethylhydrazine	1 (0.454)
Hydrazine, 1,2-diphenyl-	1,2-Diphenylhydrazine	1 (0.454)
Hydrazine, methyl-	Methyl hydrazine *	10 (4.54)

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Hydrazinecarbothioamide	Thiosemicarbazide	100 (45.4)
Hydrochloric acid *		5000 (2270)
Hydrocyanic acid *	Hydrogen cyanide	10 (4.54)
Hydrofluoric acid *	Hydrogen fluoride *	100 (45.4)
Hydrogen cyanide	Hydrocyanic acid *	10 (4.54)
Hydrogen fluoride *	Hydrofluoric acid *	100 (45.4)
Hydrogen phosphide	Phosphine *	100 (45.4)
Hydrogen sulfide *	Hydrosulfuric acid	100 (45.4)
	Sulfur hydride	
Hydroperoxide, 1-methyl-1-phenylethyl-	Alpha,alpha-Dimethylbenzyl hydroperoxide	10 (4.54)
Hydrosulfuric acid	Hydrogen sulfide *	100 (45.4)
	Sulfur hydride	
Hydroxydimethylarsine oxide	Cacodylic acid	1 (0.454)
2-Imidazolidinethione	Ethylenethiourea	1 (0.454)
Indeno(1,2,3-cd)pyrene	1,10-(1,2-Phenylene)pyrene	1 (0.454)
Iron dextran	Ferric dextran	5000 (2270)
Isobutyl alcohol	1-Propanol, 2-methyl-	5000 (2270)
Isocyanic acid, methyl ester	Methyl isocyanate *	1 (0.454)
Isophorone		5000 (2270)
Isoprene *		100 (45.4)
Isopropanolamine dodecylbenzene sulfonate		1000 (454)
Isosafrole	Benzene, 1,2-methylenedioxy-4-propenyl-	1 (0.454)
3,2H)-Isoxazolone, 5-(aminomethyl)-	5-(Aminomethyl)-3-isoxazolol	1000 (454)
Kelthane		10 (4.54)
Kepone	Decachlorooctahydro-1,3,4-metheno-2H-cyclobuta[c,d]-pentalen-2-one	1 (0.454)
Lasiocarpine		1 (0.454)
Lead *		1 (0.454)
Lead acetate	Acetic acid, lead salt	5000 (2270)
Lead arsenate *		5000 (2270)
Lead chloride *		100 (45.4)
Lead fluoborate *		100 (45.4)
Lead fluoride *		100 (45.4)
Lead iodide		100 (45.4)
Lead nitrate *		100 (45.4)
Lead phosphate	Phosphoric acid, lead salt	1 (0.454)
Lead stearate		5000 (2270)
Lead subacetate		1 (0.454)
Lead sulfate *		100 (45.4)
Lead sulfide		5000 (2270)
Lead thiocyanate		100 (45.4)
Lindane *	gamma - BHC	1 (0.454)
	Hexachlorocyclohexane (gamma isomer)	
Lithium chromate		1000 (454)
Malathion *		100 (45.4)
Maleic acid *		5000 (2270)
Maleic anhydride *	2,5-Furandione	5000 (2270)
Maleic hydrazide	1,2-Dihydro-3,6-pyridazinedione	5000 (2270)
Malononitrile	Propanedinitrile	1000 (454)
Melphalan	Alanine, 3-[p-bis(2-chloroethyl)amino]phenyl-, L-	1 (0.454)
Mercaptodimethur		10 (4.54)
Mercuric cyanide *		1 (0.454)
Mercuric nitrate *		10 (4.54)
Mercuric sulfate *		10 (4.54)
Mercuric thiocyanate		10 (4.54)
Mercurous nitrate *		10 (4.54)
Mercury *		1 (0.454)
Mercury fulminate	Fulminic acid, mercury(II) salt	10 (4.54)
Mercury, (acetato-O)phenyl-	Phenylmercuric acetate	100 (45.4)
Methacrylonitrile	2-Propenenitrile, 2-methyl-	1000 (454)
Methanamine, N-methyl-	Dimethylamine *	1000 (454)
Methane, bromo-	Methyl bromide *	1000 (454)
Methane, chloro-	Chloromethane	1 (0.454)
	Methyl chloride *	
Methane, chloromethoxy-	Chloromethyl methyl ether	1 (0.454)
	Methylchloromethyl ether ⊕	
Methane, dibromo-	Methylene bromide	1000 (454)
Methane, dichloro-	Methylene chloride *	1000 (454)
Methane, dichlorodifluoro-	Dichlorodifluoromethane *	5000 (2270)
Methane, iodo-	Methyl iodide	1 (0.454)
Methane, oxybis(chloro-	Bis(chloromethyl) ether	1 (0.454)
Methane, tetrachloro-	Carbon tetrachloride *	5000 (2270)
Methane, tetranitro-	Tetranitromethane *	10 (4.54)
Methane, tribromo-	Bromoform	100 (45.4)
Methane, trichloro-	Chloroform *	5000 (2270)
Methane, trichlorofluoro-	Trichloromonofluoromethane	5000 (2270)
Methanesulfenyl chloride, trichloro-	Perchloromethyl mercaptan ⊕	100 (45.4)
	Trichloromethanesulfenyl chloride	
Methanesulfonic acid, ethyl ester	Ethyl methanesulfonate	1 (0.454)
Methanethiol	Methyl mercaptan *	100 (45.4)
	Thiomethanol	
4,7-Methano-1H-indene, 1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-	Heptachlor	1 (0.454)
Methanoic acid	Formic acid *	5000 (2270)
4,7-Methanoindan, 1,2,4,5,6,7,8,8-octachloro-3a,4,7,7a-tetrahydro-	Chlordane *	1 (0.454)
	Chlordane, technical *	
Methanol *	Methyl alcohol *	5000 (2270)
Methapyrilene	Pyridine, 2-[(2-(dimethylamino)ethyl)-2-thenylamino]-	5000 (2270)
Methomyl	Acetimidic acid, N-[(methylcarbamoyl)oxy]thio-, methyl ester	100 (45.4)
Methoxychlor	Ethane, 1,1,1-trichloro-2,2-bis(p-methoxyphenyl)-	1 (0.454)
Methyl alcohol *	Methanol *	5000 (2270)
Methylamine ⊕	Monomethylamine	100 (45.4)
2-Methylaziridine	1,2-Propylenimine	1 (0.454)
Methyl bromide *	Methane, bromo-	1000 (454)
1-Methylbutadiene	1,3-Pentadiene	100 (45.4)
Methyl chloride *	Chloromethane	1 (0.454)

For explanation of abbreviations and reference marks, see last page of this tariff.

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
	Methane, chloro-	
Methyl chlorocarbonate *	Carbonochloridic acid, methyl ester	1000 (454)
	Methyl chloroformate ‡	
Methyl chloroform *	1,1,1-Trichloroethane *	1000 (454)
Methyl chloroformate ‡	Carbonochloridic acid, methyl ester	1000 (454)
	Methyl chlorocarbonate	
Methyl chloromethyl ether ‡	Chloromethyl methyl ether	1 (0.454)
	Methane, chloromethoxy-	
3-Methylcholanthrene	Benz[j]aceanthrylene, 1,2-dihydro-3-methyl-	1 (0.454)
4,4-Methylenebis(2-chloroaniline)	Benzenamine, 4,4'-methylenebis(2-chloro-	1 (0.454)
2,2'-Methylenebis(3,4,6-trichlorophenol)	Hexachlorophene	100 (45.4)
Methylene bromide	Methane, dibromo-	1000 (454)
Methylene chloride *	Methane, dichloro-	1000 (454)
Methylene oxide	Formaldehyde *	1000 (454)
Methyl ethyl ketone *	2-Butanone	5000 (2270)
	Ethyl methyl ketone ‡	
Methyl ethyl ketone peroxide *	2-Butanone peroxide	10 (4.54)
Methyl hydrazine *	Hydrazine, methyl-	10 (4.54)
Methyl iodide	Methane, iodo-	1 (0.454)
Methyl isobutyl ketone	4-Methyl-2-pentanone	5000 (2270)
Methyl isocyanate *	Isocyanic acid, methyl ester	1 (0.454)
2-Methyllactonitrile	Acetone cyanohydrin *	10 (4.54)
	Propanenitrile, 2-hydroxy-2-methyl-	
Methyl mercaptan *	Methanethiol	100 (45.4)
	Thiomethanol	
Methyl methacrylate *	2-Propenoic acid, 2-methyl-, methyl ester	1000 (454)
N-Methyl-N'-nitro-N-nitrosoguanidine	Guanidine, N-nitroso-N-methyl-N'-nitro-	1 (0.454)
Methyl parathion *	O,O-Dimethyl O-p-nitrophenyl phosphorothioate	100 (45.4)
4-Methyl-2-pentanone	Methyl isobutyl ketone	5000 (2270)
Methylthiouracil	4(1H)-Pyrimidinone, 2,3-dihydro-6-methyl-2-thioxo-	1 (0.454)
Mevinphos *		10 (4.54)
Mexacarbate *		1000 (454)
Mitomycin C	Azirino[2',3',3,4]pyrrolo[1,2-a]indole-4,7-dione,6-amino-8-[[(aminocarbonyl)oxy]methyl]-1,1a,2,8,8a,8b-hexahydro-8a-methoxy-5-methyl-.	1 (0.454)
Monoethylamine *		100 (45.4)
Monomethylamine	Methylamine ‡	100 (45.4)
Naled		10 (4.54)
5,12-Naphthacenedione, (8S-cis)-8-acetyl-10-[(3-amino-2,3,6-trideoxy-alpha-L-lyxo-hexopyranosyl)oxy]-7,8,9,10-tetrahydro-6,8,11-trihydroxy-1-methoxy-.	Daunomycin	1 (0.454)
Naphthalene *		100 (45.4)
Naphthalene, 2-chloro-	beta-Chloronaphthalene	5000 (2270)
	2-Chloronaphthalene	
1,4-Naphthalenedione	1,4-Naphthoquinone	5000 (2270)
2,7-Naphthalenedisulfonic acid, 3,3'-[(3,3'-dimethyl[1,1'-biphenyl]-4,4'-diyl)bis(azo)]bis(5-amino-4-hydroxy)-tetrasodium salt.	Trypan blue	1 (0.454)
Naphthenic acid		100 (45.4)
1,4-Naphthoquinone	1,4-Naphthalenedione	5000 (2270)
alpha-Naphthylamine	1-Naphthylamine	1 (0.454)
beta-Naphthylamine	2-Naphthylamine	1 (0.454)
1-Naphthylamine	alpha-Naphthylamine	1 (0.454)
2-Naphthylamine	beta-Naphthylamine	1 (0.454)
2-Naphthylamine, N,N-bis(2-chloroethyl)-	Chlornaphazine	1 (0.454)
alpha-Naphthylthiourea	Thiourea, 1-naphthalenyl-	100 (45.4)
Nickel ‡		1 (0.454)
Nickel ammonium sulfate		5000 (2270)
Nickel carbonyl *	Nickel tetracarbonyl	1 (0.454)
Nickel chloride		5000 (2270)
Nickel cyanide *	Nickel(II) cyanide	1 (0.454)
Nickel(II) cyanide	Nickel cyanide *	1 (0.454)
Nickel hydroxide		1000 (454)
Nickel nitrate *		5000 (2270)
Nickel sulfate		5000 (2270)
Nickel tetracarbonyl	Nickel carbonyl *	1 (0.454)
Nicotine * and salts *	Pyridine, (S)-3-(1-methyl-2-pyrrolidinyl)-, and salts	100 (45.4)
Nitric acid *		1000 (454)
Nitric oxide *	Nitrogen(II) oxide	10 (4.54)
p-Nitroaniline *	Benzenamine, 4-nitro-	5000 (2270)
Nitrobenzene *	Benzene, nitro-	1000 (454)
Nitrogen dioxide *	Nitrogen(IV) oxide	10 (4.54)
Nitrogen(II) oxide	Nitric oxide *	10 (4.54)
Nitrogen(IV) oxide	Nitrogen dioxide *	10 (4.54)
Nitroglycerine *	1,2,3-Propanetriol, trinitrate-	10 (4.54)
Nitrophenol [mixed]		100 (45.4)
m-	2-Nitrophenol	
o-	4-Nitrophenol	
p-	Phenol, 4-nitro-	
o-Nitrophenol	2-Nitrophenol	100 (45.4)
p-Nitrophenol	Phenol, 4-nitro-	100 (45.4)
	4-Nitrophenol	
2-Nitrophenol	o-Nitrophenol	100 (45.4)
4-Nitrophenol	p-Nitrophenol	100 (45.4)
	Phenol, 4-nitro-	
2-Nitropropane	Propane, 2-nitro-	1 (0.454)
N-Nitrosodi-n-butylamine	1-Butanamine, N-butyl-N-nitroso-	1 (0.454)
N-Nitrosodiethanolamine	Ethanol, 2,2'-(nitrosoimino)bis-	1 (0.454)
N-Nitrosodiethylamine	Ethanamine, N-ethyl-N-nitroso-	1 (0.454)
N-Nitrosodimethylamine	Dimethylnitrosamine	1 (0.454)
N-Nitrosodiphenylamine		100 (45.4)
N-Nitrosodi-n-propylamine	Di-n-propylnitrosamine	1 (0.454)
N-Nitroso-N-ethylurea	Carbamide, N-ethyl-N-nitroso-	1 (0.454)
N-Nitroso-N-methylurea	Carbamide, N-methyl-N-nitroso-	1 (0.454)
N-Nitroso-N-methylurethane	Carbamic acid, methylnitroso-, ethyl ester	1 (0.454)
N-Nitrosomethylvinylamine	Ethenamine, N-methyl-N-nitroso-	1 (0.454)

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
N-Nitrosopiperidine	Pyridine, hexahydro-N-nitroso-	1 (0.454)
N-Nitrosopyrrolidine	Pyrrole, tetrahydro-N-nitroso-	1 (0.454)
Nitrotoluene		1000 (454)
m-Nitrotoluene		
o-Nitrotoluene		
p-Nitrotoluene		
5-Nitro-o-toluidine	Benzenamine, 2-methyl-5-nitro-	1 (0.454)
5-Norbornene-2,3-dimethanol,1,4,5,8,7,7-hexachloro,cyclic sulfite	Endosulfan *	1 (0.454)
Octamethylpyrophosphoramide	Diphosphoramide, octamethyl-	100 (45.4)
Osmium oxide	Osmium tetroxide	1000 (454)
Osmium tetroxide	Osmium oxide	1000 (454)
7-Oxabicyclo[2.2.1]heptane-2,3-dicarboxylic acid	Endothall	1000 (454)
1,2-Oxathiolane, 2,2-dioxide	1,3-Propane sultone	1 (0.454)
2H-1,3,2-Oxazaphosphorine,2-[bis(2-chloroethyl) amino] tetrahydro-2-oxide	Cyclophosphamide	1 (0.454)
Oxirane	Ethylene oxide *	1 (0.454)
Oxirane, 2-(chloromethyl)-	Epichlorohydrin *	1000 (454)
	1-Chloro-2,3-epoxypropane	
Paraformaldehyde *		1000 (454)
Paraldehyde *	1,3,5-Trioxane, 2,4,6-trimethyl-	1000 (454)
Parathion *	Phosphorothioic acid, O,O-diethyl O-(p-nitrophenyl)ester	1 (0.454)
Pentachlorobenzene	Benzene, pentachloro-	10 (4.54)
Pentachloroethane	Ethane, pentachloro-	1 (0.454)
Pentachloronitrobenzene	Benzene, pentachloronitro-	1 (0.454)
Pentachlorophenol	Phenol, pentachloro-	10 (4.54)
1,3-Pentadiene	1-Methylbutadiene	100 (45.4)
Perchloroethylene *	Ethene, 1,1,2,2-tetrachloro-	1 (0.454)
	Tetrachloroethene	
	Tetrachloroethylene *	
Perchloromethyl mercaptan @	Methanesulfenyl chloride, trichloro-	100 (45.4)
	Trichloromethanesulfenyl chloride	
Phenacetin	Acetamide, N-(4-ethoxyphenyl)-	1 (0.454)
Phenanthrene		5000 (2270)
Phenol *	Benzene, hydroxy-	1000 (454)
Phenol, 2-chloro-	o-Chlorophenol	100 (45.4)
	2-Chlorophenol	
Phenol, 4-chloro-3-methyl-	p-Chloro-m-cresol	5000 (2270)
	4-Chloro-m-cresol	
Phenol, 2-cyclohexyl-4,6-dinitro-	4,6-Dinitro-o-cyclohexylphenol	100 (45.4)
Phenol, 2,4-dichloro-	2,4-Dichlorophenol	100 (45.4)
Phenol, 2,6-dichloro-	2,6-Dichlorophenol	100 (45.4)
Phenol, 2,4-dimethyl-	2,4-Dimethylphenol	100 (45.4)
Phenol, 2,4-dinitro-	2,4-Dinitrophenol	10 (4.54)
Phenol, 2,4-dinitro-6-(1-methylpropyl)-	Dinoseb	1000 (454)
Phenol, 2,4-dinitro-6-methyl-, and salts	4,6-Dinitro-o-cresol and salts	10 (4.54)
Phenol, 4-nitro-	p-Nitrophenol *	100 (45.4)
	4-Nitrophenol *	
Phenol, pentachloro-	Pentachlorophenol	10 (4.54)
Phenol, 2,3,4,6-tetrachloro-	2,3,4,6-Tetrachlorophenol	10 (4.54)
Phenol, 2,4,5-trichloro-	2,4,5-Trichlorophenol	10 (4.54)
Phenol, 2,4,6-trichloro-	2,4,6-Trichlorophenol	10 (4.54)
Phenol, 2,4,6-trinitro-, ammonium salt	Ammonium picrate *	10 (4.54)
Phenyl dichloroarsine *	Dichlorophenylarsine	1 (0.454)
1,10-(1,2-Phenylene)pyrene	Indeno(1,2,3-cd)pyrene	1 (0.454)
Phenyl mercaptan @	Benzenethiol	100 (45.4)
	Thiophenol *	
Phenylmercuric acetate	Mercury, (acetato-O)phenyl-	100 (45.4)
N-Phenylthiourea	Thiourea, phenyl-	100 (45.4)
Phorate	Phosphorodithioic acid, O,O-diethyl S-[(ethylthio) methyl]ester	10 (4.54)
Phosgene *	Carbonyl chloride	10 (4.54)
Phosphine *	Hydrogen phosphide	100 (45.4)
Phosphoric acid *		5000 (2270)
Phosphoric acid, diethyl p-nitrophenyl ester	Diethyl-p-nitrophenyl phosphate	100 (45.4)
Phosphoric acid, lead salt	Lead phosphate	1 (0.454)
Phosphorodithioic acid, O,O-diethyl S-[(ethylthio) methyl ester	Phorate	10 (4.54)
Phosphorodithioic acid, O,O-diethyl S-methylester	O,O-Diethyl S-methyl dithiophosphate	5000 (2270)
Phosphorodithioic acid, O,O-dimethyl S-[2 (methylamino)-2-oxoethyl] ester	Dimethoate	10 (4.54)
Phosphorofluoridic acid, bis(1-methylethyl) ester	Diisopropyl fluorophosphate	100 (45.4)
Phosphorothioic acid, O,O-diethyl O-(p-nitrophenyl) ester	Parathion *	1 (0.454)
Phosphorothioic acid, O,O-diethyl O-pyrazinyl ester	O,O-Diethyl O-pyrazinyl phosphorothioate	100 (45.4)
Phosphorothioic acid, O,O-dimethyl O-[p-[(dimethylamino) sulfonyl] phenyl] ester	Famphur	1000 (454)
Phosphorus *		1 (0.454)
Phosphorus oxychloride *		1000 (454)
Phosphorus pentasulfide *	Phosphorus sulfide	100 (45.4)
	Sulfur phosphide	
Phosphorus sulfide	Phosphorus pentasulfide *	100 (45.4)
	Sulfur phosphide	
Phosphorus trichloride *		1000 (454)
Phthalic anhydride	1,2-Benzenedicarboxylic acid anhydride	5000 (2270)
2-Picoline	Pyridine, 2-methyl-	5000 (2270)
Plumbane, tetraethyl-	Tetraethyl lead *	10 (4.54)
POLYCHLORINATED BIPHENYLS (PCBs)	Aroclor 1016	10 (4.54)
	Aroclor 1221	
	Aroclor 1232	
	Aroclor 1242	
	Aroclor 1248	
	Aroclor 1254	
	Aroclor 1260	
Potassium arsenate *		1000 (454)
Potassium arsenite *		1000 (454)
Potassium bichromate	Potassium dichromate @	1000 (454)
Potassium chromate		1000 (454)
Potassium cyanide *		10 (4.54)
Potassium dichromate @	Potassium bichromate	1000 (454)
Potassium hydroxide *		1000 (454)

For explanation of abbreviations and reference marks, see last page of this tariff.

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Potassium permanganate *		100 (45.4)
Potassium silver cyanide		1 (0.454)
Pronamide	3,5-Dichloro-N-(1,1-dimethyl-2-propynyl)benzamide	5000 (2270)
1-Propanal, 2,3-epoxy-	Glycidylaldehyde	1 (0.454)
Propanal, 2-methyl-2-(methylthio)-,O-[(methylamino)carbonyl]oxime	Aldicarb	1 (0.454)
1-Propanamine	n-Propylamine *	5000 (2270)
1-Propanamine, N-propyl-	Dipropylamine	5000 (2270)
Propane, 1,2-dibromo-3-chloro-	1,2-Dibromo-3-chloropropane	1 (0.454)
Propane, 2-nitro-	2-Nitropropane	1 (0.454)
Propane, 2,2'-oxybis[2-chloro-	Bis(2-chloroisopropyl) ether	1000 (454)
1,3-Propane sultone	1,2-Oxathiolane, 2,2-dioxide	1 (0.454)
Propanedinitrile	Malononitrile	1000 (454)
Propanenitrile	Ethyl cyanide	10 (4.54)
Propanenitrile, 3-chloro-	3-Chloropropionitrile	1000 (454)
Propanenitrile, 2-hydroxy-2-methyl-	Acetone cyanohydrin *	10 (4.54)
	2-Methyllactonitrile	
1,2,3-Propanetriol, trinitrate-	Nitroglycerine *	10 (4.54)
1-Propanol, 2,3-dibromo-, phosphate (3:1)	Tris(2,3-dibromopropyl)phosphate	1 (0.454)
1-Propanol, 2-methyl-	Isobutyl alcohol	5000 (2270)
2-Propanone	Acetone *	5000 (2270)
2-Propanone, 1-bromo-	Bromoacetone *	1000 (454)
Propargite		10 (4.54)
Propargyl alcohol *	2-Propyn-1-ol	1000 (454)
2-Propenal	Acrolein *	1 (0.454)
2-Propenamide	Acrylamide	5000 (2270)
Propene, 1,3-dichloro-	1,3-Dichloropropene	100 (45.4)
1-Propene, 1,1,2,3,3,3-hexachloro-	Hexachloropropene	1000 (454)
2-Propenenitrile	Acrylonitrile *	100 (45.4)
2-Propenenitrile, 2-methyl-	Methacrylonitrile	1000 (454)
2-Propenoic acid	Acrylic acid *	5000 (2270)
2-Propenoic acid, ethyl ester	Ethyl acrylate *	1000 (454)
2-Propenoic acid, 2-methyl-, ethyl ester	Ethyl methacrylate	1000 (454)
2-Propenoic acid, 2-methyl-, methyl ester	Methyl methacrylate *	1000 (454)
2-Propen-1-ol	Allyl alcohol *	100 (45.4)
Propionic acid *		5000 (2270)
Propionic acid, 2-(2,4,5-trichlorophenoxy)-	Silvex	100 (45.4)
	2,4,5-TP (fr	
	2,4,5-TP acid	
Propionic anhydride		5000 (2270)
n-Propylamine *	1-Propanamine	5000 (2270)
Propylene dichloride *	1,2-Dichloropropane	1000 (454)
Propylene oxide *		100 (45.4)
1,2-Propylenimine *	2-Methylaziridine	1 (0.454)
2-Propyn-1-ol	Propargyl alcohol *	1000 (454)
Pyrene		5000 (2270)
Pyrethrins		1 (0.454)
4-Pyridinamine	4-Aminopyridine	1000 (454)
Pyridine *		1000 (454)
Pyridine, 2-[2-(dimethylamino)ethyl]-2-thenylamino]	Methapyrilene	5000 (2270)
Pyridine, hexahydro-N-nitroso-	N-Nitrosopiperidine	1 (0.454)
Pyridine, 2-methyl-	2-Picoline	5000 (2270)
Pyridine, (S)-3-(1-methyl-2-pyrrolidinyl)-, and salts	Nicotine * and salts *	100 (45.4)
4(1H)-Pyrimidinone, 2,3-dihydro-6-methyl-2-thioxo-	Methylthiouracil	1 (0.454)
Pyrophosphoric acid, tetraethyl ester	Tetraethyl pyrophosphate *	10 (4.54)
Pyrrole, tetrahydro-N-nitroso-	N-Nitrosopyrrolidine	1 (0.454)
Quinoline		5000 (2270)
RADIONUCLIDES		1 (0.454)
Reserpine	Yohimban-16-carboxylic acid,11,17-dimethoxy-18-[(3,4,5-trimethoxybenzoyl)oxy]-, methyl ester,	5000 (2270)
Resorcinol	1,3-Benzenediol	5000 (2270)
Saccharin and salts	1,2-Benzisothiazolin-3-one,1,1-dioxide, and salts	1 (0.454)
Safrole	Benzene, 1,2-methylenedioxy-4-allyl-	1 (0.454)
Selenious acid		10 (4.54)
Selenium s		100 (45.4)
Selenium dioxide	Selenium oxide *	10 (4.54)
Selenium disulfide	Sulfur selenide	1 (0.454)
Selenium oxide *	Selenium dioxide	10 (4.54)
Selenourea	Carbamimidoselenoic acid	1000 (454)
L-Serine, diazoacetate (ester)	Azaserine	1 (0.454)
Silver s		1000 (454)
Silver cyanide *		1 (0.454)
Silver nitrate *		1 (0.454)
Silvex	Propionic acid, 2-(2,4,5-trichlorophenoxy)-	100 (45.4)
	2,4,5-TP (fr	
	2,4,5-TP acid	
Sodium *		10 (4.54)
Sodium arsenate *		1000 (454)
Sodium arsenite *		1000 (454)
Sodium azide *		1000 (454)
Sodium bichromate	Sodium dichromate (fr	1000 (454)
Sodium bifluoride *		100 (45.4)
Sodium bisulfite *		5000 (2270)
Sodium chromate		1000 (454)
Sodium cyanide *		10 (4.54)
Sodium dichromate (fr	Sodium bichromate	1000 (454)
Sodium dodecylbenzene sulfonate		1000 (454)
Sodium fluoride *		1000 (454)
Sodium hydrosulfide *		5000 (2270)
Sodium hydroxide *		1000 (454)
Sodium hypochlorite *		100 (45.4)
Sodium methylate *		1000 (454)
Sodium nitrite *		100 (45.4)
Sodium phosphate, dibasic		5000 (2270)
Sodium phosphate, tribasic		5000 (2270)

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
Sodium selenite *		100 (45.4)
Stilbestrol, alpha,alpha'-diethyl-	Diethylstilbestrol	1 (0.454)
Streptozotocin	D-Glucopyranose, 2-deoxy-2-[3-methyl-3-nitrosoureido]-	1 (0.454)
Strontium chromate		1000 (454)
Strontium sulfide		100 (45.4)
Strychnidin-10-one, and salts	Strychnine * and salts *	10 (4.54)
Strychnidin-10-one, 2,3-dimethoxy-	Brucine	100 (45.4)
Strychnine * and salts *	Strychnidin-10-one, and salts	10 (4.54)
Styrene		1000 (454)
Sulfur hydride	Hydrogen sulfide *	100 (45.4)
	Hydrosulfuric acid	
Sulfur monochloride		1000 (454)
Sulfur phosphide	Phosphorus pentasulfide *	100 (45.4)
	Phosphorus sulfide	
Sulfur selenide	Selenium disulfide	1 (0.454)
Sulfuric acid		1000 (454)
Sulfuric acid, dimethyl ester	Dimethyl sulfate *	1 (0.454)
Sulfuric acid, thallium(I) salt	Thallium(I) sulfate *	100 (45.4)
2,4,5-T *	2,4,5-T acid	1000 (454)
	2,4,5-Trichlorophenoxyacetic acid *	
2,4,5-T acid	2,4,5-T *	1000 (454)
	2,4,5-Trichlorophenoxyacetic acid *	
2,4,5-T amines		5000 (2270)
2,4,5-T esters		1000 (454)
2,4,5-T salts		1000 (454)
TDE *	DDD	1 (0.454)
	Dichlorodiphenyl dichloroethane	
	4,4-DDD	
1,2,4,5-Tetrachlorobenzene	Benzene, 1,2,4,5-tetrachloro-	5000 (2270)
2,3,7,8-Tetrachlorodibenzo-p-dioxin (TCDD)		1 (0.454)
1,1,1,2-Tetrachloroethane	Ethane, 1,1,1,2-tetrachloro-	1 (0.454)
1,1,2,2-Tetrachloroethane	Ethane, 1,1,2,2-tetrachloro-	1 (0.454)
Tetrachloroethene	Ethene, 1,1,2,2-tetrachloro-	1 (0.454)
	Perchloroethylene *	
	Tetrachloroethylene *	
Tetrachloroethylene *	Ethene, 1,1,2,2-tetrachloro-	1 (0.454)
	Perchloroethylene *	
	Tetrachloroethene	
2,3,4,6-Tetrachlorophenol	Phenol, 2,3,4,6-tetrachloro-	10 (4.54)
Tetraethyl lead *	Plumbane, tetraethyl-	10 (4.54)
Tetraethyl pyrophosphate *	Pyrophosphoric acid, tetraethyl ester	10 (4.54)
Tetraethyldithiopyrophosphate	Dithiopyrophosphoric acid, tetraethyl ester	100 (45.4)
Tetrahydrofuran *	Furan, tetrahydro-	1000 (454)
Tetranitromethane *	Methane, tetranitro-	10 (4.54)
Tetraphosphoric acid, hexaethyl ester	Hexaethyl tetraphosphate *	100 (45.4)
Thallic oxide	Thallium(III) oxide	100 (45.4)
Thallium I		1000 (454)
Thallium(I) acetate	Acetic acid, thallium(I) salt	100 (45.4)
Thallium(I) carbonate	Carbonic acid, dithallium (I) salt	100 (45.4)
Thallium(I) chloride		100 (45.4)
Thallium(I) nitrate		100 (45.4)
Thallium(III) oxide	Thallic oxide	100 (45.4)
Thallium(I) selenide		1000 (454)
Thallium(I) sulfate *	Sulfuric acid, thallium(I) salt	100 (45.4)
Thioacetamide	Ethanethioamide	1 (0.454)
Thiofanox	3,3-Dimethyl-1-(methylthio)-2-butanone,O-[(methylamino)carbonyl] oxime	100 (45.4)
Thioimidodicarbonic diamide	2,4-Dithiobiuret	100 (45.4)
Thiomethanol	Methanethiol	100 (45.4)
	Methyl mercaptan *	
Thiophenol *	Benzenethiol	100 (45.4)
	Phenyl mercaptan ‡	
Thiosemicarbazide	Hydrazinecarbothioamide	100 (45.4)
Thiourea	Carbamide, thio-	1 (0.454)
Thiourea, (2-chlorophenyl)-	1-(o-Chlorophenyl)thiourea	100 (45.4)
Thiourea, 1-naphthalenyl-	alpha-Naphthylthiourea	100 (45.4)
Thiourea, phenyl-	N-Phenylthiourea	100 (45.4)
Thiram	Bis(dimethylthiocarbamoyl) disulfide	10 (4.54)
Toluene *	Benzene, methyl-	1000 (454)
Toluenediamine *	Diaminotoluene	1 (0.454)
Toluene diisocyanate *	Benzene, 2,4-diisocyanatomethyl-	100 (45.4)
o-Tolidine hydrochloride	Benzeneamine, 2-methyl-, hydrochloride	1 (0.454)
o-Tolidine	2-Amino-1-methyl benzene	1 (0.454)
p-Tolidine	4-Amino-1-methyl benzene	1 (0.454)
Toxaphene *	Camphene, octachloro-	1 (0.454)
2,4,5-TP ‡	Propionic acid, 2-(2,4,5-trichlorophenoxy)-	100 (45.4)
	Silvex	
	2,4,5-TP acid	
2,4,5-TP acid esters		100 (45.4)
2,4,5-TP acid	Propionic acid, 2-(2,4,5-trichlorophenoxy)-	100 (45.4)
	Silvex	
	2,4,5-TP ‡	
1H-1,2,4-Triazol-3-amine	Amitrole	1 (0.454)
Trichlorfon		100 (45.4)
1,2,4-Trichlorobenzene		100 (45.4)
1,1,1-Trichloroethane *	Methyl chloroform *	1000 (454)
1,1,2-Trichloroethane	Ethane, 1,1,2-trichloro-	1 (0.454)
Trichloroethene	Trichloroethylene *	1000 (454)
Trichloroethylene *	Trichloroethene	1000 (454)
Trichloromethanesulfenyl chloride	Methanesulfenyl chloride, trichloro-	100 (45.4)
	Perchloromethyl mercaptan ‡	
Trichloromonofluoromethane	Methane, trichlorofluoro-	5000 (2270)
Trichlorophenol *		10 (4.54)
2,3,4-Trichlorophenol		
2,3,5-Trichlorophenol		

For explanation of abbreviations and reference marks, see last page of this tariff.

List of Hazardous Substances and Reportable Quantities—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
2,3,6-Trichlorophenol		
2,4,5-Trichlorophenol	Phenol, 2,4,5-trichloro-	
2,4,6-Trichlorophenol	Phenol, 2,4,6-trichloro-	
3,4,5-Trichlorophenol		
2,4,5-Trichlorophenol	Phenol, 2,4,5-trichloro-	10 (4.54)
2,4,6-Trichlorophenol	Phenol, 2,4,6-trichloro-	10 (4.54)
2,4,5-Trichlorophenoxyacetic acid *	2,4,5-T *	1000 (454)
	2,4,5-T acid	
Triethanolamine dodecylbenzene sulfonate		1000 (454)
Triethylamine		5000 (2270)
Trimethylamine *		100 (45.4)
1,3,5-Trinitrobenzene *	Benzene, 1,3,5-trinitro-	10 (4.54)
1,3,5-Trioxane, 2,4,6-trimethyl-	Paraldehyde	1000 (454)
Tris(2,3-dibromopropyl) phosphate	1-Propanol, 2,3-dibromo-, phosphate (3:1)	1 (0.454)
Trypan blue	2,7-Naphthalenedisulfonic acid, 3,3-[(3,3'-dimethyl[1,1'-biphenyl]-4,4'-diyl)-bis(azo)]bis(5-amino-4-hydroxy)-tetrasodium salt	1 (0.454)
Unlisted Hazardous Wastes Characteristic of Corrosivity D002		100 (45.4)
Unlisted Hazardous Wastes Characteristic of EP Toxicity		
Arsenic D004		1 (0.454)
Barium D005		1000 (454)
Cadmium D006		1 (0.454)
Chromium D007		1 (0.454)
Lead D008		1 (0.454)
Mercury D009		1 (0.454)
Selenium D010		10 (4.54)
Silver D011		1 (0.454)
Endrin D012		1 (0.454)
Lindane D013		1 (0.454)
Methoxychlor D014		1 (0.454)
Toxaphene D015		1 (0.454)
2,4-D D016		100 (45.4)
2,4,5-TP D017		100 (45.4)
Unlisted Hazardous Wastes Characteristic of Ignitability D001		100 (45.4)
Unlisted Hazardous Wastes Characteristic of Reactivity D003		100 (45.4)
Uracil, 5-[bis(2-chloroethyl)amino]-	Uracil mustard	1 (0.454)
Uracil mustard	Uracil, 5-[bis(2-chloroethyl)amino]-	1 (0.454)
Uranyl acetate *		100 (45.4)
Uranyl nitrate *		100 (45.4)
Vanadic acid, ammonium salt	Ammonium vanadate	1000 (454)
Vanadium(V) oxide	Vanadium pentoxide	1000 (454)
Vanadium pentoxide	Vanadium(V) oxide	1000 (454)
Vanadyl sulfate		1000 (454)
Vinyl acetate *		5000 (2270)
Vinyl chloride *	Ethene, chloro-	1 (0.454)
Vinylidene chloride *	Ethene, 1,1-dichloro-	5000 (2270)
	1,1-Dichloroethylene	
Warfarin	3-(alpha Acetonylbenzyl)-4-hydroxycoumarin and salts	100 (45.4)
Xylene * (mixed)	Benzene, dimethyl-	1000 (454)
m-	m-	
o-	o-	
p-	p-	
Xylenol *		1000 (454)
Yohimban-16-carboxylic acid,11,17-dimethoxy-18-[(3,4,5-trimethoxybenzoyl)oxy]-, methyl ester	Reserpine	5000 (2270)
Zinc		1000 (454)
Zinc acetate		1000 (454)
Zinc ammonium chloride		1000 (454)
Zinc borate		1000 (454)
Zinc bromide		1000 (454)
Zinc carbonate		1000 (454)
Zinc chloride		1000 (454)
Zinc cyanide *		10 (4.54)
Zinc fluoride		1000 (454)
Zinc formate		1000 (454)
Zinc hydrosulfite *		1000 (454)
Zinc nitrate *		1000 (454)
Zinc phenolsulfonate		5000 (2270)
Zinc phosphide *		100 (45.4)
Zinc silicofluoride		5000 (2270)
Zinc sulfate		1000 (454)
Zirconium nitrate *		5000 (2270)
Zirconium potassium fluoride		1000 (454)
Zirconium sulfate *		5000 (2270)
Zirconium tetrachloride *		5000 (2270)
F001		1 (0.454)
The following spent halogenated solvents used in degreasing and sludges from the recovery of these solvents in degreasing operations:		
(a) Tetrachloroethylene		1 (0.454)
(b) Trichloroethylene		1000 (454)
(c) Methylene chloride		1000 (454)
(d) 1,1,1-Trichloroethane		1000 (454)
(e) Carbon tetrachloride		5000 (2270)
(f) Chlorinated fluorocarbons		5000 (2270)
F002		1 (0.454)
The following spent halogenated solvents and the still bottoms from the recovery of these solvents:		
(a) Tetrachloroethylene		1 (0.454)
(b) Methylene chloride		1000 (454)
(c) Trichloroethylene		1000 (454)
(d) 1,1,1-Trichloroethane		1000 (454)
(e) Chlorobenzene		100 (45.4)
(f) 1,1,2-Trichloro-1,2,2-trifluoroethane		5000 (2270)
(g) o-Dichlorobenzene		100 (45.4)
(h) Trichlorofluoromethane		5000 (2270)

LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
F003		100 (45.4)
The following spent non halogenated solvents and solvents:		
(a) Xylene		1000 (454)
(b) Acetone		5000 (2270)
(c) Ethyl acetate		5000 (2270)
(d) Ethylbenzene		1000 (454)
(e) Ethyl ether		100 (45.4)
(f) Methyl isobutyl ketone		5000 (2270)
(g) n Butyl alcohol		5000 (2270)
(h) Cyclohexanone		5000 (2270)
(i) Methanol		5000 (2270)
F004		1000 (454)
The following spent non halogenated solvents and the still bottoms from the recovery of these solvents:		
(a) Cresols/Cresylic acid		1000 (454)
(b) Nitrobenzene		1000 (454)
F005		100 (45.4)
The following spent non halogenated solvents and the still bottoms from the recovery of these solvents:		
(a) Toluene		1000 (454)
(b) Methyl ethyl ketone		5000 (2270)
(c) Carbon disulfide		100 (45.4)
(d) Isobutanol		5000 (2270)
(e) Pyridine		1000 (454)
F006		1 (0.454)
Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum, (2) tin plating on carbon steel, (3) zinc plating (segregated basis) on carbon steel, (4) aluminum or zinc-aluminum plating on carbon steel, (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel, and (6) chemical etching and milling of aluminum.		
F007		10 (4.54)
Spent cyanide plating bath solutions from electroplating operations		
F008		10 (4.54)
Plating bath sludges from the bottom of plating baths from electroplating operations where cyanides are used in the process (except for precious metals electroplating plating bath sludges).		
F009		10 (4.54)
Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process (except for precious metals electroplating spent stripping and cleaning bath solutions).		
F010		10 (4.54)
Quenching bath sludge from oil baths from metal heat treating operations where cyanides are used in the process (except for precious metals heat treating quenching bath sludges).		
F011		10 (4.54)
Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations (except for precious metals heat treating spent cyanide solutions from salt bath pot cleaning).		
F012		10 (4.54)
Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process (except for precious metals heat treating quenching wastewater treatment sludges).		
F019		1 (0.454)
Wastewater treatment sludges from the chemical conversion coating of aluminum		
F020		1 (0.454)
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- or tetrachlorophenol, or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.).		
F021		1 (0.454)
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives		
F022		1 (0.454)
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.		
F023		1 (0.454)
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5-trichlorophenol.).		
F024		1 (0.454)
Wastes, including but not limited to distillation residues, heavy ends, tars, and reactor cleanout wastes, from the production of chlorinated aliphatic hydrocarbons, having carbon content from one to five, utilizing free radical catalyzed processes. (This listing does not include light ends, spent filters and filter aids, spent desiccants(sic), wastewater, wastewater treatment sludges, spent catalysts, and wastes listed in 40 CFR 261.32.).		
F026		1 (0.454)
Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions		

LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
F027		1 (0.454)
Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5 trichlorophenol as the sole component.)		
F028		1 (0.454)
Residues resulting from the incineration or thermal treatment of soil contaminated with EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027.		
K001		1 (0.454)
Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and or pentachlorophenol.		
K002		1 (0.454)
Wastewater treatment sludge from the production of chrome yellow and orange pigments.		
K003		1 (0.454)
Wastewater treatment sludge from the production of molybdate orange pigments		
K004		1 (0.454)
Wastewater treatment sludge from the production of zinc yellow pigments		1 (0.454)
K005		1 (0.454)
Wastewater treatment sludge from the production of chrome green pigments		1 (0.454)
K006		1 (0.454)
Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).		
K007		1 (0.454)
Wastewater treatment sludge from the production of iron blue pigments		1 (0.454)
K008		1 (0.454)
Oven residue from the production of chrome oxide green pigments		1 (0.454)
K009		1 (0.454)
Distillation bottoms from the production of acetaldehyde from ethylene		1 (0.454)
K010		1 (0.454)
Distillation side cuts from the production of acetaldehyde from ethylene		1 (0.454)
K011		1 (0.454)
Bottom stream from the wastewater stripper in the production of acrylonitrile		1 (0.454)
K013		1 (0.454)
Bottom stream from the acetonitrile column in the production of acrylonitrile		5000 (2270)
K014		
Bottoms from the acetonitrile purification column in the production of acrylonitrile		
K015		1 (0.454)
Still bottoms from the distillation of benzyl chloride		1 (0.454)
K016		1 (0.454)
Heavy ends or distillation residues from the production of carbon tetrachloride		1 (0.454)
K017		
Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.		
K018		1 (0.454)
Heavy ends from the fractionation column in ethyl chloride production		1 (0.454)
K019		1 (0.454)
Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.		
K020		1 (0.454)
Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.		
K021		1 (0.454)
Aqueous spent antimony catalyst waste from fluoromethanes production		1 (0.454)
K022		1 (0.454)
Distillation bottom tars from the production of phenol acetone from cumene		5000 (2270)
K023		
Distillation light ends from the production of phthalic anhydride from naphthalene		5000 (2270)
K024		
Distillation bottoms from the production of phthalic anhydride from naphthalene		1 (0.454)
K025		
Distillation bottoms from the production of nitrobenzene by the nitration of benzene		1000 (454)
K026		
Stripping still tails from the production of methyl ethyl pyridines		1 (0.454)
K027		1 (0.454)
Centrifuge and distillation residues from toluene diisocyanate production		
K028		1 (0.454)
Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane		
K029		1 (0.454)
Waste from the product steam stripper in the production of 1,1,1-trichloroethane		
K030		1 (0.454)
Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene		
K031		1 (0.454)
By-product salts generated in the production of MSMA and cacodylic acid		1 (0.454)
K032		1 (0.454)
Wastewater treatment sludge from the production of chlordane		1 (0.454)
K033		1 (0.454)
Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.		
K034		1 (0.454)
Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.		
K035		1 (0.454)
Wastewater treatment sludges generated in the production of creosote		1 (0.454)
K036		1 (0.454)
Still bottoms from toluene reclamation distillation in the production of disulfoton.		

LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
K037		1 (0.454)
Wastewater treatment sludges from the production of disulfoton		
K038		1 (0.454)
Wastewater from the washing and stripping of phorate production		
K039		10 (4.54)
Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.		
K040		1 (0.454)
Wastewater treatment sludge from the production of phorate		
K041		1 (0.454)
Wastewater treatment sludge from the production of toxaphene		
K042		1 (0.454)
Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T		
K043		1 (0.454)
2,6-dichlorophenol waste from the production of 2,4-D		
K044		10 (4.54)
Wastewater treatment sludges from the manufacturing and processing of explosives		
K045		10 (4.54)
Spent carbon from the treatment of wastewater containing explosives		
K046		100 (45.4)
Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds		
K047		10 (4.54)
Pink/red water from TNT operations		
K048		1 (0.454)
Dissolved air flotation (DAF) float from the petroleum refining industry		
K049		1 (0.454)
Slop oil emulsion solids from the petroleum refining industry		
K050		1 (0.454)
Heat exchanger bundle cleaning sludge from the petroleum refining industry		
K051		1 (0.454)
API separator sludge from the petroleum refining industry		
K052		10 (4.54)
Tank bottoms (leaded) from the petroleum refining industry		
K060		1 (0.454)
Ammonia still lime sludge from coking operations		
K061		1 (0.454)
Emission control dust sludge from the primary production of steel in electric furnaces.		
K062		1 (0.454)
Spent pickle liquor from steel finishing operations		
K069		1 (0.454)
Emission control dust sludge from secondary lead smelting		
K071		1 (0.454)
Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.		
K073		1 (0.454)
Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.		
K083		100 (45.4)
Distillation bottoms from aniline extraction		
K084		1 (0.454)
Wastewater treatment sludges generated during the production of veterinary pharmaceutical's from arsenic or organo-arsenic compounds.		
K085		1 (0.454)
Distillation or fractionation column bottoms from the production of chlorobenzenes		
K086		1 (0.454)
Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead		
K087		100 (45.4)
Decanter tank tar sludge from coking operations		
K093		5000 (2270)
Distillation light ends from the production of phthalic anhydride from ortho-xylene		
K094		5000 (2270)
Distillation bottoms from the production of phthalic anhydride from ortho-xylene		
K095		1 (0.454)
Distillation bottoms from the production of 1,1,1-trichloroethane		
K096		1 (0.454)
Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.		
K097		1 (0.454)
Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.		
K098		1 (0.454)
Untreated process wastewater from the production of toxaphene		
K099		1 (0.454)
Untreated wastewater from the production of 2,4-D		
K1000		1 (0.454)
Waste leaching solution from acid leaching of emission control dust sludge from secondary lead smelting		
K101		1 (0.454)
Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceutical's from arsenic or organo-arsenic compounds.		
K102		1 (0.454)
Residue from the use of activated carbon or decolorization in the production of veterinary pharmaceutical's from arsenic or organo-arsenic compounds.		
K103		100 (45.4)
Process residues from aniline extraction from the production of aniline		

For explanation of abbreviations and reference marks, see last page of this tariff.

LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES—Continued

Hazardous Substance	Synonyms	Reportable Quantity Pounds (Kilograms)
K104 Combined wastewater streams generated from nitrobenzene/aniline chlorobenzenes		1 (0.454)
K105 Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes		1 (0.454)
K106 Wastewater treatment sludge from the mercury cell process in chlorine production		1 (0.454)
K111 Product washwaters from the production of dinitrotoluene via nitration of toluene		1 (0.454)
K112 Reaction by product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.		1 (0.454)
K113 Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.		1 (0.454)
K114 Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.		1 (0.454)
K115 Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.		1 (0.454)
K116 Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.		1 (0.454)
K117 Wastewater from the reaction vent gas scrubber in the production of ethylene bromide via bromination of ethene.		1 (0.454)
K118 Spent absorbent solids from purification of ethylene dibromide in the production of ethylene dibromide.		1 (0.454)
K136 Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.		1 (0.454)

Footnotes:
¢ - the RQ for these hazardous substances is limited to those pieces of the metal having a diameter smaller than 100 micrometers (0.004 inches)
¢¢ - the RQ for asbestos is limited to friable forms only
* - indicates that this material appears by name in the Hazarous Materials Table
@ - indicates that the name was added by RSPA because (1) the name is a synonym for a specific hazardous substance and (2) the name appears in the Hazardous Materials Table as a proper shipping name.

§ 172.102 Purpose and use of Optional Hazardous Materials Table for International Shipments. (a) The Optional Hazardous Materials Table (Optional Table) set forth in this section provides descriptions, classifications, labeling and vessel stowage requirements which may be used for international shipments as authorized by §171.12 of this subchapter. The Optional Table provides alternatives to corresponding requirements in §172.101 subject to conditions set forth in this section. The provisions of this section do not apply to materials designated as hazardous materials under this subchapter that are not subject to the requirements of the IMDG Code. This section does not designate materials as hazardous materials and it does not specify packaging requirements, exceptions or limitations. They are made only in §172.101. A number of materials listed in the Optional Table may not be subject to the requirements of this subchapter, but they are subject to regulation under widely applied international standards. They are listed in this section in the interest of providing consistency with those standards and to alert persons offering or accepting these materials for transportation that the materials may be subject to regulation in international transport.

(1) A shipping description and any associated entry which is listed in the current edition of the IMDG Code but is not listed in the Optional Table may be used as if it was listed in the Optional Table, if approved by the Director, OHMT.

(b) A material described, classed, and labeled, in accordance with this section must be in conformance with all additional defining or limiting conditions prescribed for the description in the appropriate schedule of the IMDG Code.

(c) When a material is transported by aircraft, motor vehicle, or rail transport vehicle under the description and IMO class or division provided in the Optional Table, the shipping paper required by §172.202(a) must include the class name from Part 173 of this subchapter which most closely corresponds to the IMO class indicated for the material in the Optional Table. For example, the IMO proper shipping name, class and identification number for Ethylene oxide are "Ethylene oxide, 2.1, UN1040". While *Ethylene oxide* would be classed as a Flammable liquid under §172.101, the class in Part 173 of this subchapter that most closely corresponds to the IMO class provided in the Optional Table is "Flammable gas". The proper shipping paper description would be "Ethylene oxide, 2.1, Flammable gas, UN1040".

(d) When appropriate, the entries "IMO" or "IMO Class" may be entered immediately before or immediately following the class entry in the basic description. For example: "Ethylene oxide, IMO Class 2.1, Flammable gas, UN1040."

(e) When an appropriate shipping name from the Optional Table is used to describe a hazardous material which is also a hazardous substance, the additional description requirements for hazardous substances in §§172.203(c) and 172.324 are applicable.

(f) Column 1 contains the letter "N" immediately adjacent to certain entries. The letter "N" means that the entry is not an acceptable alternative and the material must be transported under the appropriate entry in §172.101.

(g) Column 2 lists the optional proper shipping names for hazardous materials. Proper shipping names are limited to those shown in Roman type (not italics). In the selection of a proper shipping name to describe a particular material, if the correct technical name is not shown, or is not appropriate, selection must be made from the general description or "n.o.s." entries corresponding to the specific hazard class of the material being shipped. The name that most appropriately describes the material must be used; e.g., an alcohol not listed by name in the Optional Table must be shipped as an "Alcohol n.o.s." rather than "Flammable liquid n.o.s." unless the technical name of the alcohol is listed, e.g., Methanol. Some mixtures may be more appropriately described by their application, such as "Paint" or "Cleaning compound".

(1) Shipping names may be entered in either upper or lower case letters.

(2) The words in italics are not part of the proper shipping name but may be used in addition to the proper shipping name. The word "or" in italics indicates that any terms in the sequence may be used as the proper shipping name, as appropriate.

(3) When one entry references another entry by use of a "see" and both names are in Roman type, either name may be used as a proper shipping name (e.g., Methyl alcohol. See Methanol).

(4) If not included in the proper shipping name in the Optional Table, the proper shipping name for a hazardous material that is a hazardous waste must include the word "Waste" preceding the name of the material. For example: Waste turpentine.

(h) Column 3 contains the hazard class or division designated for the material in the IMDG Code. In the case of explosives, a letter designating the "compatibility group" of the substance or article is also included immediately following the division. Detailed definitions of the classes, divisions, and compatibility groups are provided in the IMDG Code. Basic definitions of the IMO classes and divisions (with corresponding DOT classes shown in italics) are as follows:

(1) Class 1—Explosives.
(i) Division 1.1—Substances and articles which have a mass explosion hazard. *Explosive A*
(ii) Division 1.2—Substances and articles which have a projection hazard but not a mass explosion hazard. *Explosive A or B*
(iii) Division 1.3—Substances and articles which have a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard. *Explosive B*
(iv) Division 1.4—Substances and articles which present no significant hazard. *Explosive C*
(v) Division 1.5—Very insensitive substances. *Blasting Agent*
(2) Class 2—Gases (compressed, liquefied or dissolved under pressure).
(i) Division 2.1—Flammable gases. *Flammable gas*
(ii) Division 2.2—Nonflammable gases. *Nonflammable gas*
(iii) Division 2.3—Poison gases. *Poison A*
(3) Class 3—Flammable liquids.
(i) Division 3.1—Low flash point group (liquids with flash points below 0°F). *Flammable liquid*
(ii) Division 3.2—Intermediate flash point group (liquids with flash points of 0°F or above but less than 73°F). *Flammable liquid*
(iii) Division 3.3—High flash point group (liquids with flash points of 73°F or above up to and including 141°F). *Flammable liquid or Combustible liquid*
(4) Class 4—Flammable solids or substances.
(i) Division 4.1—Flammable solids. *Flammable solid*
(ii) Division 4.2—Substances liable to spontaneous combustion. *Flammable solid or, for pyroforic liquids, Flammable liquid*
(iii) Division 4.3—Substances emitting flammable gases when wet. *Flammable solid*
(5) Class 5—Oxidizing substances.
(i) Division 5.1—Oxidizing substances or agents. *Oxidizer*
(ii) Division 5.2—Organic peroxides. *Organic peroxide*
(6) Class 6—Poisonous and infectious substances.
(i) Division 6.1—Poisonous substances. *Poison B*
(ii) Division 6.2—Infectious substances. *Etiologic agent*
(7) Class 7—Radioactive substances. *Radioactive material*
(8) Class 8—Corrosives. *Corrosive material*
(9) Class 9—Miscellaneous dangerous substances. *Other regulated material*

(i) Column 4 contains the United Nations number listed for the substance or article in the IMDG Code. A number of substances or articles have no UN number provided for them in the IMDG Code. For some of these entries, the UN number of the article or substance which most appropriately corresponds to that particular entry is shown in parentheses.

(j) Column 5 specifies the labels to be applied to each package. Specifications for labels for domestic and export shipments shall be either as provided in the subchapter or as provided in the IMDG Code, except that color shall be as prescribed in §172.407(d). The label referred to as the "St. Andrews Cross" label is the "Harmful—Stow Away From Foodstuffs" label provided by IMO for materials of Class 6.1 Packaging Group III.

(k) Column 6 provides the packaging group specified for the material in the IMDG Code.

(l) Column 7 specifies each of the authorized stowage locations on board cargo vessels and passenger vessels and certain additional requirements for shipments of listed hazardous materials. Section 176.63 of this subchapter sets forth the physical requirements for each of the authorized stowage locations listed in Column 7. The authorized stowage locations are defined as follows:

(1) "1" means the material must be stowed "on deck."
(2) "2" means the material must be stowed "under deck."
(3) "3" means the material must be stowed "under deck away from heat."
(4) "1,2" means the material may be stowed either "on deck" or "under deck"; however, "under deck" stowage should be used if available.
(5) "1,3" means the material may be stowed either "on deck" or "under deck away from heat"; however, "under deck away from heat" stowage should be used if it is available.
(6) "5" means the material is forbidden and may not be offered or accepted for transportation by vessel.
(7) "6" means the material is authorized to be transported in a magazine subject to the requirements of §§176.135 through 176.144 of this subchapter.

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Acetal	3.1	UN1088	Flammable Liquid	II	1.3	5	Keep cool
	Acetaldehyde	3.1	UN1089	Flammable Liquid	I	1.3	5	Keep cool
	Acetaldehyde ammonia	9	UN1841	None	III	1.2	1.2	Stow "away from" foodstuffs
	Acetaldehyde oxime	3.3	UN2332	Flammable Liquid	II	1.2	1.2	
	Acetic acid, glacial or Acetic acid solution, more than 80% acid by weight	8	UN2789	Corrosive, Flammable Liquid	II	1.2	1.2	Segregation same as for flammable liquids. Glass carboys in hampers prohibited under deck
	Acetic acid solution, more than 25% but not more than 80% acid by weight	8	UN2790	Corrosive	II/III	1.2	1.2	Glass carboys in hampers prohibited under deck
	Acetic anhydride	8	UN1715	Corrosive, Flammable Liquid	II	1.2	1.2	Stow "separated longitudinally by an intervening complete compartment or hold from" explosives. Segregation same as for flammable liquids
	Acetone	3.1	UN1090	Flammable Liquid	II	1.3	5	
	Acetone cyanohydrin, stabilized	6.1	UN1541	Poison	I	1	5	Shade from radiant heat. Stow "away from" acids and alkalis
	Acetone oils	3.2	UN1091	Flammable Liquid	II	1.2	1	
	Acetonitrile. See Methyl cyanide							
	Acetyl acetone peroxide, maximum concentration 42% in solution	5.2	UN2080	Organic Peroxide	II	1	5	
	Acetyl benzoyl peroxide, maximum concentration 45% in solution	5.2	UN2081	Organic Peroxide	II	1	5	
	Acetyl bromide	8	UN1716	Corrosive	II	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Acetyl chloride	3.2	UN1717	Flammable Liquid, Corrosive	II	1.2	1	
	Acetyl cyclohexane sulphonyl peroxide, maximum concentration 82%, wetted with minimum 12% water	5.2	UN2082	Organic Peroxide	I	1	5	Control temperature -10 deg C. Emergency temperature 0 deg C
	Acetyl cyclohexane sulphonyl peroxide, maximum concentration 32% in solution	5.2	UN2083	Organic Peroxide	II	1	5	Control temperature -10 deg C. Emergency temperature 0 deg C
	Acetylene, dissolved	2.1	UN1001	Flammable Gas	–	1	1	Shade from radiant heat. Stow "separated from" chlorine
	Acetyl iodide	8	UN1898	Corrosive	II	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Acetyl methyl carbinol	3.3	UN2621	Flammable Liquid	III	1.2	1.2	
	Acetyl peroxide, maximum concentration 27% in solution	5.2	UN2084	Organic Peroxide	II	1	5	Control temperature 20 deg C. Emergency temperature 25 deg C
	Acid mixtures, spent, nitrating	8	UN1826	Corrosive	I/II	1	5	Stow "away from" fluorides
	Acids, liquid, n.o.s. See Corrosive liquids, n.o.s.							
	Acridine	6.1	UN2713	Flammable Solid	III	1.2	1.2	
	Acrolein dimer, stabilized	3.3	UN2607	Flammable Liquid	II	1.2	1.2	
	Acrolein, inhibited	3.1	UN1092	Flammable Liquid, Poison	I	1.3	5	Keep cool
	Acrylamide	6.1	UN2074	St. Andrews Cross	III	1.2	1.2	Shade from radiant heat. Keep cool
	Acrylic acid, inhibited	8	UN2218	Corrosive, Flammable Liquid	II	1	1	Shade from radiant heat. Keep cool. Segregation same as for flammable liquids. Glass carboys prohibited on passenger vessels
	Acrylonitrile, inhibited	3.2	UN1093	Flammable Liquid, Poison	I	1.3	5	Keep cool
	Activated carbon. See Carbon, activated							
	Activated charcoal. See Carbon, activated							
	Adhesives, containing a flammable liquid	3.1	UN1133	Flammable Liquid	II	1.2	5	Keep cool
		3.2	UN1133	Flammable Liquid	II	1.2	1	
		3.3	UN1133	Flammable Liquid	II	1.2	1.2	
	Adiponitrile	6.1	UN2205	St. Andrews Cross	III	1.2	1.2	Shade from radiant heat
	Aerosol dispensers, with a capacity below 1400 cubic cm:							
	(1) more than 10% by weight of total contents consisting of flammable gas	2.1	UN1950	Flammable Gas	–	1.3	1.3	
	(2) internal pressure greater than 160 psig at 130 deg F	2.2	UN1950	Nonflammable Gas	–	1.3	1.3	
	(3) more than 45% by weight of total contents consisting of flammable liquid. This limit is reduced to 35% if there is any flammable gas present	3.1	UN1950	Flammable Liquid	–	1.3	1.3	
		3.2	UN1950	Flammable Liquid	–	1.3	1.3	
		3.3	UN1950	Flammable Liquid	–	1.3	1.3	
	(4) more than 10% by weight of toxic substances in the liquid concentrate	6.1	UN1950	Poison	I/II	1.3	1.3	
		6.1		St. Andrews Cross	III	1.3	1.3	
	(5) more than 5% by weight of corrosive substances in the liquid concentrate	8	UN1950	Corrosive	–	1.3	1.3	
	(6) as specified under Group 9 on page 9011 of IMDG Code	9	UN1950	None	–			
N	Aerosol dispensers, with a capacity of 1400 cubic cm or more	2	UN1950	–				
	Agents, blasting, Type B. See Explosives, blasting, Type B							
	Agents, blasting, Type E. See Explosives, blasting, Type E							
	Air, compressed	2.2	UN1002	Nonflammable Gas	–	1.2	1.2	
	Aircraft thrust device for assisted take-off	4.1	UN2751	Flammable Solid	II	1.2	5	
	Air, refrigerated liquid	2.2	UN1003	Nonflammable Gas, Oxidizer	–	1.3	1.3	Stow "separated from" acetylene. Do not overstow

§ 172.102 Optional Hazardous Materials Table—Continued

	tert-Butyl peroxydiethylacetate, *(in a maximum concentration of 32%), with tert-butyl peroxybenzoate, (in a maximum concentration of 32%) and with solvent*	5.2	UN2551	Organic Peroxide	II	1	5	
	tert-Butyl peroxydiethylacetate, *technical pure*	5.2	UN2144	Organic Peroxide	II	1	5	Control temperature 20 deg C Emergency temperature 25 deg C
	tert-Butyl peroxy-2-ethylhexanoate, *maximum concentration 30% with 2,2-di-(tert-butyl peroxy) butane maximum concentration 35% and with at least 35% phlegmatizer*	5.2	UN2586	Organic Peroxide	II	1	5	Control temperature 35 deg C Emergency temperature 40 deg C
	tert-Butyl peroxy-2-ethylhexanoate *maximum concentration 12% with 2,2-di-(tert-butyl peroxy)butane maximum concentration 14% and with at least 14% phlegmatizer and 60% inert inorganic solid*	5.2	UN2587	Organic Peroxide	II	1	5	
	tert-Butyl peroxy-2-ethyl hexanoate, *technical pure*	5.2	UN2143	Organic Peroxide	II	1	5	Control temperature 20 deg C Emergency temperature 25 deg C
	tert-Butyl peroxy-2-ethylhexanoate, *with at least 50% phlegmatizer*		UN2588	Organic Peroxide	II	1	5	Control temperature 35 deg C Emergency temperature 40 deg C
	tert-Butyl peroxyisobutyrate, *in a concentration of more than 52% to a maximum concentration of 77% in solution*	5.2	UN2142	Organic Peroxide	II	1	5	Control temperature 15 deg C Emergency temperature 20 deg C
	tert-Butyl peroxyisobutyrate, *maximum concentration 52% in solution*	5.2	UN2562	Organic Peroxide	II	1	5	Emergency temperature 15 deg C Emergency temperature 20 deg C
	tert-Butyl peroxy isopropyl carbonate, *technical pure*	5.2	UN2103	Organic Peroxide	II	1	5	
	tert-Butyl peroxyneodecanoate, *maximum concentration 77% in solution*	5.2	UN2177	Organic Peroxide	II	1	5	Control temperature 8 deg C Emergency temperature 10 deg C
	tert-Butyl peroxyneodecanoate, *technical pure*	5.2	UN2594	Organic Peroxide	II	1	5	Control temperature -5 deg C Emergency temperature 5 deg C
	3-tert-Butylperoxy-3-phenyl phthalide, *technical pure*	5.2	UN2596	Organic Peroxide	II	1	5	
	tert-Butyl peroxyphtalate, *maximum concentration 77% in solution*	5.2	UN2110	Organic Peroxide	II	1	5	Control temperature 8 deg C Emergency temperature 10 deg C
	tert-Butyl peroxy-3,5,5-trimethyl hexanoate, *technical pure*	5.2	UN2104	Organic Peroxide	II	1	5	
	Butylphenols, liquid	6.1	UN2228	St. Andrews Cross	III	1,2	1,2	
	Butylphenols, solid	6.1	UN2229	St. Andrews Cross	III	1,2	1,2	
	Butyl phosphoric acid. See Butyl acid phosphate							
	Butyl propionate	3.3	UN1914	Flammable Liquid	II	1,2	1,2	
	Butyl toluenes	6.1	UN2667	Poison, Flammable Liquid (only if flashpoint below 61 deg C)	III	1,2	1,2	Shade from radiant heat. If flashpoint below 61 deg C segregation same as for flammable liquids
	Butyl trichlorosilane	8	UN1747	Corrosive, Flammable Liquid	II	1	1	Keep dry. Stow "separated longitudinally by an intervening complete compartment or hold from" explosives. Segregation same as for flammable liquids
	Butyl vinyl ether, inhibited	3.2	UN2352	Flammable Liquid	II	1,2	1	
	1,4-Butynediol	4.1	UN2716	Flammable Solid	III	1,2	1	Stow "separated from" mercury salts, strong acids, alkaline compounds and halides
	Butyraldehyde	3.2	UN1129	Flammable Liquid	II	1,2	1	
	Butyraldoxime	3.3	UN2840	Flammable Liquid	III	1,2	1,2	
	n-Butyric acid	8	UN2820	Corrosive	III	1,3	1,3	Keep cool. Glass carboys in hampers prohibited under deck
	Butyric anhydride	8	UN2739	Corrosive	III	1,2	1,2	
	Butyronitrile	3.2	UN2411	Flammable Liquid, Poison	II	1,3	5	Keep cool
	Butyryl chloride	3.2	UN2353	Flammable Liquid, Corrosive	II	1	1	Keep dry. Shade from radiant heat
	Cacodylic acid	6.1	UN1572	Poison	II	1,2	5	Stow "away from" acids

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Cadmium compounds	6.1	UN2570	Poison	I/II	1.2	1.2	Stow "away from" living quarters
		6.1	UN2570	St. Andrews Cross	III	1.2	1.2	Stow "away from" living quarters
	Caesium hydroxide, solid	8	UN2682	Corrosive	II	1.2	1.2	Keep dry
	Caesium hydroxide, solution	8	UN2681	Corrosive	II	1.2	1.2

	1,1-Di-(tert-butylperoxy)-3,3,5-trimethyl cyclohexane, maximum concentration 57% in solvent	5.2	UN2146	Organic Peroxide	II	1	5	
	1,1-Di-(tert-butylperoxy)-3,3,5-trimethyl cyclohexane, maximum concentration 58% with inert solid	5.2	UN2147	Organic Peroxide	II	1	5	
	Diethyl peroxydicarbonate maximum concentration 42% stable dispersion in water	5.2	UN2205	Organic Peroxide	II	1	5	Control temperature 25 deg C Emergency temperature 30 deg C
	Diethyl peroxydicarbonate, technical pure	5.2	UN2154	Organic Peroxide	II	1	5	Control temperature 20 deg C Emergency temperature 25 deg C
	Dichloroacetic acid	8	UN1764	Corrosive	II	1.2	1.2	Glass carboy in hampers not permitted under deck
	1,3-Dichloroacetone	6.1	UN2649	Poison	II	1.3	1	Keep cool Stow "away from" living quarters
	Dichloroacetyl chloride	8	UN1765	Corrosive	II	1	5	Keep dry
	Dichloroanilines	6.1	UN1590	Poison	II	1.2	1.2	Stow "away from" acids
	o-Dichlorobenzene	6.1	UN1591	St. Andrews Cross	III	1.2	1.2	
	p-Dichlorobenzene	6.1	UN1592	St. Andrews Cross	III	1.2	1.2	
	Di-(4-chlorobenzoyl) peroxide, maximum concentration 52% as a paste	5.2	UN2114	Organic Peroxide	II	1	5	
	Di-(4-chlorobenzoyl) peroxide, maximum concentration 52% in solution	5.2	UN2115	Organic Peroxide	II	1	5	
	Di-(4-chlorobenzoyl) peroxide, maximum concentration 75% with water	5.2	UN2113	Organic Peroxide	II	1	5	
	Dichlorodifluoromethane	2.2	UN1028	Nonflammable Gas	–	1.2	1.2	
	Dichlorodifluoromethane and difluoroethane, azeotropic mixture, with approximately 74% dichlorodifluoromethane	2.2	UN2602	Nonflammable Gas	–	1.2	1.2	
	Dichlorodimethyl ether, symmetrical	6.1	UN2249	Poison Flammable, Liquid	I	1	5	Stow "away from" living quarters
	1,1-Dichloroethane	3.2	UN2362	Flammable Liquid	II	1.2	1	
	Dichloroethylene	3.2	UN1150	Flammable Liquid	II	1.2	1	
	Dichloroethyl ether	6.1	UN1916	Poison	II	1.2	1.2	
	Dichloroisocyanuric acid, dry or Dichloroisocyanuric acid salts	5.1	UN2465	Oxidizer	II	1.2	1.2	
	Dichloroisopropyl ether	6.1	UN2490	Poison	II	1.2	1	
	Dichloromethane	6.1	UN1593	St. Andrews Cross	III	1.2	1.2	Shade from radiant heat
	Dichloromonofluoromethane	2.2	UN1029	Nonflammable Gas	–	1.2	1.2	
	1,1-Dichloro-1-nitroethane	6.1	UN2650	Poison	II	1.3	1.3	Keep cool Stow "away from" living quarters
	Dichloropentanes	3.3	UN1152	Flammable Liquid	II	1.2	1.2	
	Dichlorophenyl isocyanates	6.1	UN2250	Poison	II	1.3	1.3	Shade from radiant heat Stow "away from" living quarters
	Dichlorophenyl trichlorosilane	8	UN1766	Corrosive	II	1	1	Keep dry
	1,3-Dichloropropanol-2	6.1	UN2750	Poison	II	1.3	1.3	Keep cool Stow "away from" living quarters
	Dichloropropene	3.3	UN2047	Flammable Liquid	II	1.2	1.2	
	Dichlorosilane	2.3	UN2189	Poison Gas Flammable Gas	–	1	5	Stow "away from" living quarters
	Dichlorotetrafluoroethane	2.2	UN1958	Nonflammable Gas	–	1.2	1.2	
	Dicumyl peroxide, technical pure or with inert solid	5.2	UN2121	Organic Peroxide	II	1	5	
	Dicyclohexylamine	8	UN2565	Corrosive	III	1	5	Keep dry
	Dicyclohexylammonium nitrite	6.1	UN2687	St. Andrews Cross	III	1.2	1.2	
	Dicyclohexyl peroxydicarbonate, maximum concentration 91% with water	5.2	UN2153	Organic Peroxide	I	1	5	Control temperature 5 deg C Emergency temperature 10 deg C
	Dicyclohexyl peroxydicarbonate, technical pure	5.2	UN2152	Organic Peroxide	I	1	5	Control temperature 5 deg C Emergency temperature 10 deg C
	Dicyclopentadiene	3.3	UN2048	Flammable Liquid	III	1.2	1.2	
	Didecanoyl peroxide, technical pure	5.2	UN2120	Organic Peroxide	II	1	5	Control temperature 15 deg C Emergency temperature 20 deg C
	2,2-Di-(4,4-di-tert-butylperoxy cyclohexyl) propane, maximum concentration 42% with inert solid	5.2	UN2158	Organic Peroxide	II	1	5	
	Di-2,4-dichlorobenzoyl peroxide, maximum concentration 75% with water	5.2	UN2137	Organic Peroxide	II	1	5	
	Di-2,4-dichlorobenzoyl peroxide, maximum concentration 52% as a paste	5.2	UN2138	Organic Peroxide	II	1	5	
	Di-2,4-dichlorobenzoyl peroxide, maximum concentration 52% in solution	5.2	UN2139	Organic Peroxide	II	1	5	
	1,2-Di-(dimethylamino)-ethane	3.2	UN2372	Flammable Liquid	II	1.2	1	
	Didymium nitrate	5.1	UN1465	Oxidizer	III	1.2	1.2	
	Diethoxymethane	3.1	UN2373	Flammable Liquid	II	1.3	5	Keep cool
	3,3-Diethoxypropene	3.2	UN2374	Flammable Liquid	II	1.2	1	
	Diethylaluminum chloride	4.2	UN1101	Spontaneously Combustible	I	1	1

§ 172.102 Optional Hazardous Materials Table—*Continued*

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Diethylamine	3.1	UN1154	Flammable Liquid	II	1.3	S	Keep cool
	Diethylaminoethanol	3.3	UN2686	Flammable Liquid	III	1.2	1.2	
	3-(Diethylamino) propylamine	8	UN2684	Corrosive, Flammable Liquid	III	1.2	1.2	Segregation same as for flammable liquids
	N,N-Diethylaniline	6.1	UN2432	St. Andrews Cross	III	1.2	1.2	
	Diethylbenzene	3.3	UN2049	Flammable Liquid	II	1.2	1.2	
	Diethylcarbinol	3.3	UN2706	Flammable Liquid	II	1.2	1.2	
	Diethyl carbonate	3.3	UN2366	Flammable Liquid	II	1.2	1.2	
	Diethyl dichlorosilane	8	UN1767	Corrosive, Flammable Liquid	II	1	1	Keep dry. Separate longitudinally by an intervening compartment or hold from explosives. Segregation same as for flammable liquids
	N,N-Diethylethylene diamine	8	UN2685	Corrosive, Flammable Liquid	II	1.3	1.3	Keep cool. Segregation same as for flammable liquids
N	Diethyleneglycol dinitrate, desensitized with not less than 25% non-volatile water-insoluble phlegmatizer, by weight	1.1D	UN0075	Explosive (1.1D)	–	–	–	
	Diethylenetriamine	8	UN2079	Corrosive	II	1.2	1.2	Stow "away from" acids, copper and copper alloys, and living quarters. "Separated from" nitric acid
	Diethyl ether	3.1	UN1155	Flammable Liquid	I	1.3	S	Keep cool
	Di-(2-ethylhexyl) peroxydicarbonate, maximum concentration 77% in solution	5.2	UN2123	Organic Peroxide	II	1	S	Control temperature -15 deg C. Emergency temperature -5 deg C
	Di-(2-ethylhexyl) peroxydicarbonate, maximum concentration 32%, stable dispersion in water	5.2	UN2950	Organic Peroxide	II	1	S	Control temperature -10 deg C. Emergency temperature 0 deg C
	Di-(2-ethylhexyl) peroxydicarbonate, technical pure	5.2	UN2122	Organic Peroxide	II	1	S	Control temperature -20 deg C. Emergency temperature -10 deg C
	Diethyl ketone	3.2	UN1156	Flammable Liquid	II	1.2	1	
	Diethylmagnesium	4.2	UN1367	Spontaneously Combustible	I	1	S	Prohibited on any ship carrying explosives (except explosives in Division 1.4, Compatibility Group S)
	Diethyl-p-nitrosoaniline	4.2	–	Spontaneously Combustible	–	1.2	S	Stow "away from" foodstuff
	Diethyl peroxydicarbonate, maximum concentration 27% in solution	5.2	UN2175	Organic Peroxide	II	1	S	Control temperature -10 deg C. Emergency temperature 0 deg C
	Diethyl sulfide	3.2	UN2375	Flammable Liquid, Poison	II	1.3	S	Keep cool and dry
	Diethyl sulphate	6.1	UN1594	Poison	II	1	1	
	Diethylthiophosphoryl chloride	8	UN2751	Corrosive, Flammable Liquid	II	1	S	Keep cool and dry. Segregation same as for flammable liquids
	Diethylzinc	4.2	UN1366	Spontaneously Combustible	I	1	S	Prohibited on any ship carrying explosives (except explosives in Division 1.4, Compatibility Group S)
	1,1-Difluoroethane	2.1	UN1030	Flammable Gas	–	1.2	1	Stow "away from" living quarters
	1,1-Difluoroethylene	2.1	UN1959	Flammable Gas	–	1.2	S	Stow "away from" living quarters
	Difluoromonochloroethane. See Chlorodifluoroethanes							
	Difluorophosphoric acid, anhydrous	8	UN1768	Corrosive	II	1.2	1.2	
	2,2-Dihydroperoxy propane, maximum concentration 25% with inert inorganic solid	5.2	UN2178	Organic Peroxide	II	1	S	
	2,3-Dihydropyran	3.2	UN2376	Flammable Liquid	II	1.2	1	
	Di-(1-hydroxy cyclohexyl) peroxide, technical pure	5.2	UN2148	Organic Peroxide	II	1	S	
	Diisobutylamine	3.3	UN2361	Flammable Liquid	II	1.2	1.2	
	Diisobutylene, (isomeric compounds)	3.2	UN2050	Flammable Liquid	II	1.2	1	
	Diisobutyl ketone	3.3	UN1157	Flammable Liquid	III	1.2	1.2	
	Diisooctyl acid phosphate	8	UN1902	Corrosive	III	1.2	1.2	Glass carboys in hampers not permitted under deck
	Diisopropylamine	3.2	UN1158	Flammable Liquid	II	1.2	1	
	Diisopropylbenzene hydroperoxide, maximum concentration 72% in solution	5.2	UN2171	Organic Peroxide	II	1	S	
	N,N-Diisopropyl ethanolamine	8	UN2925	Corrosive	III	1.2	1.2	Stow "away from" caustic alkalis
	Diisopropyl ether	3.1	UN1159	Flammable Liquid	II	1.3	S	Keep cool
	Diisopropyl peroxydicarbonate, technical pure	5.2	UN2133	Organic Peroxide	II	1	S	Control temperature -15 deg C. Emergency temperature -5 deg C
	Diisopropyl peroxydicarbonate, maximum concentration 52% in solution	5.2	UN2134	Organic Peroxide	II	1	S	Control temperature -10 deg C. Emergency temperature 0 deg C
	Diisotridecyl peroxydicarbonate, technical pure	5.2	UN2969	Organic Peroxide	II	1	S	Control temperature -10 deg C. Emergency temperature 0 deg C
	Dilutene, inhibited	3.3	UN2521	Flammable Liquid	II	1.2	1.2	
	Dilauroyl peroxide, maximum concentration 42%, stable dispersion in water	5.2	UN2893	Organic Peroxide	II	1	S	
	Dilauroyl peroxide, technical pure	5.2	UN2124	Organic Peroxide	II	1	S	
	1,1-Dimethoxyethane	3.1	UN2377	Flammable Liquid	II	1.3	S	Keep cool
		3.2	UN2377	Flammable Liquid	II	1.2	1	
	1,2-Dimethoxyethane	3.2	UN2252	Flammable Liquid	II	1.2	1

	N,N-Dimethylcyclohexylamine	8	UN2264	Corrosive, Flammable Liquid	II	13	13	Keep cool. Segregation same as for Flammable liquids
	2,5-Dimethyl-2,5-di-(benzoylperoxy) hexane, *maximum concentration 82% with water*	5.2	UN2969	Organic Peroxide	II	1	5	
	2,5-Dimethyl-2,5-di-(benzoylperoxy) hexane, *maximum concentration 82% with inert solid*	5.2	UN2173	Organic Peroxide	II	1	5	
	2,5-Dimethyl-2,5-di-(benzoylperoxy) hexane, *technical pure*	5.2	UN2172	Organic Peroxide	II	1	5	
	2,5-Dimethyl-2,5-di-(tert-butylperoxy) hexane, *maximum concentration 52% with inert solid*	5.2	UN2156	Organic Peroxide	II	1	5	
	2,5-Dimethyl-2,5-di-(tert-butylperoxy) hexane, *technical pure*	5.2	UN2155	Organic Peroxide	II	1	5	
	2,5-Dimethyl-2,5-di-(tert-butylperoxy) hexyne-3, *maximum concentration 52% with inert solid*	5.2	UN2159	Organic Peroxide	II	1	5	
	2,5-Dimethyl-2,5-di-(tert-butylperoxy) hexyne-3, *technical pure*	5.2	UN2158	Organic Peroxide	II	1	5	
	Dimethyldichlorosilane	3.2	UN1162	Flammable Liquid, Corrosive	II	12	1	
	Dimethyldiethoxysilane	3.2	UN2380	Flammable Liquid	II	12	1	
	2,5-Dimethyl-2,5-di-(2-ethylhexanoylperoxy) hexane, *technical pure*	5.2	UN2157	Organic Peroxide	II	1	5	Control temperature 20 deg C. Emergency temperature 25 deg C
	2,5-Dimethyl-2,5-dihydroperoxy hexane, *maximum concentration 82% with water*	5.2	UN2174	Organic Peroxide	II	1	5	
	Dimethyldioxanes	3.2	UN2707	Flammable Liquid	II	12	1	
	Dimethyldioxanes	3.3	UN2707	Flammable Liquid	II	12	12	
	Dimethyl disulfide	3.2	UN2381	Flammable Liquid	II	12	1	
	Dimethylethanolamine	3.3	UN2051	Flammable Liquid	II	13	13	
	Dimethyl ether	2.1	UN1033	Flammable Gas	–	12	1	Stow "away from" living quarters
	N,N-Dimethylformamide	3.5	UN2265	Flammable Liquid	III	12	12	
	Dimethylhydrazine, *symmetrical*	3.2	UN2382	Flammable Liquid, Poison	I	13	5	Keep cool
	Dimethylhydrazine, *unsymmetrical*	3.2	UN1163	Flammable Liquid, Corrosive	I	12	1	Stow "separated from" corrosive liquids and oxidizers
	Dimethylmagnesium	4.2	UN1368	Spontaneously Combustible	I	1	5	Prohibited on any ship carrying explosives (except explosives in Division 1.4, Compatibility Group S)
	Dimethyl-p-nitrosoaniline. *See* p-Nitrosodimethylaniline							
	2,2-Dimethylpropane *other than pentane and isopentane*	2.1	UN2044	Flammable Gas	–	12	1	
	Dimethyl-N-propylamine	3.2	UN2266	Flammable Liquid, Corrosive	II	12	1	
	Dimethyl sulphate	6.1	UN1595	Poison	I	1	5	Stow "away from" living quarters
	Dimethyl sulphide	3.1	UN1164	Flammable Liquid	I	13	5	Keep cool
	Dimethyl thiophosphoryl chloride	8	UN2267	Corrosive	III	12	1	Keep dry. Stable from radiant heat. Glass carboys prohibited on passenger vessels
	Dimethylzinc	4.2	UN1370	Spontaneously Combustible	I	1	5	Prohibited on any ship carrying explosives (except explosives in Division 1.4, Compatibility Group S)
	Dimyristylperoxydicarbonate, *maximum concentration 22%, stable dispersion in water*	5.2	UN2892	Organic Peroxide	II	1	5	Control temperature 20 deg C. Emergency temperature 25 deg C
	Dimyristylperoxydicarbonate, *technical pure*	5.2	UN2595	Organic Peroxide	II	1	5	Control temperature 20 deg C. Emergency temperature 25 deg C
	Dinitroanilines	6.1	UN1596	Poison	II	12	12	
	Dinitrobenzenes *(o-, m-, p-)*	6.1	UN1597	Poison	II	12	12	
	Dinitro-o-cresol, *liquid*	6.1	UN1598	Poison	I	1	1	
		6.1	UN1598	Poison	II	12	1	
		6.1	UN1598	St. Andrews Cross	III	12	12	
	Dinitro-o-cresol, *solid*	6.1	UN1598	Poison	III	12	12	
		6.1	UN1598	St. Andrews Cross	III	12	12	
	Dinitrogen tetroxide. *See* Nitrogen dioxide							
N	Dinitrophenates *alkali metals, dry or wetted with less than 15% water, by weight*	1.3C	UN0077	Explosive (1.3C), Poison	–	–	–	
	Dinitrophenolates, *wetted with, by weight, at least 15% water*	4.1	UN1321	Flammable Solid, Poison	I	12	5	Stow "away from" heavy metals and their compounds

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Rules and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
N	Dinitrophenol, *dry or wetted with less than 15% water, by weight*	1.1D	UN0076	Explosive (1.1D), Poison	–	–	–	
	Dinitrophenol, *solution in water or flammable liquid*	6.1	UN1599	Poison, Flammable Liquid (only if flashpoint between 23 deg C and 61 deg C)	II	1.2	5	Stow "away from" heavy metals and their compounds. Segregation same as for flammable liquids if flash point below 61 deg C
	Dinitrophenol, *wetted with, by weight, at least 15% water*	4.1	UN1320	Flammable Solid, Poison	I	1.2	5	Stow "away from" heavy metals and their compounds and sodium compounds
N	Dinitroresorcinol, *dry or wetted with less than 15% water*	1.1D	UN0078	Explosive (1.1D)	–	–	–	
	Dinitroresorcinol, *wetted with, by weight, at least 15% water*	4.1	UN1322	Flammable Solid	I	1.2	5	Stow "away from" heavy metals and their compounds
N	Dinitrosobenzene	1.3C	UN0406	Explosive (1.3C)	–	–	–	
	Dinitrotoluenes, *molten*	6.1	UN1600	Poison	II	1.2	1.2	
	Dinitrotoluenes, *solid*	6.1	UN1600	Poison	II	1.2	1.2	
	Di-n-nonanoyl peroxide, *technical pure*	5.2	UN2130	Organic Peroxide	II	1	5	Control temperature 0 deg C. Emergency temperature 10 deg C
	Di-n-octanoyl peroxide, *technical pure*	5.2	UN2129	Organic Peroxide	II	1	5	Control temperature 10 deg C. Emergency temperature 15 deg C
	Dioxane	3.2	UN1165	Flammable Liquid	II	1.2	1	
	Dioxolane	3.2	UN1166	Flammable Liquid	II	1.2	1	
	Dipentene	3.3	UN2052	Flammable Liquid	III	1.2	1.2	
	Diperoxyazelaic acid, *maximum concentration 27%, with not less than 13% azelaic acid and not less than 53% sodium sulphate*	5.2	UN2958	Organic Peroxide	II	1	5	Control temperature 35 deg C. Emergency temperature 40 deg C
	Diphenylaminechloroarsine	6.1	UN1698	Poison	I	1	5	
	Diphenylchloroarsine	6.1	UN1699	Poison	I	1	5	Stow "away from" living quarters
	Diphenyl dichlorosilane	8	UN1769	Corrosive	II	1	1	Keep dry
	Diphenylmethane-4,4'-diisocyanate	6.1	UN2489	St. Andrews Cross	III	1.2	1.2	Stow "away from" sources of heat
	Diphenylmethyl bromide	8	UN1770	Corrosive	II	1	5	
N	Dipicryl sulfide, *dry or wetted with less than 10% water, by weight*	1.1D	UN0401	Explosive (1.1D)	–	–	–	
	Dipicryl sulphide, *wetted with, by weight, at least 10% water*	4.1	UN2852	Flammable Solid	I	1	5	
	Dipropionyl peroxide, *maximum concentration 28% in solution*	5.2	UN2132	Organic Peroxide	II	1	5	Control temperature 15 deg C. Emergency temperature 20 deg C
	Dipropylamine	3.2	UN2383	Flammable Liquid	II	1.2	1	
	Dipropyl ether	3.1	UN2384	Flammable Liquid	II	1.3	5	Keep cool
	Dipropylketone	3.3	UN2710	Flammable Liquid	III	1.2	1.2	
	Di-n-propyl peroxydicarbonate, *technical pure*	5.2	UN2176	Organic Peroxide	I	1	5	Control temperature -25 deg C. Emergency temperature -15 deg C

	Lithium hydroxide, solution	8	UN2679	Corrosive	II	1.2	1.2	Glass carboys not permitted under deck on passenger vessels

§ 172.102 Optional Hazardous Materials Table—*Continued*

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Lithium hypochlorite, dry or Lithium hypochlorite mixtures containing more than 39% available chlorine (9.8% available oxygen)	5.1	UN1471	Oxidizer	II	1.2	1.2	
	Lithium, metal	4.3	UN1415	Dangerous When Wet	II	1.2	5	
	Lithium nitrate	5.1	UN2722	Oxidizer	III	1.2	1.2	
	Lithium nitride	4.3	UN2806	Dangerous When Wet	I	1.2	5	
	Lithium peroxide	5.1	UN1472	Oxidizer	II	1.2	1.2	Keep dry
	Lithium silicon	4.3	UN1417	Dangerous When Wet	II	1.2	1.2	
	London purple	6.1	UN1621	Poison	II	1.2	1.2	
	Lye. See Sodium hydroxide							
	Magnesium aluminum phosphide	4.3	UN1419	Dangerous When Wet	I	1.2	5	When stowed under deck, stow in a mechanically ventilated space
	Magnesium arsenate	6.1	UN1622	Poison	II	1.2	1.2	
	Magnesium bromate	5.1	UN1473	Oxidizer	II	1.2	1.2	Stow "away from" powdered metals, "separated from" ammonium compounds
	Magnesium chlorate	5.1	UN2723	Oxidizer	II	1.2	1.2	Stow "separated from" ammonium compounds and "away from" finely powdered metals
	Magnesium diamide	4.2	UN2004	Spontaneously Combustible	II	1	1	
	Magnesium diphenyl	4.2	UN2005	Spontaneously Combustible	I	1	1	
	Magnesium granules, coated containing more than 50% magnesium, particle size not less than 149 microns	4.3	UN2950	Dangerous When Wet	III	1.2	1.2	
	Magnesium hydride	4.3	UN2010	Dangerous When Wet	I	1.2	5	
	Magnesium nitrate	5.1	UN1474	Oxidizer	III	1.2	1.2	
	Magnesium or Magnesium alloys with more than 50% magnesium, in pellets, turnings or ribbon	4.1	UN1869	Flammable Solid	III	1.2	1.2	Stow "away from" liquid halogenated hydrocarbons
	Magnesium perchlorate	5.1	UN1475	Oxidizer	II	1.2	1.2	Stow "away from" powdered metals
	Magnesium peroxide	5.1	UN1476	Oxidizer	II	1.2	1.2	Keep dry
	Magnesium phosphide	4.3	UN2011	Dangerous When Wet Poison	I	1.2	5	When stowed under deck, stow in a mechanically ventilated space
	Magnesium powder or Magnesium alloys, powder containing more than 50% magnesium, nonpyrophoric	4.3	UN1418	Dangerous When Wet	II	1.2	1.2	Stow "away from" liquid halogenated hydrocarbons
	Magnesium silicide	4.3	UN2624	Dangerous When Wet	II	1.2	1	
	Magnesium silicofluoride	6.1	UN2853	St. Andrews Cross	III	1.2	1.2	Stow "away from" acids
	Maleic anhydride, solid or molten	8	UN2215	None. Package to be marked "Class 8"	III	1.2	1.2	Stow "away from" foodstuffs
	Malononitrile	6.1	UN2647	Poison	II	1.3	1.3	Keep cool. Stow "away from" living quarters
	Maneb, or Maneb preparation(s), stabilized against self heating	4.3	UN2968	Dangerous When Wet	III	1.2	1.2	Stow "away from" acids, living quarters and foodstuffs
	Maneb, or maneb preparation(s) with not less than 60% maneb	4.2	UN2210	Spontaneously Combustible Dangerous When Wet	III	1.2	1.2	Stow "away from" acids, living quarters and foodstuffs. Keep cool and dry
	Manganese ethylene-bis-dithiocarbamate. See Maneb							
	Manganese nitrate	5.1	UN2724	Oxidizer	III	1.2	1.2	
	Manganese resinate	4.1	UN1330	Flammable Solid	III	1.2	1.2	
N	Mannitol hexanitrate, containing by weight, at least 40% water or mixture of alcohol and water	1.1D	UN0133	Explosive (1.1D)	–	–	–	
	Matches, fusee	4.1	UN2254	Flammable Solid	III	1.2	1.2	
	Matches, safety	4.1	UN1944	Flammable Solid	III	1.2	1.2	
	Matches, strike anywhere	4.1	UN1331	Flammable Solid	III	1.2	1	
	Matches, wax "vesta"	4.1	UN1945	Flammable Solid	III	1.2	1	
N	Medicines, n.o.s. to be classified and labeled according to the principle hazardous constituent	–	UN1851		–			
	MEKP See Ethyl methyl ketone peroxide							
	p-Menthane hydroperoxide, technical pure	5.2	UN2125	Organic Peroxide	I	1	5	
	Mercaptans, liquid, n.o.s. or Mercaptan mixtures, liquid, n.o.s.	3.1	UN1228	Flammable Liquid	II	1.3	5	Keep cool
		3.2	UN1228	Flammable Liquid	II	1.2	1	
		3.3	UN1228	Flammable Liquid	II	1.2	1.2	
	Mercuric acetate. See Mercury acetate							
	Mercuric arsenate	6.1	UN1623	Poison	II	1.2	1.2	
	Mercuric bromide. See Mercury bromides							
	Mercuric chloride	6.1	UN1624	Poison	II	1.2	1.2	
	Mercuric cyanide. See Mercury cyanide							
	Mercuric nitrate	6.1	UN1625	Poison	II	1.2	1.2	
	Mercuric oxycyanide. See Mercury oxycyanide							
	Mercuric potassium cyanide	6.1	UN1626	Poison	I	1.2	1.2	Stow "away from" acids
	Mercuric sulphate	6.1	UN1645	Poison	II	1.2	1.2	
	Mercurol. See Mercury nucleate							
	Mercurous acetate. See Mercury acetate							
	Mercurous bromide. See Mercury bromides							

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Note and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Mercurous nitrate	6.1	UN1627	Poison	II	1,2	1,2	
	Mercurous sulphate	6.1	UN1628	Poison	II	1,2	1,2	
	Mercury acetate	6.1	UN1629	Poison	II	1,2	1,2	
	Mercury ammonium chloride	6.1	UN1630	Poison	II	1,2	1,2	
	Mercury based pesticides, liquid, flammable, toxic, n.o.s., flash-point below 23 deg C	3.2	UN2778	Flammable Liquid and Poison or St. Andrews Cross (according to toxicity)	I,II	1,2	1	
	Mercury based pesticides, liquid, toxic, flammable, n.o.s., flash-point between 23 deg C and 61 deg C	6.1	UN3011	Poison, Flammable Liquid	I	1	1	Segregation same as for flammable liquids
		6.1	UN3011	Poison, Flammable Liquid	II	1,2	1	Segregation same as for flammable liquids
		6.1	UN3011	St. Andrews Cross, Flammable Liquid	III	1,2	1,2	Segregation same as for flammable liquids
	Mercury based pesticides, liquid, toxic, n.o.s.	6.1	UN3012	Poison	I	1	1	
		6.1	UN3012	Poison	II	1,2	1	
		6.1	UN3012	St. Andrews Cross	III	1,2	1,2	
	Mercury based pesticides, solid, toxic, n.o.s.	6.1	UN2777	Poison	I,II	1,2	1,2	
		6.1	UN2777	St. Andrews Cross	III	1,2	1,2	
	Mercury benzoate	6.1	UN1631	Poison	II	1,2	1,2	
	Mercury bisulphate	6.1	UN1633	Poison	II	1,2	1,2	
	Mercury bromides	6.1	UN1634	Poison	II	1,2	1,2	
	Mercury compounds, liquid, n.o.s.	6.1	UN2024	Poison	I,II	1,2	1	
		6.1	UN2024	St. Andrews Cross	III	1,2	1	
	Mercury compounds, solid, n.o.s.	6.1	UN2025	Poison	I,II	1,2	1,2	
		6.1	UN2025	St. Andrews Cross	III	1,2	1,2	
	Mercury cyanide	6.1	UN1636	Poison	II	1,2	1,2	Stow "away from" living quarters and acids
N	Mercury fulminate, containing by weight, at least 20% water or mixture of alcohol and water	1.1A	UN0135	Explosive (1.1A)	–	–	–	
	Mercury gluconate	6.1	UN1637	Poison	II	1,2	1,2	
	Mercury iodide	6.1	UN1638	Poison	II	1,2	1,2	
	Mercury, metal	8	UN2809	Corrosive	III	1,2	1	Stow "away from" living quarters and acids
	Mercury nucleate	6.1	UN1639	Poison	II	1,2	1,2	
	Mercury oleate	6.1	UN1640	Poison	II	1,2	1,2	
	Mercury oxide	6.1	UN1641	Poison	II	1,2	1,2	
	Mercury oxycyanide	6.1	UN1642	Poison	II	1,2	1,2	Stow "away from" acids
	Mercury potassium iodide	6.1	UN1643	Poison	II	1,2	1,2	
	Mercury salicylate	6.1	UN1644	Poison	II	1,2	1,2	
	Mercury thiocyanate	6.1	UN1646	Poison	II	1,2	1,2	
	Mesityl oxide	3.3	UN1229	Flammable Liquid	II	1,2	1,2	
	Metal alkyls, n.o.s.	4.2	UN2003	Spontaneously Combustible	I	1	5	
	Metaldehyde	4.1	UN1332	Flammable Solid	III	1,2	1,2	
	Methacraldehyde	3.2	UN2396	Flammable Liquid, Poison	II	1,3	5	Keep cool
	Methacrylic acid, inhibited	8	UN2531	Corrosive	III	1	1	Keep cool. Glass carboys prohibited on passenger vessels
	Methallyl alcohol	3.3	UN2614	Flammable Liquid	II	1,2	1,2	
	Methane or Natural gases with a high methane content, compressed	2.1	UN1971	Flammable Gas	–	1,2	5	Stow "away from" living quarters
	Methane or Natural gases with a high methane content, refrigerated liquid	2.1	UN1972	Flammable Gas	–	1	5	Stow "away from" living quarters
	Methanol	3.2	UN1230	Flammable Liquid, Poison	II	1,2	1	
	Methoxymethyl isocyanate	3.2	UN2605	Flammable Liquid, Poison	I	1	5	Keep cool. Stow "away from" living quarters and sources of heat
	4-Methoxy-4-methylpentan-2-one	3.3	UN2293	Flammable Liquid	III	1,2	1,2	
	Methyl acetate	3.2	UN1231	Flammable Liquid	II	1,2	1	
	Methyl acetone	3.2	UN1232	Flammable Liquid	II	1,2	1	
	Methyl acetylene and propadiene mixture, stabilized	2.1	UN1060	Flammable Gas	–	1,2	1	Stow "away from" living quarters
	beta-Methyl acrolein. See Crotonaldehyde, inhibited							
	Methyl acrylate, inhibited	3.2	UN1919	Flammable Liquid	II	1,2	1	
	Methylal	3.1	UN1234	Flammable Liquid	II	1,3	5	Keep cool
	Methyl alcohol. See Methanol							
	Methyl allyl chloride	3.1	UN2554	Flammable Liquid	II	1,3	5	Keep cool
	Methyl aluminum sesquibromide	4.2	UN1926	Spontaneously Combustible	I	1	1	
	Methyl aluminum sesquichloride	4.2	UN1927	Spontaneously Combustible	I	1	1	
	Methylamine, anhydrous	2.1	UN1061	Flammable Gas	–	1,2	5	Stow "away from" living quarters

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Note and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Storage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Methylamine, aqueous solution	3.1	UN1235	Flammable Liquid	II	1.3	5	Keep cool. Stow "away from" mercury and its compounds
	Methylamyl acetate	3.3	UN1233	Flammable Liquid	III	1.2	1.2	
	Methyl amyl ketone. See Amyl methyl ketone							
	N-Methylaniline	6.1	UN2294	St. Andrew's Cross	III	1.2	1.2	
	Methylbenzene	6.1	UN2938	St. Andrew's Cross	III	1.2	1.2	
	alpha-Methylbenzyl alcohol	6.1	UN2937	St. Andrew's Cross	III	1.2	1.2	
	Methyl bromide	2.3	UN1062	Poison Gas	–	1.2	5	Under deck stowage permitted only if an indicating substance such as chloropicrin has been added
	Methyl bromide and chloropicrin, mixtures. See Chloropicrin and methyl bromide, mixtures							
	Methyl bromide and ethylene dibromide mixtures, liquid	6.1	UN1647	Poison	I	1	1	Stow "away from" living quarters
	Methyl bromoacetate	6.1	UN2643	Poison	II	1	5	Keep cool. Stow "away from" living quarters
	2-Methyl-1,3-butadiene. See Isoprene							
	3-Methyl butan-2-one	3.2	UN2397	Flammable Liquid	II	1.2	1	
	3-Methyl-1-butene	3.2	UN2561	Flammable Liquid	II	1.2	1	
	2-Methyl-1-butene	3.1	UN2459	Flammable Liquid	I	1.3	5	Keep cool
	2-Methyl-2-butene	3.1	UN2460	Flammable Liquid	II	1.3	5	Keep cool
	N-Methylbutylamine	3.2	UN2945	Flammable Liquid	II	1.2	1	
	Methyl-tert-butyl ether	3.2	UN2398	Flammable Liquid	II	1.2	1	
	Methyl butyrate	3.2	UN1237	Flammable Liquid	II	1.2	1	
	Methyl chloride	2.3	UN1063	Poison Gas. Flammable Gas	–	1.2	5	
	Methyl chloride and chloropicrin, mixtures. See Chloropicrin and methyl chloride, mixtures							
	Methyl chloride and methylene chloride, mixtures	2.1	UN1912	Flammable Gas	–	1.2	5	
	Methyl chloroacetate	3.3	UN2295	Flammable Liquid	II	1.2	1.2	
	Methyl chlorocarbonate. See Methyl chloroformate							
	Methyl chloroformate	3.2	UN1238	Flammable Liquid, Poison, Corrosive	I	1.2	1	
	Methylchloromethyl ether	3.1	UN1239	Flammable Liquid	II	1	5	Keep cool
	Methyl-2-chloropropionate	3.3	UN2933	Flammable Liquid	III	1.2	1.2	
	Methyl chlorosilane	3.2	UN2534	Flammable Liquid, Corrosive	I	1.2	1	
	Methyl cyanide	3.2	UN1648	Flammable Liquid, Poison	II	1.2	1	
	Methyl cyclohexane	3.2	UN2296	Flammable Liquid	II	1.2	1	
	Methyl cyclohexanol	3.3	UN2617	Flammable Liquid	III	1.2	1.2	
	Methyl cyclohexanone	3.3	UN2297	Flammable Liquid	III	1.2	1.2	
	Methyl cyclopentane	3.1	UN2298	Flammable Liquid	II	1.2	1	
	Methyl dichloroacetate	6.1	UN2299	St. Andrew's Cross	III	1.2	1.2	Stow "away from" living quarters
	Methyldichlorosilane	3.2	UN1242	Flammable Liquid, Corrosive	I	1.2	1	
	Methylene chloride. See Dichloromethane							
	Methylene 4-phenylene isocyanate. See Diphenylmethane diisocyanate							
	Methyl ethyl ether. See Ethyl methyl ether							
	Methyl ethyl ketone peroxide(s). See Ethyl methyl ketone peroxide							
	Methyl ethyl ketone. See Ethyl methyl ketone							
	2-Methyl-5-ethylpyridine	6.1	UN2300	St. Andrew's Cross	III	1.2	1.2	Stow "away from" living quarters
	Methyl fluoride	2.1	UN2454	Flammable Gas	–	1.2	5	
	Methyl formate	3.1	UN1243	Flammable Liquid	I	1.3	5	Keep cool
	2-Methylfuran	3.1	UN2301	Flammable Liquid	II	1.3	5	Keep cool
	5-Methylhexan-2-one	3.3	UN2302	Flammable Liquid	III	1.2	1.2	
	Methylhydrazine	3.2	UN1244	Flammable Liquid, Corrosive	I	1.2	1	
	Methyl iodide	6.1	UN2644	Poison	II	1.3	1.3	Keep cool. Stow "away from" living quarters
	Methyl isobutyl carbinol	3.3	UN2053	Flammable Liquid	III	1.2	1.2	
	Methyl isobutyl ketone	3.2	UN1245	Flammable Liquid	II	1.2	1	
	Methyl isocyanate or Methyl isocyanate solutions	3.2	UN2480	Flammable Liquid, Poison	I	1	5	Keep cool. Stow "away from" living quarters and sources of heat
	Methyl isopropenyl ketone, inhibited	3.2	UN1246	Flammable Liquid	II	1.2	1	
	Methyl isothiocyanate	3.2	UN2477	Flammable Liquid, Poison	II	1	5	Keep cool. Stow "away from" living quarters and sources of heat
	Methylisovalerate	3.2	UN2400	Flammable Liquid	II	1.2	1	
	Methyl magnesium bromide, in ethyl ether	4.2	UN1928	Spontaneously Combustible	I	1	5	
	Methylmercaptan	2.1	UN1064	Flammable Gas	–	1.2	1

(1) Note and Symbols	(2) Hazardous Material's Description and Proper Shipping Name	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Storage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Methyl methacrylate, monomer, inhibited	3.2	UN1247	Flammable Liquid	II	1.2	1	
	Methylmorpholine		UN2535	Flammable Liquid Corrosive	II	1.2	1	
		3.3	UN2535	Flammable Liquid, Corrosive	II	1.2	1.2	
	Methyl nitrite - Carriage Forbidden							
	Methyl orthosilicate	3.2	UN2606	Flammable Liquid, Poison	II	1.3	5	Keep cool
	Methylpentadiene	3.1	UN2461	Flammable Liquid	II	1.3	5	Keep cool
	Methylpentanes	3.1	UN2462	Flammable Liquid	II	1.3	5	Keep cool
	2-Methylpentan-2-ol	3.3	UN2560	Flammable Liquid	III	1.2	1.2	
	Methylphenyldichlorosilane	3.3	UN2437	Flammable Liquid, Corrosive	II	1	1	
	1-Methylpiperidine	3.2	UN2399	Flammable Liquid	II	1.2	1	
	Methyl propionate	3.2	UN1248	Flammable Liquid	II	1.2	1	
	Methyl propyl ether	3.1	UN2612	Flammable Liquid	II	1.3	5	Keep cool
	Methyl propyl ketone	3.2	UN1249	Flammable Liquid	II	1.2	1	
	Methyl sulphide. See Dimethyl sulfide							
	Methyltetrahydrofuran	3.1	UN2536	Flammable Liquid	II	1.2	1	
	Methyl trichloroacetate	6.1	UN2533	St. Andrews Cross	III	1.2	1.2	
	Methyltrichlorosilane	3.2	UN1250	Flammable Liquid, Corrosive	II	1.2	1	
	alpha-Methyl valeraldehyde	3.3	UN2367	Flammable Liquid	III	1.2	1.2	
	Methyl vinyl ketone	3.2	UN1251	Flammable Liquid	II	1.2	1	
N	Mines, with bursting charge	1.1D	UNC137	Explosive (1.1D)	-	-	-	
N	Mines, with bursting charge	1.2D	UNC138	Explosive (1.2D)	-	-	-	
N	Mines, with bursting charge	1.1F	UNC136	Explosive (1.1F)	-	-	-	
N	Mines, with bursting charge	1.2F	UNC254	Explosive (1.2F)	-	-	-	
	Mixed acid, spent. See Acid mixtures, spent, nitrating							
	Molybdenum pentachloride	8	UN2508	Corrosive	III	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Monochlorodifluoromethane. See Chlorodifluoromethane							
	Monochloropentafluoroethane. See Chloropentafluoroethane							
	Monochlorotetrafluoroethane. See Chlorotetrafluoroethane							
	Monochlorotrifluoromethane. See Chlorotrifluoromethane							
	Monoethanolamine. See Ethanolamine and solutions thereof							
	Monoethylamine. See Ethylamine							
	Monomethylamine, anhydrous. See Methylamine, anhydrous							
	Monomethylamine, aqueous solution. See Methylamine, aqueous solution							
	Mononitrotoluidines	6.1	UN2660	St. Andrews Cross	III	1.2	1.2	
	Monopropylamine	3.1	UN1277	Flammable Liquid	II	1.2	5	
	Morpholine	3.3	UN2054	Flammable Liquid	II	1.2	1.2	
	Motor fuel anti-knock mixtures	6.1	UN1649	Poison, Flammable Liquid (only if flashpoint below 61 deg C)	I	1	5	If flashpoint below 61 deg C segregation same as for flammable liquids. Stow "away from" living quarters
	Motor fuel, n.o.s.	3.1	UN1203	Flammable Liquid	II	1.3	5	Keep cool
	Motor spirit. See Gasoline							
	Muriatic acid. See Hydrochloric acid							
	Naphthalene, crude or refined	4.1	UN1334	Flammable Solid	III	1.2	1.2	
	Naphtha, petroleum	3.2	UN1255	Flammable Liquid	II	1.2	1	
	Naphtha, solvent	3.2	UN1256	Flammable Liquid	II	1.2	1	
	Naphthylamine (alpha)	6.1	UN2077	St. Andrews Cross	III	1.2	1.2	
	Naphthylamine (beta)	6.1	UN1650	Poison	II	1.2	1.2	
	alpha-Naphthylthiourea	6.1	UN1651	Poison	II	1.2	1.2	
	Naphthylurea	6.1	UN1652	Poison	II	1.2	1.2	
	Naphthalene, molten	4.1	UN2304	Flammable Solid	III	1	1	
	Natural gases with a high methane content. See Methane or natural gases, etc							
	Natural gasoline. See Casinghead gasoline							
	Neohexane. See Dimethyl butane							
	Neon, compressed	2.2	UN1065	Nonflammable Gas	-	1.2	1.2	
	Neon, refrigerated liquid	2.2	UN1913	Nonflammable Gas	-	1.2	1	
	Nickel carbonyl	6.1	UN1259	Poison, Flammable Liquid	I	1	5	Keep cool. Prohibited on any ship carrying explosives except explosives in Division 1.4, Compatibility Group S. Shade from radiant heat. Segregation same as for flammable liquids
	Nickel catalyst, dry, precipitated on a carrier with a special activator	4.2	UN2881	Spontaneously Combustible	II	1.2	1	
	Nickel catalyst, wetted with not less than 40% water or other suitable liquid, by weight, finely divided, activated or spent	4.2	UN1378	Spontaneously Combustible	II	1.2	1	

§ 172.102 Optional Hazardous Materials Table—Continued

		6.1	UN1655	St. Andrews Cross	III	1.2	1.2	
	Nicotine hydrochloride, or Nicotine hydrochloride solutions	6.1	UN1656	Poison	II	1.2	1.2	
	Nicotine salicylate	6.1	UN1657	Poison	II	1.2	1.2	
	Nicotine sulphate, solid or solution	6.1	UN1658	Poison	II	1.2	1.2	
	Nicotine tartrate	6.1	UN1659	Poison	II	1.2	1.2	
	Nitrate of soda and potash, mixture. See Sodium nitrate and potash, mixture							
	Nitrates, inorganic, n.o.s.	5.1	UN1477	Oxidizer	II	1.2	1.2	Stow "away from" powdered metals
	Nitrating acid, mixtures	8	UN1796	Corrosive, Oxidizer [not required if nitric acid content not more than 50%]	II	1	5	Stow "away from" fluorides
	Nitric acid, other than red fuming, all concentrations	8	UN2031	Corrosive	II	1	5	Stow "separated from" diethylene triamine. Stow "away from" hydrazine, fluorides, and all other corrosives except sulphuric acid and sulphur trioxide
	Nitric acid, red fuming	8	UN2032	Corrosive, Oxidizer, Poison	I	1	5	Stow "separated from" diethylene triamine. Stow "away from" hydrazine, fluorides and all other corrosives except sulphuric acid and sulphur trioxide
	Nitric oxide	2.3	UN1660	Poison Gas	–	1	5	
	Nitric oxide and nitrogen tetroxide mixtures	2.3	UN1975	Poison Gas, Oxidizer	–	1	5	Stow "away from" organic materials
	Nitrites, inorganic, n.o.s.	5.1	UN2627	Oxidizer	II	1.2	1.2	Stow "separated from" ammonium compounds and cyanides and "away from" powdered metals and foodstuffs
	Nitroanilines (o-, m-, p-)	6.1	UN1661	Poison	II	1.2	1.2	
	Nitroanisoles	6.1	UN2730	St. Andrews Cross	III	1.3	1.3	Keep cool
	Nitrobenzene	6.1	UN1662	Poison	II	1.2	1.2	Stow "away from" living quarters
	Nitrobenzenesulphonic acid	8	UN2305	Corrosive	II	1.2	1.2	
	Nitrobenzol. See Nitrobenzene							
N	5-Nitrobenzotriazol	1.1D	UN0385	Explosive (1.1D)	–	–	–	
	Nitrobenzotrifluorides	6.1	UN2306	Poison	II	1.2	1.2	Stow "away from" living quarters
	Nitrobromobenzenes	6.1	UN2732	St. Andrews Cross	III	1.3	1.3	Keep cool
	Nitrocellulose, containing at least 25% alcohol, by weight, and not exceeding 12.6% nitrogen by dry weight	4.1	UN2556	Flammable Solid	I	1	5	Shade from radiant heat. Keep away from heat and open flame
	Nitrocellulose, containing at least 25% by weight, water	4.1	UN2555	Flammable Solid	II	1	5	Shade from radiant heat. Keep away from heat and open flame
	Nitrocellulose, containing at least 18% plasticizing substance, by weight, and not exceeding 12.6% nitrogen by dry weight	4.1	UN2557	Flammable Solid	I	1	1	Shade from radiant heat. Keep away from heat and open flame
N	Nitrocellulose dry or wetted with less than 25% alcohol, by weight	1.1D	UN0340	Explosive (1.1D)	–	–	–	
N	Nitrocellulose, dry or wetted with less than 25% water, by weight	1.1D	UN0340	Explosive (1.1D)	–	–	–	
	Nitrocellulose, in solution in flammable liquids	3.2	UN2059	Flammable Liquid	II	1.2	1	
		3.3	UN2059	Flammable Liquid	II	1.2	1.2	
N	Nitrocellulose, plasticized with not less than 18% plasticizing substance, by weight	1.3C	UN0343	Explosive (1.3C)	–	–	–	
N	Nitrocellulose unmodified or unplasticized with less than 18% plasticizing substance, by weight	1.1D	UN0341	Explosive (1.1D)	–	–	–	
	Nitrocellulose, wetted with, by weight, more than 40% flammable liquids	3.2	(UN2556)	Flammable Liquid	II	1.2	1	
		3.3	(UN2556)	Flammable Liquid	II	1.2	1.2	
N	Nitrocellulose, wetted with not less than 25% alcohol, by weight	1.3C	UN0342	Explosive (1.3C)	–	–	–	
	3-Nitro-4-chlorobenzotrifluoride	6.1	UN2307	Poison	II	1.2	1.2	Stow "away from" living quarters
	Nitrocresols	6.1	UN2446	St. Andrews Cross	III	1.2	1.2	Stow "away from" living quarters
	Nitroethane	3.3	UN2842	Flammable Liquid	III	1.2	1.2	
	Nitrogen, compressed	2.2	UN1066	Nonflammable Gas	–	1.2	1.2	
	Nitrogen dioxide, liquefied	2.3	UN1067	Poison Gas, Oxidizer	–	1	5	Stow "away from" foodstuffs, organic materials and living quarters
	Nitrogen, refrigerated liquid	2.2	UN1977	Nonflammable Gas	–	1.3	1.3	
	Nitrogen tetroxide. See Nitrogen dioxide							
	Nitrogen trifluoride	2.3	UN2451	Poison Gas	–	1	5	Stow "away from" living quarters and organic materials
	Nitrogen trioxide	2.3	UN2421	Poison Gas	–	1	5	Stow "away from" living quarters and readily combustible substances

For explanation of abbreviations and reference marks, see last page of this tariff.

	Organophosphorus pesticides, liquid, toxic, n.o.s.	6.1	UN3018	Poison	I	1	1	
		6.1	UN3018	Poison	II	1.2	1	
		6.1	UN3018	St. Andrews Cross	III	1.2	1.2	
	Organophosphorus pesticides solid, toxic, n.o.s.	6.1	UN2783	Poison	I II	1.2	1.2	
		6.1	UN2783	St. Andrews Cross	III	1.2	1.2	
	Organotin compounds, n.o.s.	6.1	UN2788	Poison	I II	1.2	1	Stow "away from" living quarters
		6.1	UN2788	St. Andrews Cross	III	1.2	1	
	Organotin pesticides, liquid, flammable, toxic, n.o.s., flashpoint below 23 deg C	3.2	UN2787	Flammable Liquid and Poison or St. Andrews Cross (according to toxicity)	I II	1.2	1	
	Organotin pesticides, liquid, toxic, flammable, n.o.s., flashpoint between 23 deg C and 61 deg C	6.1	UN3019	Poison, Flammable Liquid	I	1	1	Segregation same as for flammable liquids
		6.1	UN3019	Poison, Flammable Liquid	II	1.2	1	Segregation same as for flammable liquids
		6.1	UN3019	St. Andrews Cross, Flammable Liquid	III	1.2	1.2	Segregation same as for flammable liquids
	Organotin pesticides, liquid, toxic, n.o.s.	6.1	UN3020	Poison	I	1	1	
		6.1	UN3020	Poison	II	1.2	1	
		6.1	UN3020	St. Andrews Cross	III	1.2	1.2	
	Organotin pesticides, solid, toxic, n.o.s.	6.1	UN2786	Poison	I II	1.2	1.2	
		6.1	UN2786	St. Andrews Cross	III	1.2	1.2	
	Osmium tetroxide	6.1	UN2471	Poison	I	1.2	1	Stow "away from" living quarters
	Oxalates, water soluble	6.1	UN2449	St. Andrews Cross	III	1.2	1.2	
	Oxidizing substances, n.o.s.	5.1	UN1479	Oxidizer	I II III	1.2	1.2	Stow "separated from" ammonium compounds and "away from" powdered metals
	Oxygen and carbon dioxide, mixtures. See Carbon dioxide and oxygen mixtures							
	Oxygen, compressed	2.2	UN1072	Nonflammable Gas, Oxidizer	–	1.2	1.2	
	Oxygen difluoride	2.3	UN2190	Poison Gas	–	1	5	Keep dry Stow "away from" living quarters and readily combustible substances
	Oxygen, refrigerated liquid	2.2	UN1073	Nonflammable Gas, Oxidizer	–	1	5	Stow "separated from" acetylene Do not overstow
	Paints, enamels, lacquers, stains, shellac solutions, varnish, polishes, fillers liquid, lacquer base or thinners	3.2	UN1263	Flammable Liquid	II III	1.2	1	
		3.3	UN1263	Flammable Liquid	II III	1.2	1.2	
	Paper, unsaturated oil treated, *incompletely dried*	4.2	UN1379	Spontaneously Combustible	III	1.2	1.2	
	Paraformaldehyde	4.1	UN2213	None. Package to be marked "Class 4.1"	III	1.2	1.2	
	Paraldehyde	3.3	UN1264	Flammable Liquid	III	1.2	1.2	
	Pentaborane	4.2	UN1380	Spontaneously Combustible, Poison	I	1	5	
	Pentachloroethane	6.1	UN1669	Poison	II	1.2	1.2	
N	Pentaerythrite tetranitrate, wetted with *not less than 25% water by weight, or desensitized with not less than 15% phlegmatizer, by weight*	1.1D	UN0150	Explosive (1.1D)	–	–	–	
N	Pentaerythrite tetranitrate, *with not less than 7% wax, by weight*	1.1D	UN0411	Explosive (1.1D)	–	–	–	
	Pentamethylheptane	3.3	UN2286	Flammable Liquid	III	1.2	1.2	
	2,4-Pentanedione	3.3	UN2310	Flammable Liquid	III	1.2	1.2	
	Pentanes	3.1	UN1265	Flammable Liquid	I	1.3	5	Keep cool
	1-Pentol	8	UN2705	Corrosive	II	1.2	1	Stow "away from" all other corrosives
N	Pentolite, *dry or wetted with less than 15% water by weight*	1.1D	UN0151	Explosive (1.1D)	–	–	–	
	Perchlorates, inorganic, n.o.s.	5.1	UN1481	Oxidizer	II	1.2	1.2	Stow "away from" powdered metals and "separated from" ammonium compounds
	Perchloric acid, *not exceeding 50% by weight, of acid*	8	UN1802	Corrosive, Oxidizer	II	1	1	Stow "away from" hydrazine
	Perchloric acid, *over 50% and not exceeding 72% of acid*	5.1	UN1873	Oxidizer, Corrosive	I	1	5	
	Perchloroethylene. *See* Tetrachloroethylene							
	Perchloromethyl mercaptan	6.1	UN1670	Poison	I	1	5	Stow "away from" living quarters
	Perfumery products, *with flammable solvents*	3.2	UN1266	Flammable Liquid	II	1.2	1	
		3.3	UN1266	Flammable Liquid	II	1.2	1.2	
	Permanganates, inorganic, n.o.s.	5.1	UN1482	Oxidizer	II	1.2	1.2	Stow "separated from" ammonium compounds and hydrogen peroxide
	Peroxides, inorganic, n.o.s.	5.1	UN1483	Oxidizer	II	1.2	1	Stow "away from" powdered metals Keep dry
	Peroxyacetic acid, *maximum concentration 43% in acetic acid or in a mixture of acetic acid and water, with in either case not more than 6% hydrogen peroxide and not more than 1% sulphuric acid*	5.2	UN2131	Organic Peroxide, Corrosive	I	1	5	
	Pesticides, liquid, flammable, toxic, n.o.s. *Flashpoint below 23 deg C*	3.2	UN3021	Flammable Liquid and Poison or St. Andrews Cross (according to toxicity)	I II	1.2	1

	Thiocarbonyl chloride. See Thiophosgene							
	Thioglycol	6.1	UN2966	Poison	II	1,2	1,2	
	Thioglycolic acid	8	UN1940	Corrosive	II	1,2	1,2	Glass carboys in hampers prohibited under deck
	Thiolactic acid	6.1	UN2936	Poison	II	1,2	1,2	
	Thionyl chloride	8	UN1836	Corrosive	I	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Thiophene	3.2	UN2414	Flammable Liquid	II	1,2	1	
	Thiophosgene	6.1	UN2474	Poison	II	1,2	1	Stow "away from" acids and living quarters
	Thiophosphoryl chloride	8	UN1837	Corrosive	II	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Thiourea	6.1	UN2877	St. Andrews Cross	III	1,2	1,2	
	Tin chloride, fuming. *See* Stannic chloride, anhydrous							
	Tinctures, medicinal	3.2	UN1293	Flammable Liquid	II	1,2	1	
		3.3	UN1293	Flammable Liquid	III	1,2	1,2	
	Tin tetrachloride. *See* Stannic chloride, anhydrous							
	Titanium hydride	4.1	UN1871	Flammable Solid	II	1,2	5	
	Titanium *metal powder, dry mechanically produced, particle size between 3 and 53 microns, or chemically produced, particle size less than 840 microns*	4.2	UN2545	Spontaneously Combustible	II	1	5	
	Titanium *metal powder, wetted with not less than 25% water (a visible excess of water must be present) mechanically produced, particle size between 3 and 53 microns, or chemically produced, particle size less than 840 microns*	4.1	UN1352	Flammable Solid	II	1,2	5	
	Titanium sponge granules or Titanium sponge powders	4.1	UN2878	Flammable Solid	III	1	5	
	Titanium tetrachloride	8	UN1838	Corrosive	II	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Titanium trichloride mixtures, *non-pyrophoric*	8	UN2869	Corrosive	II	1,2	1,2	Keep dry
	Titanium trichloride, *pyrophoric* or Titanium trichloride *mixtures, pyrophoric*	4.2	UN2441	Spontaneously Combustible. Corrosive	II	1,2	1,2	
	Toe puffs, *nitrocellulose base*	4.1	UN1353	Flammable Solid	III	1	5	
	Toluene	3.2	UN1294	Flammable Liquid	II	1,2	1	
	Toluene diisocyanate *(TDI)*	6.1	UN2078	Poison	II	1,2	1	Shade from radiant heat. Stow "away from" living quarters
	Toluidines *(o-, m-, p-)*	6.1	UN1708	Poison	II	1,2	1,2	Stow "away from" acids
	2,4-Tolylenediamine	6.1	UN1709	St. Andrews Cross	III	1,2	1,2	
N	Torpedoes, *with bursting charge*	1.1E	UN0329	Explosive (1.1E)	–	–	–	
N	Torpedoes, *with bursting charge*	1.1F	UN0330	Explosive (1.1F)	–	–	–	
N	Tracers for ammunition	1.4G	UN0306	Explosive (1.4G)	–	1,3	1,3	

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Storage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
N	Tracers for ammunition	1.3G	UN0212	Explosive (1.3G)	–	–	–	
	Triallylamine	3.3	UN2610	Flammable Liquid	II	1,2	1,2	
	Triethyl borate	6.1	UN2609	St. Andrews Cross, Flammable Liquid (only if flashpoint below 61 deg C)	III	1,3	1,3	Keep cool and dry. Shade from radiant heat. If flashpoint below 61 deg C, segregation same as for flammable liquids
	Triazine pesticides, liquid, flammable, toxic, n.o.s., flashpoint below 23 deg C	3.2	UN2764	Flammable Liquid and Poison or St. Andrews Cross (according to toxicity)	I,II	1,2	1	
	Triazine pesticides, liquid, toxic, flammable, n.o.s., flashpoint between 23 deg C and 61 deg C	6.1	UN2997	Poison, Flammable Liquid	I	1	1	Segregation same as for flammable liquids
		6.1	UN2997	Poison, Flammable Liquid	II	1,2	1	Segregation same as for flammable liquids
		6.1	UN2997	St. Andrews Cross, Flammable Liquid	III	1,2	1,2	Segregation same as for flammable liquids
	Triazine pesticides, liquid, toxic, n.o.s.	6.1	UN2998	Poison	I	1	1	
		6.1	UN2998	Poison	II	1,2	1	
		6.1	UN2998	St. Andrews Cross	III	1,2	1,2	
	Triazine pesticides, solid, toxic, n.o.s.	6.1	UN2763	Poison	I,II	1,2	1,2	
		6.1	UN2763	St. Andrews Cross	III	1,2	1,2	
	Tributylamine	8	UN2542	Corrosive	III	1,2	1,2	
	Trichloroacetic acid, solid	8	UN1839	Corrosive	II	1,2	1,2	Keep dry
	Trichloroacetic acid, solutions	8	UN2564	Corrosive	II	1,2	1	Glass carboys in hampers prohibited under deck
	Trichloroacetyl chloride	8	UN2442	Corrosive	II	1	5	Keep dry
	Trichlorobenzenes, liquid	6.1	UN2321	St. Andrews Cross	III	1,2	1,2	Stow "away from" living quarters
	Trichlorobutene	6.1	UN2322	Poison	II	1,2	1,2	Shade from radiant heat. Stow "away from" living quarters
	1,1,2,-Trichloroethane	6.1	UN2831	St. Andrews Cross	III	1,2	1,2	
	Trichloroethylene	6.1	UN1710	St. Andrews Cross	III	1,2	1,2	
	Trichloroisocyanuric acid, dry	5.1	UN2468	Oxidizer	II	1,2	1,2	Shade from radiant heat. Keep dry. Stow "separated from" nitrogen compounds
	Trichlorosilane	4.3	UN1295	Dangerous When Wet, Flammable Liquid, Corrosive	I	1	5	
	Tricresylphosphate, with more than 3% ortho isomer	6.1	UN2574	Poison	II	1,2	1,2	
	Triethylaluminium	4.2	UN1102	Spontaneously Combustible	I	1	1	
	Triethylamine	3.2	UN1296	Flammable Liquid	II	1,2	1	
	Triethylenetetramine	8	UN2259	Corrosive	II	1,2	1	Stow "separated from" nitric acid, "away from" acids, copper and copper alloys and living quarters
	Triethyl phosphite	3.3	UN2323	Flammable Liquid	III	1,2	1,2	Stow "separated from" acids
	Trifluoroacetic acid	8	UN2699	Corrosive	I	1,3	1	Keep cool. Stow "away from" all other corrosives
	Trifluorobromomethane *See* Bromotrifluoromethane							
	Trifluorochloroethane *See* Chlorotrifluoroethane							
	Trifluorochloroethylene, inhibited	2.1	UN1082	Flammable Gas	–	1,2	1	
	Trifluorochloromethane *See* Chlorotrifluoromethane							
	Trifluoroethane	2.1	UN2035	Flammable Gas	–	1,2	1	Stow "away from" living quarters
	Trifluoromethane	2.2	UN1984	Nonflammable Gas	–	1,2	1,2	
	3-Trifluoromethyl aniline	6.1	UN2948	Poison	II	1,2	1,2	
	3-Trifluoromethyl aniline	6.1	UN2942	St. Andrews Cross	III	1,2	1,2	
	Triisobutyl aluminium	4.2	UN1930	Spontaneously Combustible	I	1	1	
	Triisobutylene	3.3	UN2324	Flammable Liquid	II	1,2	1,2	
	Triisocyanatoisocyanurate of isophoronediisocyanate, solution 70%, by weight	3.3	UN2906	Flammable Liquid	III	1,2	1,2	
	Triisopropyl borate	3.3	UN2616	Flammable Liquid	II	1,2	1,2	
	Trimethylacetyl chloride	8	UN2438	Corrosive, Flammable Liquid	II	1	5	Shade from radiant heat. Segregation same as for flammable liquids
	Trimethylaluminium	4.2	UN1103	Spontaneously Combustible	I	1	1	
	Trimethylamine, anhydrous	2.1	UN1083	Flammable Gas	–	1	5	
	Trimethylamine, aqueous solutions containing not more than 30% of trimethylamine	3.2	UN1297	Flammable Liquid	II	1,2	1	Stow "away from" mercury and its compounds
	1,3,5-Trimethylbenzene	3.3	UN2325	Flammable Liquid	III	1,2	1,2	
	Trimethyl borate	3.2	UN2416	Flammable Liquid	II	1,2	1	
		3.3	UN2416	Flammable Liquid	II	1,2	1,2	
	Trimethylchlorosilane	3.2	UN1298	Flammable Liquid, Corrosive	II	1,2	1	
	Trimethylcyclohexylamine	8	UN2326	Corrosive	III	1,2	1,2	Glass carboys prohibited on passenger vessels

§ 172.102 Optional Hazardous Materials Table—Continued

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Trimethylhexamethylene diamines	8	UN2327	Corrosive	III	1,2	1,2	Glass carboys prohibited on passenger vessels
	Trimethylhexamethylene diisocyanate	6.1	UN2328	Poison	II	1,2	1	
	2,4,4-Trimethylpentyl-2-peroxy phenoxy acetate, maximum concentration 37% in solution	5.2	UN2961	Organic Peroxide	II	1	5	Control temperature -10 deg C Emergency temperature 0 deg C
	Trimethyl phosphite	3.3	UN2329	Flammable Liquid	III	1,2	1,2	
N	Trinitroaniline	1.1D	UN0153	Explosive (1.1D)	–	–	–	
N	Trinitroanisole	1.1D	UN0213	Explosive (1.1D)	–	–	–	
N	Trinitrobenzene, dry or wetted with less than 30% water by weight	1.1D	UN0214	Explosive (1.1D)	–	–	–	
N	Trinitrobenzenesulfonic acid	1.1L	UN0386	Explosive (1.1L)	–	–	–	
	Trinitrobenzene, wetted with, by weight, at least 10% water	4.1	UN1354	Flammable Solid	I	1	5	Stow "away from" heavy metals and their compounds
	Trinitrobenzene, wetted with not less than 30% water by weight	4.1	UN1354	Flammable Solid	II	1,2	5	Stow "away from" heavy metals and their compounds
N	Trinitrobenzoic acid, dry or containing, by weight, less than 30% water	1.1D	UN0215	Explosive (1.1D)	–	–	–	
	Trinitrobenzoic acid, wetted with, by weight, at least 10% water	4.1	UN1355	Flammable Solid	I	1	5	Stow "away from" heavy metals and their compounds
	Trinitrobenzoic acid, wetted with not less than 30% water, by weight	4.1	UN1355	Flammable Solid	II	1,2	5	Stow "away from" heavy metals and their compounds
N	Trinitrochlorobenzene	1.1D	UN0155	Explosive (1.1D)	–	–	–	
N	Trinitrofluorenone	1.1D	UN0387	Explosive (1.1D)	–	–	–	
N	Trinitro-m-cresol	1.1D	UN0216	Explosive (1.1D)	–	–	–	
N	Trinitronaphthalene	1.1D	UN0217	Explosive (1.1D)	–	–	–	
N	Trinitrophenetole	1.1D	UN0218	Explosive (1.1D)	–	–	–	
N	Trinitrophenol, dry or wetted with less than 30% water, by weight	1.1D	UN0154	Explosive (1.1D)	–	–	–	
	Trinitrophenol, wetted, with not less than 30% water, by weight	4.1	UN1344	Flammable Solid	II	1,2	5	Stow "away from" heavy metals and their compounds
	Trinitrophenol, wetted with not less than 10% water, by weight	4.1	UN1344	Flammable Solid	I	1	5	Stow "away from" heavy metals and their compounds
N	Trinitrophenylmethylnitramine	1.1D	UN0208	Explosive (1.1D)	–	–	–	
N	Trinitroresorcinol, containing by weight, not less than 20% water or mixture of alcohol and water	1.1D	UN0394	Explosive (1.1D)	–	–	–	
N	Trinitroresorcinol, dry or wetted with less than 20% water by weight (or mixture of alcohol and water)	1.1D	UN0219	Explosive (1.1D)	–	–	–	
N	Trinitrotoluene and hexanitrostilbene mixtures or Trinitrotoluene and trinitrobenzene mixtures	1.1D	UN0388	Explosive (1.1D)	–	–	–	
N	Trinitrotoluene, dry or wetted with less than 30% water, by weight	1.1D	UN0209	Explosive (1.1D)	–	–	–	
N	Trinitrotoluene mixtures containing trinitrobenzene and hexanitrostilbene	1.1D	UN0389	Explosive (1.1D)	–	–	–	
	Trinitrotoluene, wetted with, by weight, at least 10% water	4.1	UN1356	Flammable Solid	I	1	5	Stow "away from" heavy metals and their compounds
	Trinitrotoluene, wetted with not less than 30% water by weight	4.1	UN1356	Flammable Solid	II	1,2	5	Stow "away from" heavy metals and their compounds
	Tripropylaluminum	4.2	UN2718	Spontaneously Combustible	I	1	5	
	Tripropylamine	3.3	UN2260	Flammable Liquid, Corrosive	II	1,2	1,2	
	Tripropylene	3.2	UN2057	Flammable Liquid	II	1,2	1	
		3.3	UN2057	Flammable Liquid	II	1,2	1,2	
	Tris-(1-aziridinyl)phosphine oxide, solution	6.1	UN2501	Poison	II	1,2	1,2	Stow "away from" living quarters
N	Tritonal	1.1D	UN0390	Explosive (1.1D)	–	–	–	
	Tungsten hexafluoride	2.3	UN2196	Poison Gas	–	1	5	
	Turpentine	3.3	UN1299	Flammable Liquid	III	1,2	1,2	
	Turpentine substitute	3.2	UN1300	Flammable Liquid	II	1,2	1	
		3.3	UN1300	Flammable Liquid	II	1,2	1,2	
	U D M H. See Dimethylhydrazine, unsymmetrical							
	Undecane	3.3	UN2330	Flammable Liquid	III	1,2	1,2	
	Urea hydrogen peroxide	5.1	UN1511	Oxidizer	III	1,2	1,2	Keep dry. Shade from radiant heat
N	Urea nitrate, dry or containing, by weight, less than 20% water	1.1D	UN0220	Explosive (1.1D)	–	–	–	
	Urea nitrate, wetted with not less than 10% water, by weight	4.1	UN1357	Flammable Solid	I	1,2	1,2	
	Urea nitrate, wetted with not less than 20% water, by weight	4.1	UN1357	Flammable Solid	II	1,2	1,2	
	Valeraldehyde	3.2	UN2058	Flammable Liquid	II	1,2	1	
	Valeryl chlorides	8	UN2502	Corrosive	II	1	1	Keep dry
	Vanadium oxytrichloride	8	UN2443	Corrosive	II	1	1	Keep dry. Stow "away from" organic compounds
	Vanadium pentoxide, non-fused form	6.1	UN2862	Poison	II	1,2	1,2	Stow "away from" living quarters
	Vanadium tetrachloride	8	UN2444	Corrosive	I	1	1	Keep dry. Glass carboys prohibited on passenger vessels
	Vanadium trichloride	8	UN2475	Corrosive	III	1,2	1,2	Keep dry
	Vanadium trioxide, non-fused form	6.1	UN2860	Poison	II	1,2	1,2	Stow "away from" living quarters
	Vanadyl sulphate	6.1	UN2931	Poison	II	1,2	1,2	Stow "away from" living quarters

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.102 Optional Hazardous Materials Table—*Continued*

(1) Notes and Symbols	(2) Hazardous Materials Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Stowage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
	Varnish. See Paints, etc							
	Vinyl acetate, *inhibited*	3.2	UN1301	Flammable Liquid	II	1,2	5	
	Vinyl bromide, *inhibited*	2.1	UN1085	Flammable Gas	–	1,2	1	Stow "away from" living quarters
	Vinyl butyrate, *inhibited*	3.2	UN2838	Flammable Liquid	II	1,2	1	
	Vinyl chloride, *inhibited*	2.1	UN1086	Flammable Gas	–	1,2	1	Stow "away from" living quarters
	Vinyl chloroacetate	6.1	UN2589	Poison, Flammable Liquid	II	1,2	1,2	Segregation same as for flammable liquids
	Vinyl ethyl ether, *inhibited*	3.1	UN1302	Flammable Liquid	I	1,3	5	Keep cool
	Vinyl fluoride, *inhibited*	2.1	UN1860	Flammable Gas	–	1,2	1	Stow "away from" living quarters
	Vinylidene chloride, *inhibited*	3.1	UN1303	Flammable Liquid	I	1,2	5	Keep cool
	Vinyl isobutyl ether, *inhibited*	3.2	UN1304	Flammable Liquid	II	1,2	1	
	Vinyl methyl ether, *inhibited*	2.1	UN1087	Flammable Gas	–	1,2	1	
	Vinyl toluenes (*mixed isomers*), *inhibited*	3.3	UN2618	Flammable Liquid	III	1,2	1,2	
	Vinyl trichlorosilane, *inhibited*	3.2	UN1305	Flammable Liquid, Corrosive	I	1,2	1	
N	Warheads, rocket, with burster or expelling charge	1.4D	UN0370	Explosive (1.4D)	–	–	–	
N	Warheads, rocket, with burster or expelling charge	1.4F	UN0371	Explosive (1.4F)	–	–	–	
N	Warheads, rocket, with bursting charge	1.1D	UN0286	Explosive (1.1D)	–	–	–	
N	Warheads, rocket, with bursting charge	1.2D	UN0287	Explosive (1.2D)	–	–	–	
N	Warheads, rocket, with bursting charge	1.1F	UN0369	Explosive (1.1F)	–	–	–	
N	Warheads, torpedo, with bursting charge	1.1D	UN0221	Explosive (1.1D)	–	–	–	
	White asbestos. See Asbestos, white							
	White phosphorus, *dry*. See Phosphorus, white or yellow, dry							
	White phosphorus, *wet*. See Phosphorus, white or yellow, in water							
	Wood alcohol. See Methanol							
	Wool waste, *wet*	4.2	UN1387	Spontaneously Combustible	III	1,2	1,2	
	Xenon	2.2	UN2036	Nonflammable Gas	–	1,2	1,2	
	Xenon, *refrigerated liquid*	2.2	UN2591	Nonflammable Gas	–	1,2	1	
	Xylenes	3.2	UN1307	Flammable Liquid	II	1,2	1	
		3.3	UN1307	Flammable Liquid	II	1,2	1,2	
	Xylenols	6.1	UN2261	Poison	II	1,2	1,2	
	Xylidines	6.1	UN1711	Poison	II	1,2	1,2	Stow "away from" acids
	Xylols. See Xylenes							
	Xylyl bromide	6.1	UN1701	Poison	II	1	5	
	Yellow phosphorus, *dry*. See Phosphorus, white or yellow, dry							
	Yellow phosphorus, *wet*. See Phosphorus, white or yellow, in water							
	Zinc arsenate or Zinc arsenite, or mixtures thereof, *solid*	6.1	UN1712	Poison	II	1,2	1,2	
	Zinc ashes	4.3	UN1435	Dangerous When Wet	III	1,2	1,2	
	Zinc bromate	5.1	UN2469	Oxidizer	III	1,2	1,2	Stow "away from" powdered metals and "separated from" ammonium compounds
	Zinc chlorate	5.1	UN1513	Oxidizer	II	1,2	1,2	Stow "away from" powdered metals, "separated from" ammonium compounds
	Zinc chloride, *anhydrous*	8	UN2331	Corrosive	III	1,2	1,2	Keep dry
	Zinc chloride, *solution*	8	UN1840	Corrosive	III	1,2	1,2	
	Zinc cyanide	6.1	UN1713	Poison	I	1,2	1,2	Stow "away from" acids
	Zinc hydrosulfite	9	UN1931	None	III	1,2	1,2	Keep dry. Stow "away from" acids
	Zinc nitrate	5.1	UN1514	Oxidizer	II	1,2	1,2	
	Zinc permanganate	5.1	UN1515	Oxidizer	II	1,2	1,2	Stow "separated from" ammonium compounds and hydrogen peroxide
	Zinc peroxide	5.1	UN1516	Oxidizer	II	1,2	1,2	Keep dry
	Zinc phosphide	4.3	UN1714	Dangerous When Wet, Poison	I	1,2	5	When stowed under deck, stow in a mechanically ventilated space
	Zinc, powder or dust, pyrophoric. See Pyrophoric metals							
	Zinc powder or zinc dust, *non-pyrophoric*	4.3	UN1436	Dangerous When Wet	II	1,2	1,2	
	Zinc resinate	4.1	UN2714	Flammable Solid	III	1,2	1,2	
	Zinc silicofluoride	6.1	UN2855	St. Andrews Cross	III	1,2	1,2	Stow "away from" acids
	Zirconium hydride	4.1	UN1437	Flammable Solid	II	1,2	5	
	Zirconium, *metal, dry, finished metal sheets, strip or coiled wire (thinner than 18 microns)*	4.2	UN2009	Spontaneously Combustible	III	1	5	
	Zirconium, *metal, dry, finished sheets, strip or coiled wire (thinner than 254 microns but not thinner than 18 microns)*	4.1	UN2858	Flammable Solid	III	1,2	1,2	
	Zirconium *metal powder, dry mechanically produced, particle size between 9 and 53 microns, or chemically produced, particle size between 10 and 840 microns*	4.2	UN2008	Spontaneously Combustible	II	1	5	
	Zirconium *metal powder, wetted with not less than 25% water (a visible excess of water must be present), mechanically produced, having a particle size less than 53 microns, or chemically produced, having a particle size less than 840 microns*	4.1	UN1358	Flammable Solid	II	1,2	5	
	Zirconium nitrate	5.1	UN2728	Oxidizer	III	1,2	1,2	Shade from radiant heat

§ 172.102 Optional Hazardous Materials Table—*Continued*

(1) Notes and Symbols	(2) Hazardous Material's Description and Proper Shipping Names	(3) IMO Class	(4) Identification Number	(5) Label(s) required	(6) Packaging Group	(7) Vessel Storage Requirements (a) Cargo vessel	(b) Passenger vessel	(c) Other requirements
N	Zirconium picramate, dry or wetted with less than 20% water, by weight	1.3C	UN0236	Explosive (1.3C)	–	–	–	
	Zirconium picramate, wetted with, by weight, at least 20% water	5.1	UN1517	Oxidizer	II	1	5	Store "away from" heavy metals and their salts
	Zirconium, scrap	4.2	UN1932	Spontaneously Combustible	III	1	5	
	Zirconium, suspended in flammable liquid	3.1	UN1308	Flammable Liquid	II	1	5	Keep cool
	Zirconium tetrachloride		UN2503	Corrosive	III	1,2	1,2	Keep dry

Appendix A—Identification Number Cross Reference to Proper Shipping Names In § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 0001	102	Alarm devices, explosive
UN 0004	102	Ammonium picrate
UN 0005	102	Cartridges for weapons
UN 0006	102	Cartridges for weapons
UN 0007	102	Cartridges for weapons
UN 0009	102	Ammunition, incendiary
UN 0010	102	Ammunition, incendiary
UN 0012	102	Cartridges for weapons
UN 0014	102	Cartridges for weapons, blank or Cartridges, safety, blank
UN 0015	102	Ammunition, smoke
UN 0016	102	Ammunition, smoke
UN 0018	102	Ammunition, tear producing
UN 0019	102	Ammunition, tear producing
UN 0020	102	Ammunition, toxic
UN 0021	102	Ammunition, toxic
UN 0027	102	Black powder
UN 0028	102	Black powder, compressed
UN 0029	102	Detonators, non-electric
UN 0030	102	Detonators, electric
UN 0033	102	Bombs
UN 0034	102	Bombs
UN 0035	102	Bombs
UN 0037	102	Bombs, photo-flash
UN 0038	102	Bombs, photo-flash
UN 0039	102	Bombs, photo-flash
UN 0042	102	Boosters
UN 0043	102	Bursters
UN 0044	102	Primers, cap type
UN 0048	102	Charges, demolition
UN 0049	102	Cartridges, flash
UN 0050	102	Cartridges, flash
UN 0054	102	Cartridges, signal

UN 1451	102	Caesium nitrate
UN 1452	101	Calcium chlorate
UN 1453	101	Calcium chlorite
UN 1454	101	Calcium nitrate
UN 1455	102	Calcium perchlorate
UN 1456	101	Calcium permanganate
UN 1457	101	Calcium peroxide
UN 1458	101	Chlorate and borate mixture
UN 1458	102	Chlorate and borate, mixtures
UN 1459	101	Chlorate and magnesium chloride mixture
UN 1459	102	Chlorate and magnesium chloride, mixture
UN 1461	101	Chlorate, n.o.s.
NA 1461	101	Chlorate, n.o.s., wet
UN 1461	102	Chlorates, inorganic, n.o.s.
UN 1462	102	Chlorites, inorganic, n.o.s.
NA 1463	101	Chromic acid mixture, dry
NA 1463	101	Chromic acid, solid
UN 1463	102	Chromium trioxide, anhydrous
UN 1465	102	Didymium nitrate
UN 1466	101	Ferric nitrate
UN 1467	101	Guanidine nitrate
UN 1469	101	Lead nitrate
UN 1470	102	Lead perchlorate
UN 1471	101	Lithium hypochlorite compound, dry
UN 1471	102	Lithium hypochlorite, dry or Lithium hypochlorite mixtures
UN 1472	101	Lithium peroxide
UN 1473	102	Magnesium bromate
UN 1474	101	Magnesium nitrate
UN 1475	101	Magnesium perchlorate
UN 1476	102	Magnesium peroxide
UN 1476	101	Magnesium peroxide, solid
NA 1477	101	Ammonium sulfate nitrate
NA 1477	101	Nitrate, n.o.s.
UN 1477	102	Nitrates, inorganic, n.o.s.
UN 1478	102	Sodium nitrate and potash, mixtures
NA 1479	101	Compound, tree or weed killing, solid
NA 1479	101	Cosmetics, n.o.s.
NA 1479	101	Cupric nitrate
NA 1479	101	Drugs, n.o.s.
UN 1479	101	Oxidizer, n.o.s. or Oxidizing material, n.o.s.
UN 1479	102	Oxidizing substances, n.o.s.
NA 1479	101	Potassium dichromate
NA 1479	101	Sodium dichromate
NA 1481	101	Perchlorate, n.o.s.
UN 1481	102	Perchlorates, inorganic, n.o.s.
NA 1482	101	Permanganate, n.o.s.
UN 1482	102	Permanganates, inorganic, n.o.s.
UN 1483	102	Peroxides, inorganic, n.o.s.
UN 1484	101	Potassium bromate
UN 1485	101	Potassium chlorate
UN 1486	101	Potassium nitrate
UN 1487	102	Potassium nitrate and sodium nitrite, mixture
UN 1487	101	Sodium nitrite mixed with potassium nitrate
NA 1487	101	Sodium nitrite mixture
UN 1488	101	Potassium nitrite
UN 1489	101	Potassium perchlorate
UN 1490	101	Potassium permanganate
UN 1491	101	Potassium peroxide

For explanation of abbreviations and reference marks, see last page of this tariff.

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 1432	102	Potassium persulphate
UN 1433	101	Silver nitrate
UN 1434	101	Sodium bromate
UN 1435	101	Sodium chlorate
UN 1436	101	Sodium chlorite
UN 1438	101	Sodium nitrate
UN 1439	102	Sodium nitrate and potassium nitrate
UN 1500	101	Sodium nitrite
UN 1502	101	Sodium perchlorate
UN 1503	101	Sodium permanganate
UN 1504	101	Sodium peroxide
UN 1505	102	Sodium persulphate
UN 1506	101	Strontium chlorate
UN 1506	101	Strontium chlorate, wet
UN 1507	101	Strontium nitrate
UN 1508	102	Strontium perchlorate
UN 1509	101	Strontium peroxide
UN 1510	101	Tetranitromethane
UN 1511	102	Urea hydrogen peroxide
NA 1511	101	Urea peroxide
UN 1512	101	Zinc ammonium nitrite
UN 1513	101	Zinc chlorate
UN 1514	101	Zinc nitrate
UN 1515	101	Zinc permanganate
UN 1516	101	Zinc peroxide
UN 1517	101	Zirconium picramate, wet
UN 1517	102	Zirconium picramate, wetted
UN 1541	101	Acetone cyanohydrin
UN 1544	102	Alkaloids, n.o.s. or Alkaloid salts, n.o.s.
UN 1545	102	Allyl isothiocyanate
UN 1546	102	Ammonium arsenate
UN 1546	101	Ammonium arsenate, solid
UN 1547	102	Aniline
UN 1547	101	Aniline oil, liquid
UN 1548	102	Aniline hydrochloride
UN 1549	102	Antimony compounds, inorganic, n.o.s.
NA 1549	101	Antimony tribromide, solid
NA 1549	101	Antimony tribromide solution
NA 1549	101	Antimony trifluoride, solid
NA 1549	101	Antimony trifluoride solution
UN 1550	102	Antimony lactate
UN 1550	101	Antimony lactate, solid
UN 1551	102	Antimony potassium tartrate
UN 1551	101	Antimony potassium tartrate, solid
UN 1553	102	Arsenic acid, liquid
UN 1553	101	Arsenic acid solution
UN 1554	101	Arsenic acid, solid
UN 1555	102	Arsenic bromide
UN 1555	101	Arsenic bromide, solid
UN 1556	101	Arsenical compound, liquid, n.o.s., or Arsenical mixture, liquid, n.o.s.
UN 1556	102	Arsenic compounds, liquid, n.o.s.
NA 1556	101	Methyldichloroarsine
NA 1556	101	Phenyldichloroarsine
UN 1557	101	Arsenical compound, solid, n.o.s., or Arsenical mixture, solid, n.o.s.
NA 1557	101	Arsenical dip, liquid
UN 1557	102	Arsenic compounds, solid, n.o.s.
NA 1557	101	Arsenic iodide, solid
NA 1557	101	Arsenic sulfide, solid
NA 1557	101	Arsenic trisulfide
UN 1558	102	Arsenic
UN 1558	101	Arsenic, solid
UN 1559	102	Arsenic pentoxide
UN 1559	101	Arsenic pentoxide, solid
UN 1560	102	Arsenic trichloride
UN 1560	101	Arsenic trichloride, liquid
UN 1561	102	Arsenic trioxide
UN 1561	101	Arsenic trioxide, solid
UN 1562	101	Arsenical dust
UN 1564	102	Barium compounds, n.o.s.
UN 1565	102	Barium cyanide
UN 1565	101	Barium cyanide, solid
NA 1566	101	Beryllium chloride
UN 1566	101	Beryllium compound, n.o.s.
UN 1566	102	Beryllium compounds
NA 1566	101	Beryllium fluoride
UN 1567	102	Beryllium
UN 1569	102	Bromoacetone
UN 1569	101	Bromoacetone, liquid
UN 1570	102	Brucine
UN 1570	101	Brucine, solid
UN 1571	101	Barium azide, wet
UN 1571	102	Barium azide, wetted
UN 1572	102	Cacodylic acid
UN 1573	102	Calcium arsenate
UN 1573	101	Calcium arsenate, solid
UN 1574	102	Calcium arsenate and arsenite
NA 1574	101	Calcium arsenite, solid
UN 1575	102	Calcium cyanide
UN 1575	101	Calcium cyanide, solid or Calcium cyanide mixture, solid
UN 1577	102	Chlorodinitrobenzene
UN 1577	101	Dinitrochlorobenzene
UN 1578	102	Chloronitrobenzenes
UN 1578	101	Nitrochlorobenzene, meta or para, solid
UN 1578	101	Nitrochlorobenzene, ortho, liquid
UN 1579	101	4-Chloro-o-toluidine hydrochloride
UN 1580	102	Chloropicrin
UN 1580	101	Chloropicrin, liquid
UN 1581	102	Chloropicrin and methyl bromide
NA 1581	101	Methyl bromide and more than 2% chloropicrin mixture, liquid
UN 1582	102	Chloropicrin and methyl chloride
UN 1582	101	Chloropicrin and methyl chloride mixture
NA 1583	101	Chloropicrin, absorbed
UN 1583	101	Chloropicrin mixture
UN 1583	102	Chloropicrin mixtures, n.o.s.
UN 1584	102	Cocculus
UN 1584	101	Cocculus, solid
UN 1585	102	Copper acetoarsenite
UN 1585	101	Copper acetoarsenite, solid
UN 1586	102	Copper arsenite
UN 1586	101	Copper arsenite, solid
UN 1587	101	Copper cyanide
UN 1588	101	Cyanide or cyanide mixture, dry
UN 1588	102	Cyanides, inorganic, n.o.s.
UN 1589	101	Cyanogen chloride
UN 1590	102	Dichloroanilines
UN 1591	101	Dichlorobenzene, ortho, liquid
UN 1591	102	o-Dichlorobenzene
UN 1592	101	Dichlorobenzene, para, solid
UN 1592	102	p-Dichlorobenzene
UN 1593	102	Dichloromethane
UN 1593	101	Dichloromethane or Methylene chloride
UN 1594	102	Diethyl sulphate
UN 1595	101	Dimethyl sulfate
UN 1595	102	Dimethyl sulphate
UN 1596	102	Dinitroanilines
UN 1597	102	Dinitrobenzenes
UN 1597	101	Dinitrobenzene, solid, or Dinitrobenzol, solid
UN 1597	101	Dinitrobenzene solution
UN 1598	102	Dinitro-o-cresol
UN 1599	101	Dinitrophenol solution
UN 1599	102	Dinitrophenol, solution
UN 1600	101	Dinitrotoluene, liquid
UN 1600	102	Dinitrotoluenes, molten
UN 1601	101	Disinfectant, liquid
UN 1601	102	Disinfectants, n.o.s.
UN 1601	101	Disinfectant, solid
UN 1602	102	Dyes, n.o.s. or Dye intermediates, n.o.s.
UN 1603	102	Ethyl bromoacetate
UN 1604	101	Ethylenediamine
UN 1605	101	Ethylene dibromide
UN 1606	102	Ferric arsenate
UN 1606	101	Ferric arsenate, solid
UN 1607	102	Ferric arsenite
UN 1607	101	Ferric arsenite, solid
UN 1608	102	Ferrous arsenate
UN 1608	101	Ferrous arsenate, solid
UN 1610	102	Halogenated irritating liquids, n.o.s.
UN 1611	102	Hexaethyl tetraphosphate
UN 1611	101	Hexaethyl tetraphosphate, liquid
UN 1612	102	Hexaethyl tetraphosphate and compressed gas
UN 1612	101	Hexaethyl tetraphosphate and compressed gas mixture
UN 1613	102	Hydrocyanic acid, aqueous solutions
UN 1613	101	Hydrocyanic acid solution
UN 1613	101	Hydrocyanic acid solution, less than 5% hydrocyanic acid
UN 1614	102	Hydrogen cyanide, anhydrous, stabilized
UN 1616	101	Lead acetate
UN 1617	102	Lead arsenates
UN 1617	101	Lead arsenate, solid
UN 1618	102	Lead arsenites
UN 1618	101	Lead arsenite, solid
UN 1620	101	Lead cyanide
UN 1621	102	London purple
UN 1621	101	London purple, solid
UN 1622	102	Magnesium arsenate
UN 1622	101	Magnesium arsenate, solid
UN 1623	102	Mercuric arsenate
UN 1624	102	Mercuric chloride
UN 1624	101	Mercuric chloride, solid
UN 1625	101	Mercuric nitrate
UN 1626	102	Mercuric potassium cyanide
UN 1626	101	Mercuric potassium cyanide, solid
UN 1627	102	Mercurous nitrate
UN 1627	101	Mercurous nitrate, solid
UN 1628	101	Mercurous sulfate, solid
UN 1628	102	Mercurous sulphate
UN 1629	101	Mercuric acetate
UN 1629	101	Mercurous acetate, solid
UN 1629	102	Mercury acetate
UN 1630	101	Mercuric ammonium chloride, solid
UN 1630	102	Mercury ammonium chloride
UN 1631	101	Mercuric benzoate, solid
UN 1631	102	Mercury benzoate
UN 1633	102	Mercury bisulphate
UN 1634	101	Mercuric bromide, solid
UN 1634	101	Mercurous bromide, solid
UN 1634	102	Mercury bromides
UN 1636	101	Mercuric cyanide, solid
UN 1636	102	Mercury cyanide
UN 1637	101	Mercurous gluconate, solid
UN 1637	102	Mercury gluconate
UN 1638	101	Mercuric iodide, solid
UN 1638	101	Mercuric iodide, solution
UN 1638	101	Mercurous iodide, solid
UN 1638	102	Mercury iodide
UN 1639	101	Mercurol or Mercury nucleate, solid
UN 1639	102	Mercury nucleate
UN 1640	101	Mercuric oleate, solid
UN 1640	102	Mercury oleate
UN 1641	101	Mercuric oxide, solid
UN 1641	101	Mercurous oxide, black, solid
UN 1641	102	Mercury oxide
UN 1642	101	Mercuric oxycyanide, solid
UN 1642	102	Mercury oxycyanide
UN 1643	101	Mercuric potassium iodide, solid
UN 1643	102	Mercury potassium iodide
UN 1644	101	Mercuric salicylate solid
UN 1644	102	Mercury salicylate
UN 1645	101	Mercuric sulfate, solid
UN 1645	102	Mercuric sulphate
UN 1646	101	Mercuric sulfocyanate, solid or Mercuric thiocyanate, solid
UN 1646	102	Mercury thiocyanate
UN 1647	102	Methyl bromide and ethylene dibromide mixtures, liquid
UN 1647	101	Methyl bromide - ethylene dibromide mixture, liquid
NA 1648	101	Acetonitrile
UN 1648	102	Methyl cyanide
UN 1649	101	Motor fuel antiknock compound or Antiknock compound
UN 1649	102	Motor fuel anti knock mixtures
NA 1649	101	Tetraethyl lead, liquid
UN 1650	102	Naphthylamine
UN 1651	102	alpha Naphthylthiourea
UN 1652	102	Naphthylurea
UN 1653	102	Nickel cyanide
UN 1653	101	Nickel cyanide, solid
UN 1654	102	Nicotine
UN 1654	101	Nicotine, liquid
UN 1655	102	Nicotine compounds, n.o.s. or Nicotine preparations, n.o.s.
UN 1656	101	Nicotine hydrochloride
UN 1656	102	Nicotine hydrochloride, or Nicotine hydrochloride solutions
UN 1657	101	Nicotine salicylate
UN 1658	101	Nicotine sulfate, liquid
UN 1658	101	Nicotine sulfate, solid
UN 1658	102	Nicotine sulphate, solid or solution
UN 1659	101	Nicotine tartrate
UN 1660	101	Nitric oxide
UN 1661	101	Nitroaniline
UN 1661	102	Nitroanilines
UN 1662	102	Nitrobenzene
UN 1662	101	Nitrobenzene, liquid or Nitrobenzol, liquid

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 1663	101	Nitrophenol
UN 1663	102	Nitrophenols
UN 1664	101	Nitrotoluene
UN 1664	102	Nitrotoluenes
UN 1665	102	Nitroxylenes
NA 1665	101	Nitroxylol
UN 1669	102	Pentachloroethane
UN 1670	101	Perchloromethyl mercaptan
UN 1671	101	Phenol
UN 1672	102	Phenylcarbylamine chloride
UN 1673	101	Phenylenediamine, meta or para, solid
UN 1673	102	Phenylenediamines
UN 1674	102	Phenylmercuric acetate
UN 1677	102	Potassium arsenate
UN 1677	101	Potassium arsenate, solid
UN 1678	102	Potassium arsenite
UN 1678	101	Potassium arsenite, solid
UN 1679	102	Potassium cuprocyanide
UN 1680	102	Potassium cyanide
UN 1680	101	Potassium cyanide, solid
UN 1680	101	Potassium cyanide solution
UN 1681	102	Rodenticides, n.o.s.
UN 1683	102	Silver arsenite
UN 1684	101	Silver cyanide
UN 1685	101	Sodium arsenate
UN 1686	102	Sodium arsenite, aqueous solutions
UN 1686	101	Sodium arsenite, liquid
UN 1687	101	Sodium azide
UN 1688	102	Sodium cacodylate
UN 1689	102	Sodium cyanide
UN 1689	101	Sodium cyanide, solid
UN 1689	101	Sodium cyanide solution
UN 1690	101	Sodium fluoride, solid
UN 1690	101	Sodium fluoride, solution
UN 1691	102	Strontium arsenite
UN 1691	101	Strontium arsenite, solid
UN 1692	102	Strychnine
UN 1692	101	Strychnine salt, solid
UN 1692	101	Strychnine, solid
NA 1693	101	Irritating agent, n.o.s.
NA 1693	101	OFM-A, n.o.s.
UN 1693	102	Tear gas
NA 1693	101	Tear gas device
UN 1694	102	Bromobenzyl cyanides
UN 1695	102	Chloroacetone
UN 1695	101	Monochloroacetone, stabilized or inhibited
UN 1697	102	Chloroacetophenone
UN 1697	101	Chloroacetophenone, gas, liquid, or solid
UN 1698	101	Diphenylaminechloroarsine
UN 1699	102	Diphenylchloroarsine
UN 1700	101	Tear gas candle
UN 1700	102	Tear gas candles
UN 1701	101	Xylyl bromide
UN 1702	102	1,1,2,2-Tetrachloroethane
UN 1702	101	Tetrachloroethane
UN 1703	101	Tetraethyl dithiopyrophosphate and compressed gas mixture
UN 1703	102	Tetraethyl dithiopyrophosphate with gases
UN 1704	101	Tetraethyl dithiopyrophosphate, liquid
UN 1704	102	Tetraethyl dithiopyrophosphate, liquid or mixtures
UN 1704	101	Tetraethyl dithiopyrophosphate mixture, dry
UN 1704	101	Tetraethyl dithiopyrophosphate mixture, liquid
UN 1705	102	Tetraethyl pyrophosphate and compressed gas
UN 1705	101	Tetraethyl pyrophosphate and compressed gas mixture
UN 1707	102	Thallium compounds, n.o.s.
NA 1707	101	Thallium salt, solid, n.o.s.
NA 1707	101	Thallium sulfate, solid
UN 1708	102	Toluidines
UN 1709	102	2,4-Toluylenediamine
NA 1709	101	Toluenediamine
UN 1710	101	Trichloroethylene
UN 1711	102	Xylidines
UN 1712	101	Zinc arsenate
UN 1712	102	Zinc arsenate or Zinc arsenite, or mixtures
UN 1712	101	Zinc arsenite, solid
UN 1713	101	Zinc cyanide
UN 1714	101	Zinc phosphide

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 1715	101	Acetic anhydride
UN 1716	101	Acetyl bromide
UN 1717	101	Acetyl chloride
UN 1718	101	Acid butyl phosphate
UN 1718	102	Butyl acid phosphate
NA 1719	101	Alkaline liquid, n.o.s.
UN 1719	102	Caustic alkali liquids, n.o.s.
UN 1722	101	Allyl chloroacetate
UN 1722	102	Allyl chloroformate
UN 1723	102	Allyl iodide
UN 1724	101	Allyl trichlorosilane
UN 1725	102	Aluminium bromide, anhydrous
UN 1725	101	Aluminum bromide, anhydrous
UN 1726	102	Aluminium chloride, anhydrous
UN 1727	101	Ammonium hydrogen fluoride, solid
UN 1728	102	Amyl trichlorosilane
UN 1728	101	Amyl trichorosilane
UN 1729	101	Anisoyl chloride
UN 1730	101	Antimony pentachloride
UN 1731	102	Antimony pentachloride
UN 1731	101	Antimony pentachloride solution
UN 1732	101	Antimony pentafluoride
UN 1733	102	Antimony trichloride
UN 1733	101	Antimony trichloride, solid
UN 1733	101	Antimony trichloride solution
UN 1736	101	Benzoyl chloride
UN 1737	101	Benzyl bromide
UN 1738	101	Benzyl chloride
UN 1739	101	Benzyl chloroformate
UN 1740	102	Bifluorides, n.o.s.
UN 1741	101	Boron trichloride
UN 1742	102	Boron trifluoride acetic acid complex
UN 1742	101	Boron trifluoride acetic acid complex
UN 1743	102	Boron trifluoride propionic acid complex
UN 1744	101	Bromine
UN 1745	101	Bromine pentafluoride
UN 1746	101	Bromine trifluoride
UN 1747	101	Butyl trichlorosilane
UN 1748	102	Calcium hypochlorite, dry or Calcium hypochlorite mixtures
UN 1748	101	Calcium hypochlorite mixture
UN 1749	101	Chlorine trifluoride
UN 1750	102	Chloroacetic acid
UN 1750	101	Chloroacetic acid, liquid or solution
UN 1751	101	Chloroacetic acid, solid
UN 1752	101	Chloroacetyl chloride
UN 1753	102	Chlorophenyl trichlorosilane
UN 1753	101	Chlorophenyltrichlorosilane
UN 1754	101	Chlorosulfonic acid
UN 1754	101	Chlorosulfonic acid-sulfur trioxide mixture
UN 1754	102	Chlorosulphonic acid
UN 1755	102	Chromic acid
UN 1755	101	Chromic acid solution
UN 1756	101	Chromic fluoride, solid
UN 1757	101	Chromic fluoride solution
UN 1757	102	Chromic fluoride, solution
UN 1758	102	Chromium oxychloride
UN 1758	101	Chromium oxychloride or Chromyl chloride
UN 1759	101	Corrosive solid, n.o.s.
UN 1759	102	Corrosive solids, n.o.s.
NA 1759	101	Cosmetics, solid, n.o.s.
NA 1759	101	Drugs, solid, n.o.s.
NA 1759	101	Ferrous chloride, solid
NA 1759	101	Stannous chloride, solid
NA 1760	101	2-(2-Aminoethoxy) ethanol
NA 1760	101	2,2-Dichloropropionic acid
NA 1760	101	Acid, liquid, n.o.s.
NA 1760	101	Aluminum phosphate solution
NA 1760	101	Aluminum sulfate solution
NA 1760	101	Aminopropyldiethanolamine
NA 1760	101	bis (Aminopropyl) piperazine
NA 1760	101	Boiler compound, liquid
NA 1760	101	Chemical kit
NA 1760	101	Compound, cleaning, liquid
NA 1760	101	Compound, rust preventing or Compound, rust removing
NA 1760	101	Compound, tree or weed killing, liquid
NA 1760	101	Compound, vulcanizing, liquid
UN 1760	101	Corrosive liquid, n.o.s.
UN 1760	102	Corrosive liquids, n.o.s.
NA 1760	101	Cosmetics, liquid, n.o.s.
NA 1760	101	Drugs, liquid, n.o.s.
NA 1760	101	Ethyl phosphonothioic dichloride, anhydrous

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
NA 1760	101	Ethyl phosphorodichloridate
NA 1760	101	Ferrous chloride, solution
NA 1760	101	Flame retardant compound liquid
NA 1760	101	Hexanoic acid
NA 1760	101	Isopentanoic acid
NA 1760	101	Memlehahydro phthalic anhydride
NA 1760	101	Methyl phosphonothioic dichloride, anhydrous
NA 1760	101	Morpholine, aqueous, mixture
NA 1760	101	N Aminopropylmorpholine
NA 1760	101	Nitric acid, 40% or less
NA 1760	101	OFM-B, n.o.s.
NA 1760	101	Paint or paint related material
NA 1760	101	Textile treating compound or mixture, liquid
NA 1760	101	Titanium sulfate solution
NA 1760	101	Valeric acid
NA 1760	101	Water treatment compounds, liquid
NA 1760	101	White acid
UN 1761	101	Cupriethylene diamine solution
UN 1761	102	Cupriethylenediamine, solution
UN 1762	101	Cyclohexenyl trichlorosilane
UN 1763	101	Cyclohexyl trichlorosilane
UN 1764	101	Dichloracetic acid
UN 1765	101	Dichloracetyl chloride
UN 1766	102	Dichlorophenyl trichlorosilane
UN 1766	101	Dichlorophenyltrichlorosilane
UN 1767	101	Diethyl dichlorosilane
UN 1768	102	Difluorophosphoric acid
UN 1768	101	Difluorophosphoric acid, anhydrous
UN 1769	101	Diphenyl dichlorosilane
UN 1770	102	Diphenylmethyl bromide
UN 1770	101	Diphenyl methyl bromide, solid
UN 1770	101	Diphenyl methyl bromide solution
UN 1771	101	Dodecyl trichlorosilane
UN 1773	102	Ferric chloride, anhydrous
UN 1773	101	Ferric chloride, solid
UN 1774	101	Fire extinguisher charge containing sulfuric acid
UN 1774	102	Fire extinguisher charges
UN 1775	101	Fluoboric acid
UN 1776	102	Fluorophosphoric acid
UN 1776	101	Monofluorophosphoric acid, anhydrous
UN 1777	101	Fluorosulfonic acid or Fluosulfonic acid
UN 1777	102	Fluorosulphonic acid
UN 1778	102	Fluosilicic acid
NA 1778	101	Hydrofluorosilicic acid
UN 1779	101	Formic acid
UN 1779	101	Formic acid solution
UN 1780	101	Fumaryl chloride
UN 1781	102	Hexadecyl trichlorosilane
UN 1781	101	Hexadecyltrichlorosilane
UN 1782	101	Hexafluorophosphoric acid
UN 1783	101	Hexamethylenediamine, solution
UN 1784	102	Hexyl trichlorosilane
UN 1784	101	Hexyltrichlorosilane
UN 1786	102	Hydrofluoric acid and sulphuric acid mixtures
UN 1786	101	Hydrofluoric and sulfuric acid mixture
UN 1787	101	Hydriodic acid
UN 1787	102	Hydriodic acid, solution
UN 1788	101	Hydrobromic acid
UN 1788	101	Hydrobromic acid not more than 49% strength
UN 1788	102	Hydrobromic acid, solution
NA 1789	101	Compound, cleaning, liquid (containing hydrochloric (muriatic) acid)
UN 1789	101	Hydrochloric acid
NA 1789	101	Hydrochloric acid mixture
UN 1789	102	Hydrochloric acid, solution
UN 1789	101	Hydrochloric acid solution, inhibited
NA 1790	101	Compound, cleaning, liquid (containing hydrofluoric acid)
NA 1790	101	Etching acid, liquid, n.o.s.
UN 1790	101	Hydrofluoric acid solution
UN 1790	102	Hydrofluoric acid, solution
UN 1791	101	Hypochlorite solution
NA 1791	101	Hypochlorite solution containing not more than 7% available chlorine
UN 1791	102	Hypochlorite, solutions
UN 1792	101	Iodine monochloride
UN 1793	101	Isopropyl acid phosphate, solid
UN 1793	102	Isopropyl acid phosphate
UN 1794	101	Lead dross
UN 1794	101	Lead sulfate, solid
UN 1794	102	Lead sulphate

For explanation of abbreviations and reference marks, see last page of this tariff.

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 1796	102	Nitrating acid, mixtures
UN 1796	101	Nitrating acid, mixture (with more than 50% nitric acid)
UN 1796	101	Nitrating acid, mixture (with not more than 50% nitric acid)
UN 1798	101	Nitrohydrochloric acid
UN 1798	101	Nitrohydrochloric acid, diluted
UN 1799	102	Nonyl trichlorosilane
UN 1799	101	Nonyltrichlorosilane
UN 1800	102	Octadecyl trichlorosilane
UN 1800	101	Octadecyltrichlorosilane
UN 1801	102	Octyl trichlorosilane
UN 1801	101	Octyltrichlorosilane
UN 1802	102	Perchloric acid
UN 1802	101	Perchloric acid, not over 50% acid
UN 1803	102	Phenolsulphonic acid
UN 1804	102	Phenyl trichlorosilane
UN 1804	101	Phenyltrichlorosilane
UN 1805	101	Phosphoric acid
UN 1806	102	Phosphorus pentachloride
UN 1806	101	Phosphorus pentachloride, solid
NA 1807	101	Phosphoric anhydride
UN 1807	102	Phosphorus pentoxide
UN 1808	101	Phosphorus tribromide
UN 1809	101	Phosphorus trichloride
UN 1810	101	Phosphorus oxychloride
UN 1811	102	Potassium bifluoride
NA 1811	101	Potassium hydrogen fluoride solution
UN 1812	101	Potassium fluoride
UN 1812	101	Potassium fluoride solution
NA 1813	101	Battery
UN 1813	101	Potassium hydroxide, dry solid, flake, bead, or granular
UN 1813	102	Potassium hydroxide, solid
UN 1814	101	Potassium hydroxide, liquid or solution
UN 1814	102	Potassium hydroxide, solution
UN 1815	102	Propionyl chloride
UN 1816	101	Propyl trichlorosilane
UN 1817	101	Pyrosulfuryl chloride
UN 1817	102	Pyrosulphuryl chloride
UN 1818	101	Silicon chloride or Silicon tetrachloride
UN 1818	102	Silicon tetrachloride
UN 1819	101	Sodium aluminate solution
UN 1819	102	Sodium aluminate, solution
UN 1821	101	Sodium hydrogen sulfate, solid
UN 1821	102	Sodium hydrogen sulphate, solid
UN 1823	101	Sodium hydroxide, dry solid, flake, bead, or granular
UN 1823	102	Sodium hydroxide, solid
UN 1824	101	Sodium hydroxide, liquid or solution
UN 1824	102	Sodium hydroxide, solution
UN 1825	102	Sodium monoxide
UN 1825	101	Sodium monoxide, solid
UN 1826	102	Acid mixtures, spent, nitrating
NA 1826	101	Nitrating acid, spent
UN 1827	102	Stannic chloride, anhydrous
UN 1827	101	Tin tetrachloride, anhydrous
UN 1828	101	Sulfur chloride
UN 1828	102	Sulphur chlorides
UN 1829	101	Sulfur trioxide
UN 1829	102	Sulphur trioxide
UN 1830	101	Sulfuric acid
UN 1830	102	Sulphuric acid
NA 1831	101	Oleum
UN 1831	102	Sulphuric acid, fuming
UN 1832	101	Sulfuric acid, spent
UN 1832	102	Sulphuric acid, spent
UN 1833	101	Sulfurous acid
UN 1833	102	Sulphurous acid
UN 1834	101	Sulfuryl chloride
UN 1834	102	Sulphuryl chloride
UN 1835	102	Tetramethylammonium hydroxide
UN 1835	101	Tetramethylammonium hydroxide, liquid
UN 1836	101	Thionyl chloride
UN 1837	101	Thiophosphoryl chloride
UN 1838	101	Titanium tetrachloride
UN 1839	101	Trichloroacetic acid, solid
UN 1840	101	Zinc chloride solution
UN 1840	102	Zinc chloride, solution
UN 1841	101	Acetaldehyde ammonia
UN 1843	102	Ammonium dinitro-o-cresolate
UN 1845	102	Carbon dioxide, solid
UN 1845	101	Carbon dioxide, solid, or Dry ice, or Carbonice
UN 1846	101	Carbon tetrachloride

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 1847	102	Potassium sulphide, hydrated
UN 1848	101	Propionic acid
UN 1848	101	Propionic acid, solution
UN 1849	102	Sodium sulphide, hydrated
UN 1850	101	Eradicator, paint or grease, liquid
UN 1850	102	Eradicators
UN 1851	101	Medicines, liquid, n.o.s.
UN 1851	101	Medicines, n.o.s.
UN 1851	101	Medicines, solid, n.o.s.
UN 1854	102	Barium alloys, pyrophoric
UN 1855	102	Calcium, pyrophoric or Calcium alloys, pyrophoric
UN 1856	102	Rags
UN 1856	101	Rags, oily
UN 1857	101	Textile waste, wet
UN 1857	102	Textile waste, wet, n.o.s.
UN 1857	101	Waste textile, wet
UN 1858	101	Hexafluoropropylene
UN 1859	101	Silicon tetrafluoride
UN 1860	102	Vinyl fluoride
UN 1860	101	Vinyl fluoride, inhibited
UN 1862	101	Ethyl crotonate
UN 1863	102	Fuel, aviation
UN 1863	101	Fuel, aviation, turbine engine
UN 1864	102	Gas drips
UN 1864	101	Gas drips, hydrocarbon
UN 1865	102	n-Propyl nitrate
UN 1866	101	Resin solution
UN 1867	102	Cigarettes
UN 1867	101	Self-lighting cigarette
UN 1868	101	Decaborane
UN 1869	101	Magnesium, metal
UN 1869	102	Magnesium or Magnesium alloys
NA 1869	101	Magnesium scrap
UN 1870	102	Potassium borohydride
UN 1871	102	Titanium hydride
UN 1872	102	Lead dioxide
UN 1872	101	Lead peroxide
UN 1873	101	Perchloric acid
UN 1884	101	Barium oxide
UN 1885	101	Benzidine
UN 1886	102	Benzylidene chloride
UN 1887	101	Bromochloromethane
UN 1888	101	Chloroform
UN 1889	101	Cyanogen bromide
UN 1891	102	Ethyl bromide
UN 1892	102	Ethyl dichloroarsine
UN 1894	102	Phenylmercuric hydroxide
UN 1895	102	Phenylmercuric nitrate
UN 1896	102	Resin solution, poisonous
UN 1897	102	Tetrachloroethylene
UN 1897	101	Tetrachloroethylene or Perchloroethylene
UN 1898	101	Acetyl iodide
NA 1902	101	Di-(2-ethylhexyl) phosphoric acid
UN 1902	101	Diisooctyl acid phosphate
UN 1903	101	Disinfectant, liquid
UN 1903	102	Disinfectants, corrosive, liquid, n.o.s.
UN 1905	102	Selenic acid
UN 1905	101	Selenic acid, liquid
UN 1906	101	Acid, sludge
UN 1906	102	Sludge acid
UN 1907	102	Soda lime
UN 1907	101	Soda lime, solid
UN 1908	101	Sodium chlorite solution
UN 1908	102	Sodium chlorite, solution
UN 1910	101	Calcium oxide
UN 1911	102	Diborane
UN 1911	101	Diborane or diborane mixtures
UN 1912	102	Methyl chloride and methylene chloride, mixtures
UN 1912	101	Methyl chloride-methylene chloride mixture
NA 1913	101	Neon, refrigerated liquid
UN 1913	102	Neon, refrigerated liquid
UN 1914	102	Butyl propionate
UN 1915	102	Cyclohexanone
UN 1916	102	Dichloroethyl ether
UN 1917	102	Ethyl acrylate
UN 1917	101	Ethyl acrylate, inhibited
UN 1918	102	Isopropylbenzene
UN 1919	102	Methyl acrylate
UN 1919	101	Methyl acrylate, inhibited
UN 1920	102	Nonane
UN 1921	102	Propyleneimine
UN 1921	101	Propyleneimine, inhibited

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 1922	101	Pyrrolidine
UN 1923	102	Calcium hydrosulphite
UN 1924	102	Ethyl aluminium dichloride
UN 1925	102	Ethyl aluminium sesquichloride
UN 1926	102	Methyl aluminium sesquibromide
UN 1927	102	Methyl aluminium sesquichloride
UN 1928	101	Methyl magnesium bromide in ethyl ether
UN 1928	102	Methyl magnesium bromide, in ethyl ether
UN 1929	102	Potassium hydrosulphite
UN 1930	102	Triisobutyl aluminium
UN 1931	101	Zinc hydrosulfite
UN 1931	102	Zinc hydrosulphite
UN 1932	102	Zirconium
UN 1932	101	Zirconium scrap
UN 1935	101	Cyanide solution, n.o.s.
UN 1935	102	Cyanide, solutions
UN 1938	102	Bromoacetic acid
UN 1938	101	Bromoacetic acid, solid
UN 1938	101	Bromoacetic acid solution
UN 1939	101	Phosphorus oxybromide
UN 1939	102	Phosphorus oxybromide, solid
UN 1940	101	Thioglycolic acid
UN 1941	101	Dibromodifluoromethane
UN 1942	102	Ammonium nitrate
UN 1942	101	Ammonium nitrate (no organic coating)
NA 1942	101	Ammonium nitrate (organic coating)
UN 1944	101	Matches, safety
UN 1945	102	Matches
UN 1950	102	Aerosol dispensers
UN 1951	101	Argon, refrigerated liquid
UN 1951	102	Argon, refrigerated liquid
UN 1952	102	Carbon dioxide and ethylene oxide mixtures
UN 1953	102	Compressed or liquefied gases, flammable, toxic, n.o.s.
NA 1953	101	Poisonous liquid or gas, flammable, n.o.s.
UN 1954	101	Compressed gas, n.o.s.
UN 1954	102	Compressed or liquefied gases, flammable
NA 1954	101	Refrigerant gas, n.o.s. or Dispersant gas, n.o.s.
NA 1954	101	Refrigerating machine
NA 1955	101	Chlorpicrin and nonflammable, nonliquefied compressed gas mixture
UN 1955	102	Compressed or liquefied gases
NA 1955	101	Methyl bromide and nonflammable, nonliquefied compressed gas mixture, liquid
NA 1955	101	Organic phosphate, Organic phosphate compound, or Organic phosphorus compound, mixed with compressed gas
NA 1955	101	Poisonous liquid or gas, n.o.s.
(UN 1955)	102	Tetrafluorohydrazine
NA 1956	101	Accumulator, pressurized
UN 1956	101	Compressed gas, n.o.s.
UN 1956	102	Compressed or liquefied gases

UN 2075	102	Chloral

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 2076	101	Cresol
UN 2076	102	Cresols
UN 2077	102	Naphthylamine
UN 2078	101	Toluene diisocyanate
UN 2079	102	Diethylenetriamine
UN 2080	101	Acetyl acetone peroxide
UN 2081	101	Acetyl benzoyl peroxide
UN 2081	101	Acetyl benzoyl peroxide solution
UN 2082	101	Acetyl cyclohexanesulphonyl peroxide
UN 2082	102	Acetyl cyclohexane sulphonyl peroxide
UN 2083	101	Acetyl cyclohexanesulphonyl peroxide
UN 2083	102	Acetyl cyclohexane sulphonyl peroxide
UN 2084	101	Acetyl peroxide
UN 2084	101	Acetyl peroxide solution
NA 2085	101	Benzoyl peroxide
UN 2085	101	Benzoyl peroxide
UN 2086	102	Benzoyl peroxide
UN 2087	101	Benzoyl peroxide
UN 2088	101	Benzoyl peroxide
UN 2089	101	Benzoyl peroxide
UN 2090	101	Benzoyl peroxide
UN 2091	101	tert-Butyl cumyl peroxide
NA 2091	101	tert-Butyl isopropyl benzene hydroperoxide
UN 2092	101	tert-Butyl hydroperoxide
UN 2093	101	tert-Butyl hydroperoxide
UN 2094	101	tert-Butyl hydroperoxide
UN 2095	101	tert-Butyl peroxyacetate
UN 2096	101	tert-Butyl peroxyacetate
UN 2097	101	tert-Butyl peroxybenzoate
UN 2098	101	tert-Butyl peroxybenzoate
UN 2099	102	tert-Butyl monoperoxymaleate
UN 2099	101	tert-Butyl peroxymaleate
UN 2100	102	tert-Butyl monoperoxymaleate
UN 2100	101	tert-Butyl peroxymaleate
UN 2101	102	tert-Butyl monoperoxymaleate
UN 2101	101	tert-Butyl peroxymaleate
UN 2102	101	Di-tert-butyl peroxide
UN 2103	101	tert-Butyl peroxyisopropyl carbonate
UN 2103	102	tert-Butyl peroxy isopropyl carbonate
UN 2104	102	tert-Butyl peroxy-3,5,5 trimethylhexanoate
UN 2104	101	tert-Butyl peroxy-3,5,5-trimethylhexanoate or tert-Butyl peroxyisononanoate
UN 2105	102	tert-Butyl monoperoxyphthalate
UN 2105	101	tert-Butyl peroxyphthalate
UN 2106	101	Di-(tert-butylperoxy)phthalate
UN 2107	101	Di-(tert-butylperoxy)phthalate
UN 2108	101	Di-(tert-butylperoxy)phthalate
UN 2110	101	tert-Butyl peroxypivalate
UN 2111	101	2,2-Di-(tert-butylperoxy)butane
UN 2111	102	2,2-Di-(tert-butylperoxy) butane
UN 2112	101	1,3-Di-(2-tert-butylperoxyisopropyl) benzene
UN 2112	101	1,3-Di-(2-tert-butylperoxy isopropyl) benzene and 1,4-Di-(2-tert-butylperoxyisopropyl) benzene mixture
UN 2112	101	1,4-Di-(2-tert-butylperoxyisopropyl) benzene
UN 2112	102	1,4-Di-(2-tert-butylperoxy isopropyl) benzene, or 1,3-di-(2-tert-butylperoxy isopropyl) benzene, or mixtures
UN 2113	102	Di-(4-chlorobenzoyl) peroxide
UN 2113	101	p-Chlorobenzoyl peroxide
UN 2114	102	Di-(4-chlorobenzoyl) peroxide
UN 2114	101	p-Chlorobenzoyl peroxide
UN 2115	102	Di-(4-chlorobenzoyl) peroxide
UN 2115	101	p-Chlorobenzoyl peroxide
UN 2116	101	Cumene hydroperoxide
UN 2116	102	Cumyl hydroperoxide
UN 2117	102	Cyclohexanone peroxides
UN 2118	101	Cyclohexanone peroxide
UN 2118	102	Cyclohexanone peroxides
UN 2119	101	Cyclohexanone peroxide
UN 2119	102	Cyclohexanone peroxides
UN 2120	101	Decanoyl peroxide
UN 2120	102	Didecanoyl peroxide
NA 2121	101	Decumyl peroxide
UN 2121	101	Decumyl peroxide
UN 2121	101	Decumyl peroxide, dry
UN 2122	101	Di-(2-ethylhexyl) peroxydicarbonate
UN 2123	101	Di-(2-ethylhexyl) peroxydicarbonate
UN 2124	102	Dilauroyl peroxide

For explanation of abbreviations and reference marks, see last page of this tariff.

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 2124	101	Lauroyl peroxide
UN 2125	101	Paramenthane hydroperoxide
UN 2125	101	p-Menthane hydroperoxide
UN 2126	102	Isobutyl methyl ketone peroxide
UN 2126	101	Methyl isobutyl ketone peroxide
UN 2127	102	Ethyl methyl ketone peroxide(s)
UN 2128	102	Di-(3,5,5 trimethylhexanoyl)peroxide
UN 2128	101	Isononanoyl peroxide
NA 2129	101	Caprylyl peroxide solution
UN 2129	102	Di-n-octanoyl peroxide
UN 2129	101	n-Octanoyl peroxide
UN 2130	102	Di-n-nonanoyl peroxide
UN 2130	101	Pelargonyl peroxide
NA 2131	101	Peracetic acid solution
UN 2131	101	Peroxyacetic acid
UN 2132	102	Dipropionyl peroxide
UN 2132	101	Propionyl peroxide
UN 2133	102	Diisopropyl peroxydicarbonate
NA 2133	101	Isopropyl percarbonate, unstabilized
UN 2133	101	Isopropyl peroxydicarbonate
UN 2134	102	Diisopropyl peroxydicarbonate
NA 2134	101	Isopropyl percarbonate, stabilized
UN 2134	101	Isopropyl peroxydicarbonate
UN 2135	102	Disuccinic acid peroxide
UN 2135	101	Succinic acid peroxide
UN 2136	101	Tetralin hydroperoxide
UN 2137	101	2,4-Dichlorobenzoyl peroxide
UN 2137	102	Di-2,4-dichlorobenzoyl peroxide
UN 2138	101	2,4-Dichlorobenzoyl peroxide
UN 2138	102	Di-2,4-dichlorobenzoyl peroxide
UN 2139	101	2,4-Dichlorobenzoyl peroxide
UN 2139	102	Di-2,4-dichlorobenzoyl peroxide
UN 2140	101	n-Butyl-4,4-di-(tert-butylperoxy)valerate
UN 2140	102	n-Butyl 4,4-di-(tert-butyl-peroxy) valerate
UN 2141	101	n-Butyl-4,4-di-(tert-butylperoxy)valerate
UN 2141	102	n-Butyl 4,4-di-(tert-butyl-peroxy) valerate
UN 2142	101	tert-Butyl peroxyisobutyrate
UN 2143	101	tert-Butyl peroxy-2-ethylhexanoate
UN 2143	102	tert-Butyl peroxy-2-ethyl hexanoate
UN 2144	101	tert-Butyl peroxyethylacetate
UN 2145	101	1,1-Di-(tert-butylperoxy)-3,3,5-trimethyl cyclohexane
UN 2145	101	1,1-Di-(tert-butylperoxy)-3,3,5-trimethyl cyclohexane
UN 2147	101	1,1-Di-(tert-butylperoxy)-3,3,5-trimethyl cyclohexane
UN 2148	102	Di-(1-hydroxy cyclohexyl) peroxide
UN 2148	101	Di-(1-hydroxycyclohexyl) peroxide
UN 2149	101	Diisopropyl peroxydicarbonate
UN 2150	101	Di-sec-butyl peroxydicarbonate
UN 2151	101	Di-sec-butyl peroxydicarbonate
UN 2152	101	Dicyclohexyl peroxydicarbonate
UN 2153	101	Dicyclohexyl peroxydicarbonate
UN 2154	101	Di-(4-tert-butylcyclohexyl peroxydicarbonate
UN 2154	102	Di-(4-tert-butylcyclohexyl) peroxydicarbonate
UN 2155	101	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexane
UN 2156	101	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexane
UN 2157	102	2,5-Dimethyl-2,5-di-(2-ethylhexanoylperoxy) hexane
UN 2157	101	2,5-Dimethyl-2,5-di-(2-ethylhexanoylperoxy)hexane
UN 2158	101	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexyne-3
UN 2159	101	2,5-Dimethyl-2,5-di-(tert-butylperoxy)hexyne-3
UN 2160	101	1,1,3,3-Tetramethylbutyl hydroperoxide
UN 2160	102	1,1,3,3-Tetramethyl butyl hydroperoxide
UN 2161	102	1,1,3,3-Tetramethyl butyl peroxy-2-ethyl hexanoate
UN 2161	101	1,1,3,3-Tetramethylbutyl peroxy-2-ethylhexanoate
UN 2162	101	Pinane hydroperoxide
UN 2162	101	Pinane hydroperoxide solution
UN 2162	102	Pinanyl hydroperoxide
UN 2163	101	Diacetone alcohol peroxide
UN 2163	102	Diacetone alcohol peroxides

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 2164	101	Diallyl peroxydicarbonate
UN 2165	101	3,3,6,6,9,9 Hexamethyl-1,2,4,5-tetraoxacyclononane
UN 2166	101	3,3,6,6,9,9 Hexamethyl-1,2,4,5-tetraoxacyclononane
UN 2167	101	3,3,6,6,9,9 Hexamethyl-1,2,4,5-tetraoxacyclononane
UN 2168	101	2,2-Di-(4,4-di-tert-butylperoxycyclohexyl)propane
UN 2169	101	n-Butyl peroxydicarbonate
UN 2170	101	n-Butyl peroxydicarbonate
UN 2171	101	Dicopropoxybenzene hydroperoxide
UN 2171	101	Dicopropoxybenzene hydroperoxide solution
UN 2172	101	2,5-Dimethyl-2,5-di-(benzoylperoxy)hexane
UN 2173	101	2,5-Dimethyl-2,5-di-(benzoylperoxy)hexane
UN 2174	101	2,5-Dimethyl-2,5-dihydroperoxy hexane
UN 2174	101	Dimethylhexane dihydroperoxide, (with 18% or more water)
UN 2175	101	Diethyl peroxydicarbonate
UN 2176	101	Di-n-propyl peroxydicarbonate
UN 2177	101	tert-Butyl peroxyneodecanoate
UN 2178	101	2,2-Dihydroperoxy propane
UN 2179	101	1,1-Di-(tert-butylperoxy)cyclohexane
UN 2179	102	1,1-Di-(tert-butylperoxy) cyclohexane
UN 2180	101	1,1-Di-(tert-butylperoxy)cyclohexane
UN 2180	102	1,1-Di-(tert-butylperoxy) cyclohexane
UN 2181	101	1,2-Di-(tert-butylperoxy)cyclohexane
UN 2182	101	Diisobutyryl peroxide
UN 2182	102	Isobutyryl peroxide
UN 2183	101	tert-Butyl peroxyisobutyrate
UN 2184	101	Ethyl-3,3-di-(tert-butylperoxy)butyrate
UN 2184	102	Ethyl-3,3-di-(tert-butylperoxy) butyrate
UN 2185	101	Ethyl-3,3-di-(tert-butylperoxy)butyrate
UN 2185	102	Ethyl-3,3-di-(tert-butylperoxy) butyrate
UN 2186	101	Hydrogen chloride, refrigerated liquid
UN 2187	101	Carbon dioxide, refrigerated liquid
UN 2187	102	Carbon dioxide, refrigerated liquid
UN 2188	101	Arsine
UN 2189	102	Dichlorosilane
UN 2190	102	Oxygen difluoride
UN 2191	101	Sulfuryl fluoride
UN 2191	102	Sulphuryl fluoride
UN 2192	101	Germane
UN 2193	102	Hexafluoroethane
UN 2194	102	Selenium hexafluoride
UN 2195	102	Tellurium hexafluoride
UN 2196	101	Tungsten hexafluoride
UN 2197	102	Hydrogen iodide, anhydrous
UN 2198	102	Phosphorus pentafluoride
UN 2199	101	Phosphine
UN 2200	102	Propadiene, inhibited
UN 2201	101	Nitrous oxide, refrigerated liquid
UN 2201	102	Nitrous oxide, refrigerated liquid
UN 2202	101	Hydrogen selenide
UN 2203	102	Silane
UN 2204	102	Carbonyl sulfide
UN 2205	102	Adiponitrile
UN 2206	102	Isocyanates, n.o.s. or isocyanate solutions, n.o.s
UN 2207	102	Isocyanates, n.o.s. or isocyanate solutions, n.o.s
UN 2208	101	Bleaching powder
UN 2208	102	Calcium hypochlorite mixtures, dry
UN 2209	101	Formaldehyde solution
UN 2209	102	Formaldehyde, solutions
UN 2210	102	Maneb, or maneb preparation(s)
NA 2210	101	Pesticide, water reactive
UN 2211	102	Plastics moulding materials evolving flammable vapours
UN 2212	102	Asbestos, blue
UN 2213	101	Paraformaldehyde
UN 2214	102	Phthalic anhydride
NA 2215	101	Maleic acid
UN 2215	101	Maleic anhydride
UN 2216	102	Fishmeal or fishscrap
NA 2216	101	Fish meal or fish scrap containing 6% to 12% water
UN 2217	102	Seed cake
UN 2218	101	Acrylic acid
UN 2218	102	Acrylic acid, inhibited
UN 2219	102	Allyl glycidyl ether
UN 2220	102	Aluminium alkyl halides

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 2221	102	Aluminium alkyl halides
UN 2222	102	Anisole
UN 2224	101	Benzonitrile
UN 2225	102	Benzene sulphonyl chloride
UN 2226	102	Benzotrichloride
UN 2227	102	n-Butyl methacrylate
UN 2228	102	Butylphenols, liquid
UN 2229	102	Butylphenols, solid
UN 2232	102	Chloroacetaldehyde

UN 2454	102	Methyl fluoride
UN 2456	101	2-Chloropropene
UN 2457	101	2,3-Dimethylbutane
UN 2458	101	Hexadiene
UN 2459	102	2-Methyl-1-butene
UN 2460	102	2-Methyl-2-butene
UN 2460	101	Methyl butene
UN 2461	101	Methylpentadiene
UN 2462	101	Methyl pentane

Appendix A—Identification Number Cross Reference to Proper Shipping Names In § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 2462	102	Methylpentanes
UN 2463	102	Aluminium hydride
UN 2463	101	Aluminum hydride
UN 2464	101	Beryllium nitrate
UN 2465	102	Dichloroisocyanuric acid, dry or Dichloroisocyanuric acid salts
NA 2465	101	Potassium dichloro-s-triazinetrione
UN 2465	101	Sodium dichloro-s-triazinetrione
UN 2466	101	Potassium superoxide
UN 2467	102	Sodium percarbonates
NA 2468	101	(mono-(Trichloro) tetra (monopotassium dichloro) penta-s-triazinetrione, dry
UN 2468	102	Trichloroisocyanuric acid, dry
UN 2468	101	Trichloro-s-triazinetrione
UN 2469	102	Zinc bromate
UN 2470	102	Phenylacetonitrile, liquid
UN 2471	102	Osmium tetroxide
UN 2472	102	Pindone
UN 2473	102	Sodium arsanilate
UN 2474	101	Thiophosgene
UN 2475	102	Vanadium trichloride
UN 2477	102	Methyl isothiocyanate
UN 2478	102	Isocyanates, n.o.s. or Isocyanate solutions, n.o.s.
UN 2480	101	Methyl isocyanate
UN 2480	102	Methyl isocyanate or Methyl isocyanate solutions
UN 2481	102	Ethyl isocyanate
UN 2482	102	n-Propyl isocyanate
UN 2483	102	Isopropyl isocyanate
UN 2484	102	tert-Butyl isocyanate
UN 2485	101	n-Butyl isocyanate
UN 2486	102	Isobutyl isocyanate
UN 2487	102	Phenyl isocyanate
UN 2488	102	Cyclohexyl isocyanate
UN 2489	102	Diphenylmethane-4,4-diisocyanate
UN 2490	101	Dichloroisopropyl ether
UN 2491	102	Ethanolamine or Ethanolamine solutions
UN 2491	101	Monoethanolamine
UN 2493	101	Hexamethylenediamine
UN 2495	101	Iodine pentafluoride
UN 2496	101	Propionic anhydride
UN 2497	101	Sodium phenolate, solid
UN 2498	101	1,2,3,6-Tetrahydrobenzaldehyde
UN 2501	101	Tris-(1-aziridinyl) phosphine oxide
UN 2501	102	Tris-(1-aziridinyl)phosphine oxide, solution
UN 2502	101	Valeryl chloride
UN 2502	102	Valeryl chlorides
UN 2503	102	Zirconium tetrachloride
UN 2503	101	Zirconium tetrachloride, solid
UN 2504	101	Acetylene tetrabromide
UN 2504	102	Tetrabromoethane
UN 2505	101	Ammonium fluoride
UN 2506	101	Ammonium hydrogen sulfate
UN 2506	102	Ammonium hydrogen sulphate
UN 2507	101	Chloroplatinic acid, solid
UN 2508	101	Molybdenum pentachloride
UN 2509	101	Potassium hydrogen sulfate, solid
UN 2509	102	Potassium hydrogen sulphate
UN 2511	102	Chloropropionic acid
UN 2512	102	Aminophenols
UN 2513	102	Bromoacetyl bromide
UN 2514	101	Bromobenzene
UN 2515	102	Bromoform
UN 2516	102	Carbon tetrabromide
UN 2517	101	Chlorodifluoroethane
UN 2517	102	Chlorodifluoroethanes
UN 2518	102	1,5,9-Cyclododecatriene
UN 2520	102	Cyclooctadienes
UN 2521	102	Diketene, inhibited
UN 2522	102	Dimethylaminoethyl methacrylate
UN 2524	102	Ethyl orthoformate
UN 2525	102	Ethyl oxalate
UN 2526	102	Furfurylamine
UN 2527	102	Isobutyl acrylate
UN 2528	102	Isobutyl isobutyrate
UN 2529	101	Isobutyric acid
UN 2530	101	Isobutyric anhydride
UN 2531	102	Methacrylic acid, inhibited
UN 2533	102	Methyl trichloroacetate
UN 2534	102	Methyl chlorosilane
UN 2535	102	Methylmorpholine
UN 2536	102	Methyltetrahydrofuran

For explanation of abbreviations and reference marks, see last page of this tariff.

Appendix A—Identification Number Cross Reference to Proper Shipping Names in § 172.101 and § 172.102—Continued

This listing is provided for information purposes only

(1) Identification Number	(2) Source 172.***	(3) Description
UN 2538	102	Nitronaphthalene
UN 2541	102	Terpinolene
UN 2542	102	Tributylamine
UN 2545	102	Hafnium
UN 2545	101	Hafnium metal, dry
UN 2546	102	Titanium
UN 2546	101	Titanium metal powder, dry or wet
UN 2547	101	Sodium superoxide
UN 2548	102	Chlorine pentafluoride
UN 2550	102	Ethyl methyl ketone peroxide(s)
UN 2550	101	Methyl ethyl ketone peroxide
UN 2551	102	tert-Butyl peroxydiethylacetate
UN 2551	101	tert-Butyl peroxydiethylacetate, with tert-Butyl peroxybenzoate
UN 2552	102	Hexafluoroacetone hydrate
UN 2553	102	Coal tar naphtha
NA 2553	101	Coal tar naphtha

UN 2767	102	Phenyl urea pesticides, solid, toxic, n.o.s.
UN 2768	101	Phenylurea pesticide, liquid, n.o.s.
UN 2768	102	Phenyl urea pesticides, liquid, flammable, toxic, n.o.s.
UN 2769	101	Benzoic derivative pesticide, liquid, n.o.s.
UN 2769	101	Benzoic derivative pesticide, solid, n.o.s.
UN 2769	102	Benzoic derivative pesticides, solid, toxic, n.o.s.
NA 2769	101	Dicamba
NA 2769	101	Dichlobenil
UN 2770	101	Benzoic derivative pesticide, liquid, n.o.s.
UN 2770	102	Benzoic derivative pesticides, liquid, flammable, toxic, n.o.s.
UN 2771	101	Dithiocarbamate pesticide, liquid, n.o.s.
UN 2771	101	Dithiocarbamate pesticide, solid, n.o.s.
UN 2771	102	Dithiocarbamate pesticides, solid, toxic, n.o.s.
NA 2771	101	Thiram
UN 2772	101	Dithiocarbamate pesticide, liquid, n.o.s.
UN 2772	102	Dithiocarbamate pesticides, liquid, flammable, toxic, n.o.s.
UN 2773	101	Phthalimide derivative pesticide, liquid, n.o.s.
UN 2773	101	Phthalimide derivative pesticide, solid, n.o.s.
UN 2773	102	Phthalimide derivative pesticides, solid, toxic, n.o.s.
UN 2774	101	Phthalimide derivative pesticide, liquid, n.o.s.
UN 2774	102	Phthalimide derivative pesticides, liquid, flammable, toxic, n.o.s.
UN 2775	101	Copper based pesticide, liquid, n.o.s.
UN 2775	101	Copper based pesticide, solid, n.o.s.
UN 2775	102	Copper based pesticides, solid, toxic, n.o.s.
UN 2776	101	Copper based pesticide, liquid, n.o.s.
UN 2776	102	Copper based pesticides, liquid, flammable, toxic, n.o.s.
UN 2777	101	Mercury based pesticide, liquid, n.o.s.
UN 2777	101	Mercury based pesticide, solid, n.o.s.
UN 2777	102	Mercury based pesticides, solid, toxic, n.o.s.
UN 2778	101	Mercury based pesticide, liquid, n.o.s.
UN 2778	102	Mercury based pesticides, liquid, flammable, toxic, n.o.s.
UN 2779	101	Substituted nitrophenol pesticide, liquid, n.o.s.
UN 2779	101	Substituted nitrophenol pesticide, solid, n.o.s.
UN 2779	102	Substituted nitrophenol pesticides, solid, toxic, n.o.s.
UN 2780	101	Substituted nitrophenol pesticide, liquid, n.o.s.
UN 2780	102	Substituted nitrophenol pesticides, liquid, flammable, toxic, n.o.s.
UN 2781	101	Bipyridilium pesticide, liquid, n.o.s.
UN 2781	101	Bipyridilium pesticide, solid, n.o.s.
UN 2781	102	Bipyridilium pesticides, solid, toxic, n.o.s.
NA 2781	101	Diquat
UN 2782	101	Bipyridilium pesticide, liquid, n.o.s.
UN 2782	102	Bipyridilium pesticides, liquid, flammable, toxic, n.o.s.
NA 2783	101	Azinphos methyl
NA 2783	101	Azinphos methyl mixture, liquid
NA 2783	101	Chlorpyrifos
NA 2783	101	Coumaphos
NA 2783	101	Coumaphos mixture, liquid
NA 2783	101	Diazinon
NA 2783	101	Dichlorvos
NA 2783	101	Dichlorvos mixture, dry
NA 2783	101	Disulfoton
NA 2783	101	Disulfoton mixture, dry
NA 2783	101	Disulfoton mixture, liquid
NA 2783	101	Ethion
NA 2783	101	Ethion mixture, dry
NA 2783	101	Hexaethyl tetraphosphate mixture, dry
NA 2783	101	Hexaethyl tetraphosphate mixture, liquid
UN 2783	101	Hexaethyl tetraphosphate mixture, liquid
NA 2783	101	Malathion
NA 2783	101	Methyl parathion, liquid
NA 2783	101	Methyl parathion mixture, dry
NA 2783	101	Methyl parathion mixture, liquid
NA 2783	101	Methyl parathion mixture, liquid, (containing 25% or less methyl parathion)
NA 2783	101	Mevinphos
NA 2783	101	Mevinphos mixture, dry
NA 2783	101	Mevinphos mixture, liquid
UN 2783	101	Migafox
NA 2783	101	Naled
NA 2783	101	Organic phosphate mixture, Organic phosphate compound mixture, or Organic phosphorus compound mixture, liquid
NA 2783	101	Organic phosphate mixture, Organic phosphate compound mixture, or Organic phosphorus compound mixture, solid or dry
NA 2783	101	Organic phosphate, Organic phosphate compound, or Organic phosphorus compound, liquid
NA 2783	101	Organic phosphate, Organic phosphate compound, or Organic phosphorus compound, solid or dry
UN 2783	101	Organophosphorus pesticide, liquid, n.o.s.
UN 2783	101	Organophosphorus pesticide, solid, n.o.s.
UN 2783	102	Organophosphorus pesticides solid, toxic, n.o.s.
NA 2783	101	Parathion, liquid
NA 2783	101	Parathion mixture, dry
NA 2783	101	Parathion mixture, liquid
NA 2783	101	Phencapton
NA 2783	101	Tetraethyl pyrophosphate, liquid
NA 2783	101	Tetraethyl pyrophosphate mixture, dry
NA 2783	101	Tetraethyl pyrophosphate mixture, liquid
NA 2783	101	Trichlorfon
UN 2784	101	Organophosphorus pesticide, liquid, n.o.s.
UN 2784	102	Organophosphorus pesticides, liquid, flammable, toxic, n.o.s.
UN 2785	102	4 Thiapentanal
UN 2786	101	Organotin pesticide, liquid, n.o.s.
UN 2786	101	Organotin pesticide, solid, n.o.s.
UN 2786	102	Organotin pesticides, solid, toxic, n.o.s.
UN 2787	101	Organotin pesticide, liquid, n.o.s.
UN 2787	102	Organotin pesticides, liquid, flammable, toxic, n.o.s.
UN 2788	102	Organotin compounds, n.o.s.
UN 2789	101	Acetic acid, glacial
UN 2789	102	Acetic acid, glacial or Acetic acid solution
UN 2790	101	Acetic acid
UN 2790	102	Acetic acid solution
NA 2791	101	Aircraft rocket engine
UN 2791	102	Aircraft thrust device
UN 2792	101	Aircraft rocket engine igniter
UN 2792	102	Igniter for aircraft thrust device
UN 2793	102	Ferrous metal borings, shavings, turnings, or cuttings
UN 2793	101	Metal borings, shavings, turnings, or cuttings
UN 2794	102	Batteries, wet, filled with acid
NA 2794	101	Battery
UN 2794	101	Battery
UN 2795	102	Batteries, wet, filled with alkali
NA 2795	101	Battery
UN 2795	101	Battery
UN 2796	101	Battery fluid, acid
NA 2796	101	Battery fluid, acid, with battery
NA 2796	101	Battery fluid, acid, with electronic equipment or actuating device
UN 2796	102	Sulphuric acid
UN 2797	101	Battery fluid, alkali
UN 2797	101	Battery fluid, alkali, with battery
NA 2797	101	Battery fluid, alkali, with electronic equipment or actuating device
UN 2798	101	Benzene phosphorus dichloride
UN 2798	102	Phenyl phosphorus dichloride
UN 2799	101	Benzene phosphorus thiodichloride
UN 2799	102	Phenyl phosphorus thiodichloride
UN 2800	102	Batteries, wet, non-spillable
NA 2801	101	Coal tar dye, liquid
UN 2801	101	Dye intermediate, liquid
UN 2801	102	Dyes, n.o.s. or Dye intermediates, n.o.s.
UN 2802	101	Copper chloride
UN 2803	102	Gallium
UN 2803	101	Gallium metal, liquid
UN 2803	101	Gallium metal, solid
UN 2805	102	Lithium hydride, fused solid
UN 2805	101	Lithium hydride in fused solid form
UN 2806	101	Lithium nitride

SUBPART C

SHIPPING PAPERS

§ 172.200 Applicability. (a) **Description of hazardous materials required.** Except as otherwise provided in this subpart, each person who offers a hazardous material for transportation shall describe the hazardous material on the shipping paper in the manner required by this subpart.

(b) **Exceptions.** This subpart does not apply to any material, other than a hazardous waste or a hazardous substance, that is:

(1) An ORM-A, B, or C, unless it is offered or intended for transportation by air when it is subject to the regulations pertaining to transportation by air as specified in §172.101; or

(2) An ORM-A, B, or C, unless it is offered or intended for transportation by water when it is subject to the regulations pertaining to transportation by water as specified in §172.101; or

(3) An ORM-D unless it is offered or intended for transportation by air.

§ 172.201 General entries. (a) **Contents.** When a description of hazardous material is required to be included on a shipping paper, that description must conform to the following requirements:

(1) When a hazardous material and a material not subject to the requirements of this subchapter are described on the same shipping paper, the hazardous material description entries required by §172.202 and those additional entries that may be required by §172.203:

(i) Must be entered first, or

(ii) Must be entered in a color that clearly contrasts with any description on the shipping paper of a material not subject to the requirements of this subchapter, except that a description on a reproduction of a shipping paper may be highlighted, rather than printed, in a contrasting color (the provisions of this paragraph apply only to the basic description required by §§172.202(a)(1) and (2), or (3)), or

(iii) Must be identified by the entry of an "X" placed before the proper shipping name in a column captioned "HM". (The "X" may be replaced by "RQ," if appropriate.)

(2) The required shipping description on a shipping paper and all copies thereof used for transportation purposes, must be legible and printed (manually or mechanically) in English.

(3) Unless it is specifically authorized or required in this subpart, the required shipping description may not contain any code or abbreviation.

(4) A shipping paper may contain additional information concerning the material provided the information is not inconsistent with the required description. Unless otherwise permitted or required by this subpart, additional information must be placed after the basic description required by §172.202(a).

(i) When appropriate, the entries "IMO" or "IMO Class" may be entered immediately before or immediately following the class entry in the basic description.

(ii) For a material meeting the definition of more than one hazard class, the additional hazard class or classes may be entered after the hazard class in the basic description.

(b) **Name of shipper.** A shipping paper for a shipment by water must contain the name of the shipper.

(c) **Continuation page.** A shipping paper may consist of more than one page, if each page is consecutively numbered and the first page bears a notation specifying the total number of pages included in the shipping paper. For example, "Page 1 of 4 pages."

§ 172.202 Description of hazardous material on shipping papers. (a) The shipping description of a hazardous material on the shipping paper must include:

(1) The proper shipping name prescribed for the material in §172.101 or §172.102 (when authorized);

(2) The hazard class prescribed for the material in the same Section. Except for a proper shipping name that contains words describing more than one hazard class, inclusion of the hazard class is not required when the words of the proper shipping name contain the key word or words of the hazard class of the material, such as Flammable liquid; Poison B, liquid; Radioactive device; or Corrosive liquid;

(3) The identification number (preceded by "UN" or "NA" as appropriate) prescribed for the material in the same section; and

(4) Except for empty packagings, cylinders for compressed gases, and packagings of greater than 110 gallons capacity, the total quantity by weight (net or gross as appropriate) or volume, including the unit of measure, of the hazardous material covered by the description. For example: "800 lbs", "55 gal".

(b) Except as provided in this subpart, the basic description specified in paragraphs (a)(1), (2) and (3) of this section must be shown in sequence. For example: "Gasoline, Flammable liquid, UN 1203".

(c) The total quantity of the material covered by one description must appear before or after, or both before and after, the description required and authorized by this subpart.

(1) Abbreviations may be used to specify the type of packaging and unit of measurement for total quantity. For example: "10 ctns. Paint, Flammable liquid, UN1263, 500 lbs".

(2) The type of packaging and destination marks may be entered in any appropriate manner before or after the basic description.

(d) Technical and chemical group names may be entered in parentheses between the proper shipping name and hazard class.

(e) Except for those materials in the UN Recommendations, the ICAO Technical Instructions, or the IMDG Code, a material that is not a hazardous material according to this subchapter may not be offered for transportation or transported when its description on a shipping paper includes a hazard class or an identification number specified in §172.101.

§ 172.203 Additional description requirements. (a) **Exemptions.** Each shipping paper issued in connection with a shipment made under an exemption must bear the notation "DOT-E" followed by the exemption number assigned and so located that the notation is clearly associated with the description to which the exemption applies.

(b) **Limited quantities.** The description for a material offered for transportation as "limited quantity," as authorized by this subchapter, must include the words "Limited Quantity" or "Ltd Qty" following the basic description.

(c) **Hazardous substances.**

(1) If the proper shipping name for a material that is a hazardous substance does not identify the hazardous substance by name, one of the following descriptions shall be entered, in parentheses, in association with the basic description:

(i) The name of the hazardous substance as shown in the appendix to §172.101; or

(ii) For waste streams, the waste stream number; or

(iii) For wastes which exhibit an EPA characteristic of ignitability, corrosivity, reactivity or EP toxicity, the letters "EPA" followed by the word "ignitability", or "corrosivity", or "reactivity", or "EP toxicity", as appropriate or the corresponding "D" number, as appropriate.

(2) The letters "RQ" shall be entered on the shipping paper either before or after the basic description required by §172.202 for each hazardous substance. For example: "RQ, Cresol, Corrosive material, UN 2076; or "Hazardous substance, solid, n.o.s., ORM-E, NA 9188 (Adipic Acid), RQ".

(d) **Radioactive material.**

(1) The description for a shipment of radioactive material must include the following additional entries as appropriate:

(i) The name of each radionuclide in the radioactive material that is listed in §173.435 of this subchapter. Abbreviations, e.g., "^{99}Mo" are authorized.

(ii) A description of the physical and chemical form of the material, if the material is not in special form (generic chemical description is acceptable for chemical form).

(iii) The activity contained in each package of the shipment in terms of curies, millicuries, or microcuries. Abbreviations are authorized. For the shipment of a package containing a highway route controlled quantity of radioactive material's (see §173.403(l) of this subchapter), the words "Highway route controlled quantity" must be entered in association with the basic description.

(iv) The category of label applied to each package in the shipment. For example: "RADIOACTIVE WHITE—I."

(v) The transport index assigned to each package in the shipment bearing RADIOACTIVE YELLOW—II or RADIOACTIVE YELLOW—III labels.

(vi) For a shipment of fissile radioactive material's:

(A) The words "Fissile Exempt," if the package is exempt pursuant to §173.453 of this subchapter, or

(B) If not exempt, the fissile class of each package in the shipment, pursuant to §173.455 of this subchapter; and

(C) For a Fissile Class III shipment, the additional notation: "Warning—Fissile Class III Shipment. Do not Load More than * * * Packages per Vehicle." (Asterisks to be replaced by appropriate number.) "In loading and Storage Areas, Keep at Least 20 Feet (6 Meters) from Other Packages Bearing Radioactive Labels."

(D) If a Fissile Class III shipment is to be transported by water, the supplementary notation must also include the following statement: "For shipment by water, only one Fissile Class III shipment is permitted in each hold."

(vii) For a package approved by the U.S. Department of Energy (DOE) or U.S. Nuclear Regulatory Commission (USNRC), a notation of the package identification marking as prescribed in the applicable DOE or USNRC approval. (See §173.471 of the subchapter.)

(viii) For an export shipment or a shipment in a foreign made package, a notation of the package identification marking as prescribed in the applicable International Atomic Energy Agency (IAEA) Certificate of Competent Authority which has been issued for the package. (See §173.473 of the subchapter.)

(e) **Empty packagings.** (1) The description on the shipping paper for a packaging containing the residue of a hazardous material may include the words "RESIDUE: Last contained * * *" in association with the basic description of the hazardous material last contained in the packaging.

(2) For a tank car containing the residue (as defined in 171.8) of a hazardous material, the requirements of §174.25(c) and paragraph (e)(3) of this section apply.

(3) If a packaging, including a tank car, contains a residue that is a hazardous substance, the description on the shipping papers must be

prefaced with the phrase "RESIDUE: Last contained * * * *" and the letters "RQ" must be entered on the shipping paper either before or after the basic description.

(f) *Transportation by air.* When a package containing a hazardous material is offered for transportation by air and this subchapter prohibits its transportation aboard passenger-carrying aircraft, the words "Cargo aircraft only" must be entered after the basic description.

(g) *Transportation by rail.*

(1) The shipping paper for a rail car containing a hazardous material must contain the notation "Placarded" followed by the name of the placard required for the rail car.

(2) The shipping paper for each Class DOT-113 tank car containing a flammable gas must contain an appropriate notation, such as "DOT-113A," and the statement "Do Not Hump or Cut Off Car While in Motion."

(h) *Transportation by highway.* Following the basic description for a hazardous material in a Specification MC 330 or MC 331 cargo tank, there must be entered for—

(1) *Anhydrous ammonia.*

(i) The words "0.2 PERCENT WATER" to indicate the suitability for shipping anhydrous ammonia in a cargo tank made by quenched and tempered steel as authorized by §173.315(a)(1), Note 14 of this subchapter, or

(ii) The words "NOT FOR Q AND T TANKS" when the anhydrous ammonia does not contain 0.2 percent or more water by weight.

(2) *Liquefied petroleum gas.*

(i) The word NONCORROSIVE" or "NONCOR" to indicate the suitability for shiping "Noncorrosive" liquefied petroleum gas in a cargo tank made of quenched and tempered steel as authorized by §173.315(a)(1), Note 15 to this subchapter, or

(ii) The words "NOT FOR Q and T TANKS" for grades of liquefied petroleum gas other than "Noncorrosive".

(i) *Transportation by water.*

(1) Each shipment by water must have the following additional shipping paper entries:

(i) Identification of the type of packages such as barrels, drums, cylinders, and boxes,

(ii) The number of each type of package including those in a freight container or on a pallet, and

(iii) The gross weight of each type of package or the individual gross weight of each package.

(2) The shipping paper for a hazardous material offered for transportation by vessel to any country outside the United States must have in parentheses the technical name of the material immediately following the proper shipping name when the material is described by an n.o.s. entry in §172.101 or 172.102. For example: "Corrosive liquid, n.o.s. (caprylyl chloride), UN 1760." If the material is a mixture of two or more hazardous materials, the names of at least two components most predominately contributing to the hazard or hazards of the mixture shall be entered in parentheses. For example: "Flammable liquid, corrosive, n.o.s. (Methyl alcohol, Potassium hydroxide), UN 2924." The provisions of this paragraph do not apply:

(i) If the n.o.s. description for the material (other than a mixture of hazardous materials of different classes meeting the definition of more than one hazard class) contains the name of the chemical element or group which is primarily responsible for the material being included in the hazard class indicated. For example: "Mercury compound, solid, n.o.s., Poison B, UN 2025."

(ii) If the n.o.s. description for the material (which is a mixture of hazardous materials of different classes meeting the definition of more than one hazard class) contains the name of the chemical element or group responsible for the material meeting the definition of one of these classes. In such cases, only the technical name of the component that is not appropriately identified in the n.o.s. description shall be entered in parentheses. For example: "Carbamate pesticide, liquid, n.o.s. (contains Xylene), Flammable liquid, UN 2758, POISON."

(3) The entry "Skin corrosive only" must be included to also authorize "under deck" stowage for corrosive liquid, n.o.s. and corrosive solid, n.o.s. that meet only the corrosion to skin criteria of §173.240(a)(1).

(j) *Dangerous When Wet.* The words "Dangerous When Wet" shall be entered on the shipping paper in association with the basic description when a package covered by the basic description is required to be labeled with a DANGEROUS WHEN WET label.

(k) *Poisonous materials.* Notwithstanding the class to which a material is assigned:

(1) If the name of the compound or principal constituent that causes a material to meet the definition of a poison (according to this subchapter) is not included in the proper shipping name for the material, the name of that compound or constituent shall be entered on the shipping paper in association with the shipping description for the material. The name of the compound or principal constituent may be either a technical name or any name for the material that is listed in the NIOSH Registry. This subparagraph does not apply to:

(i) A material having a proper shipping name that includes the chemical element or group which causes the material to be a poison.

(ii) Limited Quantities.

(2) If a liquid or solid material in a package meets the definition of a poison according to this subchapter, and the fact that it is a poison is not disclosed by the shipping name or class entry, the word "Poison" shall be entered on the shipping paper in association with the shipping description.

(3) The provisions of paragraphs (k)(1) and (2) of this section do not apply—

(i) To consumer commodities, ORM-D, or

(ii) To compounds or principal constituents that would cause death by corrosive destruction to tissue rather than by systemic poisoning.

(4) If the inhalation toxicity of any material falls within the criteria specified in §173.3a(b)(2) (subject to definitions and implementation conditions of (c) and (d) of the same section), the words "Poison-Inhalation Hazard" shall be entered on the shipping paper in association with the shipping description. However, the word "Poison" need not be repeated if it is entered as part of the basic description or in conformance with paragraph (k)(2) of this section. This paragraph does not apply to packagings having primary containment units of one liter capacity or less.

(l) *IM portable tanks.* A hazardous material described by an "n.o.s." entry in §172.101 or §172.102 (when authorized) and offered for transportation in an IM portable tank must be described on shipping papers in accordance with the provisions of paragraph (i)(2) of this section.

§ 172.204 Shipper's certification. (a) *General.* Except as provided in paragraphs (b) and (c) of this section, each person who offers a hazardous material for transportation shall certify that the material is offered for transportation in accordance with this subchapter by printing (manually or mechanically) on the shipping paper containing the required shipping description the certification contained in paragraph (a)(1) of this section or the certification (declaration) containing the language contained in paragraph (a)(2) of this section.

(1) "This is to certify that the above-named materials are properly classified, described, packaged, marked and labeled, and are in proper condition for transportation according to the applicable regulations of the Department of Transportation."

Note: In lieu of the certification the words "herein named" may be substituted for the words "above named."

(2) "I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked and labeled, and are in all respects in proper condition for transport by [*] according to applicable international and national governmental regulations."

*Additional language indicating the modes of transportation to be used may be inserted at this point in the certification. All modes of transportation may be indicated provided that any mode not applicable to a specific shipment is deleted (lined out).

(b) *Exceptions.* (1) Except for a hazardous waste no certification is required for a hazardous material offered for transportation by motor vehicle and transported—

(i) In a cargo tank supplied by the carrier, or

(ii) By the shipper as a private carrier except for a hazardous material that is to be reshipped or transferred from one carrier to another.

(2) No certification is required for the return of any empty tank car which previously contained a hazardous material and which has not been cleaned or purged.

(c) *Transportation by air.*

(1) *General.* Certification containing the following language may be used in place of the certification required by paragraph (a) of this section:

I hereby certify that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked and labeled, and in proper condition for carriage by air according to applicable national governmental regulations.

(2) *Certificate in duplicate.* Each person who offers a hazardous material to an aircraft operator for transportation by air shall provide two copies of the certification required in this section. (See §175.30 of this subchapter.)

(3) *Passenger and cargo aircraft.* Each person who offers for transportation by air a hazardous material authorized for air transportation shall add to the certification required in this section the following statement:

This shipment is within the limitations prescribed for passenger aircraft/cargo aircraft only (delete nonapplicable).

(4) *Radioactive material.* Each person who offers any radioactive material for transportation aboard a passenger-carrying aircraft shall sign (mechanically or manually) a printed certificate stating that the shipment contains radioactive material intended for use in, or incident to, research, or medical diagnosis, or treatment.

(d) *Signature.* The certifications required by paragraphs (a) or (c) of this section:

(1) Must be legibly signed by a principal, officer, partner, or employee of the shipper or his agent; and

(2) May be legibly signed manually, by typewriter, or by other mechanical means.

§ 172.205 Hazardous waste manifest.

(a) No person may offer, transport, transfer, or deliver a hazardous waste (waste) unless an EPA Form 8700-22 and 8700-22A (when necessary) hazardous waste manifest (manifest) is prepared in accordance with 40 CFR 262.20 and is signed, carried, and given as required of that person by this section.

(b) The shipper (generator) shall prepare the manifest in accordance with 40 CFR Part 262.
(c) The original copy of the manifest must be dated by, and bear the handwritten signature of, the person representing:
(1) The shipper (generator) of the waste at the time it is offered for transportation, and
(2) The initial carrier accepting the waste for transportation.
(d) A copy of the manifest must be dated by, and bear the handwritten signature of the person representing:
(1) Each subsequent carrier accepting the waste for transportation, at the time of acceptance, and
(2) The designated facility receiving the waste, upon receipt.
(e) A copy of the manifest bearing all required dates and signatures must be:
(1) Given to a person representing each carrier accepting the waste for transportation,
(2) Carried during transportation in the same manner as required by this subchapter for shipping papers,
(3) Given to a person representing the designated facility receiving the waste,
(4) Returned to the shipper (generator) by the carrier that transported the waste from the United States to a foreign destination with a notation of the date of departure from the United States, and
(5) Retained by the shipper (generator) and by the initial and each subsequent carrier for three years from the date the waste was accepted by the initial carrier. Each retained copy must bear all required signatures and dates up to and including those entered by the next person who received the waste.
(f) The requirements of paragraphs (d) and (e) of this section do not apply to a rail carrier when waste is delivered to a designated facility by railroad if:
(1) All of the information required to be entered on the manifest (except generator and carrier identification numbers and the generator's certification) is entered on the shipping paper carried in accordance with § 174.26(c) of this subchapter;
(2) The delivering rail carrier obtains and retains a receipt for the waste that is dated by and bears the handwritten signature of the person representing the designated facility; and
(3) A copy of the shipping paper is retained for three years by each railroad transporting the waste.
(g) The person delivering a hazardous waste to an initial rail carrier shall send a copy of the manifest, dated and signed by a representative of the rail carrier, to the person representing the designated facility.
(h) A hazardous waste manifest required by 40 CFR Part 262, containing all of the information required by this subpart, may be used as the shipping paper required by this subpart.

SUBPART D

MARKING

§ 172.300 Applicability.
(a) Each person who offers a hazardous material for transportation shall mark each package, freight container, and transport vehicle containing the hazardous material in the manner required by this subpart.
(b) When assigned the function by this subpart, each carrier that transports a hazardous material shall mark each package, freight container, and transport vehicle containing the hazardous material in the manner required by this subpart.

§ 172.301 General marking requirements. (a) Except as provided by this subchapter, each person who offers for transportation a hazardous material in a packaging having a rated capacity of 110 gallons or less shall mark the package with the proper shipping name and identification number (preceded by "UN" or "NA" as appropriate) assigned to the material in § 172.101 or § 172.102 (when authorized). In addition, if the inhalation toxicity of any material in a package falls within the criteria specified in § 173.3a(b)(2), the package shall be marked "Inhalation Hazard" in association with the required label(s). This additional marking requirement does not apply to packaging having primary containment units of one liter capacity or less and to packagings of greater than 110 gallons capacity.
(1) The proper shipping name is not required to include the word "Waste" as specified by § 172.101(c)(10) if the package bears the EPA marking prescribed by 40 CFR 262.32.
(b) When it has been determined by the shipper that a package has been previously marked as required for the material it contains, it need not be remarked. (For empty packagings, see § 173.29 of this subchapter.)
(c) This section does not apply to:
(1) Display of identification numbers on packages containing Limited Quantities (see § 171.8 of this subchapter) or materials classed as ORM-D (see § 173.1200 of this subchapter) when packed with no other hazardous material.
(2) Display of identification numbers on packagings having a rated capacity of 110 gallons or less filled for shipment prior to July 1, 1983.
Note: EPA requires special markings for hazardous wastes. See 40 CFR 262.32.

§ 172.302 Export shipments by water. (a) Each package of hazardous material offered for export by water and described by a "n.o.s." entry in § 172.101 or § 172.102 (when authorized) must have the technical name or names of the material added in parentheses immediately following the proper shipping name (see § 172.203(i)(2)). For example: Corrosive liquid, n.o.s. (Caprylyl chloride).
(b) For a mixture of two or more hazardous materials, the technical name of at least two components most predominately contributing to the hazard or hazards of the mixture must be added in parentheses immediately following the proper shipping name.

§ 172.304 Marking requirements. (a) The marking required in this subpart—
(1) Must be durable, in English and printed on or affixed to the surface of a package or on a label, tag, or sign.
(2) Must be displayed on a background of sharply contrasting color;
(3) Must be unobscured by labels or attachments; and
(4) Must be located away from any other marking (such as advertising) that could substantially reduce its effectiveness.

§ 172.306 Consignee's or consignor's name and address. (a) Each package containing a hazardous material offered for transportation must be marked with the name and address of the consignee or consignor except when the package is:
(1) Transported by highway and will not be transferred from one motor carrier to another, or
(2) Part of a carload lot, truckload lot, or freight container load, and the entire contents of the rail car, truck or freight container are tendered from one consignor to one consignee, or
(3) A portable tank, cargo tank or tank car.

§ 172.308 Authorized abbreviations. (a) Abbreviations may not be used in a proper shipping name marking except in the following instances:
(1) For marking descriptions of ammunition, such as Ammunition for cannon without projectile, etc., the words "with" or "without" may be abbreviated as "W" or "W.O". For example: "Ammunition for cannon W/O projectile".
(2) The abbreviation "ORM" may be used in place of the words "Other Regulated Material."

§ 172.310 Radioactive materials. (a) In addition to any other markings required by this subpart, each package containing radioactive materials must be marked as follows:
(1) Each package of radioactive materials in excess of 110 pounds (50 kilograms) must have its gross weight plainly and durably marked on the outside of the package.
(2) Each package of radioactive materials which conforms to the requirements for Type A or Type B packaging (§ 173.403 of this subchapter) must be plainly and durably marked on the outside of the package in letters at least ½-inch (13 mm.) high, with the words "TYPE A" or "TYPE B" as appropriate. A packaging which is not in compliance with these requirements may not be so marked.
(3) Each package of radioactive material destined for export shipment must also be marked "USA" in conjunction with the specification marking, or other package certificate identification. (See §§ 173.471, 173.472, and 173.473 of this subchapter.)

§ 172.312 Liquid hazardous materials. (a) Except as provided in this section each package having an inside packaging containing liquid hazardous materials must be—
(1) Packed with closures upward, and
(2) Legibly marked "THIS SIDE UP" or "THIS END UP" as appropriate, to indicate the upward position of the inside packaging.
(b) Except as otherwise prescribed in Part 173 of this subchapter cylinders of liquefied compressed gas and specification containers 60, 37M, 37P, and 21P are not required to be marked "THIS SIDE UP" or "THIS END UP".
(c) Arrows for purposes other than indicating proper package orientation may not be displayed on a package containing a hazardous material that is a liquid.
(1) An arrow symbol indicating "This Way Up" as specified in ANSI MH6.1-1968 entitled "Pictorial Marking for Handling of Goods" should be used in addition to the marking required by this section and § 173.25 of this subchapter.
(d) Except when offered for transportation by air, packages containing flammable liquids in inside packagings of one quart or less prepared in accordance with §§ 173.118(a) or 173.1200(a)(1) of this subchapter are excepted from the requirements of paragraph (a) of this section.
(e) When offered for transportation by air, packages containing flammable liquids in inside packagings of one quart or less prepared in accordance with §§ 173.118(a) or 173.1200(a)(1) of this subchapter are excepted from the requirements of paragraph (a) of this section when

packed with sufficient absorption material between the inner and outer packagings to completely absorb the liquid contents.

§ 172.316 Packagings containing material classed as ORM.

(a) Each packaging having a rated capacity of 110 gallons or less and containing a material classed as ORM-A, B, C, D, or E must be plainly, durably, and legibly marked on at least one side or end with the appropriate ORM designation immediately following or below the proper shipping name of the material. The appropriate ORM designation must be placed within a rectangle that is approximately ¼ inch (6.3 mm.) larger on each side than the designation. The appropriate designation for each ORM must be:

(1) ORM-A for an ORM-A.

(2) ORM-B KEEP DRY for an ORM-B that is a solid and is corrosive only to aluminum when wet.

(3) ORM-B for an ORM-B other than that described in paragraph (a)(2) of this section.

(4) ORM-C for an ORM-C.

(5) ORM-D AIR for an ORM-D that is prepared for air shipment and packaged in accordance with the provisions of § 173.6 of this subchapter.

(6) ORM-D for an ORM-D other than that described in paragraph (a)(5) of this section.

(7) ORM-E for an ORM-E.

(b) When the ORM-D marking, including the proper shipping name, can not be affixed on the package surface, it may be on an attached tag.

(c) The marking ORM-A, B, C, D or E is the certification by the person offering the package for transportation that the material is properly described, classed, packaged, marked and labeled (when appropriate) and in proper condition for transportation according to the applicable regulations of this subchapter. This form of certification does not preclude the requirement for a certificate on a shipping paper when required by Subpart C of this Part.

§ 172.324 Hazardous substances.

For each package with a capacity of 110 gallons or less that contains a hazardous substance—

(a) If the proper shipping name does not identify the hazardous substance by name, one of the following descriptions shall be marked on the package, in parentheses, in association with the proper shipping name:

(1) The name of the hazardous substance as shown in the appendix to § 172.101; or

(2) For waste streams, the waste stream number; or

(3) For wastes which exhibit an EPA characteristic of ignitability, corrosivity, reactivity, or EP toxicity, the letters "EPA" followed by the word "ignitability", or "corrosivity", or "reactivity", or "EP toxicity", as appropriate or the corresponding "D" number, as appropriate.

(b) The letters "RQ" shall be marked on the package in association with the proper shipping name.

§ 172.326 Portable tanks. (a) No person may offer for transportation or transport a portable tank containing a hazardous material unless it is legibly marked with letters or numerals, as required, measuring no less than two inches (50.8 mm.) in height:

(1) On two opposing sides with the proper shipping name of the material, and

(2) As prescribed by § 172.332, with the identification number specified for the material in § 172.101 or § 172.102, (when authorized) and

(i) On each side and each end, if the tank has a capacity of 1,000 gallons or more, or

(ii) On two opposing sides in association with the proper shipping name, if the tank has a capacity of less than 1,000 gallons.

(b) A portable tank marked with the name or identification number of a hazardous material may not be used to transport any other material unless the marking is removed, or changed to identify the hazardous material in the portable tank, whichever is appropriate.

(c) The name of the owner, or when appropriate, of the lessee, must be legibly displayed on a portable tank that contains a hazardous material.

(d) If the marking required by paragraph (a)(2) of this section is not visible, a transport vehicle, or freight container used to transport a portable tank must be marked on each side and each end as required by § 172.332 with the identification number specified for the material in § 172.101 or § 172.102 (when authorized).

(1) Each person who offers a motor carrier a portable tank for transportation in a transport vehicle or freight container shall provide the motor carrier with the required identification numbers on placards, orange panels, or the white square-on-point configuration, as appropriate, for each side and each end of the transport vehicle or freight container from which identification numbers on the portable tank are not visible.

(e) Each portable tank marked as required by paragraph (a) of this section must remain marked unless it is:

(1) Filled with a material not subject to this subchapter; or

(2) Sufficiently cleaned of residue and purged of vapor to remove any potential hazard.

§ 172.328 Cargo tanks.

(a) Except as provided in this subpart, no person may offer for transportation or transport a hazardous material in a cargo tank unless the cargo tank is marked as required by § 172.332 on each side and each end with the identification number specified for the material in § 172.101 or § 172.102 (when authorized).

(1) A person who offers a motor carrier a hazardous material for transportation in a cargo tank shall provide the motor carrier the required identification numbers on placards or shall affix orange panels containing the required identification numbers, prior to or at the time the material is offered for transportation unless the cargo tank is already marked with the identification number required by this subpart in accordance with paragraph (f) of this section and § 173.29(c) of this subchapter.

(2) A person who offers a cargo tank containing a hazardous material for transportation shall affix the required identification numbers on panels or placards prior to or at the time the cargo tank is offered for transportation unless it is already marked with identification numbers as required by this subpart.

(b) When the name of a material is required by this subchapter to be marked on a cargo tank, it must be legibly displayed on each end and each side in lettering no less than two inches (50.8 mm.) in height.

(c) Required markings: Gases. Except for certain nurse tanks which must be marked as specified in § 173.315(m) of this subchapter, each cargo tank transporting flammable or nonflammable gas (including a cryogenic liquid) subject to this subchapter must be marked as specified in this part on each end and each side with—

(1) The proper shipping name of the gas, or

(2) An appropriate common name for the material such as "Refrigerant Gas."

(d) QT NQT marking for MC 330 and MC 331 cargo tanks. Each specification MC 330 and MC 331 cargo tank must be appropriately marked "QT" or "NQT" to indicate it is constructed of quenched and tempered steel (QT) or other than quenched and tempered steel (NQT). These markings must be placed near the specification identification plate letters no less than two inches (50.8 mm.) in height.

(e) A cargo tank marked with the name or identification number of a hazardous material may not be used to transport any other material unless that marking:

(1) Is removed,

(2) Is changed to identify the hazardous material in the cargo tank; or

(3) Conforms with § 172.336(c)(4) or (c)(5) of this part.

(f) A cargo tank that is required to be marked with the name or identification number of a hazardous material must remain marked when empty unless it is:

(1) Reloaded with a material not subject to this subchapter; or

(2) Sufficiently cleaned of residue and purged of vapor to remove any potential hazard.

§ 172.330 Tank cars and multi-unit tank car tanks.

(a) No person may offer for transportation or transport a hazardous material in a tank car (other than a multi-unit tank car tank) unless the tank car is:

(1) Marked on each side, when required by Part 173 or 179 of this subchapter, with the:

(i) Proper shipping name of the material, or

(ii) Common name authorized in this subchapter for the material such as "Refrigerant Gas."

(2) Marked on each side and each end, as required by § 172.332, with the identification number specified for the material in § 172.101 or § 172.102 (when authorized).

(b) The letters in the marking of a proper shipping name or common name must be 4 inches (101.6 mm.) or more in height with at least a ½ inch (15.9 mm.) stroke. The separation between each letter must be at least ¾ inch (19.0 mm.).

(c) No person may offer for transportation or transport a hazardous material in a multi-unit tank car tank unless it is marked on opposing sides, in letters and numerals no less than two inches high, with the:

(1) Proper shipping name specified for the material in § 172.101 or § 172.102 or common name authorized for the material in this subchapter, and

(2) Identification number specified for the material in § 172.101 or § 172.102 (when authorized).

(d) A tank car or a multi-unit tank car tank marked with the identification number or name of a hazardous material may not be used to transport any other material unless the marking is removed, or changed to identify the hazardous material that the tank car or multi-unit tank car tank contains, whichever is appropriate.

(e) A motor vehicle or rail car used to transport a multi-unit tank car tank must be marked on each side and each end, as required by § 172.332, with the identification number specified for the material in § 172.101 or § 172.102 (when authorized).

(f) If a multi-unit tank car tank contains chlorine, marking of the name "Chlorine" is not required when the CHLORINE label is used as provided in § 172.405(b).

(g) Each multi-unit tank car tank and each tank car (except when it contains a combustible liquid) must remain marked when empty unless:

(1) Reloaded with a material not subject to this subchapter, or

(2) Sufficiently cleaned of residue and purged of vapor to remove any potential hazard.

§ 172.331 Bulk packagings other than portable tanks, cargo tanks, tank cars and multi-unit tank car tanks.

(a) This section prescribes marking requirements for bulk packagings other than portable tanks (see § 172.326), cargo tanks (see § 172.328), tank cars and multi-unit tank car tanks (see § 172.330).

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) No person may offer for transportation or transport a bulk packaging unless the packaging is marked as prescribed in § 172.332 or § 172.336(b), as appropriate, with the identification number specified for the material in § 172.101 or § 172.102, when authorized—

(1) On two opposing sides, for a packaging of 1,000 gallons (3,785.4 liters or 133.7 cubic feet) or less capacity;

(2) On each side and each end, for a packaging of greater than 1,000 gallons (3,785.4 liters or 133.7 cubic feet) capacity.

(c) The provisions of paragraph (b) do not apply to cylinders permanently installed on a tube trailer motor vehicle if the identification numbers are displayed as prescribed on each side and each end of the motor vehicle.

(d) Each person who offers a motor carrier a hazardous material in a bulk packaging for transportation shall provide the motor carrier with the required identification numbers on placards of plain white square-on-point display configurations, as authorized, or shall affix orange panels containing the required identification numbers to the packaging prior to or at the time the material is offered for transportation, unless the packaging is already marked with the identification number as required by this subpart.

(e) Each person who offers a bulk packaging containing a hazardous material for transportation shall affix to the packaging the required identification numbers on orange panels, square-on-point configurations or placards, as appropriate, prior to, or at the time the packaging is offered for transportation unless it is already marked with identification numbers as required by this subchapter.

(f) No person may mark a bulk packaging with the name or identification number of a hazardous material that is not in the bulk packaging.

(g) A bulk packaging that is required to be marked with the name or identification number of a hazardous material must remain marked unless it is—

(1) Reloaded with a material that requires another marking or no marking; or

(2) Cleaned and purged of all residue.

§ 172.332 Identification number markings.

(a) **General.** When required by §§ 172.326, 172.328, 172.330, or 172.331 of this subpart, identification numbers shall be displayed on orange panels or placards as specified in this section or, when appropriate, on white square-on-point configurations as prescribed in § 172.336(b).

(b) **Orange panels.** Display of an identification number on an orange panel shall be in conformance with the following:

(1) The orange panel must be 6 ½ inches (16 cm.) high by 15 ¾ inches (40 cm.) wide with a ⅜ inch (15 mm.) black outer border. The identification number shall be displayed in 4-inch (10 cm.) black Helvetica Medium numerals on the orange panel. Measurements may vary from those specified plus or minus 0.2 of an inch (5 mm.).

(2) The orange panel may be made of any durable material prescribed for placards in § 172.519, and shall be of the orange color specified for labels or placards in Appendix A to this Part.

(3) The name and hazard class of a material represented by the identification number may be shown in the upper left border of the orange panel in letters not more than ¼ inch (18 points) high.

(4) Except for size and color, the orange panel and identification numbers shall be as illustrated for Liquefied petroleum gas:

(c) **Placards.** Display of an identification number on a hazard warning placard shall be in conformance with the following:

(1) The identification number shall be displayed across the center area of the placard in 3½ inch (89 mm.) black Alpine Gothic or Alternate Gothic No. 3 numerals on a white background 4 inches (10 cm.) high and approximately 8½ inches (21.5 cm.) wide and may be outlined with a solid or dotted line border.

(2) The top of the 4-inch (10 cm.) high white background shall be approximately 1¾ inches (40.0 mm.) above the placard horizontal center line.

(3) When an identification number is displayed on a placard the United Nations hazard class number for the material shall be displayed in the lower corner of each placard as specified in § 172.519(d).

(4) For a COMBUSTIBLE placard used to display an identification number, the entire background below the white background for the identification number must be white during transportation by rail and may be white during the transportation by highway.

(5) The name of the hazardous material and the hazard class may be shown in letters not more than ¼ inch (18 points) high immediately within the upper border of the space on the placard bearing the identification number of the material.

(6) If an identification number is placed over the word(s) on a placard, the word(s) should be substantially covered to maximize the effectiveness of the identification number.

(d) Except for size and color, the display of an identification number on a placard shall be as illustrated for Acetone.

§ 172.334 Identification numbers; prohibited display.

(a) No person may display an identification number on a POISON GAS, RADIOACTIVE, EXPLOSIVES A, EXPLOSIVES B, BLASTING AGENTS OR DANGEROUS placard.

(b) No person may display an identification number on a placard, orange panel or white square-on-point display configuration unless—

(1) The identification number is specified for the material in § 172.101 or § 172.102 (when authorized);

(2) The identification number is displayed on the placard, orange panel or white square-on-point configuration authorized by § 172.332 or § 172.336(b), as appropriate, and any placard used for display of the identification number corresponds to the hazard class of the material specified in § 172.504;

(3) Except as provided under § 172.336(c)(4) or (c)(5) the package, freight container, or transport vehicle on which the number is displayed contains the hazardous material associated with that identification number in § 172.101 or § 172.102.

(c) Except as required by § 172.332(c)(4) for a combustible liquid, the identification number of a material may be displayed only on the placards required by the tables in § 172.504.

(d) Except as provided in § 172.336, a placard bearing an identification number may not be used to meet the requirements of Subpart F of this Part unless it is the correct identification number for all hazardous materials of the same class in the transport vehicle or freight container on which it is displayed.

(e) Except as specified in § 172.338, an identification number may not be displayed on an orange panel on a cargo tank unless affixed to the cargo tank by the person offering the hazardous material for transportation in the cargo tank.

(f) If a placard is required by § 172.504, an identification number may not be displayed on an orange panel unless it is displayed in proximity to the placard.

(g) No person shall add any color, number, letter, symbol, or word other than as specified in this subchapter, to any identification number marking display which is required or authorized by this subchapter.

§ 172.336 Identification numbers; special provisions and exceptions.

(a) When not required or prohibited by this subpart, identification numbers may be displayed on a transport vehicle or a freight container in the manner prescribed by this subpart.

(b) For hazardous materials in hazard classes for which hazard warning placards are not specified (e.g., ORM-A, B, C, D, or E), identification numbers, when required, must be displayed on either orange panels (see § 172.332(b)) or on a plain white square-on-point display configuration having the same outside dimensions as a placard. In addition, for materials in hazard classes for which placards are specified and identification number displays are required, but for which identification numbers may not be displayed on the placards authorized for the material (see § 172.334(a)), identification numbers must be displayed on orange panels or on the plain white square-on-point display configuration in association with the required placards. An identification number displayed on a white square-on-point display configuration is not considered to be a placard.

(1) The 4-inch (10 cm.) by 8½ inch (21.5 cm.) area containing the identification number shall be located as prescribed by § 172.332(c)(1) and (c)(2) and may be outlined with a solid or dotted line border.

(c) Identification numbers are not required:

(1) On the ends of a portable tank, cargo tank or tank car having more than one compartment if hazardous materials having different identification numbers are being transported therein. In such a circumstance, the identification numbers on the sides of the tank shall be displayed in the same sequence as the compartments containing the materials they identify.

(2) On a cargo tank containing only gasoline, if the cargo tank is marked "Gasoline" on each side and rear in letters no less than 2 inches high, or is placarded in accordance with § 172.542(c).

(3) On a cargo tank containing only fuel oil, if the cargo tank is marked "Fuel Oil" on each side and rear in letters no less than 2 inches high, or is placarded in accordance with § 172.544(c).

(4) For each of the different liquid petroleum distillate fuels, including gasoline and gasahol in a compartmented cargo tank or tank car, if the identification number is displayed for the distillate fuel having the lowest flash point.

(5) For each of the different liquid petroleum distillate fuels, including gasoline and gasahol transported in a cargo tank, if the identification number is displayed for the liquid petroleum distillate fuel having the lowest flash point.

(6) On nurse tanks meeting the provisions of § 173.315(m) of this subchapter.

§ 172.338 Replacement of identification numbers.

If more than one of the identification number markings on placards, orange panels, or white square-on-point display configurations that are required to be displayed are lost, damaged or destroyed during transportation, the carrier shall replace all the missing or damaged identification numbers as soon as practicable. However, in such a case, the numbers may be entered by hand on the appropriate placard, orange panel or white square-on-point display configuration providing the correct identification numbers are entered legibly using an indelible marking material. When entered by hand, the identification numbers must be located in the white display area specified in § 172.332. This section does not preclude required compliance with the placarding requirements of Subpart F of this subchapter.

SUBPART E

LABELING

§ 172.400 General labeling requirements. (a) Except as otherwise provided in this subchapter, each person who offers a package, overpack, or freight container containing a hazardous material for transportation shall label it, when required, with labels prescribed for the material as specified in § 172.101 or § 172.102 (when authorized) and in accordance with this subpart.

(b) A label is not required on a:

(1) Package for which labeling is not required under the conditions set forth in this subchapter and in this section;

(2) Cylinder containing a compressed gas classed as flammable or nonflammable that is:

(i) Carried by a private or contract motor carrier;

(ii) Not overpacked; and

(iii) Durably and legibly marked in accordance with CGA Pamphlet C–7, Appendix A.

(3) Package or unit of military explosives (including ammunition) shipped by or on behalf of the DOD when in

(i) Freight containerload, carload or truckload shipments, if loaded and unloaded by the shipper or DOD or

(ii) unitized or palletized break bulk shipments by cargo vessel under charter to DOD if at least one required label is displayed on each unitized or palletized load.

(4) Package containing a hazardous material other than ammunition that is:

(i) Loaded and unloaded under the supervision of DOD personnel, and

(ii) Escorted by DOD personnel in a separate vehicle.

(5) Compressed gas cylinder permanently mounted in or on a transport vehicle;

(6) Portable tank which is placarded in accordance with § 172.514;

(7) Freight container having a volume of 640 cubic feet or more which is subject to § 172.512;

(8) Package containing a material classed as ORM–A, B, C, D, or E if that package does not contain any other material classed as a hazardous material that requires labeling.

(9) Package containing a combustible liquid; or

(10) Package of low specific activity radioactive material, when being transported in a conveyance assigned for exclusive use of the consignor under § 173.425(b) of this subchapter.

(11) Cargo tank or tank car other than a multi-unit tank car tank.

(c) Provisions of Paragraph B do not apply to the CARGO AIRCRAFT ONLY label.

(d) Except as provided in paragraph (b) of this section, when the proper shipping name marked on a package is a proper shipping name from § 172.102 that does not appear in § 172.101, the package must be labeled as provided in § 172.102.

§ 172.401 Prohibited labeling.

(a) Except as provided in paragraphs (c) and (d) of this section, no person may offer for transportation and no carrier may transport any package bearing a label specified in this subpart unless:

(1) The package contains a material that is a hazardous material, and

(2) The label represents a hazard of the hazardous material in the package.

(b) No person may offer for transportation and no carrier may transport a package bearing any marking or label which by its color, design, or shape could be confused with or conflict with a label prescribed by this part.

(c) The restrictions in paragraphs (a) and (b) of this section, do not apply to packages labeled in conformance with:

(1) Any United Nations recommendation, including the class number (see § 172.407), in the document entitled "*Transport of Dangerous Goods*";

(2) The International Maritime Organization (IMO) requirements, including the class number (see § 172.407), in the document entitled "International Maritime Dangerous Goods Code";

(3) The ICAO Technical Instructions; or

(4) The TDG Regulations

(d) A package containing a sample of a hazardous material, other than an explosive, must be labeled in accordance with § 172.402(h).

§ 172.402 Additional labeling requirements. (a) Multiple labeling. Each package containing a material meeting the definition of more than one hazard class must be labeled as follows:

(1) A material classed as an Explosive A, Poison A, or Radioactive material that also meets the definition of another hazard class, must be labeled as required for each class.

(2) A Poison B liquid that also meets the definition of a Flammable liquid must be labeled POISON and FLAMMABLE LIQUID.

(3) A material classed as Oxidizer, Flammable solid or Flammable liquid that also meets the definition of a Poison B must be labeled POISON in addition to the class label.

(4) A material classed as a Flammable solid that also meets the definition of a water restrictive material must have both the FLAMMABLE SOLID and DANGEROUS WHEN WET labels affixed.

(5) A material classed as a Corrosive material that also meets the definition of a Poison B shall be labeled with a POISON label in addition to the class label. This subparagraph does not apply to a material that would cause death due to corrosive destruction of tissue rather than by systemic poisoning.

(6) A material classed as a Poison B that also meets the definition of a corrosive material shall be labeled with a CORROSIVE label in addition to the class label.

(7) A material classed as a Flammable liquid that also meets the definition of a Corrosive material shall be labeled with a CORROSIVE label in addition to the class label.

(8) A material classed as a Flammable solid that also meets the definition of a Corrosive material shall be labeled with a CORROSIVE label in addition to the class label.

(9) A material classed as an Oxidizer that also meets the definition of a Corrosive material shall be labeled with a CORROSIVE label in addition to the class label.

(10) A material falling within the inhalation hazard criteria described in § 173.3a(b)(2) shall be labeled with a POISON label in addition to any other label(s) required by this section. Duplication of the POISON label is not required.

(b) **CARGO AIRCRAFT ONLY label.** Each person who offers for transportation by air a package containing a hazardous material authorized only on cargo aircraft shall affix to the package a CARGO AIRCRAFT ONLY label which is described in § 172.448.

(c) **DANGEROUS WHEN WET label.** Each person who offers for transportation a package containing a hazardous material must affix to the package a DANGEROUS WHEN WET label as described in § 172.423 when required by § 172.101.

(d) [Reserved]

(e) **BUNG label.** Each metal barrel or drum containing a flammable liquid having a vapor pressure between 16 and 40 p s i a. at 100° F must have affixed a BUNG label as specified in § 173.119(i) of this subchapter in addition to a FLAMMABLE LIQUID label described in § 172.419.

(f) **ETIOLOGIC AGENTS label.** See § 172.444 and § 173.388 of this subchapter for ETIOLOGIC AGENTS labeling requirements.

(g) **EMPTY label.** See § 173.29 of this subchapter for EMPTY labeling requirements.

(h) **Packages containing samples.** Except as provided in §§ 173.21 and 173.86 of this subchapter, a material for which a reasonable doubt exists as to its class and labeling requirements, and for which a sample must be transported for laboratory analysis may be labeled according to the shipper's tentative class assignment based upon:

(1) Defining criteria in this subchapter;

(2) The hazard precedence prescribed in § 173.2 of this subchapter; and

(3) The shipper's knowledge of the material.

(i) **Labels for DOT specification 106 and 110 tanks.** A DOT specification 106 or 110 tank must be labeled on each end as required by this subchapter for the hazardous material it contains.

§ 172.403 Radioactive material. (a) Unless excepted from labeling by §§ 173.421 through 173.425 of this subchapter, each package of radioactive material must be labeled as provided in this section.

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) The proper label to affix to a package of radioactive material is based on the radiation level at the surface of the package, the transport index (§ 173.403 of this subchapter) and, if appropriate, the fissile characteristics of the package. The proper category of label shall be determined in accordance with paragraph (c) of this section. The label to be applied shall be the highest category required for any of the three determining conditions for the package. Radioactive White-I is the lowest category and Radioactive Yellow-III is the highest. For example: a package with a transport index of 0.8 and a maximum surface radiation level of 60 millirem per hour which contains no fissile material must bear a Radioactive Yellow-III label.

(c) Category of Label to be Applied to Radioactive Materials Packages:

Transport index (TI)	Radiation level at package surface (RL)	Fissile criteria	Label category[1]
TI=0	RL≤0.5 millirem per hour (mrem/h)	Fissile class I only, no fissile class II or III.	White-I.
0<TI≤1.0	0.5 mrem/h<RL≤50 mrem/h	Fissile class I, fissile class II, with TI≤1.0, no fissile class III	Yellow-II.
1.0<TI	50 mrem/h<RL	Fissile Class II with 1.0<TI, fissile class III.	Yellow-III.

[1]Any package containing a "highway route controlled quantity" (§ 173.403 of this subchapter) must be labeled as Radioactive Yellow-III.

(d) [Reserved]

(e) Each package containing a radioactive material that also meets the definition of one or more additional hazards must be labeled as a radioactive material as required by this section and for each additional hazard. For example:

(1) Packages containing the solid nitrates of uranium or thorium must be labeled RADIOACTIVE and OXIDIZER.

(2) Packages containing nitric acid solutions of radioactive material must be labeled RADIOACTIVE and CORROSIVE.

(f) Each package required by this section to be labeled with a RADIOACTIVE label must have two of these labels, affixed to opposite sides of the package. (See § 172.406(e)(3) for freight container label requirements).

(g) The following applicable items of information must be entered in the blank spaces on the RADIOACTIVE label by legible printing (manual or mechanical), using a durable weather resistant means of marking:

(1) "Contents." The name of the radionuclides as taken from the listing of radionuclides in § 173.435, (symbols which conform to established radiation protection terminology are authorized, i.e., ^{99}Mo, ^{60}Co, etc.). For mixtures of radionuclides, the most restrictive radionuclides on the basis of radiotoxicity must be listed as space on the label allows.

(2) "Activity." Units shall be expressed in appropriate curie units, i.e., curies (Ci), millicuries (mCi) or microcuries (uCi) (abbreviations are authorized). For a fissile material, the weight in grams or kilograms of the fissile radioisotope also may be inserted.

(3) "Transportation index." (See § 173.403 of this subchapter.)

§ 172.404 Labels for mixed and consolidated packaging. (a) Mixed packaging. When hazardous materials having different hazard classes are packed within the same packaging, or within the same outside container or overpack as described in § 173.25 and authorized by § 173.21 of this subchapter, the packaging, outside container or overpack must be labeled as required for each class of hazardous material contained therein.

(b) Consolidated packaging. When two or more packages containing compatible hazardous material (see § 173.21 of this subchapter) are placed within the same outside container or overpack, the outside container or overpack must be labeled as required for each class of hazardous material contained therein.

§ 172.405 Authorized label modifications. (a) For a package containing Oxygen, the word "OXYGEN" may be used in the place of the word "OXIDIZER" on the OXIDIZER label provided the letter size and color for OXYGEN are the same as those required for OXIDIZER.

(b) For a package containing Chlorine, the word "CHLORINE" may be used in the place of the word "POISON" on the POISON label provided the letter size and color for CHLORINE are the same as those required for POISON;

(1) A CHLORINE label may be used in place of the NON-FLAMMABLE GAS and POISON labels required for Chlorine by § 172.101.

§ 172.406 Placement of labels. (a) General. Except as provided in paragraphs (b) and (e) of this section, each label required by this subpart must be printed on or affixed to the surface of the package near the marked proper shipping name required by Subpart D of this part.

(b) Exceptions. Labels may be printed on or placed on a securely affixed tag, or may be affixed by other suitable means to:

(1) A package that contains no radioactive material and which has dimensions less than those of the required label;

(2) A compressed gas cylinder; and

(3) A package which has such an irregular surface that a label cannot be satisfactorily affixed.

(c) Placement of multiple labels. When two or more different labels are required, they must be displayed or affixed next to each other.

(d) Label border. Each label must be affixed to a background of contrasting color, or must have a dotted or solid line outer border.

(e) Additional labeling. When labeling is required, the labels must be displayed on at least two sides or two ends (excluding the bottom) of:

(1) Each package containing a radioactive material;

(2) Each package having a volume of 64 cubic feet or more; and

(3) Each freight container having a volume of 64 cubic feet or more, but less than 640 cubic feet, except when placarded in accordance with § 172.512(b).

(i) Placarding may not be used instead of labeling on a package containing radioactive material.

(ii) When labeled, one of each of the appropriate labels must be displayed on or near the closure.

(4) Each portable tank having a rated capacity of less than 1,000 gallons, except when placarded in accordance with § 172.514(a).

(f) Obscured labels. A label must not be obscured by markings or attachments.

§ 172.407 Label specifications. (a) Each label, affixed to or printed on a package must be durable and weather resistant. Black and any color on a label must be able to withstand, without substantial change:

(1) A 72-hour fadeometer test (for a description of equipment designed for this purpose, see ASTM G 23–69 (1975), or ASTM G 26–70); and

(2) A 30-day exposure to conditions incident to transportation that reasonably could be expected to be encountered by the labeled package.

(b) Each diamond (square-on-point) label prescribed in this part must be at least four inches (101 mm.) on each side with each side having a black solid line border ¼ inch (6.3 mm.) from the edge.

(c) Except for size and color, the printing, inner border, and symbol on each label must be as shown for each label.

(d) A color on a label, upon visual examination, must fall within the color tolerances displayed on the appropriate Office of Hazardous Materials Label and Placard Color Tolerance Chart.

(1) A set of six charts, dated January 1973, for comparison with labels and placards surfaced with paint, lacquer, enamel, plastic or other opaque coatings, or ink, may be purchased from the Office of Hazardous Materials Regulation, U.S. Department of Transportation, Washington, D.C. 20590, for $5.50.

(2) A set of six charts, dated January 1974, for comparison with labels and placards surfaced with ink, may be similarly purchased for $12.50.

(3) Both sets of charts may be inspected in Room 8426, Nassif Building, 400 7th Street S.W., Washington, D.C. 20590, or any of the offices of the Federal Highway Administration listed at 49 CFR 390.40.

(4) The technical specifications for each chart are set forth in Appendix A to this Part.

(e) The specified label color must extend to the edge of the label in the area designated on each label except the CORROSIVE, MAGNETIZED MATERIAL, RADIOACTIVE YELLOW-II, and RADIOACTIVE YELLOW-III labels.

(f) A label may contain form identification information, including the name of its maker, provided that information is printed outside of the solid line inner border in no larger than 10-point type.

(g) A label may contain the UN and (IMO) hazard class number and, when appropriate, the division number. The number must be:

(1) Black, unless it is on a CORROSIVE label when it must be white, or unless other colors are authorized by this Part.

(2) Located in the lower corner of the label, and

(3) One-half inch (12.7 mm.) or less in height.

(h) For import shipments only, a label conforming to the requirements of IMO or the United Nations Recommendations affixed to a package in another country may contain inscriptions required by the country of origin.

(i) The dotted line border shown on each label is not part of the label specification, except when used as an alternative for the solid line outer border to meet the requirements of § 172.406(d).

(j) EXPLOSIVE A, EXPLOSIVE B, and EXPLOSIVE C labels may bear inscriptions in addition to those prescribed in this subpart, if required for import or export purposes.

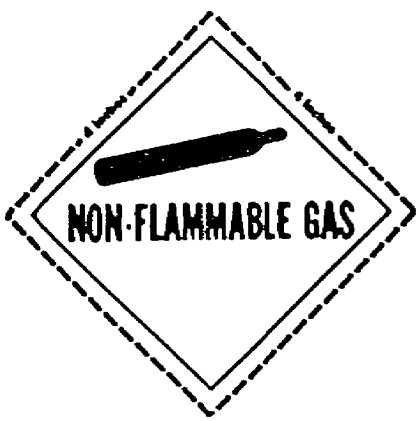
§ 172.411 EXPLOSIVE A, EXPLOSIVE B, EXPLOSIVE C, and BLASTING AGENTS labels. (a) Except for size and color, the EXPLOSIVE A, EXPLOSIVE B, and EXPLOSIVE C labels must be as follows:

(b) In addition to complying with §172.407, the **EXPLOSIVE A, EXPLOSIVE B,** and **EXPLOSIVE C** labels must be orange. The printing and symbol must be black.

(c) Except for size and color, the **BLASTING AGENT** label must be as follows:

(d) In addition to complying with §172.407, the **BLASTING AGENT** label must be orange. The printing must be black.

§ 172.415 NON-FLAMMABLE GAS label. (a) Except for size and color, the **NON-FLAMMABLE GAS** label must be as follows:

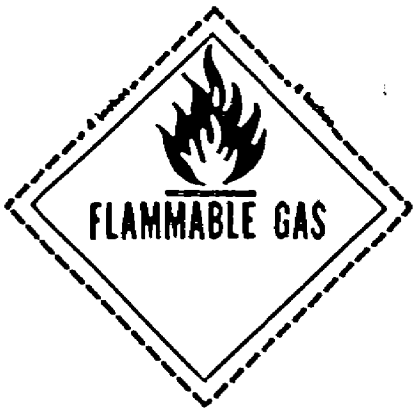


(b) In addition to the requirements specified in §172.407, the **NON-FLAMMABLE GAS** label must be green. The symbol and inscription must be black or white. The solid line border and, if used, the hazard class number must be the color of the symbol.

§ 172.416 POISON GAS label. (a) Except for size and color, the **POISON GAS** label must be as follows:

(b) In addition to complying with §172.407, the **POISON GAS** label must be white. The printing must be black, and the symbol must be black and white.

§ 172.417 FLAMMABLE GAS label. (a) Except for size and color, the **FLAMMABLE GAS** label must be as follows:



(b) In addition to complying with §172.407, the **FLAMMABLE GAS** label must be red. The symbol and inscription must be black or white. The solid line border and, if used, the hazard class number must be the color of the symbol.

§ 172.419 FLAMMABLE LIQUID label. (a) Except for size and color, the **FLAMMABLE LIQUID** label must be as follows:

(b) In addition to complying with §172.407, the **FLAMMABLE LIQUID** label must be red. The symbol and inscription must be black or white. The solid line border and, if used, the hazard class number must be the color of the symbol.

§ 172.420 FLAMMABLE SOLID label. (a) Except for size and color, the **FLAMMABLE SOLID** label must be as follows:

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) In addition to complying with §172.407, the **FLAMMABLE SOLID** label must be white with vertical red stripes equally spaced on each side of a red strip in the center of the label. The rectangle for the words "**FLAMMABLE SOLID**" must be white. The printing and symbol must be black with the symbol overprinted. The words "**FLAMMABLE SOLID**" must not contact any red stripe. The white stripes must be sufficiently wider than the red stripes to make them appear visually equal in width.

§ 172.422 SPONTANEOUSLY COMBUSTIBLE label. (a) Except for size and color, the **SPONTANEOUSLY COMBUSTIBLE** label must be as follows:

(b) In addition to complying with §172.407, the **SPONTANEOUSLY COMBUSTIBLE** label must be red in the lower half and white in the upper half. The symbol and printing must be black.

(c) If use of the **SPONTANEOUSLY COMBUSTIBLE** label is required by the regulations of another country, it may be used in addition to the labels required by §§172.400 and 172.402.

§ 172.423 DANGEROUS WHEN WET label. (a) Except for size and color, the **DANGEROUS WHEN WET** label must be as follows:

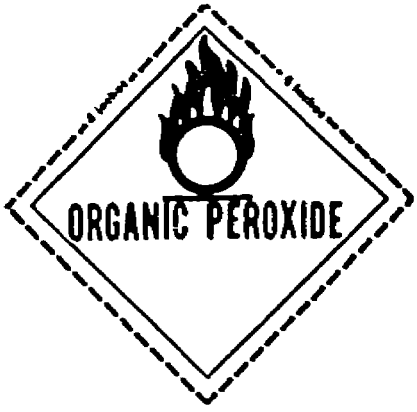
(b) In addition to complying with §172.407, the **DANGEROUS WHEN WET** LABEL must be blue. The symbol and inscription must be black or white. The solid line border and, if used, the hazardous class number must be the color of the symbol.

(c) If use of the **DANGEROUS WHEN WET** label is required by the regulations of another country, it may be used in addition to the labels required by §§172.400 and 172.402.

§ 172.426 OXIDIZER label. (a) Except for size and color, the **OXIDIZER** label must be as follows (see §172.405 for authorized label modification):

(b) In addition to complying with §172.407, the **OXIDIZER** label must be yellow. The printing and symbol must be black.

§ 172.427 ORGANIC PEROXIDE label. (a) Except for size and color, the **ORGANIC PEROXIDE** label must be as follows:

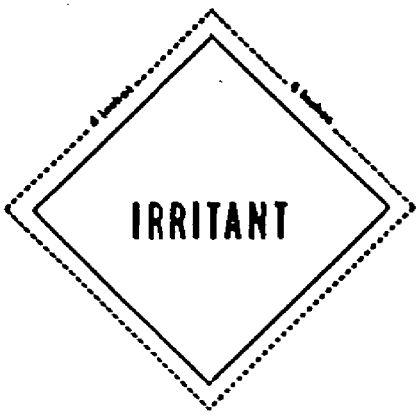


(b) In addition to complying with §172.407, the **ORGANIC PEROXIDE** label must be yellow. The printing and symbol must be black.

§ 172.430 POISON label. (a) Except for size and color, the **POISON** label must be as follows (see §172.405 for authorized label modification):

(b) In addition to complying with §172.407, the **POISON** label must be white. The printing and symbol must be black.

§ 172.432 IRRITANT label. (a) Except for size and color, the IRRITANT label must be as follows:



(b) In addition to complying with § 172.407, the IRRITANT label must be white. The word "IRRITANT" must be red.

(c) For export shipments, if use of the following label is required for irritants by the regulations of another country, it may be used in place of the label for irritants required by § 172.400 and described in § 172.432. In addition to complying with § 172.407, this label for irritant, except for size and color, must be as follows:

(d) The printing and symbol must be black on a white background.

§ 172.436 RADIOACTIVE WHITE-I label. (a) Except for size and color, the RADIOACTIVE WHITE-I label must be as follows:

(b) In addition to complying with § 172.407, the RADIOACTIVE WHITE-I label must be white. The printing and symbol must be black except for the "I" which must be red.

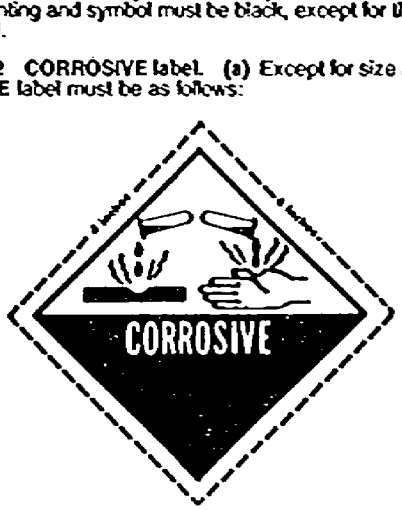
§ 172.438 RADIOACTIVE YELLOW-II label. (a) Except for size and color, the RADIOACTIVE YELLOW-II label must be as follows:

(b) In addition to complying with § 172.407, the RADIOACTIVE YELLOW-II label must be yellow in the top half and white in the lower half. The printing and symbol must be black, except for the "II" which must be red.

§ 172.440 RADIOACTIVE YELLOW-III label. (a) Except for the size and color, the RADIOACTIVE YELLOW-III label must be as follows:

(b) In addition to complying with § 172.407, the RADIOACTIVE YELLOW-III label must be yellow in the top half and white in the lower half. The printing and symbol must be black, except for the "III" which must be red.

§ 172.442 CORROSIVE label. (a) Except for size and color, the CORROSIVE label must be as follows:



(b) In addition to complying with § 172.407, the CORROSIVE label must be white in the top half and black in the lower half. The printing must be white and the symbol must be black and white.

§ 172.444 ETIOLOGIC AGENT label. (a) Each package containing an Etiologic agent subject to this subchapter must be labeled as specified in § 173.388 of this subchapter.

(b) For export shipments, if use of the following label is required by the regulations of another country, it may be used in addition to the label required in paragraph (a) of this section for Etiologic agents. In addition to complying with § 172.407, this additional label for Etiologic agents, except for size and color, must be as follows:

(c) The printing and symbol must be black on a white background.

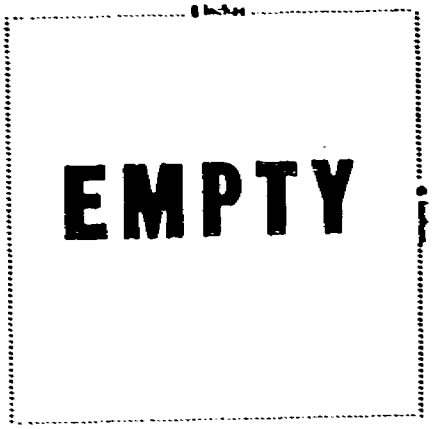
§ 172.448 [Reserved]

§ 172.448 CARGO AIRCRAFT ONLY label. (a) Except for size and color, the CARGO AIRCRAFT ONLY label must be as follows:

(b) The CARGO AIRCRAFT ONLY label must be a rectangle measuring 4 $\frac{5}{16}$ inches (110 mm.) high by 4 $\frac{3}{4}$ inches (120 mm.) wide. The printing must be black and the symbol must be black and orange.

(c) CARGO AIRCRAFT ONLY labels with the text "DANGER-PELIGRO" may continue to be used until stocks existing on January 1, 1983, are depleted.

§ 172.450 EMPTY label. (a) Each EMPTY label, except for size, must be as follows:



(1) Each side must be at least 6 inches (152 mm.) with each letter at least 1 inch (25.4 mm.) in height.

(2) The label must be white with black printing.

SUBPART F

PLACARDING

§ 172.500 Applicability of placarding requirements.

(a) Each person who offers for transportation or transports any hazardous material subject to this subchapter shall comply with the applicable placarding requirements of this subpart.

(b) This subpart does not apply to:

(1) Etiologic agents.

(2) Hazardous materials classed as ORM—A, B, C, D, or E, or

(3) Hazardous materials authorized by this subchapter to be offered

for transportation as Limited Quantities when identified as such on shipping papers in accordance with §172.203(b).

§ 172.502 Prohibited placarding. (a) Except as provided in paragraph (c) of this section, no person may affix or display on a transport vehicle, portable tank or freight container any placard described in this subpart unless:

(1) The material being offered or transported is a hazardous material, and

(2) The placard represents a hazard of the hazardous material being offered or transported.

(b) No person may affix or display any sign or other device on a transport vehicle, portable tank, or freight container, that by its color, design, shape, or content could be confused with any placard prescribed in this subpart.

(c) The restrictions in paragraphs (a) and (b) of this section do not apply to transport vehicles, portable tanks, or freight containers which—

(1) In addition to any placards required by this Part, may be placarded in conformance with the IMDG Code; or

(2) Are placarded in conformance with the TDG Regulations.

§ 172.503 Identification number display on placards.

For procedures and limitations pertaining to the display of identification numbers on placards, see §172.334.

§ 172.504 General placarding requirements. (a) Except as otherwise provided in this subchapter, each transport vehicle, and freight container containing any quantity of a hazardous material must be placarded on each end and each side with the type of placards specified in the following tables and other placarding requirements of this subpart, including the specifications for the placards named in the tables and described in detail in §§172.519 through 172.558.

TABLE 1

If the transport vehicle, or freight container contains a material classed (described) as—.	The transport vehicle or freight container must be placarded on each side and each end—
Class A explosives	EXPLOSIVES A.[1]
Class B explosives	EXPLOSIVES B.[2]
Poison A	POISON GAS.[4]
Flammable solid (DANGEROUS WHEN WET label only)	FLAMMABLE SOLID W.[3]
Radioactive material	RADIOACTIVE.[4,5]
Radioactive material:	
Uranium hexafluoride, fissile (containing more than 1.0 pct U^{235})	RADIOACTIVE[4] and CORROSIVE.[6]
Uranium hexafluoride, low specific activity (containing 1.0 pct or less U^{235})	RADIOACTIVE[4,5] and CORROSIVE.[6]

[1] See §172.510(a).

[2] EXPLOSIVES B placard not required if the transport vehicle or freight container contains class A explosives and is placarded EXPLOSIVES A as required.

[3] FLAMMABLE SOLID "W" placard is required only when the DANGEROUS WHEN WET label is specified in §172.101 for a material classed as a Flammable solid.

[4] Applies only to any quantity of packages bearing the RADIOACTIVE YELLOW III label. (See §172.403.)

[5] For exclusive use shipments [see §173.403] of low specific activity radioactive materials transported in accordance with §173.425(b) or (c).

[6] CORROSIVE placard not required for shipments of less than 1000 pounds gross weight.

TABLE 2

If the transport vehicle, or freight container contains a material classed (described) as—.	The transport vehicle or freight container must be placarded on each side and each end—
Class C explosives	DANGEROUS.[1,8]
Blasting agents	BLASTING AGENTS.[8,10]
Nonflammable gas	NONFLAMMABLE GAS.[8]
Nonflammable gas (chlorine)	CHLORINE.[7]
Nonflammable gas (fluorine)	POISON.
Nonflammable gas (oxygen, cryogenic liquid)	OXYGEN.
Flammable gas	FLAMMABLE GAS.[8]
Combustible liquid	COMBUSTIBLE.[3,4]
Flammable liquid	FLAMMABLE.
Flammable solid	FLAMMABLE SOLID.[3]
Oxidizer	OXIDIZER.[8,10]
Organic peroxide	ORGANIC PEROXIDE.
Poison B	POISON.
Corrosive material	CORROSIVE.[8]
Irritating material	DANGEROUS.

[1] Applies only to a class C explosive required to be labeled with an EXPLOSIVE C label.

[2] [Reserved]

[3] COMBUSTIBLE placard required only when a material classed as a combustible liquid is transported in a packaging having a rated capacity of more than 110 gallons, a cargo tank, or a tank car.

[4] A FLAMMABLE placard may be used on a cargo tank or portable tank during transportation by highway, rail or water, and on a compartmented tank car containing materials classed as flammable liquid and combustible liquid.

[5] Except when offered for transportation by water, a FLAMMABLE placard may be displayed in place of a FLAMMABLE SOLID placard except when a DANGEROUS WHEN WET label is specified for the material in sec. 172.101. (See table 1, this section.)

[6] See §173.245(b) of this subchapter for authorized exemptions.

[7] CHLORINE placard required only for a packaging having a rated capacity of more than 110 gallons, the NON FLAMMABLE GAS placard for packagings having a rated capacity of 110 gallons or less.

[8] A NON FLAMMABLE GAS placard is not required on a motor vehicle displaying a FLAMMABLE GAS placard or an OXYGEN placard.

[9] BLASTING AGENTS, OXIDIZER and DANGEROUS placards need not be displayed if a transport vehicle or freight container also contains Class A or Class B explosives and is placarded EXPLOSIVES A or EXPLOSIVES B as required.

[10] Except for shipments by water, OXIDIZER placards need not be displayed if a freight container, motor vehicle or rail car also contains blasting agents and is placarded BLASTING AGENT as required.

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) A transport vehicle or freight container containing two or more classes of materials requiring different placards specified in Table 2 may be placarded DANGEROUS in place of the separate placarding specified for each of those classes of material specified in Table 2. However, when 5,000 pounds or more of one class of material is loaded therein at one loading facility, the placard specified for that class in Table 2 must be applied. This paragraph does not apply to a portable tank, cargo tank, or tank car.

(c) When the gross weight of all hazardous materials covered by Table 2 is less than 1000 pounds, no placard is required on a transport vehicle, or freight container for the Table 2 materials. A Table 1 material must be placarded as specified in Table 1. This paragraph does not apply to portable tanks, cargo tanks, tank cars, transportation by air or water, or transport vehicles and freight containers subject to §172.505.

(d) Any packaging having a capacity of 110 gallons or less that contains only the residue of a hazardous material covered by Table 2 of this section need not be included in determining the applicability of the placarding requirements.

§ 172.505 Special placarding requirements for certain poisonous materials. Each transport vehicle and freight container that contains a material subject to the "Poison-Inhalation Hazard" shipping paper description of §172.203(k)(4) must be placarded POISON on each side and each end in addition to the placards required by §172.504. This requirement also applies to portable tanks. Duplication of POISON placards is not required nor display of UN class numbers at the bottom of additional placards required by this section.

§ 172.506 Providing and affixing placards: Highway. (a) Each person offering a motor carrier a hazardous material for transportation by highway shall provide to the motor carrier the required placards for the material being offered prior to or at the same time the material is offered for transportation, unless the carrier's motor vehicle is already placarded for the material as required by this subpart.

(1) No motor carrier may transport a hazardous material in a motor vehicle, unless the placards required for the hazardous material are affixed thereto as required by this subpart.

§ 172.507 Special placarding provisions: Highway. (a) Each motor vehicle used to transport a package of highway route controlled quantity radioactive materials (see §173.403(l) of this subchapter) must have the required RADIOACTIVE warning placard placed on a square background as described in §172.527.

(b) A nurse tank, meeting the provisions of §173.315(m) of this subchapter, is not required to be placarded on an end containing valves, fittings, regulators or gauges when those appurtenances prevent the markings and placard from being properly placed and visible.

§ 172.508 Placarding and affixing placards: rail. (a) Each person offering a hazardous material for transportation by rail shall affix to the rail car containing the material, the placards specified by this subpart for the material unless the placards already displayed on motor vehicles, transport containers, or portable tanks that are on the rail car comply with §§172.502 and 172.504 as these sections pertain to placarding the rail car.

(b) No rail carrier may accept a rail car containing a hazardous material for transportation unless the placards for the hazardous material are affixed thereto as required by this subpart.

§ 172.510 Special placarding provisions: Rail. (a) **Square background required.** Each EXPLOSIVE A placard, POISON GAS placard and POISON GAS—RESIDUE, placard affixed to a rail car must be placed on a square background as described in §172.527.

(b) **RESERVED.**

(c) **RESIDUE placard.** Each tank car containing the residue of a hazardous material must be placarded with the appropriate RESIDUE placards, as required in §172.525 and paragraph (a) of this section. The RESIDUE placard must correspond to the placard that was required for the material the tank car contained when loaded, unless the tank car—

(1) Is reloaded with a material requiring no placards or different placards; or

(2) Is sufficiently cleaned of residue and purged of vapor to remove any potential hazard.

(d) **FUMIGATION placard.** Each transport vehicle and freight container containing lading that has been fumigated or treated with poisonous liquid, solid, or gas, and that is offered for transportation by rail must have the placard specified in §173.9 of this subchapter affixed on or near each door.

(e) **Chemical ammunition.** Each rail car containing Class A explosive ammunition which has the additional hazard of Poison A must be placarded EXPLOSIVES A and POISON GAS.

§ 172.512 Freight containers and aircraft unit load devices. (a) **Capacity of 640 cubic feet or more.** Each person who offers for transportation, and each person who loads and transports, a hazardous material in a freight container or aircraft unit load device having a capacity of 640 cubic feet or more shall affix to the freight container or aircraft unit load device the placards specified for the material in accordance with §172.504. However:

(1) The placarding exception provided in §172.504(c) applies to motor vehicles transporting freight containers and aircraft unit load devices,

(2) The placarding exception provided in §172.504(c) applies to each freight container and aircraft unit load device being transported for delivery to a consignee immediately following an air or water shipment, and,

(3) Placarding is not required on a freight container or aircraft unit load device if it is only transported by air and is identified as containing a hazardous material in the manner provided in Part 5, Chapter 2, Section 2.7, of the ICAO Technical Instructions.

(b) **Capacity less than 640 cubic feet.** Each person who offers for transportation by air, and each person who loads and transports by air, a hazardous material in a freight container or aircraft unit load device having a capacity of less than 640 cubic feet shall affix one placard of the type specified by paragraph (a) of this section unless the freight container or aircraft load unit device:

(1) Is labeled in accordance with §172.406(e)(3);

(2) Contains radioactive materials requiring the Radioactive Yellow III label and is placarded with one Radioactive placard and is labeled in accordance with §172.406(e); or,

(3) Is identified as containing a hazardous material in the manner provided in Part 5, Chapter 2, Section 2.7, of the ICAO Technical Instructions. When hazardous materials are offered for transportation, not involving air transportation, in a freight container having a capacity of less than 640 cubic feet the freight container need not be placarded. However, if not placarded it must be labeled in accordance with Subpart E of this part.

(c) Notwithstanding paragraphs (a) and (b) of this section, packages containing hazardous materials, other than ORM-D, offered for transportation by air in freight containers are subject to the inspection requirements of §175.30 of this chapter.

§ 172.514 Cargo tanks and portable tanks. (a) Each person who offers for transportation a cargo tank or a portable tank containing a hazardous material shall affix the placards specified for the material in accordance with §172.504(a). However, if placarded instead of labeled as provided in §172.406(e)(4), a portable tank having a rated capacity of less than 1,000 gallons need be placarded on only two opposite sides.

(b) Each cargo tank and portable tank that is required to be placarded when it contains a hazardous material must remain placarded when it is emptied unless it is:

(1) Reloaded with a material not subject to this subchapter; or

(2) Sufficiently cleaned and purged of vapors to remove any potential hazard.

§ 172.516 Visibility and display of placards. (a) Each placard on a motor vehicle and each placard on a rail car must be readily visible from the direction it faces except from the direction of another motor vehicle or rail car to which the motor vehicle or rail car is coupled. This requirement may be met by the placards displayed on the freight containers or portable tanks loaded on a motor vehicle or rail car.

(b) The required placarding of the front of a motor vehicle may be on the front of a truck-tractor instead of or in addition to the placarding on the front of the cargo body to which a truck-tractor is attached.

(c) Each placard on a transport vehicle, portable tank or freight container must:

(1) Be securely attached or affixed thereto or placed in a holder thereon. (See Appendix C to this part.);

(2) Be located clear of appurtenances and devices such as ladders, pipes, doors, and tarpaulins;

(3) So far as practicable, be located so that dirt or water is not directed to it from the wheels of the transport vehicle;

(4) Be located away from any marking (such as advertising) that could substantially reduce its effectiveness, and in any case at least 3 inches (76.0 mm.) away from such marking;

(5) Have the words or identification number (when authorized) printed on it displayed horizontally, reading from left to right;

(6) Be maintained by the carrier in a condition so that the format, legibility, color, and visibility of the placard will not be substantially reduced due to damage, deterioration, or obscurement by dirt or other matter.

(d) Recommended specifications for a placard holder are set forth in Appendix C of this part. Except for a placard holder similar to that contained in Appendix C to this part, the means used to attach a placard may not obscure any part of its surface other than the borders.

(e) A placard or placard holder may be hinged provided the required format, color, and legibility of the placard are maintained.

§ 172.519 General specifications for placards. (a) A placard may be made of any plastic, metal, or other material that is equal to or better in strength and durability than the tagboard specified in paragraph (b) of this section. Also, reflective or retroreflective materials may be used on a placard providing the prescribed colors, strength and durability are maintained.

(b) A placard made of tagboard must be of material that has:

(1) A quality at least equal to that designated commercially as white tagboard,

(2) A weight of 175 pounds per ream of 24 by 36 inch sheets (waterproofing material included);

(3) The ability to pass a 60 p s i. Mullen test; and

(4) Been treated with plastic or other waterproofing material that will give it the ability to withstand open weather exposure (including rain) for 30 days without a substantial reduction in effectiveness.

(c) A placard may contain form identification information, including the name of its maker if that information is printed in the outer ½-inch (12.7 mm.) border in no larger than 10-point type.

(d) The hazard class and division number prescribed for dangerous goods in the UN Recommendations titled "Transport of Dangerous Goods" may be entered in the lower corner of the diamond on each placard. If a placard is used to display identification numbers as authorized by §172.332, the class number must be entered in a numeral approximately 1¾-inches (45 mm.) in height (numeral height may be between 1⅝ inches (41 mm.) and 1¾ inches (45 mm.)). It must be black on each placard except when on a **NON-FLAMMABLE GAS, FLAMMABLE GAS, FLAMMABLE, COMBUSTIBLE** or **CORROSIVE** placard. The class numbers on a **NON-FLAMMABLE GAS, FLAMMABLE GAS, FLAMMABLE** and **COMBUSTIBLE** placard may be white or black. The class number on a **CORROSIVE** placard must be white and on a **COMBUSTIBLE** placard with a white bottom as prescribed by §172.332(c)(4), the class number must be red or black.

(e) Surface pigmentation on a placard must meet the following requirements:

(1) Black and any color must be able to withstand, without substantial change:

(i) A 72-hour fadeometer test (for a description of equipment designed for this purpose, see ASTM G 23–69 (1975), or ASTM G 26–70); and

(ii) A 30-day exposure to open weather conditions.

(2) A color on a placard, upon visual examination, must fall within the color tolerances displayed on the appropriate Office of Hazardous Materials Label and Placard Color Tolerance Chart (see §172.407(d)).

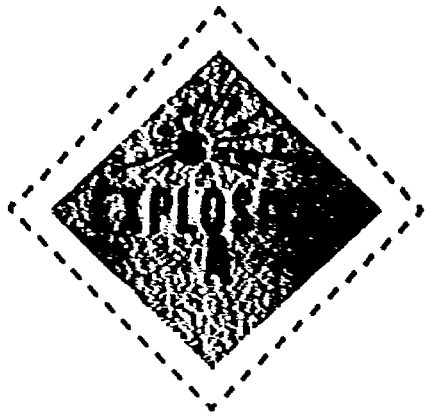
(f) Except as provided in §172.332, placards shall be as described in this section and as prescribed in Appendix B to this part.

(g) The dotted line at the outside of the ½ inch (12.7 mm.) white border on each placard is not part of the placard specification. However, a dotted or solid line outer border may be used when needed to indicate the full size of a placard that is part of a larger format or is on a background the color of which does not contrast with the placard color.

§ 172.521 DANGEROUS placard. (a) Except for size and color, the **DANGEROUS** placard must be as follows:

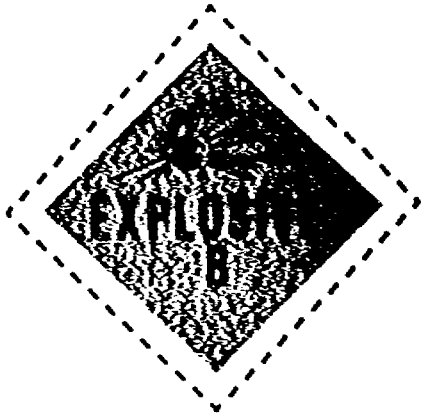
(b) In addition to meeting the requirements of §172.519, the Appendix B to this part, the **DANGEROUS** placard must have a red upper and lower triangle. The placard center area and ½ inch (12.7 mm.) border must be white. The inscription must be black with the ⅛ inch (3.2 mm.) border marker in the white area at each end of the inscription red.

§ 172.522 EXPLOSIVES A placard. (a) Except for size and color, the **EXPLOSIVES A** placard must be as follows:



(b) In addition to meeting the requirements of §172.519, and Appendix B to this part, the **EXPLOSIVES A** placard must be orange with a ½ inch (12.7 mm.) white outer border. The symbol and print must be black.

§ 172.523 EXPLOSIVES B placard. (a) Except for size and color, the **EXPLOSIVES B** placard must be as follows:



(b) In addition to meeting the requirements of §172.519 and Appendix B to this part, the **EXPLOSIVES B** placard must be orange with a ½ inch (12.7 mm.) white outer border. The symbol and print must be black.

§ 172.524 BLASTING AGENTS placard.

(a) Except for size and color, the **BLASTING AGENTS** placard must be as follows:

(b) In addition to meeting the requirements of this part, the **BLASTING AGENTS** placard must be orange with a ½-inch (12.7 mm) white outer border. The printing must be black.

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 172.525 Standard requirements for the RESIDUE placard.

(a) Each RESIDUE placard must be as follows:

(1) Except as provided in paragraph (a)(3) of this section, the lower triangle of the RESIDUE placard must be black and the word "RESIDUE" must be in white letters approximately 1 inch (25 mm) high, made with approximately ¼ inch (6 mm) stroke. Use of RESIDUE placards displaying the word "RESIDUE" in 1½ inch lettering is authorized until July 1, 1987.

(2) Except for the POISON GAS, RADIOACTIVE, EXPLOSIVES, or subsidiary placard required by § 172.505, the RESIDUE placard may be used to display the appropriate identification number in accordance with the provisions of Subpart D of this part.

(3) For a combustible liquid residue, the lower triangle of the RESIDUE placard must be white and the word "RESIDUE" must be in black letters.

(4) Otherwise, the RESIDUE placard must be as specified in § 172.519 and Appendix B to this Part, and §§ 172.528, 172.530, 172.532, 172.536, 172.540, 172.542, 172.544, 172.546, 172.548, 172.550, 172.552, 172.554 and 172.558, as appropriate for the residue of the hazardous material being transported and required by this subchapter to be placarded. No other placard may be used as a RESIDUE placard.

(b) The lower part of each placard must be as specified in Appendix B to this Part and as illustrated on the FLAMMABLE—RESIDUE placard which, except for size and color, must be as follows:

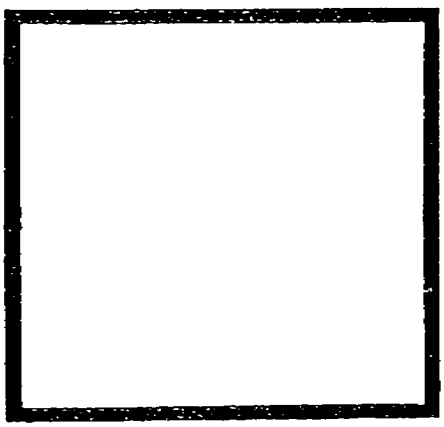
(c) The RESIDUE placard must be as shown in paragraph (b) of this section and may be—

(1) A separate placard;

(2) On the reverse side of a placard, or

(3) A composite made according to the specifications in this section, and paragraph (a)(10) of Appendix B to this Part. The lower triangle of the appropriate placard should have a black triangle bearing the word RESIDUE in white letters with the appropriate hazard class number in white.

§ 172.527 Background requirements for certain placards. (a) Except for size and color, the square background required by § 172.510(a) for certain placards on rail cars, and § 172.507 for placards on motor vehicles containing a package of highway route controlled quantity radioactive materials, must be as follows:

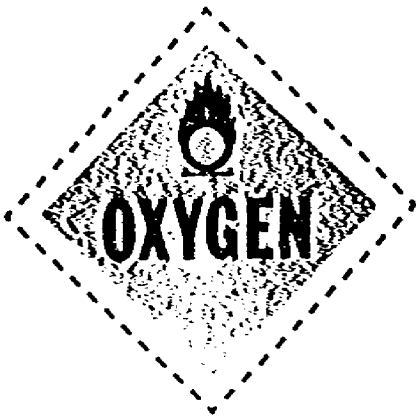


(b) In addition to meeting the requirements of § 172.519 for minimum durability and strength, the square background must consist of a white square measuring 14½ inches (362.0 mm.) on each side surrounded by a black border extending to 15¼ inches 387.0 mm.) on each side.

§ 172.528 NON-FLAMMABLE GAS placard. (a) Except for size and color, the NON-FLAMMABLE GAS placard must be as follows:

(b) In addition to meeting the requirement of § 172.519, and Appendix B to this part, the NON-FLAMMABLE GAS placard must be green with the symbol, inscription, and ½ inch (12.7 mm.) border white.

§ 172.530 OXYGEN placard. (a) Except for size and color, the OXYGEN placard must be as follows:



(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the OXYGEN placard must be yellow with ½ inch (12.7 mm) white border. The symbol and inscription must be black.

§ 172.532 FLAMMABLE GAS placard. (a) Except for size and color, the FLAMMABLE GAS placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the FLAMMABLE GAS placard must be red with the symbol, inscription, and ½ inch (12.7 mm.) border white.

§ 172.538 CHLORINE placard. (a) Except for size, the CHLORINE placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the CHLORINE placard must be a white 10¾ inches (273.0 mm.) square-on-point with a ⅛ inch (3.2 mm.) black solid line border ½ inch (12.7 mm.) in from each edge. The symbol and inscription must be black.

§ 172.540 POISON GAS placard. (a) Except for size, the POISON GAS placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the POISON GAS placard must be a white 10¾ inches (273.0 mm.) square-on-point with a ⅛ inch (3.2 mm.) black solid line border ½ inch (12.7 mm.) in from each edge. The symbol and inscription must be black.

§ 172.542 FLAMMABLE placard and modification. (a) Except for size and color, the FLAMMABLE placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part the FLAMMABLE placard must be red with white symbol, inscription, and ½-inch (12.7 mm.) border.

(c) The word "GASOLINE" may be used in place of the word "FLAMMABLE" on the placard that is displayed on a cargo tank or portable tank being used to transport gasoline by highway. The word "GASOLINE" must be in letters of the same size and color as those in the word "FLAMMABLE."

§ 172.544 COMBUSTIBLE placard and modification. (a) Except for size and color, the COMBUSTIBLE placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the COMBUSTIBLE placard must be red with white symbol, inscription, and ½ inch (12.7 mm.) border.

(c) The words "FUEL OIL" may be used in place of the word "COMBUSTIBLE" on the placard that is displayed on a cargo tank or portable tank being used to transport by highway fuel oil that is not classed as a flammable liquid. The words "FUEL OIL" must be in letters of the same size and color as those in the word "COMBUSTIBLE."

§ 172.548 FLAMMABLE SOLID placard. (a) Except for size and color, the FLAMMABLE SOLID placard must be as follows:

(b) In addition to complying with § 172.519 and Appendix B to this part, the FLAMMABLE SOLID placard must be white with seven vertical red stripes and a ½ inch (12.7 mm.) white border. The symbol and inscription must be black.

§ 172.548 FLAMMABLE SOLID W placard. (a) Except for size and color, the FLAMMABLE SOLID W placard must be as follows:

(b)

(1) The triangle at the top of the **FLAMMABLE SOLID W** placard must be blue with a white symbol, otherwise, the specifications for the **FLAMMABLE SOLID W** placard are the same as those for the **FLAMMABLE SOLID** placard.

(2) The **FLAMMABLE SOLID W** placard may be:

(i) A separate placard;

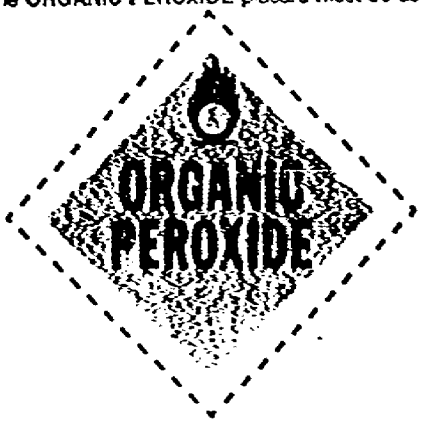
(ii) On the reverse side of a placard; or

(iii) A composite made by covering the top triangle of the **FLAMMABLE SOLID** placard with the blue triangle and white symbol as shown in paragraph (a) of this section.

§ 172.550 OXIDIZER placard. (a) Except for size and color, the **OXIDIZER** placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the **OXIDIZER** placard must be yellow with a ½ inch (12.7 mm.) white border. The symbol and inscription must be black.

§ 172.552 ORGANIC PEROXIDE placard. (a) Except for size and color, the **ORGANIC PEROXIDE** placard must be as follows:



(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part the **ORGANIC PEROXIDE** placard must be yellow with a ½ inch (12.7 mm.) white border. The symbol and inscription must be black.

§ 172.554 POISON placard. (a) Except for size, the **POISON** placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the **POISON** placard must be white with a ⅛ inch (3.2 mm.) black solid line border ½ inch (12.7 mm.) in from the edge. The symbol and inscription must be black.

§ 172.556 RADIOACTIVE placard. (a) Except for size and color, the **RADIOACTIVE** placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the **RADIOACTIVE** placard must have the top portion yellow with the symbol black. The lower portion must be white and the inscription black.

§ 172.558 CORROSIVE placard. (a) Except for size, the **CORROSIVE** placard must be as follows:

(b) In addition to meeting the requirements of § 172.519, and Appendix B to this part, the **CORROSIVE** placard must have the center and lower area black except for the letters in the word "**CORROSIVE**" which must be white. The symbol must be black and white.

Appendix A—Office of Hazardous Materials Regulation Color Tolerance Charts and Tables

The following are Munsell notations and Commission Internationale de L'Eclairage [CIE] coordinates which describe the Office of Hazardous Materials Transportation Label and Placard Color Tolerance Charts in Tables 1 and 2, and the CIE coordinates for the color tolerances specified in Table 3. Central colors and tolerances described in Table 2 approximate those described in Table 1 while allowing for differences in production methods and materials used to manufacture labels and placards surfaced with printing inks. Primarily, the color charts based on Table 1 are for label or placard colors applied as opaque coatings such as paint, enamel or plastic, whereas color charts based on Table 2 are intended for use with labels and placards surfaced only with inks.

For labels printed directly on packaging surfaces, Table 3 may be used, although compliance with either Table 1 or Table 2 is sufficient. However, if visual reference indicates that the colors of labels printed directly on package surfaces are outside the Table 1 or 2 tolerances, a spectrophotometer or other instrumentation may be required to insure compliance with Table 3.

TABLE 1.—Specifications for Color Tolerance Charts for Use with Labels and Placards Surfaced with Paint, Lacquer, Enamel, Plastic, Other Opaque Coatings, or Ink.[1]

[1] Maximum chroma is not limited.

[2] For the colors green and purple, the minimum saturation (chroma) limits for porcelain enamel on metal are lower than for most other surface coatings. Therefore, the minimum chroma limits of these 2 colors as displayed on the Charts for comparison to porcelain enamel on metal is low, as shown for green (grayish B) and purple (gray).

Appendix B—Dimensional Specification for Placards

1. Placard specifications.

(a) The print type on each placard must be Franklin Gothic Condensed.

(b) Each square-on-point placard must measure 10¾ inches (273.0 mm.) on each side, the outer ½ inch (12.7 mm.) of which must be white.

NOTE: The measurements in these specifications may be rounded to the nearest 1/32 of a inch and to the nearest whole millimeter.

(c) Specifications for each placard to augment those in paragraphs (1)(a) and (b) of this Appendix and those contained in Subpart F, Part 172 of this subchapter are as follows:

(1) DANGEROUS placard. The word "DANGEROUS" must be across the center of the placard and made with letters 2⅜ inches (56.4

mm.) high with a 3/8 inch (9.5 mm.) stroke. The white section of the placard must be centered across the placard and 5 inches (127 mm.) wide. The two ends of the white area must have an 1/8 inch (3.2 mm.) red solid line border to indicate the outer 1/2-inch (12.7 mm.) white placard border. The placard color must be red, white, and black.

(2) **EXPLOSIVES A** placard. The word "EXPLOSIVES" must be across the center area of the placard and made with letters 1 7/8 inches (47.6 mm) high with a 7/16 inch (7.9 mm.) stroke. The top of the letters in the word "EXPLOSIVES" must be 1 1/2 inches (38.1 mm.) above the placard horizontal center line. The top of the letter "A" must be 1/2 inch (12.7 mm.) below the horizontal center line. The letter "A" must be approximately 2 inches (50.8 mm.) high. The base of the symbol must be 2 1/16 inches (52.4 mm.) above the placard horizontal center line, and must be 4 1/2 inches (114.3 mm.) high when measured from a horizontal line touching the lowest extremity. The width of the symbol must be 7 7/8 inches (200.0 mm.) when measured between two lines perpendicular to the base line and touching the widest extremities on each side. The radius of the bomb must be 3/4 inch (19.1 mm.) The placard color must be orange, black and white.

(3) Except for the letter "B", the **EXPLOSIVES B** placard specifications are the same as those for the **EXPLOSIVES A** placard. The location, height, and stroke for the letter "B" are the same as those prescribed for the letter "A".

(4) The word "NON-FLAMMABLE" must be across the center area with the word "GAS" centered beneath the word "NON-FLAMMABLE." The letters in both words must be 1 9/16 inches (39.6 mm.) high and made with a 9/32 inch (7.1 mm.) stroke. The top of the letters in the words "NON-FLAMMABLE" must be 1 3/8 inches (35.9 mm.) above the placard horizontal center line, and the top of the letters in the word "GAS" must be 9/16 inch (14.3 mm.) below the placard horizontal center line. The base of the symbol must be 3 1/8 inches (79.3 mm.) above the horizontal centerline with the top 4 15/16 inches (125.4 mm.) above the placard horizontal center line. The lower portion of the cylinder (symbol) must be 11/32 inch (13.5 mm.) wide with the neck 1/4 inch (6.3 mm.) wide. The symbol must be 3 9/16 inches (90.4 mm.) long. The placard color must be green and white.

(5) The word "OXYGEN" must be centered on the placard horizontal center line in letters 2 1/2 inches (63.5 mm.) high and made with a 7/16 inch (11.1 mm.) stroke. The base of the bar in the symbol must be 2 1/16 inches (52.4 mm.) above the placard horizontal center line. The overall height of the symbol must be 4 5/16 (109.5 mm.) with the bar measuring 1/8 inch (3.2 mm.) wide and, 2 3/16 inches (55.5 mm.) long.

The symbol must be 2 3/8 inches (60.3 mm.) across the widest part.

The outer 1/2-inch (12.7 mm.) of the 10 3/4 inches (273.0 mm.) square on-point placard must be white. The placard color must be yellow, black, and white.

(6) **FLAMMABLE GAS** placard. The word "FLAMMABLE" must be across the placard center area with the word "GAS" centered beneath the word "FLAMMABLE". The letters in both words must be 2 inches (50.8 mm.) high and made with a 3/8-inch (9.5 mm.) stroke. The top of the letters in the word "FLAMMABLE" must be 1 5/8 inches (41.3 mm.) above the placard horizontal center line and the top of the word "GAS" must be 5/8-inch (15.9 mm.) below the placard horizontal center line. The base of the symbol bar must be 2 1/4 inches (57.1 mm.) above the placard horizontal center line, and must be 4 17/32 inches (115.1 mm.) high and 3 5/16 inches (84.1 mm.) wide. The bar must be 5/32-inch (4.0 mm.) wide and 3 5/16 inches (84.1 mm.) long. The outer 1/2 (12.7 mm.) of the 10 3/4 inches (273.0 mm.) square-on-point placard must be white. The placard color must be red and white.

(7) **CHLORINE** placard. The specifications for the **CHLORINE** placard are the same as those for the **POISON GAS** placard except for the word "CHLORINE" and the symbol. The word "CHLORINE" must be centered on the placard horizontal center line in letters 2 1/2 inches (6.35 mm.) high and made with a 7/16-inch (11.1 mm.) stroke. The lowest part of the symbol must be 1 3/4 inches (44.5 mm.) above the placard horizontal center line. The symbol must be 3 11/16 inches (93.6 mm.) high and 5 1/8 inches (130.2 mm.) across the widest extremities.

(8) **POISON GAS** placard. The word "POISON" must be across the center area of the placard with the word "GAS" centered beneath the word "POISON." The letters in both words must be 2 3/16 inches (55.5 mm.) high and made with a 13/32-inch (10.3 mm.) stroke. The top of the letters in the word "POISON" must be 2 1/4 inches (57.1 mm.) above the horizontal center line. The lowest part of the symbol must be 2 3/4 inches (69.8 mm.) above the horizontal center line and must be 3 1/4 inches (82.5 mm.) high and 4 5/16 inches (109.5 mm.) across the widest extremities. The 1/8-inch (3.2 mm.) black border must be 1/2 inch (12.7 mm.) in from the placard edge. The placard color must be black and white.

(9) **FLAMMABLE** placard. The word "FLAMMABLE" must be centered on the placard horizontal center line. The letters in the word "FLAMMABLE" must be 2 inches (50.8 mm.) high and made with an 11/32-inch (8.7 mm.) stroke. The base of the symbol bar must be 2 1/4 inches (57.1 mm.) above the placard horizontal center line. The symbol must be 4 1/16 inches (115.9 mm.) high and 3 5/16 inches (84.1 mm.) wide. The bar must be 1/8-inch (3.2 mm.) wide and 3 5/16 inches (84.1 mm.) long. The outer 1/2-inch (12.7 mm.) of the 10 3/4 inches (273.0 mm.) square-on-point placard must be white.

(10) **RESIDUE** placard. The specifications for the **FLAMMABLE-RESIDUE** placard are the same as the specifications for the following **RESIDUE** placards: NON-FLAMMABLE GAS; POISON GAS; CHLORINE; OXYGEN; FLAMMABLE GAS; FLAMMABLE; FLAMMABLE SOLID; FLAMMABLE SOLID W; OXIDIZER; ORGANIC PEROXIDE; POISON; and CORROSIVE. The lower triangle of each **RESIDUE** placard must be black. This triangle must be 2 1/2 inches (50 mm) below the horizontal center line of the placard or adjacent to the lower edge of the white block for the identification number. The letters in the word *RESIDUE* must be approximately 1 inch (25 mm) high, made with approximately 1/4 inch (6 mm) stroke. The letters must be located in the lower black triangle and parallel to the horizontal center line of the placard. The hazard class number must be approximately 1 1/2 inches (40 mm) high and centered below the word *RESIDUE*. The *RESIDUE* placard may be made in any of the three ways cited in § 172.525(c), Subpart F of Part 172.

(11) **COMBUSTIBLE** placard. The specification for the **COMBUSTIBLE** placard are the same as those prescribed for the **FLAMMABLE** placard except the letters in the word "COMBUSTIBLE" must be 1 7/8 inches (47.6 mm.) high and made with an 11/32-inch (8.7 mm.) stroke.

(12) **FLAMMABLE SOLID** placard. The word "FLAMMABLE" must be across the center of the placard with the word "SOLID" centered beneath the word "FLAMMABLE." The letters in the word "FLAMMABLE" must be 2 inches (50.8 mm.) high and made with a 3/8-inch (9.5 mm.) stroke. The letters in the word "SOLID" must be 1 1/2 inches (38.1 mm.) high and made with a 1/4-inch (6.3 mm.) stroke. The top of the letters in the word "FLAMMABLE" must be 1 3/16 inches (30.1 mm.) above the placard horizontal center line, and the top of the word "SOLID" must be 1-inch (25.5 mm.) below the placard horizontal center line. The base of the symbol bar must be 2 1/4 inches (57.1 mm.) above the placard horizontal center line. The symbol must be 4 1/16 inches (115.9 mm.) high and 3 5/16 inches (84.1 mm.) wide. The outer 1/2-inch (12.7 mm.) of the 10 3/4 inches (273.0 mm.) square-on-point placard must be white. Each red and white stripe must be approximately 1 inch (25.4 mm.) wide. The placard must have seven red stripes and six white stripes. One red stripe must be approximately centered on the vertical center line of the placard. The placard color must be black, white, and red.

(13) **FLAMMABLE SOLID W** placard. The specifications for the **FLAMMABLE SOLID W** are the same as the specifications for the **FLAMMABLE SOLID** placard except for the top triangle. The base of the blue triangle must be 2 inches (50.8 mm.) above the placard horizontal center line with the base of the symbol 2 1/8 inches (60.3 mm.) above the placard horizontal center line. The symbol must be 2 1/4 inches (57.1 mm.) high; 2 3/4 inches (69.8 mm.) across the top 1 3/4 inches (44.4 mm.) across the base, and made with a 5/16 inch (7.9 mm.) stroke. The white stripe in the symbol must be 7/32 inch (5.5 mm.) wide and 3 1/2 inches (88.9 mm.) long. The white stripe must slant upward from right to left at an angle of approximately 21 degrees from the horizontal line. This placard may be made in any of the three ways cited in § 172.543, subpart F of Part 172.

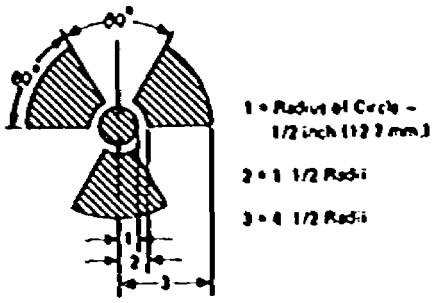
(14) **OXIDIZER** placard. The word "OXIDIZER" must be centered on the placard horizontal center line in letters 2 1/2 inches (63.5 mm.) high with a 15/32-inch (11.9 mm.) stroke. The base of the bar of the symbol must be 2 1/16 inches (52.4 mm.) above the placard horizontal center line. The overall height of the symbol must be 4 5/16 inches (109.5 mm.) with the bar measuring 1/8-inch (3.2 mm.) wide and 2 3/16 inches (55.6 mm.) long. The symbol must be 2 3/8 inches (60.3 mm.) across the widest part. The outer 1/2-inch (12.7 mm.) of the 10 3/4 inches (273.0 mm.) placard must be white. The placard color must be yellow, black, and white.

(15) **ORGANIC PEROXIDE** placard. The word "ORGANIC" must be across the center line of the placard with the word "PEROXIDE" centered beneath the word "ORGANIC." The letters in both words must be 2 inches (50.8 mm.) high and made with an 11/32-inch (8.7 mm.) stroke. The top of the letters in the word "ORGANIC" must be 2 1/8 inches (54.0 mm.) above the placard horizontal center line, and the top of the letters in the words "PEROXIDE" must be 5/16-inch (7.9 mm.) below the placard horizontal center line. The base of the symbol bar must be 2 7/8 inches (73.0 mm.) above the horizontal center line. The symbol must be 3 11/16 inch (93.6 mm.) high and 2 1/16 inches (52.3 mm.) wide with the bar 3/16-inch (4.8 mm.) wide and 1 7/8 inches (47.6 mm.) long. The outer 1/2-inch (12.7 mm.) of the 10 3/4 inches (273.0 mm.) square-on-point placard must be white. The placard color must be yellow, black, and white.

(16) **POISON** placard. The word "POISON" must be centered on the placard horizontal center line in letters 3 1/16 inches (77.8 mm.) high and made with a 9/16-inch (14.3 mm.) stroke. The lowest point on the symbol must be 2 1/8 inches (54.0 mm.) above the placard horizontal center line. The symbol must be 3 11/16 inches (93.6 mm.) high and 4 15/16 inches (125.4 mm.) across the widest extremities. The 1/8-inch (3.2 mm.) black border must be 1/2-inch (12.7 mm.) in from the placard edge. The placard color must be black and white.

(17) **RADIOACTIVE** placard. The word "RADIOACTIVE" must be centered on the placard horizontal center line in letters 2 inches (50.8 mm.) with an 11/32-inch (8.7 mm.) stroke. The lower edge of the yellow triangle must be 1 1/4 inches (28.6 mm.) above the placard horizontal center line. The lower edge of the symbol must be 1 1/4 inches (31.7 mm.)

above the placard horizontal center line. The symbol must be made as shown with the following dimensions.

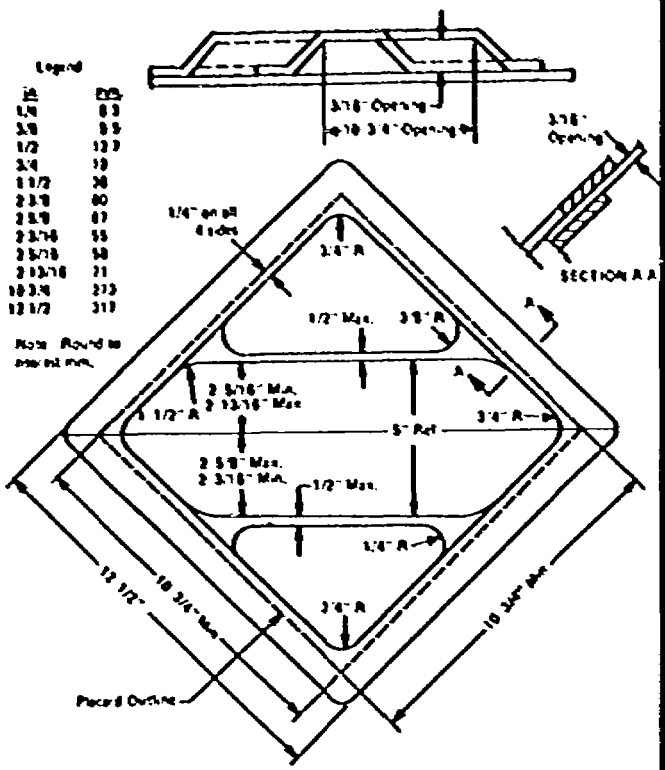


The lower white area must have a ⅛-inch (3.2 mm.) black solid line border extended from the edge of the yellow area to indicate the outer ½-inch (12.7 mm.) white placard border. The placard color must be yellow, black, and white.

(18) CORROSIVE placard. The word "CORROSIVE" must be across the center of the placard and made with letters 2 ⁱ⁄₁₆ inches (52.4 mm.) high with a ⁱ⁄₃₂-inch (8.7 mm.) stroke. The base of the top white triangle must be 1½ inches (38.1 mm.) above the placard horizontal center line. The lowest part of the symbol must be 1⅝ inches (41.3 mm.) above the placard horizontal center line. The height of the symbol measured from a horizontal line extended from the lowest part of the symbol must be 3¼ inches (82.5 mm.) and the width across the widest part must be 7⅜ inches (187.3 mm.). The upper white area must have a ⅛-inch (3.2 mm.) black solid border as an extension from the edge of the black area to indicate the outer ½-inch (12.7 mm.) white placard border. The placard color must be black and white.

(19) BLASTING AGENTS placard. The words **BLASTING AGENTS** must be across the center area of the placard and made with letters 1⅞ inches (47.6 mm) high with a ⁱ⁄₁₆-inch (7.9 mm) stroke.

Appendix C—Dimensional Specifications for Recommended Placard Holder



For explanation of abbreviations and reference marks, see last page of this tariff.

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

SUBPART A

GENERAL

§ 173.1 Purpose and scope. (a) This part includes:
(1) Definitions of hazardous materials for transportation purposes;
(2) Requirements to be observed in preparing hazardous materials for shipment by air, highway, rail, or water, or any combination thereof; and
(3) Inspection, testing, and retesting responsibilities for persons who retest, recondition, maintain, repair and rebuild containers used or intended for use in the transportation of hazardous materials.
(b) A shipment that is not prepared for shipment in accordance with this subchapter may not be offered for transportation by air, highway, rail, or water. It is the duty of each person who offers hazardous materials for transportation to instruct each of his officers, agents, and employees having any responsibility for preparing hazardous materials for shipment as to applicable regulations in this subchapter.
(c) When a person other than the person preparing a hazardous material for shipment performs a function required by this part, that person shall perform the function in accordance with this part.

§ 173.2 Classification of a material having more than one hazard as defined in this part. *(a) Classification of material having more than one hazard as defined in this part.* Except as provided in paragraph (b) of this section, a hazardous material, having more than one hazard as defined in this part, must be classed according to the following order of hazards:
(1) Radioactive material (except a limited quantity).
(2) Poison A.
(3) Flammable gas.
(4) Non-flammable gas.
(5) Flammable liquid.
(6) Oxidizer.
(7) Flammable solid.
(8) Corrosive material (liquid).
(9) Poison B.
(10) Corrosive material (solid).
(11) Irritating materials.
(12) Combustible liquid (in containers having capacities exceeding 110 gallons).
(13) ORM–B.
(14) ORM–A.
(15) Combustible liquid (in containers having capacities of 110 gallons or less).
(16) ORM–E.
(b) **Exceptions.** Paragraph (a) of this section does not apply to—
(1) a material specifically identified in §172.101 of this subchapter;
(2) An explosive required to be classed and approved under §173.86, or a blasting agent required to be classed and approved under §173.114a.
(3) An etiologic agent identified in §173.386 as those materials listed in 42 CFR 72.3; or
(4) An organic peroxide. (See §172.101 and §173.151a of this subchapter.)
(5) A limited quantity radioactive material that also meets the definition of another hazard class (see §173.421–2).

§ 173.3 Packaging and exceptions. (a) The packaging of hazardous materials for transportation by air, highway, rail, or water must be as specified in this part. Methods of manufacture, packing, and storage of hazardous materials, that affect safety in transportation, must be open to inspection by a duly authorized representative of the initial carrier or a representative of the Department. Methods of manufacture and related functions necessary for completion of a DOT specification packaging must be open to inspection by a representative of the Department.
(b) The regulations setting forth packaging requirements for a specific material apply to all modes of transportation unless otherwise stated, or unless exceptions from packaging requirements are authorized. For example, the restriction in §173.249(b) applicable to cargo aircraft only applies only to quantities in excess of those allowable under §173.244. Quantities covered under §173.244 may also be shipped by cargo aircraft only.
(c) Packages of hazardous materials that are damaged or found leaking and hazardous materials that have been spilled or leaked may be placed in a metal removable head salvage drum that is compatible with the lading and shipped for repackaging or disposal under the following conditions.
(1) The drum utilized may be either a DOT specification or a non-DOT specification drum as long as the drum has equal or greater structural integrity than a package that is authorized for the respective material in this subchapter. Maximum capacity shall not exceed 110 gallons.
(2) Each drum must be provided with adequate closure and, when necessary, provided with sufficient cushioning and absorption material to prevent excessive movement of the damaged package and to absorb all free liquid. All cushioning and absorbent material used in the drum must be compatible with the hazardous material.
(3) Each drum must be marked with the proper shipping name of the material inside the defective packaging and the name and address of the consignee. In addition, the drum must be marked "salvage drum".
(4) Each drum must be labeled as prescribed for the respective material.
(5) The shipper shall prepare shipping papers in accordance with Subpart C of Part 172 of this subchapter.
(6) The overpack requirements of §173.25, and the reuse provisions of §173.28(h) and §173.28(m) do not apply to drums used in accordance with this paragraph.

§ 173.3a Packaging; special requirements for certain poisonous materials. (a) Notwithstanding the packaging requirements and authorizations referred to in paragraph (b)(1) of this section (including exemptions referring thereto), no person may offer for transportation a material addressed by those sections that also meets the criteria of paragraph (b)(2) of this section except in a packaging—
(1) Specified in Subpart H of this part for any Poison A material if the packaging is made of materials that are chemically compatible with the hazardous materials;
(2) The basic containment unit of which has a rated capacity of one liter or less and that is otherwise offered for transportation in conformance with this Chapter; or
(3) Approved by the Associate Director for HMR based on a determination that the packaging provides a level of safety equivalent to a packaging authorized in this Chapter for Poison A materials, or to packagings authorized for a hazardous material having similar hazards addressed by a specific packaging regulation of this part.
(b) This section applies to any liquid material other than a liquefied compressed gas—
(1) Addressed by the Table in §172.101 (Column 5b) of this subchapter to a packaging requirement prescribed in §§173.119, 173.125, 173.134, 173.154, 173.221, 173.245, 173.249, 173.346, or 173.352, or which is addressed by an exemption, issued under Subpart B of Part 107 of this chapter, that refers to one or more of those sections for the purpose of packaging authorization; and
(2) Having a saturated vapor concentration at 20°C (68°F) equal to or greater than ten times its LC_{50} (vapor) value if the LC_{50} value is 1000 parts per million (ppm) or less.
(c) For the purposes of this section—
(1) LC_{50} means the concentration of vapor that, when administered by continuous inhalation of both male and female young albino rats for one hour, is most likely to cause death within 14 days to one half of the animals tested. The result is expressed in milliliters per cubic meter of air (ppm). Wherever practicable, the test should be conducted in accordance with the procedure described in the Organization for Economic Cooperation and Development (OECD) for Acute Inhalation Toxicity except that the periods of exposure shall be one hour instead of four hours.
(2) Saturated vapor concentration (SVC) means the concentration of vapor at equilibrium with the liquid phase at 20°C (68°F) and standard atmospheric pressure expressed in milliliters per cubic meter (expressed in ppm). This concentration may be calculated from the vapor pressure (VP) of the liquid at 20°C (68°F). The general formula is the vapor pressure divided by the standard atmospheric pressure and multiplied by a million. If the vapor pressure is expressed in millimeters (mm) of mercury the calculation would be

$$\frac{\text{VP (in mm Hg)}}{760} \times 10^6 = \text{SVC (in ppm)}$$

(3) If LC_{50} data are available based on other than a one hour exposure, a factor may be used to determine an acceptable one hour value for the purposes of this section. If the only value available is for a 4 hour exposure, that value is multiplied by 2. This method of estimating a LC_{50} value may not be used when a material causes death by direct pulmonary effect, i.e., by destruction of lung tissue as opposed to systemic poisoning. For these corrosive poisons, the exposure period must be one hour.
(4) LC_{50} data published in scientific and technical handbooks, journals and texts may be used in place of new tests using animals to determine compliance with this section. Where different values for the LC_{50} of a material are found, the most credible value must be used. The Registry of Toxic Effects of Chemical Substances (RTECS) published by NIOSH is a recommended source of these data.
(5) *Limit test.* As an alternative to determine a LC_{50} value, the following procedure may be used to determine whether a material is subject to this section: The saturated vapor concentration at 20°C (68°F) is determined as in

paragraph (c)(2) of this section. This then is divided by 10 and the resulting concentration used to test 10 animals in accordance with the OECD procedure noted in paragraph (c)(1) of this section, with a one hour exposure period. If 5 or more animals die during a 14 day observation period, the material is subject to this section. For example: If a liquid has a saturated vapor concentration of 500 ppm at 20°C, the concentration used in the test outlined in this paragraph would be 50 ppm.

(d) The requirements of this section, and other requirements of this subchapter referring to this section for application, are effective as follows:

(1) Transportation in packagings having capacities greater than 110 gallons after April 30, 1986.

(2) Transportation in packaging having capacities of 110 gallons or less after September 30, 1986.

(3) Until January 1, 1988, LC_{50} or limit test data based on a 48 hour observation period may be used in place of a 14 day observation period.

§ 173.4 Exceptions for small quantities. (a) Small quantities of Flammable liquids, Flammable solids, Oxidizers, Organic peroxides, Corrosive materials, Poison B, and ORM A, B, C, and Radioactive materials that also meet the definition of one or more of these hazard classes are not subject to any other requirements of this subchapter if:

(1) The maximum quantity of material per inner receptacle is limited to:

(i) Thirty (30) milliliters for authorized liquids, other than poisons;

(ii) Thirty (30) grams for authorized solids, other than poisons;

(iii) One (1) gram for authorized materials classed as Poison B; or subject to the "Poison-Inhalation Hazard" shipping paper description requirements of §172.203(k)(4); and

(iv) An activity level not exceeding that specified in §§173.421, 173.422, or 173.424, as appropriate, for a package containing a radioactive material;

(2) With the exception of temperature sensing devices, each inner receptacle:

(i) Is not liquid-full at 130°F; and

(ii) Is constructed of plastic having a minimum thickness of no less than 0.008-inch (0.2 millimeters), or earthenware, glass, or metal;

(3) Each inner receptacle with a removable closure has its closure held securely in place with wire, tape, or another positive means;

(4) Unless equivalent cushioning and absorbent material surrounds the inside packaging, each inner receptacle is securely packed in an inside packaging with cushioning and absorbent material that:

(i) Will not react chemically with the material, and

(ii) Is capable of absorbing the entire content (if a liquid) of the receptacle;

(5) The inside packaging is securely packed in a strong outside packaging;

(6) The completed package, as demonstrated by prototype testing, is capable of sustaining:

(i) Each of the following free drops made from a height of 6-feet direct onto a solid unyielding surface without breakage or leakage from any inner receptacle and without a substantial reduction in the effectiveness of the package:

(A) One drop flat on bottom;

(B) One drop flat on top;

(C) One drop flat on the long side;

(D) One drop flat on the short side; and

(E) One drop on a corner at the junction of three intersecting edges; and

(ii) A compressive load in pounds determined by multiplying by two the maximum horizontal cross section of the package (in square inches) in the position in which it would normally be transported without a substantial reduction in effectiveness; the load shall be applied continuously during a period of 24 hours, uniformly against the top and bottom of the package which is in the position in which it is intended to be normally transported.

Note: Each of the above tests may be performed on a different, but identical package (i.e., all tests need not be performed on the same package.

(7) Placement of the material, or packing it with different materials, in the package does not result in a violation of §173.21;

(8) The gross weight of the completed package does not exceed 65 pounds;

(9) The shipper certifies conformance with this section by marking the outside of the package with the statement: "This package conforms to conditions and limitations specified in 49 CFR 173.4";

(10) The package is not opened or otherwise altered until it is no longer in commerce; and

(11) The package, unless approved by the Director, OHMT, does not contain a material assigned any of the following identification numbers associated with the hazardous materials description in §§172.101 or 172.102 of this subchapter:

1092	1419	1504	2031	2845
1131	1422	1749	2032	2924
1259	1432	1798	2495	2925
1380	1433	1831	2626	9191
1397	1491	1873	2813	9193

(b) A package containing a radioactive material also must conform with the requirements of §173.421(a) through (e) or §173.422(a) through (f). After May 2, 1989, a package containing a radioactive material may not be offered for transportation aboard a passenger-carrying aircraft unless that material is intended for use in, or incident to, research, medical diagnosis or treatment.

§ 173.5 Agricultural operations. (a) Formulated agricultural chemicals which are offered for transportation in less-than-case-lot quantities, or when repackaged, are not subject to Subpart D of Part 172 of this subchapter and the outside specification packaging requirements of Part 173 of this subchapter if all of the following conditions are met:

(1) Inside packagings are enclosed in strong outside packagings. Inside liquid packagings are cushioned, if necessary, to prevent breakage and leakage;

(2) Each inside packaging does not exceed 1-gallon capacity for liquids nor 25 pounds for dry materials;

(3) Gross weight of less-than-case or repackaged lots is not over 100 pounds in each vehicle;

(4) Transportation is authorized only by private motor vehicle between a final distribution point and the ultimate point of application, if that distance does not exceed one hundred miles.

(b) Formulated liquid agricultural chemicals in specification packagings of 55 gallons capacity, or less, with closures manifolded to a closed mixing system and equipped with positive dry disconnect devices may be transported by a private motor carrier between a final distribution point and an ultimate point of application or loading aboard an aircraft for aerial application.

(c) See §173.315(m) pertaining to nurse tanks.

§ 173.5a Oilfield service vehicles. Notwithstanding §173.29 of this subchapter, a cargo tank mounted on a transport vehicle used in oilfield servicing operations is not subject to the specification requirements of this subchapter if—

(a) The cargo tank and equipment contains only residual amounts (i.e., it is emptied so far as practicable) of a flammable liquid alone or in combination with water.

(b) No flame producing device is operated during transportation, and

(c) The proper shipping name is preceded by "Residual" on the shipping paper for each movement on a public highway.

§ 173.6 Shipments by air. (a) **General shipping requirements.** When the regulations indicate a hazardous material is forbidden aboard cargo-aircraft only, the material is also forbidden aboard passenger-carrying aircraft.

(b) **General packaging requirements.** (1) In addition to the requirements of this part and Parts 175 and 178 of this subchapter, for air shipments each packaging must be designed and constructed to prevent leakage that may be caused by changes in altitude and temperature during air transportation.

(2) Inner containers that are breakable (such as earthenware, glass, or brittle plastic), must be packaged to prevent breakage and leakage under conditions normally incident to transportation. These completed packagings must be capable of withstanding a 4-foot drop on solid concrete in the position most likely to cause damage. Cushioning and absorbent materials must not be capable of reacting dangerously with the contents. Where any plastic packaging is specified in this part, a plastic bag or pouch is not permitted unless specifically authorized.

(3) For any packaging with a capacity of 110 gallons or less containing liquid, sufficient outage (ullage) must be provided to prevent liquid contents from completely filling the packaging at 130°F. The primary packaging (which may include composite packaging), for which retention of the liquid is the basic function, must be capable of withstanding, without leakage, an internal absolute pressure of no less than 26 lbs./sq. inch or no less than the sum of the absolute vapor pressure of the contents at 130°F. (55°C.) and the atmospheric pressure at sea level, whichever is greater.

(4) Stoppers, corks, or other such friction-type closures must be held securely, tightly, and effectively in place with wire, tape, or other positive means. Each screw-type closure on any inside plastic packaging must be secured to prevent the closure from loosening due to vibration or substantial changes in temperature.

(5) Bags permitted by regulations as outside packaging for transportation aboard aircraft must be water resistant.

(6) For any cylinder containing hazardous materials incorporating valves, sufficient protection must be provided to prevent operation and damage to such valves during transportation, by one of the following methods:

(i) By equipping each cylinder with securely attached valve caps or protective headrings, or

(ii) By boxing or crating of the cylinder.

(7) Tank cars and cargo tanks containing hazardous materials may not be transported aboard aircraft.

(c) **Special labeling requirements.** See "Magnetized materials" in §§172.101 and 173.1020 of this subchapter and see §172.101 for cargo-only aircraft labeling requirements.

(d) No person may offer for transportation aboard aircraft an overpack containing hazardous materials which require segregation under the provisions of §175.78 of this subchapter.

§ 173.7 U.S. Government material. (a) Hazardous materials offered for transportation by, for, or to the Department of Defense (DOD) of the U.S. Government, including commercial shipments pursuant to a DOD contract, must be packaged in accordance with the regulations in this sub-

chapter or in packagings of equal or greater strength and efficiency as certified by DOD pursuant to the "Policies and Procedures for Hazardous Materials Packaging Certification, AFLCR 800-29/AFSCR 800-29/ OARDOM-R 700-103/NAVMATINST 4030.11/DLAR 4145.37." Hazardous materials offered for transportation by DOD under this provision may be reshipped by any shipper to any consignee provided the original packaging has not been damaged or altered in any manner.

(i) Hazardous materials sold by the DOD in packagings that are not marked in accordance with the requirements of this subchapter may be shipped from DOD installations if the DOD certifies in writing that the packagings are equal to or greater in strength and efficiency than the packaging prescribed in this subchapter. The shipper shall obtain such a certification in duplicate for each shipment. He shall give one copy to the originating carrier and retain the other for no less than 1 year.

(b) Shipments of radioactive materials, made by or under the direction or supervision of the U.S. Department of Energy or the Department of Defense, and which are escorted by personnel specifically designated by or under the authority of those agencies, for the purpose of national security, are not subject to the regulations in Parts 170–189 of this subchapter.

(c) Shipments of explosive samples, not exceeding one gram net weight, offered by and consigned to the Bureau of Alcohol, Tobacco and Firearms (ATF) of the Department of the Treasury are not otherwise subject to the regulations in Parts 110–189 of this subchapter when placed in a specifically designed multi-unit assembly packed in a strong outside packaging. The packaging must be of a type accepted by ATF as capable of precluding a propagation of any explosion outside the packaging. The second component from the outside of the packaging must be marked or tagged to indicate the presence of an explosive.

(d) Notwithstanding the requirements of §§ 173.416 and 173.417 of this subchapter, packagings made by or under the direction of the U.S. Department of Energy may be used for the transportation of radioactive materials when evaluated, approved, and certified by the Department of Energy against packaging standards equivalent to those specified in 10 CFR Part 71. Packages shipped in accordance with this paragraph shall be marked and otherwise prepared for shipment in a manner equivalent to that required by this subchapter for packagings approved by the Nuclear Regulatory Commission.

§ 173.8 [Reserved]

§ 173.9 Cars, truck bodies or trailers containing lading which has been fumigated or treated with flammable liquids, flammable gases, poisonous liquids or solids, or poisonous gases. (a) Delivery of rail cars, freight container, or trailers containing lading, fumigated or treated with flammable liquid or flammable gas for transportation by rail carrier is prohibited until 48 hours have elapsed after such fumigation or treatment, or until cars, truck bodies or trailers have been ventilated so as to remove danger of fire or explosion due to the presence of flammable vapors.

(b) Rail cars, truck bodies or trailers containing lading which has been fumigated or treated with poisonous liquid, solid, or gas, such as carbolic acid, liquid or solid, chlorpicrin, hydrocyanic acid, methyl bromide, etc., must be placarded on each door or near thereto with placard as described below (for cleaning cars see § 174.615 of this subchapter):

(Reduced size)

(Red lettering on white cardboard)

DANGER

The lading of this car has been
FUMIGATED or
TREATED
with

(Name of poisonous liquid, solid, or gas)

BEFORE UNLOADING, open both doors and DO NOT ENTER until car is free of gas. REMOVE ALL POISONOUS MATERIAL before release of empty car.

§ 173.10 Tank car shipments. (a) Tank cars containing any flammable gas (including a cryogenic liquid) or flammable liquid, except liquid road asphalt or tar, may not be offered for transportation unless originally consigned or subsequently reconsigned to parties having private-siding (see Note 1 of this section) or to parties using railroad siding facilities which have been equipped for piping the liquid from tank cars to permanent storage tanks of sufficient capacity to receive contents of car.

(b) A tank car containing any compressed gas must not be offered for transportation unless the car is consigned for delivery (see paragraph (c) of this section), and unloading on a private track (see Note 1 of this section), except that where no private track is available, delivery and unloading on carrier tracks is permitted provided the following conditions are complied with:

(1) Any tank car of DOT-106A or 110A type (see §§ 179.300 and 179.301 of this subchapter) may be offered for transportation and the loaded unit tanks may be removed from car frame on carrier tracks, provided the shipper has obtained from the delivering carrier and filed with originating carrier, written permission (see Note 2 of this section) for such removal. The consignee must furnish adequately safe mechanical hoist, obtained from the carrier if desirable, by which the tanks shall be lifted from the car and deposited directly upon vehicles furnished by the consignee for immediate removal from carrier property or tanks must be lifted by adequately safe mechanical hoist from car directly to vessels for further transportation.

(c) Any tank car of other than DOT-106A or 110A type (see §§ 179.300 and 179.301 of this subchapter), containing anhydrous ammonia, liquefied hydrocarbon or liquefied petroleum gas, and having interior pipes of liquid and gas discharge valves equipped with check valves, may be consigned for delivery and unloading on carrier tracks, if the lading is piped directly from the car to permanent storage tanks of sufficient capacity to receive the entire contents of the car. Such cars may also be consigned for storage on a private track or on a carrier track when designated by the carrier for such storage.

(d) For cars of the DOT-106A or 110A type (see §§ 179.300 and 179.301 of this subchapter), the tanks must be placed in position and attached to the car structure by the shipper.

(e) Flammable liquids and flammable gases (including a cryogenic liquid) may not be loaded into tank cars on carrier property from tank trucks or drums.

Note 1. For this purpose, a private track is a track outside of carrier's right of way, yard, and terminals, and of which the carrier does not own either the rails, ties, roadbed or right of way; or a track or portion of a track which is devoted to the purpose of its use, either by lease or written agreement, in which case the lease or written agreement will be considered as equivalent to ownership.

Note 2. Carriers should give permission for the unloading of these containers on carrier tracks only where no private siding is available within reasonable trucking distance of final destination. The danger involved is the release of compressed gases due to accidental injury to container in handling. The exposure to this danger decreases directly with the isolation of the unloading point.

§ 173.11 Shipper's registration statement; flammable cryogenic liquids. (a) No person may offer a flammable cryogenic liquid for transportation in a portable tank, cargo tank or a tank car unless he has filed a registration statement by certified mail, return receipt requested, with the Director, OHMT, RSPA, in accordance with paragraphs (b), (c) and (d) of this section.

(b) The registration statement must contain the following information:

(1) The shipper's name and principal place of business;

(2) Location where flammable cryogenic liquids are offered for transportation, including transportation by private carriage;

(3) The name and principle place of business of each initial carrier used to transport flammable cryogenic liquids and the name of each flammable cryogenic liquid the carrier is offered for transportation; and

(4) The type of packaging and the serial number or vehicle identification number of each portable tank and cargo tank, and the reporting mark and number of each tank car, owned, leased, or otherwise controlled by the shipper and used to offer a flammable cryogenic liquid for transportation.

(c) The registration statement must be filed:

(1) Initially between January 1 and February 28, 1985 (this initial statement is only required to contain information regarding operations that took place during the 90 days prior to the date of the statement); and

(2) Subsequently, between July 1 and August 31 of each odd numbered year after 1985.

(d) For operations begun between the two-year filing intervals specified in paragraph (c) of this section, the information must be provided on the registration statement filed during the next required filing period.

§ 173.12 Exceptions for shipment of waste material.

(a) **General.** Waste material meeting the hazard class definition of a flammable liquid, flammable solid, oxidizer, corrosive material, Posion B or ORM-A, B, C, and E are excepted from the specification packaging requirements of this subchapter if packaged in combination packagings in accordance with this section and transported for disposal or recovery by private or contract motor carrier by highway only. In addition, a generic proper shipping name from § 172.101 may be used in place of specific chemical names, when two or more waste materials in the same hazard class are packaged in the same outside packaging, provided the waste materials are chemically compatible.

(b) **Outside packaging.** The outside packaging must be a DOT specification metal or fiber drum. It may also be a polyethylene drum capable of withstanding:

(1) The vibration and compression tests specified in § 178.19-7(c)(1) and (2), and

(2) A four-foot drop test as specified in § 178.224-2(b).

(c) **Inside packagings.** The inside packagings must be either glass packagings not exceeding 1-gallon rated capacity, or metal or plastic packagings not exceeding a rated capacity of 5 gallons.

(d) **Additional packaging requirements.** The following additional requirements are applicable:

(1) Each outside packaging may only contain one hazard class and the materials must be chemically compatible;

(2) Inside packagings of liquid must be surrounded by a compatible absorbent material capable of absorbing the total liquid contents; and

(3) Gross weight may not exceed 450 pounds or the rated capacity of the drum; whichever is less.

(e) **Prohibited materials.** The following materials are not authorized under the provisions of this section: acrolein; bromine pentafluoride; bromine trifluoride; chloric acid, chlorine trifluoride, nitric acid, fuming; pyroforic liquids; and sulfuric acid, fuming.

SUBPART B

PREPARATION OF HAZARDOUS MATERIALS FOR TRANSPORTATION

§ 173.21 Forbidden materials and packages.

Unless otherwise provided in this subchapter, the offering for transportation of the following is forbidden:

(a) A hazardous material in the same packaging, freight container, or overpack with another hazardous material, the mixing of which would be liable to cause a dangerous evolution of heat or gas, or produce corrosive materials, except as provided in §§ 173.152(a) and 173.242(a) and (b).

(b) A package containing a material which is liable to decompose or polymerize at a temperature of 130°F. (54.4°C.) or less with an evolution of a dangerous quantity of heat or gas unless stabilized or inhibited in a manner that will preclude such evolution.

(1) The determination of whether a material is forbidden under this paragraph may be made by one of the following methods: Standard Method of Test for Constant Temperature Stability of Chemical Materials (ASTM E-487-74) or the Self Accelerating Decomposition Temperature (SADT) Test published by the Organic Peroxide Producers' Safety Division (OPPSD).

(2) Refrigeration may be used as a means of stabilization only when approved by the Director, Office of Hazardous Materials Transportation, RSPA. (For status of approvals issued by the Bureau of Explosives, see § 171.19 of this subchapter.)

(3) For organic peroxides, the decomposition temperature of 130°F. (54.4°C.) does not apply if the controlled temperature requirements specified in Chapter 11 of the UN Recommendations are applied to determine when refrigeration is required.

(c) Packages which evolve a dangerous quantity of flammable gas or vapor released from a material which would not otherwise be subject to this subchapter, i.e., the release of flammable vapor or gas in such quantities that a flammable mixture with air would be created within a transport vehicle.

(d) Packages containing materials (other than those classed as explosives) which will detonate in a fire. For the purposes of this paragraph, a detonation is a type of explosion in which a shock wave travels through the material at a speed greater than the speed of sound in the undecomposed material. When tests are required to evaluate a package under the provisions of this paragraph, the testing must be done or approved by one of the agencies specified in § 173.86.

(e) Any package containing a cigarette lighter or other similar device with fuel and equipped with an ignition element, unless the design of the device and its packaging insofar as they affect safety in transportation have been examined by the Bureau of Explosives (B of E) and approved by the Director, Office of Hazardous Materials Transportation, RSPA. (An approval which was issued by the B of E remains valid to the same extent as if it had been issued by RSPA.) For lighters containing gases, also see § 173.308.

(f) For carriage by aircraft, any material which when packaged has a measurable magnetic field of more than 0.00525 gauss when measured from any surface of the package at a distance of 15 feet.

§ 173.22 Shipper's responsibility. (a) Except as otherwise provided in this part, a person may offer a hazardous material for transportation in a packaging or container required by this part only in accordance with the following:

(1) The person shall class and describe the hazardous material in accordance with Parts 172 and 173 of this subchapter, and

(2) The person shall determine that the packaging or container has been manufactured, assembled, and marked in accordance with—

(i) Section 173.7(a) and Parts 173, 178, or 179 of this subchapter;

(ii) A specification of the Department in effect at the date of manufacture of the packaging or container;

(iii) An approval issued under this subchapter; or

(iv) An exemption issued under Subchapter B of this chapter.

(3) In making the determination under paragraph (a)(2) of this section, the person may accept:

(i) The manufacturer's certification, specification, approval, or exemption marking (see §§ 178.0-2 and 179.1 of this subchapter); or

(ii) With respect to cargo tanks provided by a carrier, the manufacturer's identification plate or a written certification of specification or exemption provided by the carrier.

(b) When a person performs a function covered by or having an effect on a specification prescribed in Part 178 or 179 of this subchapter, an approval issued under this subchapter, or an exemption issued under Subchapter B of this chapter, that person must perform the function in accordance with that specification, approval, or exemption, as appropriate.

(c) Prior to each shipment of fissile radioactive materials, and Type B or highway route controlled quantity packages of radioactive materials (see § 173.403), the shipper shall notify the consignee of the dates of shipment and expected arrival. The shipper shall also notify each consignee of any special loading/unloading instructions prior to his first shipment. For any shipment of irradiated reactor fuel, the shipper shall provide physical protection in compliance with a plan established under:

(1) Requirements prescribed by the U.S. Nuclear Regulatory Commission, or

(2) Equivalent requirements approved by the Director, Office of Hazardous Materials Transportation, RSPA.

(d) Within 90 days following acceptance by a carrier of any package containing a highway route controlled quantity of radioactive material (see § 173.403(l)) for transportation by public highway, the shipper shall file the following information with the Director, Office of Hazardous Materials Transportation, RSPA (this paragraph does not apply to packages shipped in compliance with physical security requirements of the U.S. Nuclear Regulatory Commission in 10 CFR Part 73):

(1) The route plan required under § 177.825(c) of this subchapter (any supplement to the route plan prepared in accordance with § 177.825(c) of this subchapter shall be filed within 90 days of receipt from the carrier);

(2) A statement identifying the name and address of the shipper, carrier and consignee; and

(3) A copy of the shipping paper or the description of the radioactive material required by §§ 172.202 and 172.203 of this subchapter.

§ 173.22a Use of packagings authorized under exemptions. (a) Except as provided in paragraph (b) of this section, no person may offer a hazardous material for transportation in a packaging the use of which is dependent upon an exemption issued under Subpart B of Part 107 of this title, unless that person is the holder of or a party to the exemption.

(b) If an exemption authorizes the use of a packaging for the shipment or transportation of a hazardous material by any person or class of persons other than or in addition to the holder of the exemption, that person or a member of that class of persons may use the packaging for the purposes authorized in the exemption subject to the terms specified therein. However, no person may use a packaging under the authority of this paragraph unless he maintains a copy of the exemption at each facility where the packaging is being used in connection with the shipment or transportation of the hazardous material concerned. Copies of exemptions may be obtained from the Office of Hazardous Materials Transportation, U.S. Department of Transportation, Washington, D.C. 20590, Attention: Docket Section.

§ 173.23 Previously authorized packaging. (a) Where the regulations specify Specification 34 polyethylene drums, a polyethylene drum manufactured and marked in accordance with a DOT exemption may be used if the polyethylene drum conforms to Specification 34 except for the specification marking required by § 178.19-6(a)(2) of this subchapter and the drum is legibly marked "DOT-34" in characters at least one half inch in height in a location near the exemption marking.

(b) [Reserved]

(c) After July 2, 1982, a seamless aluminum cylinder manufactured in conformance with and for use under DOT exemption E 6498, E 8107, E 7042, E 8364, or E 8422, may be continued in use if marked before or at the time of the next retest with the specification identification "3AL" immediately above the exemption number, or the DOT mark (i.e., DOT 3AL 1800) is added in proximity to the exemption marking.

(d) Cylinders (spheres) manufactured and marked DOT-E 6616 prior to January 1, 1983, may be continued in use if marked before or at the time of the next retest with the specification identification "4BA" near the exemption marking.

(e) After October 1, 1984, cylinders manufactured for use under exemptions DOT E-6668 or E-8404 may be continued in use, and must be marked "DOT-4L XXXYY" (XXX to be replaced by the service pressure, YY to be replaced by the letters "AL," if applicable), in compliance with Specification 4L (§ 178.57 of this subchapter) on or before January 1, 1986. The "DOT-4L XXXYY" must appear in proximity to other required specification markings.

§ 173.24 Standard requirements for all packages. (a) Each package used for shipping hazardous materials under this subchapter shall be so designed and constructed, and its contents so limited, that under conditions normally incident to transportation:

(1) There will be no significant release of the hazardous materials to the environment;

(2) The effectiveness of the packaging will not be substantially reduced; and

(3) There will be no mixture of gases or vapors in the package which could, through any credible spontaneous increase of heat or pressure, or through an explosion, significantly reduce the effectiveness of the packaging.

(b) Materials for which detailed specifications for packaging are not set forth in this part must be securely packaged in strong, tight packages meeting the requirements of this section.

(c) Packaging used for the shipment of hazardous materials under this subchapter shall, unless otherwise specified or exempted therein, meet all of the following design and construction criteria:

(1) Each specification container must be marked as follows:

(i) In an unobstructed area with letters and numerals identifying the container specification (e.g., DOT-1A, DOT-17E-304HT, DOT-23G40). See § 178.0-2 of this subchapter.

(ii) The name and address or symbol of person making the mark specified in paragraph (c)(1)(i) of this section. Symbol letters, if used, must be registered with the Director, OHMT. Duplicate symbols are not authorized.

(iii) The markings must be stamped, embossed, burned, printed, or otherwise marked on the packaging to provide adequate accessibility, permanency, and contrast so as to be readily apparent and understood.

(iv) Unless otherwise specified, letters and numerals must be at least ½ inch high.

(v) Packaging which does not comply with the applicable specification listed in Parts 178 and 179 of this subchapter must not be marked to indicate such compliance (see § 178.0-2 and § 179.1 of this subchapter).

(2) Steel used shall be low-carbon, commercial quality steel. Stainless, open hearth, electric, basic oxygen, or other similar quality steels are acceptable. Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness (inches)	Minimum thickness (inches)
12	0.1046	0.0946
13	0.0897	0.0817
14	0.0747	0.0677
15	0.0673	0.0603
16	0.0598	0.0533
17	0.0538	0.0478
18	0.0478	0.0428
19	0.0418	0.0378
20	0.0359	0.0324
22	0.0299	0.0269
23	0.0269	0.0239
24	0.0239	0.0209
26	0.0179	0.0159
28	0.0149	0.0129
30	0.0120	0.0110

(3) Lumber used shall be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(4) Welding and brazing shall be performed in a workmanlike manner using suitable and appropriate techniques, materials, and equipment.

(5) Packaging materials and contents shall be such that there will be no significant chemical or galvanic reaction among any of the materials in the package.

(6) Closures shall be adequate to prevent inadvertent leakage of the contents under normal conditions incident to transportation. Gasketed closures shall be fitted with gaskets of efficient material which will not be deteriorated by the contents of the container.

(7) Nails, staples, and other metallic devices shall not protrude into the interior of the outer packaging in such a manner as to be likely to cause failures.

(8) The nature and thickness of the packaging shall be such that friction during transport does not generate any heating likely to decrease the chemical stability of the contents.

(d) **Polyethylene packagings and receptacles.** (1) Polyethylene used in packagings and receptacles must be of a type compatible with the lading and may not be permeable to an extent that a hazardous condition occurs during transportation, handling or refilling.

(2) Each polyethylene packaging or receptacle which is used for liquid hazardous materials must be capable of withstanding without failure the procedure specified in Appendix B of this Part ("Procedure for Testing Chemical Compatibility and Rate of Permeation in Polyethylene Packagings and Receptacles") and the maximum rate of permeation of hazardous lading through or into the polyethylene packaging or receptacles may not exceed the following rates:

(i) 0.5 percent for materials meeting the definition of a poison according to this subchapter and 2.0 percent for other hazardous materials, when subjected to temperatures no lower than 18°C. (64°F) for 180 days in accordance with Test Method 1;

(ii) 0.5 percent for materials meeting the definition of a poison according to this subchapter and 2.0 percent for other hazardous materials, when subjected to a temperature no lower than 50°C. (122°F) for 28 days in accordance with Test Method 2; or

(iii) 0.5 percent for materials meeting the definition of a poison according to this subchapter and 2.0 percent for other hazardous materials, when subjected to a temperature no lower than 60°C. (140°F) for 14 days in accordance with Test Method 3.

(3) Alternative procedures or rates of permeation are permitted if they yield a level of safety equivalent to or greater than that provided by paragraph (d)(2) of this section and are approved by the Director, OHMT.

(4) Each polyethylene packaging used as an outside packaging for materials meeting the definition of a poison according to this subchapter shall be permanently marked, by embossment or other durable means, with the word "POISON" in letters of at least ½ inch in height. Additional text or symbols may be included in the marking. The marking shall be located within six inches of the packaging's closure. The requirements of this subparagraph do not apply prior to September 1, 1985.

(e) For specification containers, compliance with the applicable specifications in Parts 178 and 179 of this subchapter shall be required in all details, except as otherwise provided in this subchapter.

§ 173.25 Authorized packages and overpacks. (a) Except as provided in paragraph (b) of this section, authorized packages containing hazardous materials may be offered for transportation when tightly packed in a strong overpack, if all of the following conditions are met:

(1) The package meets the requirements of §§ 173.21 and 173.24 of this subchapter.

(2) The overpack is marked with the proper shipping name and identification number, and labeled as required by this subchapter for each hazardous material contained therein unless markings and labels representative of each hazardous material in the overpack are visible.

(3) Each package subject to the orientation marking requirements of § 172.312 of this subchapter is packed in the overpack with its filling holes up and the overpack is marked "THIS END UP" or "THIS SIDE UP" (as appropriate) to indicate the upward position of closures.

(4) The overpack is marked with a statement indicating that the inside (inner) packages comply with prescribed specifications when specification packagings are required, unless specification markings on the inside packages are visible.

(b) In addition to the requirements of paragraph (a) of this section, authorized packages containing corrosive liquids must meet the following conditions:

(1) Packages containing nitric acid (over 40% concentration), perchloric acid, hydrogen peroxide solution (over 52% strength by weight), nitrohydrochloric or nitrohydrochloric acid diluted are not overpacked; and

(2) Other corrosive liquids are not to be overpacked with any other hazardous material, except as follows:

(i) As provided in §§ 173.242, 173.257, 173.258, 173.259, 173.260, 173.261, and 173.286 of this subchapter; and

(ii) Acid or alkaline battery fluid in packages prescribed by §§ 173.257 and 173.258 of this subchapter may be included in overpacks with storage batteries when packed to prevent movement within the overpack.

(c) Hazardous materials which are required to be labeled Poison, may be transported in the same motor vehicle with material that is marked or known to be foodstuffs, feed or any edible material intended for consumption by humans or animals provided the Poison B material is marked, labeled, and packaged in accordance with this subchapter, conforms to the requirements of paragraph (a) of this section and is overpacked as specified in § 177.841(e) or is in an overpack meeting the following requirements:

(1) The overpack conforms to Specification 5C (§ 178.83 of this subchapter), or

(2) The overpack is a salvage drum as prescribed in § 173.3(c) of this subchapter, and—

(i) Has a maximum rated capacity of 85 gallons;

(ii) Is constructed of steel with a minimum thickness of 16 gauge; and

(iii) It meets the requirements of Specification 17C (§ 178.115 of this subchapter) except for size and marking.

§ 173.26 Quantity limitations and metric measurements. (a) When quantity limitations are specified in this subchapter only by United States liquid measure for 110 gallons or less, or only by avoirdupois weight for 1,000 pounds or less quantities measured in metric units may be substituted on an equivalent basis and up to and including 1 liter per quart and 500 grams per pound. When metric measurements are used, specification packagings must be marked to indicate their use and must be tested accordingly. Symbols for metric markings are L for liter, mL for milliliter, kg for kilogram, and g for gram.

(b) When quantity limitations do not appear in the packaging requirements of this subchapter, the permitted gross weight or capacity authorized for a container to be offered for transportation is as shown in the container specification. (See also § 173.27.)

§ 173.27 Aircraft quantity limitations. (a) The maximum quantity of hazardous material that may be offered for transportation by air in a package that is required for the material by this subchapter may not exceed that quantity prescribed in § 172.101 of this subchapter.

(b) When offered for transportation by air, the combined quantity of any one class of materials may not exceed the lowest maximum quantity prescribed in § 172.101 of this subchapter for any one of the materials in that class contained in the same package that meets the minimum requirements for the material contained therein.

§ 173.28 Reuse of packagings (containers). (a) Containers used more than once (refilled and reshipped after having been previously emptied) must be in such condition, including closure devices and cushioning materials, that they comply in all respects with the prescribed requirements for those containers. Repairs must be made in an efficient manner in accordance with requirements for materials and construction as prescribed in Parts 178 and 179 of this subchapter for new containers, or as otherwise prescribed. Parts that are weak, broken, or otherwise deteriorated must be replaced.

(1) Retest of carboy packages must have been made by or for shippers, or their authorized agents, as required by applicable provisions of the specifications in Part 178 of this subchapter before carboys which are to be offered for transportation are filled.

Note 1: Tests not required by shipper who fills and ships or who reships filled carboys for one shipment only carboy packages which have been properly tested by another shipper or a duly authorized agency.

(b) Markings applied as prescribed by the specifications must be maintained in a legible condition.

(c) If, on account of painting or any other reason, the markings as prescribed for any container cannot be kept plain and legible, a metal plate, brazed or soldered, or otherwise securely fastened to the container, with a reproduction of the prescribed markings plainly stamped thereon, will be permitted.

(d) Packagings previously used for any hazardous material must have the old markings (other than markings which are required by this subchapter to be permanent) and labels, if any, thoroughly removed or obliterated before being used for other materials.

(e) Boxes previously used for high explosives containing a liquid explosive ingredient not contained in an inside metal container must not be again used for shipments of any character.

(f) Boxes that have been contaminated by liquid explosive compositions must not again be used for shipments of any character.

(g) Kegs previously used for any chlorate must not be again used for shipments of any character.

(h) Metal kegs previously used for black powder not contained in an interior package must not be again used for shipment of any explosive.

Note 1: Until further order of the Department, metal kegs previously used for the shipment of black powder not contained in an interior package, may be used provided the kegs are in good physical condition and are not liable to permit escape of contents during transportation. Empty kegs previously used for shipment of black powder must be entirely free of black powder on the inside and outside before being offered for transportation.

(h) Except as provided in paragraphs (m) (n) and (p) of this section, single-trip containers (marked STC) and nonreusable containers (marked NRC) subject to the specification requirement of Part 178 of this subchapter, from which contents have been removed following use for transportation of any material, may not be used thereafter for the transportation of hazardous materials.

(i) Polyethylene packagings previously used for poisonous materials should not be reused for any materials other than poisonous materials or hazardous wastes.

(j) [Reserved]

(k) Containers used for shipments of etching acid liquid, n.o.s. must not be reused for shipment of any commodity.

(l) Cylinders used in anhydrous hydrofluoric acid service must comply with the requirements of § 173.264(b)(1) and must not be used in any other service.

(m) Specifications 17C, 17E, and 17H steel drums (§§ 178.115, 178.116, 178.118 of this subchapter) from which contents have been removed, may be reused as prescribed in this Part as packagings for shipment of flammable liquids, flammable solids, organic peroxides, oxidizers, poisons covered by § 173.370, Radioactive materials and corrosive liquids covered by §§ 173.249 and 173.249a, only if the following requirements, in addition to the other requirements of this section, are complied with prior to each reuse:

(1) Each drum must be thoroughly cleaned to remove all residues and foreign matter, inspected for deterioration or defects, and returned to its original shape and contour. All closure devices and parts must be removed (if removable), inspected for defects, and replaced as necessary. Each open head cover gasket must be replaced. Any drum which shows evidence of deterioration (e.g., visible pitting; creases; significant reduction in parent metal thickness from rust, corrosion, or cleaning processes; metal fatigue; or other material defects) or which cannot be returned to its original shape and contour does not qualify for reuse.

(2) The entire surface of each closed-head drum (and after December 31, 1971, each open-head drum, except for its removable head and adjacent chime area) must be tested for leakage by constant internal air pressure. The leakage test must be conducted by submersion under water, by completely covering the surface with soap suds or oil, or by some other method that will be equally sensitive. The air pressure must be maintained for a period of time sufficient to permit a complete inspection for leaks. The minimum air pressure for the test must be as follows:

Specification No.	Capacity	Minimum test pressure p.s.i.
17C	All	15
	Over 12 gallons	7
17E	12 gallons or less	5
	Over 12 gallons	7
17H	12 gallons or less	5

If leaking, the drum does not qualify for reuse.

(3) Marking:

(i) All previous test markings, commodity identification markings, and labels must be removed.

(ii) The outside of each drum qualifying for reuse under this section must be marked on the body within 10 inches of the top head with the following information: "Tested" (or "Inspected" as appropriate), the month and year of the test (or inspection, if an open-head drum), and the DOT registration number of the reconditioner. For example:

TESTED 2/70
DOT R1001

The registration number required for this marking must be obtained from the Office of Hazardous Materials Transportation, Department of Transportation, Washington, D.C. 20590.

(iii) Markings must be in at least ¼-inch figures and letters on a contrasting background.

(iv) The printed marking of the month and year of test is not required if each is clearly indicated by other means, such as perforations on a decal.

(n) A packaging marked as STC or NRC according to the specification requirements of Part 178 of this subchapter may be reused for the shipment of any corrosive solid, ORM-A, ORM-B, ORM-C, ORM-E, or any material not required by this subchapter to be shipped in a DOT specification packaging. Paragraph (m) of this section does not apply to these materials.

(o) Any drum meeting one specification which has been altered to meet another specification must be capable of meeting the new specification in all respects.

(1) Each drum so altered must be inspected, tested, and marked in accordance with paragraph (m) of this section. In addition, the drum must:

(i) Bear the specification markings required by the specification under which it was originally manufactured, and

(ii) Bear both the old and the new specification identification in conjunction with the markings required by paragraph (m) of this section with the specification to which the drum is converted shown last, e.g., "17E/17H". For example:

17E/17H
TESTED 2/70
DOT R1001

(p) A packaging marked NRC or STC according to the specification requirements of Part 178 of this subchapter may be reused for the shipment of hazardous waste to designated facilities subject to the following conditions:

(1) Except as authorized by this paragraph, the waste must be packaged in accordance with this part and offered for transportation in accordance with the requirements of this subchapter.

(2) Transportation is performed by highway only.

(3) A package is not offered for transportation less than 24 hours after it is finally closed for transportation, and each package is inspected for leakage immediately prior to being offered for transportation.

(4) Each package is loaded by the shipper and unloaded by the consignee, unless the motor carrier is a private or contract carrier.

(5) The packaging may be used only once under this paragraph and may not be used again for shipment of hazardous materials except in accordance with paragraph (m) or (n) of this section.

§ 173.29 Empty packagings. (a) Except as otherwise provided in this section, a packaging having a capacity of 110 gallons or less that previously contained a hazardous material may not be offered for transportation unless offered in the same manner as required when it previously contained a greater quantity of hazardous material.

(1) This paragraph does not apply to:

(i) A packaging that has been cleaned and purged of all residue, or

(ii) A packaging filled with a material that is not subject to this subchapter.

(2) The word "waste" does not have to be displayed as part of the marking required by § 172.300 of this subchapter on a packaging having a capacity of 110 gallons or less that contains only the residue of a hazardous material.

(3) Any packaging having a capacity of 110 gallons or less that contains only the residue of a hazardous material covered by Table 2 of § 172.504 of this subchapter:

(i) Does not have to be included in determining the applicability of the placarding requirements of that section, and

(ii) Is not subject to the shipping paper requirements of this subchapter when collected and transported by a contract or private carrier for reconditioning or reuse.

(4) Notwithstanding the stowage requirements in Columns 7(a) and (b) of the Table in § 172.101 or of the Optional Table in § 172.102 of this subchapter, for transportation by water, empty drums or empty cylinders not meeting the exception in paragraph (a)(1) of this section may be stowed on deck or under deck. Also, these packagings are not subject to Subparts D through O of Part 176 of this subchapter.

(b) [Reserved]

(c) An empty portable tank, cargo tank, tank car or multi-unit tank car tank may not be offered for transportation unless—

(1) Each opening is tightly closed except heater coil inlet and outlet pipes of empty tank cars; and

(2) Except as otherwise specified in this subchapter it is offered for transportation in the same manner as when it previously contained a greater quantity of a hazardous material. This requirement, as well as other provisions in this subchapter, does not apply to any tank that has been cleaned or purged of all hazardous material's residue or when it is reloaded with a material not subject to this subchapter.

(d) An empty packaging bearing a label or marking that is described in this subchapter and that pertains to the identification of a hazardous material may not be offered for transportation, unless the packaging contains some of the hazardous material that previously required display of the label or marking. This prohibition does not apply to transportation in a transport vehicle or freight container if such a packaging is not

For explanation of abbreviations and reference marks, see last page of this tariff.

visible during transportation and the packaging is loaded by the shipper and unloaded by the shipper or consignee.

(e) No person may offer for transportation, and no carrier may accept or transport, an empty packaging containing the residue of a hazardous material unless each opening is securely closed and free from leaks.

§ 173.30 Loading and unloading of transport vehicles. A person who loads or unloads hazardous materials into or from a transport vehicle or vessel shall comply with the applicable loading and unloading requirements of Parts 174, 175, 176, and 177 of this subchapter.

§ 173.31 Qualification, maintenance, and use of tank cars. (a) **General qualifications for use.** (1) Except as otherwise provided in paragraph (a)(2) of this section, every tank car used for the transportation of dangerous articles shall meet the requirements of the applicable specification and regulations for the transportation of the particular commodity. See paragraph (a)(3) of this section.

(2) Tanks prescribed in the following table are authorized for service provided they conform to all applicable safety requirements of this subchapter:

Specifications prescribed in current regulations	Other specifications permitted (subject to the notes)	Notes
105A200-W	105A100-W	1
105A200AL-W	105A100AL-W	1
105A300-W	ICC-105, 105A300	
105A400-W	105A400	
105A500-W	105A500	
105A600-W	105A500	
106A500-X	ICC-27, BE-27, 106A500	
106A800-X	106A800	
107A****		2

Note 1.—Tanks built as Spec. DOT-105A100-W or 105A100AL-W may be altered and reclassified as Spec. DOT 105A200W or 105A200ALW, respectively, by installing safety relief valves, retesting and stenciling in accordance with the applicable specification.

Note 2.—The test pressures of tanks built in the United States prior to January 1, 1956, may be increased to conform with current Spec. DOT-107A except that tanks built prior to 1941 are not authorized. Original and revised test pressure must be indicated and may be shown on a plate attached to the bulkhead of the car.

(3) Unless otherwise specifically provided in this Part:

(i) When class DOT-105A, 105-AL, 106A, 109A-AL, 110A, 111A, 112A, 112S, 112T, 112J, 114A, 114S, 114T or 114J tank car tanks are prescribed, the same class tanks having higher marked test pressures than those prescribed may also be used.

(ii) When class DOT-111AW1 tank car tanks are prescribed, class 111AW3 tank car tanks may also be used.

(iii) When class DOT-112A tank car tanks are prescribed, classes DOT-112S, 112T, and 112J tanks having equal or higher marked test pressures than those prescribed may also be used.

(iv) When class DOT-112S tank car tanks are prescribed, classes DOT-112T and 112J tanks having equal or higher marked test pressures than those prescribed may also be used.

(v) When class DOT-114A tank car tanks are prescribed, classes DOT-114S, 114T, and 114J tanks having equal or higher marked test pressures than those prescribed may also be used.

(vi) When class DOT-114S tank car tanks are prescribed, classes DOT-114T, and 114J tanks having equal or higher marked test pressures than those prescribed may also be used.

(vii) When a class DOT-105A tank car is prescribed, class DOT-105S and DOT-105J tank cars having equal or higher marked test pressures than those prescribed may also be used.

(viii) When class DOT-105S tank car tanks are prescribed, class DOT-105J tank cars having equal or higher marked test pressures than those prescribed may also be used.

(4) Tank cars and appurtenances may be used for the transportation of any commodity for which they are authorized. Tank cars proposed for a commodity service other than authorized, must be approved for such service by the Association of American Railroads' Committee on Tank Cars. Transfer of a tank car from one authorized service to another may be made only by the owner or owner's authorization. Classes DOT-105A-W, 109A-W, 111A-100-W-4, 112A-W, 114A-W tank cars may be used for any commodity for which they are approved by the Committee on Tank Cars and may be stenciled accordingly. When a tank car is stenciled to indicate that it is authorized for one commodity only, it must not be used for any other service.

Note 1: For additional requirements for tank cars for compressed gases, see § 173.314.

(5) After December 31, 1978, each Specification 112 and 114 tank car must be equipped with shelf couplers in accordance with § 179.105-6 of this subchapter.

(6) After February 28, 1982, each Specification 105 tank car shall be equipped with a coupler vertical restraint system in accordance with § 179.105-6 of this subchapter.

(7) After February 28, 1985, no person may load a DOT Specification tank car unless it is equipped with a coupler vertical restraint system in accordance with § 179.105-6 of this subchapter.

(8) For each tank car conforming to and used under an exemption issued before October 1, 1984, which authorized the transportation of a cryogenic liquid in a tank car, the owner or operator, if not the owner, shall remove the exemption number stenciled on the car and stamp the tank car with the appropriate Class DOT-113 Specification followed by the applicable exemption number, for example, "DOT-113D60W-E****". (Asterisks to be replaced by the exemption number.) The owner or operator, if not the owner, of a tank car that is remarked in this manner shall retain on file a copy of the last exemption in effect during the period the tank car is in service. No modification of a tank car remarked under this paragraph is authorized unless made in conformance with an applicable requirement or provision of this subchapter.

(9) Specification DOT-113A175W, DOT-113C60W, DOT-113D60W, and DOT-113D120W tank cars may continue in use, but new construction is not authorized.

(10) Class DOT-105A and 105S tank cars, constructed of ASTM A212B steel to ASTM A300 low temperature requirements, that were authorized under DOT E-3992 may continue in service but new construction is not authorized.

(b) **Loading and shipping.** (1) **Examination before shipping.** When tanks are loaded and prior to shipping, the shipper must determine to the extent practicable, that the tank, safety appurtenances and fittings are in proper condition for the safe transportation of the lading. Tanks with bottom discharge outlets must have their outlet caps off, or outlet cap plugs open, during the entire time tanks are being loaded. After loading, tanks with bottom outlet valves which permit more than a dropping of the liquid with the outlet caps off, or the outlet cap plugs open, must not be offered for transportation until proper repairs have been made. Tanks which show any dropping or leaking of liquid contents at seams or rivets, must not be offered for transportation until proper repairs have been made.

(2) **Loading requirements for tanks with interior heater coils.** Tank cars equipped with interior heater coils, except when coils are rendered inoperative by blocking off the inlet and outlet, must be loaded with heater coil inlet and outlet caps off during entire time tanks are being loaded and show no leakage with caps off.

(3) **Securing closures.** All closures of openings in tank cars and of their protective housings must be properly secured in place by the use of a bar, wrench, or other suitable tool. A wrench having a handle at least 36 inches long must be used to apply the outlet valve cap. Manway covers and outlet valve caps must be made tight against leakage of vapor and liquid, by use of gaskets of suitable materials, before cars are tendered to carrier for transportation. Lubricating materials must not be used in outlet cap or on threads of bottom outlet. All closures of openings in tank cars must be inspected to the extent practical for corrosion of or damage to the gasket seating surface and for serviceability of packing, gaskets, and hold-down bolts. All defective packing, gaskets, bolting or threaded elements must be replaced.

(4) [Reserved]

(5) A tank car is authorized for shipment of a hazardous material by water when in conformance with the requirements of Part 176 of this subchapter and the following limitations:

(i) On carfloats or trainships if the material is permitted aboard a cargo vessel by § 172.101 of this subchapter, or

(ii) On railroad car ferry vessels if the material is permitted aboard a passenger vessel by § 172.101 of this subchapter.

(c) **Periodic retest and reinspection of single-unit tank car tanks.** (1) Tanks, interior heater systems, and safety relief valves must be retested periodically as specified in Retest Table 1 of this section. Retests may be made at any time during the calendar year the retest falls due except as provided in the notes. Periodic retest of exterior heater systems is not a specification requirement.

(2) Each tank must be retested by completely filling the tank and manway nozzle or expansion dome with water or other liquid of similar viscosity except as otherwise provided for in Note (d) to Retest Table 1 and applying the specified pressure for 10 minutes if the tank is not insulated, or 20 minutes if the tank is insulated. There shall be no leakage or evidence of distress. The tank insulation and jacket need not be removed unless leakage is indicated by a drop in pressure. The liquid temperature must not exceed 100° F. during the test. Caulking of welded joints to stop leaks developed during retests is prohibited.

(3) Unless longer retest interval is authorized, tanks in service 10 years or over must be internally inspected and interior heater systems inspected for defects which would make leakage or failure probable during transit.

(4) Anchor rivet housings, if used, must not be removed during retest. They shall be retested by applying an air pressure of 100 psi through openings in the tank shell and must show no leakage.

(5) Interior heater systems must be retested hydrostatically at 200 psi and must show no leakage.

(6) Safety relief valves must be retested with air or gas and must start to discharge at the pressure prescribed within plus or minus 3 percent except that if the start-to-discharge pressure is under 100 psi, the valve must start to discharge at the pressure prescribed within plus or minus 3 psi. Valves must be vapor tight at the prescribed pressure.

(7) A DOT tank car built to one specification and authorized to be stenciled to another specification must be retested in accordance with the higher specification and the test pressure stenciled accordingly on the tank or jacket. An existing pressure tank car tank which is permanently converted to a lower pressure specification must have the new specification and conversion date permanently stamped in letters and figures at least ¾-inch high on the outside of the manway nozzle or the edge of the manway nozzle flange on the left side of the car. Each car

must be tested as designated in Retests Table 1 for the new specification. On a Class DOT-111A tank car, the class numeral of the specification number may be omitted from the stamping.

(8) Retests of tanks and safety relief devices must be reported by party making tests to car owner. Reports must show initials and numbers of cars, pressure to which tested, date and place of test, and by whom tested. Reports of latest retest must be retained by owner until the next retest has been accomplished and recorded.

(9) After repairs requiring welding, riveting, caulking of rivets, or hot or cold forming to restore tank contour, tanks must be retested at the pressure specified in Retest Table 1 of this paragraph before being returned to service. Glass, lead, rubber, elastomeric or polyvinyl chloride lined tanks must be retested before lining is renewed or after lining is removed. Interior heater systems must be retested before the tank is returned to service after repairs or renewals of any part of the system.

(10) The year of a pressure test, the pressure to which it was tested, and tests due dates for the tank, pressure relief valve and interior heating system must be stenciled on the tank (or on the tank jacket if the tank is insulated). If a retest is required during a particular calendar month, the month and the year must be stenciled. On existing cars, the test due date stencil must be applied at the next test date or tank painting whichever comes first. Any pressure relief valve from a stock which has been tested within six months of installation may be considered as having been tested or retested in the month in which installed, providing the valve has been protected from deterioration during this period.

(11) Any glass, rubber, or lead-lined tank need not be periodically retested, but the interior heater systems and safety valves must be retested at the prescribed interval. See also paragraph (c)(9) of this section.

(12) Any tank lined with an elastomeric polyvinyl chloride at least ¼-inch thick or an elastomeric polyurethane at least ⅜-inch thick need not be periodically retested, but the heater system and safety relief valves must be retested at the prescribed intervals. The tank must be retested before lining is renewed.

(13) Special requirements for Class DOT-113 tank cars.

(i) A Class DOT-113 tank care need not be periodically pressure tested; however, each shipment must be monitored to determine the average daily pressure rise in the tank car. If the average daily pressure rise during any shipment exceeds 3 psi per day, the tank car must be retested for thermal integrity prior to any subsequent shipment.

(ii) Thermal integrity retest. Either of the following alternative thermal integrity retests may be used:

(A) Pressure rise retest: The pressure rise in the tank may not exceed 5 psi in 24 hours. When the pressure rise retest is performed, the absolute pressure in the annular space of the loaded tank car may not exceed 75 microns of mercury at the beginning of the retest, and may not increase more than 25 microns during the 24 hour period, or

(B) Calculated heat transfer rate retest: The insulation system must be performance tested as prescribed in §179.400-4 of this subchapter. When the calculated heat transfer rate retest is performed, the absolute pressure in the annular space of the loaded tank car may not exceed 75 microns of mercury at the beginning of the retest, and may not increase more than 25 microns during the 24 hour period. The calculated heat transfer rate in 24 hours may not exceed:

(1) 120 percent of the appropriate standard heat transfer rate specified in §179.401-1 of this subchapter, for DOT-113A60W and DOT-113C120W tank cars;

(2) .1164 Btu/day/lb. of inner tank water capacity, for DOT-113A175W tank cars;

(3) .3272 Btu/day/lb. of inner tank water capacity, for DOT-113C60W and 113D60W tank cars; or

(4) .4740 Btu/day/lb. of inner tank water capacity, for DOT-113D120W tank cars.

(iii) If the car fails either of the retests prescribed in paragraph (c)(13)(ii) of this section, the car must be removed from service and may not be placed back in service until one of the applicable retests in paragraph (c)(13)(ii) of this section is successfully completed.

(iv) Each frangible disc must be replaced every 12 months and the replacement date stenciled on the car near the pressure relief valve information.

(v) An alternate pressure relief valve must be retested at the same time interval prescribed for the required pressure relief valve. The start-to-discharge pressure and vapor tight pressure requirements for the alternate pressure relief valve must be as specified in §179.401-1 of this subchapter. The alternate pressure relief valve values specified in §179.401-1 of this subchapter for the DOT-113C120W tank car apply to the DOT-113D120W tank car.

(This space intentionally left blank)

RETEST-TABLE 1

Specification	Retest interval years [1]				Retest pressure—p.s.i.		
	Tank and interior heater systems			Safety relief valve	Tank	Safety relief valve	
	Up to 10 years old	Over 10 to 22 years old	Over 22 years old			Start to discharge	Vapor tight

DOT-109A300W	10	10	10	5	300	225	180

[1] Tanks and safety relief valves in chlorine service must be retested every 2 years at any time during the calendar month the retest falls due. See § 173.314(c) Note 12.

[2] Specifications 103CW and 103A-ALW cars built prior to Aug. 31, 1956, equipped with safety relief valves set to discharge at 45 p.s.i., may be continued in service. Such valves may be set to discharge at 35 p.s.i. by installing a spring suitable for the lower pressure. Specifications 103A-ALW and 103CW tank cars used to transport anhydrous hydrazine or hydrazine solutions may have a safety relief valve having a start to discharge pressure of 45 p.s.i. with a tolerance of plus or minus 3 p.s.i. and a vapor tight pressure of 36 p.s.i.

[3] Class 103 and 104 tank cars built before January 1, 1959 and equipped with 25 psi pressure relief valves may remain in service with start-to-discharge retested at 25 psi, vapor tight at 20 psig.

[4] A commodity for which a tank is approved may be used for filling tank and dome when retesting tanks in service not over 10 years.

[5] Safety relief valve retest period is same as tank retest period.

[6] Nickel clad tanks in bromine service and any glass, rubber, lead, or elastomeric lined tank need not be periodically retested, but the interior heater systems and pressure relief valves must be retested at the prescribed interval. For testing requirements for glass, rubber or other lined tanks see paragraphs (c)(9), (c)(11), and (c)(12) of this section.

[7] If safety relief valves are used in combination with breaking pins designed to break at 225 psi, the safety relief valves must be retested and must start to discharge at 213 psi plus or minus 3 percent.

[8] If safety relief valves are used in combination with breaking pins designed to break at 375 psi, the safety relief valves must be retested and must start to discharge at 360 psi plus or minus 3 percent.

[9] Tanks and safety relief devices in hydrocyanic acid service must be retested and inspected by a written procedure filed with and approved by the Associate Director for HMR.

[10] When the retest interval changes due to the age of the tank, the new retest interval must be measured from the last retest date but in no case shall the time between retests exceed the interval specified in Table 1 for the age of the tank. The retest of a tank because of repairs may alter the normal retest schedule specified in the table.

[11] Safety relief valves in bromine service must be retested every 2 years.

[12] [Reserved]

[13] When a safety relief valve is used in combination with a breaking pin device, the breaking pin device shall be designed to fail at a pressure of 75 percent of the tank test pressure and safety relief valve shall be set for a start-to-discharge pressure of 71 percent of the tank pressure.

[14] If the alternate safety relief valve start-to-discharge pressure setting is used, the retest pressures of the safety relief valves must be in accordance with the provisions of § 179.102-11 of this chapter.

[15] [Reserved]

[16] Retest period for interior heater systems on cars so equipped is 10 years.

[17] Tanks must be retested at the time they are converted from existing pressure type tanks to a non-pressure specification. When tanks are converted to DOT 103A-ALW from DOT 103ALW or AAR 201A70W, the tank must be retested at the time of conversion if welding on the tank is performed. For future retests of converted tanks, the retest interval must be selected from the table based on the age of the tank computed from the date converted instead of the date built. The conversion date must be stenciled on the tank below the built date.

[18] When tanks are converted to DOT-103AW from existing DOT-103W or 103W tanks, the tank must be retested at time of conversion if welding on the tank is performed. Lined tanks must be retested before the lining is renewed or after the lining is removed. For future retests, the retest interval must be selected from the Table as though the tank were 10 years old at time of conversion. The conversion date must be stenciled on the tank below the built date.

[19] See paragraph (c)(13) of this section for additional requirements for Class DOT-113 cars.

[20] Tanks in sodium metal service may be visually inspected at least once every 10 years instead of being retested hydrostatically. Date of the visual inspection must be stenciled on the tank near the other required markings.

[21] Tank cars stenciled 105S, 105J, 112S, 112T, 112J, 114S, 114T or 114J have the same retest requirements as 105A, 112A, or 114A, respectively.

[22] Pressure tank cars authorized for corrosive material service must have tank and pressure relief valve retested when removed from the service and prior to return to compressed gas service.

[23] Tank cars stenciled 105S or 105J have the same retest requirements as 105A.

RETEST TABLE 2

Specification	Retest interval—years		Retest pressure—psi		Safety valve pressure—psi	
	Tank	Safety relief devices[1]	Tank hydrostatic expansion[2]	Tank air test	Start-to-discharge	Vapor tight
DOT 27	5	2	500	100	375	300
106A500	5	2	500	100	375	300
106A500X	5	2	500	100	375	300
106A800	5	2	800	100	600	480
106A800X	5	2	800	100	600	480
106A800NCI	[4] 5	[4] 2	800	100	600	480
107A****	5	2	[3]	None	None	None
110A500-W	5	2	500	100	375	300
110A500-W	5	2	600	100	450	360
110A800-W	5	2	800	100	600	480
110A1000-W	5	2	1,000	100	750	600
BE-27	5	2	500	100	375	300

[1] If DOT 107A**** tanks are used for transportation of flammable gases, one frangible disc from each car must be burst at the interval prescribed. The sample disc must burst at a pressure not exceeding the marked test pressure of the tank and not less than 7/10 of the marked test pressure. If the sample disc does not burst within the prescribed limits all discs on the car must be replaced.

[2] The hydrostatic expansion test pressure must at least equal the marked test pressure.

[3] [Reserved]

[4] See § 173.31(d)(9).

[5] Safety relief valves of the spring loaded type on tanks used exclusively for fluorinated hydrocarbons and mixtures thereof which are free from corroding components may be retested every 5 years.

(d) Periodic retest and reinspection of tanks other than single-unit tank car tanks. (1) Tanks designed to be removed from cars for filling and emptying and tanks to spec. DOT 107A**** and their safety relief devices must be retested periodically as specified in Retest Table 2 of this paragraph. Retests may be made at any time during the calendar year the retest falls due.

(2) Each tank, except as provided in paragraph (d)(9) of this section, must be subjected to the specified hydrostatic pressure and its permanent expansion determined. Pressure must be maintained for 30 seconds and as much longer as may be necessary to secure complete expansion of the tank. Pressure gauge must permit reading to an accuracy of 1 percent. Expansion gauge must permit reading of total expansion to an accuracy of 1 percent. Expansion must be recorded in cubic centimeters. Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure and tank must not leak or show evidence of distress.

(3) Each tank, except tanks to Spec. DOT 107A, must also be subjected to interior air pressure test of at least 100 psi under conditions favorable to detection of any leakage. No leaks shall appear.

(4) Safety relief valves must be retested by air or gas, must start to discharge at or below the prescribed pressure and must be vaportight at or above the prescribed pressure.

(5) Frangible discs or fusible plugs must be removed from the tank and visually inspected.

(6) Tanks must be retested as specified in Retest Table 2 of this paragraph before return to service after repairs involving welding or heat treatment.

(7) The month and year of test, followed by a "V" if visually inspected as described in paragraph (d)(9) of this section, must be plainly and permanently stamped into the metal of one head or chime of each tank passing test; for example, 1–60 for January 1960. On DOT 107A**** tanks, the date must be stamped into the metal of the marked end; except that if all tanks mounted on a car have been tested, the date may be stamped into the metal of a plate permanently applied to the bulkhead on the "A" end of the car. Date of previous tests and all prescribed markings must be kept legible.

(8) Retests of tanks and safety relief devices must be reported by party making tests to owner of tank. Reports must show registered identifying mark and serial number, pressure to which tested, date and place of test, and by whom tested. Reports of latest retest must be retained by owner until the next retest has been accomplished and recorded.

(9) Tanks of DOT 106A and DOT 110A–W (§§ 179.300, 179.301, 179.302 of this subchapter) specifications used exclusively for transporting fluorinated hydrocarbons and mixtures thereof which are free from corroding components may be given a periodic complete internal and external visual inspection in lieu of the periodic hydrostatic retest. Visual inspections shall be made only by competent persons. Acceptance or rejection of tanks must be based upon the methods used for cylinders in CGA Pamphlet C–6, and the results must be recorded on a suitable data sheet, the completed copies of which must be kept by the owner as a permanent record. The points to be recorded and checked on these data sheets are: Date of inspection (month and year followed by a "V" to indicate visual inspection); DOT specification number; tank identification (registered symbol and serial number, date of manufacture and ownership symbol); type of protective coating (painted, etc., and statement as to need of refinishing or recoating); conditions checked (leakage, corrosion, gouges, dents or digs, broken or damaged chime or protective ring, fire, fire damage, internal condition); disposition of tank (returned to service, returned to manufacturer for repair, or scrapped).

(e) Tank car tanks subjected to the action of fire. (1) Tank car tanks of other than classes DOT 106A, 107A or 110A bearing evidence of damage to the metal by fire must be withdrawn from transportation service except that if the damage to the tank is local only or confined to not more than 25 percent of the tank surface, the damaged material may be replaced. See paragraph (f)(1) of this section for the procedure for handling tank car tanks with more than 25 percent of the tank surface damaged.

(2) Tank car tanks of classes DOT 106A, 107A or 110A bearing evidence of damage to the metal by fire must be withdrawn from transportation service until they have been inspected inside and outside to determine that no reduction in wall thickness has resulted, and have been heat-treated and retested. These operations must be carried out, supervised and reported as prescribed by the specifications for original heat treatment and test.

(f) Repairs or alterations. (1) For procedure to be followed in making repairs or alterations to all tank car tanks and securing approval thereof, see Appendix R, Association of American Railroads Specifications for Tank Cars.

(2) After alterations of tank cars or equipment therefor from original design, a certificate of compliance with the respective specification must be furnished to the car owner, to the Bureau of Explosives, and to the Secretary, Mechanical Division, Association of American Railroads.

§ 173.32 Qualification, maintenance, and use of portable tanks other than Specification IM portable tanks. (a) Except as otherwise provided in this section, each portable tank container used for the transportation of hazardous materials must conform to the requirements of the specification and regulations for the transportation of the particular commodity. Except for Specification 56 and 57 portable tanks, a manufacturer's data report of the portable tank must be procured and retained in the files of the owner during the time that such portable tank is used for such service.

(1) When a portable tank container is used as a cargo tank container, it shall comply with all the requirements prescribed for cargo tank containers. (See § 173.33.)

(2) [Reserved]

(3) Each uninsulated portable tank used for the transportation of compressed gases, as defined in § 173.300, must have an exterior surface finish complying with § 178.245–1(c) of this subchapter.

(4) No portable tank or specification 106A or 110A tank containing a hazardous material may be offered for transportation aboard a passenger vessel unless:

(i) The vessel is operating under a change to its character of vessel certification as defined in § 171.8 of this subchapter; and

(ii) The material is permitted to be transported aboard a passenger vessel in § 172.101 of this subchapter.

(5) Where IM–101 and IM–102 portable tanks are prescribed, Specification 51 portable tanks otherwise conforming to the special commodity requirements of the IM Tank Table may be used.

(b) Any portable tank container constructed prior to May 15, 1950, complying with the requirements of either the A. S. M. E. Code for Unfired Pressure Vessels, 1946 Edition, or the A. P. I.–A. S. M. E. Code for Unfired Pressure Vessels, 1943 Edition, may be used for the transportation of liquefied compressed gas, provided it fulfills all the requirements of this part and specifications for the particular gas or gases to be transported therein and shall be marked "ICC Specification 51X" on the plate required by the specification, except as modified by any or all of the following:

(1) Tanks designed and constructed in accordance with Pars. U–68, U–69, or U–201 of the A. S. M. E. Code may be used. Tanks designed and constructed in accordance with Pars. U–68 or U–69 may be re-rated at a working pressure 25 percent in excess of the design pressure for which the tank was originally constructed. If advantage is taken of the increased rating, the re-rated pressure shall be marked on the plate as follows:

Re rated working pressure - psig

Note 1. For purposes of setting safety relief valves, pressure control valves and establishing retest pressure, and for purposes of establishing maximum and minimum design pressures, the re rated working pressure shall be considered as the equivalent of the design pressure as defined in the specification.

(2) Loading and unloading accessories, valves, piping, fittings, safety and gauging devices, do not have to comply with the requirements for the particular location on the tank.

(3) Specification requirements as to stress-relieving and radiographing are waived.

(c) Any portable tank container of IOC Specification 50[1] fulfilling the requirements of that specification may be continued in service for transportation of a liquefied petroleum gas if it is retested every five years in accordance with the requirements of paragraph (e)(3), (4), and (5) of this section: *Provided*, That it is in and can be maintained in safe operating condition for the transportation of that gas. In this case the container may retain its original markings.

(d) **Use of specification 52 and 53 tanks.** Continued use of an existing portable tank constructed to specification 52 or 53 is authorized only for a tank constructed before June 1, 1972.

(e) **Retest.** Each portable tank used for the transportation of a hazardous material must be successfully retested before further use in accordance with the following:

(1) Schedule. Each tank must be retested as prescribed in paragraph (e)(2) of this section, in accordance with the following schedule:

(i) Specification 51 (§ 178 245 of this subchapter): at least once every 5 years.

(ii) Specifications 52, 53, 56, and 57 (§§ 178 251, 178 252, 178 253 of this subchapter): at least once every 2 years.

(iii) Specification 60 (§ 178 255 of this subchapter): at the end of the first 4-year period after the original test; at least once every 2 years thereafter up to a total of 12 years of service; and at least once annually thereafter. Retesting is not required on a rubber-lined tank except before each relining.

(iv) Any other portable tank authorized by this part for transportation of compressed gases (including liquefied compressed gases): at least once every 5 years.

(2) Test procedures. Unless otherwise specified, each tank must be retested in accordance with the following test procedures:

(i) Pressure. Each Specification 60 tank must be retested in accordance with § 178 255-12 of this subchapter. A Specification 57 tank must be retested in accordance with § 178 253-5(b) of this subchapter. Any other tank must be tested by a minimum pressure (air or hydrostatic) of at least 2 pounds per square inch gage or at least one and one-half times the design pressure (maximum allowable working pressure, or re-rated pressure) of the tank, whichever is greater. During each air pressure test, the entire surface of all joints under pressure must be coated with or immersed in a solution of soap and water, heavy oil, or other material suitable for the purpose of detecting leaks. The pressure must be held for a period of time sufficiently long to assure detection of leaks. During the air or hydrostatic test, relief devices may be removed, but all the closure fittings must be in place and the relief device openings plugged. Lagging need not be removed from a lagged tank if it is possible to maintain the required test pressure at constant temperature with the tank disconnected from the source of pressure.

(ii) Visual. While under the test pressure, the tank must be visually inspected for leakage, defective fittings and welds, defective closures, significant dents, and other defects or abnormalities which indicate a potential or actual weakness that could render the tank unsafe for the transportation of a hazardous material.

(iii) Rejection criteria. A tank fails to meet the requirements of the pressure test if, during the test, there is permanent distortion of the tank exceeding that permitted by the applicable specification, if there is any leakage, or if any deficiencies described in paragraph (e)(ii) of this section are found. Any tank that fails must be rejected and may not be used again for the transportation of a hazardous material unless the tank is adequately repaired and thereafter a successful test is conducted in accordance with the requirements of this paragraph.

(3) Marking. The date of the most recent periodic retest must be marked on the tank, on or near the metal certification plate. Marking must be in accordance with § 173 24.

(4) Records. The owner of the tank or his authorized agent must retain a written record indicating the date and results of all required tests and the name and address of the tester, until the next retest has been satisfactorily completed and recorded.

(f) **Special tanks.** Each portable tank authorized by this part including each exemption tank (other than a tank covered by paragraph (e)(1)(iv) of this section) which is not in compliance with one of the specifications listed in paragraph (e) of this section, must be tested in accordance with the procedures prescribed in paragraph (e) of this section for the type of portable tank most nearly equivalent in design and usage. A tank constructed in accordance with paragraph U-68 or U-69 of previous editions of the ASME Code, and which has not been re-rated, must be hydrostatically retested at twice the design pressure instead of the one and one-half times prescribed in paragraph (e)(2)(i) of this section.

(g) **Deteriorated tanks.** Without regard to any other retest requirements, any tank that shows evidence at any time of bad dents, corroded areas, leakage, or other conditions that indicate weakness which could render the tank unsafe for the transportation of a hazardous material, must be retested as prescribed in paragraph (e)(2) of this section.

(h) **Damaged tanks.** Any tank that has been in an accident and that has been damaged to an extent that may adversely affect its product retention capability, must be retested as prescribed in paragraph (e)(2) of this section.

(i) **Unused tanks.** Any tank that has not been used to transport a hazardous material for a period of 1 year or more may not be returned to hazardous material's service until it has been tested successfully in accordance with the requirements of paragraph (e)(2) of this section.

(j) The Department may require the testing under prescribed conditions of any tank when probable cause appears for suspecting that such tank is in unsafe operating condition.

(k) The repair of tanks is authorized, provided such repairs are made under requirements prescribed in the "Code" for the original design and construction.

(l) In addition to any other provisions of the specification, no tank shall be repaired, or remodeled, as to cause leakage or cracks or likelihood of leakage or cracks, by areas of stress concentration due to shrinkage of cooling metal in welding operations, sharp fillets, reversal of stresses, or otherwise.

(2) No field welding shall be done except to non-pressure parts.

(m) The bursting strength of any piping and fittings shall be not less than four times the design pressure of the tank, and not less than four times that pressure to which, in any instance, it may be subjected in service, by the action of a pump or other device (not including safety relief valves) the action of which may be to subject certain portions of the tank piping to pressures greater than the design pressure of the tank.

(1) Pipe joints shall be threaded, welded or flanged. If threaded pipe is used, the pipe and pipe fittings must not be lighter than (Schedule 80) weight. Nonmalleable metals must not be used in the construction of valves or fittings. Where copper tubing is permitted, joints must be brazed or be of equally strong metal union type. The melting point of brazing material may not be lower then 1000° F. The method of joining tubing must not decrease the strength of the tubing such as by the cutting of threads.

(2) Fittings shall be extra heavy. Non-malleable metals shall not be employed in the construction of valves or fittings.

(3) Suitable provision shall be made in every case to allow for expansion, contraction, jarring and vibration of all pipe. Slip joints shall not be used for this purpose.

(4) Piping and fittings shall be grouped in the smallest practicable space and shall be protected from damage as required by the specification.

(5) All piping, valves and fittings on every tank shall be leakage tested with gas or air after installation and proved tight at not less than the design pressure of the tank on which they are used. In the event of replacement, all such piping, valves, or fittings so replaced shall be tested in accordance with the requirements of this section before the tank is returned to transportation service. The requirements of this section shall apply with equal force to all hose used on such tanks, except that such hose may be so tested either before or after installation on the tank.

(n) All materials of construction used in portable tank containers and their appurtenances shall not be subject to destructive attack by the contents of the tank.

(o) All parts of tanks and appurtenances for anhydrous ammonia shall be steel. No copper, silver, zinc, nor their alloys shall be permitted. Brazed joints shall not be permitted.

(p) Each outlet of portable tanks used for the transportation of liquefied compressed gases, except carbon dioxide, shall be provided with a suitable automatic excess-flow valve. These valves shall be located inside the tank or at a point outside the tank where the line enters or leaves the tank. The valve seat shall be located inside the tank or shall be located within a welded flange or its companion flange, or within a nozzle or within a coupling. The installation shall be made in such a manner as reasonably to assure that any undue strain which causes failure requiring functioning of the valve shall cause failure in such a manner that it will not impair the operation of the valve.

Exception. Safety device connections and liquid level gauging devices which are so constructed that the outward flow of tank contents shall not exceed that passed by a No. 54 drill size opening are not required to be equipped with excess-flow valves.

(q) Excess-flow valves shall close automatically at the rated flows of gas or liquid as specified by the valve manufacturer. The connections or lines on each side of the excess-flow valve, including valves, fittings, etc., shall have a greater capacity than the rated flow of the excess-flow valve.

[1] Use of existing portable tanks authorized, but new construction not authorized.

(2) Excess-flow valves may be designed with a by-pass, not to exceed a No. 60 drill size opening, to allow equalization of pressures.

(3) Filling and discharge lines shall be provided with manually operated shut-off valves located as close to the tank as is practicable. The use of so-called "Stop-Check" valves to satisfy with one valve the requirements of this subparagraph and of paragraph (n) of this section, is forbidden.

(o) Each tank for carbon dioxide and nitrous oxide shall be lagged with a suitable insulation material of such thickness that the overall thermal conductance is not more than 0.08 Btu per square foot per degree F. differential in temperature per hour. The conductance shall be determined at 60° F. Insulation material used on tanks for nitrous oxide shall be noncombustible.

(p) A refrigerating and or heating coil or coils may be installed in tanks for carbon dioxide and nitrous oxide. Such coils must be tested externally to at least the same pressure as the test pressure of the tank. The coils must also be tested internally to at least twice the working pressure of the heating or refrigerating system to be used but in no case less than the test pressure of the tank. Such coils shall be securely anchored. The refrigerant or heating medium to be circulated through the coil or coils must be such as to cause no adverse chemical reaction with the tank or tank contents in case of leakage.

§ 173.32a Approval of Specification IM portable tanks. (a) **Application for approval.**

(1) An owner or manufacturer of an IM portable tank (§§ 178.270 through 178.272 of this subchapter) shall apply for approval to any approval agency designated to approve that tank in accordance with the procedures in Subpart E, Part 107 of this chapter.

(2) Each application for approval must contain the following information:

(i) Three complete copies of all engineering drawings, calculations, and test data necessary to insure that the design complies with the relevant specification.

(ii) The manufacturer's serial number that will be assigned to each portable tank.

(iii) A statement as to whether the design type has been examined by any approval agency previously and judged unacceptable. Affirmative statements must be documented with the name of the approving agency, reason for nonacceptance, and the nature of modifications made to the design type.

(b) **Action by approval agency.** The approval agency shall:

(1) Review the application for approval to determine whether it is complete and conforms with the requirements of paragraph (a) of this section. If an application is incomplete, it will be returned to the applicant and the applicant will be informed in what respects the application is incomplete.

(2) Review all drawings and calculations to ensure that the design is in compliance with all requirements of the relevant specification. If the application is approved, one set of the approved drawings, calculations, and test data shall be returned to the applicant. The second and third (inspector's copy) sets of approved drawings, calculations, and test data shall be retained by the approval agency.

(3) Witness all tests required in § 178.270–13 of this subchapter.

(4) Ensure, through appropriate inspection that each IM portable tank is fabricated in all respects in conformance with the approved drawings, calculations, and test data; and

(5) Upon successful completion of all requirements of this subpart, the approval agency shall:

(i) Apply its name, identifying mark or identifying number, and the date upon which the approval was issued, to the metal identification plate required by § 178.270–14 of this subchapter.

(ii) Issue an approval certificate for each IM portable tank or, in the case of a series of identical tanks manufactured to a single design, for the series of IM portable tanks. The approval certificate must include all the information required to be displayed on the required metal identification plate.

(c) **Disposition of approval certificates.** A copy of each approval certificate shall be retained by the approval agency and by the owner of each IM portable tank, and a copy shall be forwarded by the approval agency to the Director, OHMT.

(d) **Denial of application for approval.** If an approval agency finds that an IM portable tank cannot be approved for any reason, it shall so notify the applicant in writing and shall provide the applicant with the reasons for which the approval is denied. An applicant aggrieved by a decision of an approval agency may appeal the decision in writing within 90 days of receipt to the Director, OHMT.

(e) [Reserved]

(f) **Approval of other existing IM portable tanks.** Portable tanks constructed on or before May 1, 1991, that have not operated under a DOT exemption must be approved in accordance with the provisions of paragraph (b) of this section.

(g) Modifications to approved portable tanks.

(1) Prior to modification of any approved portable tank which may affect conformance to § 178.271 or § 178.272 of this subchapter, the owner or manufacturer desiring to make such modification shall inform the approval agency that issued the initial approval of the portable tank (or if unavailable another approval agency) of the nature of the modification and request approval of the modification. The owner or manufacturer shall supply the approval agency with three sets of all revised drawings, calculations, and test data relative to the intended modification.

(2) A statement as to whether the intended modification has been examined by any approval agency previously and judged unacceptable. An affirmative statement must be documented with the name of the approving agency, the reason for nonacceptance, and the nature of changes made to the modification since its original rejection.

(3) The approval agency shall review the request for modification, and if it is determined that the proposed modification is in full compliance with the relevant DOT specification the request shall be approved and the approval agency shall:

(i) Return one set of the approved revised drawings, calculations, and test data to the applicant. The second and third sets of the approved revised drawings, calculations, and test data shall be retained by the approval agency as required in § 107.404(a)(3) of this chapter.

(ii) Ensure through appropriate inspection, that all modifications conform to the revised drawings, calculations, and test data.

(iii) Determine the extent to which retesting of the modified tank is necessary based on the nature of the proposed modification, and ensure that all required retests are performed in accordance with § 178.270–13 of this subchapter.

(iv) If modification to an approved tank alters any information on the approval certificate, issue a new approval certificate for the modified tank and ensure that any necessary changes are made to the metal identification plate. A copy of each newly issued approval certificate shall be retained by the approval agency and by the owner of each portable tank.

(4) If it determined that the proposed modification is not in compliance with the relevant DOT specification, the request shall be denied. The procedures of paragraph (d) of this section apply to such denial.

(h) **Termination of Approval Certificate.**

(1) The Director, OHMT may terminate an approval issued under this section if he determines that:

(i) Information upon which the approval was based is fraudulent or substantially erroneous; or

(ii) Termination of the approval is necessary to adequately protect against risks to life and property.

(iii) The approval was not issued by the approval agency in good faith.

(2) Before an approval is withdrawn, the Director, OHMT gives the owner or manufacturer and the approval agency:

(i) Written notice of the facts or conduct believed to warrant the withdrawal;

(ii) Opportunity to submit oral and written evidence, and

(iii) Opportunity to demonstrate or achieve compliance with the application requirement.

(3) If the Director, OHMT determines that a certificate of approval must be withdrawn to preclude a significant and imminent adverse affect on public safety, he shall withdraw the certificate of approval issued by a designated approval agency. In such circumstances, the procedures of paragraphs (h)(2) (ii) and (iii) of this section need not be provided prior to withdrawal of the approval, but shall be provided as soon as practicable thereafter.

§ 173.32b Periodic testing and inspection of Specification IM portable tanks. (a) **Periodic testing**—(1) **Hydrostatic test.** Each Specification IM portable tank (§§ 178.270, 178.271 and 178.272 of this subchapter) and all piping, valves and accessories, except pressure-relief devices, shall be hydrostatically tested with water, or other liquid of similar density and viscosity, to a pressure not less than 150 percent of its maximum allowable working pressure. Testing shall be at intervals of not more than five years. While under pressure the tank shall be inspected, for leakage, distortion, or any other condition which might render the tank unsafe for service. The hydrostatic test shall be witnessed by an approval agency. Any damage or deficiency which might render the portable tank unsafe for service shall be repaired to the satisfaction of the witnessing approval agency and the tank hydrostatically retested. Upon successful completion of the hydrostatic test, the witnessing approval agency shall apply its name, identifying mark or identifying number and the date of the test on the tank as described in paragraph (d) of this section.

(2) **Pressure relief valves.** Spring loaded pressure relief valves must be removed from the tank and tested at intervals of not more than two and one-half years.

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) Visual inspection. Each portable tank and all piping, valves and accessories shall be visually inspected at intervals not exceeding two and one half years. The inspection shall be conducted by an owner or his agent or by an approval agency, except that it must be conducted by an approval agency coincident with each hydrostatic test required by paragraph (a) of this section. In the case of insulated tanks, insulation need not be removed if, in the opinion of the person performing the visual inspection, external corrosion is likely to be negligible. If evidence of any unsafe condition is discovered, the portable tank may not be returned to service until such condition has been corrected to the satisfaction of the person performing the inspection. The inspection shall include the following:

(1) The tank shall be carefully inspected internally for corroded areas, dents, distortions, defects in welds, and other conditions that might render the tank unsafe for service;

(2) The piping, valves, and gaskets shall be carefully inspected for corroded areas, defects in welds, and other conditions, including leakage, that might render the tank unsafe for service;

(3) Devices for tightening manhole covers must be operative and there must be no leakage at manhole covers or gaskets.

(4) Missing or loose bolts or nuts on any flanged connection or blank flange must be replaced or tightened.

(5) All emergency devices and valves must be free from corrosion, distortion and any damage or defect that could prevent their normal operation.

(6) Required markings on the tank must be legible.

(7) Upon successful completion of the visual reinspection, the inspector shall mark the date of the visual reinspection on the tank as described in paragraph (d) of this section.

(c) International shipments. A portable tank that meets the definition of "container" in § 450.3(a)(3) of this title may not be offered for international transport unless the frame work, tank supports and lifting attachments fully comply with all applicable requirements of Parts 450–453 of this title.

(d) Test date marking. The month and year of the last hydrostatic test, the identification markings of the approval agency witnessing the test, and the date of the last visual inspection must be durably and legibly marked on or near the metal identification plate in letters not less than 3 mm (0.118 inches) high when on the metal identification plate and 32 mm (1.25 inches) high when on the tank.

(e) Damaged or deteriorated portable tanks. Without regard to any other test requirement, any tank that shows evidence at any time of damaged or corroded areas, leakage, or other deterioration that indicates a weakness that could render the tank unsafe for service, must be inspected and tested in accordance with the requirements of paragraphs (a) and (b) of this section prior to reuse. Pressure relief devices need not be tested or replaced unless there is reason to believe the relief devices have been affected by the damage or deterioration.

(f) Record retention. The owner of each portable tank or his authorized agent shall retain a written record of the date and results of all required tests, (including visual inspections), and the name and address of the person performing the test, until the next retest has been satisfactorily completed and recorded.

§ 173.32c Use of specification IM portable tanks. (a) No person may offer a hazardous material for transportation in an IM portable tank except as authorized by this subchapter and under conditions approved by the Director, OHMT in the IM Tank Table.

(b) Except as otherwise provided in this subpart, an IM portable tank may not be used for the transportation of a hazardous material unless it meets the requirements of this subchapter and the conditions and limitations specified in the IM Tank Table for the hazardous material.

(c) An IM portable tank for which the prescribed periodic retest or reinspection under § 173.32b of this subchapter has become due may not be filled and offered for shipment until the retest or reinspection has been successfully completed. This paragraph does not apply to any tank filled prior to the test due date.

(d) Prior to filling, each IM portable tank shall be given a complete external inspection. Any unsafe condition must be corrected prior to its use. The external inspection shall include:

(1) A visual inspection of:

(i) The shell, piping, valves and other appurtenances for corroded areas, dents, defects in welds and other defects such as missing, damaged, or leaking gaskets;

(ii) All flanged connections or blank flanges for missing or loose nuts and bolts;

(iii) All emergency devices for corrosion, distortion, or any damage or defect that could prevent their normal operation; and

(iv) All required markings on the tank for legibility.

(2) An inspection to determine that any device for tightening manhole covers is operative and adequate to prevent leakage at the manhole cover.

(e) A hazardous material may not be loaded in an IM portable tank if the part of the tank or any of its appurtenances having contact with the material during transportation would be subject to destructive attack by or a dangerous reaction with the material.

(f) A hazardous material may not be loaded in an IM portable tank unless it has pressure relief devices providing total relieving capacity meeting the requirements of § 178.270-11(d) of this subchapter.

(g) A hazardous material may not be loaded in an IM portable tank with filling or discharge connections located below the normal liquid level of the tank unless:

(1) Each filling or discharge connection located below the normal liquid level of the tank has at least two serially-mounted closures consisting of an internal discharge valve and a bolted blank flange or other suitable, liquid-tight closure on each filling or discharge connection; or

(2) When required for a hazardous material by the IM Tank Table, each filling or discharge connection located below the normal liquid level of the tank, or compartment thereof, has three serially-mounted closures consisting of an internal discharge valve capable of being closed from a location remote from the valve itself, an external valve, and a bolted blank flange or other suitable, liquid-tight closure on the outlet side of the external valve.

(h) Except during a hydrostatic test, an IM portable tank may not be subjected to a pressure greater than its maximum allowable working pressure.

(i) An IM portable tank may not be loaded to a gross weight greater than the maximum allowable gross weight specified on its identification plate.

(j) An IM portable tank or compartment thereof having a volume greater than 5,000 liters (1,900 gallons) may not be loaded to a filling density less than 80 percent by volume.

(k) The outage for an IM portable tank may not be less than 2 percent at a temperature of 122 F (50°C).

(l) Each tell-tale indicator for the space between a frangible disc and a safety relief valve mounted in series must be checked after the tank is filled and prior to transportation to ensure that the frangible disc is leak free. Any leakage through the frangible disc must be corrected prior to offering the tank for transportation. The tell-tale device must be designed to prevent the loss of any hazardous material through the device itself while the tank is in transportation.

(m) An IM portable tank containing a hazardous material may not be loaded on a highway or rail transport vehicle unless loaded entirely within the horizontal outline thereof, without overhang or projection of any part of the tank assembly.

(n) Specifications IM 101 and IM 102 portable tanks used for the transportation of flammable liquids via rail may not be fitted with non-reclosing pressure relief devices except in series with spring loaded pressure relief valves.

(o) An IM 101 tank may be used whenever an IM 102 tank is authorized provided it meets the requirements of columns (5), (6), (7) and (8) of the IM Tank Table for the material to be transported.

§ 173.32d Additions, modifications and removals of entries in the IM Tank Table. The following requirements and conditions apply to listing of hazardous materials in the IM Tank Table (the Table):

(a) A hazardous material that is not listed or authorized in the Table may be added to the Table by the Director, OHMT.

(b) Any person may request the Director, OHMT to add a material to the Table, or to delete or modify an entry in the Table. A request should contain the information specified in the preface to the Table.

(c) The decision of the Director, OHMT to add a material to the Table, deny addition of a material to the Table, or to delete or modify an entry in the Table, will be based on a technical analysis of available data concerning the material and analogical comparison with existing entries in the Table.

(d) Each addition of a material to the Table by the Director, OHMT has interim status until completion of his review of comments following publication in the *Federal Register* of proposed permanent addition of the material to the Table. Following consideration of all comments in response to the publication, the Associate Director will add the material to the Table, or terminate its interim status, based on the information received.

(e) If the Director, OHMT determines that it may be necessary to remove an authorization for a material from the Table, or to modify the conditions for transportation of a material in an IM portable tank, he shall take action after subjecting the issue to public comment by publication in the *Federal Register* unless he determines that public safety requires immediate action.

(f) If the Director, OHMT denies a request for addition of a material to the Table or terminates an addition of a material under paragraphs (c) and (d) of this section, an appeal of the denial or termination may be submitted to the Administrator, Research and Special Programs Administration, within 60 days of receipt of the denial or termination. The decision of the Administrator concerning the appeal is final.

§ 173.33 Qualification, maintenance, and use of cargo tanks. (a) General: Unless otherwise provided in this part, every cargo tank (or compartment) used for the transportation of hazardous materials must be an authorized packaging. Such authorized packaging shall comply with requirements as set forth in this section, in addition to those regulations applicable for the transportation of the particular material. For the purposes of this part, whenever reference is made to a Specification MC-338 insulated cargo tank, the definitions in § 178.338-1(a) and (b) of this subchapter apply.

(i) A cargo tank is authorized for shipment of a hazardous material by vessel when in conformance with the requirements of Part 176 of this subchapter and the following limitations:

(i) On carfloats or trainerships if the material is permitted aboard a cargo vessel by §172.101 of this subchapter, or

(ii) On passenger ferry vessels or railroad car ferry vessels if the material is permitted aboard a passenger vessel by §172.101 of this subchapter.

(2) [Reserved]

(b) Cargo tank qualification as an authorized packaging requires compliance with the applicable Specification MC-300, MC-301, MC-302, MC-303, MC-304, MC-305, MC-306, MC-307, MC-310, MC-311, MC-312, MC-330, MC-331, or MC-338 (§178.340, §178.341, §178.342, §178.343, §178.337 or §178.338 of this subchapter), this section, and the inspection, retest and marking requirements of §177.824 of this subchapter. Any Specification MC-304 cargo tank on which construction began before September 2, 1967, may have the vents and outlets modified to comply with Specification MC-307 cargo tanks (See §§178.342–4 and 178.342–5).

(1) A cargo tank of the specification listed in Column 1 may be used when authorized in this part, provided the tank construction began before the date in Column 2:

Column 1	Column 2
MC-300	Sept. 2, 1967.
MC-301	June 12, 1961
MC-302, MC-303, MC-304, MC-305, MC-310, MC-311	Sept. 2, 1967
MC-330	May 15, 1967.

(2) For each cargo tank conforming to and used under an exemption issued before October 1, 1984, which authorized the transportation of a cryogenic liquid in a cargo tank, the owner or operator, if not the owner, shall remove the exemption number stenciled on the cargo tank and stamp the specification plate (or a plate placed adjacent to the specification plate) "DOT MC-338" followed by the applicable exemption number, for example, "DOT MC-338–E* * * *". (Asterisks to be replaced by the exemption number.) The owner or operator, if not the owner, of a cargo tank that is remarked in this manner shall retain on file a copy of the last exemption in effect during the period the cargo tank is in service. No modification of a cargo tank remarked under this paragraph is authorized unless made in conformance with an applicable requirement or provision of this subchapter. No new construction of such cargo tanks may be initiated after September 30, 1984.

(i) The holding time must be determined, as required in §178.338–9 of this subchapter, on each cargo tank or on at least one cargo tank of each design. Any subsequent cargo tank manufactured to the same design, if not individually tested, must have the optional test regimen performed during the first shipment (see §178.338–9 (b) and (c) of this subchapter). For the purpose of performing the holding time test, same design means cargo tanks having the same manufacturer, same drawings, same dimensions (of length, diameter, and volume), same material's of construction, and the same insulation system.

(ii) The holding time determined by test for one authorized cryogenic liquid may be used as the basis for establishing the holding time for other authorized cryogenic liquids.

(3) For each MC-331 cargo tank (§178.337 of this subchapter) conforming to and used under an exemption issued before October 1, 1984, which authorizes the transportation of ethane, refrigerated liquid; ethane-propane mixture, refrigerated liquid, or hydrogen chloride, refrigerated liquid, the owner or operator, if not the owner, shall remove the exemption number stenciled on the cargo tank and stamp the exemption number on the specification plate immediately after the DOT Specification, for example, "DOT MC-331–E* * * *". (Asterisks to be replaced by the exemption number.) If there is not adequate room on the specification plate, the exemption number must be stamped on a plate placed adjacent to the specification plate. The owner or operator, if not the owner, of a cargo tank that is remarked in this manner shall retain on file a copy of the last exemption in effect during the period the cargo tank is in service.

(c) Multipurpose cargo tanks. Multipurpose cargo tanks which have more than one compartment, each of which meets the requirements qualifying them as different container types, are authorized for use for applicable commodities.

(1) Multipurpose tanks which can be physically altered to qualify as containers to accommodate various commodities subject to the regulations in this part or commodities not subject to the regulation in this part are authorized if:

(i) All applicable provisions of the regulations in this part which are required to qualify the container as acceptable for the commodity being transported are met.

(ii) The required physical alterations to convert from one container type to another are clearly indicated on or near the certification plate.

(d) A Specification MC-330, MC-331 or MC-338 (§178.337 or §178.338 of the subchapter) cargo tank may not be used unless it meets the following requirements, as applicable:

(1) Each cargo tank must be tested and inspected at least once every 5 years in accordance with paragraphs (d)(2), (3), (4), (10), (11) and (12) of this section.

(i) The tank, and each pressure relief valve, of any cargo tank used for the transportation of chlorine must be tested at least once every 2 years. Tanks used only in sodium metal service may have a complete internal visual inspection at least once every 5 years instead of a hydrostatic or pneumatic test.

(ii) Each cargo tank used to transport a flammable cryogenic liquid must be examined after each shipment to determine its actual holding time. The record required by §177.840(h) of this subchapter may be used for this determination. If the examination indicates that the actual holding time of the cargo tank, after adjustment to reflect an average ambient temperature of 85°F, is less than 90 percent of the marked rated holding time (MRHT) for the cryogenic liquid marked on the specification plate or adjacent thereto (§178.338–18(b) of this subchapter), the tank may not be refilled with any flammable cryogenic liquid until it is restored to its marked rated holding time value or it is re-marked with the actual marked rated holding time determined by this examination. If the name of the flammable cryogenic liquid that was transported and its marked rated holding time is not displayed on or adjacent to the specification plate, this requirement may be met by deriving the MRHT of the cargo tank for that flammable cryogenic liquid and comparing that derived MRHT with the actual holding time after adjustment.

(2) Each tank (less fittings) must be subjected to a minimum internal pressure as shown below:

Specification	Ratio[1]
MC-330, MC-331	1½
MC-338	1¼

[1] Ratio of test pressure to the design pressure (maximum allowable working pressure or rated pressure) of the tank.

The internal pressure may be hydraulically or pneumatically generated. If a pneumatic test is used, a suitable method must be used for detecting the existence of leaks at all joints under pressure. This method must consist either of coating the entire surface of all joints under pressure with a solution of soap and water, or using another equally sensitive method. When a pneumatic test is performed, suitable safeguards should be provided to protect employees and other persons should a failure occur.

(3) The tank shall be inspected for corroded areas, bad dents, or other conditions, including leakage under test pressure, which indicate weakness that might render the tank unsafe for transportation service, and shall be rejected if evidence of any such unsafe condition is discovered.

(4) When testing cargo tanks, the insulation and jacketing need not be removed unless it is otherwise impossible to reach test pressure and maintain a condition of pressure equilibrium after test pressure is reached, or the vacuum integrity cannot be maintained in the insulation space.

(5) [Reserved]

(6) Without regard to any other retest requirement, any tank that shows evidence at any time of bad dents, corroded areas, leakage, or other conditions that indicate weakness which might render the tank unsafe for transportation service, shall be retested as prescribed by paragraphs (d)(2), (3), and (4) of this section.

(7) Any tank which has been in an accident and which has been damaged to an extent likely to cause it to be in unsafe condition or to an extent where such a condition is suspected, shall be tested as prescribed by paragraphs (d)(2), (3), and (4) of this section.

(8) Any tank which has been out of transportation service for a period of 1 year or more shall not be returned to or placed in such service until it shall have successfully fulfilled the testing requirements prescribed by paragraphs (d)(2), (3), and (4) of this section.

(9) The Department may require the testing under prescribed conditions of any tank when probable cause appears for suspecting that such tank is in unsafe condition.

(10) Ammonia tanks. Each MC 330 and MC 331 cargo tank used for anhydrous ammonia which is constructed of quenched and tempered steel or constructed of other than quenched and tempered steel but without post-weld heat treatment, must be internally inspected by the wet fluorescent magnetic particle method immediately prior to and in conjunction with the performance of any hydrostatic retest prescribed in this section. The wet fluorescent magnetic particle inspection must be in accordance with Section V of the ASME Code and CGA Technical Bulletin TB–2 titled, "Guidelines for Inspection and Repair of MC 330 and MC 331 Cargo Tanks," 1975 edition. This paragraph does not apply to cargo tanks that do not have manholes.

(11) Repairs. All cracks and other defects found must be repaired in accordance with the repair procedures described in CGA Technical Bulletin TB–2, titled "Guidelines for Inspection and Repair of MC 330 and MC 331 Cargo Tanks," 1975 edition and section VIII of the edition of the ASME Code under which the tank was built. Each tank having cracks and defects requiring welded repairs must meet all of the requirements of §178.337–16 of this subchapter except that post-weld heat treatment

For explanation of abbreviations and reference marks, see last page of this tariff.

after minor weld repairs is not required. When any repairs are made, including those by grinding, the tank must again be examined by the wet fluorescent magnetic particle method after hydrotest to assure that all defects have been removed.

(12) Reports required. Each motor carrier operating an MC 330 or MC 331 cargo tank subject to paragraph (d)(10) of this section must make a written report concerning the cargo tank following the required inspection or test. This reporting requirement does not apply to a motor carrier leasing a cargo tank for less than 30 days if the lessor has submitted the reports required by this section. The report for each cargo tank must contain the following:

(i) Carrier's name, address of principal office, and telephone number;

(ii) Complete name plate data required by specification MC 330 or MC 331, including data required by ASME Code;

(iii) Carrier's equipment number, which shall be the same as reported in accordance with §177.824(f)(1)(iii) of this subchapter;

(iv) A statement indicating whether or not the tank was stress relieved after fabrication;

(v) Name and address of the person performing the test and date of test;

(vi) A statement of the nature and severity of defects found, if any. In particular, information must be furnished to indicate the location of defects detected, such as in a weld, a heat-affected zone, the liquid phase, the vapor phase, or the head-to-shell seam. If no defect or damage was discovered, that fact must be reported;

(vii) A statement indicating the methods employed to make repairs, who made the repairs, and the date they were completed. Also, a statement of whether or not the tank was stress relieved after repairs and, if so, whether full or local stress relieving was performed;

(viii) A statement of the disposition of cargo tank, such as "tank scrapped," or "returned to service;" and

(ix) A statement of whether or not the cargo tank is used for transportation of anhydrous ammonia, liquefied petroleum gas or any other commodity which shall be identified. Also, if the cargo tank was used for anhydrous ammonia, a statement indicating whether each shipment of ammonia was certified by its shipper as containing 0.2 percent water by weight.

(13) Report retention. A copy of the report required by this section must be retained by the carrier at its principal place of business during the period the tank is in the carrier's service and for 1 year thereafter. However, upon a written request to, and with the approval of the Regional Director of Motor Carrier Safety, for the region in which a motor carrier has its principal place of business, the carrier may maintain the reports at a regional or terminal office.

(14) Supplying reports. Each carrier offering a MC 330 or MC 331 cargo tank for sale or lease must make available for inspection a copy of any reports made under this paragraph to each prospective purchaser or lessee. Copies of such reports must be provided for the purchaser or lessee if the cargo tank is leased for more than 30 days.

(15) Record of inspections. Each carrier shall prepare a record of inspections required by paragraphs (d)(10), (d)(11), and (d)(12) of this section. The inspection record shall be signed by the person conducting the inspections, and retained with the carrier's file copy of the report submitted under paragraph (d)(12) of this section. The inspection record must identify by cargo tank manufacturer's serial number each cargo tank inspected and also indicate the name of the inspecting agency and person, the nature of any defect or damage discovered, and must state by what method the defect or damage was discovered. If no defect or damage was discovered upon inspection this fact must also be reported.

(i) The reports required of a carrier by paragraphs (d)(12) and (13) of this section may be combined in a single report.

(e) The repair of tanks is authorized, provided such repairs are made under requirements prescribed in the "Code" for its original design and construction.

(1) In addition to any other provisions of the specification, no tank shall be repaired, or remodeled, as to cause leakage or cracks or likelihood of leakage or cracks, by areas of stress concentration due to shrinkage of cooling metal in welding operations, sharp fillets, reversal of stresses, or otherwise.

(2) No field welding shall be done except to nonpressure parts.

(f) On any tank used for a compressed gas except chlorine, the bursting pressure of all piping, pipe fittings, hose and other pressure parts except pump seals and safety relief devices must be at least 4 times the design pressure of the tank. In addition, the bursting pressure may not be less than 4 times any higher pressure to which each pipe, pipe fitting, hose and other pressure part may be subjected in service by the action of a pump or other device. For tanks used in transporting chlorine, see paragraphs (f)(8) through (10) of this section.

(1) Pipe joints shall be threaded, welded or flanged. If threaded pipe is used, the pipe and pipe fittings must not be lighter than Schedule 80 weight. Nonmalleable metals must not be used in the construction of valves or fittings. Where copper tubing is permitted, joints must be brazed or be of equally strong metal union type. The melting point of brazing material must not be lower than 1000 F. The method of joining tubing must not decrease the strength of the tubing such as by the cutting of threads.

(2) Each hose coupling must be designed for a pressure at least 20 percent in excess of the hose design pressure and so there will be no leakage when connected.

(3) Provision must be made to prevent damage to piping due to thermal expansion and contraction, jarring, and vibration. Slip joints may not be used for this purpose.

(4) Piping and fittings must be grouped in the smallest practicable space and be protected from damage as required by the specification.

(5) All piping, valves, and fittings on every cargo tank shall be proved free from leaks at not less than the design pressure for the tank. This condition will be considered to have been met when such piping, valves, and fittings have been tested for leakage with gas or air after installation and proved tight at not less than the design pressure marked on the cargo tank with which they are used. In the event of replacement, all such piping, valves, or fittings so replaced shall be tested in accordance with the requirements of this section before the tank is returned to transportation service. The requirements of this section shall apply with equal force to all hose used on such tanks, except that such hose may be so tested either before or after installation on the tank.

(6) Liquid pumps or gas compressors, wherever used, must be of suitable design, adequately protected against breakage by collisions, and kept in good condition. They may be driven by motor vehicle power takeoff or other mechanical, electrical, or hydraulic means. Unless they are of the centrifugal type, they shall be equipped with suitable pressure actuated by-pass valves permitting flow from discharge to suction or to the tank.

(7) Each tank used for the shipment of carbon dioxide, refrigerated liquid or nitrous oxide, refrigerated liquid shall be provided with a suitable pressure gauge. A shutoff valve must be installed between the pressure gauge and the tank. This gauge need be used only during the filling operation.

(8) Chlorine cargo tanks. No piping, hose, or other means of loading or unloading may be attached to any valve of a cargo tank containing chlorine except at the time of loading or unloading. No hose, piping, or tubing used for loading or unloading may be mounted or carried on the motor vehicle. Except at the time of loading or unloading, the pipe connection of each angle valve must be closed with a screw plug which is chained or otherwise fastened to prevent misplacement.

(9) Chlorine cargo tank angle valves must be tested before installation to be leak free at not less than 225 p.s.i.g. using dry air or inert gas. The angle valves must also be tested as above once every five loadings or once a week whichever occurs first. At each loading, tanks must be inspected and the angle valves and gasketed joints must be examined and tested at a pressure of not less than 50 p.s.i.g. to determine that they are not leaking and are in proper condition for transportation. Leaks which are detected must be corrected before the cargo tank motor vehicle is shipped.

(10) Liquid chlorine pumps shall not be installed on cargo tank motor vehicles used for the shipment of chlorine.

(g) All materials of construction used in cargo tanks and their appurtenances shall not be subject to destructive attack by the contents of the tank.

(1) All parts of tanks and appurtenances for anhydrous ammonia shall be steel. No copper, silver, zinc, nor their alloys shall be permitted. Brazed joints shall not be permitted.

(h) Each outlet of cargo tanks used for the transportation of liquefied compressed gases, except carbon dioxide, refrigerated liquid shall be provided with an approved suitable automatic excess-flow valve or in lieu thereof may be fitted with an approved automatic quick-closing internal valve. These valves shall be located inside the tank or at a point outside the tank where the line enters or leaves the tank. The valve seat shall be located inside the tank or shall be located within a welded flange or its companion flange, or within a nozzle, or within a coupling. The installation shall be made in such a manner as reasonably to assure that any undue strain which causes failure requiring functioning of the valve shall cause failure in such a manner that it will not impair the operation of the valve.

Exception. Any liquid level gauging device which is constructed so that the outward flow of tank contents does not exceed that passed by a 0.060-inch diameter opening, or any safety device connection, is not required to be equipped with an excess flow valve.

(1) Each excess-flow valve must close automatically at the rated flow of gas or liquid as specified by the valve manufacturer. The flow rating of the piping, fittings, valves, and hose on each side of the excess-flow valve must be greater than that of the excess-flow valve. If branching or any other restriction is incorporated in the system so that the flow rating is less than that of the excess-flow valve at the tank, additional excess-flow valves must be located where the flow rates are reduced.

(2) An excess-flow valve may be designed with a bypass, not to exceed 0.040-inch diameter opening, to allow equalization of pressures.

(3) Each filling and discharge line must be provided with a manual shut-off valve located as close to the tank as practicable. However, when an internal shut-off valve that closes automatically is used, a manual shut-off valve must be located in the line ahead of the hose connection.

The use of a so-called "slop-check" or excess flow valve to satisfy the requirements of this rule and of paragraph (i) of this section with one valve is prohibited except as provided in §178.337-11(c) of this subchapter.

(4) Angle valves and excess-flow valves on chlorine tank motor vehicles manufactured on or before December 31, 1974, must conform to the standards of The Chlorine Institute, Inc., as follows:

(i) An angle valve must conform to either DWG. 104-4 dated May 5, 1958, or DWG. 104-5, dated September 1, 1972.

(ii) An excess-flow valve conforming to either DWG. 101-4 dated May 16, 1969, or DWG. 101-6, dated September 1, 1973, must be installed under each liquid angle valve. An excess-flow valve conforming to either DWG. 106-3, dated May 16, 1969, or DWG. 106-5, dated September 1, 1973, must be installed under each gas angle valve.

(5) Angle valves and excess-flow valves on chlorine tank motor vehicles manufactured on or after January 1, 1975, must conform to the standards of The Chlorine Institute, Inc., as follows:

(i) An angle valve must conform to DWG. 104-5, dated September 1, 1972.

(ii) An excess-flow valve conforming with DWG. 101-6, dated September 1, 1973, must be installed under each liquid angle valve. An excess-flow valve conforming to DWG. 106-5, dated September 1, 1973, must be installed under each gas angle valve.

(j) Each tank for chlorine, carbon dioxide, refrigerated liquid and nitrous oxide, refrigerated liquid must be insulated with a suitable insulation material of such thickness that the overall thermal conductance is not more than 0.08 B.t.u. per square foot per degree F. differential in temperature per hour. The conductance must be determined at 60° F. Insulation material used on tanks for nitrous oxide, must be noncombustible. Insulation material used on tanks for chlorine must be corkboard or self-extinguishing polyurethane foam with minimum thickness of 4 inches.

(j) A refrigerating and/or heating coil or coils may be installed in tanks for carbon dioxide, refrigerated liquid and nitrous oxide, refrigerated liquid. Such coils must be tested externally to at least the same pressure as the test pressure of the tank. The coils must also be tested internally to at least twice the working pressure of the heating or refrigerating system to be used but in no case less than the test pressure of the tank. Such coils shall be securely anchored. The refrigerant or heating medium to be circulated through the coil or coils must be such as to cause no adverse chemical reaction with the tank or tank contents in case of leakage. If desired, the unit furnishing refrigeration may be mounted on the motor vehicle.

(k) Each MC 330 cargo tank used for flammable compressed gas or anhydrous ammonia must be equipped with liquid discharge controls that conform to the requirements of §178.337-11(c) of this subchapter at each liquid discharge opening. The controls required by this paragraph must be installed not later than the date the tests prescribed by paragraph (d) of this section are required.

§ 173.34 Qualification, maintenance and use of cylinders. (a) **General qualification for use of cylinders.** (See §§173.1 through 173.30 for requirements applying to all shipments.)

(1) No person may charge or fill a cylinder unless it is as specified in this part and Part 178 of this subchapter. A cylinder that leaks, is bulged, has defective valves or safety devices, bears evidence of physical abuse, fire or heat damage, or detrimental rusting or corrosion, must not be used unless it is properly repaired and requalified as prescribed in these regulations.

(2) When cylinders with a marked pressure limit are prescribed, other cylinders made under the same specification but with a higher marked service pressure limit are authorized. For example, cylinders marked DOT-4B500 may be used where DOT-4B300 is specified.

(b) **Grandfather clause.** A cylinder in domestic use previous to the date upon which the specification therefor was first made effective in these regulations may be used if the cylinder has been properly tested and otherwise complies with the requirements applicable for the gas with which it is charged.

(c) **Cylinder marking.** Each required marking on a cylinder must be maintained so that it is legible. Retest markings and original markings which are becoming illegible may be reproduced by stamping on a metal plate which must be permanently secured to the cylinder.

(1) Additional information not affecting the markings prescribed in the applicable cylinder specification may be placed on the cylinder. No indentation may be made in the sidewall of the cylinder unless specifically permitted in the applicable specification.

(2) When the space originally provided for dates of subsequent retests becomes filled, the stamping of additional test dates into the external surface of the footring of a cylinder is authorized.

(3) Except for marked service pressure, markings required on cylinders may not be altered or removed. The marked service pressure may be changed only upon application to the Director, Office of Hazardous Materials Transportation and receipt of written instructions as to the procedure to be followed. A service pressure change is not authorized for a cylinder which fails to pass the prescribed periodic hydrostatic retest, unless it is reheat treated and requalified in accordance with this section.

(d) **Pressure relief device systems.** No person may offer a cylinder charged with a compressed gas for transportation unless the cylinder is equipped with one or more pressure relief devices sized and selected as to type, location, and quantity and tested in accordance with CGA Pamphlet S-1.1. The pressure relief device system must be capable of preventing rupture of the normally charged cylinder when subjected to a fire test conducted in accordance with CGA Pamphlet C-14 or in the case of an acetylene cylinder, CGA Pamphlet C-12. Cylinders shall not be shipped with leaking safety relief devices. Safety relief devices must be tested for leaks before the charged cylinder is shipped from the cylinder filling plant; it is expressly forbidden to repair leaking fuse plug devices, where leak is through the fusible metal or between the fusible metal and the opening in the plug body, (except by removal of the device and replacement of the fusible metal). Exceptions are as follows:

(1) Except as provided in Notes 1, 2, and 3, safety relief devices are not required on cylinders 12 inches or less in length, exclusive of neck, and 4½ inches or less in outside diameter.

Note 1: Safety relief devices are required on specifications 9, 40, 41, and 39 (§178.65 of this subchapter) cylinders. Metal safety relief valves are required on specification 39 cylinders used for liquefied flammable gases. Fusible safety relief devices are not authorized on specification 39 cylinders containing liquefied compressed gases.

Note 2: Safety relief devices are required on cylinders charged with a liquefied gas for which the part requires a service pressure of 1,800 psi or higher.

Note 3: Safety relief devices are required on cylinders charged with non-liquefied gases to a pressure of 1,800 psi or higher at 70° F.

(2) Except for specification 39 cylinders and cylinders for acetylene in solution, safety relief devices are not required on cylinders charged with non-liquefied gas under pressure of 300 p.s.i. or less at 70° F.

(3) Safety relief devices are prohibited on cylinders charged with Poison A gas or liquid.

(4) Safety relief devices are prohibited on cylinders charged with fluorine.

(5) Safety relief devices are not required on cylinders charged with methyl mercaptan; with mono-, di-, or trimethylamine, anhydrous; with not over 10 pounds of nitrosyl chloride; or with less than 165 pounds of anhydrous ammonia.

(6) [Reserved]

(7) Safety relief devices, if used, must be in the vapor space of cylinders containing pyrolonic liquids, n.o.s., covered by §173.134.

(e) **Periodic retesting, reinspection and marking of cylinders.** Each cylinder that becomes due for periodic retest as specified in the following table and exceptions, must be retested and marked in conformance with the applicable requirements of this paragraph.

Specification under which cylinder was made	Minimum retest pressure (p.s.i.)	Retest period (years)
DOT-3	3,000 p.s.i.	5
DOT-3A, 3AA, 3AL	5/3 times service pressure, except non-corrosive service (see §173.34(e)(10).)	5 or 10 (see §173.34(e)(11), (e)(14), and (e)(15).)
DOT-3AX, 3AAX	5/3 times service pressure	5.
3B, 3BN	2 times service pressure (see §173.34(e)(10).)	5 or 10 (see §173.34(e)(14).)
3C	Retest not required	
3D	5/3 times service pressure	5.
3E	Retest not required	
3HT	5/3 times service pressure	3 (see §173.34(e)(13).)
3T	5/3 times service pressure	5.
4	700 p.s.i.	10.
4A	5/3 times service pressure (see §173.34(e)(10).)	5 or 10 (see §173.34(e)(14).)
4AA480	2 times service pressure (see §173.34(e)(10).)	5 or 10 (see §173.34(e)(11).)
4B, 4BA, 4BW, 4B-240ET	2 times service pressure, except non-corrosive service (see §173.34(e)(10).)	5 or 10 (see §173.34(e)(9) and (e)(14).)
4C	Retest not required	
4D, 4DA, 4DS	2 times service pressure	5.
DOT-4E	2 times service pressure, except non-corrosive service (see §173.34(e)(10).)	5.
4L	Retest not required	
8, 8AL	Retest not required	
DOT-9	450 p.s.i. (maximum 600 p.s.i.)	5.
25	500 p.s.i.	5.
26 for filling at over 450 p.s.i.	5/3 times service pressure	5.
26 for filling at 450 p.s.i. and below	2 times service pressure, except non-corrosive service (see §173.34(e)(10).)	5 or 10 (see §173.34(e)(9).)
33	800 p.s.i.	5.
38	500 p.s.i.	5.
Any cylinder with marked test pressure	Retest at marked test pressure	5.
Foreign cylinder charged for export	As marked on the cylinder, but not less than 5/3 of any service or working pressure marking	See §173.301(j).

Note 1: For cylinders not marked with a service pressure, see §173.301(e)(1).

For explanation of abbreviations and reference marks, see last page of this tariff.

(f) The periodic retest must be performed by an authorized retester and must include a visual internal and external examination in accordance with CGA Pamphlet C-6, and a test by interior hydrostatic pressure in a water jacket or other apparatus suitable for determination of the expansion of the cylinder. The internal inspection may be omitted for cylinders of the type and in the service described under paragraphs (e)(9) and (10) of this section.

(i) No person may represent that he has retested a DOT specification cylinder under this section, by marking the cylinder with a test date or by any other means unless that person holds a current retester's identification number issued by the RSPA.

(ii) The marking of a test date on a DOT specification cylinder is the certification by the person affixing the date that all applicable requirements of this section have been met with respect to that cylinder.

(iii) No cylinder required to be retested in accordance with this paragraph, or paragraphs (e)(9) or (10) of this section, may be used for the transportation of a hazardous material unless it has been retested successfully under this section, and the retester has marked the cylinder by stamping the cylinder retester identification number and date of retest plainly and permanently into the metal of the cylinder or on a metal plate which must be permanently secured to the cylinder.

(iv) RSPA may issue a retester's identification number based on an application and an inspection report of the applicant's facility and qualifications performed by an independent inspection agency approved pursuant to §173.300a, and any other information available to RSPA. A retester's identification number is valid for five years from the date of issuance and may be renewed upon application to RSPA. Applications for renewal must be submitted at least 50 days prior to expiration of the number. An initial or renewal application may be obtained from the Office of Hazardous Materials Transportation, U.S. Department of Transportation, Washington, D.C. 20590.

(v) Authority to perform retesting under this section, as reflected by assignment of a current retester identification number, remains valid as long as the level of personnel qualifications, and equipment used, is maintained at least equivalent to the level observed at the time of inspection by the independent inspection agency.

(2) Cylinders of DOT 4 series, without regard to date of previous test, that show bad dents or other evidence of rough usage, or that are corroded locally to such extent as to indicate possible weakness, or that have lost as much as 5 percent of their official tare weight, must be retested before being again charged and shipped. After any retest, the actual tare weight for those cylinders passing the test may be recorded as their new official tare weight.

(3) In hydrostatic retesting of a cylinder the pressure must be maintained for at least 30 seconds and as much longer as may be necessary to secure complete expansion of the cylinder. The gauge indicating the total expansion of the cylinder must be such that the total expansion can be read with an accuracy of 1 percent, except that a reading to 0.1 cubic centimeter shall be acceptable. The gauge indicating the pressure must be capable of being read to within 1 percent of the test pressure. Any internal pressure applied previous to the test pressure shall not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 psi, whichever is the lower value.

(4) A cylinder must be condemned when it leaks, or when internal or external corrosion, denting, bulging, or evidence of rough usage exists to the extent that the cylinder is likely to be weakened appreciably, or when the permanent expansion exceeds 10 percent of the total expansion, except that for DOT 4E aluminum cylinders, when the permanent expansion exceeds 12 percent of the total expansion. Except for DOT 3AL and DOT 4E aluminum cylinders, a cylinder condemned for excessive permanent expansion may be reheat-treated. (See paragraph (g) of this section.) DOT 4 series cylinders, condemned for other than excessive permanent expansion, may be repaired and rebuilt as otherwise provided in this section.

(5) Records showing the result of reinspection and retest must be kept by the owner or his authorized agent until either expiration of the retest period, or until the cylinder is again reinspected or retested, whichever occurs first.

(6) Each cylinder passing retest must be marked with the cylinder retester's identification number set in a square pattern, between the month and year of the retest date, in characters not less than ⅛-inch high with the first character occupying the upper left corner of the square pattern. The second character must be in the upper right, the third in the lower right, and the fourth in the lower left. Example: A cylinder retested in May, 1984, and approved by a retester who has been issued identification number A123 would be stamped:

```
      A  1
5           84
      3  2
```

Variations from the marking requirements may be permitted upon written request to, and approval issued by, the Director, OHMT. Stamping must be in accordance with the location requirements of the cylinder specification. Date of previous tests must not be obliterated. Cylinders which are subject to the requirements under subparagraphs (8), (9) (modified hydrostatic test only), (10), and (12) are not required to be marked with a retester's identification number.

(7) Cylinders in chlorine or sulfur dioxide service made before April 20, 1915, must be retested at 500 psi.

(8) For cylinders of not over twelve pounds water capacity which are authorized for service pressures not over 300 psi, the hydrostatic testing portion of the retest procedure may consist of application of the prescribed internal hydrostatic test pressure without the use of special apparatus and without the determination of total and permanent expansions. In this test the cylinders shall be examined while under pressure and must show no leak or other harmful defect as enumerated in paragraph (e)(4) of this section.

(9) Cylinders made in compliance with specifications DOT 4B, DOT 4BA, DOT 4BW, DOT 4E, and ICC-26-300[1] (§§178.50, 178.51, 178.61, 178.68 of this subchapter) which are used exclusively for anhydrous dimethylamine; anhydrous monomethylamine; anhydrous trimethylamine; methyl chloride; liquefied petroleum gas; methylacetylene-propadiene stabilized; or dichlorodifluoromethane, difluoroethane, difluoromonochloroethane, monochlorodifluoromethane, monochlorotetrafluoroethane, monochlorotrifluoroethylene, or mixture thereof, or mixtures of one or more with trichlorofluoromethane; and which are commercially free from corroding components and protected externally by suitable corrosion resisting coatings (such as galvanizing, painting, etc.) may be retested decennially (see Note 2) instead of quinquennially, or, as an alternative such cylinders may be subjected to an internal hydrostatic pressure equal to at least two times the marked service pressure without determination of expansions (see Note 1), but this latter type of test must be repeated quinquennially after expiration of the first 10-year period (see Note 2). When subjected to this latter test, cylinders must be carefully examined under the test pressure and removed from service if leaks or other harmful defects exist.

Note 1 — Cylinders requalified by the modified hydrostatic test method or external inspection shall be marked after each retest or reinspection by stamping the date of retest or reinspection on the cylinders followed by the symbol E (external inspection) or S (modified hydrostatic test method) as appropriate.

Note 2: Until further order of the Department, the decennial retest period may be extended to a 12 year period, and the quinquennial retest period may be extended to a 7 year period after expiration of the first 12 year period.

(10) Cylinders made in compliance with the specifications listed in the table below and used exclusively in the service indicated may, in lieu of the periodic hydrostatic retest, be given a complete external visual inspection at the time such periodic retest becomes due. External visual inspection as described in CGA Pamphlet C-6 will, in addition to the following requirements prescribed herein, meet the requirements for visual inspection.

When this inspection is used in lieu of hydrostatic retesting, subsequent inspections are required 5 years after the first such inspection and periodically at 5-year intervals thereafter. Inspections shall be made only by competent persons and the results shall be recorded on a suitable data sheet, the completed copies which shall be kept in accordance with the requirements of paragraph (e)(5) of this section. The points to be recorded and checked on these data sheets are: Date of inspection (month and year); DOT specification number; cylinders identification (registered symbol and serial number, date of manufacture, and ownership symbol (if needed for adequate identification)); type cylinder protective coating (painted, etc., and statement as to need of refinishing or recoating); conditions checked (leakage, corrosion, gouges, dents or digs in shell or heads, broken or damaged footring or protective ring or fire damage); disposition of cylinders (returned to service, to cylinder manufacturer for repairs or scrapped); a cylinder which passes the inspection prescribed shall have the date recorded in the manner presently prescribed for the recording of the retest date, except that an "E" is to follow the date (month and year) indicating requalification by the external inspection method.

Cylinders made in compliance with—	Used exclusively for—
DOT 4, DOT-3A, DOT-3AA, DOT-3A480X, DOT 4A, DOT 4AA480	Anhydrous ammonia of at least 99.95% purity
DOT-3A, DOT-3AA, DOT-3A480X, DOT-3B, DOT-4B, DOT-4BA, DOT-4BW, ICC-26 240[1] ICC-26-300[1]	Butadiene, inhibited, which is commercially free from corroding components
DOT-3A, DOT-3A480X, DOT-3AA, DOT-3B, DOT-4A, DOT-4AA480, DOT-4B, DOT-4BA, DOT-4BW	Cyclopropane which is commercially free from corroding components
DOT-3A, DOT-3AA, DOT-3A480X, DOT 4B, DOT 4BA, DOT4BW, DOT 4E	Fluorinated hydrocarbons and mixtures thereof which are commercially free from corroding components
DOT-3A, DOT-3AA, DOT-3A480X, DOT-3B, DOT-4B, DOT 4BA, DOT 4BW, DOT 4E, ICC-26 240[1] ICC-26-300[1]	Liquefied hydrocarbon gas which is commercially free from corroding components
DOT-3A, DOT-3AA, DOT-3A480X, DOT-3B, DOT 4B, DOT 4BA, DOT 4BW, DOT 4E, ICC-26 240[1] ICC-26-300[1]	Liquefied petroleum gas which is commercially free from corroding components
DOT-3A, DOT-3AA, DOT-3B, DOT 4B, DOT 4BA, DOT 4BW, DOT 4E	Methylacetylene-propadiene, stabilized, which is commercially free from corroding components
DOT-3A, DOT-3AA, DOT-3B, DOT 4B, DOT 4BA, DOT 4BW	Anhydrous mono, di, trimethylamines which are commercially free from corroding components
DOT 4B240, DOT 4BW240	Ethylene imine, inhibited

[1] Use of existing cylinders authorized, but new construction not authorized.

(11) A cylinder made in compliance with specification DOT-3A, DOT-3AA480X, or DOT-4AA480 used exclusively for anhydrous ammonia, commercially free from corroding components, and protected externally by suitable corrosion resisting coatings (such as painting, etc.) may be retested every 10 years instead of every 5 years.

(12) All cylinders not exceeding 2 inches outside diameter and length less than 2 feet are exempted from hydrostatic retest.

(13) In addition to the requirements of this paragraph (e), cylinders marked DOT-3HT must be requalified in accordance with CGA Pamphlet C-8 and must comply with the following:

(i) Cylinder shall be subjected, at least once in three years, to a test by hydrostatic pressure in a water jacket, for the determination of the expansion of the cylinder. A cylinder must be condemned if the elastic expansion exceeds the marked rejection elastic expansion.

(ii) A cylinder must be condemned if there is evidence of any denting or bulging.

(iii) A cylinder must be condemned at the termination of a 24-year period following the date of the original test or after 4,380 pressurizations, whichever occurs first. If a cylinder is recharged more than an average of once every other day, an accurate record of the number of rechargings must be maintained by its owner, or his agent.

(iv) Retest dates shall be applied by low stress type steel stamping to a depth no greater than that of the original marking at the time of manufacture. Stamping on sidewall not authorized.

(v) A cylinder made before January 17, 1978 and not yet marked with a rejection elastic expansion (REE) in cubic centimeters near the marked original elastic expansion prior to the next retest date. The REE for a cylinder is 1.05 times its original elastic expansion.

(14) Cylinders made in compliance with specifications DOT-3A, DOT-3AA, DOT-3B, DOT-4A, DOT-4BA, and DOT-4BW (§§ 178.36, 178.37, 178.38, 178.49, 178.51, 178.61 of this chapter) having service pressures up to and including 300 p.s.i. which are used exclusively for methyl bromide, liquid; mixtures of methyl bromide and ethylene dibromide, liquid; mixtures of methyl bromide and chlorpicrin, liquid; mixtures of methyl bromide and petroleum solvents, liquid; or methyl bromide and nonflammable, nonliquefied compressed gas mixtures, liquid; which are commercially free from corroding components, and which are protected externally by suitable corrosion resisting coatings (such as galvanizing, painting, etc.) and internally by a suitable corrosion resisting lining (galvanized, etc.) may be tested decennially instead of quinquennially. All tests must be supplemented by a visual internal and external examination of the cylinder quinquennially. Examination must be as required by CGA Pamphlet C-6. All tests must be supplemented by a very careful examination of the cylinder at each filling, and the cylinder must be rejected if evidence is found of bad dents, corroded areas, a leak, or other conditions that indicate possible weakness which would render the cylinder unfit for service.

(15) A cylinder made in compliance with specification DOT-3A or 3AA, not exceeding 125 pounds water capacity and removed from any cluster, bank, group, rack, or vehicle each time it is filled, may be retested every 10 years instead of every 5 years, provided the cylinder complies with all of the following:

(i) The cylinder is not over 35 years old when it is retested.

(ii) The cylinder is used exclusively for: Air, argon, cyclopropane, ethylene, helium, hydrogen, krypton, neon, nitrogen, nitrous oxide, oxygen, sulfur hexafluoride, xenon, and permitted mixtures thereof (see § 173.301(a)) and permitted mixtures of these gases with up to 30 percent by volume of carbon dioxide. These commodities must have a dewpoint at or below minus 52° F. at 1 atmosphere.

(iii) Prior to each refill, the cylinder is subjected to, and passes the hammer test specified in CGA Pamphlet C-6.

(iv) A cylinder currently in compliance with paragraphs (e)(15)(i), (ii), and (iii) of this section but which has not been confined to the exclusive use service specified since the last required hydrostatic retest is retested and examined in accordance with the requirements of § 173.302(c)(2), (3), and (4) before the periodic retest interval is extended to 10 years.

(v) Each cylinder less than 35 years old is stamped with a five pointed star at least one-fourth of an inch high following the test date. If at any time a cylinder marked with the star is used other than as specified in this paragraph, the star following the most recent test date is obliterated and subsequent tests are made every 5 years.

(vi) The cylinder is dried immediately following hydrostatic testing to remove all traces of free water.

(vii) The cylinder is not used for underwater breathing.

(16) A cylinder that previously contained a commodity classified as a "corrosive material" must not be used for the transportation of any compressed gas unless the following requirements are complied with before the subsequent initial filling with the compressed gas.

(i) The cylinder must be visually inspected, internally and externally, in accordance with the CGA Pamphlet C-6.

(ii) Regardless of the previous test or retest date, the cylinder must be tested by interior hydrostatic pressure and must meet the acceptance criteria as specified in paragraphs (e)(1), (2), (3), and (4) of this section.

(iii) In addition to the record prescribed in paragraph (e)(5) of this section, the record of the inspection and test shall include the date (month and year) of the inspection and test; the cylinder identification (including ICC or DOT specification number, registered symbol, serial number, date of manufacture, and ownership symbol); the conditions checked (leakage, corrosion, gouges, dents, or digs in shell or heads, broken or damaged footrings, or fire damage) and the disposition of the cylinder (returned to service, returned to the manufacturer for repairs, or scrapped).

(iv) A cylinder requalified for compressed gas service in accordance with this paragraph may have its next retest and inspection scheduled from the date of the inspection and retest prescribed herein.

(v) A cylinder that contained any corrosive liquid, for which decontamination methods cannot remove all significant residue or impregnation by the former corrosive content must not be used for the transportation of any compressed gas.

(f) **Cylinders subjected to the action of fire.** A cylinder which has been subjected to the action of fire must not again be placed in service until it has been properly reconditioned as follows:

(1) A cylinder made of plain carbon steel with not over 0.25 percent carbon nor over 0.90 manganese need not be reheat-treated but must pass the periodic retest requirements as specified in paragraph (e) of this section.

(2) DOT-8 cylinders made of plain carbon steel with not over 0.25 percent carbon nor over 0.90 percent manganese must be reinspected to determine the condition of the cylinder and the porous filling. If the cylinder is undamaged and the filler is unchanged and intact, the cylinder may be returned to service without reheat treatment or test.

(3) The inner cylinders made under specification DOT-4L (§ 178.57 of this chapter) may be used after again passing the original hydrostatic test.

(4) DOT 3AL and DOT 4E aluminum cylinders may not be reheat-treated and must be removed from service.

(5) Other cylinders must be reheat-treated and reconditioned as specified in paragraph (g) of this section.

(g) **Reheat treatment.** (1) Previous to the reheat treatment procedure hereinafter prescribed, each cylinder must be subjected to a careful internal and external inspection.

(2) Cylinders must be segregated for reheat treatment in lots of 100 or less cylinders of the same general size having practically the same chemical composition.

(3) The reheat treatment operation must be carried out, supervised, and reported as prescribed for the heat treatment in the specification covering the manufacture of the cylinder in question. Data from the original reports of manufacture of the cylinders must be available.

(4) The reheat treatment must be followed by hydrostatic retest, such retest to be carried out, supervised, and reported as prescribed for the hydrostatic tests in the specification covering the manufacture of the cylinder in question. The results of the retest must meet either of the following conditions:

(i) The permanent expansion shall be from zero to 10 percent of the total expansion in the hydrostatic retest and one cylinder from each lot shall pass the requirements of the flattening and physical tests prescribed. Failure to pass the flattening or physical tests will reject the lot or;

(ii) The permanent expansion shall not be less than 3 percent nor more than 10 percent of the total expansion in the hydrostatic retest, in which case the flattening and physical tests are not required. For this alternative method the hydrostatic retest pressure may not exceed 115 percent of the minimum prescribed test pressure.

(h) **Repair by welding or brazing of specifications DOT-3A, 3AA, 3B, 3C cylinders.** Repair of specifications DOT-3A, 3AA, 3B or 3C (§§ 178.36, 178.37, 178.38, or 178.40 of this subchapter) cylinders by welding or brazing authorized, but only for the removal and replacement of neckrings and footrings attached to cylinders originally manufactured to conform to §§ 178.36-9(a), 178.37-9(a), 178.38-9(a), and 178.40-9(a) of this subchapter. Removal and replacement must be done by a regular manufacturer of this type of cylinder. After removal and before replacement of such parts, cylinders must be inspected, and defective ones rejected. Cylinders, neckrings, footrings, and method of replacement must conform to § 178.36-9(a), § 178.37-9(a), § 178.38-9(a), or § 178.40-9(a) of this subchapter whichever applies. Replacement must be followed by reheat treating, testing, inspection, and supervised and reported as prescribed by the specification covering their original manufacture. Inspector's reports must conform with that required by the specification covering original manufacture with the

For explanation of abbreviations and reference marks, see last page of this tariff.

word "repaired" substituted for "manufactured." Show original markings and the new additional markings added, and statement: "Cylinders were carefully inspected for defects after removal of neckrings and footrings and after replacement, which replacement was made by process of .....

(Welding brazing)."

(l) **Repair by welding or brazing of DOT–4 series, and DOT–8, welded or brazed cylinders.** Repairs on DOT–4 series and DOT–8 series welded or brazed cylinders are authorized to be made by welding or brazing. Such repairs must be made by a manufacturer of these types of DOT cylinders or by a repair facility approved by the Director, OHMT and by a process similar to that used in its manufacture and under the following specific requirements:

(1) Cylinders with injurious defects in welded joints in or on pressure parts must be repaired by completely removing the defect prior to rewelding.

(2) Cylinders with injurious defects in brazed joints in or on pressure parts must be repaired by rebrazing.

(3) Cylinders during welding must be free of materials in contact with the welded joint that may impair the serviceability of the metal in or adjacent to the weld. (Precautions must be taken to prevent acetylene cylinder steels from picking up carbon during repair.)

(4) Neckrings, footrings, or other nonpressure attachments authorized by the specification may be replaced or repaired. Repair or replacement of footrings, neckrings, or other nonpressure attachments authorized by the specification for DOT–4BA and 8AL (§§ 178.51 and 178.60 of this subchapter) cylinders may be made without conforming to the requirements of paragraph (i)(6) of this section provided the following requirements are met:

(i) Must be done by a manufacturer of these types of DOT cylinders or by a repair facility approved by the Director, OHMT.

(ii) The welder shall have available to him information as to the procedure, equipment, and rod used during manufacture and shall use a similar method for repair.

(iii) Repairs must be by metal arc welding only. Welds shall be 3 inches maximum length and spaced at least 3 inches apart.

(iv) Welds shall not be made on or near a brazed joint (to prevent the possibility of copper penetration).

(v) After repair the welds are to be inspected visually for weld quality.

(vi) After repair the weld area is to be leak tested at the service pressure of the cylinder.

(5) After removal, and before replacement of attachments, cylinders must be inspected and defective ones rejected, repaired or rebuilt.

(6) After repair, cylinders must be reheat-treated, tested, inspected and reported when and as prescribed by the specification covering their original manufacture when welding or brazing seams in a pressure part of a cylinder; or when welding or brazing on pressure parts of cylinders of plain carbon steels with carbon over 0.25 percent or manganese over 1.00 percent or of alloy steels except as provided in § 173.34(l)(7).

Note 1: Heat treatment is not required after welding or brazing weldable low carbon parts to attachments of similar material which has been previously welded or brazed to the top or bottom of cylinders and properly heat treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

(7) Repair of cylinders must be followed by a proof pressure leakage test at prescribed test pressure and visual examination for weld quality when welding on pressure parts of cylinders of plain carbon 0.25 percent or less and manganese 1.00 percent or less, or when repairing steel types 1315, NAX and GLX by the following procedure:

(i) Leakage through the welding metal may be repaired without subsequent reheat treatment of the cylinder.

(ii) Repair permitted only by either the metal arc or tungsten inert gas shielded arc process. E7015, 7016, or 7018 electrodes not larger than ⅛ inch diameter shall be used for the metal arc process.

(iii) Weld defects must be removed by grinding or chipping before repair by the metal arc process. The tungsten inert gas shielded arc process may be used for repair only when such repair can be made by pudding. Repair weld shall not exceed 1 inch in length nor be closer than 3 inches to the next repair area.

(iv) Repair of weld defects which have any cracking is not permitted.

(j) **Repair of non-pressure attachments.** Repair of non-pressure attachments by welding or brazing without affecting a pressure part of the cylinder must be followed by visual examination for weld quality.

(k) **Prohibited repairs.** Walls, heads or bottoms of cylinders with injurious defects or leaks in base metal shall not be repaired, but may be replaced as provided for in paragraph (l) of this section.

(l) **Rebuilding of DOT 4 series and DOT 8, welded or brazed cylinders.** Rebuilding of DOT–4 series and DOT–8 series, welded or brazed cylinders is authorized. Such rebuilding must be done by a manufacturer of these types of DOT cylinders or by a repair facility approved by the Director, OHMT and by a process similar to that used in its original manufacture and under the following specific requirements:

(1) The replacement of a pressure part such as wall, heads, or bottoms of cylinders or the replacement of the porous filling material, shall be considered as rebuilding.

(2) Rebuilt cylinders shall be considered as new cylinders and shall conform to all the requirements of the specifications applying, including verification of material, examination, inspection, etc., and the rendering of the proper reports to the purchaser, cylinder rebuilder, and Director, OHMT. Report must show that cylinders were rebuilt.

(3) Information in sufficient detail regarding previous serial numbers and identification symbols must be filed with Director, OHMT.

SUBPART C

EXPLOSIVES AND BLASTING AGENTS; DEFINITIONS AND PREPARATION

§ 173.50 An explosive. (a) For the purpose of Parts 170–189 of this subchapter an explosive is defined as any chemical compound, mixture, or device, the primary or common purpose of which is to function by explosion, i.e., with substantially instantaneous release of gas and heat, unless such compound, mixture, or device is otherwise specifically classified in Parts 170–189 of this subchapter.

§ 173.51 Forbidden explosives. Unless otherwise provided in this subchapter, the transportation of the following explosives is forbidden.

(a) Explosive compounds, mixtures or devices which ignite spontaneously or undergo marked decomposition when subjected to a temperature of 167°F. (75°C.) for 48 consecutive hours.

(b) New explosive compounds, mixtures or devices except as provided for in § 173.86.

(c) Explosive mixtures or devices containing an ammonium salt and a chlorate.

(d) Explosive mixtures or devices containing an acidic metal salt and a chlorate.

(e) Leaking or damaged packages of explosives.

(f) Nitroglycerin, diethylene glycol dinitrate or other liquid explosives not authorized by § 173.53(e) or (h). (For shipment by motor vehicle other than by common carrier, see § 177.822(b) of this subchapter.)

(g) Loaded firearms (except as provided in 14 CFR 108.11).

(h) Fireworks that combine an explosive and a detonator or blasting cap.

(i) Fireworks containing yellow or white phosphorous.

(j) Toy torpedoes, the maximum outside dimension of which exceeds ¾-inch, or toy torpedoes containing a mixture of potassium chlorate, black antimony, and sulfur with an average weight of explosive composition in each torpedo exceeding four grains.

§ 173.52 Acceptable explosives. (a) For the purposes of this subchapter, acceptable explosives are divided into three classes as follows (acceptable military explosives must be transported on board vessels in accordance with 46 CFR 146.29):

(1) Class A explosives; detonating or otherwise of maximum hazard.

(2) Class B explosives; flammable hazard.

(3) Class C explosives; minimum hazard.

CLASS A EXPLOSIVES; DEFINITIONS

§ 173.53 Definition of Class A explosives. (a) **Type 1.** Solid explosives which can be caused to deflagrate by contact with sparks or flame such as produced by safety fuse or an electric squib, but cannot be detonated (see Note 1) by means of a No. 8 test blasting cap (see Note 2). Example: Black powder and low explosives.

(b) **Type 2.** Solid explosives which contain a liquid explosive ingredient, and which, when unconfined (see Note 3), can be detonated by means of a No. 8 test blasting cap (see Note 2); or which can be exploded in at least 50 percent of the trials in the Bureau of Explosives' Impact Apparatus (see Note 4) under a drop of 4 inches or more, but cannot be exploded in more than 50 percent of the trials under a drop of less than 4 inches. Example: High explosives, commercial dynamite containing a liquid explosive ingredient.

(c) **Type 3.** Solid explosives which contain no liquid explosive ingredient and which can be detonated, when unconfined (see Note 3), by means of a No. 8 test blasting cap (see Note 2); or which can be exploded in at least 50 percent of the trials in the Bureau of Explosives' Impact Apparatus (see Note 4) under a drop of 4 inches or more, but cannot be exploded in more than 50 percent of the trials under a drop of less than 4 inches. Example: High explosives, commercial dynamite containing no liquid explosive ingredient, trinitrotoluene, amatol, tetryl, picric acid, urea nitrate, pentolite, and commercial boosters.

(d) **Type 4.** Solid explosives which can be caused to detonate when unconfined (see Note 3), by contact with sparks or flame such as produced by safety fuse or an electric squib, or which can be exploded in the Bureau of Explosives' Impact Apparatus (see Note 4), in more than 50 percent of the trials under a drop of less than 4 inches. Example: Initiating and priming explosives, lead azide, fulminate of mercury, etc., and high explosives.

(e) **Type 5.** Desensitized liquid explosives are explosives which may be detonated separately or when absorbed in sterile absorbent cotton, by a No. 8 test blasting cap (see Note 2); but which cannot be exploded in the Bureau of Explosives' Impact Apparatus (see Note 4), by a drop of less than 10 inches. The desensitizer must not be significantly more volatile than nitroglycerine and the desensitized explosive must not freeze at temperatures above minus 10° F. Example: High explosives, desensitized nitroglycerine.

(f) **Type 6.** Liquid explosives that can be exploded in the Bureau of Explosives' Impact Apparatus (see Note 4) under a drop of less than 10 inches. Example: Nitroglycerin. (See § 173.51(a)(3))

(g) **Type 7.** An initiating device is a metal or plastic casing containing initiating or priming explosives, Class A-Type 4, either with or without other explosives. It is activated by any one of several means, including an electrical pulse, a flame, a shock or detonation wave, mechanical impact (percussion), pressurized gas, or high intensity light beam. It produces an explosive output that may be used to initiate another explosive or to perform work. A time delay may be incorporated in the means of applying the stimulus, or in the initiating device itself.

(1) A detonator (see Note 5) is an initiating device (other than one properly described as a detonating fuze) which contains no more than 10 grams of total explosives weight, excluding ignition and delay charges per unit. There are different kinds of detonators including the following:

(i) Blasting caps which are activated by safety fuse.

(ii) Blasting caps which are percussion activated.

(iii) Blasting caps which are activated by flexible detonating cord, including:

(A) Delay connectors in plastic sheaths which consist of a plastic sleeve that contains a suitable delay system with receptor and donor explosive charges in the center portion. Each end of the sleeve is made so that flexible detonating cord can be inserted into and locked to the connector;

(B) Delay connectors in metal tubes which consist of a system with a receptor and donor charge positioned between two detonators with the entire assembly placed in a metal tube having both ends open for the insertion of flexible detonating cord;

(C) Delay connectors with detonating cord pigtails which consist of delay connectors as described in paragraph (g)(1)(iii)(B) of this section that have short lengths of detonating cord inserted into both ends and crimped in place; and

(D) Nonelectric instantaneous and delay caps which consist of blasting caps to which is assembled a length of detonating cord that may have a transfer explosive charge at the opposite end.

(iv) Blasting caps which are activated by gas pressurization or reaction.

(v) Blasting caps which are activated by a shock tube.

(vi) Electric blasting caps which are activated by an electric current.

(2) A detonating primer (see Note 6) is an initiation device for commercial use which contains more than 10 grams of total explosives weight, excluding ignition and delay charges per unit.

(3) Detonating fuzes, class A, are used in the military service to detonate the high explosive bursting charges of projectiles, mines, bombs, torpedoes, and grenades. In addition to a powerful detonator, they may contain several ounces of a high explosive, such as tetryl or dry nitrocellulose, all assembled in a heavy steel envelope. They may also contain a small amount of radioactive component. Those that are so made and packed that they will not cause functioning of other fuzes, explosives, or explosive devices in the same or adjacent containers are classed as class C explosives.

(h) **Type 8.** Any device or solid or liquid compound or mixture which is not specifically included in any of the above types, and which under special conditions may be so designated and examined by the Bureau of Explosives or the Bureau of Mines, U.S. Department of the Interior and approved by the Director, OHMT. Example: Shaped charges, commercial.

(i) A shaped charge, commercial, consists of a plastic, paper, or other suitable container comprising a charge of not to exceed 8 ounces of a high explosive containing no liquid explosive ingredient and with a hollowed-out portion (cavity) lined with a rigid material. Detonators or other initiating elements may not be assembled in the device unless examined by the Bureau of Explosives and approved by the Director, OHMT.

(i) **Ammunition for cannon.** Ammunition for cannon is fixed, semi-fixed or separate loading ammunition which is fired from a cannon, mortar, gun, howitzer or recoilless rifle.

(j) **Ammunition for cannon with projectiles.** Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, or shell is fixed ammunition assembled in a unit consisting of the cartridge case containing the propelling charge and primer, and the projectiles, or shell, fuzed or unfuzed. Detonating fuzes, tracer fuzes, explosive or ignition devices, or fuze parts with explosives contained therein may not be assembled in ammunition or included in the same outside package unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(k) **Explosive projectiles.** Explosive projectiles are shells, projectiles, warheads, or rocket heads, loaded with explosives or bursting charges, with or without other materials, for use in cannons, guns, tubes, mortars or other firing or launching devices.

(l) **Grenades.** Grenades, hand or rifle, are small metal or other containers designed to be thrown by hand or projected from a rifle. They are filled with an explosive or a liquid, gas, or solid material such as a toxic or tear gas or an incendiary or smoke producing material and a bursting charge. When shipped without explosives or bursting charges, see §§ 173.100(y), 173.330, 173.350, and 173.385.

(m) **Explosive bombs.** Explosive bombs are metal or other containers filled with explosives. They are used in warfare and include aeroplane bombs and depth bombs.

(n) **Explosive mines.** Explosive mines are metal or composition containers filled with a high explosive.

(o) **Explosive torpedoes.** Explosive torpedoes, such as are used in warfare, are metal devices containing a means of propulsion and a quantity of high explosives.

(p) **Rocket ammunition.** Rocket ammunition (including guided missiles) is ammunition designed for launching from a tube, launcher, rails, trough, or other launching device, in which the propellant material is a solid propellant explosive. It consists of an igniter, rocket motor, and projectile (warhead) either fuzed or unfuzed, containing high explosives or chemicals. Rocket ammunition may be shipped completely assembled or may be shipped unassembled in one outside container.

(q) **Ammunition for small arms with explosive projectiles or incendiary projectiles.** Ammunition for small arms with explosive projectiles and ammunition for small arms with incendiary projectiles is fixed ammunition of caliber 20 millimeters to be used in machine guns or cannons, and consists of a metallic cartridge case, the primer and the propelling charge, with explosive projectile or incendiary projectile with or without detonating fuze; the component parts necessary for one firing being all in one assembly. Detonating fuzes, tracer fuzes, explosive or ignition devices or fuze parts with explosives contained therein must not be assembled in ammunition or included in the same outside package unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the U.S. Government or unless of a type approved by the Department.

(r) **Chemical ammunition.** Chemical ammunition used in warfare is all kinds of explosive chemical projectiles, shells, bombs, grenades, etc., loaded with toxic, tear, or other gas, smoke or incendiary agent, also such miscellaneous apparatus as cloud-gas cylinders, smoke generators, etc., that may be utilized to project chemicals.

For explanation of abbreviations and reference marks, see last page of this tariff.

(s) **Boosters, bursters, and supplementary charges.** Boosters and supplementary charges consist of a casing containing a high explosive and are used to increase the intensity of explosion of the detonator of a detonating fuze. Bursters consist of a casing containing a high explosive and are used to rupture a projectile or bomb to permit release of its contents.

(t) **Jet thrust units (jato), class A explosives; rocket motors, class A explosives; igniters, jet thrust (jato), class A explosives; and igniters, rocket motor, class A explosives:**

(1) Jet thrust units (jato), class A explosives, are metal cylinders containing a mixture of chemicals capable of burning rapidly and producing considerable pressure. Under certain conditions the chemical fuel with which the unit is loaded may explode. Jet thrust units are designed to be ignited by an electric igniter. They are used to assist aeroplanes to take off.

(2) Rocket motor, class A explosives, is a device containing a propelling charge and consisting of one or more continuous type combustion unit(s) closed at one end (closure may be an igniter with a thrust plate) and with a nozzle(s) at the other end. (The rocket motor carries its own solid oxidizer-fuel combination.) The propelling charge consists of a mixture of chemicals and or chemical compounds which when ignited is capable of burning rapidly and producing considerable pressure and which will sustain a detonation. Rocket motors, class A explosives, should be nonpropulsive in shipment (see paragraphs (t)(2)(i) and (ii) of this section). Rocket motors, class A explosives, are designed to be ignited by an electrically actuated device which may be an igniter, or by other means. They are used to propel and or provide thrust for guided missiles, rockets, or spacecraft.

(i) A rocket motor to be considered "nonpropulsive" must be capable of unrestrained burning and will not move appreciably in any direction when ignited by any means. Blast deflectors, thrust neutralizers, or other similar devices must be proven adequate by test prior to authorization for use.

(ii) Rocket motors, class A explosives may be shipped in a propulsive state only under conditions approved by the Department of Defense.

(3) Igniters, jet thrust (jato), class A explosives, and igniters, rocket motor, class A explosives, are devices consisting of an electrically operated or remotely controlled ignition element and a charge of fast-burning composition meeting the definition prescribed for Type 1 class A explosives (see paragraph (a) of this section), assembled in a unit for use in igniting the propelling charge of jet thrust units or rocket motors.

(u) **Charged well casing jet perforating guns.** Charged well casing jet perforating guns are steel tubes or metallic strips into which are inserted shaped charges connected in series by primacord. Shaped charges must be of a type described in paragraph (h)(1) of this section, except that each shaped charge installed in the steel tube or metallic strip shall contain not over 4 ounces of high explosive. Charged well casing jet perforating guns must not be transported with blasting caps, electric blasting caps, or other firing devices affixed to or installed in the guns.

(v) **Type 9.** Propellant explosives, class A, are solid chemicals or solid chemical mixtures which are designed to function by rapid combustion of successive layers, generally with little or no smoke. The combustion is controlled by composition, size, and form of grain. Propellant explosives, class A, include some types of smokeless powder and some types of solid propellant explosives for jet thrust units, rockets, or other devices. Any propellant explosive is class A which detonates in any one out of five trials when tested in the packages in which it is offered for transportation. In conducting the test, one propellant container shall be surrounded by inert loaded containers of the same weight, including one inert container placed on top of the propellant container. The propellant shall be ignited by means of a commercial electric squib placed within 4 inches of the bottom of the container. The presence of a crater and absence of flame shall be considered as evidences of detonation.

(w) Detonating cord is a device consisting of a core of pentaerythrite tetranitrate, cyclotrimethylene-trinitramine or similar explosive overspun with tapes, yarns and plastics or waterproofing compounds without wire countering.

Note 1: The detonation test is performed by placing the sample in an open-end fiber tube which is set on the end of a lead block approximately 4½ inches in diameter and 4 inches high which, in turn, is placed on a solid base. A steel plate may be placed between the fiber tube and the lead block.

Note 2: A No. 8 test blasting cap is one containing two grams of a mixture of 80 percent mercury fulminate and 20 percent potassium chlorate, or a cap of equivalent strength.

Note 3: "Unconfined" as used in this section does not exclude the use of a paper or soft fiber tube wrapping to facilitate tests.

Note 4: The Bureau of Explosives Impact Apparatus is a testing device designed so that a guided 8 pound weight may be dropped from predetermined heights so as to impact specific quantities of liquid or solid materials under fixed conditions. Detailed prints may be obtained from the Bureau of Explosives, 50 F Street, N.W., Washington, D.C. 20001.

Note 5.—See § 173.100(gg) for criteria that determine whether a particular type of detonator can be classed as a Class C explosive.

Note 6.—See § 173.100(hh) for criteria that determine whether a particular type of detonating primer can be classed as a Class C explosive.

§ 173.54 Ammunition for cannon. (a) Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, or tear gas projectiles must be packed and properly secured in strong wooden or metal containers, or in plastic containers of approved military specifications complying with § 173.7(a).

(b) Each outside package must be plainly marked **"AMMUNITION FOR CANNON WITH EXPLOSIVE PROJECTILES," "AMMUNITION FOR CANNON WITH GAS PROJECTILES," "AMMUNITION FOR CANNON WITH SMOKE PROJECTILES," "AMMUNITION FOR CANNON WITH INCENDIARY PROJECTILES," "AMMUNITION FOR CANNON WITH ILLUMINATING PROJECTILES,"** or **"AMMUNITION FOR CANNON WITH TEAR GAS PROJECTILES, CLASS A EXPLOSIVES,"** as appropriate.

§ 173.55 Ammunition, nonexplosive. (a) Nonexplosive ammunition is defined as a device which contains no explosives or other hazardous materials, such as cartridge cases, dummy or drill cartridges; empty, sand loaded or solid projectiles with or without tracers (containing not in excess of one ounce of tracer composition), empty mines, empty bombs, solid projectiles, empty torpedoes, or practice bombs. It also includes devices containing no explosives, or other hazardous materials, except installed electric squibs, primers, propellants or thermal batteries required for the activation of the device, provided that it has been proven by test that when initiated the full energy release is contained within the outside shipping container. Such ammunition is exempt from Parts 170–189 of this chapter. Rotating bands should be protected against deformation by method of packing or loading.

§ 173.56 Ammunition, projectiles, grenades, bombs, mines, gas mines, and torpedoes. (a) Detonating fuzes, tracer fuzes, explosive or ignition devices, bouchons, or fuze parts with explosives contained therein, must not be assembled in explosive projectiles, grenades, explosive bombs, explosive mines, or explosive torpedoes, or included in the same outside package with them unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(b) Explosive projectiles, explosive torpedoes, explosive mines, explosive bombs, or explosive grenades except as provided in paragraph (c) of this section, must be packed and properly secured in strong wooden or metal boxes.

(c) The following explosives may be shipped without being boxed when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD:

(1) Explosive projectiles, explosive torpedoes, explosive mines, or explosive bombs, exceeding 90 pounds in weight, and explosive projectiles of not less than 4½ inches when palletized.

(2) Explosive projectiles less than 4½ inches when palletized.

(d) Gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, gas bombs, smoke bombs, incendiary bombs, gas grenades, smoke grenades, incendiary grenades, and gas mines, explosive, containing a bursting charge must be packed and properly secured in strong wooden boxes. Detonating fuzes, boosters or bursters, bouchons or ignition elements may not be assembled in these articles or included in the same package with them unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(e) The gross weight of a box containing more than one projectile, mine, grenade, or bomb must not exceed 250 pounds.

(f) Explosive bombs packed more than one in shipping containers having gross weights not in excess of 1,400 pounds may be shipped by, for or to the Departments of the Army, Navy, and Air Force of the U.S. Government.

(g) Each exterior package or projectile, bomb, or mine must be plainly marked "Explosive Projectile," "Explosive Torpedo," "Explosive Mine," "Explosive Bomb," "Hand Grenades," or "Rifle Grenades," as the case may be, except that each device need not be so marked when palletized and the palletized units are plainly marked and shipped as carload or truckload shipments.

(g) Bombs, projectiles, grenades, ammunition for cannon with gas projectiles, or other packagings loaded with Poison A, and an explosive charge, either boxed or unboxed (see paragraph (c) of this section) must bear the **POISON GAS** label in addition to the **EXPLOSIVE** label.

(h) For regulations for shipping ammunition containing chemicals but no explosives or bursting charges, see chemical ammunition, §§ 173.330, 173.350, and 173.383.

§ 173.57 Rocket ammunition. (a) Rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, or illuminating projectiles must be well packed and properly secured in strong wooden, metal, preformed fiber glass resin impregnated container, or other packagings or approved military specifications which comply with § 173.7(a).

(b) [Reserved]

§ 173.58 Ammunition for small arms. (a) Ammunition for small arms with explosive projectiles or incendiary projectiles must be well packed and properly secured in strong metal or wooden containers. The gross weight of the outside package must not exceed 175 pounds.

(b) [Reserved]

§ 173.59 Chemical ammunition, explosive. (a) When chemical elements of ammunition are shipped assembled with their detonating fuzes or bursting charges, they must be shipped in conformity with the regulations prescribed for explosive articles, class A, see §173.56. For shipment of these articles not containing ignition elements, bursting charges, detonating fuzes, or other explosive components, see §173.330, §173.350, and §173.383. For shipment of these articles assembled with their ignition elements or expelling charges but without any detonating or bursting charge see §173.68(d).

§ 173.60 Black powder and low explosives. (a) Black powder and low explosives must be packed in containers complying with the following specifications:

(1) Specification 13 (§178.140 of this subchapter). Metal kegs not less than 7 inches long. Net weight not less than 6¼ pounds nor more than 150 pounds.

(2) [Reserved]

(3) [Reserved]

(4) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes with inside fiber or metal containers not over 1½ pounds capacity each, or cotton bags of at least 4 ounce cotton duck not over 25 pounds capacity each. The gross weight of Specification 14 boxes may not exceed 140 pounds and the gross weight of Specification 15A or 16A boxes may not exceed 200 pounds.

(5) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes with inside cylindrical fiber cartridges not over 5 inches diameter nor over 18 inches long with fiber at least 0.05 inch thick paraffined on outer surface with joints securely glued or cemented, or strong paraffined paper cartridges not over 12 inches long authorized only for compressed pellets (cylindrical block) ⅞ inch or more in diameter. Boxes must be completely lined with strong paraffined paper or other suitable waterproofed material without joints or other openings at the bottom or sides. Authorized gross weight not to exceed 75 pounds.

(6) Spec. 12H, 23F, or 23H (§§178.209, 178.214, or 178.219 of this subchapter). Fiberboard boxes with inside cylindrical fiber cartridges not over 5 inches diameter nor over 18 inches long with fiber at least 0.05 inch thick paraffined on outer surface with joints securely glued or cemented, or strong paraffined paper cartridges not over 12 inches long authorized only for compressed pellets (cylindrical block) ⅞ inch or more in diameter. Authorized gross weight not to exceed 65 pounds.

(b) Black powder (not low explosives) in addition to containers specified in paragraph (a) of this section, must be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes with inside containers which must be cloth or paper bags of capacity not exceeding 25 pounds net weight, provided the completed shipping package shall be capable of standing a drop of 4 feet without rupture of inner or outer containers. The completed package must not exceed 50 pounds, net weight of black powder.

(2) Spec. 12H, 23F, or 23H (§178.209, 178.214, or 178.219 of this subchapter). Fiberboard boxes with inside containers which must be cloth, paper, or securely closed polyethylene bags constructed of material not less than 0.004 inch thick of capacity not exceeding 25 pounds net weight for cloth or paper bags and not exceeding 50 pounds net weight for polyethylene bags, or inside fiber or metal containers having not over 1 pound capacity each, provided the completed shipping package shall be capable of withstanding a drop of 4 feet without rupture of inner or outer containers. The tubes of the box may be eliminated and a single tube as specified in spec. 23F (§178.214 of this subchapter) may be substituted. The completed package shall not contain more than 50 pounds net weight of black powder.

(3) Spec. 17E (§178.116 of this subchapter). Metal drums (single trip), not over 5 gallons capacity each, without opening except bunghole not exceeding 2.3 inches in diameter. Authorized for carload or truckload shipments only.

(c) Black pellet powder primed with an electric squib secured inside the coaxial hole of the pellet powder with loose ends of the wires of the squib effectively short-circuited may be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes with inside cartridges which must be strong paraffined paper cartridges not over 12 inches long authorized only for compressed pellets (cylindrical block) ⅞ inch or more in diameter. Boxes must be lined as prescribed for cylindrical fiber cartridges. Gross weight not to exceed 65 pounds.

(d) Low explosives (not black powder) may in addition to the containers specified in paragraph (a) of this section, be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes with inside containers which must be strong paper bags of capacity not exceeding 25 pounds. Gross weight of spec. 14 box must not exceed 140 pounds. Gross weight of spec. 15A or 16A box must not exceed 200 pounds.

(2) Spec. 12H, 23F, or 23H (§178.209, §178.214 or §178.219 of this subchapter). Fiberboard boxes with inside containers which must be strong paper bags of capacity not exceeding 25 pounds. Gross weight must not exceed 65 pounds.

(3) Spec. 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes, lined, spec. 2L (§178.30 of this subchapter). Authorized only for low explosives in the form of hard nonplastic rods or cylinders not less than ⅝-inch diameter.

(e) Each outside package must be plainly marked, stamped, or stenciled "BLACK POWDER" or "LOW EXPLOSIVES," and may also show "BLASTING," "RIFLE," etc., as "BLACK BLASTING POWDER," "BLACK RIFLE POWDER," "LOW BLASTING EXPLOSIVE" or "BLACK PELLET POWDER," as the case may be.

(f) Inside containers of over 1½ pounds capacity each in boxes, must be packed with filling holes up, and the boxes must be marked on top "THIS SIDE UP."

§ 173.61 High explosives. (a) High explosives (dynamite), except gelatin dynamite, when offered for transportation by rail freight or highway must not contain in excess of 60 percent of liquid explosive ingredient and when offered for transportation by carrier by water must not contain in excess of 75 percent of liquid explosive ingredient. Maximum limit of liquid explosive ingredient specified for transportation by carrier by water applies only for such explosives as consist principally of wood pulp or other satisfactory absorbent and liquid explosive, which are comparable with good commercial dynamite under tests as to leakage of liquid ingredient and sensitiveness to the shocks of transportation, and for shipments that are otherwise in compliance with the regulations in Parts 170–189 of this subchapter, for the transportation of high explosives.

(b) High explosives consisting of a liquid mixed with an absorbent material must have the absorbent (wood pulp or similar material) in sufficient quantity and of satisfactory quality, properly dried at the time of mixing; nitrate of soda must be dried at the time of mixing to less than 1 percent of moisture; and the ingredients must be uniformly mixed so that the liquid will remain thoroughly absorbed under the most unfavorable conditions incident to transportation.

(c) High explosives containing nitroglycerin or other liquid explosive ingredients must have uniformly mixed with an absorbent material a satisfactory antacid, which must be in quantity sufficient to have the acid neutralizing power of an amount of magnesium carbonate equal to 1 percent of the nitroglycerin or other liquid explosive ingredient.

(d) Cartridges shall consist of a column of explosives completely inclosed in a shell made of strong paper or polyethylene or a combination of paper and polyethylene, so treated that it will not absorb the liquid ingredient of the explosive.

(e) Bags shall be made of strong paper or equally efficient material so treated or of such nature that it will not absorb the liquid ingredient of the explosive.

(f) All boxes in which high explosives are packed must be lined with strong paraffined paper or other suitable material, except as provided in paragraph (j) of this section, §173.64(a)(5), and §173.65(a)(5). Lining must be without joints or other openings or with cemented joints at the bottom, ends or sides of boxes, and for explosives with liquid ingredients must be impervious to such ingredient and also to water. Covers of boxes must be protected from contact with explosives by lining paper or other suitable material. (See spec. 2L (§178.30 of this subchapter), for authorized lining material.)

(g) Before cartridges or bags of gelatin explosives are packed in boxes, lined in accordance with paragraph (f) of this section, dry fine wood pulp or sawdust at least ¼ inch in depth must be spread over the bottom of box or bottom of box may have a full area pad formed of absorptive cellulose sheet having nitroglycerin absorptive value equivalent to sawdust as specified; similar materials are required in boxes for packing all non-gelatinous types of explosives containing 30 percent or more liquid explosive ingredient.

For explanation of abbreviations and reference marks, see last page of this tariff.

(h) Except for cartridges containing gelatin dynamite, all cartridges of high explosives exceeding 4 inches in length and containing more than 10 percent of a liquid explosive ingredient must be placed horizontally in boxes. Bags must be packed with their filling holes up.

(i) Movement of cartridges and bags of high explosives within the boxes shall be prevented by sufficiently tight packing.

(j) High explosives (dynamite), except gelatin dynamite, packed in bags or in cartridges in excess of 2 inches in diameter and containing not more than 30 percent liquid explosive ingredients may be packed in outside containers without sawdust and without lining paper provided either each inside or outside container is sift-proof and is so treated as to prevent penetration by the commodity with which the container is filled for shipping.

§ 173.62 High explosives, liquid. (a) Liquid explosives as defined in §173.53(e) must be packed in specification containers as follows:

(1) Spec. 15L (§178.176 of this subchapter). Wooden boxes which must be plainly marked on top and on one side or end "HIGH EXPLOSIVES—DANGEROUS" in letters not less than ¾ inch in height. The tops of boxes must be marked "THIS SIDE UP".

(2) Spec. 15M (§178.177 of this subchapter.) Wooden boxes. Metal inside containers shall contain not more than 10 quarts liquid explosives each. Boxes must be plainly marked on top and on one side or end "HIGH EXPLOSIVES—DANGEROUS" in letters not less than ¾ inch in height. The tops of boxes must be marked "THIS SIDE UP".

(3) Spec. MC–200 (§178.315 of this subchapter). Motor vehicle container.

§ 173.63 High explosive with liquid explosive ingredient. (a) High explosives (dynamite) containing not more than 30 percent liquid explosive ingredients must be prepared as prescribed in §173.61, except as otherwise specified, and packed in containers complying with the following specifications:

(1) Spec. 23G (§178.218 of this subchapter.) Fiberboard boxes. Not more than one cartridge in each box. High explosives packed in boxes consisting of more than one tube joined circumferentially are exempt from the requirements of §173.61(f) and (g). High explosives packed in boxes consisting of one tube closed at the ends are exempt from the requirements of §173.61(d), (f), and (g). Gross weight of boxes not to exceed 65 pounds.

(2) Spec. 14, 15A, 16A, or 19B (§178.165, §178.168, §178.185, or §178.191 of this subchapter). Wooden boxes, or spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter) fiberboard boxes, with inside containers which must be cartridges not exceeding 12 inches in diameter or 50 pounds in weight with length not to exceed 36 inches, or bags not exceeding 50 pounds each securely closed so as to prevent leakage therefrom. Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(3) Spec. 23F or 23H (§178.214 or §178.219 of this subchapter). Fiberboard boxes having one inside 26-gauge metal container, measuring not over 8 inches in diameter and 31 inches long, containing high explosives (ammonium dynamite core) surrounded by a material classed as a blasting agent. Authorized gross weight not to exceed 65 pounds.

(b) High explosives (dynamite) containing 10 percent or less of a liquid explosive ingredient in cartridges or bags as prescribed in §173.61(d) and (e) may be packed in wooden boxes, Spec. 14, 15A, 16A, or 19B (§178.165, §178.168, §178.185, or §178.191 of this subchapter), gross weight not to exceed 140 pounds, or fiberboard boxes, Spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter), gross weight not to exceed 65 pounds.

(1) High explosives (dynamite) containing 10 percent or less of a liquid explosive ingredient may be packed in fiberboard boxes, spec. 23G (§178.218 of this subchapter). Not more than one cartridge in each box. High explosives packed in boxes consisting of more than one tube joined circumferentially are exempt from the requirements of §173.61(f) and (g). High explosives packed in boxes consisting of one tube closed at the ends are exempt from the requirements of §173.61(d), (f), and (g). Gross weight of boxes not to exceed 65 pounds.

(c) High explosives (dynamite) containing more than 30 percent liquid explosive ingredients must be prepared as prescribed in §173.61(a) to (i), inclusive, except as otherwise specified, and in containers complying with the following specifications:

(1) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter) wooden boxes or spec. 12H, 23F, or 23H (§§178.209, 178.214, or 178.219 of this subchapter) fiberboard boxes. Inside containers must consist of:

(i) Cartridges not exceeding 4 inches in diameter and not exceeding 8 inches in length.

(ii) Cartridges exceeding 4 inches in diameter and not exceeding 5 inches in diameter and between 8 inches and not exceeding 10 inches in length must be redipped in melted paraffin or equivalent material.

(iii) Two or more cartridges that must be redipped because of their size may be enclosed in another strong paper shell to form a completed cartridge not exceeding 30 inches in length. The resulting cartridge must be dipped in melted paraffin or equivalent material.

(iv) Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(2) Spec. 14, 15A, 16A, or 19B (§178.165, §178.168, §178.185, or §178.191 of this subchapter) wooden boxes, or spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter), fiberboard boxes, with inside containers which must be paraffined two-ply paper bags not exceeding 12½ pounds capacity, securely closed by folding the tops and securing the fold by tape, with not more than two such bags inserted into another two-ply paper bag which must be securely closed and dipped in paraffin after closing, or with not more than two inside containers which must be securely closed polyethylene bags not less than 0.004 inch in thickness of not more than 12½ pounds capacity each packed in a securely closed polyethylene or paper bag and packed in polyethylene lined outside fiberboard boxes. Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(d) High explosives (gelatin dynamite and blasting gelatin) must be prepared as prescribed in §173.61(a) to (i) inclusive, except as otherwise specified, and in containers complying with the following specifications:

(1) Spec. 23G (§178.218 of this subchapter). Fiberboard boxes. Not more than one cartridge in each box. High explosives packed in boxes consisting of more than one tube joined circumferentially are exempt from the requirements of §173.61(f) and (g) or when packed in boxes consisting of one tube closed at the ends are exempt from the requirements of §173.61(d) to (g), inclusive. Gross weight of boxes not to exceed 65 pounds.

(2) Spec. 14, 15A, 16A, or 19B (§178.165, §178.168, §178.185, or §178.191 of this subchapter). Wooden boxes, or spec. 12H, 23F, or 23H (§178.209, §176.214, or §178.219 of this subchapter), fiberboard boxes, with inside containers which must be cartridges not exceeding 12 inches in diameter or 50 pounds in weight with length not to exceed 36 inches, or bags not exceeding 12½ pounds each. Bags if not completely sealed against leakage by method of closure must be packed with filling holes up. Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(3) High explosives (gelatin dynamite or blasting gelatin) may be shipped in a package consisting of not more than 6 cartridges of such explosives, each not exceeding 32 inches in length or 5 inches in diameter, cartridged with heavy paper in such manner as to have the approximate strength of a spec. 23G (§178.218 of this subchapter) container, which cartridges shall in turn be placed in a 10-ply paper tube not exceeding 11 feet in length. The outer paper tube must be equipped with a metal cone or equally efficient device on one end which shall serve to close that end of the tube and to the metal cone shall be affixed a wire threaded through fiber tubes running through the center of each of the 6 cartridges; or as an alternative to the single wire running through the cartridges in the outer tube at the center, two wires may be applied, one on each side of the cartridges and between the outside of the cartridges and the inside of the outer tube. In either event, cartridges and the outer tube shall be securely closed so as to prevent spilling of any loose explosive under any conditions normally incident to transportation and cartridges shall be so loaded and stayed within the car or motor vehicle as to prevent damage to individual containers. The total gross weight of each completed package shall not exceed 125 pounds. Shipments are authorized in carload or truckload lots only without transfer of packages other than such transfers as may be necessary in the event of mechanical failure of the car or vehicle in which originally loaded.

(e) High explosives (straight gelatin dynamites of 80 percent strength and over and blasting gelatin) must be packed in cartridges or in bulk in outside boxes. When packed in bulk in boxes double lining paper throughout must be used. Containers must comply with the following specifications:

(1) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes.

(2) Specification 12H, 23F, 23G, or 23H (§§178.209, 178.214, 178.218, 178.219 of this subchapter). Fiberboard boxes. Specification 23G must be packed in an outer container consisting of at least 7-ply heavy kraft paper (see §173.25 for additional required marking). Two 3-mil polyethylene bags (one within the other) may be used in place of the double lining paper when Specification 12H is the outside container. Not more than one such double bag may be packed in the Specification 12H fiberboard box.

(3) Gross weight of wooden boxes not to exceed 75 pounds. Gross weight of fiberboard boxes not to exceed 65 pounds.

(f) Boxes containing high explosives must be plainly marked on top and on one side or end, except those made in compliance with spec. 23G which must be marked on the side or end, and kegs, drums, or barrels containing high explosives must be marked on both ends "HIGH EXPLOSIVES—DANGEROUS" in letters not less than ⅞ inch in height. The tops of boxes except those made in compliance with spec. 23G, must be marked "THIS SIDE UP".

§ 173.64 High explosives with no liquid explosive ingredient and propellant explosives, Class A. (a) High explosives containing no liquid explosive ingredients if their sensitiveness to percussion is not greater than that measured by the blow delivered by an 8-pound weight dropping from a distance of 7 inches on a compressed pellet of the explosive three-hundredths of an inch thick and two-tenths of an inch in diameter, confined rigidly between hard steel surfaces as in the standard Impact Testing Apparatus of the Bureau of Explosives, must be packed in cartridges or in bags in outside boxes. They must be packed in cartridges when their sensitiveness is greater than the limit prescribed herein. Such explosives when dry may be packed in strong sift-proof cloth or paper bags of capacity not exceeding 25 pounds. These explosives must be packed in outside containers complying with the following specifications:

(1) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, or 178.191 of this subchapter). Wooden boxes.

(2) Spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter). Fiberboard boxes.

(3) [Reserved]

(4) Gross weight of wooden boxes not to exceed 140 pounds. Gross weight of fiberboard boxes not to exceed 65 pounds.

(5) When such explosives contain over 5 percent moisture, box must have an inside polyethylene bag having a minimum thickness of 6 mils; or the box must be lined with strong paraffined paper or other authorized material, spec. 2L (§178.30 of this subchapter). Box handholes are not authorized.

(6) When such explosives are in combination cartridges, consisting of column of explosives with core of dynamite, they may be shipped when packed in outside boxes with 65 pounds as the maximum gross weight. The column of explosives must be completely inclosed in waterproofed cloth or strong waterproofed paper and must not exceed 6 inches in diameter, 20 inches in length, or gross weight of 25 pounds.

(7) Spec. 23G (§178.218 of this subchapter). Fiberboard boxes. Such explosives when packed in boxes consisting of more than one tube joined circumferentially are exempt from requirements of §173.61(f) and (g) or when packed in boxes consisting of one tube closed at the ends are exempt from requirements of §173.61(d) to (g) inclusive. The gross weight of boxes not to exceed 65 pounds.

(b) Boxes containing high explosives must be plainly marked on top and on one side or end, except those made in compliance with spec. 23G which must be marked on the side or end, and kegs, drums, or barrels containing high explosives must be marked on both ends "HIGH EXPLOSIVES—DANGEROUS" in letters not less than ¾ inch in height.

(c) [Reserved]

(d) Propellant explosives, class A must be packed in containers as prescribed in §173.93. Each outside container must be plainly marked "PROPELLANT EXPLOSIVES, CLASS A".

§ 173.65 High explosives with no liquid explosive ingredient nor any chlorate. (a) High explosives containing no liquid explosive ingredient nor any chlorate if their sensitiveness to percussion is not greater than that measured by the blow delivered by an 8-pound weight dropping from a distance of 7 inches on a compressed pellet of the explosive three-hundredths of an inch thick and two-tenths of an inch in diameter, confined rigidly between hard steel surfaces as in the standard Impact Testing Apparatus of the Bureau of Explosives, must be packed in cartridges, or in bags or metal containers in outside boxes, except that the requirement of packaging in cartridges, bags or metal containers does not apply to plastic-bonded explosives, but they must be packed and cushioned so as to prevent movement of individual pieces within the outside shipping container. They must be packed in cartridges when their sensitiveness is greater than the limit prescribed in this section. Such explosives when dry may be packed in strong sift-proof bags securely closed so as to prevent leakage therefrom or metal containers of capacity not exceeding 60 pounds. These explosives must be packed in outside containers complying with the following specifications:

(1) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes.

Note 1: Wooden boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1½ inches from top edge of end of box.

(2) Spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter). Fiberboard boxes.

(3) Specification 17H or 37A (§§178.118 and 178.131 of this subchapter). Metal drums (single-trip) having a minimum 0.003-inch thick polyethylene liner. Authorized only for ammonium perchlorate with particle size of 5 to 15 microns. Maximum capacity is 30 gallons.

(4) Gross weight of wooden boxes not to exceed 140 pounds. Gross weight of fiberboard boxes not to exceed 65 pounds.

(5) When these explosives contain over 5 percent moisture, each box must have inside securely closed polyethylene bags having a minimum wall thickness of 0.006-inch, or must incorporate a specification 2L (§178.30 of this subchapter) lining. Polyethylene is authorized only for materials that will not, react with, or cause decomposition of the plastic.

(6) When such explosives are in combination cartridges, consisting of column of explosives with core of dynamite, they may be shipped when packed in outside boxes with 65 pounds as the maximum gross weight. The column of explosives must be completely inclosed in waterproofed cloth or strong waterproofed paper and must not exceed 6 inches in diameter, 20 inches in length, or gross weight of 25 pounds.

(7) Spec. 23G (§178.218 of this subchapter). Fiberboard boxes. Such explosives when packed in boxes consisting of more than one tube joined circumferentially are exempt from requirements of §173.61(f) and (g) or when packed in boxes consisting of one tube closed at the ends are exempt from requirements of §173.61(d) to (g) inclusive. The gross weight of boxes not to exceed 65 pounds.

(b) Amatol consisting of 80 percent ammonium nitrate and 20 percent trinitrotoluene, ammonium picrate, nitroguanidine, nitrourea, urea nitrate, picric acid, tetryl, trinitroresorcinol, trinitrotoluene, pentolite, cyclotrimethylenetrinitramine (desensitized), and soda amatol, in dry condition, in addition to containers prescribed in paragraphs (a)(1) to (5) and (7) of this section, may be shipped in containers complying with the following specifications:

(1) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes with inside strong paper or cloth bags not over 50 pounds capacity each, packed with filling holes up.

(2) Specification 21C (§178.224 of this subchapter). Fiber drums. Net weight not to exceed 200 pounds.

(c) Trinitrotoluene and pentolite, in dry condition, in addition to containers prescribed in paragraphs (a)(1) to (5) and (b)(1) and (2) of this section, may be shipped in specification containers as follows:

(1) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes with inside strong paper or cloth bags not over 100 pounds capacity each, packed with filling holes up.

(2) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes with strong sift-proof liners. Specification 2L (§178.30 of this subchapter).

(d) The following materials may be shipped dry as drugs, n.o.s., or medicines, n.o.s., without any other requirements by rail freight or highway if the amount in one outside package does not exceed 4 ounces, and the materials are packed in securely closed bottles or jars that are cushioned to prevent breakage:

(1) Ammonium picrate.
(2) Dipicrylamine.
(3) Dipicryl sulfide.
(4) Dinitrophenylhydrazine.
(5) Nitroguanidine.
(6) Picramide.
(7) Picric acid.
(8) Picryl chloride.
(9) Trinitroanisole.
(10) Trinitrobenzene.
(11) Trinitrobenzoic acid.
(12) Trinitro-m-cresol.
(13) Trinitronaphthalene.
(14) Trinitroresorcinol.
(15) Trinitrotoluene.
(16) Urea nitrate.
(17) Triaminotrinitrobenzene
(18) Trichlortrinitrobenzene
(19) Hexanitrostilbene

(e) Ammonium picrate, cyclo-tetramethylenetetranitramine, cyclotrimethylenetrinitramine, pentaerythrite tetranitrate (desensitized), picric acid, trinitrobenzene, trinitrobenzoic acid, trinitroresorcinol, trinitrotoluene, or urea nitrate, when wet with not less than 10 pounds of water to each 90 pounds of dry material must be shipped in packagings as follows:

(1) [Reserved]

(2) (See §173.192 for shipments of wet ammonium picrate, wet picric acid, wet trinitrobenzoic acid, and wet urea nitrate not in excess of 16 ounces and §173.193 for shipments of wet picric acid, wet trinitrobenzoic acid, and wet urea nitrate not in excess of 25 pounds.) (See §173.212 for shipments of wet trinitrobenzene and wet trinitrotoluene not in excess of 16 ounces.)

(3) Specification 5B (§178.82 of this subchapter) Metal barrels or drums or Spec. 21C (§178.224 of this subchapter) fiber drums. Authorized only for cyclotetramethylenetetranitramine, or cyclotrimethylenetrinitramine, each wet with not less than 10 pounds of water to each 90 pounds of dry material in inside containers which must be bags made of at least 10-ounce cotton duck, plastic bags not less than 4 mils thick, rubber, or rubberized cloth and securely closed. The dry weight of cyclotrimethylenetrinitramine or cyclotetramethylenetetranitramine in one metal barrel or drum must not exceed 300 pounds and not more than 225 pounds in fiber drums. These bags containing the cyclotrimethylenetrinitramine or cyclotetramethylenetrinitramine must then be placed in a rubber bag, rubberized cloth bag or bag made of suitable water-tight material which must be securely closed and then placed in the drum. If shipment of cyclotrimethylenetetranitramine is to take place at a time freezing weather is to be anticipated, it must be wet with a mixture of denatured ethyl alcohol or other suitable anti-freeze and water of such proportions that freezing will not occur in transit.

For explanation of abbreviations and reference marks, see last page of this tariff.

(4) Specification 21C (§178.224 of this subchapter). Fiber drum with an inside polyethylene bag having 0.004 inch minimum thickness and liquid tight closure. Net weight not to exceed 200 pounds. Authorized only for wet desensitized pentaerythrite tetranitrate.

(f) Amatol when cast or pressed in a block or column, in addition to the containers prescribed in paragraphs (a)(1) to (5) and (7) of this section, may be shipped in specification containers as follows:

(1) Spec. 13A (§178.141 of this subchapter). Metal drums not exceeding 90 pounds gross weight.

(g) Nitrocellulose must be packed in wooden boxes complying with Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter), with inside packages which must be:

(1) Inside packages containing not more than 1 pound each of dry, uncompressed nitrocellulose, wrapped in strong paraffined paper or suitable, sparkproof material. Completed outside package not to contain more than 10 pounds dry nitrocellulose.

(2) Inside packages containing compressed sticks or blocks of dry nitrocellulose wrapped in strong paraffined paper. Gross weight not to exceed 75 pounds.

(h) Shaped charges, commercial, having exposed lined conical cavities must have such cavities effectively filled. Those having conical cavities that are covered shall be paired together with the cavities facing each other and with one or more pairs in a fiber tube, or so arranged that the conical cavities of the shaped charges at the ends of the column face toward the center of the tube. The shaped charges in the fiber tubes must fit snugly with no excess space and the fiber tubes containing the shaped charges must be packed snugly with no excess space in the outside containers. Other methods of packaging for devices of which shaped charges are a component part may be employed when examined by the Bureau of Explosives and approved by the Director, OHMT. Shaped charges, commercial, must be packed in specification containers as follows:

(1) Spec. 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes. Gross weight not to exceed 140 pounds.

(2) Spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes which must be manufactured of at least 275-pound strength (Mullen or Cady test) double-wall corrugated fiberboard and shall be provided with double-faced corrugated lining board (see §178.205-15 of this subchapter) having minimum strength (Mullen or Cady test) of 200 pounds. Individual charges of explosives shall be packed in inside securely closed, waterproof plastic containers, or in securely closed waterproof fiberboard containers having metal ends. Gross weight not to exceed 65 pounds. Inside individual containers shall be separated by means of double-faced corrugated fiberboard partitions of material not less than 175-pound Mullen or Cady test.

(i) Cyclotrimethylenetrinitramine (desensitized) in pellet form, dry, in addition to provisions of paragraphs (a) and (b) of this section may be packed in specification containers as follows:

(1) Spec. 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes. For pellets ¼ inch or less in diameter; pellets must be packed in a side-type fiber carton with perforated fillers. All openings of the fiber carton shall be securely closed with pressure-sensitive tape. Inside containers shall be cushioned with at least 2 inches of sawdust between inner containers and outside box. No inside container shall contain more than one-half pound net weight of explosive composition and not more than 10 pounds net weight of explosive composition shall be packed in one outside box.

(2) Spec. 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes. For pellets exceeding ¼ inch in diameter; pellets must be packed in a fiber tube with positive closures at both ends, which shall be packed in a fiber carton having not more than one-half pound net weight of explosive composition. Fiber carton shall be cushioned with not less than 2 inches of sawdust in the outside box. Not more than 10 pounds net weight of explosive composition shall be packed in one outside box.

(j) Boxes containing high explosives must be plainly marked on top and on the side or end, except those made in compliance with spec. 23G (§178.218 of this subchapter) which must be marked on the side or end, and kegs, drums, or barrels containing high explosives must be marked on both ends "HIGH EXPLOSIVES—DANGEROUS" in letters not less than ¾ inch in height. When space will not permit such marking on ends of kegs or drums, it may be applied to the side of the container. The tops of boxes, except those referred to in paragraph (a)(1) to (7) of this section, must be marked "THIS SIDE UP".

§ 173.66 Detonators. (a) Unless otherwise specified in this section, detonators must be packed in accordance with the following:

(1) They must be snugly packed in strong inside packagings.

(2) Inside packagings must be snugly packed in an outside packaging specified in paragraph (e) of this section.

(3) For devices containing no more than 10 grams of explosive (excluding ignition and delay charges):

(i) No more than 50 devices may be packed in one inside packaging;

(ii) No more than 500 devices may be packed in one outside packaging; and

(iii) The gross weight of the completed package may not exceed 150 pounds or the gross weight permitted by the specification for the outside packaging used, whichever is less.

(b) Detonators that are blasting caps (including percussion activated) or delay connectors in metal tubes, must be packed as specified in paragraph (a) of this section. In addition:

(1) They must be packed in inside packagings with the open ends of any device covered with an appropriate cushioning material;

(2) Inside packagings must be snugly packed in intermediate packagings consisting of cartons, or wrappings made of paper, plastic, or pasteboard;

(3) Intermediate packagings must be separated from the outside packaging by at least 1 inch of cushioning material; and

(4) For devices containing no more than 3 grams of explosive (excluding ignition and delay charges):

(i) No more than 100 devices may be packed in one inside packaging; and

(ii) No more than 5,000 devices may be packed in one outside packaging.

(c) Detonators that are electric blasting caps, delay connectors in plastic sheaths, or blasting caps with empty plastic tubing, must be packed as specified in paragraph (a) of this section, except that:

(1) Devices containing no more than 3 grams of explosive (excluding ignition and delay charges) may be packed as follows:

(i) No more than 100 devices may be packed in one inside packaging; and

(ii) No more than 1,000 devices may be packed in one outside packaging.

(2) Devices that are electric blasting caps with leg wires 4 feet long or longer, delay connectors in plastic sheaths, or blasting caps with empty plastic tubing 12 feet long or longer, and contain no more than 1 gram of explosive (excluding ignition and delay charges) may be offered for transportation and transported in an IME Standard 22 container or compartment without the outside packaging specified in paragraph (e)(1) or (e)(2) of this section if:

(i) The devices are packed as specified in paragraph (a)(1) and (a)(3)(i) of this section;

(ii) There are no more than 1000 detonators in the IME Standard 22 container or compartment; and

(iii) No material is loaded on top of the IME Standard 22 container, or no material is loaded against the outside of the door of the IME Standard 22 compartment.

(3) Inside packaging is not required for electric blasting caps when packed in inside pasteboard tubes, or when their leg wires are wound on spools with the caps either placed inside the spool or securely taped to the wire on the spool, so as to restrict freedom of movement of the caps and to protect them from impact forces.

(d) Detonators that are blasting caps with safety fuse, blasting caps with metal clad mild detonating cord, blasting caps with detonating cord, or blasting caps with shock tubes, must be packed in accordance with the requirements of paragraph (a) of this section, except that:

(1) The blasting caps are not required to be attached to the safety fuse, metal clad mild detonating cord, detonating cord, or shock tube; and

(2) Inside packagings are not required if the packing configuration restricts freedom of movement of the caps and protects them from impact forces.

(e) Detonators with or without inside packaging as provided for in paragraphs (a) through (d) of this section, must be packed in the following outside packagings.

(1) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes.

(2) DOT Specification 12H, 23F, or 23H (§§178.209, 178.214, 178.219 of this subchapter) fiberboard box.

(3) IME Standard 22 container or compartment when the detonators conform with conditions and limitations specified in paragraph (c)(2) of this section.

(f) Each outside packaging containing detonators must be plainly marked "DETONATORS—HANDLE CAREFULLY" and bear the appropriate explosives label specified in §172.411 of this subchapter.

(g) Devices subject to this section and approved by an agency listed in §173.86(b) before January 1, 1980, may be transported subject to conditions of the approval and in accordance with regulations in effect on October 31, 1979, until December 31, 1985. Applicability of this paragraph is further limited to detonators packaged for transportation prior to January 1, 1985.

§ 173.68 Detonating primers. (a) Detonating primers that are blasting caps with detonating cord, and delay connectors with detonating cord pigtails, must be packed in accordance with the following:

(1) They must be snugly packed in inside packagings;

(2) Inside packagings must be snugly packed in an outside packaging specified in paragraph (d) of this section;

(3) No more than 50 devices may be packed in one inside packaging;

(4) No more than 500 devices may be packed in one outside packaging; and

(5) The gross weight of the completed package may not exceed 150 pounds or the maximum gross weight permitted by the specification for the outside packaging used, whichever is less.

(b) Detonating primers that are blasting caps with detonating cord in a coil configuration must be packed as specified in paragraph (a) of this section, except the use of inside packaging is not required if the packing configuration restricts movement of the caps and protects them from impact forces.

(c) All other unspecified types of detonating primers may only be offered for transportation if they are packed in accordance with the requirements of paragraph (a) of this section, except that inside packagings are not required for devices that are packed in individual pasteboard, metal, plastic, or wooden tubes.

(d) Detonating primers, with or without inside packagings, as provided for in paragraphs (a) through (c) of this section, must be packed in one of the following outside packagings:

(1) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes.

(2) DOT specification 12H, 23F, or 23H (§§178.209, 178.214, 178.219 of this subchapter) fiberboard box.

(e) Each outside packaging of detonating primers must be plainly marked "DETONATING PRIVERS—HANDLE CAREFULLY" and must bear the appropriate label specified in §172.411 of this subchapter.

(f) Devices subject to this section, which have been approved by an agency listed in §173.86(b) before January 1, 1980, may be transported subject to the conditions of the approval and in accordance with the regulations in effect on October 31, 1979, until December 31, 1984.

§ 173.69 Detonating fuzes, Class A, with or without radioactive components, detonating fuze parts containing an explosive, boosters, bursters, or supplementary charges. (a) Detonating fuzes, class A with or without radioactive components, detonating fuze parts containing an explosive, boosters, bursters, or supplementary charges, when shipped not assembled in projectiles, bombs, etc., must be packed and well secured in strong, tight wooden or metal boxes.

Note 1. A fuze with any radioactive component is also subject to the applicable provisions of Subpart I of this part for the radioactive material.

(b) The gross weight of one outside package containing detonating fuzes, class A, must not exceed 190 pounds. Boosters, bursters and supplementary charges, without detonators, when shipped separately, must not exceed a gross weight of 300 pounds.

(c) Each outside package must be plainly marked "DETONATING FUZES CLASS A EXPLOSIVES—HANDLE CAREFULLY—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVES," or "DETONATING FUZES, CLASS A EXPLOSIVES, RADIOACTIVE—HANDLE CAREFULLY—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVES," or "BOOSTERS (EXPLOSIVE)—HANDLE CAREFULLY," or "BURSTERS (EXPLOSIVE)—HANDLE CAREFULLY," or "SUPPLEMENTARY CHARGES (EXPLOSIVE)—HANDLE CAREFULLY," as the case may be.

§ 173.70 Diazodinitrophenol or lead mononitroresorcinate. (a) The offering of diazodinitrophenol or lead mononitroresorcinate in a dry condition for transportation is forbidden except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Diazodinitrophenol or lead mononitroresorcinate must be packed wet with not less than 40 percent by weight of water in a specification container 5 or 5B (§§178.80, 178.82 of this subchapter) metal barrel or drum, with inside containers which must be bags made of at least 10-ounce cotton duck, rubber, or rubberized cloth. Each bag must be securely closed. The bags containing diazodinitrophenol or lead mononitroresorcinate must be placed in a rubber bag, rubberized cloth bag, or bag made of suitable watertight material and then placed in the barrel or drum. Any empty space in the outside bag must be filled with water and this bag securely closed. The dry weight of diazodinitrophenol in one outside container must not exceed 220 pounds and the dry weight of lead mononitroresorcinate in one outside container must not exceed 100 pounds.

(c) Sufficient outage in outside container must be allowed to prevent rupturing of container in freezing weather, or a mixture of denatured alcohol and water may be used to prevent freezing in transit.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.71 Fulminate of mercury. (a) The offering of fulminate of mercury in a dry condition for transportation is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Fulminate of mercury must be packed wet with not less than 25 percent by weight of water in a specification container 5 or 5B (§§178.80, 178.82 of this subchapter) metal barrel or drum, 17H (§178.118 of this subchapter) metal drum (single-trip), with an inside container which must be a bag made of 4-ounce duck. Inside the bag and over the fulminate, there must be placed a cap of the same fabric and of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. The grain bag must also be securely tied. The bag and contents must be packed in the center of the metal barrel or drum and must be entirely surrounded by not less than three inches of well-packed sawdust saturated with water. The metal barrel or drum must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel or drum must be inspected carefully and all leaks stopped. The dry weight of fulminate in one outside container must not exceed 150 pounds.

(c) If shipment of fulminate is to take place at a time that freezing weather is to be anticipated, a mixture of denatured ethyl alcohol and water of such proportions that freezing will not occur in transit must be used.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.72 Guanyl nitrosamino guanylidene hydrazine. (a) The offering of guanyl nitrosamino guanylidene hydrazine in a dry condition for transportation is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Guanyl nitrosamino guanylidene hydrazine must be packed wet with not less than 30 percent by weight of water in a specification container 5 or 5B (§§178.80, 178.82 of this subchapter) metal barrel or drum, 17H (§178.118 of this subchapter) metal drum (single-trip), with an inside container which must be a bag made of 4-ounce duck. Inside the bag and over the guanyl nitrosamino guanylidene hydrazine, there must be placed a cap of the same fabric and of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The bag and contents must be packed in the center of the metal barrel or drum, and must be entirely surrounded by not less than three inches of well-packed sawdust saturated with water. The metal barrel or drum must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel or drum must be inspected carefully and all leaks stopped. The dry weight of guanyl nitrosamino guanylidene hydrazine in one outside container must not exceed 75 pounds.

(c) If shipment of guanyl nitrosamino guanylidene hydrazine is to take place at a time that freezing weather is to be anticipated, a mixture of denatured ethyl alcohol and water of such proportions that freezing will not occur in transit must be used.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.73 Lead azide. (a) The offering of lead azide in a dry condition for transportation is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Lead azide, dextrinated type, or otherwise prepared to effectively control grain size, must be packed wet with not less than 20 percent by weight of water in a specification container 5 or 5B (§§178.80, 178.82 of this subchapter) metal barrel or drum, 17H (§178.118 of this subchapter) metal drum (single-trip), with an inside container which must be a bag made of 4-ounce duck. Inside the bag and over the lead azide, there must be placed a cap of the same fabric and of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The bag and contents must be packed in the center of the metal barrel or drum, and must be entirely surrounded by not less than three inches of well-packed sawdust saturated with water. The metal barrel or drum must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel or drum must be inspected carefully and all leaks stopped. The dry weight of lead azide in one container must not exceed 150 pounds.

(c) If shipment of lead azide is to take place at a time that freezing weather is to be anticipated, a mixture of denatured ethyl alcohol or other suitable antifreeze and water of such proportions that freezing will not occur in transit must be used.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.74 Lead styphnate. (a) The offering of lead styphnate (lead trinitroresorcinate) or barium styphnate, monohydrate in a dry condition for transportation is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Lead styphnate (lead trinitroresorcinate) or barium styphnate, monohydrate must be packed wet with at least 20 percent by weight of water in a Specification 5 or 5B (§§178.80, 178.82 of this subchapter) metal barrel or drum, or a Spec. 17H (§178.118 of this subchapter) metal drum (single-trip), lined with a heavy, close-fitting jute bag closed by secure sewing. The lead styphnate (lead trinitroresorcinate) or barium styphnate, monohydrate shall be placed in an inside bag made of rubber or rubberized cloth. This bag should be divided into a number of smaller packages. Inside the bag and over the lead styphnate, (lead trinitroresorcinate) or barium styphnate, monohydrate there must be placed a cap of the same fabric and of the same diameter as the bag. The bag and contents must be packed in the center of the metal barrel or drum, and must be entirely surrounded by at least three inches of well-packed sawdust saturated with water. The barrel or drum must be inspected carefully and be determined free of leaks. The dry weight of lead styphnate (lead trinitroresorcinate) or barium styphnate, monhydrate in one outside container may not exceed 150 pounds.

(c) If lead styphnate (lead trinitroresorcinate) or barium styphnate, monhydrate is to be transported during freezing weather it must be wet with a mixture of denatured ethyl alcohol and water so that it does not freeze.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.75 Nitromannite. (a) The offering of nitromannite in a dry condition for transportation is forbidden, except as a component of manufactured articles such as percussion caps, detonator, blasting caps, and exploders.

(b) Nitro mannite must be packed wet with not less than 40 percent by weight of water in a specification container 5 or 5B (§§ 178.80, 178.82 of this subchapter) metal barrel or drum, with inside container which must be bags made of at least 10-ounce cotton duck, rubber or rubberized cloth. Each bag must be securely closed. These bags containing the nitro mannite must then be placed in a rubber bag, rubberized cloth bag, or bag made of suitable watertight material and then placed in the barrel or drum. Any empty space in the outside bag must be filled with water and this bag securely closed. The dry weight of nitro mannite in one outside container must not exceed 100 pounds.

(1) Spec. 21C (§ 178.224 of this subchapter). Fiber drums not over 30 gallons capacity of at least nine-ply construction having, in addition, a sheet of steel having a minimum base box of 75 pounds, not less than 0.008 inch thick, wound between the fifth and sixth plies. The inside ply of kraft paper shall be laminated on each side with polyethylene to form a waterproof lining. The bottom head shall be of fiber, metal covered on the outside. Nitro mannite must be packed wet with not less than 40 percent by weight of water and shall be contained in at least two tightly sealed polyethylene bags of at least 0.004 inch thickness and this unit shall then be placed in a tightly closed polyethylene bag of at least 0.004 inch thickness and this assembly shall be placed within a 0.006 inch thickness polyethylene or other suitable plastic bag, completely filled with water and tightly closed. The 0.006 inch plastic bag shall be of such size as to completely fill the outside shipping container. The dry weight of nitro mannite in one outside container must not exceed 100 pounds.

(c) Sufficient outage in outside container must be allowed to prevent rupturing of container in freezing weather, or a mixture of denatured ethyl alcohol and water may be used to prevent freezing in transit.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.76 Nitrosoguanidine. (a) The offering of nitrosoguanidine in a dry condition for transportation is forbidden except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Nitrosoguanidine must be packed wet with not less than 10 percent by weight of water in a specification container 5 or 5B (§§ 178.80, 178.82 of this subchapter) metal barrel or drum, 17H (§ 178.118 of this subchapter) metal drum (single-trip) with an inside container which must be a bag made of strong cloth, which must in turn be placed in the barrel or drum. The dry weight of nitrosoguanidine in one outside container must not exceed 75 pounds.

(c) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.77 Pentaerythrite tetranitrate. (a) The offering of pentaerythrite tetranitrate in a dry condition for trasportation is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Pentaerythrite tetranitrate must be packed wet with not less than 40 percent by weight of water in a specification container 5 or 5B (§§ 178.80, 178.82 of this subchapter) metal barrel or drum, 17H (§ 178.118 of this subchapter) metal drum (single-trip) with inside containers which must be bags made of at least 10-ounce cotton duck, rubber, or rubberized cloth. Each bag must be securely closed. These bags containing pentaerythrite tetranitrate must then be placed in a rubber bag, rubberized cloth bag, or bag made of suitable watertight material and then placed in the barrel or drum. Any empty space in the outside bag must be filled with water and this bag securely closed. The dry weight of pentaerythrite tetranitrate in one outside container must not exceed 300 pounds.

(c) Sufficient outage in outside container must be allowed to prevent rupturing of container in freezing weather, or a mixture of denatured ethyl alcohol or other suitable anti-freeze and water may be used to prevent freezing in transit.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.78 Tetrazene. (a) The offering of tetrazene (guanyl nitrosamino guanyl tetrazene) in a dry condition for transportation is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders.

(b) Tetrazene (guanyl nitrosamino guanyl tetrazene) must be packed wet with not less than 30 percent by weight of water in a specification container 5 or 5B (§§ 178.80, 178.82 of this subchapter) metal barrel or drum, 17H (§ 178.118 of this subchapter) metal drum (single-trip) with an inside container which must be a bag made of 4-ounce duck. Inside the bag and over the tetrazene, there must be placed a cap of the same fabric and of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The bag and contents must be packed in the center of the metal barrel or drum, and must be entirely surrounded by not less than three inches of well-packed sawdust saturated with water. The metal barrel or drum must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel or drum must be inspected carefully and all leaks stopped. The dry weight of tetrazene in one outside container must not exceed 75 pounds.

(c) If the shipment of tetrazene is to take place at a time that freezing weather is to be anticipated, it must be wet with a mixture of denatured ethyl alcohol and water of such proportions that freezing will not occur in transit.

(d) Each barrel or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE."

§ 173.79 Jet thrust units (jato), Class A explosives; rocket motors, Class A explosives; igniters, jet thrust (jato), Class A explosives; and igniters, rocket motor, Class A explosives. (a) Jet thrust units (jato), rocket motors, jet thrust (jato) igniters, and rocket motor igniters, which are Class A explosives must be packaged as follows:

(1) Specification 14, 15A, 15E, 16A, or 19B (§§ 178.165, 178.168, 178.172, 178.185, 178.191 of this subchapter). Wooden boxes, or wooden boxes, fiberboard lined.

(2) Wooden boxes, wooden crates, or other packagings of approved military specifications which comply with § 173.7(a).

(b) Jet thrust units, class A explosives or rocket motors, class A explosives, must not be shipped with igniters assembled therein unless shipped by, for, or to the Department of the Army, the Department of the Navy, or the Department of the Air Force.

(c) Jet thrust units Class A explosives or rocket motors, Class A explosives, may be packaged in the same outside packaging with their separately packaged igniters (or igniter components), Class A, B, or C explosives only when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(d) Each package must be plainly marked "JET THRUST UNITS, CLASS A EXPLOSIVES", "ROCKET MOTORS, CLASS A EXPLOSIVES", "IGNITERS, JET THRUST, CLASS A EXPLOSIVES", or "IGNITERS, ROCKET MOTOR, CLASS A EXPLOSIVES", as appropriate.

§ 173.80 Charged well casing jet perforating guns. (a) Charged well casing jet perforating guns may be transported only by highway and only by private carriers engaged in well operations. These guns may be transported as Class C explosives if the total weight of the explosive contents of the shaped charges assembled to guns does not exceed 20 pounds. See § 173.110.

(b) Charged well casing jet perforating guns of the steel tube type must be packed without blasting caps, electric blasting caps, or other firing devices affixed to or installed in the guns and transported in specifically contructed bodies of motor vehicles operated by private carriers engaged in well operations whose motor vehicles transporting such guns must have specially built racks or carrying cases designed and constructed so that the guns are held securely in place during transportation and are not subject to damage by contact, one to the other or other articles or materials carried on the vehicle. Shaped charges assembled in the steel tubes must be of the type described in § 173.53(h)(1), except that each shaped charge shall contain not over 4 ounces of high explosive and each shaped charge if not completely enclosed in glass or metal must be fully protected by a metal cover after installation in the gun.

(c) Charged well casing jet perforating guns of the metallic strip or tubular framework type must be packed without blasting caps, electric blasting caps, or other firing devices affixed to or installed in the guns and transported in specially constructed bodies of motor vehicles operated by private carriers engaged in well operations whose motor vehicles transporting such guns must have specially built racks or carrying cases designed and constructed so that the guns are held securely in place during transportation and are not subject to damage by contact, one to the other or other articles or materials carried on the vehicle. Shaped charges assembled in the metallic strips or tubular framework must be of the type described in § 173.53(h)(1), except that each shaped charge shall contain not over 4 ounces of high explosive and each shaped charge if not completely enclosed in glass or metal must be fully protected by a metal cover after installation in the gun.

(d) The charged well casing jet perforating guns described in paragraphs (b) and (c) of this section and the bodies of motor vehicles transporting such guns must be so designed and constructed so that the guns are held securely in place during transportation and are not subject to damage by contact, one to the other or other articles or materials carried on the vehicle. The assembled gun or guns packed as required by paragraphs (b) or (c) of this section must not extend beyond the body of the vehicle and must be secured in the body of the motor vehicle in a fixed position so as to prevent movement relative to each other or in the body of the motor vehicle.

(e) Blasting caps, electric blasting caps, or other firing devices transported on any motor vehicle operated by private carriers engaged in well operations transporting charged well casing jet perforating guns shall be segregated; each kind from every other kind, and from jet perforating guns, tools or other supplies. Blasting caps, electric blasting caps, or other firing devices shall be carried in a container having individual pockets for each such device or in a fully enclosed steel container lined with nonsparking material. No more than two blasting caps, electric blasting caps, or other firing devices per gun shall be transported on the same motor vehicle transporting well casing jet perforating guns.

§ 173.81 Cord, detonating. (a) Detonating cord shall be packed in wooden or fiberboard boxes.

(b) Each outside packaging shall be plainly marked "CORD, DETONATING—HANDLE CAREFULLY".

(c) Detonating cord having an explosive content not exceeding 100 grains per linear foot may be offered for transportation and transported as a class C explosive if the gross weight of all packages of detonating cord does not exceed 100 pounds per—

(1) transport vehicle, freight container or cargo only aircraft,
(2) offshore down hole tool pallet carried on a cargo vessel,
(3) cargo compartment of a cargo vessel,
(4) passenger-carrying aircraft used to transport personnel to remote work sites, such as offshore drilling units.

§ 173.85 New explosives definitions; approval and notification. (a) As used in this section, "new explosive" means an explosive compound, mixture or device, produced by a person who:

(1) Has not previously produced that explosive compound, mixture or device; or

(2) Has previously produced the explosive compound, mixture or device, but has made a change in the formulation, design, process or production equipment. An explosive compound, mixture or device will not be considered a "new explosive" if an agency listed in paragraph (b) of this section has determined and confirmed in writing that there are no significant differences in hazard characteristics from the explosive compound, mixture or device previously approved. The written determination must be submitted to, and approved by, the Director, OHMT, before the explosive is offered for transportation.

(b) No person may offer a new explosive for transportation unless it has been examined and assigned a recommended shipping description and hazard class by the Bureau of Explosives or the Bureau of Mines, U.S. Department of the Interior and classed and approved by the Director, OHMT; or examined, classed, and approved by one of the following agencies:

(1) U.S. Department of Energy (DOE) for new explosives made by, or under the direction or supervision of DOE when tested in accordance with the Explosives Hazardous Classification procedures contained in DOT TB 700-2 (May 19, 1967), or

(2) U.S. Army Material Development and Readiness Command (DRCSF), Naval Sea Systems Command (NAVSEA 06H), or HQUSAF (IGD) SEV, for new explosives made by, or under the direction or supervision of the Department of Defense when tested in accordance with Explosives Hazard Classification procedures contained in DOD TB 700-2 (May 19, 1967), (NAVSEAINST 8020.8 AFTO 11A-1-47, DSAR 8220.1).

(c) Each person who offers a new explosive for transportation must file a copy of the approval for the new explosive accompanied by a supporting laboratory report or equivalent data with the Director, OHMT before offering the new explosive for transportation, unless the new explosive is:

(1) Covered under an approval issued by the Director, OHMT;
(2) Being transported under paragraph (d), (e), (f), or (g) of this section; or
(3) A new DOD explosive covered by a security classification.

(d) Notwithstanding paragraph (b) of this section, any person may offer a sample of a new explosive that has not been approved for transportation by railroad, highway, or vessel to a laboratory for examination if:

(1) The new explosive has been assigned a tentative shipping description and class in writing by one of the agencies listed in paragraph (b) of this section;
(2) The sample consists of no more than five pounds of the new explosive;
(3) The new explosive is packaged as required in this part according to the tentative description and class assigned unless otherwise specified in writing by one of the agencies listed in paragraph (b) of this section, and
(4) The package is labeled as required by this subchapter and the following is marked on the package:

(i) The words "SAMPLE FOR LABORATORY EXAMINATION";
(ii) The net weight of the new explosive, and
(iii) The tentative shipping description.

(e) Notwithstanding paragraph (b) of this section, a manufacturer of a new explosive that has not been examined or approved may transport that new explosive from where it was produced to an explosive testing facility if:

(1) The new explosive is not a forbidden explosive or an initiating explosive according to this subchapter;
(2) The new explosive is a compound or mixture it must be described as high explosive or high explosive, liquid, as appropriate (other than when contained in a device) and packed, marked, labeled, and described on the shipping paper as required by this subchapter;
(3) The new explosive is a device it must be assigned a tentative description and class by the owner and packed, marked, labeled, and described on the shipping paper as required by this subchapter based on its tentative description and class;
(4) The new explosive is transported in a motor vehicle operated by the owner of the explosive, and
(5) The new explosive is accompanied by a person, in addition to the driver of the motor vehicle, who is qualified by training and experience to handle the explosive.

(f) Notwithstanding the provisions of paragraph (b) or (d) of this section, the Director, Office of Hazardous Materials Transportation may approve a new explosive on the basis of an approval issued for the explosive by the competent authority of a foreign government, or, when examination of explosives by the Bureau of Explosives or Bureau of Mines is impracticable, on the basis of reports of tests conducted by disinterested third parties, or may approve the transportation of an explosives sample for the purpose of examination by the Bureau of Explosives, or the Bureau of Mines or other government agency.

(g) Notwithstanding the provisions of paragraph (b) of this section, an explosive may be transported under the provisions of §§ 171.11, 171.12 or § 176.11 without the approval of the Director, Office of Hazardous Materials Transportation provided that the Director, Office of Hazardous Materials Transportation has acknowledged, in writing, the acceptability of an approval issued by the competent authority of a foreign government pursuant to the provisions of the UN Recommendations, the ICAO Technical Instructions, the IMDG Code or other national or international regulations based on the provisions of the UN Recommendations. In such cases, a copy of the approval of the foreign competent authority, and a copy of the written acknowledgement of its acceptability must accompany each shipment of that explosive.

(h) The requirements of this section do not apply to small arms ammunition which is:

(1) Not a forbidden explosive under § 173.51;
(2) Ammunition for rifle, pistol, or shotgun;
(3) Ammunition with inert projectile or blank ammunition; and
(4) Ammunition not exceeding 50 caliber for rifle or pistol cartridges or 8 gauge for shotshells.

(i) If experience or other data indicate that the hazard of a material (device) containing an explosive composition is greater or less than indicated according to the definition and criteria specified in §§ 173.53, 173.86, and 173.100 of this Part, the Director, OHMT may, following examination in accordance with paragraph (b) of this section, revise its classification or except the material (device) from the requirements of this subchapter.

§ 173.87 Explosives in mixed packing. Unless specifically authorized in this subchapter, explosives may not be packaged in the same outside packaging with other articles unless packaged by the DOD in accordance with § 173.7(a). Inside packages of different explosives (except detonators and initiating explosives) may be packed in one outside packaging in accordance with the requirements of this subchapter if the gross weight of each inside package does not exceed 8 ounces and the gross weight of the completed package does not exceed 50 pounds.

CLASS B EXPLOSIVES; DEFINITIONS

§ 173.88 Definitions of class B explosives. (a) Explosives, Class B, are defined as those explosives which in general function by rapid combustion rather than detonation and include some explosive devices such as special fireworks, flash powders, some pyrotechnic signal devices and liquid or solid propellant explosives which include some smokeless powders. These explosives are further specifically described in paragraphs (b) to (g) of this section.

(b) Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles or without projectiles, or shell, and catapult charges exceeding 2 inches in diameter, is fixed ammunition assembled in a unit consisting of the cartridge case containing the propelling charge and primer with empty, inert-loaded, or solid projectiles, or without projectiles, which is fired from a cannon, mortar, gun, howitzer or recoilless rifle.

(c) Rocket ammunition is fixed ammunition which is fired from a tube, launcher, rails, trough, or other device as distinguished from cannon ammunition which is fired from a cannon, gun, or mortar. It consists of an igniter, a rocket motor, and empty projectile, inert-loaded projectile, or solid projectile.

(d) Special fireworks are manufactured articles designed primarily for the purpose of producing visible or audible pyrotechnic effects by combustion or explosion. (See § 173.100(r) for common fireworks.) Examples are toy torpedoes, railway torpedoes, some firecrackers and salutes, exhibition display pieces, aeroplane flares, illuminating projectiles, incendiary projectiles, incendiary bombs or incendiary grenades and smoke projectiles or smoke bombs fuzed or unfuzed and containing expelling charges but without bursting charges, flash powders in inner units not exceeding 2 ounces each, flash sheets in interior packages, flash powder or spreader cartridges containing not over 72 grains of flash powder each (see § 173.60 for shipments made as low explosives) and flash cartridges consisting of a paper cartridge shell, small-arms primer, and flash composition, not exceeding 180 grains all assembled in one piece. Fireworks must be in a finished state, exclusive of mere ornamentation, as supplied to the retail trade and must be so constructed and packed that loose pyrotechnic composition will not be present in packages in transportation.

(e) Jet thrust units (jato). Class B explosives; rocket motors, Class B

explosives; igniters, jet thrust (jato), Class B explosives; and igniters, rocket motors, Class B explosives:

(1) Jet thrust units (jato), Class B explosives, are metal cylinders containing a mixture of chemicals capable of burning rapidly and producing considerable pressure. Jet thrust units are designed to be ignited by an electric igniter. They are used to assist aeroplanes to take off.

(2) Rocket motor, Class B explosives, is a device containing a propelling charge and consisting of one or more continuous type combustion unit(s), closed at one end (closure may be an igniter with a thrust plate) and with a nozzle(s) at the other end. The propelling charge consists of a mixture of chemicals and or chemical compounds which when ignited is capable of burning rapidly and producing considerable pressure and which will not sustain a detonation. (The rocket motor carries its own solid oxidizer-fuel combination.) Rocket motors, Class B explosives, should be nonpropulsive in shipment (see paragraphs (e)(2)(i) and (ii) of this section). Rocket motors, class B explosives, are designed to be ignited by an electrically actuated device which may be an igniter, or by other means. They are used to propel and or provide thrust for guided missiles, rockets, or spacecraft.

(i) A rocket motor to be considered "nonpropulsive" must be capable of unrestrained burning and will not move appreciably in any direction when ignited by any means. Blast deflectors, thrust neutralizers or other similar devices must be proven by test prior to authorization for use.

(ii) Rocket motors, Class B explosives, may be shipped in a propulsive state only under conditions approved by the Department of Defense or the National Aeronautics and Space Administration.

(3) Igniters, jet thrust (jato), Class B explosives, and igniters, rocket motor, Class B explosives, are devices consisting of an electrically operated or remotely controlled ignition element and a fast burning composition which functions by rapid burning rather than detonation, assembled in a unit for use in igniting the propelling charge of jet thrust units, rocket motors, or rocket engines.

(f) Propellant explosives, Class B. Propellant explosives, Class B, are solid or liquid chemicals or chemical mixtures which function by combustion. The combustion is controlled by composition, size, form of grain, or other chemical or mechanical means. Any propellant is class B which fails to detonate in five trials when tested (see Note 2) in the package in which it is offered for shipment. Propellant explosives, Class B, include smokeless powder for small arms (see Note 4), smokeless powder for cannon, liquid monopropellant fuel (see Note 3), smokeless powder, or solid propellant explosives for rockets, jet thrust units, or other devices. Black powder is not included in this classification and is defined specifically in § 173.53.

(g) Explosives power devices, Class B, are devices designed to operate ejecting apparatus or other mechanisms by means of a propellant explosive, Class B, and differ from explosive power devices, Class C, in that they contain larger or more powerful propellants. The devices must not rupture on functioning and must be of a type examined by the Bureau of Explosives and approved by the Director, OHMT except as otherwise provided in § 173.51(b) and § 173.66(a).

Note 1. Fire extinguisher charges containing not to exceed 50 grains of propellant explosives per unit are exempt from the regulations in Parts 170-189 of this chapter.

Note 2: In conducting the test, one propellant container shall be surrounded by inert loaded containers of the same weight, including one inert container placed on top of the propellant container. The propellant shall be ignited by means of a commercial electric squib placed within 4 inches of the bottom of the container. The presence of a crater and absence of flame shall be considered as evidences of detonation.

Note 3: A liquid monopropellant fuel is defined as any propellant in which the fuel and the oxidizer are physically or chemically combined in one form.

Note 4. Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one car or motor vehicle, except shipments by, for or to the Department of the Army, Navy or Air Force of the United States Government, shall be classed as a flammable solid for purposes of transportation when packaged in accordance with § 173.197a.

(h) Starter cartridges, jet engine, Class B explosives consist of plastic and/or rubber cases, each containing a pressed cylindrical block of propellant explosive and having in the top of the case a small compartment that incloses an electrical squib, small amounts of black powder, and smokeless powder, which constitutes an igniter. The starter cartridge is used to activate a mechanical starter for jet engines.

(i) Rocket engine (liquid), Class B explosives is a complete, self-contained rocket propulsion unit which contains an oxidizer and a fuel, each separated by an aluminum or stainless steel wall of not less than 0.250 inch thickness. Double walls are permitted. Pressurization of the propellant tanks is by use of a gas generator. The ignition source must be in an unarmed position for shipment. Rocket engines (liquid) are used to propel or provide thrust for rockets, missiles or spacecraft.

§ 173.89 Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles, tear gas projectiles or without projectiles. (a) Ammunition for cannon with empty projectiles, inert-loaded projectiles solid projectiles, tear gas projectiles, or without projectiles must be well packed and properly secured in strong wooden or metal containers or in plastic containers of approved military specifications complying with § 173.7(a).

(b) Each outside package must be plainly marked **"AMMUNITION FOR CANNON WITH EMPTY PROJECTILES", "AMMUNITION FOR CANNON WITH INERT-LOADED PROJECTILES", "AMMUNITION FOR CANNON WITH SOLID PROJECTILES", "AMMUNITION FOR CANNON WITHOUT PROJECTILES", or "AMMUNITION FOR CANNON WITH TEAR GAS PROJECTILES, CLASS B EXPLOSIVES,"** as appropriate.

§ 173.90 Rocket ammunition with empty, inert-loaded, or solid projectiles. (a) Rocket ammunition with empty, inert-loaded, or solid projectiles must be well packed and properly secured in strong wooden or metal containers.

(b) Each package must be plainly marked **"ROCKET AMMUNITION WITH EMPTY PROJECTILES," "ROCKET AMMUNITION WITH INERT-LOADED PROJECTILES," or "ROCKET AMMUNITION WITH SOLID PROJECTILES,"** as appropriate.

§ 173.91 Special fireworks. (a) Special fireworks, except as otherwise authorized, must be securely packed in containers complying with the following specifications:

(1) [Reserved]

(2) Specification 15A, 15B, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes. Gross weight not to exceed 500 pounds.

(3) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes. Gross weight not to exceed 65 pounds except as provided in paragraph (a)(5) of this section. Not permitted for illuminating projectiles and aeroplanes flares.

(4) Fireworks that can be exploded enmasse, by dropping the completed shipping container from a height of six feet or by the impact of a rifle bullet, if found safe for transportation, may be shipped in accordance with the regulations in this part applying to high explosives.

(5) Ship distress signals when packed in tight inside metal containers of not less than 24 gauge sheet iron or other metal of equal strength, securely closed by positive means (not friction) and of such design and so arranged as to completely fill the outside container, may be packed in Spec. 12B (§ 178.205 of this subchapter) fiberboard boxes. Gross weight not to exceed 95 pounds when boxes are made in accordance with § 178.205-29 of this subchapter.

(6) Illuminating projectiles, incendiary projectiles, and smoke projectiles exceeding 90 pounds each, or of not less than 4½ inches in diameter, may be offered for transportation without being boxed only by, for, or to the Department of Defense (DOD) of the U.S. Government when securely blocked and braced in accordance with methods prescribed by DOD.

(i) Illuminating projectiles, incendiary projectiles, and smoke projectiles less than 4½ inches in diameter may be offered for transportation without being boxed, when palletized, only by, for, or to the Department of Defense (DOD) of the U.S. Government when securely blocked and braced in accordance with methods prescribed by DOD.

(b) Flash or spreader cartridges not exceeding 72 grains of flash powders each must be packed in containers complying with the following specifications:

(1) Specification 15A, 15B, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes or Spec. 12B (§ 178.205 of this subchapter) fiberboard boxes, with inside containers which must be cartons or tin cans containing not over 6 cartridges and not to exceed 150 cartons or cans to an outer box.

(c) Flash cartridges consisting of a paper cartridge shell, small arms primer, and flash composition, not exceeding 180 grains each, all assembled in one piece ready for firing must be packed in containers complying with the following specifications:

(1) Specification 15A, 15B, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes, or spec. 12B (§ 178.205 of this subchapter) fiberboard boxes, with inside containers which must be cartons containing not to exceed 12 cartridges each and not more than 12 such cartons in one outside box.

(2) Flash cartridges, in quantity not exceeding 5 pounds, when in small interior wooden boxes, may be packed with nonexplosive, nonflammable or noncorrosive articles.

(d) Flash sheets must be packed in containers complying with the following specifications:

(1) Specification 15A, 15B, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes, or spec. 12B (§ 178.205 of this subchapter) fiberboard boxes, with inside containers which must be an inner package or envelope containing not more than 6 flash sheets and not more than one dozen inner envelopes or packages inclosed in each inner pasteboard box or carton. Gross weight of wooden box not to exceed 150 pounds. Gross weight of fiberboard box not to exceed 65 pounds.

(2) Flash sheets, in quantity not exceeding 5 pounds, when in small interior wooden boxes, may be packed with nonexplosive, nonflammable, or noncorrosive articles.

(e) Photographic flash powder must be packed in containers complying with the following specifications:

(1) Specification 15A, 15B, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes, or Spec. 12B (§ 178.205 of this subchapter) fiberboard boxes, with inside containers which must be any inside container sufficiently strong to retain contents not exceeding 2 ounces each. If bottles are used, each bottle must be packed in a securely closed fiber mailing tube having metal ends. Not more than 4 dozen 2-ounce bottles may be packed in an outer wooden box. When packed in units not exceeding 1 ounce each without bottles in similar fiber mailing tubes and outer wooden boxes, the gross weight of one outside box must not exceed 150 pounds. Gross weight of fiberboard box not to exceed 65 pounds.

(2) Photographic flash powder, in quantity not exceeding 5 pounds,

when in small interior wooden boxes, may be packed with nonexplosive, nonflammable, or noncorrosive articles.

(f) Railway torpedoes (track torpedoes) must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, 19A, or 19B (§§178.168, 178.169, 178.185, 178.190, or 178.191 of this subchapter). Wooden boxes. Net weight not to exceed 125 pounds.

(2) Spec. 12H, 23F, or 23H (§178.209, §178.214, or §178.219 of this subchapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside containers which must be cartons containing not to exceed one-half gross track torpedoes each. Gross weight of outside fiberboard box not to exceed 65 pounds.

(4) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes without inside containers may be used for not more than 50 track torpedoes provided the smallest dimension of the box is not less than 6 inches.

(g) Toy torpedoes must be securely packed as prescribed in this section in containers complying with the following specifications:

(1) Specification 15A, 15B, 16A, 19A, or 19B (§§178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes, or Spec. 12B (§178.205 of this subchapter) fiberboard boxes which must be constructed to comply with §178.205-30 of this subchapter. Not more than 20 one-quarter gross cartons totalling not more than 5 gross of toy torpedoes are authorized per fiberboard box. Gross weight of fiberboard box must not exceed 35 pounds. Gross weight of wooden box must not exceed 65 pounds.

(2) Toy torpedoes of any kind must not be packed with other fireworks.

(3) Toy torpedoes containing a cap must be packed in sawdust, in inside paper or cardboard cartons. The size of the carton must not be less than 4 cubic inches for each grain of explosive.

(4) Toy torpedoes containing a mixture of potassium chlorate, black antimony and sulfur, must be packed in an inner container, containing not more than one-fourth gross. The capacity of this inner container must be not less than 105 cubic inches, and it must be divided into 12 equal compartments. All vacant space inside the container must then be filled with sawdust or fine shavings.

(5) The gross weight of a container of toy torpedoes must not exceed 65 pounds.

(h) Except as otherwise specified in this section the gross weight of one outside container of special fireworks must not exceed 500 pounds.

(i) Marking. Each outside container of special fireworks must be plainly marked in letters not less than ¾ inch in height "SPECIAL FIREWORKS—HANDLE CAREFULLY—KEEP FIRE AWAY", except that each outside container of railway torpedoes must be plainly marked in letters not less than ¾ inch in height "RAILWAY TORPEDOES—HANDLE CAREFULLY—KEEP FIRE AWAY".

(j) Outside containers of toy torpedoes must in addition be marked "TOY TORPEDOES".

§ 173.92 Jet thrust units (jato), Class B explosives; rocket motors, Class B explosives; igniters, jet thrust (jato), Class B explosives; igniters, rocket motors, Class B explosives; and starter cartridges, jet engine, Class B explosives. (a) Class B explosives covered by this section must be packaged in outside packagings complying with the following specifications:

(1) Specification 14, 15A, 15E, 16A, or 19B (§§178.165, 178.168, 178.172, 178.185, 178.191 of this subchapter). Wooden boxes, or wooden boxes, fiberboard lined.

(2) Specification 15B (§178.169 of this subchapter) wooden boxes. Authorized only for igniters, jet thrust, Class B explosives, or igniters, rocket motors, Class B explosives.

(3) Specification 23F (§178.214 of this subchapter) fiberboard boxes. Authorized only for igniters, jet thrust, Class B explosives; igniters, rocket motor, Class B explosives; or starter cartridges, jet engine, Class B explosives. Items must be packaged in tightly closed inside fiberboard boxes (at least 200-pound test (Mullen or Cady)) or metal containers. Starter cartridges, jet engine, must have igniter wires short-circuited when packed for shipment.

(4) Wooden boxes, wooden crates, or other packagings of approved military specification which comply with §173.7(a).

(b) Jet thrust units, Class B explosives, or rocket motors, Class B explosives, must not be shipped with igniters assembled therein unless shipped by, for, or to the Department of Defense or the National Aeronautics and Space Administration.

(c) Jet thrust units, Class B explosives, or rocket motors, Class B explosives, may be packaged in the same outside packaging with their separately packaged igniters (or igniter components), Class A, B, or C explosives, only when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(d) Each package must be plainly marked "JET THRUST UNITS, CLASS B EXPLOSIVES", "ROCKET MOTORS, CLASS B EXPLOSIVES", "IGNITERS, JET THRUST, CLASS B EXPLOSIVES", "IGNITERS, ROCKET MOTORS, CLASS B EXPLOSIVES", or "STARTER CARTRIDGES, JET ENGINE, CLASS B EXPLOSIVES" as appropriate.

§ 173.93 Propellant explosives (solid) for cannon, small arms, rockets, guided missiles, or other devices, and propellant explosives (liquid). (a) Propellant explosives (solid) for cannon, small arms, rockets, guided missiles, or other devices, and propellant explosives (liquid) when offered for transportation by carriers by rail freight, highway, or water, must be packed in containers complying with the following specifications (see paragraph (g)(1) of this section for shipments by cargo aircraft only):

(1) Specification 12H, 23G, or 23H (§178.209, 178.218, 178.219 of this subchapter) fiberboard boxes with inside securely closed polyethylene bags having a minimum wall thickness of 0.006 inch.

(2) Smokeless powder for small arms may be shipped as Class B explosives in packagings approved in accordance with §173.197a.

(3) [Reserved]

(4) Tight metal cases in tight wooden boxes not over 200 pounds gross weight, or tight metal containers not over 200 pounds gross weight.

(5) Specification 14, 15A, or 19B (§§178.165, 178.168, 178.191 of this subchapter). Wooden boxes, metal-lined, Spec. 2F (§178.25 of this subchapter). Gross weight not to exceed 200 pounds.

(6) Specification 14, 15A, or 19B (§§178.165, 178.168, 178.191 of this subchapter). Wooden boxes or Spec. 23F or 23H (§§178.214 or 178.219 of this subchapter) fiberboard boxes, with inside cloth or paper bags, not exceeding 25 pounds net weight each and capable of withstanding at least two drops on end from a height of 4 feet, without breakage or sifting of contents. Outside container not to exceed 50 pounds net weight.

(7) [Reserved]

(8) Specification 14, 15A, 15B, 15C, or 19B (§§178.165, 178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes, or Spec. 12H, 23F, or 23H (§§178.209, 178.214, 178.219 of this subchapter) fiberboard boxes, with inside fiber or metal containers not exceeding 1½ pounds capacity each. Gross weight not to exceed 200 pounds in wooden boxes or 65 pounds in fiberboard boxes.

(9) Specification 14, 15A, 15B, 15C, or 19B (§§178.165, 178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes, or Spec. 23F or 23H (§§178.214, 178.219 of this subchapter) fiberboard boxes, with not more than four strong inside tight metal containers of not more than 25 pounds each. The gross weight in fiberboard boxes may not exceed 65 pounds.

(10) Specification 21C (§178.224 of this subchapter). Fiber drum. Drums having a wooden head must contain a strong, sift-proof liner. Net weight may not exceed 265 pounds. Shipment by rail freight is prohibited except in trailer-on-flat-car service.

(11) Specification 14, 15A, 16A, or 19B (§§178.165, 178.168, 178.185, 178.191 of this subchapter). Wooden boxes, not lined, authorized only for grains not less than 1-inch in diameter or 3 inches in length, provided such grains are tightly packed and are coated with a protective material. Gross weight not to exceed 200 pounds.

(b) Propellant explosives (smokeless powder for cannon or small-arms) in water when offered for transportation by carriers by rail freight, highway, or water must be packed in containers complying with the following specifications:

(1) Specification 5, 5A, 5B, 6B, or 6C (§§178.80, 178.81, 178.82, 178.98, or 178.99 of this subchapter). Metal barrels or drums.

(2) Specification 17H (§178.118 of this subchapter). Steel drums (single-trip) not over 30-gallon capacity each.

(3) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes, metal-lined, Specification 2F (§178.25 of this subchapter).

(c) Igniters composed of black powder may be included in shipments of propellant explosives.

(d) Propellant explosives (unstable, condemned, or deteriorated smokeless powder for cannon or small arms) must be packed submerged in water in containers complying with the following specifications:

(1) Specification 5, 5A, 5B, 6B, or 6C (§§178.80, 178.81, 178.82, 178.98, or 178.99 of this subchapter). Metal barrels or drums.

(2) [Reserved]

(3) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes, metal-lined, Specification 2F (§178.25 of this subchapter).

(4) Spec. 103, 103-W or 111A100-W-1 (§§179.200, 179.201 of this subchapter). Tank cars.

(5) Propellant explosives (unstable, condemned, or deteriorated smokeless powder for cannon or small arms) may not be offered for transportation by cargo aircraft only.

(e) Propellant explosives (liquid), when offered for transportation by rail freight, highway, or water, must be packed in containers complying with the following specifications (see §173.93(g) for shipments by rail express):

(1) Specification 15A, 15B, 15E, or 19B (§§178.168, 178.169, 178.172, 178.191 of this subchapter). Wooden box or wooden box fiberboard lined, with inside polyethylene bottles having taped screw-cap closures, not over 1 gallon capacity each. Each bottle must be entirely contained within a polyethylene or other suitable plastic bag formed of material not less than 0.004 inch thickness, with ends securely closed. Each bottle in the plastic bag shall be enclosed in a tight metal container and be surrounded on all sides with at least 2 inches of incombustible cushioning material, cans in the outside box must likewise be cushioned from each other and sides, top, and bottom of the container.

(2) Specification 5B, 6B, 6C, 6D; also 17C or 17H (single-trip containers) (§§178.82, 178.98, 178.99, 178.102, 178.115, 178.118 of this subchapter). Metal barrel, drum, or cylindrical steel overpack, with inside Specification 2S (§178.35 of this subchapter) polyethylene container, packed inside a strong, tight metal drum. Inside steel drum must be surrounded on all sides with at least 2 inches of incombustible

absorbent cushioning material uniformly distributed. Polyethylene containers are authorized only for liquids that will not react dangerously with the plastic or result in container failure.

(3) Outage requirements. Containers must not be entirely filled. Sufficient interior space must be left vacant to prevent leakage or distortion of containers due to the expansion of the contents from increase of temperature during transit.

(f) Each outside container must be plainly marked "PROPELLANT EXPLOSIVES (LIQUID), CLASS B," "PROPELLANT EXPLOSIVES (SOLID), CLASS B," or "PROPELLANT EXPLOSIVES (SOLID), CLASS B, IN WATER," as the case may be. There may be added such additional marketing as "Smokeless Powder for Cannon" or "Smokeless Powder for Small Arms," as the case may be.

(g) Propellant explosives, except as provided in paragraph (d)(5) of this section, when offered for transportation by cargo aircraft only must be packaged as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) Solids in tightly closed metal cans or fiber containers, not exceeding 1 pound each, or in inside metal cans or fiber containers containing not more than one grain of propellant, not exceeding 5 pounds each, and liquids in polyethylene bottles compatible with contained liquid, with screw-cap closures taped, not exceeding 1-pound or 16 fluid ounces capacity each, packed in an outside wooden box, Spec. 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter); or outside fiberboard box Spec. 12B, 23F or 23H (§§178.205, 178.214, 178.219 of this subchapter). Not more than 1,000 small-arms primers packed in inside containers as prescribed by § 173.107 may be included in one outside shipping container with solid propellant explosives. Inside containers must be packed so as to prevent movement within the outside container. Not more than 10 pounds of propellant explosives may be shipped in one outside container. Each outside container must be plainly marked "PROPELLANT EXPLOSIVES (LIQUID), CLASS B," or "PROPELLANT EXPLOSIVES (SOLID), CLASS B," or "PROPELLANT EXPLOSIVES, CLASS B, and SMALL-ARMS PRIMERS," as the case may be.

§ 173.94 Explosive power devices, Class B. (a) Explosive power devices, Class B may not be shipped with igniters assembled therein unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD. Explosive power devices, Class B, must be packed in outside containers complying with the following specifications:

(1) Specification 14, 15A, 15E, 16A, or 19B (§§178.165, 178.168, 178.172, 178.185, 178.191 of this subchapter). Wooden boxes or wooden boxes, fiberboard lined.

(2) Strong wooden or metal boxes or containers. Authorized only for shipments made by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government.

(b) Explosive power devices, Class B packed in any other manner must be in containers of a type examined by the Bureau of Explosives and approved by the Director, OHMT.

(c) Each outside container must be plainly marked "EXPLOSIVE POWER DEVICES, CLASS B" and "HANDLE CAREFULLY—KEEP FIRE AWAY."

§ 173.95 Rocket engines (liquid), Class B explosives. (a) Rocket engines (liquid), Class B explosives must be packaged as follows:

(1) Specification 14, 15A, 15E, 16A, or 19B (§§178.165, 178.168, 178.172, 178.185, 178.191 of this subchapter). Wooden boxes or wooden boxes, fiberboard lined.

(2) Wooden boxes or metal packagings of approved military specification which comply with § 173.7(a).

(b) Rocket engines (liquid), Class B explosives, may not be shipped with igniters or initiators assembled therein unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(c) Rocket engines (liquid), Class B explosives, may be packed in the same outside packaging with their separately packaged igniters, jet thrust, Class B explosives when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(d) Each package must be plainly marked "ROCKET ENGINES (LIQUID), CLASS B EXPLOSIVES."

CLASS C EXPLOSIVES; DEFINITIONS

§ 173.100 Definitions of Class C explosives. (a) Explosives, Class C, are defined as certain types of manufactured articles which contain Class A, or Class B explosives, or both, as components but in restricted quantities, and certain types of fireworks. These explosives are further specifically described in this section.

(b) Small arms ammunition is fixed ammunition consisting of a metallic, plastic composition, or paper cartridge case, a primer, and a propelling charge, with or without bullet, projectile, shot, tear gas material, tracer components, or incediary compositions, or mixtures, and is further limited to the following:

(1) Ammunition designed to be fired from a pistol, revolver, rifle, or shotgun held by the hand or to the shoulder.

(2) Ammunition of caliber less than 20 millimeters with incendiary solid, inert or empty projectiles (with or without tracers), designed to be fired from machine guns or cannons.

(3) Blank cartridges including canopy remover cartridges, starter cartridges, and seat ejector cartridges, containing not more than 500 grains of propellant powder, provided that such cartridges shall be incapable of functioning en masse as a result of the functioning of any single cartridge in the container or as a result of exposure to external flame.

(4) Twenty millimeter ammunition other than specified in § 173.53(q).

(c) Explosive cable cutters are used for cutting cables, etc. They consist of a metal device containing a knife-edged component which is propelled by a small charge of an explosive compound.

(d) Cord, detonating *flexible* is a device consisting of a core of pentaerythrite tetranitrate, cyclotrimethylene-trinitramine or similar explosive overspun with tapes, yarns and plastics or waterproofing compounds without wire countering. Approval of detonating cord as a class C explosive is contingent upon:

(1) examination by an agency listed in § 173.86(b); and

(2) a demonstrated ability to confine blast effects of a detonation to the package as prepared for transportation, and without propagation of detonation to similar packages which surround it.

(e) Percussion fuzes, combination fuzes, and time fuzes are devices designed to ignite powder charges of ammunition or to initiate an intermediate charge (booster) in projectiles, bombs, etc. When such fuzes are assembled with booster charges they are properly described as "detonating fuzes" (see § 173.53(g)(2)).

(f) Tracer fuzes and tracers are devices which are attached to projectiles and contain a slow-burning composition to show the flight of projectiles at night.

(g) Cartridge bags, empty, with black powder igniters consist of empty bags having attached thereto an igniter composed of black powder. (See § 173.93(b), (c), and (d) when shipped with propellant explosives.)

(h) Igniters consist of fiberboard, plastic, paper or metal tubes containing a small quantity of igniting compound which is ignited by the action of a primer, pull wire or scratch composition.

(i) Delay electric igniters consist of small metal, fiberboard, or pasteboard tubes containing a wire bridge in contact with a small quantity of ignition compound. The ignition compound is in contact with or in close proximity to a short piece of safety fuse.

(j) Electric squibs consist of small tubes or blocks containing a small quantity of ignition compound in contact with a wire bridge.

(k) Fuse lighters and fuse igniters are small cylindrical hollow pasteboard or metal tubes containing an igniting composition in one end, the other end being open to permit it to be placed on safety fuse.

(l) Safety squibs are small paper tubes containing a small quantity of black powder. One end of each tube is usually twisted and tipped with sulfur.

(m) Instantaneous fuse is cotton yarn impregnated with metal powder. No restrictions other than packing in strong wooden boxes or barrels plainly marked "INSTANTANEOUS FUSE" are prescribed in this part.

(n) Primers are devices used to ignite the powder charges of ammunition or the black powder bursting charges of projectiles. For small-arms ammunition the primers are "small-arm primers" or "percussion caps".

(o) Safety fuse, consisting of a core of black powder overspun with yarns, waterproofing compounds, and/or tapes must be packed in outside fiberboard boxes, wooden boxes, wooden barrels, bales, or metal containers, and must be described for shipping purposes as "SAFETY FUSE". No other restrictions apply in this part.

(p) Toy plastic or paper caps for toy pistols in sheets, strips, rolls, or individual caps, must not contain more than an average of twenty-five hundredths of a grain of explosive composition per cap and must be packed in inside packages constructed of cardboard not less than 0.013-inch in thickness, metal not less than 0.008-inch in thickness, noncombustible plastic not less than 0.015-inch in thickness, or a composite blister package consisting of cardboard not less than 0.013-inch in thickness and noncombustible plastic not less than 0.005-inch in thickness, which shall provide a complete enclosure and the minimum dimensions of each side or end of such package shall be not less than ¼-inch in height. The number of caps in these inside packages shall be limited so that not more than 10 grains of explosives composition shall be packed into one cubic inch of space and not exceeding 17.5 grains of the explosive composition of toy caps shall be packed in any inside container. These inner containers must be packed in outside containers as specified in § 173.109.

(q) Explosive rivets, each containing not more than 375 milligrams of explosive composition, are exempt from specification packaging and labeling requirements when packed in pasteboard or other inside boxes in securely closed strong wooden boxes, fiberboard boxes or metal containers. Each outside container must be marked "EXPLOSIVE RIVETS". No other restrictions apply in this part.

(r) Common fireworks are fireworks devices suitable for use by the public and designed primarily to produce visible effects by combustion.

Some small devices designed to produce audible effects are also included in this class. The types, sizes and amount of pyrotechnic contents of these devices are limited as enumerated in this paragraph. No component of any device listed in this paragraph, which produces or is intended to produce an audible effect shall contain pyrotechnic composition in excess of 2 grains in weight, nor shall such device or component, upon functioning, project or disperse any metal, glass or brittle plastic fragments. (Propelling or expelling charges consisting of a mixture of sulfur, charcoal, and saltpeter are not considered as designed to produce audible effects). Any new device, not enumerated in this paragraph, must be examined by the Bureau of Explosives and approved by the Director, OHMT, before being offered for transportation as Common Fireworks. Common fireworks must be in a finished state exclusive of mere ornamentation as supplied to the retail trade and must be so constructed and packed that loose pyrotechnic composition will not be present in packages in transportation. Fireworks, except articles defined in paragraphs (s) through (y) inclusive, of this section, other than common fireworks as defined in this paragraph, and those forbidden for transportation in §173.51, are classed as Special Fireworks (see §173.88(d)).

(t) Roman candles, not exceeding ten balls spaced uniformly in the tube, total pyrotechnic composition not to exceed twenty grams each in weight. The inside tube diameter shall not exceed ¾ inch.

(2) Sky rockets with sticks, total pyrotechnic composition not to exceed twenty grams each in weight. The inside tube diameter shall not exceed ⅛ inch. The rocket sticks must be securely fastened to the tubes.

(3) Helicopter type rockets, total pyrotechnic composition not to exceed twenty grams each in weight. The inside tube diameter shall not exceed ⅛ inch.

(4) Cylindrical fountains, total pyrotechnic composition not to exceed seventy-five grams each in weight. The inside tube diameter shall not exceed ¾ inch.

(5) Cone fountains total pyrotechnic composition not to exceed fifty grams each in weight.

(6) Wheels, total pyrotechnic composition not to exceed sixty grams for each driver unit or two hundred and forty grams for each complete wheel. The inside tube diameter of driver units shall not exceed ½ inch.

(7) Illuminating torches and colored fire in any form, total pyrotechnic composition not to exceed one hundred grams each in weight.

(8) Dipped sticks, the pyrotechnic composition of which contains any chlorate or perchlorate shall not exceed 5 grams. Sparklers, the composition of which does not exceed 100 grams each and which contain no magnesium or magnesium and a chlorate or perchlorate, are not subject to the regulations in Parts 170–189 and 397 of this title.

(9) Mines and shells of which the mortar is an integral part, total pyrotechnic composition not to exceed forty grams each in weight.

(10) Firecrackers and salutes with casings, the external dimensions of which do not exceed one and one-half inches in length or one-quarter inch in diameter, total pyrotechnic composition not to exceed two grains each in weight.

(11) Novelties consisting of two or more devices enumerated in this paragraph when examined by the Bureau of Explosives and approved by the Director, OHMT.

(s) Igniter cord consists of textile yarns and or a wire uniformly covered with a combustible chemical mixture, with or without additional textile or wire counterings, waterproofing or finishing coatings which, when ignited burns externally at various rates according to design. Igniter cord must be packed in strong, tight, outside fiberboard boxes or drums, wooden boxes or metal containers plainly marked "IGNITER CORD."

(t) Explosive auto alarms are tubular devices containing a small amount of explosive composition and igniting compound which is ignited by an electric spark. These devices must be so designed that they will neither burst nor cause external flame on functioning.

(u) Toy propellant devices and toy smoke devices consist of small paper or composition tubes or containers containing a small charge of slow burning propellant powder or smoke producing powder. These devices must be so designed that they will neither burst nor produce external flame on functioning.

Ignition elements, if attached, must be of a design examined by the Bureau of Explosives and approved by the Director, OHMT.

(v) Oil well cartridges are tubular devices each containing not more than 350 grains of propellant powder and having no ignition device or element. Cartridges must be constructed and packed so that they will be incapable of functioning en masse as a result of exposure to external flame.

(w) Actuating cartridges, explosive, fire extinguisher or valve consist of a small metal or fiber housing containing a small amount of initiating explosive and a propellant and are used to actuate valves on remotely controlled fire extinguishers or other apparatus.

(x) Cigarette loads, trick matches, and trick noise makers, explosive, must be of a type examined by the Bureau of Explosives and approved by the Director, OHMT and are described as follows:

(1) Cigarette loads consist of wooden pegs to which are affixed a small amount of explosive composition.

(2) Trick matches consist of book matches, strike anywhere matches, or strike-on-box matches which have small amounts of explosive or pyrotechnic composition affixed to the match stem just below the match head.

(3) Trick noise makers, explosive, consist of spheres containing a small amount of explosive composition.

(y) Smoke candles, smokepots, smoke grenades, smoke signals, signal flares, hand signal devices, and very signal cartridges are devices designed to produce visible effects for signal purposes. These devices must contain no bursting charges and no more than 200 grams of pyrotechnic composition each (see Note 1), exclusive of smoke composition (see Note 2), unless greater weight of composition is examined by the Bureau of Explosives and approved by the Director, OHMT.

Note 1. Pyrotechnic compositions (other than smoke compositions) are defined as chemical mixtures which on burning and without explosion, produce visible or brilliant displays or bright lights.

Note 2. Pyrotechnic smoke compositions are defined as chemical smoke producing mixtures, which on ignition burn at a controlled rate, without the production of flame and without the build-up of internal pressure that would rupture or burst the end product.

(z) Explosive release devices consist of a rod or link fitted with means for mechanical attachment to other apparatus or equipment and containing a small electrically initiated explosive charge which will break the rod or link upon functioning. These devices must be so designed that they will not function other explosive devices in the package sympathetically.

(aa) Explosive power devices, Class C, are devices designed to drive generators or mechanical apparatus by means of propellant explosives, Class B. The devices consist of a housing with a contained propellant charge and an electric igniter or squib. The devices must be of a type examined by the Bureau of Explosives and approved by the Director, OHMT for this classification.

(bb) Detonating fuzes, Class C explosives, are used in the military service to detonate high explosive bursting charges of projectiles, mines, bombs, torpedos, grenades, demolition charges, and safety and arming devices. They contain a detonator and a quantity of high explosives. Additionally they may be used by the military to transmit a detonation between two or more devices. This type detonating fuze contains either an explosive train consisting of mild detonating fuse, metal clad, igniter fuse-metal clad or similar type fuses, and any combination of one or more boosters, detonators and high explosives in a total quantity not exceeding 25 grams of explosive composition. All detonating fuzes, Class C explosives, must be made and packed so that they will not cause functioning of other fuzes, explosives, or other explosive devices if one of the fuzes detonates in a shipping container or in adjacent containers.

(cc) Mild detonating fuses, metal clad and flexible linear shaped charges, metal clad consists of a core containing not more than 2½ grains of high explosive composition per lineal foot, clad with metal either with or without a covering of tapes, yarns, plastics or waterproofing compounds. Mild detonating fuse, metal clad, and flexible linear shaped charges, metal clad, in lengths not over 26 feet and not exceeding 15 grains per lineal foot having the individual lengths separated from adjacent lengths so that mass propagation will not occur, may be shipped as Class C explosives.

(dd) Igniter fuse-metal clad consists of a base metal tube with a core of explosive igniter composition in quantity not exceeding 20 grains per foot.

(ee) Starter cartridges, jet engine, Class C, consist of a metal, plastic, and or rubber case, each containing a pressed cylindrical block of flammable solid material and having in the top of the case a small compartment that encloses an electric squib, small amount of black powder, and or smokeless powder which constitute an igniter. The starter cartridge is used to activate a mechanical starter for jet engines and must be of a type examined by the Bureau of Explosives and approved by the Director, OHMT, except as provided in §173.51(a)(16) and §173.66(a).

(ff) "Cartridge, practice ammunition" means a metal cartridge case containing a primer, a propelling charge of not more than 500 grains of propellant powder, and a solid projectile or a projectile containing a smoke spotting charge.

(gg) Detonators (§173.53(g)(1)), which will undergo only limited propagation in the shipping package, are classed as Class C explosives. For the purposes of this paragraph, limited propagation means that if one detonator near the center of a shipping package is exploded, the aggregate weight of explosives, excluding ignition and delay charges, in this and all additional detonators in the outside packaging that explode may not exceed 25 grams. Detonators which mass detonate in the shipping package may not be classed as Class C explosives. For the purposes of this paragraph "mass detonate" means that more than 90 percent of the devices tested in a package explode practically simultaneously.

(hh) Detonating primers (§173.53(g)(2)) in which the total explosive charge per unit does not exceed 25 grams, and which will undergo only limited propagation in the shipping package, are classed as Class C explosives. For the purposes of this paragraph, limited propagation means that if one detonating primer near the center of a shipping package is exploded, the aggregate weight of explosives, excluding ignition and delay charges, in this and all additional detonating primers in the outside packaging that explode may not exceed 25 grams. Detonating primers which mass detonate in the shipping package may not be

classed as Class C explosives. For the purposes of this paragraph, "mass detonate" means that more than 90 percent of the devices tested in a package explode practically simultaneously.

(ii) Explosive pest control devices, class C explosives, consist of a cardboard-pasteboard type tube not exceeding 4 inches in length and ¾ inch in diameter or a shotgun shell type having an explosive projectile. They may contain a mixture of potassium perchlorate, aluminum power, sulfur, black powder, smokeless powder or similar pyrotechnic mixture. The component which produces the audible effect may not contain more than 40 grains of explosive composition. Devices and packaging must be of a type examined by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT.

§ 173.101 Small-arms ammunition. (a) Small-arms ammunition must be packed in pasteboard or other inside boxes, or in partitions designed to fit snugly in the outside container, or must be packed in metal clips. The partitions and metal clips must be so designed as to protect the primers from accidental injury. The inside boxes, partitions and metal clips must be packed in securely closed strong outside wooden or fiberboard boxes or metal containers. Blank Industrial Power Load cartridges, similar to the 22 long rim-fire cartridge, may be packed in bulk in securely closed fiberboard boxes.

(b) Small-arms ammunition in pasteboard or other inside boxes, in addition to containers prescribed in paragraph (a) of this section, may be shipped when packed in the same outside container with nonexplosive and nonflammable articles; or with small-arms primers or percussion caps in quantity not to exceed 5 pounds. The weight of the small-arms ammunition packed with other articles must not exceed 55 pounds in outside fiberboard box, or 75 pounds in outside wooden box. The outside package must be a securely closed strong wooden or fiberboard container.

(c) Packages containing small-arms ammunition are excepted from the label prescribed in §172.411 of this subchapter, but the outside of each package must be plainly marked "**SMALL ARMS AMMUNITION.**"

(d) Each package containing cartridges loaded with an irritating Material must, in addition to marking prescribed herein, be marked "**IRRITATING AGENT**" and must bear the IRRITANT label.

(e) No restrictions other than proper description, packing and marking for small-arms ammunition and additional marking and labeling for tear gas cartridges are prescribed in this part for the transportation of small-arms ammunition and tear gas cartridges.

(f) Shipments of small-arms ammunition, including broken lots which have lost their identity (lot number identification), may be shipped loosely packed in securely closed strong wooden boxes or metal boxes, in carload or truckload lots, when shipments are made by or for the Departments of the Army, Navy or Air Force of the United States Government to depots or manufacturing plants for reprocessing or demilitarization. Seriously deteriorated ammunition or ammunition damaged to the point of exposing incendiary or tracer composition, spillage of propellant powder, or ammunition with other hazardous defects must not be shipped. Each outside package must be plainly marked "**SMALL-ARMS AMMUNITION.**"

(g) Special exceptions for certain types of small arms ammunition in the ORM-D class are provided in Subpart N of this part.

§ 173.101a Cartridges, practice ammunition. (a) Cartridges, practice ammunition must be packaged in pasteboard or other inside boxes, or in partitions designed to fit snugly in the outside packaging, or must be packed in metal clips. The partitions and metal clips must be so designed as to protect the primers from accidental injury. The inside boxes, partitions, and metal clips must be packaged in securely closed strong outside wooden or fiberboard boxes or metal packagings.

(b) Each package must be plainly marked "**CARTRIDGES, PRACTICE AMMUNITION.**"

§ 173.102 Explosive cable cutters; explosive power devices, Class C; explosive release devices, or starter cartridges, jet engine, Class C explosives. (a) Explosive cable cutters, explosive power devices, Class C, explosive release devices, or starter cartridges, jet engine, Class C must be packed in specification containers as follows:

(1) Spec. 12H, 23F or 23H (§§178.209, 178.214, or §178.219 of this chapter), Fiberboard boxes. Authorized gross weight not to exceed 65 pounds.

(2) In addition to specification containers prescribed in this section, explosive cable cutters, explosive power devices, Class C, explosive release devices, or starter cartridges, jet engines, Class C may be shipped in strong wooden or metal boxes. Starter cartridges, jet engine, must have igniter wires short-circuited when packed for shipment.

(b) Each package must be plainly marked "**EXPLOSIVE CABLE CUTTERS**"; "**EXPLOSIVE POWER DEVICES, CLASS C**"; "**EXPLOSIVE RELEASE DEVICES**", or "**STARTER CARTRIDGES, JET ENGINE, CLASS C EXPLOSIVES**", as appropriate, and "**HANDLE CAREFULLY—KEEP FIRE AWAY.**"

§ 173.103 Detonators, Class C explosives, and detonating primers, Class C explosives. (a) It must be shown by actual tests that detonators and detonating primers which are to be offered for transportation as Class C explosives meet the appropriate definitions in paragraphs (gg) and (hh) in §173.100. Testing must be performed or confirmed and the classification approved as specified in §173.86. Substitution of a representative packaging in place of the actual shipping package for testing purposes may be authorized by one of the agencies specified in §173.86(b).

(b) Detonators, Class C explosives, and detonating primers, Class C explosives, may only be offered for transportation if they are packed in packagings specified in §§173.66 and 173.68 that meet the requirements of paragraph (a) of this section, except that quantity limitations for devices in packagings (other than the gross weight limitation for the specification packaging used) do not apply.

(c) Detonators originally classed as Class C explosives in accordance with the requirements of paragraph (a) of this section, may be offered for transportation in an IME Standard 22 container as Class C explosives subject to the following conditions:

(1) Each detonator may contain no more than 1 gram of explosive (excluding ignition and delay charges);

(2) The detonators must be packed in accordance with the requirements and limitations of §173.66, except paragraphs (a)(3)(ii) and (iii), and paragraph (e);

(3) There are no more than 1,000 detonators in the container; and

(4) Each inside packaging shall be marked "class C explosives".

Note 1. The "class C explosives" marking is the shipper's certification that the contents of the IME Standard 22 container or compartment are class C explosives.

Note 2. Any detonator packed in an inside packaging that is not marked "class C explosives" shall be offered for transportation as a class A explosive.

(d) Detonators, Class C explosives, and detonating primers, Class C explosives, may be offered for transportation on passenger-carrying aircraft only under the following conditions:

(1) They must be packed in accordance with the applicable requirements of §§173.66 and 173.68 except that the maximum gross weight of any completed package may not exceed 50 pounds or the maximum gross weight permitted by the specification for the outside packaging used, whichever is less;

(2) Packages must have been tested in accordance with the requirements of paragraph (a) of this section, except that when one device near the center of the package is detonated, no other device in the package may be caused to detonate and there must be no communication of detonation from one package to another; and

(3) The shipper certifies conformance with requirements of this paragraph by marking the outside of the package with the statement: "This package conforms to conditions and limitations specified in 49 CFR 173.103(d)".

§ 173.104 Cord, detonating; fuse, mild detonating, metal clad; or flexible linear shaped charge, metal clad. (a) Cord, detonating flexible which was properly examined, and classed and described "cordeau detonant fuse, class C explosive" prior to January 1, 1985 by an agency listed in §173.86(b) is reclassed class A explosive and assigned the proper shipping name "cord, detonating *flexible*". However, until June 30, 1986, cord detonating *flexible* which was properly examined, and classed and described "cordeau detonant fuse, class C explosive" may be offered for transportation and transported subject to conditions of the approval and in accordance with requirements of this subchapter in effect on December 31, 1984.

(b) Cord, detonating *flexible*; mild detonating fuse, metal clad or flexible; and flexible linear shaped charges, metal clad may not be packed in the same package with detonators or with any high explosive.

(c) Cord, detonating *flexible*; fuse, mild detonating, metal clad and flexible linear shaped charges, metal clad shall be packed in wooden or fiberboard boxes. Each package shall be marked "CORD, DETONATING—HANDLE CAREFULLY", or "FLEXIBLE LINEAR SHAPED CHARGES, METAL CLAD—HANDLE CAREFULLY", as appropriate.

§ 173.105 Percussion, tracer, combination, time fuzes and tracers. (a) Percussion, tracer, combination, time fuzes and tracers must be packed in strong, tight, outside wooden boxes or Spec. 23F (§178.214 of this subchapter) fiberboard boxes, with special provision for securing individual packages of fuzes or tracers against movement in the box.

(b) The gross weight of one outside wooden box must not exceed 150 pounds, and the gross weight of one outside fiberboard box must not exceed 65 pounds.

(c) Each outside container must be plainly marked with proper descriptive name and also "**HANDLE CAREFULLY**".

(d) No restrictions other than proper description, packing, and marking are prescribed in this part for the transportation of percussion, tracer, time, or combination fuzes, or tracers.

§ 173.106 Cartridge bags, empty, with black powder igniters, igniters, safety squibs, electric squibs, delay electric igniters, igniter fuse-metal clad, and fuse lighters or fuse igniters. (a) Cartridge bags, empty, with black powder igniters, igniters, safety squibs, electric squibs, delay electric igniters, igniter fuse-metal clad, and fuse lighters or fuse igniters must be packed in strong fiberboard or wooden boxes or wooden or metal barrels or drums properly described and properly marked with the name of the article packed therein.

§ 173.107 Primers, percussion caps, and grenades, empty, primed. (a) Primers (cannon, combination and small arms), percussion caps, and empty grenades, primed, must be packed in strong, tight, outside wooden boxes, except as otherwise provided herein, with special provision for securing individual packages against movement in the box.

(b) [Reserved]

(c) Small-arms primers containing anvils must be packed in cellular inside packages, with partitions separating the layers and columns of the primers, so that the explosion of a portion of the primers in the completed shipping package will not cause the explosion of all the primers. They must be packed as prescribed in paragraphs (a) of this section or in Spec. 12B (§178.205 of this subchapter) fiberboard boxes, and equipped with corrugated fiberboard liners having Mullen or Cady test equal to or exceeding that of the box, except liner is not required for full depth telescope style box which may be closed as specified by §178.205-17(a)(2) of this subchapter. Not more than 5,000 primers shall be packed in each fiberboard box.

(1) Spec. 23H (§178.219 of this subchapter) Fiberboard boxes of full depth telescope style with top section having extended end flaps and bottom section with extended side flaps designed to tuck under and form boxes without glued or stapled joints. Boxes shall have full height inside perimeter liner and top and bottom full area pads of double-wall corrugated fiberboard. Hand-holes oval in shape, not more than 1 inch in width by 4 inches in length and horizontal with top score line, are authorized in ends of boxes. Primers shall be packed in cellular inside packages with partitions separating the layers and columns of the primers as required by the introductory text of this paragraph. Not more than 50,000 primers shall be packed in one outside box.

(d) Percussion caps must be packed in metal or other inside boxes containing not more than 500 caps; the construction of the cap or packing and the kind and quantity of explosives in each must be such that the explosion of a part of the caps in the completed shipping package will not cause the explosion of all the caps.

(1) Specification 12B (§178.205 of this subchapter). Fiberboard box. Caps must be packed in inside metal cans containing not more than 100 caps each. Can must then be packed in a chipboard box with not more than 10 cans per box. Not more than 5 chipboard boxes shall be packed in the 12B fiberboard box. The completed package must be such that the explosion of a part of the caps will not cause the explosion of all the caps.

(2) Specification 12B (§178.205 of this subchapter). Fiberboard box. Caps must be packed in inside plastic cans containing not more than 100 caps each. Cans must then be packed in a chipboard box with not more than 8 such chipboard boxes packed tightly in the 12B fiberboard box. The completed package must be such that the explosion of part of the caps will not cause the explosion of all of the caps.

(e) Small-arms primers and or percussion caps may be packed with nonexplosive and or nonflammable articles, or with small-arms ammunition as provided in §173.101(b). Small-arms primers may be included with propellant explosives (solid), class B, in the same outside container as provided in §173.93(g)(1). The weight of the small-arms primers or percussion caps must not exceed 5 pounds in any such outside container.

(f) The gross weight of one outside package must not exceed 150 pounds.

(g) Each outside container must be plainly marked with proper descriptive name and also "**HANDLE CAREFULLY**".

(h) No restrictions other than proper shipping name, packaging and marking are prescribed in this subpart for the transportation of those materials named in paragraph (a) of this section.

§ 173.108 Common fireworks, signal flares, hand signal devices, smoke signals, smoke candles, smoke grenades, smoke pots, and Very signal cartridges. (a) Class C explosives covered by this section must, unless otherwise specifically provided for, be securely packed in packages complying with the following specifications.

(1) [Reserved]

(2) Specification 15A, 15B, 16A, 19A, or 19B (§§178.168, 178.169, 178.185, 178.190, or 178.191 of this subchapter). Wooden boxes. Gross weight not to exceed 100 pounds, except gross weight of 500 pounds is authorized for Very signal cartridges only.

(3) Spec. 12B (§178.205 of this subchapter) Fiberboard boxes. Gross weight not to exceed 65 pounds.

(4) Firecrackers, Chinese, in addition to containers specified in paragraph (a)(1), (2), and (3) of this section, may also be transported in the package in which they are imported, provided these packages consist of wooden boxes, or fiberboard boxes, spec. 12B (§178.205 of this subchapter), in good condition, completely covered with strong matting and do not weigh more than 100 pounds, gross.

(5) Fireworks, such as sparklers, with match tip or head, or similar ignition point or surface, must have each individual tip, head, or similar ignition point or surface entirely covered and securely protected against accidental contact or friction.

(6) Signal flares may be packed with nonexplosive or nonflammable articles provided the outside packages are marked as prescribed in this section.

(b) [Reserved]

(c) Except as otherwise specified herein the gross weight of one outside package containing common fireworks must not exceed 100 pounds.

(d) Each outside package must be plainly marked in letters not less than seven-sixteenths of an inch in height "Common Fireworks," "Signal Flares," "Hand Signal Devices," "Smoke Signals," "Smoke Candles," "Smoke Pots," "Smoke Grenades," or "Very Signal Cartridges," as appropriate, and with the additional words "Handle Carefully—Keep Fire Away."

§ 173.109 Toy caps. (a) Toy caps must be packed in containers complying with the following specifications:

(1) Specification 15A, 15B, 16A, 19A, or 19B (§§178.168, 178.169, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes. Gross weight not to exceed 150 pounds.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Toy caps, in addition to containers specified in paragraphs (a)(1) and (2) of this section, may be transported in the package in which they are imported, provided the package consists of a wooden box, metal-lined, in good condition, and weighing not over 100 pounds gross. Inside packages must be as defined in §173.100(p).

(b) Toy caps may be packed with nonexplosive or nonflammable articles provided the outside containers are marked as prescribed herein.

(c) Toy paper caps of any kind must not be packed with fireworks.

(d) Each outside container must be plainly marked "**TOY CAPS—HANDLE CAREFULLY**".

§ 173.110 Charged well casing jet perforating guns, total explosive content in guns not exceeding 20 pounds per motor vehicle. (a) Charged well casing jet perforating guns transported by motor vehicles operated by private carriers engaged in well operations in which the total weight of the explosive contents of shaped charges assembled to guns being transported does not exceed 20 pounds per such vehicle must be packed as prescribed in §173.60(b), (c), (d) and (e).

(b) Charged well casing jet perforating guns may be offered for transportation and transported only by private carrier by highway.

(c) Charged well casing jet perforating guns may be offered for transportation and transported by private offshore well supply vessels only when carried in special motor vehicles as prescribed in §173.60 or on offshore down hole tool pallets provided that:

(1) No blasting caps, electric blasting caps or other firing devices shall be affixed or installed in the guns;

(2) Each shaped charge shall contain not over 4 ounces of explosives;

(3) Each shaped charge, if not completely enclosed in glass or metal, shall be fully protected by a metal cover after installation in the gun; and

(4) The total weight of the explosive contents of shaped charges assembled in guns being carried does not exceed 20 pounds per vehicle or pallet. Each cargo vessel compartment may contain up to 20 pounds of explosive content if the segregation requirements of §176.83(b)(3) are met. More than one pallet or vehicle, each containing not more than 20 pounds of explosive content, may be stowed "on deck" provided a minimum horizontal separation distance of 10 feet is provided.

§ 173.111 Cigarette loads, explosive auto alarms, toy propellant devices, toy smoke devices, trick matches, and trick noise makers, explosive. (a) Cigarette loads, explosive auto alarms, toy propellant devices, toy smoke devices, trick matches, and trick noise makers, explosive must be packed in specification containers as follows:

(1) Specification 15A, 15B, 16A, 19A or 19B (§178.168, §178.169, §178.185, §178.190, §178.191 of this subchapter). Wooden boxes. Gross weight not to exceed 150 pounds.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Each outside container must be plainly marked with the proper descriptive name and "**HANDLE CAREFULLY**".

§ 173.112 Oil well cartridges. (a) Oil well cartridges must be so packed that the explosive composition does not exceed 20 grains per cubic inch of space in the outside shipping container and must be in specification containers as follows:

(1) Specification 15A, 15B, 16A, 19A or 19B (§178.168, §178.169, §178.185, §178.190, §178.191 of this subchapter). Wooden boxes. Gross weight not to exceed 150 pounds.

(2) Specification 12B, 12H, 23F or 23H (§§178.205, 178.209, 178.214, 178.219 of this subchapter). Fiberboard boxes. Gross weight not to exceed 65 pounds. Hand holes are not authorized.

(3) Each outside container must be plainly marked with the name "Oil Well Cartridge" and "**HANDLE CAREFULLY**".

§ 173.113 Detonating fuzes, Class C explosives. (a) Detonating fuzes, class C explosives, must be packed in specification containers as follows:

(1) Specification 12H (§178.209 of this subchapter). Fiberboard boxes either without liners with well secured inside pasteboard cartons or with suitable filler or lining material to prevent movement in the box.

(2) In addition to specification containers prescribed in this section, detonating fuzes, Class C explosive, may be packed in well secured strong, tight outside wooden or metal boxes. The gross weight of the outside wooden or metal box must not exceed 190 pounds.

(b) Each outside package must be plainly marked "**DETONATING FUZES, CLASS C EXPLOSIVES—HANDLE CAREFULLY**".

§ 173.114 Actuating cartridges, explosive, fire extinguisher or valve. (a) Actuating cartridges, explosive, fire extinguisher or valve must be packed in strong wooden or fiberboard boxes.

(b) Each outside container must be plainly marked "**ACTUATING CARTRIDGES EXPLOSIVE, FIRE EXTINGUISHER—HANDLE**

CAREFULLY" or "ACTUATING CARTRIDGES, EXPLOSIVE, VALVE—HANDLE CAREFULLY".

(c) When shipped as components with fire extinguisher or with valve and with not more than 2 cartridges for each extinguisher or valve, they are exempt from Parts 170–189 of this subchapter.

§ 173.114a Blasting agents.

(a) Definition of a blasting agent. A blasting agent is a material designed for blasting which has been tested in accordance with paragraph (b) of this section and found to be so insensitive that there is very little probability of accidental initiation to explosion or of transition from deflagration to detonation.

(b) Tests. Except as provided in paragraph (c) of this section, no material may be offered for transportation described or classed as a blasting agent unless it passes the following tests:

(1) Blasting cap sensitivity test.

(i) The container used for the blasting agent sample must be cylindrical, having a diameter of 3½ inches and a length of 6½ inches. The container must provide essentially no confinement.

(ii) The container must be filled with the sample. Solid materials must be packed to the same filling density as they will be packed in the shipping container. The temperature of the sample must be between 70°F. and 75°F. If it is difficult to achieve an appropriate filling density in the test container, e.g., auger packed products, it may be necessary to auger fill a special container for the test.

(iii) The filled container must be placed on a solid lead cylinder 4 inches long by 2 inches in diameter which must, in turn, be placed upright on a firm surface.

(iv) A commercial No. 8 fuse blasting cap or electric blasting cap must be inserted in the center of the top of the sample for the full length of the cap. A No. 8 commercial cap means a cap which contains 0.40–.45 grams of pentaerythrite tetranitrate (PETN) base charge pressed into an aluminum shell with bottom thickness not to exceed 0.03 inch to a specific gravity of not less than 1.4 grams per cubic centimeter and primed with standard weights of primer, in accordance with the manufacturer's specifications.

(v) The blasting cap must be initiated from a safe position.

(vi) If the lead block is compressed ½-inch or more, the material is considered to have detonated.

(vii) The test must be conducted three times or until detonation occurs, whichever occurs first.

(viii) A material which detonates in any trial may not be classed as a blasting agent.

(2) Differential thermal analysis test.

(i) This test must be conducted using a standard, commercially produced, differential thermal analysis instrument or a laboratory constructed apparatus which gives comparable results.

(ii) The portion of the blasting agent tested must be representative of the complete mixture.

(iii) The test must be conducted three times. If the first exotherm exhibited by the material in any trial is less than 212°F. (100°C.), it may not be classed as a blasting agent.

(3) Thermal stability test.

(i) At least 50 grams of the material must be placed in a loosely covered glass vessel and maintained at 167°F. (75°C.) for 48 consecutive hours.

(ii) A material which ignites or evidences decomposition by fumes, discoloration, or other characteristics may not be classed as a blasting agent.

(4) Electrostatic sensitivity test.

(i) The apparatus must be designed so that an electrostatic spark can be caused to jump from a pointed electrode to a metal plate which also serves as a sample holder.

(ii) Ten milligrams of material must be used for each test. The portion of the blasting agent tested must be representative of the complete mixture.

(iii) If the test portion flames, smolders, or glows from the spark, the material is considered to have ignited.

(iv) The test must be conducted three times or until ignition occurs, whichever occurs first.

(v) A material which ignites in any trial when exposed to a spark of 0.006 joules delivered from a 0.002 to 0.004 micro-farad capacitor may not be classed as a blasting agent.

(5) Impact sensitivity test.

(i) Impact tests must be conducted in a Bureau of Explosives Impact Apparatus. (see §173.53, Note 4.)

(ii) The tests must be run on ten milligram samples. The test portions must be representative of the complete mixture.

(iii) The drop height used in all trials must be ten inches.

(iv) The test must be conducted ten times or until an explosion occurs, whichever occurs first. An explosion is evidenced by flame or flame and noise. The production of smoke alone is not evidence of explosion.

(v) A material which explodes in any trial may not be classed as a blasting agent.

(6) Fire test.

(i) The largest package [not to exceed 200 kg (440 lbs.)] of each type to be offered for transportation must be placed on incombustible supports and subjected to a fire.

(ii) The fuel used may be kerosene-soaked wood, flammable or combustible liquid, or flammable gas.

(iii) The fire shall be large enough to engulf the bottom of the package. The flames must reach at least halfway up on all sides.

(iv) The duration of the fire must be such as to cause the material in the package to burn or fume off completely, except for substances such as the oxides of aluminum or iron which are incombustible.

(v) Explosion is evidenced by a loud noise and the projection of fragments from the fire area.

(vi) Any material which explodes in this test may not be classed as a blasting agent.

(c) A material containing no ingredients, other than prilled ammonium nitrate and fuel oil, need only pass the test specified in paragraph (b)(1) of this section to be classed as a blasting agent. If a material classed as a blasting agent is offered for transportation under the test exception of this paragraph, it must be described as "ammonium nitrate-fuel oil mixture."

(d) Notification and approval. Except as provided in paragraphs (e) and (f) of this section, approval by the Director, Office of Hazardous Material Transportation (OHMT) is required for materials classed as blasting agents produced by a person who:

(1) Has not previously produced that blasting agent, or

(2) Has previously produced the blasting agent but has made a change in the formulation, process, or components. A blasting agent is not required to be approved by the Director, OHMT if an agency listed in paragraph (d)(3) of this section has determined and confirmed in writing to the Director, OHMT that there are no significant differences in hazard characteristics relative to a blasting agent previously approved by the Director, OHMT.

(3) No person may offer a blasting agent for transportation unless it has been examined by the Bureau of Explosives or Bureau of Mines, U.S. Department of the Interior and classed and approved by the Director, OHMT; or examined, classed, and approved by one of the following agencies:

(i) U.S. Department of Energy (DOE) for blasting agents made by, or under the direction or supervision of DOE; or

(ii) U.S. Army Materiel Development and Readiness Command (DRCSF), Naval Sea Systems Command (NAVSEA 06H) or HQUSAF (IGD SEV) for blasting agents made by, or under the direction or supervision of the DOD.

(4) Except as otherwise provided in this section, each person who offers a blasting agent for transportation must submit a copy of the tentative class accompanied by a supporting laboratory report or equivalent data to, and receive a written approval from, the Director, OHMT prior to offering the blasting agent for transportation.

(e) For each mixture of a blasting agent containing only prilled ammonium nitrate and fuel oil classed in accordance with paragraph (c) of this section, a copy of the test report on which the class is based must be filed with the Director, OHMT before the material is offered for transportation and a copy of the report retained as long as that formulation is in use. As a minimum, the test report must contain the name and address of the person or organization conducting the test, date of test, quantitative composition of the mixture, including prill size and porosity, and a description of test results.

(f) Samples of materials designed for blasting not previously approved may be offered for transportation to a testing facility for examination if:

(1) The material has been assigned a tentative description and class in writing by one of the agencies listed in paragraph (d)(3) of this section.

(2) The material is packaged as required by this part according to the tentative description and class assigned.

(3) The package is labeled as required by this subchapter and the following is marked on the package:

(i) The words "SAMPLE FOR LABORATORY EXAMINATION";

(ii) The net weight of material; and

(iii) The tentative shipping description.

(g) A material designed for blasting that has not been examined or approved may be transported from where it was produced to an explosive testing facility under the following conditions:

(1) The material is not a forbidden explosive or an initiating explosive according to this subchapter;

(2) The material must be described as high explosive or high explosive, liquid, as appropriate and packed, marked, labeled, and described on the shipping paper as required by this subchapter;

(3) The material is transported in a motor vehicle operated by the owner of the material; and

(4) The shipment is accompanied by a person, in addition to the driver of the motor vehicle, who is qualified by training and experience to handle the blasting material.

(h) Packaging for blasting agents. Each package of blasting agent when prepared for shipment must comply with the applicable requirements of §173.24 and withstand one of the following tests:

(1) Rigid packages (e.g., boxes and drums), prepared as for shipment, must be capable of withstanding a four-foot drop onto solid concrete so as to strike the most vulnerable point on the package without rupture or any loss of contents.

(2) Non-rigid packages (e.g., tubes and bags), prepared as for shipment, must be capable of withstanding three four-foot drops onto solid concrete without rupture or any loss of contents.

(i) Blasting agents may not be transported in bulk packagings except in accordance with the terms of specific exemptions issued pursuant to Part 107 of this chapter.

(j) See §§ 174.83, 176.83 and 177.848 of this subchapter for loading requirements.

SUBPART D

FLAMMABLE, COMBUSTIBLE, AND PYROPHORIC LIQUIDS; DEFINITIONS AND PREPARATION

§ 173.115 Flammable, combustible, and pyrophoric liquids; definitions. (a) **Flammable liquid.** (1) For the purposes of this subchapter a flammable liquid means any liquid having a flash point below 100° F. (37.8° C.), with the following exceptions:

(i) Any liquid meeting one of the definitions specified in § 173.300;

(ii) Any mixture having one component or more with a flash point of 100° F. (37.8° C.) or higher, that makes up at least 99 per cent of the total volume of the mixture;

(2) For the purposes of this subchapter, a distilled spirit of 140 proof or lower is considered to have a flash point no lower than 73° F.

(b) **Combustible liquid.** (1) For the purposes of this subchapter, a combustible liquid is defined as any liquid that does not meet the definition of any other classification specified in this subchapter and has a flash point at or above 100° F. (37.8° C.) and below 200° F. (93.3° C.) except any mixture having one component or more with a flash point at 200° F. (93.3° C.) or higher, that makes up at least 99 per cent of the total volume of the mixture.

(2) For the purposes of this subchapter:

(i) An aqueous solution containing 24 percent or less alcohol by volume is considered to have a flash point of no less than 100° F. (37.8° C) if the remainder of the solution is not subject to this subchapter, and

(ii) An aqueous solution containing 24 percent or less alcohol by volume is not subject to the requirements of this subchapter if it contains no less than 50 percent water and no material (other than the alcohol) which is subject to this subchapter.

(3) 200° F. (93.3° C.) is a limitation of the application of the regulations in this subchapter and should not be construed as indicating that liquids with higher flash points will not burn. Markings such as "NONFLAMMABLE" or "NONCOMBUSTIBLE" should not be used on a vehicle containing a material that has a flash point of 200° F. (93.3° C.) or higher.

(c) **Pyrophoric liquids.** (1) For the purposes of this subchapter, a pyrophoric liquid is any liquid that ignites spontaneously in dry or moist air at or below 130° F. (54.5° C.).

Note 1: The Bureau of Explosives is equipped to test samples of flammable liquids to determine whether or not they are pyrophoric.

(d) **Flash point.** (1) "Flash point" means the minimum temperature at which a liquid gives off vapor within a test vessel in sufficient concentration to form an ignitable mixture with air near the surface of the liquid and shall be determined as follows:

(i) For a homogeneous, single-phase, liquid having a viscosity less than 45 S.U.S. at 100° F. (37.8° C) that does not form a surface film while under test, one of the following test procedures shall be used:

(A) Standard Method of Test for Flash Point by Tag Closed Tester, (ASTM D56–79); or

(B) Standard Methods of Test for Flash Point of Liquids by Setaflash Closed Tester, (ASTM D3278–78).

(ii) For a liquid other than one meeting all of the criteria of paragraph (d)(1)(i) of this section, one of the following test procedures shall be used:

(A) Standard Method of Test for Flash Point by Pensky-Martens Closed Tester, (ASTM D93–80). For cutback asphalt, use Method B of ASTM 93–80. (Alternate tests authorized in this standard may be used); or

(B) Standard Methods of Test for Flash Point of Liquids by Setaflash Closed Tester, (ASTM D3278–78).

(2) For a liquid that is a mixture of compounds that have different volatility and flash points, its flash point shall be determined as specified in paragraph (d)(1) of this section, on the material in the form in which it is to be shipped. If it is determined by this test that the flash point is higher than 20° F. (—6.67° C), a second test shall be made as follows: a portion of the mixture shall be placed in an open beaker (or similar container) of such dimensions that the height of the liquid can be adjusted so that the ratio of the volume of the liquid to the exposed surface area is 6 to one. The liquid shall be allowed to evaporate under ambient pressure and temperature (20 to 25°C) for a period of 4 hours, or until 10 percent by volume has evaporated, whichever comes first. A flash point is then run on a portion of the liquid remaining in the evaporation container and the lower of the two flash points shall be the flash point of the material.

(3) For flash point determinations by Setaflash closed tester, the glass syringe specified need not be used as the method of measurement of the test sample if a minimum quantity of 2 milliliters is assured in the test cup.

(e) "S.U.S." means Saybolt Universal Seconds as determined by the Standard Method of Test for Saybolt Viscosity (ASTM D88–56) (reapproved 1968) and may be determined by use of the S.U.S. conversion tables specified in the Standard Method for Conversion of Kinematic Viscosity to Saybolt Universal Viscosity or to Saybolt Furol Viscosity ASTM D2161–79 following determination of viscosity in accordance with the Standard Test Method for Kinematic Viscosity of Transparent and Opaque Liquids (and the Calculation of Dynamic Viscosity) (ASTM D445–79).

(f) [Reserved]

(g) If experience or other data indicate that the hazard of a material is greater or less than indicated by the criteria specified in paragraphs (a), (b), and (c) of this section, the Department may revise its classification or make the material subject to the requirements of Parts 170–189 of this subchapter.

§ 173.116 Outage. (a) Outage for packings of flammable liquids offered for transportation, except as otherwise provided in this part, must be as prescribed in paragraphs (b) to (h) of this section.

(b) Packagings must not be completely filled. For packagings of a capacity of 110 gallons or less, sufficient outage must be provided so that the packaging will not be liquid full at 130° F. (55°C).

(c) [Reserved]

(d) Flammable liquids must not be loaded into domes of tank cars. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage.

(e) Flammable liquids having vapor pressure of 16 pounds per square inch absolute at 100° F. or less must be so loaded in tank cars that the outage shall be not less than 2 percent.

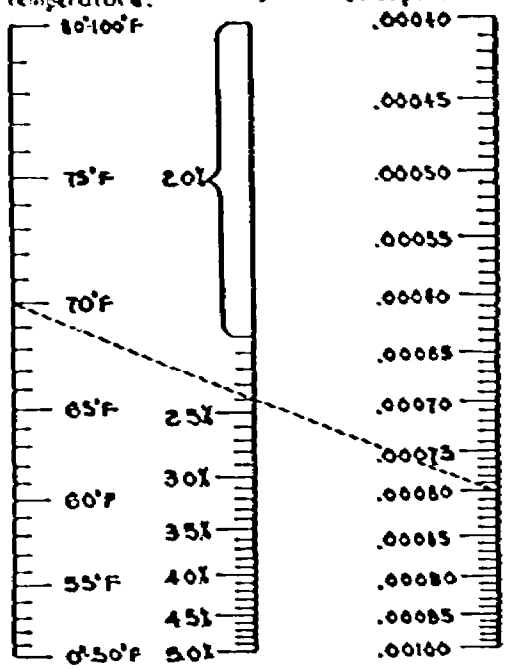
(f) Flammable liquids having a vapor pressure exceeding 16 pounds per square inch absolute at 100° F. for which minimum outage is not otherwise specifically provided herein, when loaded in uninsulated tank cars, must be so loaded that the minimum outage will be the greatest of the following values:

(1) Dome capacity.

(2) Two percent of total capacity of tank and dome.

(3) Outage as shown in paragraph (g) of this section.

(g) Outage chart for flammable liquids loaded in uninsulated tank cars:



(1) Example: Suppose the temperature of the liquid at time of loading is 70° F. and its coefficient of expansion is 0.00080; lay a ruler on the chart running from 70° to 0.00080 as shown by the dotted line and the required outage is 2.4 percent where the ruler crosses the outage scale.

The following coefficients of expansion per degree Fahrenheit, of the principal flammable liquids shall be used in determining outages:

Acetone	0.00085
Amyl acetate	.00068
Benzol (benzene)	.00071
Carbon bisulfide	.00070
Ether	.00098
Ethyl acetate	.00079
Ethyl (grain) alcohol	.00062
Methyl (wood) alcohol	.00072
Toluol (toluene)	.00063
Gasoline or naphtha	
50-55° A.P.I.[1]	.00055
55.1-60° A.P.I.[1]	.00060
60.1-65° A.P.I.[1]	.00065
65.1-70° A.P.I.[1]	.00070
70.1-75° A.P.I.[1]	.00075
75.1-80° A.P.I.[1]	.00080
80.1-85° A.P.I.[1]	.00085
85.1-90° A.P.I.[1]	.00090

[1] A.P.I. (American Petroleum Institute), according to the following formula

$$°A.P.I. = \frac{141.5}{\text{specific gravity}} - 131.5$$

(h) No cargo tank or compartment thereof used for the transportation of any flammable liquid shall be liquid full. The vacant space (outage) in a cargo tank or compartment thereof used in the transportation of flammable liquids shall be not less than 1 percent; sufficient space (outage) shall be left vacant in every case to prevent leakage from or distortion of such tank or compartment by expansion of the contents due to rise in temperature in transit.

§ 173.117 Closing and cushioning. (a) All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

§ 173.118 Limited quantities of flammable liquids. (a) Limited quantities of flammable liquids that do not meet the definition of another hazard class in this subchapter and for which exceptions are permitted as noted by reference to this section in §172.101 of this subchapter, are excepted from labeling (except when offered for transportation by air) and specification packaging requirements of this subchapter when packed according to the following paragraphs. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) In metal containers not over 1 quart capacity each, packed in strong outside containers,

(2) In containers having a capacity not over 1 pint or 16 ounces by weight each, packed in strong outside containers, or

(3) In inside containers having a rated capacity of one gallon or less when packed in strong outside containers. The provisions of this partial exemption apply only if the flash point of the material is 73° F. or higher and the flash point, or an indication that the flash point is 73° F. or higher is marked on the outside package.

(b) A flammable liquid that does not meet the definition of another hazard class and has a flash point of 73° F. or higher is not subject to the specification packaging requirements of this part when in packagings of 110 gallons or less. The provisions of this paragraph apply only if the flash point, or an indication that its flash point is 73° F. or higher, is marked on the outside package. Notwithstanding §172.101 of this subchapter, the net quantity limitation for flammable liquids meeting the conditions of this paragraph is one gallon per package for carriage aboard passenger-carrying aircraft or railcar, and 55 gallons per package for carriage aboard cargo aircraft only.

(c) Alcoholic beverages (wine and distilled spirits as defined in 27 CFR 4.10 and 5.11) in containers having a rated capacity of one gallon or less are not subject to the requirements of this subchapter.

(d) Special exceptions for shipment of certain flammable liquids in the ORM-D class are provided in Subpart N of this part.

§ 173.118a Exceptions for combustible liquids. (a) Unless otherwise stated for a specific material, the regulations in this subchapter do not apply to a material classed as a combustible liquid in a packaging having a rated capacity of 110 gallons or less, unless the combustible liquid is a hazardous substance, or a hazardous waste.

(b) A combustible liquid that is a hazardous substance or a hazardous waste in a packaging having a rated capacity of 110 gallons or less, and a combustible liquid in a portable tank, cargo tank or tank car is not subject to the requirements of this subchapter except those pertaining to:

(1) Shipping papers, waybills, switching orders, and hazardous waste manifests;

(2) Marking of portable tanks and marking of packages having a rated capacity of 110 gallons or less that contain hazardous substances or hazardous wastes;

(3) Display of identification numbers on portable tanks, cargo tanks, tank cars and multi-unit tank car tanks;

(4) Placarding of portable tanks, cargo tanks and tank cars;

(5) Carriage aboard aircraft and vessels (for packaging requirements for transport by vessel see §176.340 of this subchapter);

(6) Reporting incidents as prescribed by §§171.15 and 171.16 of this subchapter; and

(7) The requirements of §§173.1, 173.24, 174.1 and 177.804 of this subchapter.

§ 173.119 Flammable liquids not specifically provided for. (a) **Flammable liquids with flash point 20° F. or below.** Flammable liquids with flash point 20° F. or below and having vapor pressure (Reid[1] test) not over 16 pounds per square inch, absolute, at 100° F., other than those for which special requirements are prescribed in this part, must be prepared for shipment in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein as required in the following paragraphs (see paragraphs (c) to (i) of this section for high pressure liquids, paragraphs (j) to (l) of this section for viscous liquids, and paragraph (m) of this section for flammable liquids which are also oxidizers, radioactive material, corrosive liquids, poison B liquids, or organic peroxides and §173.134 for flammable liquids that are also pyrophoric liquids):

(1) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Rated capacity may not exceed 5 gallons for Specification 1A. Not authorized for transportation by aircraft.

(2) Spec. 5, 5A, 5B, 5C, or 5M (§§178.60, 178.81, 178.82, 178.83, or 178.90 of this subchapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(3) Specification 17E (§178.116 of this subchapter). Metal drums (single-trip) with openings not over 2.3 inches in diameter. Drums with a marked capacity of more than 5 gallons but not more than 30 gallons must be constructed of 19-gauge body and head sheets. Drums with a marked capacity in excess of 30 gallons must be constructed of 18-gauge body and head sheets. Drums with a marked capacity of more than 5 gallons are not authorized for transportation by air.

(4) Spec. 17C (§178.115 of this subchapter). Metal drums (single-trip), with openings not exceeding 2.3 inches in diameter.

(5) [Reserved]

(6) [Reserved]

(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over 1 quart each; metal cans not over 1 gallon each.

Note 1. Spec. 12B fiberboard boxes (§178.205-26(a) of this subchapter), with one inside rectangular metal can, spec. 2F (§178.25 of this subchapter) not to exceed 5 gallons capacity are authorized for gasoline only. Gross weight of completed package not over 65 pounds.

(8) Spec. 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, or 178.191 of this subchapter.) Wooden boxes with inside containers which must be metal pails, kits, or cans, not over 10 gallons each or inside glass or earthenware containers not over 1 gallon each, except that glass or earthenware containers up to 3 gallons each are authorized when only one inside container is packed in each outside container.

(9) Spec. 21C, 22A, or 22B (§178.224, §178.196 or §178.197 of this subchapter). Fiber drums and plywood drums with a single inside glass, earthenware, or metal container of not over one gallon capacity in each drum. Inside container must be so cushioned at top, sides, and bottom, as to prevent breakage or leakage in transit.

(10) Specification 42B, (§178.107, of this subchapter). Aluminum drums.

(11) Cylinders as prescribed for any compressed gas, except acetylene.

(12) Specification 103,[2] 103W, 103ALW, 103DW, 104,[2] 104W, 105A100,[2] 105A100ALW, 105A100W, 106A500X, 106A800XNC, 106A800NCI,[2] 109A100ALW, 109A300W, 110A500W, 111A60ALW1, 111A60F1, 111A60W1, 111A100W3, 111A100W4, 111A100W6, 112A200W, 112A400F, 114A340W, 115A60W1, 115A60ALW, or 115A60W6, (§§179.100, 179.101, 179.200, 179.201, 179.220, 179.300, 179.301 of this subchapter) tank cars. For cars equipped with expansion domes, manway closures must be so designed that pressure will be released automatically by starting the operation of removing the manway cover. Openings in tank heads to facilitate application of lining are authorized on tank cars constructed before January 1, 1975. These openings must be closed in an approved manner (§179.3 of this subchapter).

(13) The use of spec. 103AL special riveted aluminum tank cars is authorized for the transportation of gasoline, ethyl acetate, acetone, methanol, or butyraldehyde as provided in special orders of November 5, 1937 and February 1, 1939.

(14) Spec. 15X (§178.181 of this subchapter). Wooden boxes with inside metal containers. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which

[1] ASTM Test D323.

[2] Use of existing tank cars authorized, but new construction not authorized.

are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(15) [Reserved]

(16) [Reserved]

(17) Specification MC 300, MC 301, MC 302, MC 303, MC 304, MC 305, MC 306, MC 307, MC 310, MC 311, MC 312, MC 330 or MC 331 (§§178.340, 178.341, 178.342, 178.343, 178.337 of this subchapter) cargo tanks, subject to the following conditions:

(i) Bottom outlets on Specification MC 304, MC 310, MC 311 or MC 312 cargo tanks must conform to §178.342-5(a). Bottom outlets on Specification MC 330 cargo tanks must be equipped with valves conforming to §178.337-11(c).

(ii) Specification MC 310, MC 311 or MC 312, cargo tanks must be equipped with pressure relief devices conforming to §178.342-4. Safety relief devices on Specification MC 330 cargo tanks must conform with §178.337-9.

(iii) Necessary interior cleaning of cargo tanks must be performed between changes in lading.

(18) [Reserved]

(19) Spec. 5L (§178.69 of this subchapter). Metal barrels or drums for gasoline shipments offered by or consigned to the Departments of the Army, Navy, and Air Force of the United States Government or Allies. Use of this container will be permitted because of the present emergency and until further order of the Department.

(20) Spec. 12D (§178.207 of this subchapter). Fiberboard boxes with inside containers which must be glass or earthenware not over one gallon each, authorized for not more than 75 pounds gross weight, not to contain more than 4 such inside containers if their capacity is greater than 5 pints each. Use of this container will be permitted because of the present emergency and until further order of the Department.

(21) Gasoline samples in boxes of metal not lighter than 20 gauge, United States standard, having hinged cover securely closed, and containing not more than 5 inside rectangular metal cans with screw cap closure, each having a capacity not to exceed ½ gallon, may be shipped when consigned to state laboratories for examination.

(22) Specification 17H or 37A (§§178.118 and 178.131 of this subchapter). Metal drums with inside glass packagings not over 9 pints capacity each. Inside containers may contain biological materials if these materials are not etiologic agents, except that etiologic agents exempt by §173.386(d) are authorized.

(23) Specification 12A (§178.210 of this subchapter). Fiberboard box, with inside glass bottles or specification 2E (178.243 of this subchapter) polyethylene bottles, not over 1 gallon capacity each. Polyethylene bottles are authorized only for materials that will not react with, or cause decomposition of the plastic. Not more than four inside bottles exceeding 5 pints capacity each may be packed in a package. Shipper must have established that the completed package meets the test requirements prescribed by §178.210-10 of this subchapter.

(24) Spec. 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside spec. 2S (§178.35 of this subchapter) polyethylene container.

(25) Spec. 51 (§178.245 of this subchapter). Portable tanks.

(26) Specification 57 (§178.253 of this subchapter). Portable tanks. Not authorized for transportation by water.

(27) Specification 12P (§178.211 of this subchapter). Fiberboard box with one inside specification 2U (§178.24 of this subchapter) polyethylene container of not over 5-gallon capacity, or two inside specification 2U polyethylene containers of not over 2½ gallon capacity each. Authorized only for material which will not react with or cause decomposition of polyethylene. Not authorized for transportation by air.

(28) Specification 12A (§178.210 of this subchapter). Fiberboard boxes with inside metal containers not over 1-gallon capacity each. Not more than six metal containers shall be packed in a 275-pound test, double faced, corrugated fiberboard, specification 12A box and gross weight shall not exceed 45 pounds. The inner flap gaps of the box shall not exceed ¼-inch and the box shall provide a tight fit so there is no movement of the cans within the box.

(29) Marine portable tanks meeting the requirements of 46 CFR Part 64 authorized for highway and cargo vessel only when shipped in support of off-shore oil well drilling activities. Tanks shall comply with mounting and tie-down requirements of §178.245-4 of this subchapter when transported by highway.

(30) IM portable tanks, under conditions specified in the IM Tank Table.

(b) Flammable liquids with flash points above 20° F. to 73° F. Flammable liquids with flash points above 20° F. to 73° F. and having vapor pressure (Reid[3] test) not over 16 pounds per square inch, absolute, at 100° F. other than those for which special requirements are prescribed in this Part, must be packaged in packagings of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein as follows (see paragraphs (c) through (i) of this section for high-pressure liquids and paragraph (m) of this section for flammable liquids which are also oxidizers, poison B liquids, organic peroxides or corrosive liquids):

(1) Containers as specified in paragraph (a) of this section, except that openings greater than 2.3 inches in diameter in barrels and drums are authorized when permitted by the specification.

(2) Spec. 17E or 17H (§§178.116 or 178.118 of this subchapter). Metal drums (single-trip).

(3) Specification 10B (§178.156 of this subchapter). Wooden barrels or kegs. Authorized only for alcohol and alcohol-water-mixtures.

Note 1: Until further order of the Department, wooden whiskey barrels, properly reconditioned, which comply with all the provisions of spec. 10B (§178.156 of this subchapter), are also authorized. Marking is required on the head of each container, by hot branding or legible stenciling, as follows: DOT-10B

Name or symbol (letters) of reconditioner, this must be registered with the Director, OHMT and located just above, below, or following the mark DOT-10B

Size of marking (minimum) 3/8 inch high.

(4) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be glass, earthenware, polyethylene (bags are not authorized), or metal, not over 1 gallon each. Packages containing inside glass or earthenware containers must not contain more than 4 such inside containers if their capacity is greater than 5 pints each. Polyethylene containers are authorized only for materials that will not react with or cause decomposition of the plastic.

Note 1: Until further order of the Department, fiberboard boxes, spec. 12B (§178.205-2(a) of this subchapter), with one inside rectangular metal can, spec. 2F (§178.25 of this subchapter), not to exceed 5 gallons capacity, are authorized. Gross weight of completed package not over 65 pounds.

(5) Spec. 12E (§178.208 of this subchapter). Fiberboard box with 1 or 2 rectangular metal inside containers of not over 5 gallons capacity each.

(6) Specification 57 (§178.253 of this subchapter). Steel portable tank. Authorized for transportation by water when having a minimum design pressure of 9 psig and equipped in accordance with §178.253-4, except that frangible devices are not authorized. Also, for water transportation, no pressure relief device may open at less than 5 psig. Authorized for liquids with flash points above 20° F. and a vapor pressure not over 16 psia at 100° F.

(7) Specification 37P (§178.133 of this subchapter). Steel drums with polyethylene liner (nonreusable container). Authorized only for materials that will not react with polyethylene and result in container failure. Not authorized for transportation by air.

(8) Specification 6D or 37M (nonreusable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpack with an inside specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene container. Authorized only for materials that will not react with polyethylene and result in container failure.

(9) Spec. 21P (§178.225 of this subchapter). Fiber drum overpack with inside spec. 2S or 2SL (§178.35 or 178.35a of this subchapter) polyethylene container. Authorized only for materials that will not react with polyethylene and result in container failure.

(10) Specification 37D (§178.137 of this subchapter). Nonreusable steel drum authorized only for a material not exceeding a weight of 10 pounds per gallon. For a material weighing more than 10 pounds per gallon but not exceeding a weight of 12 pounds per gallon, drum made of not less than 21-gauge body and 20-gauge heads must be used.

(11) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(c) Flammable liquids for which other special packing requirements are not prescribed. Flammable liquids for which other special packing requirements are not prescribed in this part, must be shipped, depending upon their Reid[1] vapor pressures as prescribed in paragraphs (d) to (i) of this section.

(d) When the vapor pressure does not exceed 16 pounds per square inch, absolute, at 100° F. When the vapor pressure does not exceed 16 pounds per square inch, absolute, at 100° F., flammable liquids must be packed as prescribed in paragraphs (a) and (b) of this section.

(e) When the vapor pressure exceeds 16 pounds per square inch, absolute, at 100° F. When the vapor pressure exceeds 16 pounds per square inch, absolute, at 100° F., but does not exceed 27 pounds per square inch, absolute, at 100° F., flammable liquids must be packed in specification containers as follows:

(1) As prescribed in paragraphs (a)(1) to (11) of this section, except spec. 17E (§178.116 of this subchapter). Bung labels required, for metal barrels and drums, as prescribed in paragraph (i) of this section.

(2) Specification 103,[2] 103W, 103ALW, 103DW, 104,[2] 104W, 105A100,[2] 105A100ALW, 105A100W, 106A500X, 106A800XNC, 106A800NCI,[2]

[1] In addition to other requirements of this section, necessary interior cleaning of the tanks must be performed between changes in lading. Safety relief devices must be in accordance with specification MC 331 (§178.337).

[2] The use of existing tank cars authorized but new construction not authorized.

[3] ASTM Test D323.

[1] ASTM Test D323.

[2] The use of existing tank cars authorized, but new construction not authorized.

109A100ALW, 109A300W, 110A500W, 111A60ALW1, 111A60F1, 111A60W1, 111A100W3, 111A100W4, 111A100W6, 112A200W, 112A400F, 114A340W, 115A60W1, 115A60W6, or 115A60ALW, (§§179.100, 179.101, 179.200, 179.201, 179.220, 179.221, 179.300, 179.301 of this subchapter) tank cars. Openings in tank heads to facilitate the application of linings are authorized on tank cars constructed before January 1, 1975. These openings must be closed in an approved manner (§179.3 of this subchapter).

(3) Specification MC 304, MC 307, MC 310, MC 311, MC 312, MC 330, or MC 331 (§§178.340, 178.342, 178.343, 178.337 of this subchapter) cargo tanks, subject to the following conditions:

(i) Bottom outlets on Specification MC 304, MC 310, MC 311 cargo tanks must conform to §178.342-5. Bottom outlets on Specification MC 330 cargo tanks must be equipped with valves conforming to §178.337-11(c).

(ii) MC 310, MC 311 or MC 312 cargo tanks must have a design pressure of at least 25 psig. These cargo tanks must be equipped with pressure relief devices conforming to §178.342-4.

(iii) MC 330 cargo tanks must be equipped with pressure relief devices conforming to §178.337-9.

(iv) Each safety relief device must be set to discharge at no less than 25 psig.

(v) Necessary interior cleaning of cargo tanks must be performed between changes in lading.

(4) Spec. 51 (§178.245 of this subchapter). Portable tanks.

(5) IM portable tanks, under conditions specified in the IM Tank Table.

(f) When the vapor pressure exceeds 27 pounds per square inch absolute at 100° F. When the vapor pressure exceeds 27 psia at 100° F, but does not exceed 40 psia (see note 1) at 100° F, flammable liquids must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5P (§§178.80, 178.81, or 178.92 of this subchapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter. Bung label's required as prescribed in paragraph (i) of this section.

(2) Cylinders as prescribed for any compressed gas except acetylene.

(3) Specification 105A100,[2] 105A100ALW, 105A100W, 106A500X, 106A800XNC, 106A800NCL[2] 109A100ALW, 109A300W, 110A500W, 111A100W4, 112A200W, 112A400F, or 114A340W (§§179.100, 179.101, 179.200, 179.201, 179.300, 179.301 of this subchapter), tank cars. (See Note 1 of this paragraph.) Specification 104[2], 104W, and 111A100W3 (§§179.200, 179.201 of this subchapter), tank cars are authorized under conditions prescribed in paragraph (f)(4) of this section and Note 2 of this paragraph. Openings in tank heads to facilitate application of linings are authorized on tank cars constructed before January 1, 1975. These openings must be closed in an approved manner (§179.3 of this subchapter).

(4) Specification 103,[2] 103W, 103ALW, 104,[2] 104W, 111A60ALW1, 111A60F1, 111A60W1, 115A60W1, 115A60W6, 115A60ALW (§§179.200, 179.201, 179.220, 179.221 of this subchapter). Tank cars.

Note 1: Tanks built in compliance with American Railway Association specifications for class IV-A tank cars authorized for use effective October 1, 1925, may be continued in service for the transportation of ethyl chloride and other liquids which do not have a vapor pressure exceeding 28 pounds per square inch, gauge pressure, at 100° F, provided there is stenciled on each side of the tank immediately below the valve protecting housing the words "Liquids having vapor pressure exceeding 28 pounds per square inch at 100° F must not be loaded into this tank" in letters and figures at least 1 inch high. These tank cars must be retested as prescribed in current spec. 105A100W except that safety valves must open at pressure not exceeding 35 pounds and be vapor tight at 28 pounds per square inch.

Note 2: When the vapor pressure exceeds 40 pounds per square inch, absolute, at 100° F, these flammable liquids are classed as flammable compressed gases and must be described, packed, and shipped as prescribed for such articles.

Note 3: Spec. 104[2] or 104-W tank cars are authorized provided they are equipped with approved fittings designed to provide for the loading, unloading, gauging, sampling, and taking temperature of the contents without removing the manway closure, that pressure relief valves are set to open at pressure of 35 pounds gauge (with a tolerance of plus or minus 3 pounds), and are vapor tight at 28 pounds per square inch gauge pressure, that bottom discharge outlets are of the same type as authorized for specification 104[2] or 104-W tank cars, and that there is stenciled on each side of the tank above the specification mark, in letters and figures at least 1 inch high, "For vapor pressures not exceeding 40 pounds per square inch, absolute, at 100° F." Specification IOC-104[2] or 104-W tank cars, equipped with pressure relief valves set to open at pressure of 35 pounds gauge (with a tolerance of plus or minus 3 pounds) and which are vapor tight at 28 pounds per square inch gauge pressure are authorized provided that they are stenciled as required above.

(5) Specification cargo tanks as prescribed in paragraph (e)(3) of this section.

(6) Spec. 51 (§178.245 of this subchapter). Portable tanks.

(7) IM portable tanks, under conditions specified in the IM Tank Table.

(g) [Reserved]

(h) [Reserved]

(i) **Bung label.** A flammable liquid as described in paragraph (e) or (f) of this section, shipped in a metal drum or barrel, in addition to the **FLAMMABLE LIQUID** label, must be labeled near the bung with a white rectangular label or tag measuring 5 by 3 inches, bearing the wording as displayed below:

BUNG LABEL

(Reduced size)

(Black printing on white)

5 inches

3 inches

CAUTION Unscrew This Bung SLOWLY

Do not unscrew entirely until all interior pressure has escaped through the loosened threads. REMOVE BUNG IN OPEN AIR. Keep all open flame lights and fires away. Inclosed Electric Lights are safe.

(j) **Viscous flammable liquids.** Flammable liquids which are viscous as defined in §171.8 of this subchapter must be shipped in specification packagings as prescribed in paragraph (k) or (l) of this section.

(k) Viscous flammable liquids having a vapor pressure which does not exceed 16 pounds per square inch, absolute, at 100° F. (See paragraphs (c) to (i) of this section for higher pressure liquids) must be prepared for shipment in containers as follows:

(1) As prescribed in paragraphs (a) or (b) of this section, irrespective of flash point.

(2) Specification 6B, or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Specification 37A or 37B (§§178.131, 178.132 of this subchapter). Metal drums (single-trip) not over 5 gallons with welded side seams. Not authorized for transportation by air.

(4) [Reserved]

(l) Viscous flammable liquids with flash point above 20° F. to 73° F. and having a vapor pressure which does not exceed 18 pounds per square inch, absolute, at 100° F. Viscous flammable liquids with flash point above 20° F. to 73° F. and having a vapor pressure which does not exceed 18 pounds per square inch, absolute, at 100° F. must be packaged as follows:

(1) As prescribed in paragraphs (e) to (i) of this section.

(2) Spec. 17E or 17H (§178.116 or §178.118 of this subchapter). Metal drums (single-trip).

(m) Flammable liquids which are also organic peroxides, oxidizers, radioactive material, corrosive liquids or poison B liquids. A flammable liquid which is also an organic peroxide, oxidizer, radioactive material, corrosive liquid, or poison B liquid must be packed as follows:

(1) Specification 1A, 1D, 1EX (single-trip) or 1M (§§178.1, 178.4, 178.6, 178.17 of this subchapter). Glass carboys in boxes, plywood drums or expanded polystyrene packagings. Rated capacity may not exceed 5 gallons for Specification 1A. Not authorized for transportation by aircraft.

(2) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers which must be glass, earthenware, or polyethylene not over 1 gallon capacity each. Inside containers must be cushioned with noncombustible packaging material in sufficient quantity to absorb the contents of the inner container.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard box with inside metal cans, glass or earthenware containers not over 1-quart capacity each. Inside containers must be cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container. Use of the inside metal can is authorized only for materials which will not react dangerously with the metal can, or be decomposed by contact with it.

(4) Specification 5, 5A, 5B, 5C, 5P, 17C (single-trip), or 17E (single-trip) (§§178.80, 178.81, 178.82, 178.83, 178.92, 178.115, 178.116 of this subchapter). Metal barrels or drums. Removable head packagings over 16 gallons capacity are not authorized. Authorized only for materials which will not react dangerously with the drum metal, or be decomposed by contact with it.

[2] The use of existing tank cars authorized, but new construction not authorized.

(5) Specification 37P (§178.133 of this subchapter). Steel drums, not over 15 gallons capacity, with polyethylene liner (non-reusable container). Drums exceeding 1 gallon capacity must be constructed of at least 24-gauge metal. Authorized only for materials that will not react with polyethylene and result in container failure. Not authorized for transportation by air.

(6) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with inside Specification 2E (§178.249 of this subchapter) polyethylene bottles not over 1-gallon capacity each. Not more than four 1-gallon polyethylene bottles shall be packed in one outside fiberboard box. Authorized only for material which will not react dangerously with or be decomposed by contact with polyethylene.

(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with one inside polyethylene bottle not over 5-gallons capacity, as specified by §178.205-34 of this subchapter. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.

(8) Specification 12P (§178.211 of this subchapter). Fiberboard box with one inside specification 2U (§178.24 of this subchapter) polyethylene container of not over 6 gallon capacity or two inside specification 2U polyethylene containers of not over 2½ gallon capacity each. Authorized only for material which will not react with or cause decomposition of polyethylene. Not authorized for transportation by air.

(9) Specification steel or nickel cylinders as prescribed for any compressed gas except acetylene. All cylinder valves must be protected by one of the methods described in §173.301(g)(1), (2), or (3) of this part. See §173.34(e)(16).

(10) Specification MC 303 or MC 304: Cargo tank meeting §178.343-2(c) of this subchapter. If the cargo tank is constructed with bottom outlets, they must meet §178.342-5(a) of this subchapter. Not authorized for flammable liquids which are also organic peroxides. MC 303 not authorized for transportation by water.

(11) Specification MC 305, MC 306, or MC 307 (§§178.340, 178.341, 178.342 of this subchapter). Cargo tanks meeting §178.343-2(c) of this subchapter. Not authorized for flammable liquids which are also organic peroxides. MC 305 and MC 306 not authorized for transportation by water.

(12) Specification MC 310, MC 311, or MC 312 (§§178.340, 178.343 of this subchapter). Cargo tanks. If the cargo tank is constructed with bottom outlets, they must meet §§178.342-5(a) and 178.343-5 of this subchapter. Not authorized for flammable liquids which are also organic peroxides.

(13) Specification 103AW, 103ALW, 103A-ALW, 103ANW, 103BW, 103CW, 103DW, 103EW, 103W, 104W, 105A100W, 111A60ALW1, 111A60ALW2, 111A60W1, 111A60W2, 111A60W5, 111A100F2, 111A100W3, 111A100W6, 115A60W6, or AAR206W (§§179.200, 179.201, 179.220 of this subchapter). Tank cars. All special requirements for tank cars according to flashpoint, vapor pressure, and viscosity in paragraphs (a) through (f) of this section apply. Not authorized for flammable liquids which are also organic peroxides.

(14) Specification 112A200W or 114A340W (§§179.100, 179.101 of this subchapter). Tank cars. Authorized only for propylene oxide except 112A200W also authorized for acrylonitrile and dichlorobutene.

(15) Specification 51 (§178.245 of this subchapter). Portable tank. Authorized only for a flammable liquid which is also a Poison B liquid. Bottom outlets are not authorized.

(16) Specification 6D or 37M (nonreusable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks with an inside specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene container. Authorized only for materials that will not react with polyethylene and result in container failure.

(17) Specification 6D or 37M (nonreusable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks with an inside specification 2U (§178.24 of this subchapter) polyethylene container, not over 5 gallons capacity. Authorized only for materials that will not react with polyethylene and result in container failure.

(18) IM portable tanks, under the conditions specified in the IM Tank Table. Not authorized for flammable liquids which are also organic peroxides or oxidizers.

(19) Specification 34 (§178.19 of this subchapter). Polyethylene drum. Authorized only for flammable liquids which are also organic peroxides or corrosive liquids. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

§ 173.120 Automobiles, motorcycles, tractors, or other self-propelled vehicles. (a) Automobiles, motorcycles, tractors, or other self-propelled vehicles, equipped with flammable liquid fuel tanks, provided these tanks are securely closed, are not subject to any other requirements for transportation by rail or highway. For transportation by air see paragraph (d) of this section.

(b) Engines or motors (internal combustion). Engines or motors (internal combustion) employing liquid fuel classed as flammable liquid in this chapter, whether shipped separately or as a part of other apparatus, unless specifically exempt in paragraph (a) of this section, must have their fuel tanks completely drained. Fuel may be left in the carburetor, fuel pump, and fuel lines provided the total flammable fuel content does not exceed 16 ounces and provided the lines are tightly closed to prevent leakage of the fuel.

(c) Truck bodies or trailers on flat cars. Except as specified in §173.21, truck bodies or trailers with automatic heating or refrigerating equipment of the flammable liquid type may be shipped with fuel tanks filled and equipment operating or not operating, when used for the transportation of other freight and loaded on flat cars as part of a joint rail highway movement. The heating or refrigerating equipment is considered to be a part of the truck body or trailer, and is not subject to any other requirements of this subchapter.

(d) Except as provided in §175.305 of this subchapter, each automobile, motorcycle, tractor, or other self-propelled vehicle, powered by an internal combustion engine fueled by a flammable or combustible liquid, when offered for transportation by air, must have the fuel tank drained of all fuel and have the tank opening tightly closed.

§ 173.121 Carbon bisulfide (disulfide). (a) Carbon bisulfide must be packed in specification containers as follows:

(1) [Reserved]

(2) Spec. 12A or 12B (§178.210 or §178.205 of this subchapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over 1 pint each, or metal cans, not over 1 quart each. Outside containers not to exceed 65 pounds gross weight.

(3) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, or 178.191 of this subchapter). Wooden boxes with strong inside metal containers or with inside glass or earthenware containers not over 5 pints capacity each.

(4) Spec. 17E (§178.116 of this subchapter). Metal drums (single-trip) not over 5 gallons capacity each, with openings not exceeding 2.3 inches in diameter.

(5) Spec. 5, 5A, or 17C (single-trip) (§§178.60, 178.81, or 178.115 of this subchapter). Metal barrels or drums not over 55 gallons capacity each, with openings not exceeding 2.3 inches in diameter.

(6) Tank cars as prescribed in §173.119(a)(12). (See §173.10 for shipping instructions.)

(7) Specification cylinders as prescribed for any compressed gas except acetylene.

§ 173.122 Acrolein, inhibited. (a) Acrolein must be inhibited when shipped, and when offered for transportation must be packaged as follows:

(1) Spec. 5, 5A, or 5B (§§178.60, 178.81, or 178.82 of this subchapter). Metal drums not over 55 gallons capacity each. Spec. 5 or 5B drums must have no opening exceeding 2.3 inches in diameter.

(2) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with strong inside tight metal containers not over 5 gallons capacity each.

(3) Specification 105A300W (§§179.100, 179.101, of this subchapter) tank car.

(i) Each tank car must be stenciled DOT-105A200W, and must be equipped with the 150 psig safety relief valve required by that specification.

(ii) Each tank car must be marked "ACROLEIN" in accordance with the requirements of §172.330 of this subchapter.

(4) [Reserved]

(5) Specification 4B240, 4BA240, or 4BW240 (§§178.50, 178.51, 178.61 of this subchapter) welded cylinders each having a water capacity not exceeding 500 pounds.

(6) Specification 51 (§178.245 of this subchapter) portable tanks each having a water capacity not exceeding 425 gallons.

(b) Acrolein must be inhibited and when offered for transportation by cargo-only aircraft must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§178.168, §178.169, §178.170, §178.185, §178.190, or §178.191 of this subchapter). Wooden boxes or Spec. 12B (§178.205 of this subchapter) fiberboard boxes having not more than one inside glass container of not over 1-quart capacity, securely cushioned within a metal container.

§ 173.123 Ethyl chloride. (a) Ethyl chloride must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, or 178.191 of this subchapter). Wooden boxes with glass, earthenware, or metal inside containers not over 1 pound capacity each.

(2) Spec. 12B (§178.205 of this subchapter) fiberboard boxes with glass, earthenware, or metal inside containers not over 1 pound capacity each. Outside containers not to exceed 65 pounds gross weight.

(3) Spec. 5A (§178.81 of this subchapter) Metal barrels or drums not over 33 gallons capacity each.

(4) Cylinders as prescribed for any compressed gas, except acetylene.

(5) Specification 105A100,* 105A100W, 111A100W4, 112A200W, 112A400F, or 114A340W (§§179.100, 179.101, 179.200, 179.201 of this subchapter) tank cars. Specification 114A340W tank cars must not be equipped with any bottom outlet. Bottom washout permitted. (See Note 1 following §173.119(l)(3)) (See §173.10 for shipping instructions.)

(6) Specification MC 330 or MC 331 (§178.337) of this subchapter. Cargo tanks. Tank bottom outlets must be equipped with valves conforming with §178.337-11(c) of this subchapter.

(7) Specification 51 (§178.245 of this subchapter) portable tanks.

(b) Outage for all containers except tank cars must be 7.5 percent or more at 70° F. Outage for tank cars must be 4.2 percent or more at 70° F.

(c) Maximum quantity in one package for cargo aircraft only is limited to 300 pounds in cylinders and 15 pounds in other packagings.

§ 173.124 Ethylene oxide. (a) Ethylene oxide must be packed in specification containers as follows and copper or copper bearing alloys shall not be used in any part of a container, container valve or other container appurtenance if that part is normally in contact with ethylene oxide liquid or vapor.

(1) Specification 15A, 15B, 15C, 16A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.191 of this subchapter) wooden boxes and Spec. 12B (§178.205 of this subchapter) fiberboard boxes, with inside metal packaging not over 12-ounce capacity each. Each inside packaging must have a minimum bursting strength of 180 psig as prepared for shipment and be provided with a safety vent having a minimum diameter of 0.1023 inch and closed with fusible metal having a yield temperature of 157° to 170° F. The safety vent opening must be hot tinned before filling with fusible metal. Filling must be such that the container will not be liquid full below 185° F. Each inside packaging must be completely insulated except for top closure. Not more than 12 inside packages nor more than one layer of packagings may be packed in one outside box.

(2) Cylinders as prescribed for any compressed gas, except acetylene, not exceeding 30 gallons nominal water capacity, which meet the following requirements: All cylinders must be seamless or steel welded. Cylinders must be equipped with safety devices of the fusible plug type with threaded straight bore orifice, with yield temperature of 157° to 170° F, having a minimum vent area of 0.0055 square inch per pound of water capacity for packagings not over 1-gallon capacity and 0.0012 square inch per pound of water capacity for all packagings over 1-gallon capacity. Each cylinder must be tested for leakage at a pressure of at least 15 psig with an inert gas before each refilling. Fillings must be such that the packaging will not be liquid full at 185° F. Pressurizing valves must be provided for all packaging over 1-gallon capacity. Eductor tubes must be provided for all packagings over 5-gallon capacity. Cylinders having a water capacity in excess of 1-gallon must be insulated.

(3) In addition to specification packagings prescribed in this section, ethylene oxide may be shipped when packed in strong noncombustible outside packagings, with inside containers which must be securely sealed glass ampules or vials, contents not over 100 grams each, or inside aluminum cartridges, contents not over 138 grams each, cushioned in vermiculite or equally efficient noncombustible cushioning material. Not more than 100 grams of ethylene oxide shall be packed in any outside packaging except a maximum of 12 aluminum cartridges may be packed in a DOT Specification 12B (§178.205 of this subchapter) fiberboard box having top and bottom pads and an inside perimeter liner. A maximum of 10 such boxes may be overpacked in a master carton under the provisions of §173.25(a).

(4) Spec. 5P (§178.92 of this subchapter) Lagged steel drums not over 61 gallons capacity each. Drums must be equipped with safety devices of the fusible plug type with threaded straight bore orifice, with yield temperature of 157 to 170° F having a minimum vent area of 0.0055 square inch per pound of water capacity of the container for containers not over 1 gallon capacity and 0.0012 square inch per pound of water capacity of the container for all containers over one gallon capacity. Each drum must be tested for leakage at a pressure of at least 15 p.s.i. gauge with an inert gas before each refilling. Top head of each drum must be plainly marked with paint "Keep This End Up." Filling shall be such that the container will not be liquid full below 185° F. and the maximum filling for 61 gallon drums must not exceed 55 gallons of ethylene oxide at 60° F.

(5) Specification 105A100W or 111A100W4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter) tank car. Each 105A***W series tank car must be equipped with a 75 p.s.i.g. safety valve and must be stenciled 105A100W. Outage of each tank must be sufficient to prevent the tank from becoming liquid full at 105° F. Each tank, loaded or empty, must be padded with dry nitrogen or other suitable dry inert gas in sufficient quantity to render the vapor phase in the tank nonflammable at a temperature up to 105° F. Consideration must be given to the lading temperature and the solubility of the gas in ethylene oxide as well as the partial pressure required of the padding gas used to provide this protection. The gas must be free of impurities which may cause the ethylene oxide to rearrange chemically or to polymerize, decompose, or undergo other violent chemical reaction. See §§179.102-12 and 179.202-18 of this subchapter for special requirements for tank cars authorized for ethylene oxide. Openings in tank heads to facilitate application of nickel lining are authorized on tank cars constructed before January 1, 1975. These openings must be closed in an approved (§179.3 of this subchapter) manner (see Note 1 of §173.119(l)(3)).

(i) Each tank car must be marked "ETHYLENE OXIDE" in accordance with the requirements of §172.330 of this subchapter.

(ii) Each Specification 105 tank car built after August 31, 1981, and before March 1, 1984, used for the transportation of ethylene oxide, must conform to DOT Specification 105J, except for the safety relief valve requirements of §179.106-2(c)(4). Each Specification 105 tank car built after February 29, 1984, used for the transportation of ethylene oxide, must conform to DOT Specification 105J.

(iii) After December 31, 1986, each Specification 105 tank car built before September 1, 1981, having a water capacity (shell full volume, including manways) exceeding 18,500 U.S. gallons and used for the transportation of ethylene oxide shall conform to Specification 105J.

(iv) After December 31, 1986, each Specification 111 tank car with a water capacity (shell full volume, including manways) exceeding 18,500 U.S. gallons, used for the transportation of ethylene oxide, shall conform to DOT Specification 111J.

(v) Specification 111 tank cars built after March 1, 1984, are not permitted for the transportation of ethylene oxide.

(6) Specification 51 (§178.245 of this subchapter) portable tank. Each tank, loaded or empty, must be padded with dry nitrogen or other suitable dry inert gas in sufficient quantity to render the vapor phase in the tank nonflammable at a temperature up to 105° F. Consideration must be given to the lading temperature and the solubility of the gas in ethylene oxide as well as the partial pressure required of the padding gas used to provide this protection. The gas must be free of impurities which may cause the ethylene oxide to rearrange chemically or to polymerize, decompose, or undergo other violent chemical reaction. Each tank must be constructed to be in compliance with the following requirements:

(i) The tank must be insulated with mineral wool or glass fiber of sufficient thickness so that the thermal conductance at 60° F. is not more than 0.075 B.t.u. per hour, per square foot, per degree Fahrenheit temperature differential. When a tank is equipped with fusible plugs instead of a safety relief valve or frangible disc, insulation must meet the requirements of paragraph (a)(6)(iii) of this section.

(ii) The insulating material of the tank must be protected by a steel jacket having a minimum thickness of 12 gauge. This jacket must be applied to prevent moisture from coming in contact with the insulation.

(iii) Each tank must be equipped with a safety relief valve or frangible disc, meeting the requirements of §173.315, set to relieve at 75 p.s.i.g. Instead of a safety relief valve or frangible disc, a tank may be equipped with safety devices of the fusible plug type with threaded straight base orifice, with yield temperature of 157° to 170° F, having a minimum vent area of 0.0012 square inch per pound of water capacity of the container. When a fusible plug is used instead of a safety relief valve or frangible disc, the tank must be insulated with mineral wool or glass fiber of such insulating properties and required additional thickness that the tank filled as for shipment will not rupture in a fire.

(iv) Filling must be such that the tank will not be liquid full below 185° F.

(v) Copper, silver, mercury, magnesium, or their alloys may not be used in any part of the tank or appurtenances if that part or appurtenance is normally in contact with ethylene oxide liquid or vapor.

(vi) Neoprene, natural rubber, and asbestos gaskets are prohibited. All packings and gaskets must be constructed of materials which do not react spontaneously with or lower the autoignition temperature of ethylene oxide.

(vii) The capacity of the tank may not exceed 300 gallons.

(b) The maximum quantity in one package for cargo aircraft only is limited to 300 pounds in cylinders and 15 pounds in other packagings.

* The use of existing tank cars authorized but new construction not authorized

§ 173.125 Alcohol, n.o.s. (flammable liquid). (a) Except as otherwise provided in this Part, alcohol, n.o.s., which is classed as a flammable liquid must be packaged as follows:

(1) In containers as prescribed in §173.119(a) and (b).

(2) Securely closed metal tanks of not exceeding 16 gallons capacity, made of metal not lighter than 20 gauge, United States standard, packed in strong outside wooden boxes, may be used for the transportation of natural history or laboratory specimens preserved in alcohol, when shipped by or for the United States Government.

(3) [Reserved]

(4) [Reserved]

(5) [Reserved]

(6) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles, not over 1-gallon capacity each, suitably cushioned to prevent movement within the box.

(7) Specification 34 (§178.19 of this subchapter). Polyethylene drum.

§ 173.126 Nickel carbonyl. Nickel carbonyl must be packed in specification steel or nickel cylinders as prescribed for any compressed gas, except acetylene. A cylinder used exclusively for nickel carbonyl may be given a complete external visual inspection in lieu of the interior hydrostatic pressure test required by §173.34(e) of this part. Visual inspection must be in accordance with CGA Pamphlet C-6. All cylinder valves must be protected by one of the methods described in §173.301(g)(1), (2) or (3) of this part.

§ 173.127 Nitrocellulose or collodion cotton, fibrous or nitrostarch, wet; nitrocellulose flakes; colloided nitrocellulose, granular, flake, or block, and lacquer base or lacquer chips, wet. (a) Nitrocellulose, fibrous, wet with alcohol or solvent, must contain at least 25 percent by weight of alcohol or a solvent with flash point not lower than 25° F; collodion cotton, fibrous and nitrostarch, wet with alcohol or a solvent, must contain at least 30 percent by weight of alcohol or a solvent with flash point not lower than 25° F; nitrocellulose flakes; colloided nitrocellulose, granular or flake; lacquer base or lacquer chips, wet with alcohol or a solvent, must contain at least 20 percent by weight of alcohol or a solvent with flash point not lower than 25° F, and nitrocellulose blocks wet with alcohol must contain at least 25 percent by weight of alcohol and must be packed in specification containers as follows:

(1) Containers, except cargo tanks or tank cars, as prescribed in §173.119.

(2) Specification 6B, 6C, or 6J (§178.98, §178.99, §178.100 of this subchapter). Metal barrels or drums not over 55 gallons capacity. Specification 6J (§178.100 of this subchapter) drums must have removable heads of 14 gauge metal or 16 gauge metal with one or more corrugations near the periphery and heads must have a minimum convexity of ⅜ inch; each drum must have three rolled or swedged-in hoops, one of which shall be in the body near the curl.

(3) [Reserved]

(4) Spec. 37A or 37B (§178.131 or §178.132 of this subchapter). Metal barrels or drums.

(5) Spec. 6J (§178.100 of this subchapter). Metal drums. Authorized only for nitrocellulose in solid block forms and wet with alcohol to not less than 25 percent by weight. Authorized only for carload or truckload shipments.

(b) Except for Spec. 37A which is limited to 480 pounds, gross weight of any container must not exceed 490 pounds.

§ 173.128 Paint and paint related materials (flammable liquids). (a) Except as otherwise provided in this part, the description "Paint" is the proper shipping name for paint, lacquer, enamel, stain, shellac, varnish, liquid aluminum, liquid bronze, liquid gold, liquid wood filler, and liquid lacquer base. The description "Paint related material" is the proper shipping name for a paint thinning, reducing or removing compound. However, if a more specific description is listed in §172.101, that description must be used. Paint and paint related material must be packaged as follows:

(1) As prescribed in §173.119, according to flash point, pressure, or viscosity.

(2) Specification 37A or 37B (§178.131, §178.132 of this subchapter). Metal drums (single-trip) not over 5 gallons capacity, with welded side seams for drums over 2 gallons capacity, irrespective of flash point or viscosity. Specification 37A metal drums constructed with 26-gauge body sheets, 24-gauge removable heads, and 26-gauge bottom heads are authorized for not over 80 pounds gross weight. Not authorized for transportation by air.

(3) Specifications 52[1] or 57 (§§178.251, 178.253 of this subchapter). Metal portable tank. Not authorized for transportation by water except as prescribed in §173.119(b)(6) of this subchapter.

(4) Specification 37C (§178.135 of this subchapter). Metal drums (non-reusable containers) not over 5 gallons capacity each. Authorized only for materials having flash point above 20° F. Not authorized for transportation by air.

(5) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(b) The flammable liquids identified in paragraph (a) of this section, in glass packagings of not over 1 quart capacity each, or in metal packagings of not over 5 gallons capacity each, further overpacked in a strong outside packaging are excepted from the specification packaging requirements of this part.

(c) Special exceptions for shipment of paint and paint related material in the ORM-D class are provided in subpart N of this part.

§ 173.130 Refrigerating machines. Refrigerating machines assembled for shipment and containing limited quantities of 15 pounds or less of a flammable liquid for their operation are excepted from labeling and the specification packaging requirements of this subchapter (except when offered for transportation by air). In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

§ 173.131 Road asphalt, or tar, liquid. (a) Road asphalt, or tar, liquid, must be packaged as follows:

(1) As prescribed in §173.119, according to flash point, pressure, or viscosity.

(2) In cargo tanks that are at least equivalent in design and construction to Specification MC-306 (§§178.340, 178.341 of this subchapter) except for the requirements of §§178.340-10, 178.341-3, 178.341-4, and 178.341-5.

§ 173.132 Adhesive; cement; container cement; linoleum cement; pyroxylin cement; rubber cement; tile cement; wallboard cement, and coating solution. (a) Except as otherwise provided in this part, a flammable liquid which is an adhesive, cement, container cement, linoleum cement, pyroxylin cement, rubber cement, tile cement, wallboard cement, or coating solution must be packaged as follows:

(1) As prescribed in §173.119, irrespective of flash point or viscosity.

(2) Specification 52[1] or 57 (§§178.251, 178.253 of this subchapter). Metal portable tank. Not authorized for transportation by water except as prescribed in §173.119(b)(6) of this subchapter.

(3) Specification 37C (§178.135 of this subchapter). Metal drums (non-reusable container) not over 5 gallons capacity each. Authorized only for materials having flash point above 20° F. Not authorized for transportation by air.

(b) The adhesive and cements identified in paragraph (a) of this section, except any adhesive or cement containing carbon bisulfide (carbon disulfide), in glass or leakproof packagings consisting of a fiberboard body and metal tops and bottoms of not over 1-quart capacity each, or metal packagings of not over 5 gallons capacity each, further overpacked in a strong outside packaging are excepted from the specification packaging requirements of this part.

§ 173.133 Spirits of nitroglycerin. (a) Spirits of nitroglycerin means nitroglycerin in ethyl alcohol or in propylene glycol. Solutions of nitroglycerin means nitroglycerin in acetone. These mixtures and solutions may not contain more than 10 percent by weight of nitroglycerin. They must be packed in specification packings as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes lined with paraffined paper, Spec. 2L (§178.30 of this subchapter), and with inside packagings securely closed with rubber stoppers tied in place. The inside packagings must be entirely surrounded by at least 2 inches of dry, fine sawdust or kieselguhr. Not more than 6 quarts of the spirits or solutions may be packed in any outside wooden box. Inside packagings made of metal are not authorized.

(2) Specification 12A or 12B (§§178.210 or 178.205 of this subchapter). Fiberboard boxes or Spec. 21C (§178.224 of this subchapter) fiber drums laminated with a 0.004 inch polyethylene lining. Inside packagings must be Spec. 2E polyethylene bottles or Spec. 2U polyethylene containers not exceeding 5 gallons capacity each, overpacked in a strong polyethylene bag. The inside packagings must be entirely

[1] Use of existing tanks authorized. Construction not authorized after May 31, 1972.

surrounded by at least 2 inches of dry, fine sawdust or kieselguhr. Not more than 6 quarts of the nitroglycerin mixture may be packed in one outside packaging, except that a maximum of 5 gallons of a nitroglycerin-propylene glycol mixture may be packaged in one Spec. 2U and overpacked in the fiber drum.

(b) Spirits of nitroglycerin consisting of not over 1 percent by weight of nitroglycerin in ethyl alcohol or propylene glycol, in addition to containers specified in paragraphs (a)(1) and (a)(2) of this section, may be packed in specification packagings as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1-quart capacity each, cushioned by at least 2 inches of dry, fine sawdust or kieselguhr.

§ 173.134 Pyroforic liquids, n.o.s. (a) Pyroforic liquids, n.o.s., must be packed in specification packagings as follows:

(1) Specification steel or nickel cylinders prescribed for any compressed gas except acetylene having a minimum design pressure of 175 pounds per square inch are authorized. Cylinders with valves must be:

(i) Equipped with steel valve protection caps or collars, when shipped loose.

(ii) Overpacked in a strong wooden box; or

(iii) Overpacked in a Specification 12A or 12B (§§178.210, 178.205 of this subchapter) fiber board box or Specification 33A (§178.150 of this subchapter) polystyrene case. When overpacked, cylinders must be secured to protect all valves. Unless packed in a box or case, any safety relief device must be in the vapor space of any loaded cylinder. (See §§174.300(d) and 177.837(d) of this subchapter)

(2) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes or Spec. 12B (§178.205 of this subchapter) fiberboard boxes enclosing not more than four strong tight metal cans with inside containers of glass or metal, not over one-quart capacity each, having positive screw cap closures adequately gasketed ahead of the threads. Inside containers must be cushioned on all sides with dry, absorbent, incombustible material in a quantity sufficient to absorb the entire contents. The strong tight metal cans must be closed by positive means, not by friction.

(3) Spec. 17C or 37A (§§178.115 or 178.131 of this subchapter). Metal drums (sing'e-trip) with inside metal cans not over 1 gallon capacity each, constructed of not less than 28 gauge electro-coated tin plate closed by positive means, not friction. Inside containers shall have no opening exceeding 1 inch diameter and must be surrounded on all sides with incombustible cushioning material. Spec. 17C, 30-gallon capacity drums, shall contain not more than 20 gallons of pyroforic liquids, n.o.s. per drum and 55-gallon capacity drums shall contain not more than 35 gallons of pyroforic liquids, n.o.s. per drum; each layer of inside containers must be separated by a tin plate separator in addition to cushioning material. Spec. 37A drums shall not exceed 5 gallons capacity each.

(4) Spec. 105A300-W (§§179.100 and 179.101 of this subchapter) tank cars.

(5) Spec. 51 (§178.245 of this subchapter). Portable tanks having a minimum design pressure of 175 pounds per square inch. Safety relief devices must communicate with the vapor space when tanks are fully loaded.

(6) Specification MC 330 or MC 331 (§178.337 of this subchapter). Cargo tanks having a minimum design pressure of 175 p.s.i. Safety relief devices must communicate with the vapor space when tanks are fully loaded. Tank bottom outlets must be equipped with valves conforming with §178.337-11(c) of this subchapter.

§ 173.135 Diethyl dichlorosilane, dimethyl dichlorosilane, ethyl dichlorosilane, ethyl trichlorosilane, methyl trichlorosilane, trimethyl chlorosilane, and vinyl trichlorosilane. (a) Diethyl dichlorosilane, dimethyl dichlorosilane, ethyl dichlorosilane, ethyl trichlorosilane, methyl trichlorosilane, trimethyl chlorosilane, and vinyl trichlorosilane must be packaged as follows:

(1) Specification 15A, 16B, or 19B (§§178.168, 178.186, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1 gallon capacity each, securely closed and cushioned with incombustible absorbent material.

(2) Spec. 17H or 37A (§178.118 or §178.131 of this subchapter). Metal drums (sing'e-trip) with glass inside containers not over 1 gallon capacity each securely closed and cushioned with incombustible absorbent material.

(3) Spec. 5A (§178.81 of this subchapter). Metal drums not over 55 gallons capacity.

(4) [Reserved]

(5) Specifications 5, 5B, 5C, and 17E (sing'e-trip) (§§178.80, 178.82, 178.83, 178.116 of this subchapter). Metal drums. Not authorized for shipment by air.

(6) Specification steel or nickel cylinders as prescribed for any compressed gas except acetylene.

(7) Spec. 103,[1] 103-W, 111A60-F-1, or 111A60-W-1 (§§179.200, 179.201 of this subchapter). Tank cars, without bottom discharge outlet.

(8) Spec. 105A100,[1] 105A100-W, or 111A100-W-4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars.

(9) Specification MC 300, MC 303, MC 304, MC 306, MC 307, MC 330 or MC 331 (§§178.340, 178.341, 178.342, 178.337 of this subchapter). Cargo tanks having cargo tanks of steel or stainless steel construction. Bottom outlets, if any, must be equipped with valves conforming with §178.342-5(a) of this subchapter.

(10) Specification 51 (§178.245 of this subchapter). Portable tanks.

(11) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.136 Methyl dichlorosilane and trichlorosilane. (a) Methyl dichlorosilane and trichlorosilane must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1 quart capacity each, securely closed and cushioned with incombustible absorbent material.

(2) Spec. 17H or 37A (§178.118 or §178.131 of this subchapter). Metal drums (sing'e-trip) with glass inside containers not over 1 quart capacity each securely closed and cushioned with incombustible absorbent material.

(3) Specification 5A, 5B, or 5C (§§178.81, 178.82, 178.83 of this subchapter). Metal drums not over 55 gallons capacity each. Specification 5B drums must have no opening exceeding 2 3 inches in diameter. Not authorized for shipment by air.

(4) [RESERVED]

(5) Specification steel or nickel cylinders as prescribed for any compressed gas, except acetylene.

(6) Spec. 103,[1] 103-W, 111A60-F-1, or 111A60-W-1 (§§179.200, 179.201 of this subchapter). Tank cars, without bottom discharge outlet.

(7) Spec. 105A100,[1] 105A100-W, or 111A100-W-4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars.

(8) Specification MC 330 or MC 331 (§178.337 of this subchapter). Cargo tanks. Tank bottom outlets must be equipped with valves conforming with §178.337-11(c) of this subchapter.

(9) Spec. 51 (§178.245 of this subchapter). Portable tanks.

(10) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.137 Lithium aluminum hydride, ethereal. (a) Lithium aluminum hydride, ethereal, must be packed in specification containers as follows:

(1) Specification 15A or 19B (§178.168, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1 quart each enclosed in air-tight metal cans and cushioned with sufficient incombustible cushioning material to completely absorb the contents in event of leakage.

(2) Specification 6B, 6C, or 17H (sing'e-trip) (§§178.98, 178.99, 178.118 of this subchapter). Metal barrels or drums with not more than one inside glass container not exceeding 2 gallons capacity. The inside container must be completely cushioned in sufficient incombustible cushioning material to completely absorb the contents in event of breakage.

(3) Specification steel or nickel cylinders as prescribed for any compressed gas except acetylene. Valves or fittings must be protected from injury by a metal cap or equally efficient device securely attached to the cylinder.

§ 173.138 Pentaborane. Specification steel or nickel cylinders prescribed for any compressed gas except acetylene are authorized. Each cylinder must be protected with a valve protection cap or must be packed in a strong wooden box and blocked therein so as to protect the valve from injury under conditions normally incident to transportation. Cylinders not exceeding 2 inches in diameter nor 6 inches in length, excluding the length of the valve, may also be packed in strong solid fiberboard boxes, having no outside dimension less than 4 inches, completely filled with layers of strong corrugated fiberboard, the center of which shall be cut out to fit the cylinder valve, and otherwise so designed that neither the cylinder nor the valve will be in contact with the wall of the box under conditions normally incident to transportation.

§ 173.139 Ethylene imine, inhibited, and propylene imine, inhibited. (a) Ethylene imine and propylene imine must be inhibited and must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§178.168, §178.169, §178.191 of this subchapter). Wooden boxes with inside securely sealed glass ampules or glass bottles, contents not over 16 fluid ounces or 1 pound each, in tightly closed metal cans. If more than one ampule or bottle is

[1] Use of existing tanks authorized. Construction not authorized after May 31, 1972.

packed in a metal can, ampules or bottles must be separated by fiberboard partitions. Ampules or bottles must be cushioned with sufficient incombustible cushioning material to completely absorb contents in event of leakage. Not more than 5 pints of liquid may be packed in any outside wooden box.

(2) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with not more than four inside metal drums, Spec. 37B (§178.132 of this subchapter), not over 1-gallon capacity each, or not more than one Spec. 37B metal drum of 5 gallons capacity, in one outside box. Inside drums must be surrounded on all sides with incombustible absorbent cushioning material.

(3) Specification 6B, 6C, or 6J (§§178.93, 178.99, 178.100 of this subchapter). Metal barrels or drums, with one inside Specification 17E (§178.116 of this subchapter) metal drum not over 30 gallons capacity. Inside drum must be completely surrounded with incombustible cushioning material.

(4) Specification 104W, 105A100W, and 111A60W1 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars, for ethylene imine, inhibited only. Specification 111A60W1 tank cars must be insulated in accordance with §179.200–4 of this subchapter.

(5) Spec. 5A (§178.81 of this subchapter). Metal barrels or drums not over 55-gallon capacity. Authorized for propylene imine, inhibited only.

(6) Specification 4B240, 4BA240 or 4BW240 (§§178.50, 178.51, 178.61 of this subchapter). Cylinders of all welded construction.

§ 173.140 Zirconium, metallic, solutions, or mixtures thereof, liquid. (a) Zirconium, metallic, solutions, or mixtures thereof, liquid, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside metal containers. Each inside container shall not contain more than 20 individual glass or porcelain jars, not exceeding 2-ounce capacity each, securely closed and completely cushioned in incombustible cushioning material in sufficient quantity to completely absorb the contents in event of leakage.

§ 173.141 Amyl mercaptan, butyl mercaptan, ethyl mercaptan, isopropyl mercaptan, propyl mercaptan, and aliphatic mercaptan mixtures. (a) Amyl mercaptan, butyl mercaptan, ethyl mercaptan, isopropyl mercaptan, propyl mercaptan, and aliphatic mercaptan mixtures must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with securely closed inside metal containers not over 5 gallons capacity each, or in tightly closed glass bottles not exceeding 1 quart capacity each, securely cushioned in incombustible cushioning material in sufficient quantity to completely absorb the contents in event of leakage.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with securely closed inside metal containers not over 1 gallon capacity each; or in tightly closed glass bottles not exceeding 1 quart capacity each, securely cushioned in sufficient quantity of absorbent material to completely absorb the contents in event of leakage.

(3) Spec. 5, 5A, 5B, or 5C (§§178.80, 178.81, 178.82 or 178.83 of this subchapter). Metal barrels or drums, with not more than one opening not exceeding 2.3 inches in diameter and not more than one vent opening not exceeding 1 inch in diameter. Gaskets are required and must be not less than 1/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material.

(4) Spec. 17C (§178.115 of this subchapter). Metal drums (sing'e-trip), with not more than one opening not exceeding 2.3" in diameter and not more than one vent opening not exceeding 1 inch in diameter. Gaskets are required and must be not less than 1/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material.

(5) Spec. 17E (§178.116 of this subchapter). Metal drums (sing'e-trip), not over 5 gallons capacity, without opening except bung hole not exceeding 2.3 inches in diameter. Gaskets are required and must be not less than 1/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material. (See also paragraph (a)(6) of this section.)

(6) Spec. 17E (§178.116 of this subchapter). Metal drums (sing'e-trip), not over 55 gallons capacity, with not more than one opening not exceeding 2.3 inches in diameter and not more than one vent opening not exceeding 1 inch in diameter. Gaskets are required and must be not less than 1/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material. Authorized only for mercaptans having flash point above 20° F.

(7) Specification 103W, 105A100,[1] 105A100W, 105A200ALW, 105A500X, 110A500W, 111A60F1, 111A60W1, 112A200W, 112A400F, or 114A340W (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars. Specifications 103W, 111A60F1, 111A60W1, and 114A340W tank cars must not be equipped with any bottom outlet. Bottom washout permitted. Specification 105A200ALW is authorized for ethyl mercaptan only and is not authorized for transportation by water.

(8) Specification MC 330 or MC 331 (§178.337). Cargo tanks. Tank bottom outlets must be equipped with valves conforming with §178.337–11(c) of this subchapter.

(9) Specification steel or nickel cylinders as prescribed for any compressed gas except acetylene.

(10) Specification 51 (§178.245 of this subchapter). Portable tank. Each tank must be equipped with safety relief valves which must be in compliance with all requirements of §173.315(i). A tank must not be liquid full at 130° F.

(11) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Warning or odorizing devices containing not more than one ounce of a mercaptan or an aliphatic mercaptan mixture in a hermetically sealed container or in a hermetically sealed portion of the device are not subject to the regulations in Parts 170–189 and 397 of this title.

§ 173.143 Methylchloromethyl ether, anhydrous. (a) Methylchloromethyl ether, anhydrous, must be packed in specification containers as follows:

(1) Spec. 5K (§178.83 of this subchapter). Nickel barrels or drums.

(2) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers, not over 1 gallon capacity each, except that inside containers up to 3 gallons each are authorized when only one inside container is packed in each outside box.

(3) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.144 Ink (flammable liquid). (a) Except as otherwise provided in this part, ink which is classed as a flammable liquid in this subchapter must be packaged as follows:

(1) In containers as prescribed in §173.119, according to flash point, pressure, or viscosity.

(2) Spec. 17C (§178.115 of this subchapter). Full removable head metal drums (sing'e-trip).

(3) Specification 37C (§178.135 of this subchapter). Metal drums (non-reusable container) not over 5 gallons capacity each. Authorized only for material having flash point over 20° F. Not authorized for transportation by air.

(b) Ink in glass packagings not over 1 quart capacity each, or in metal packagings not over 5 gallons capacity each, further overpacked in a strong outside packaging is excepted from the specification packaging requirements of this part.

§ 173.145 Dimethylhydrazine, unsymmetrical, and methylhydrazine. (a) Dimethylhydrazine, unsymmetrical, and methylhydrazine must be packed in specification containers as follows:

(1) Specification 1D or 1M (§§178.4 or 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(2) Specification 15A, 15B, 15C, or 19B (§178.168, §178.169, §178.170, §178.191 of this subchapter). Wooden boxes with inside glass bottles not exceeding 1-gallon capacity each, cushioned by means of vermiculite within tin cans which shall be tightly closed, or containers not over 2 quarts capacity each made of aluminum not less than 0.04 inch thick. Closures and gaskets must be of material which will not react dangerously with or be decomposed by contact with the contents.

(3) Spec. 5, 5A, or 5C (§178.80, §178.81, or §178.83 of this subchapter); or 17E (§178.116 of this subchapter) (sing'e-trip). Metal barrels or drums which shall be of type 304 or 347 stainless steel, with openings not exceeding 2.3 inches in diameter.

(4) Spec. 17C (§178.115 of this subchapter). Metal barrels or drums (sing'e-trip) with openings not exceeding 2.3 inches in diameter. Authorized only for dimethylhydrazine, unsymmetrical.

(5) Spec. 42B (§178.107 of this subchapter). Aluminum drums. Authorized only for dimethylhydrazine, unsymmetrical.

(6) Specification 103W, 103CW, 105A100W, 111A60W1, 111A60W7, or 111A100W4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars.[1] Authorized for dimethylhydrazine, unsymmetrical only. Each tank car must be equipped with steel safety valves of approved design and any 103W or 111A*** tank car must not be equipped with any bottom outlet. Bottom washout permitted. Specification 105A200W, 105A300W, 105A400W, 105A500W, and 105A600W (§§179.100, 179.101 of this subchapter) tanks must be restenciled 105A100W and be equipped with safety valves of the type and size used on specification 105A100W tank cars.

(7) Specification MC 300, MC 301, MC 302, MC 303, MC 304, MC 305, MC 306, MC 307, MC 310, MC 311, or MC 312 (§178.341, §178.342, §178.343 of this subchapter). Cargo tanks without bottom discharge outlets and equipped with steel safety valves of approved design.

(8) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

[1] Use of existing tank cars authorized, but new construction not authorized

[1] Use of existing tank cars authorized, but new construction not authorized

§ 173.146 Heaters for refrigerator cars, flammable liquid fuel type. (a) Heaters of the liquid fuel type for refrigerator cars, containing flammable liquid fuel, may be shipped in carload or truckload lots provided each heater shall have been inspected to see that flame has been extinguished, that there is no leakage of fuel, and that controls are in the "off" position. Heaters shall be loaded and braced so as to prevent falling, tipping, or mechanical damage under normal conditions incident to transportation.

(b) Heaters of the liquid fuel type for refrigerator cars must have their flammable liquid fuel tanks completely drained if offered for transportation or transported in less-than-carload or less-than-truckload lots.

§ 173.147 Methyl vinyl ketone, inhibited. (a) Methyl vinyl ketone must be inhibited and must be packed in specification containers as follows:

(1) As prescribed in §173.119(a) or (b).

(b) Limited quantities of inhibited methyl vinyl ketone, in a glass or metal inside container having a capacity of no more than 4 fluid ounces with no more than one such container securely closed and efficiently cushioned in a strong outside packaging, is excepted from labeling and the specification packaging requirements of this subpart (except that labeling is required for transportation by air). In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

§ 173.148 Monoethylamine. (a) Monoethylamine must be packed in specification containers as follows:

(1) Specification 5, 5A, or 5P (§§178.80, 178.81, 178.92 of this subchapter). Metal barrel or drum equipped with openings not exceeding 2.3 inches in diameter. Bung labels must be applied and must meet the requirements prescribed in §173.119(i).

(2) Cylinders as prescribed for any compressed gas except acetylene.

(3) Tank cars prescribed in §173.119(f)(3).

(4) Specification 106A500X or 110A500W (§§179.300, 179.301 of this subchapter) tanks. Authorized only for transportation by rail freight and by highway (See §§174.560 and 177.834(m) of this subchapter for special requirements.)

(5) Cargo tanks as prescribed in §173.119(f)(5).

(6) Specification 51 (§178.245 of this subchapter). Portable tanks. Tanks must have no bottom opening, except one 3-inch maximum plugged opening for maintenance purposes is authorized.

(b) Solution of monoethylamine in water which has a vapor pressure not exceeding 16 pounds per square inch absolute at 100° F. may be shipped in containers prescribed by §173.119(d).

§ 173.149 Methyl magnesium bromide in ethyl ether in concentrations not over 40 percent. (a) Methyl magnesium bromide in ethyl ether in concentrations not over 40 percent must be packed in specification containers as follows:

(1) As prescribed in §173.134.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside glass bottles not over 1 quart capacity each. Inside containers must be surrounded on all sides with dry absorbent noncombustible material in quantity sufficient to absorb entire contents. Authorized gross weight not over 65 pounds.

(3) Spec. 17C (§178.115 of this subchapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

§ 173.149a Nitromethane. Nitromethane must be packaged as specified in §173.119(b) except that shipment in cargo tanks, tank cars, portable tanks, and any container having a capacity greater than 110 gallons is forbidden.

SUBPART E

FLAMMABLE SOLIDS, OXIDIZERS, AND ORGANIC PEROXIDES; DEFINITIONS AND PREPARATION

§ 173.150 Flammable solid; definition. For the purpose of this subchapter, "flammable solid" is any solid material, other than one classed as an explosive, which, under conditions normally incident to transportation is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and when ignited burns so vigorously and persistently as to create a serious transportation hazard. Included in this class are spontaneously combustible and water-reactive materials.

§ 173.151 Oxidizer; definition. An oxidizer for the purpose of this subchapter is a substance such as a chlorate, permanganate, inorganic peroxide, or a nitrate, that yields oxygen readily to stimulate the combustion of organic matter.

§ 173.151a Organic peroxide; definition. (a) an organic compound containing the bivalent —O—O— structure and which may be considered a derivative of hydrogen peroxide where one or more of the hydrogen atoms have been replaced by organic radicals must be classed as an organic peroxide unless:

(1) The material meets the definition of an explosive A or explosive B, as prescribed in Subpart C of this part, in which case it must be classed as an explosive,

(2) The material is forbidden to be offered for transportation according to §172.101 or §173.21 of this subchapter,

(3) It is determined that the predominant hazard of the material containing an organic peroxide is other than that of an organic peroxide, or

(4) According to data on file with the Research and Special Programs Administration, it has been determined that the material does not present a hazard in transportation.

§ 173.152 Packing. (a) Flammable solids or oxidizing materials must not be packed in the same outside container with corrosive liquids unless the corrosive liquids are in bottles, cushioned by incombustible absorbent material, in tightly closed metal containers.

1. Oxidizing or other materials in quantity not exceeding 4 ounces, in securely closed metal cans, packed in the same compartment with other securely packed materials necessary for a complete fumigant, are acceptable for transportation.

(b) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed or in any case when necessary to prevent breakage or leakage.

§ 173.153 Limited quantities of flammable solids, oxidizers and organic peroxides. (a) Limited quantities of flammable solids for which exceptions are permitted as noted by reference to this section in §172.101 of this subchapter, are excepted from labeling (except when offered for transportation by air) and specification packaging requirements when packed according to the following paragraph. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) Flammable solids in inside containers not over 1 pound net weight each, in outside containers not exceeding 25 pounds net weight each.

(b) Limited quantities of oxidizers and organic peroxides for which exceptions are permitted as noted by reference to this section in §172.101 of this subchapter are excepted from labeling (except when offered for transportation by air) and specification packaging requirements when packed according to the following paragraphs. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) Oxidizers in inside containers having a rated capacity of not over 1 pint for liquids or a net weight of not over one pound for solids, in strong outside packagings not exceeding 25 pounds net weight each.

(2) Organic peroxides, except acetyl benzoyl peroxide and benzoyl peroxide, as follows:

(i) In inside containers which must be securely packed and cushioned with noncombustible cushioning material (except that cushioning material is not required when the liquid is contained in strong, securely closed plastic packagings of not over 1 ounce by volume capacity each), further overpacked in strong outside packagings containing not over 1 pint or 1 pound net weight of the material.

(ii) In not more than 24 inside fiberboard containers each having not more than 70 securely closed tubes having a maximum fluid capacity each of ½-ounce and securely packed in non-combustible cushioning material.

(c) Special exceptions for shipment of certain flammable solids, oxidizers and organic peroxides in the ORM-D Class are provided in Subpart N of this part.

§ 173.154 Flammable solids, organic peroxide solids and oxidizers not specifically provided for. (a) Flammable solids, organic peroxide solids and oxidizers as defined in §§173.150 and 173.151, other than those for which special packing requirements are prescribed, must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by

the chemical packed therein. Specific packaging requirements are as follows:

(1) Specification 6B, or 6C (§178.98 or §178.99 of this chapter). Metal barrels or drums.

(2) Spec. 17C, 17E, 17H, 37A or 37B (§§178.115, 178.116, 178.118, 178.131, or 178.132 of this chapter), metal drums (sing'e-trip).

(3) Specification 57 (§178.253 of this subchapter). Portable tanks. Tanks must have a fusible plug having a fusing temperature between 70°C and 90°C. Authorized only for dicumyl peroxide, dry and a, a'-bis (t-butylperoxy) diisopropyl-benzene, solid.

(4) Specification MC 303, MC 304, MC 306, MC 307, MC 311 or MC 312 (§§178.341, 178.342, 178.343 of this subchapter). Cargo tanks. Tanks must conform with §178.340-8. Discharge valves must be located inside the tank or at a point outside the tank where the line enters or leaves the tank. The valve seat must be located inside the tank or within the welded flange, its companion flange, nozzle, or coupling. Each product discharge opening shall have a secondary closing means, remote from tank filling or discharge openings, for operation in event of fire or other accident. Tanks may have heating coils if an inorganic heating medium is used. Authorized only for sodium perchlorate or magnesium perchlorate, wet, with 10 percent or more of water, equally distributed within the cargo tank. Specification MC 311 and MC 312 also authorized for potassium nitrite solution. Only Specification MC 304 and MC 307 are authorized for transportation by vessel.

(5) Specification 56 (§178.252 of this subchapter). Metal portable tank. Authorized only for flammable solids (including water reactive material's) and dry oxidizers.

(6) Spec. 12B (§178.205 of this chapter). Fiberboard boxes with inside containers which must be metal cans, sliding-lid wooden boxes, fiber cans or boxes, Spec. 2G (§178.26 of this chapter), not over 5 pounds capacity each; or glass bottles not over 1 pound capacity each. Packages containing glass containers must not weigh over 65 pounds gross.

(7) Spec. 15A or 15B (§§178.168 or 178.169 of this subchapter). Wooden boxes lined, Spec. 2F or 2M (§§178.25 or 178.31 of this subchapter).

(8) Spec. 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers.

(9) Spec. 21C (§178.224 of this subchapter). Fiber drums. Maximum net weight may not exceed 225 pounds except that a 21C400 fiber drum may have a net weight not exceeding 350 pounds.

(10) Spec. 22A (§178.196 of this subchapter). Plywood drums.

(11) Spec. 22B (§178.197 of this subchapter). Plywood drums with inside metal drums, Spec. 2F (§178.25 of this subchapter).

(12) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads shall not require perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.004 inch. Not more than 25 pounds net weight of product may be packed in one outside box.

(13) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each, shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(14) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles not over 1-gallon capacity each or polyethylene jars not over 9 pints capacity each. Each jar shall contain not more than 10 pounds net weight of product. Not more than four bottles or jars may be packed in one outside container. Authorized only for materials which will not cause decomposition of polyethylene or container failure.

(15) Specification 103,[1] 103W, 111A60W1, or 111A60F1 (§§179.200, 179.201 of this subchapter). Tank cars. Authorized only for sodium perchlorate or magnesium perchlorate wet with 10 percent or more water equally distributed.

(16) Specification 35 (§178.16 of this subchapter) non-reusable, removable head polyethylene drum for use without overpack and not over seven gallons capacity. Authorized only for dry or paste material that will maintain its form to a minimum temperature of 130°F.

(17) Specification 103ALW or 111A60ALW (§§179.200, 179.201 of this subchapter). Insulated tank cars designed for operation at temperatures up to 250°F. Authorized only for ammonium nitrate with 15 percent or more water in solution at a maximum temperature of 240°F. Transportation by water is not authorized.

(18) Specification MC 307 or MC 311 (§§178.340, 178.342 of this subchapter). Insulated cargo tanks designed for operation at temperatures up to 250°F. Authorized only for ammonium nitrate with 15 percent or more water in solution at a maximum temperature of 240°F. Transportation by water is not authorized.

(19) Specification 6D or 37M (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks (non-reusable containers) with inside specification 2S, 2SL, or 2U (§§178.35, 178.35a, 178.24 of this subchapter) polyethylene packaging.

(20) As prescribed in §173.163(a)(7). Authorized only for ammonium persulfate, hydrated calcium hypochlorite, potassium persulfate, sodium carbonate peroxide, sodium chlorate, dry, sodium perborate monohydrate and sodium persulfate.

(21) Specification 105A200ALW (§§179.100, 179.101 of this subchapter). Tank cars. Authorized only for a mixture of 24 to 26 percent ammonia, 68 to 70 percent ammonium nitrate and 5 to 7 percent water. Transportation by water is not authorized.

(22) Specification 41P (§§178.241 of this subchapter). All plastic bags. Authorized only for ammonium persulfate, potassium persulfate, sodium carbonate peroxide, sodium perborate monohydrate and sodium persulfate. Net weight may not exceed 81 pounds.

(23) Specification 41B or 41C (§§178.236, 178.237 of this subchapter). Multiwall paper bags. Authorized only for ammonium persulfate, dibasic lead phosphite, potassium persulfate, sodium carbonate peroxide, sodium perborate monohydrate and sodium persulfate.

§ 173.154a Fusees. (a) A fusee is a device designed to burn at a controlled rate and to produce visible effects for signaling purposes. It consists of a pasteboard or fiber tube containing a colored flare mixture and with or without a means of support. The composition of the fusee must be such that spontaneous ignition does not occur when the moistened composition is exposed to a temperature of 212°F. for 72 consecutive hours. Fusees must have individual tip, head, or similar ignition point or surface entirely covered and securely protected against accidental contact or friction. Fusees must be securely packed in packages complying with the following specifications:

(1) Specifications 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes having a gross weight not to exceed 150 pounds for specification 19B boxes; 200 pounds for the other boxes. When specification 15C boxes are used, devices must be packed in airtight inside metal receptacles.

(2) Specification 12B (§178.205 of this subchapter) fiberboard boxes. Boxes must have reinforced ends proven to be capable of preventing penetration of spikes through the outside box when a sample package, prepared as for shipment, is subjected to two drops from a height of 4 feet onto a solid surface. The package must be dropped so as to strike diagonally with the spikes in a downward position. Gross weight not to exceed 65 pounds except that gross weight not to exceed 75 pounds is authorized in boxes made in accordance with §178.205-24 of this subchapter.

(3) Specification 29 (§178.226 of this subchapter). Mailing tubes, provided the penetration of the spikes of the fusees through the outside container is prevented by the method specified for fiberboard boxes, specification 12B, in paragraph (a)(2) of this section. Gross weight not to exceed 5 pounds.

(4) Fusees without spikes when offered for shipment may be packed in packages prescribed in this paragraph, omitting the protection required for these devices when equipped with spikes.

(5) Fusees may be packed with nonexplosive or nonflammable articles provided the outside packages are marked as prescribed in this section.

(b) Each outside package must be plainly marked in letters not less than seven-sixteenths inch in height "Fusees" and with the additional words "Handle Carefully—Keep Fire Away."

§ 173.156 Barium peroxide and calcium peroxide. (a) Barium peroxide and calcium peroxide must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1-pound capacity each; or with inside glass containers not over 5 pounds capacity each, cushioned with incombustible cushioning material; or with inside metal containers or lining. Spec. 2F (§178.25 of this subchapter).

(2) [Reserved]

(3) Spec. 6B or 6C (§§178.98 or 178.99 of this subchapter). Metal barrels or drums with not more than 1400 pounds net weight in each container.

(4) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (sing'e-trip).

(5) Spec. 21C (§178.224 of this subchapter). Fiber drums. Authorized net weight not over 225 pounds.

§ 173.157 Benzoyl peroxide, chlorobenzoyl peroxide (para), cyclohexanone peroxide, dimethylhexane dihydroperoxide, lauroyl peroxide, or succinic acid peroxide, wet. (a) Benzoyl peroxide, chlorobenzoyl peroxide (para), dimethylhexane dihydroperoxide, lauroyl peroxide, and succinic acid peroxide, each wet with at least 30 percent of water by weight, and cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration, wet, must be packed in specification packagings as follows:

(1) Specification 15A, 15B, 15C, or 19B, (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside metal containers or lining. Specification 2F (§178.25 of this subchapter), or with securely

[1] Use of existing tank cars authorized, but new construction not authorized.

closed inside paper bags lined with polyethylene at least 0.002 inch thick, or with inside aluminum drums of at least 16 gage metal throughout. Net weight (dry weight) in each inside DOT-2F metal container or in each paper bag may not exceed 1 pound. Gross weight may not exceed 200 pounds.

(2) [Reserved]

(3) Specification 12B (§178.205 of this subchapter). Fiberboard box with inside fiber containers securely closed by taping or gluing, or with securely closed inside paper bags lined with polyethylene at least 0.002 inch thick. The net weight (dry weight) in each inside container may not exceed 1 pound. Except for lauroyl peroxide, wet, each inside container must be surrounded by an appropriate fire-resistant cushioning material. The gross weight in Specification 12B65 fiberboard boxes may exceed 65 pounds, but may not exceed 80 pounds, provided the net weight (dry weight) of the contents does not exceed 50 pounds.

(4) Specification 21C (§178.224 of this subchapter). Fiber drum with securely closed inside plastic containers made of polyethylene film at least 0.002 inch thick for cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration and for dimethylhexane dihydroperoxide; with securely closed inside plastic containers made of polyethylene film at least 0.004 inch thick for benzoyl peroxide wet with at least 30 percent of water by weight. Authorized net weight (wet weight) in one outside drum may not exceed 50 pounds for cyclohexanone peroxide, 100 pounds for dimethylhexane dihydroperoxide, or 225 pounds for benzoyl peroxide.

(5) Specification 12B (§178.205 of this subchapter). Fiberboard box with securely closed inside plastic containers made of polyethylene film at least 0.004 inch thick. The net weight (dry weight) in each inside container may not exceed 25 pounds. Each inside container must be surrounded by an appropriate fire-resistant cushioning material. Authorized only for benzoyl peroxide.

(b) Benzoyl peroxide, wet with at least 20 percent of water by weight, must be packed in specification packagings as follows:

(1) Specification 12B (§178.205 of this subchapter). Fiberboard box with securely closed inside paper bags lined with polyethylene at least 0.002 inch thick. The net weight (dry weight) in each bag may not exceed 1 pound. Each bag must be surrounded by an appropriate fire-resistant cushioning material.

(2) Specification 21C (§178.224 of this subchapter). Fiber drum with securely closed inside plastic containers made of polyethylene film at least 0.004 inch thick. Net weight (dry weight) in each outside drum may not exceed 55 pounds.

(3) Specification 12B (§178.205 of this subchapter). Fiberboard box with securely closed inside plastic containers made of polyethylene film at least 0.004 inch thick. The net weight (dry weight) in each inside container may not exceed 25 pounds. Each inside container must be surrounded by an appropriate fire-resistant cushioning material. The net weight (dry weight) in each outside box may not exceed 50 pounds.

§ 173.158 Benzoyl peroxide, dry; chlorobenzoyl peroxide (para) dry; cyclohexanone peroxide, dry; lauroyl peroxide, dry; or succinic acid peroxide, dry. (a) Benzoyl peroxide, dry; chlorobenzoyl peroxide (para), dry; cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration, dry; lauroyl peroxide, dry; or succinic acid peroxide, dry; must be packed in specification packagings as follows:

(1) Specification 15A, 15B, 19A, or 19B (§178.168, §178.169, §178.190, §178.191 of this subchapter). Wooden boxes, with inside fiber containers securely closed by taping or gluing, or inside securely closed paper bags lined with 0.002 inch thick polyethylene, not over 1 pound capacity each. Except for lauroyl peroxide, dry, each inside container must be surrounded by an appropriate fire-resistant cushioning material. The net weight in outside container must not exceed 50 pounds, except that for lauroyl peroxide, dry, a net weight not over 100 pounds is authorized.

(2) Spec. 21C (§178.224 of this subchapter) fiber drums. Authorized only for lauroyl peroxide, dry. Authorized net weight not over 100 pounds in one drum.

(3) Specification 12B (§178.205 of this subchapter). Fiberboard boxes, with inside fiber containers securely closed by taping or gluing, or inside securely closed paper bags lined with polyethylene not less than 0.002 inch thick, not over 1 pound capacity each. Except for lauroyl peroxide, dry, each inside container must be surrounded by an appropriate fire-resistant cushioning material. The gross weight in Specification 12B65 boxes may be more than 65 pounds, but not more than 80 pounds, provided the net weight of contents does not exceed 50 pounds.

§ 173.159 Burnt cotton. (a) "Burnt cotton" is cotton that has been on fire and from which the burnt portions have not been removed by repicking. It must not be offered for transportation until at least 10 days have elapsed since the last evidence of fire in it.

(b) When burnt cotton is picked and baled, the separated unburnt cotton is subject to the same regulations as cotton that has not been involved in a fire. See §172.101 of this subchapter.

§ 173.160 Calcium chlorite and sodium chlorite. (a) Calcium chlorite and sodium chlorite must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 2½ pounds capacity each or metal not over 5 pounds capacity each.

(2) Specification 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131 or 178.132 of this subchapter). Metal drums (single-trip).

§ 173.161 Calcium phosphide. (a) Calcium phosphide must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, or 178.191 of this subchapter). Wooden boxes lined, Spec. 2F (§178.25 of this subchapter), and with hermetically sealed inside containers.

(2) Specifications 6B, or 6C (§§178.98, or 178.99 of this subchapter). Metal barrels or drums.

§ 173.162 Charcoal. (a) "Limited quantities of charcoal, as described in this paragraph, are excepted from labeling (except when offered for transportation by air) and specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) [Reserved]

(2) Charcoal made from pine wood and processed so that it is not liable to heat dangerously or cause fires in transportation.

(3) Charcoal briquettes made from wood charcoal with starch and water, or tar, for a binder, which have been screened and cooled to a temperature below 100° F. before being offered for transportation.

(4) Charcoal screenings made from "pinon" wood.

(5) Charcoal made from walnut shells, corn cobs, peach pits, and similar material, must be cooled and held not less than five days before shipment, and shipped in bags, barrels, or boxes. The five-day holding period shall not apply to charcoal briquettes screened and cooled to a temperature below 100° F. before being offered for transportation.

(6) Charcoal, lump, made by the old kiln or pit method by which long air exposure is provided before shipment.

(7) Charcoal, wood, except charcoal screenings, when packed in boxes or barrels.

(8) Charcoal, wood, when in bags in less-than-carload or less-than-truckload shipments of not exceeding 2,000 pounds.

(9) When offered for transportation by air, charcoal must be packaged in boxes or barrels.

(10) Charcoal screenings or ground, crushed, granulated, or pulverized charcoal, from pit or kiln burned charcoal, provided the screenings or the material from which the ground charcoal is made has been exposed to the air for not less than 5 days prior to shipment or grinding (see paragraphs (j) and (k) of this section).

(11) Special exceptions for shipment of charcoal in the ORM-D class are provided in Subpart N of this part.

(b) Charcoal made in round retorts must be transferred to air-tight metal cans for cooling, and must be kept in these cans for 24 hours or more. The charcoal after removal from these cans should be aired by spreading on a floor to a depth not exceeding 1 foot. This air exposure must last not less than 44 hours. Not less than 72 hours should elapse from the time the air exposure of the charcoal commences before a car loaded with it is closed for shipment, or before the lump charcoal is placed in paper bags.

(1) The charcoal during this airing period must be protected from the weather, and exposed to good circulation of air. When the charcoal is aired on the floor for only 24 hours and then placed in burlap bags, it must be kept in the bags 60 hours before shipment. If the charcoal is not aired on the floor for at least 24 hours, it must be kept in the burlap bags for at least 96 hours before loading for shipment.

(c) Charcoal made in ovens in slatted cars should be kept for two periods of 24 hours each in first and secondary air-tight cooling chambers respectively. After removing the charcoal from the secondary coolers it must be exposed to good air circulation, but protected from the weather for a period of not less than 44 hours.

(1) Not less than 72 hours must elapse from the time the air exposure of the charcoal commences before a car loaded with it is closed for shipment, or before the lump charcoal is placed in paper bags.

(d) When fire occurs in charcoal during air exposure period, it should be extinguished with as little water as possible. Any charcoal wet in this way or otherwise must be dried, by again heating in the retorts or ovens, and cooled and aired in the usual way described in paragraphs (b) and (c) of this section, or the charcoal must be set aside and allowed to dry for not less than 30 days before shipment.

(e) Charcoal, lump, must be dry and free from screenings and brands.

(1) Shipments must be loaded into tight box cars, tight container cars, or into tight closed-top hopper cars, except that lump charcoal made from soft wood may be shipped in open or stock cars.

(2) When a chute is used in loading the car, the chute must contain a properly constructed screen which must be kept clean. This screen shall be not less than ¾ inch mesh. Forks with prongs not less than 1 inch apart must be used instead of shovels to handle the charcoal. The screenings which accumulate in the doorway of the car must be removed before loading the doorway. The car should be swept before loading, and a car which has contained lime must be thoroughly cleaned before loading with charcoal. The doors of the car must be closed tightly before the car is forwarded.

(3) Lump charcoal may be shipped in bags, barrels or boxes, or bulk in cars.

(4) Lump charcoal, dry and free from screenings and brands, may be shipped in bulk in motor vehicles. Vehicle must be swept before loading and if it contained lime it must be thoroughly cleaned.

(f) Charcoal screenings consist of small pieces of charcoal varying from about one-half inch in the maximum dimension to grains of dust. These screenings are more liable to produce fires than other forms of charcoal. Charcoal screenings from wet charcoal or wet screenings or screenings which have been wet must not be offered for shipment unless they have been dried for not less than 12 hours in a retort or oven, and then subjected to not less than 10 days airing and cooling before shipment.

(1) Charcoal screenings must be stored in a dry place, in loosely piled bags, freely exposed to the air for not less than 20 days after separation from the lump before shipment.

(2) Screenings from pine-wood charcoal must be stored as above described for not less than five days before shipment.

(3) Charcoal screenings must be packed in cotton or jute bags of not greater than 4 bushels capacity.

(g) Charcoal ground, crushed, granulated, or pulverized is prepared from either lump charcoal or screenings.

(1) Lump charcoal used for the preparation of ground, crushed, granulated, or pulverized charcoal must be stored subject to ventilation, and protected from the weather for not less than 20 days after its removal from the coolers before milling; or the ground, crushed, granulated or pulverized charcoal must be stored in bags, subject to ventilation and protected from the weather for not less than 20 days before shipment. Lump charcoal made from pine wood must be stored as above described for not less than 5 days before milling. Ground, crushed, or granulated charcoal made by the "Stafford" process must be stored subject to ventilation and protected from the weather for not less than 7 days before shipment in lieu of the 20-days' storage otherwise prescribed.

(2) Charcoal screenings used for the preparation of ground, crushed, granulated, or pulverized charcoal must be stored in a dry place in loosely piled cotton or jute bags freely exposed to air for a period of not less than 20 days after separation from the lump charcoal, and before milling; or the ground, crushed, granulated, or pulverized charcoal must be stored in bags, subject to ventilation and protected from the weather for not less than 20 days before shipment. Charcoal screenings made from pine wood charcoal must be stored as above described not less than 5 days before milling.

(3) Ground, crushed, granulated, or pulverized charcoal must be packed in tight sift-proof wooden barrels or boxes containing not more than 4 bushels each; or in fiberboard boxes; or in unlined jute bags, or in strong unlined cotton bags, containing not more than 4 bushels each; or in paper-lined jute bags, or in paper bags, containing not more than 2½ bushels each. Whenever practicable, all boxes, barrels, or bags, after filling, should be allowed to remain open and freely exposed to the air, and protected from the weather for not less than 24 hours before being closed. Ground, crushed, granulated, or pulverized charcoal made from pine-wood charcoal should be so stored for not less than 72 hours before the packages are closed.

(h) Charcoal, screenings or ground, crushed, granulated or pulverized charcoal, in bags, when loaded in cars for shipment by rail must be so loaded that the bags are laid horizontally in the car, and so piled that there will be spaces for efficient air circulation. These spaces must be not less than 4 inches wide. If the bags are not compactly filled and closed so as to avoid free space within, transverse wooden strips must be laid between the bags and extending the full width of the car; these strips should be approximately 2 feet apart vertically and longitudinally. The bags must not be piled closer than 6 inches from the top of the car, and no more than 26,000 pounds of screenings, ground, granulated, crushed, or pulverized charcoal, shall be loaded in a 36-foot, 6-inch car; 27,000 pounds in a 37-foot, 6-inch car; 28,000 pounds in a 38-foot, 6-inch car; 29,000 pounds in a 39-foot, 6-inch car; 36,000 pounds in a 40-foot, 6-inch car; and 40,000 pounds in a 50-foot, 6-inch car. A tight car must be used, and any loose material must be swept up and removed from the doorway of the car before completing the loading.

(i) See § 177.838 of this subchapter for loading in motor vehicles.

(j) Charcoal burned in pits or kilns must be thoroughly cooled in the sealed kilns. After the kilns are opened, the charcoal must be allowed to stand in the open kiln or elsewhere exposed to the air for not less than 24 hours before loading in a freight car. Charcoal burned in kilns may be loaded in open cars or in box cars, but after loading in box cars, the cars must be allowed to stand not less than 24 hours with doors open before shipment.

(k) Screenings, or ground, crushed, granulated, or pulverized charcoal, from pit or kiln burned charcoal, are considered as non-hazardous, provided the screenings or the material from which the ground charcoal is made has been exposed to the air for not less than 5 days prior to shipment or grinding.

(l) Reburned charcoal must be cooled and exposed to good fresh-air circulation for not less than five days after removal from the reburning furnaces and before being shipped or ground to produce ground or pulverized charcoal.

§ 173.163 Chlorate of soda, chlorate of potash, and other chlorates. (a) Chlorate of soda, chlorate of potash, and other chlorates must be packed in specification containers as follows:

(1) Specification 6B, or 6C (§§ 178.98 or 178.99 of this subchapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§ 178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (single-trip).

Note 1. Specs. 37A and 37B. Metal drums for export service, marked for an authorized gross weight of 150 pounds, must be at least 24 gauge metal throughout.

(3) Spec. 21C, 22A, or 22B (§ 178.224, § 178.196 or § 178.197 of this subchapter). Fiber or plywood drums with inside metal drums, Spec. 2F (§ 178.25 of this subchapter). Authorized net weight not over 225 pounds.

(4) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with tightly closed inside containers which must be of metal not over 10 pounds capacity each; or of glass not over 5 pounds each; or of fiber, Spec. 2G (§ 178.26 of this subchapter), not over 6 pounds capacity each.

(5) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes with inside metal cans not over 5 pounds capacity each, closed air tight and with not over 25 pounds of chlorate in the outside container.

(6) Chlorates wet with 10 percent or more of water are authorized for shipment in tank cars, spec. 103,[1] 103-W, 111A60-F-1, or 111A60-W-1 (§§ 179.200, 179.201 of this subchapter), when equally distributed therein.

(7) Chlorate of soda, dry, is authorized for shipment in aluminum or steel tank car tanks, cargo tank vehicles, tight sift-proof covered hopper cars, or tight sift-proof covered hopper type motor vehicles. Tank car tanks, cargo tank vehicles, hopper cars, and hopper type motor vehicles must be thoroughly cleaned before loading. Tank car tanks may have their internal operating valve removed provided the bottom outlet is securely capped.

(8) Specification 12A (§ 178.210 of this subchapter). Fiberboard box with inside glass or plastic bottles not over 5 pounds capacity each. Not more than 4 glass bottles or 6 plastic bottles having a capacity of 5 pounds each shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by § 178.210-10 of this subchapter.

(9) Specification 56 (§§ 178.251, 178.252 of this subchapter). Metal portable tanks.

§ 173.164 Chromic acid or chromic acid mixture, dry.

(a) Chromic acid and chromic acid mixture, dry, must be packaged as follows:

(1) Specification 6B, or 6C (§§ 178.98 or 178.99 of this subchapter). Metal barrels or drums.

(2) Specifications 17C, 17H or 37A (§§ 178.115, 178.118, 178.131 of this subchapter) metal drums. Spec. 37A metal drums constructed from 22-gauge steel throughout are authorized for a gross weight of 490 pounds or less when shipped in a carload or truckload lot.

(3) Specification 15A, 15B, or 19B (§§ 178.168, 178.169, 178.191 of this subchapter). Wooden boxes, with inside glass bottles of not over 5 pounds capacity each, with closures securely fastened, each bottle individually packed in a tight metal container, and cushioned therein with incombustible mineral packing material; or with inside tightly closed metal containers, not over 10 pounds capacity each.

(4) Spec. 12A (§ 178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each, shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by § 178.210-10 of this subchapter.

[1] Use of existing tank cars authorized, but new construction not authorized.

For explanation of abbreviations and reference marks, see last page of this tariff.

(5) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with metal inside containers which must have closing device securely fastened by positive means (not friction), not over 1-gallon capacity each. Not more than 4 metal containers shall be packed in one outside box.

(6) Specification 21C (§178.224 of this subchapter). Fiber drums lined with a plastic material having a minimum thickness of 0.003 inch. Net weight may not exceed 115 pounds.

(7) Specification 56 (§178.252 of this subchapter). Steel portable tank.

§ 173.165 Coal, ground bituminous, sea coal, coal facings. (a) Coal, ground bituminous, sea coal, coal facings, 90 percent of which will pass through a 100-mesh sieve, must be stored for at least six days after grinding, or if not so stored must be shipped in tight metal tank cars or in tight metal containers on container cars, or in permanently covered metal hopper cars, or in other tight metal containers, or in tight, metal-bodied, covered motor vehicles.

(b) Coal, ground bituminous, which has been dried by heating before grinding must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

§ 173.166 Cobalt resinate, precipitated, calcium resinate, and calcium resinate fused. (a) Cobalt resinate, precipitated, calcium resinate, and calcium resinate fused, must be packed in specification containers as follows:

(1) Specification 6B, or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or §178.132 of this subchapter). Metal drums (single-trip).

(3) Spec. 15A or 15B (§§178.168 or 178.169 of this subchapter). Wooden boxes with air-tight metal inside containers.

§ 173.168 Lithium amide, powdered. (a) Lithium amide, powdered, must be packed as follows:

(1) As prescribed in §173.154(a)(1), (2), (8) and (11).

(2) Spec. 21C (§178.224 of this subchapter). Fiber drums with inside metal drums, Spec. 2F (§178.25 of this subchapter). Authorized net weight not over 225 pounds.

§ 173.171 Fish scrap or fish meal. (a) Fish scrap or fish meal containing less than 6 or more than 12 percent moisture (does not include wet acidulated fish scrap with moisture 40 to 55 percent), or which has not been sufficiently cooled after manufacture, or is liable to spontaneous heating in transit, must be packed in air-tight metal containers.

§ 173.173 Aluminum dross or magnesium dross.

Aluminum dross or magnesium dross must not be shipped when hot or when containing moisture liable to cause heating or fire during transportation.

§ 173.174 Iron sponge, spent oxide, spent iron mass, spent iron sponge. (a) Iron sponge that has not been properly oxidized during manufacture must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) [Reserved]

(c) Spent oxide, spent iron mass, or spent iron sponge must be loaded in open steel cars or open highway vehicles with steel bodies. After exposure to air for a period of not less than 10 days, these articles may be offered for transportation by carrier by water in bulk in all-steel barges having open holds.

§ 173.175 Lacquer base, or lacquer chips, dry. (a) Lacquer base, or lacquer chips, dry, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside metal containers, Spec. 2F (§178.25 of this subchapter).

(2) Specification 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, 37B or 37C (§§178.116, 178.118, 178.131, 178.132, or 178.135 of this subchapter). Metal drums (single-trip), or Spec. 37C (non-reusable container).

(4) Spec. 21C (§178.224 of this subchapter). Fiber drums. Authorized net weight not over 225 pounds.

§ 173.176 Safety matches. (a) Safety matches (strike-on-box, book, and card) are matches which are intended to be ignited on a prepared surface. Safety matches, when offered for transportation, must be of a type which will not ignite spontaneously or undergo marked decomposition when subjected for eight consecutive hours to a temperature of 200 °F. (93.3 °C.). As used in this section, the term "safety matches" includes matches combined with or attached to the box, book, or card.

(b) Safety matches must be tightly packed in securely closed inside packagings to prevent accidental ignition under conditions normally incident to transportation, and further packed in outside fiberboard, wooden, or other equivalent-type packagings. Safety matches in outside packagings not exceeding 50 pounds gross weight are not subject to any other requirement (except marking) of this subchapter. Safety matches may be packed in the same outside packaging with materials not subject to this subchapter.

§ 173.176a Strike anywhere matches. (a) Strike anywhere matches are matches which may be ignited by friction on a solid surface. Strike anywhere matches, when offered for transportation, must be of a type which will not ignite spontaneously or undergo marked decomposition when one complete inside package is subjected for eight consecutive hours to a temperature of 200 °F. (93.3 °C.).

(b) Strike anywhere matches may not be packed in the same outside packaging with any material other than safety matches. The safety matches must be packed in separate inside packagings.

(c) **Inside packagings.** Strike anywhere matches must be tightly packed in securely closed chipboard, fiberboard, wooden, or metal inside packagings to prevent accidental ignition under conditions normally incident to transportation. Each inside packaging may contain no more than 700 strike anywhere matches.

(d) **Outside packagings.** Strike anywhere matches must be packed in specification packagings as follows:

(1) Spec. 15A or 19B (§§ 178.191 of this subchapter). Wooden boxes, with inside packages. Gross weight must not exceed 100 pounds.

(2) Spec. 12B or 12C (§§ 178.205, 178.206 of this subchapter). Fiberboard boxes, with inside packages. Gross weight must not exceed 60 pounds. Fill-in pieces specified by §178.205-14 or §178.206-14 of this subchapter are not required.

§ 173.177 Motion-picture film and X-ray film. (a) Motion-picture film and X-ray film (nitrocellulose base) must be packed in specification containers as follows:

(1) Spec. 32A or 32B (§§178.146 or 178.147 of this subchapter). Metal cases.

(2) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with each reel in a tightly closed metal can, or strong cardboard of fiberboard box with cover held in place by adhesive tape or paper. Gross weight must not exceed 200 pounds.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes complying with §178.205-22(a)(1) of this subchapter; authorized for a single tightly closed inside metal can or strong cardboard or fiberboard box with cover held in place by adhesive tape or paper, not over 2,000 feet of film. Taped closure authorized.

(4) Spec. 12B (§178.205 of this subchapter). One-piece fiberboard boxes complying with §178.205-22(a)(2) of this subchapter; authorized only when each film is in a tightly closed metal film-reel can or strong cardboard of fiberboard box with cover held in place by adhesive tape or paper containing not over 2,000 feet (approximately) of film; cans or boxes to be adequately braced in center of box by fiberboard, at least 175-pound test, extending full depth of box. Gross weight not over 65 pounds. Closing of box must be effected by coating entire contact surfaces of flaps with efficient adhesive; stitched closure not authorized. Boxes that have been filled, shipped, and opened, are not authorized for reuse.

(5) Spec. 32C (§178.148 of this subchapter). Trunks with each film in standard metal film-reel can or strong cardboard or fiberboard box with cover held in place by adhesive tape or paper. Trunks to contain no material other than films in cans or boxes and projecting apparatus. The apparatus, as packed, must not be capable of creating an electric current.

(6) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes complying with §178.205-27 of this subchapter; authorized only for not more than two square inside metal cans containing not over 200 feet (approx.) of film each; gross weight not over 15 pounds. Taped closure authorized.

(b) Slow burning motion-picture film is excepted from the requirements of this subchapter, except when packed with flammable film.

§ 173.178 Calcium carbide, calcium silicon powder, and magnesium granules, coated. (a) Calcium carbide, calcium silicon powder, and magnesium granules, coated must be packed as follows:

(1) In water-tight metal drums with rolled, folded top and bottom seams and with welded side seams. Closures must be of the friction-type or screw-type. Full open-top closures must be gasketed and equipped with leverlock or bolted clamping ring. Maximum rated capacity may not exceed 60 gallons.

(2) In water-tight, sift-proof, bulk metal containers.

(3) In water-tight, sift-proof, closed-top metal covered hopper rail cars.

(4) In water-tight, sift-proof, closed-top metal covered hopper motor vehicles.

(5) In water-tight metal containers not exceeding 10 pounds net weight.

§ 173.179 N-methyl-N'-nitro-N-nitrosoguanidine.

N-methyl-N'-nitro-N-nitrosoguanidine must be packaged as follows: The quantity in one outside packaging may not exceed 25 grams and must be placed in a polyethylene bottle which is tightly closed and the closure secured in place with pressure sensitive tape. The bottle must be sealed in a polyethylene bag constructed of polyethylene at least 4 mils thick. The bag containing the bottle must be cushioned in a hermetically sealed can with noncombustible cushioning material. There must be at least one inch of cushioning material between the outer surface of the bag and the inner surface of the can. The metal can must be cushioned in a DOT 12B fiberboard box constructed of at least 350 pound test fiberboard. There must be at least one inch of cushioning material between the outer surface of the can and the inner surface of the fiberboard box.

§ 173.182 Nitrates. (a) Aluminum nitrate, ammonium nitrate (no organic coating), ammonium nitrate (organic coating), ammonium nitrate-carbonate mixture, ammonium nitrate-phosphate, ammonium nitrate fertilizer[1] (containing no more than 0.2 percent carbon), ammonium nitrate mixed fertilizer, barium nitrate, beryllium nitrate, calcium nitrate, cupric nitrate, ferric nitrate. (NOTE: The double salt of calcium and ammonium nitrate ($5Ca(NO_3)_2 \cdot NH_4NO_3 \cdot 10H_2O$) containing not more than 15.5 percent nitrogen and at least 12 percent water is not subject to the regulations in this subchapter), guanidine nitrate, lead nitrate, magnesium nitrate, mercuric nitrate, nickel nitrate, nitrates, n.o.s., nitrate of soda and potash, potassium nitrate, silver nitrate, sodium nitrate, strontium nitrate, zinc nitrate, and zirconium nitrate must be packaged as follows:

(1) In wooden or fiberboard boxes with glass, metal, or other strong inside containers; in metal or fiber drums; in kegs or barrels; or in strong metal cans. When so packed, they are excepted from the specification packaging requirements of this part.

(b) Aluminum nitrate, ammonium nitrate (no organic coating), ammonium nitrate-carbonate mixture, ammonium nitrate-phosphate, ammonium nitrate fertilizer[1] (containing no more than 0.2 percent carbon), ammonium nitrate mixed fertilizer, barium nitrate, beryllium nitrate, calcium nitrate, cupric nitrate, ferric nitrate, guanidine nitrate, mercuric nitrate, nickel nitrate, nitrate of soda and potash, potassium nitrate, sodium nitrate, strontium nitrate, and zirconium nitrate in addition to containers prescribed in paragraph (a) of this section, may be packaged as follows:

(1) In bulk, in tightly closed freight cars.

(2) In bulk, in sift-proof closed or open type motor vehicles.

(3) [Reserved]

(4) In burlap bags not exceeding 200 pounds net weight, water-resistant, made tight against sifting, and made of not less than 7½-ounce burlap.

(5) Multiple-wall paper bags must be constructed as follows:

(i) At least 4-ply including moisture-barrier ply, and made tight against sifting. Maximum authorized net weight is 110 pounds. Completed package, filled to weight with product and closed for shipment, must be capable of withstanding three 4-foot drops on face or back onto solid concrete without rupture.

(ii) At least 3-plies of extensible kraft paper having a minimum total basis weight of 180 pounds including an inner-most ply coated with polyethylene to provide a moisture barrier. Maximum authorized net weight is 80 pounds. Completed package, filled to weight with product and closed for shipment, must be capable of withstanding three 4-foot drops on face or back onto solid concrete without rupture.

(6) Plastic bags must be constructed as follows:

(i) Specification 44P (§178.241 of this subchapter). All plastic bags. Maximum authorized net weight is 81 pounds. Authorized only for ammonium nitrate mixed fertilizer, ammonium nitrate fertilizer (containing no more than 0.2 percent carbon), and potassium nitrate.

(ii) Polypropylene bag made of 9 denier polypropylene fibers spun continuously to form a sheet weighing at least 3½ ounces per square yard. Maximum authorized net weight is 100 pounds. Each bag must have an inner liner of polyethylene not less than 4 mils thick. Each bag filled to weight with product and closed for shipment must be capable of withstanding three 4-foot drops on face or back onto solid concrete without rupture. Authorized only for ammonium nitrate (no organic coating) ammonium nitrate fertilizer, and potassium nitrate; or

(iii) Polyethylene bag made of two plies of high-density polyethylene film laminated together so that the orientation of each ply of film is at right angles to the other. Maximum authorized net weight is 100 pounds. For a net weight not exceeding 50 pounds, the thickness of each bag must be at least 2.5 mils. For a net weight exceeding 50 pounds but not exceeding 100 pounds, the thickness of each bag must be at least 4 mils. Each bag must be capable of withstanding the test requirements of §178.241–4 and each bag must be in compliance with the requirements of §178.241–3 of this subchapter for bag closures. Authorized only for ammonium nitrate (no organic coating), ammonium nitrate fertilizer, and sodium nitrate.

(7) Specification 53[2] or 56 (§§178.251, 178.252 of this subchapter). Portable tank. Authorized only for sodium nitrate.

§ 173.183 Potassium nitrate mixed (fused) with sodium nitrite. (a) Potassium nitrate mixed (fused) with sodium nitrite must be packed in containers as follows:

(1) In containers as prescribed in §173.182(a).

(2) Spec. 103–W (§§179.200 and 179.201 of this subchapter). Tank cars specially designed, equipped and approved for this service without bottom discharge outlet and with heavier plate thicknesses than the minimum prescribed for cars built under this specification. For specification 103–W tank cars made of plates having the minimum prescribed thicknesses, internal reinforcement of the upper sheets of tank in the region of the dome and reinforcing plates attached to the bottom sheet of the tank which rests on bolsters is required, and these tanks must be equipped with baffle plates. Heater pipes must be of welded construction designed for a test pressure of 500 pounds per square inch. A 1-inch woven asbestos lining must be placed between bolster slabbing and bottom of tank to prevent heat transmission. Safety vents of the frangible disc type may be used and if used the frangible discs must be perforated with ⅛ inch hole. If safety valves are used, a vacuum relief valve must be installed on the dome. Each tank car must be marked "Fused Potassium Nitrate and Sodium Nitrite" in accordance with the requirements of §172.330 of this subchapter.

§ 173.184 Nitrocellulose or collodion cotton, wet, or nitrocellulose, colloided, granular, or flake, wet, or nitrostarch, wet, or nitroguanidine, wet. (a) Nitrocellulose or collodion cotton, wet, or nitrocellulose, colloided, granular, or flake, wet, or nitrostarch, wet, or nitroguanidine, wet, must be uniformly wet with at least 20 pounds of water to 80 pounds of dry material and must be packed in specification containers as follows:

(1) [Reserved]

(2) Specification 14, 15A, 15B, or 19B (§178.165, §178.168, §178.169, §178.191 of this subchapter). Wooden boxes lined, Spec. 2M (§178.31 of this subchapter).

(3) Specification 6B, 6C, or 6J (§178.98, §178.99, §178.100 of this subchapter). Metal barrels or drums not over 55 gallons capacity. Specification 6J (§178.100 of this subchapter) drums must have removable heads of 14 gauge metal or 16 gauge metal with one or more corrugations near the periphery and the heads must have a minimum convexity of ¾ inch; each drum must have three rolled or swedged-in hoops, one of which shall be in the body near the top curl.

(4) Spec. 37A or 37B (§178.131 or §178.132 of this subchapter). Metal drums (single-trip) not over 5 gallons capacity. Welded side seams required.

(5) Spec. 17E or 17H (§§178.116 or 178.118 of this subchapter). Metal drums (single-trip).

(6) [Reserved]

(b) Gross weight of any container must not exceed 490 pounds.

§ 173.187 Potassium peroxide; potassium superoxide; sodium peroxide or sodium superoxide. (a) Potassium peroxide; potassium superoxide; sodium peroxide or sodium superoxide must be packed in specification containers as follows:

[1] Applies only to materials tested in accordance with and meeting the definition in The Fertilizer Institute's publication "Definition and Test Procedures for Ammonium Nitrate Fertilizer" dated May 7, 1971.

[2] Use of existing tanks authorized. Construction not authorized after May 31, 1972.

For explanation of abbreviations and reference marks, see last page of this tariff.

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside air-tight metal cans.

(2) Specification 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (sing'e-trip).

(4) Spec. 12A or 12B (§178.210 or §178.205 of this subchapter). Fiberboard boxes with inside air-tight metal cans not over 5 pounds capacity each.

§ 173.188 Phosphoric anhydride. (a) Phosphoric anhydride must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside tightly stoppered glass bottles not over 1 pound capacity each; or metal cans, not over 3 pounds capacity each, hermetically sea'ed (soldered) or closed with cork securely held in place by metal strap soldered in position. Inside containers must be cushioned with elastic incombustible packing materials.

(2) Specification 6B, or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (sing'e-trip).

(4) Specification 56 (§178.252 of this subchapter). Stainless steel portable tanks.

(5) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 1 pound capacity each. Not more than 12 bottles shall be packed in one outside box. Shipper must have established that completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(6) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles of one-third fluid ounce capacity each. Each bott'e shall be packed in a heat-sea'ed polyethylene or other suitable plastic bag of equal efficiency and not more than 75 such units shall be packed in a heat-sea'ed polyethylene or other suitable plastic bag of equal efficiency, which shall be placed in a securely closed metal can. Not more than 1 can shall be packed in one outside box.

§ 173.189 Phosphorus, amorphous, red. (a) Phosphorus, amorphous, red, must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes, with inside airtight metal containers.

(2) Specification 6B; also 37A or 37B (sing'e-trip containers) (§§178.98, 178.131, 178.130 of this subchapter). Metal barrels or drums. Gross weight not to exceed 160 pounds.

(3) Spec. 29 (§178.226 of this subchapter). Mailing tube having not more than 100 grams of phosphorous contained in an inside glass container, sea'ed under nitrogen or other inert gas, with an air-tight closure. The glass container shall be packed in a metal can having air-tight closure. Both the inside glass container and the metal can shall be surrounded on all sides with incombustible cushioning material.

§ 173.190 Phosphorus, white or yellow. (a) Phosphorus, white or yellow, when offered for transportation by rail freight, highway, or water, must be packed in water or dry.

(b) When placed in water it must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside hermetically sea'ed (soldered) metal cans, inclosed in other hermetically sea'ed (soldered) metal cans; or inside water-tight metal cans containing not over 1 pound with screw-top closures, or Spec. 2F (§178.25 of this subchapter).

(2) Specification 5A or 6B (§§178.81, 178.98 of this subchapter). Metal barrels or drums, not over 30 gallons capacity each.

(3) Spec. 103,[1] 103-W, 111A60-F-1 or 111A60-W-1 (§§179.200, 179.201 of this subchapter). Tank cars without bottom outlet for discharge of lading and with approved dome fittings, external heater systems, and with insulation at least 4 inches in thickness, except that thickness of insulation may be reduced to 2 inches over external heater coils. Bottom washout nozzle of approved design may be applied. The material must be immersed in water or be blanketed with an inert gas and be loaded at a temperature not exceeding 140° F. The water must be loaded in the dome to not more than 50 percent of the capacity of the dome. After unloading, the person who unloaded the tank must fill to its entire capacity with an inert gas or must fill it with water having a temperature not exceeding 140° F, to not more than 50 percent of the capacity of its dome. Before the car is offered for return movement, it must be placarded with FLAMMABLE SOLID-RESIDUE placards, as described in §172.525 of this subchapter.

(i) Each tank car must be marked "PHOSPHORUS" in accordance with the requirements of §172.330 of this subchapter.

Note 1: Until further order of the Department, Specification ARA, III tank cars, converted as follows, are authorized for use without bottom discharge outlet, with insulation at least 2 inches in thickness, internal heater coils, at least one safety valve or frangible disc safety vent of approved design, and dome equipped for top unloading. Cars to be loaded and unloaded as prescribed in paragraph (b)(3) of this section. Cars to be stenciled immediately above the mark ARA III with the words "FOR PHOSPHORUS ONLY".

(4) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks, without bottom outlet and with insulation at least 4 inches in thickness, except that 2 inches of insulation is authorized for tanks equipped with an exterior heating jacket. Interior heating coils are not authorized. The material must be immersed in water or be blanketed with an inert gas and be loaded at a temperature not exceeding 140° F. After unloading, the tank must be filled to its entire capacity with an inert gas or to its entire capacity with water having a temperature not exceeding 140° F.

(5) Specification IM 101 portable tanks (§§178.270, and 178.271 of this subchapter) are authorized under the conditions specified in the IM Tank Table. The material must be immersed in water or blanketed with an inert gas and be loaded at a temperature not exceeding 140° F. After unloading, the tank must be filled with an inert gas or water having a temperature not exceeding 140° F.

(c) Phosphorus, white or yellow, when offered for transportation by air must be packed in water in packaging as follows (also authorized for transportation by rail freight, highway or water):

(1) Specification 15A, 15B, 19A or 19B (§§178.168, 178.169, 178.190, 178.191 of this subchapter). Wooden boxes with inside hermetically sea'ed (soldered) metal cans, inclosed in other water-tight metal cans containing not over 1-pound with screw-top closures, or with soldered closures.

(2) Samples of phosphorus, white or yellow, not to exceed 4 ounces each, placed in water in sea'ed metal cylinders or cans, inclosed in a wooden box, Spec. 15A or 15B (§§178.168 or 178.169 of this subchapter), may be transported only when consigned to the laboratory of the Internal Revenue Bureau or to the Hygienic Laboratory of the Public Health Service, Washington, D.C.

(3) Spec. 29 (§178.226 of this subchapter). Mailing tube having a water-tight rigid polyethylene container in which is placed a quartz tube containing not more than 100 grams of phosphorus sea'ed under nitrogen or other inert gas, with the remaining space in the polyethylene container filled with water. The polyethylene container shall be cushioned within the mailing tube with incombustible cushioning material.

(d) Phosphorus, white or yellow, when dry must be cast solid and shipped in containers as follows:

(1) Specification 6B, or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums not over 30 gallons capacity each.

(2) In projectiles or bombs when shipped by, for, or to the Departments of the Army, Navy, and the Air Force of the United States Government, without bursting elements.

§ 173.191 Phosphorus pentachloride. (a) Phosphorus pentachloride must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or glazed earthenware containers, not over 25 pounds capacity each, cushioned with mineral packing. When inside containers are packed in the same outside container with other articles, they must be enclosed in tightly closed metal cans. Net weight not to exceed 50 pounds in each outside box.

(2) Specification 6B, or 6C; also 37A or 37B (sing'e-trip containers) (§§178.98, 178.99, 178.131, or 178.132 of this subchapter). "Black iron" metal barrels or drums.

§ 173.192 Ammonium picrate, picric acid, trinitrobenzoic acid, and urea nitrate, wet. (a) Ammonium picrate, picric acid, trinitrobenzoic acid, and urea nitrate, wet with not less than 10 percent water, in quantity not exceeding 16 ounces in one outside package, may be shipped as drugs, medicines, or chemicals, when in glass bottles securely stoppered, each bottle inclosed in a strong fiber carton properly cushioned in the outside shipping case. No restrictions other than packing prescribed by this section are required when these materials are offered for transportation.

§ 173.193 Picric acid, trinitrobenzoic acid, or urea nitrate, wet. (a) Picric acid, trinitrobenzoic acid, or urea nitrate, wet with not less than 10 percent water must be packed in specification containers as follows:

(1) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers, cushioned and tightly closed. The net weight in an outside package

[1] Use of existing tank cars authorized, but new construction not authorized.

[1] Use of existing tank cars authorized, but new construction not authorized.

must not exceed 25 pounds dry weight. (See § 173.65 for shipment of wet picric acid, wet trinitrobenzoic acid and wet urea nitrate in excess of 25 pounds, and § 173.192 for exemption up to 16 ounces.)

(2) Specification 21C (§ 178.224 of this subchapter). Fiber drums of not over 6½ gallons capacity with one inside 5-mil polyethylene bag. Drum must be made vapor tight through the installation of a 7-mil polyethylene interior lining, plus 1½ mil of polyethylene buried in the inside ply of the drum. The full open head of the container must be made vapor tight by the use of a 24-gauge metal lid with a 10-mil preformed sealing disc glued to the rubber gasket cover and locked with a lever type locking ring and a pilfer proof seal. The net weight of the dry material shall not exceed 25 pounds.

§ 173.194 Potassium permanganate. (a) Potassium permanganate must be packed in specification containers as follows:

(1) In containers as prescribed in § 173.154.

(2) In bulk, in sift-proof, self-clearing, covered hopper or bottom outlet steel cars or in sift-proof all steel flat bottom gondola cars with fixed sides and ends equipped with water-proof and dust-proof wooden or steel covers well secured in place for all openings, or in bulk, in motor vehicles with steel, sift-proof, self-clearing hopper-type or dump-type bodies, with water-proof and dust-proof covers, well secured in place. Such cars, when used exclusively in this service and stenciled "FOR POTASSIUM PERMANGANATE ONLY," are not subject to the requirements of § 174.515 of this subchapter.

§ 173.195 Pyroxylin plastic scrap. (a) Pyroxylin plastic scrap must be packaged as follows:

(1) Specification 15A, 15B, or 19B (§§ 178.168, 178.169, 178.191 of this subchapter). Wooden boxes lined, Spec. 2F or 2M (§§ 178.25, 178.31 of this subchapter). Gross weight must not exceed 450 pounds each.

(2) Specification 6B, 6C, or 6J; also 17H, 37A, or 37B (sing'e-trip containers) (§§ 178.98, 178.99, 178.100, 178.118, 178.131, or 178.132 of this subchapter). Metal barrels or drums.

(3) [Reserved]

(4) [Reserved]

(5) Spec. 21C (§ 178.224 of this subchapter). Fiber drums. Must be externally treated to provide protection against moisture. Authorized net weight not over 225 pounds.

(b) Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion picture film scrap, or pieces of exposed or unexposed film which show evidence of decomposition or instability or are liable to decompose or become unstable must be packed submerged in water in specification containers as follows:

(1) Specification 6B or 6C; or 17H (sing'e-trip) (§ 178.98, § 178.99, or § 178.118 of this subchapter). Metal barrels or drums.

(2) Specification 15A, 15B, 15C, or 19B (§ 178.168, § 178.169, § 178.170, 178.191 of this subchapter). Wooden boxes with tightly closed inside metal containers.

§ 173.197 Pyroxylin plastics, in sheets, rolls, rods, or tubes. (a) Pyroxylin plastics, in sheets, rolls, rods, or tubes containing nitrocellulose are subject to this subchapter only when offered for transportation by air or water and then must be packaged as follows:

(1) Specification 15A, 15B, 19A, or 19B (§§ 178.168, 178.169, 178.190, 178.191 of this subchapter). Wooden boxes.

(2) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes. Special boxes §§ 178.205-20 and 178.205-21 authorized only for pyroxylin in sheets, rods or tubes.

(3) Sheets rolled, in spec. 21C (§ 178.224 of this subchapter) fiber drums, having 2 straps applied lengthwise and one or more circumferentially; straps at least ½ by 0.02 inch steel. Authorized net weight not over 225 pounds.

(4) Sheets, rolled, not over 15 pounds net weight in fiber tubes lined throughout with single faced corrugated fiberboard at least 0.2 inch thick and securely closed; tube material at least 0.115 inch thick for side walls and 0.05 inch thick for ends with strength, Mullen or Cady test, at least 245 and 220 pounds respectively; metal ends for tubes acceptable when lined with fiber discs at least 0.05 inch thick.

(b) Pyroxylin plastics in manufactured articles or articles made therefrom is not subject to Parts 170-189 of this subchapter and Part 397 of this title.

§ 173.197a Smokeless powder for small arms. Smokeless powder for small arms in quantities not exceeding 100 pounds net weight transported in one rail car or motor vehicle may be classed as a flammable solid when examined for this classification by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT. Maximum quantity in any inside packaging may not exceed 8 pounds. Inside packagings must be arranged and protected to prevent simultaneous ignition of the contents. The complete package must be a type examined by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT. In addition, inside packages which have been examined by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT, may be overpacked in DOT-12A65, 12B65, or 12H65 fiberboard boxes provided all inside containers are firmly packed to prevent movement and the net weight of smokeless powder in any one box does not exceed 16 pounds. Each outside package must bear a FLAMMABLE SOLID label.

§ 173.198 Sodium hydride. (a) Sodium hydride must be packed in specification containers as follows:

(1) In containers as prescribed in § 173.206(a)(1) and (a)(2).

(2) Spec. 17H (§ 178.118 of this subchapter). Metal drums (single-trip).

(3) Spec. 37A or 37B (§ 178.131 or § 178.132 of this subchapter). Metal drums (sing'e-trip) with welded side seams and hermetically sealed closure or closure made fast by positive pressure of the lid against a rubber gasket with edge of the lid crimped over the lip of the drum and a protective metal ring fastened around the crimped edge, packed in strong outside wooden boxes.

§ 173.202 Sodium metal liquid alloy, potassium metal liquid alloy, and sodium potassium liquid alloy. (a) Sodium metal liquid alloy, potassium metal liquid alloy, and sodium potassium liquid alloy, must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§ 178.168, § 178.169, 178.191 of this subchapter). Wooden boxes with inside metal packagings. Inside packagings must be cushioned with incombustible cushioning material. Each inside metal packaging must have been tested hydrostatically to a pressure of not less than 60 pounds per square inch without rupture. Closing devices on inside metal packagings must be protected from injury. Not more than 300 pounds of the material may be shipped in one outside box.

(2) Spec. 5A (§ 178.81 of this subchapter), metal barrels or drums not exceeding 400 pounds capacity each, having protruding valves protected by a 12-gauge steel dome securely attached to the head of the drum. Shipments are authorized by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 4BW240 (§ 178.61 of this subchapter) cylinder. Each cylinder must be equipped with steel valve protection caps or collars, or be packed in strong wooden boxes and secured therein to protect the valves.

(4) Specification 51 (§ 178.245 of this subchapter) portable tank. Tanks shall have a minimum design pressure of 150 pounds per square inch. Safety relief devices must communicate with the vapor space when tanks are fully loaded. Tank must be blanketed with dry nitrogen at a pressure not to exceed 15 psig at all times.

(b) Packaging of metallic liquid alloys of sodium or potassium in combination with fissile or large quantities of radioactive material, is authorized as provided in § 173.206(a)(10) and (12).

§ 173.203 Tetranitromethane. (a) Tetranitromethane must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§ 178.168, 178.169, 178.191 of this subchapter). Wooden boxes, gross weight not exceeding 150 pounds, with inside containers which must be: glass bottles not more than 1 quart capacity each, with closures securely fastened and of a type not deteriorated by the contents, each bottle individually packed in a tight metal container and cushioned therein with absorbent incombustible material; or aluminum cans or polyethylene bottles, not more than 5 pounds capacity each, with opening not more than 1.25 inches diameter, fitted with securely fastened screw-type closures and gaskets of material not deteriorated by contact with the contents, cushioned with not less than 2 inches of absorbent incombustible cushioning material between the inside containers and any part of the wooden box.

(2) Specification 6B or 6C (§§ 178.98, 178.99 of this subchapter). Metal barrels or drums, with an inside stainless steel or aluminum drum(s). The inside drum may have no opening larger than 2.5 inches in diameter, and must be securely closed by a gasketed screw-type device. Gaskets must be made of materials that will not deteriorate upon contact with the contents. The inside drum(s) must be cushioned with not less than 2 inches of absorbent incombustible cushioning material. Each inside drum shall be of not less than 20-gauge metal and shall be tested for leakage before packing in the outside drum.

§ 173.204 Sodium hydrosulfite. (a) Sodium hydrosulfite must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not exceeding 5 pounds capacity each, or metal containers.

(2) Specification 6B, or 6C (§§ 178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Spec. 17E, 17H, or 37K (§§ 178.116, 178.118, or 178.130 of this subchapter). Metal drums (single-trip).

(4) Specification 37A or 37B (§§ 178.131, 178.132 of this subchapter). Metal drums (STC). Not authorized for transportation by air. Authorized for transportation by water only when the containers are fitted with a minimum 4-mil polyethylene liner, the drum covers contain sponge rubber gaskets, the drums are closed with a bolted ring closure and the gross weight is not over 275 pounds.

(5) Spec. 21C (§ 178.224 of this subchapter). Fiber drums with inside metal drums. Authorized net weight not over 225 pounds.

(6) Spec. 21C (§ 178.224 of this subchapter). Fiber drums. Authorized net weight of product not over 250 pounds; drums must have a metal foil (laminated between two sheets of kraft paper with thermoplas-

For explanation of abbreviations and reference marks, see last page of this tariff.

6c adhesive) moisture and water barrier wound into the sidewall of the drum and located not more than 2 plies from the interior of drum but not to be wound as the first ply; a metal foil moisture and water barrier must also be present in the fiber or wood heading; exterior of drum sidewall must be protected with a water resistant coating; in addition to the tests prescribed by §178.224-2(a), (b), and (c) of this subchapter, a drum having been given a 4-foot diagonal bottom chime drop must, after being emptied, withstand complete immersion of the bottom in 6 inches of water for 4 hours without leakage to the interior; drums must not be offered for transportation by carriers by water.

(7) Spec. 22B (§178.197 of this subchapter). Plywood drums with inside metal drums.

(8) Specification 56 (§§178.251, 178.252 of this subchapter). Portable tank. Authorized only for shipment in a closed transport vehicle. For rail transportation see §174.63 of this subchapter. Not authorized for transportation by water.

§ 173.205 Sodium picramate, wet. (a) Sodium picramate must be wet with not less than 20 percent of water by weight and packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers not exceeding 1 quart capacity each, and cushioned in outside container.

(2) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with inside polyethylene container meeting all requirements of Specification 2U (§178.24 of this subchapter) except removable head is authorized. Fiber drum must be rated for a minimum net weight of 600 pounds. Maximum gross weight shall not exceed 400 pounds.

§ 173.206 Sodium or potassium, metallic; sodium amide; sodium potassium alloys; sodium aluminum hydride; lithium metal; lithium silicon; lithium ferro silicon; lithium hydride; lithium borohydride; lithium aluminum hydride; lithium acetylide-ethylene diamine complex; aluminum hydride; cesium metal; rubidium metal; zirconium hydride, powdered. (a) Metallic sodium or potassium, sodium amide, sodium potassium alloys, sodium aluminum hydride, lithium metal, lithium silicon, lithium ferro silicon, lithium hydride, lithium borohydride, lithium aluminum hydride, lithium acetylide-ethylene diamine complex, aluminum hydride, cesium metal, rubidium metal, and powdered zirconium hydride must be packaged as follows:

(1) Specification 15A, 15B, 19A, or 19B (§§178.168, 178.169, 178.190, 178.191 of this subchapter). Wooden boxes must have inside air-tight metal packagings. Each inside air-tight metal packaging must have a closing device securely fastened by positive means (not friction). For shipments of lithium aluminum hydride, each inside metal packaging must not exceed 1 gallon capacity and must be securely closed, positive means not required. Each inside metal packaging containing lithium aluminum hydride must be cushioned in outside packagings with sufficient incombustible packaging material.

(2) Specification 5, 5C, 6B, or 6C (§§178.80, 178.83, 178.98, 178.99 of this subchapter). Metal barrels or drums. Not authorized for lithium aluminum hydride or aluminum hydride.

(3) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (sing'e-trip). Authorized only for lithium metal or sodium, metallic which must be fused solid in the container.

(4) Spec. 37A or 37B (§178.131 or §178.132 of this subchapter). Metal drums (sing'e-trip) not exceeding 6 gallons capacity each, with welded side seams and hermetically sealed closure or closure made fast by positive pressure of the lid against a rubber gasket with edge of the lid crimped over the lip of the drum and a protective metal ring fastened around the crimped edge, cushioned on all sides with incombustible packing material, packed in strong outside wooden boxes (see §173.25). Not more than four inside metal drums shall be packed in one outside wooden box.

(5) Spec. 17C (§178.115 of this subchapter). metal drums (sing'e-trip). Not authorized for lithium aluminum hydride.

(6) Spec. 17H or 37A (§178.118 or §178.131 of this subchapter). Metal drums (sing'e-trip), with air-tight metal inside containers which must have closing device securely fastened by positive means (not friction). Inside metal containers must be cushioned on all sides by incombustible packing material. Authorized for lithium metal or lithium hydride only.
