(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 375-pound test (Mullen or Cady) solid fiberboard with inside air-tight metal container which must have a closing device securely fastened by positive means (not friction). Each inside metal container must be individually nested into a double-faced corrugated partition of at least 200-pound test (Mullen or Cady) which is in turn surrounded on all sides by a peripheral double-walled corrugated liner of at least 200-pound test (Mullen or Cady). Authorized gross weight not over 90 pounds.

(8) Spec. 21C (§178.224 of this subchapter). Fiber drums constructed for 400 pounds net weight, with the material packed not more than 5 pounds net weight each in not to exceed one-half gallon steel cans equipped with friction-top closures. Authorized for lithium ferro silicon only.

(9) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with non-sparking inside metal cans securely closed by use of plastic tape, or other efficient means to provide moisture tight seal. Authorized only for lithium metal in ribbon form not over ½ inch wide and 1/16 inch thick. Lithium metal ribbon must be coated with heavy mineral oil or petrolatum and be wound on motion picture film reels not over 1,600-foot capacity each.

(10) Tubes of stainless steel, or other metals of equivalent strength and nonreactivity, having sealed, welded end caps, and containing not more than 50 grams of metal. Authorized only for metallic sodium, metallic lithium, metallic potassium, and sodium potassium alloy. Each tube must be enclosed within a secondary sealed metallic tube and further enclosed within strong tight outer packaging.

(11) Specification 12B (§173.205 of this subchapter). Fiberboard box. Authorized only for lithium metal in wire form. Fiberboard box must have inside nonsparking metal packaging. Each inside nonsparking metal packaging must be tin coated and sealed by rolled-on lids. The contents of each inside packaging must be coated with heavy mineral oil or petroleum and wound on a 3-inch by 3-inch nonsparking metal spool. The net weight of the contents in each inside packaging must not exceed one-fourth pound.

(12) Any packaging as prescribed in §§173.416 or 173.417(b).

(13) Specification 21C (§178.224 of this subchapter). Fiber drums with inside hermetically sealed tin-coated steel cans with a minimum wall thickness of 0.015 inch. Not more than four spools made of nonsparking material may be packed in each inside container with not more than 2½ pounds net weight of product in each inside container. Each metal can shall be individually separated with double-faced corrugated partitions and noncombustible packaging material. Authorized only for lithium metal in ribbons.

(b) Sodium or potassium, metallic, sodium amide, and lithium metal, immersed in neutral oil may also be shipped when packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§178.168, §178.169, §178.191 of this subchapter). Wooden boxes with inside metal drums, Spec. 37A or 37B (§178.131, §178.132 of this subchapter) having welded side seams, net weight not over 30 pounds, or with inside glass containers, each enclosed in a tin container.

(2) Spec. 17H (§178.118 of this subchapter). Metal drum (sing'e-trip). Authorized only for lithium metal in the form of cups or ingots.

(c) Sodium, metallic, may also be shipped when packed in specification containers as follows:

(1) Spec. 105A300-W (§§179.100 and 179.101 of this subchapter). Tank cars, having exterior heater coils fushion welded to tank shell and properly stress-relieved, the material to be in molten condition when loaded into the tank and allowed to solidify before car is offered to the carrier. Outage must be 5 percent or more for sodium at fusion temperature of 208° F.

(2) Specification 17C, 17H, 37A, or 37B (§§178.115, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (sing'e-trip). These drums are authorized for cylindrical blocks which must be at least 2 inches in diameter and not less than 6 inches in length, or rectangular blocks not less than 6 inches in length and not less than 2 inches in any other dimension.

(3) Specification MC 330 or MC 331 (§178.337 of this subchapter). Cargo tanks having a minimum design pressure of 150 pounds per square inch and having exterior coils fusion-welded to the tank shell and properly stress-relieved. Tanks must be equipped with safety valves having a start-to-discharge pressure not exceeding 150 pounds per square inch. The material must be in molten condition when loaded and solidified before being moved over a public highway. Outage must be 5 percent or more at a sodium temperature of 208° F.

(4) Specification 51 (§178.245 of this subchapter). Portable tank. Each tank must have a minimum design pressure of 150 p.s.i.g. Each tank must be equipped with safety valves having a start-to-discharge pressure of 150 p.s.i.g. If a tank has exterior heating coils these coils must be welded to the tank and must be stress relieved. The material must be in molten condition when loaded and the tank must be held for sufficient time to allow the material to be completely solidified before being offered for transportation. Outage must be five percent or more at sodium fusion temperature of 208° F.

(d) Limited quantities of lithium metal in cartridges or rubidium metal in cartridges is excepted from labeling (except when offered for transportation by air) and specification packaging requirements, when packaged according to the following paragraph. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) In inside hermetically sealed metal cartridges not exceeding 18 grams net weight each, packed in strong outside packagings with net weight of lithium or rubidium metal not exceeding one pound; which outside packaging may be further overpacked in strong wooden boxes or fiber drums provided total net weight of lithium or rubidium metal in one outside box or drum does not exceed one pound.

(e) Lithium metal or rubidium metal in cartridges, containing more

than 18 grams but not more than 120 grams of lithium or rubidium, must be packed in specification packagings as follows:

(1) Specification 15A, 15B, 19A, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside air-tight copper cartridges having a minimum wall thickness of 0.02-inch. Cartridges having less than 0.022-inch wall thickness must be separated or securely cushioned in the boxes. Gross weight must not exceed 75 pounds.

(f) Lithium batteries comprised of one or more cells are not subject to the requirements of this subchapter, if they meet the following requirements.

(1) Each cell may contain no more than 0.5 gram of lithium or lithium alloy.

(2) Each battery may contain an aggregate quantity of no more than 1 gram of lithium or lithium alloy.

(3) Each cell must be hermetically sealed.

(4) Cells must be separated so as to prevent short circuits.

(5) Batteries must be packed in strong outside packagings except when installed in electronic devices.

(6) If a battery contains more than 0.5 gram of lithium or lithium alloy, it may not contain a liquid or gas that is a hazardous material according to this subchapter unless the liquid or gas, if free, would be completely absorbed or neutralized by other materials in the battery.

§ 173.207 Sulfide of sodium or sulfide of potassium, fused or concentrated, when ground. (a) Sulfide of sodium or sulfide of potassium, fused or concentrated, when ground, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside bottles enclosed in tightly closed metal cans, or hermetically sealed (soldered) metal cans.

(2) Specification 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside containers which must be hermetically sealed (soldered) metal cans of not over 5 pounds capacity.

(b) When fused or concentrated, but not ground (may be chipped, flaked, or broken), may be shipped in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside bottles of not more than 5 pounds capacity each, or tightly sealed metal cans.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be metal cans of not over 5 pounds net weight each or glass bottles of not over 1 pound net weight each. Packages containing glass or earthenware containers must not weigh over 65 pounds gross.

(3) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (single-trip).

(4) Specification 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(5) Spec. 21C (§178.224 of this subchapter). Fiber drums which must be lined or coated, or otherwise treated so as to prevent the entrance of moisture in quantities sufficient to create a hazardous condition in transportation; maximum loaded capacity 250 pounds net.

(6) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads shall not require perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.004 inch. Not more than 25 pounds net weight of product may be packed in one outside box.

(7) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each shall be packed in one outside box. Shipper must have established that completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(c) Sulfide of potassium, crystallized, is not subject to Parts 170–189 and 397 of this title.

(d) Sodium sulfide when shipped fused in one solid mass in a metal barrel or drum and sodium sulfide, crystallized, are not subject to Parts 170–189 and 397 of this title.

(e) Sodium sulfide containing 35 percent or more combined water by weight, fused or concentrated but not ground (may be chipped, flaked, or broken), when packed in steel barrels or drums or portable metal tanks that are equipped with moisture-tight closures, or in strong tight fiber drums having a moisture-barrier incorporated in the walls and equipped with moisture-tight closures, is not subject to Parts 170–189 and Part 397 of this Title. Portable tanks filled to gross weight to be shipped must be capable of withstanding a drop from a height of 4 feet onto solid concrete without rupture or serious damage, and must be equipped with lifting devices capable of holding 4 times the gross weight of filled tank.

§ 173.208 Titanium metal powder, wet or dry. (a) Titanium metal powder, wet. Titanium metal powder, wet, with not less than 20 percent water, must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside metal cans not exceeding 1 gallon each, and not more than 12 metal cans in one outside box; or not more than 1 inside metal can of not less than 22-gauge metal and not over 10 gallons capacity. Metal cans must be tightly closed.

(2) Titanium metal powder, wet, with not less than 50 percent water by weight may be packed in any full removable head drum specified in §173.154.

(b) Titanium metal powder, dry. Titanium metal powder, dry, must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.190, 178.191 of this subchapter). Wooden boxes with inside metal containers, closed by push-in covers, held in place by soldering at least four points, or in screw-cap metal cans. Inside containers must not exceed 10 pounds net weight each and must be cushioned by an incombustible material. Gross weight not to exceed 75 pounds each.

(2) Spec. 17H or 37A (§178.118 or §178.131 of this subchapter). Metal barrels or drums (single-trip) with inside metal drum of not less than 20-gauge metal and with closure secured by positive means. The inside container shall be completely surrounded by not less than 1 inch of incombustible cushioning material.

(3) Spec. 5B (§178.82 of this subchapter). Metal barrels or drums not over 15 gallons capacity.

(4) Specification 17C (§178.115 of this subchapter). Metal drums (single trip) not over 30-gallon capacity.

§ 173.212 Trinitrobenzene and trinitrotoluene, wet. (a) Trinitrobenzene and trinitrotoluene, wet with not less than 10 percent water, in quantity not exceeding 16 ounces in one outside package, may be shipped as drugs, medicines, or chemicals, when in glass bottles securely stoppered, each bottle inclosed in a strong fiber carton properly cushioned in the outside shipping case and are not subject to any other requirement of Parts 170–189 and 397 of this title.

§ 173.214 Hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, chemically produced (see Note 1), finer than 20 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, chemically produced (see Note 1), finer than 20 mesh particle size.

Note 1. Produced by means other than attrition or grinding.

Note 2. Any product containing 10 percent or more particle size specified, shall be subject to this section.

Note 3. Any product containing less than 25 percent water by weight is considered dry for purposes of these regulations.

(a) Hafnium metal, wet, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size with a minimum of 25 percent water by weight (a mixture of water and a suitable anti-freeze agent may be used when freezing temperatures may be encountered during transportation) must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes or Spec. 6B or 6C (§§178.98, 178.99 of this subchapter) metal drums with inside glass or noncarbon polyethylene containers having net weight of not over 10 pounds each. Inside glass containers must be equipped with positive type clamp-on closures equipped with rubber gaskets. Inside polyethylene containers must have screw-cap closures equipped with gaskets ahead of thread and shall be of material which will not react with or be decomposed when in contact with contents. Screw-cap closures must be secured in place by suitable tape. Each glass or polyethylene container must be surrounded on all sides with not less than 1 inch of incombustible cushioning material and in an amount sufficient to completely absorb the entire liquid contents of the containers. Each inside glass or polyethylene container must be placed in a strong tight metal can closed with push-in cover held in place by soldering or crimping at least four points. The authorized net weight of hafnium in one outside container shall not exceed 40 pounds for wooden boxes and shall not exceed 150 pounds for steel drums.

(b) Hafnium metal, dry, in an atmosphere of inert gas, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size must be packed in specification containers as follows:

(1) Specification 6B or 6C (§§178.98, 178.99 of this subchapter) or Spec. 17C, 17H, or 37A (single-trip containers) (§§178.115, 178.118, 178.131 of this subchapter). Metal barrels or drums with inside noncarbon polyethylene bottles having positive type clamp-on closures equipped with rubber gaskets, or with screw-cap closures having not less than three continuous threads and equipped with gaskets ahead of threads, not over 5 pounds net weight capacity each. Screw-cap closures must be secured in place by suitable tape. Each bottle must be placed in a Specification 2R (§178.34 of this subchapter) metal container having a wall thickness of one-fourth inch and be completely sur-

For explanation of abbreviations and reference marks, see last page of this tariff.

rounded by cushioning material. Specification 2R containers must be separated from one another by incombustible cushioning material. The authorized net weight of metal in one outside container shall not exceed 150 pounds.

(c) Zirconium metal, wet, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size with a minimum of 25 percent water by weight (a mixture of water and a suitable anti-freeze agent may be used when freezing temperatures may be encountered during transportation) must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter) Wooden boxes or Spec. 6B or 6C (§§178.98, 178.99 of this subchapter) or Spec. 17C or 17H (§§178.115, 178.118 of this subchapter) metal drums with inside glass or noncarbon polyethylene containers having net weight of not over 10 pounds each. Inside glass containers must be equipped with positive type clamp-on closures equipped with rubber gaskets. Inside polyethylene containers must have screw-cap closures equipped with gaskets ahead of the thread and shall be of material which will not react with or be decomposed when in contact with contents. Screw-cap closures must be secured in place by suitable tape. Each glass or polyethylene container must be surrounded on all sides with not less than 1 inch of incombustible cushioning material and in an amount sufficient to completely absorb the entire liquid contents of the containers. Each inside glass or polyethylene container must be placed in a strong metal can closed with push-in cover held in place by soldering or crimping at at least four points. The authorized net weight of zirconium in one outside container shall not exceed 40 pounds in wooden boxes and 150 pounds in steel drums.

(2) [Reserved]

(3) Spec. 37P (§178.133 of this subchapter). Steel drums with polyethylene liner of one-piece molded construction (nonreusable container) not over 5 gallons capacity each. Drums exceeding 1 gallon capacity must be constructed of at least 24-gauge metal.

(4) Specification 37M (§178.134 of this subchapter). Cylindrical steel overpack with inside specification 2S (§178.35 of this subchapter) polyethylene container. Each overpack must be constructed of at least 24-gage steel. Each packaging may not exceed a capacity of 5 gallons. Net weight of contents may not exceed 50 pounds of dry material.

(5) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside specification 2S (§178.35 of this subchapter) noncarbon polyethylene container. Container is limited to single trip only and may not exceed a capacity of 5 gallons. Net weight of contents must not exceed 50 pounds of dry material.

(d) Zirconium metal, dry, in an atmosphere of inert gas, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size must be packed in specification containers as follows:

(1) Specification 6B or 6C (§§178.98, 178.99 of this subchapter) or Specification 17C, 17H, or 37A (single-trip containers) (§§178.115, 178.118, 178.131 of this subchapter). Metal barrels or drums with inside non-carbon polyethylene bottles having positive type clamp-on closures equipped with rubber gaskets, or with screw-cap closures having not less than three continuous threads and equipped with gaskets ahead of threads, not over 5 pounds net weight capacity each. Screw-cap closures must be secured in place by suitable tape. Each bottle must be placed in a Specification 2R (§178.34 of this subchapter) metal container having a wall thickness of one-fourth inch and be completely surrounded by cushioning material. Specification 2R containers must be separated from one another by incombustible cushioning material. The authorized net weight of metal in one outside container shall not exceed 150 pounds.

(e) Mechanically produced hafnium metal, coarser than 270 mesh particle size and chemically produced coarser than 20 mesh particle size in strong tight containers are not subject to Parts 170–189 of this subchapter and Part 397 of this Title.

(f) Mechanically produced zirconium metal, coarser than 270 mesh particle size and chemically produced coarser than 20 mesh particle size in strong tight containers are not subject to Parts 170–189 and 397 of this title. (See §173.220, zirconium scrap.)

§ 173.216 Zirconium picramate, wet. (a) Zirconium picramate must be wet with not less than 20 percent of water by weight and packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers of not over 1-quart capacity each, tightly stoppered and cushioned.

§ 173.217 Calcium hypochlorite, hydrated; Calcium hypochlorite mixture, dry; lithium hypochlorite mixture, dry; mono-(trichloro) tetra-(monopotassium dichloro)-penta-s-triazinetrione, dry; potassium dichloro-s-triazinetrione, dry; sodium dichloro-s-triazinetrione, dry; trichloro-s-triazinetrione, dry. (a) Calcium hypochlorite, hydrated; calcium hypochlorite mixture, dry, lithium hypochlorite mixture, dry, mono-(trichloro) tetra-(monopotassium dichloro)-penta-s-triazinetrione, dry, potassium dichloro-s-triazinetrione, dry, sodium dichloro-s-triazinetrione, dry, and trichloro-s-triazinetrione, dry, each containing more than 39 percent available chlorine must be packaged as follows:

(1) Specification 6B, or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (single-trip).

(3) Specification 21C (§178.224 of this subchapter). Fiber drums with inner ply consisting of a laminated sheet of paper and aluminum foil, internally coated. Cover of drum must be gasketed. Authorized net weight not over 400 pounds.

(4) Specification 21C (§178.224 of this subchapter). Fiber drum with commodity packed in securely closed polyethylene bag constructed of polyethylene film not less than 0.004-inch thickness. Not authorized for calcium hypochlorite mixtures and lithium hypochlorite compounds, dry.

(5) Specification 21C (§178.224 of this subchapter). Fiber drum must be made with integral inner body ply having 0.003-inch minimum thickness aluminum facing and bottom inner ply having 0.001-inch minimum thickness aluminum facing. Cover of drum must be gasketed. Authorized net weight not over 400 pounds. Authorized only for dry calcium hypochlorite mixtures.

(6) Specification 56 (§§178.251, 178.252 of this subchapter). Metal portable tank. Authorized only for calcium hypochlorite, hydrated; mono-(trichloro) tetra-(monopotassium dichloro)-penta-s-triazinetrione, dry; potassium dichloro-s-triazinetrione, dry; sodium dichloro-s-triazinetrione, dry; and trichloro-s-triazinetrione, dry. For rail transportation, see §174.63(b) of this subchapter.

(7) Specification 35 (§178.16 of this subchapter) non-reusable, removable head polyethylene drum for use without overpack and not over seven gallons capacity.

(8) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles with a minimum wall thickness of 0.015 inch. Not more than 2 polyethylene bottles may be packed in one box and each bottle must not contain more than 20 pounds net weight of the material. Packaging must be such that it will not react dangerously with or be decomposed by the commodity.

(9) Specification 12B (§178.205 of this subchapter). Fiberboard box with not more than two inside minimum 30-gauge thick steel pails containing not over 26 pounds net weight each. Each cover must be gasketed.

(b) As prescribed in §173.163(a)(7). Authorized only for calcium hypochlorite, hydrated.

(c) Limited quantities of these materials in strong outside wooden or fiberboard packages with inside packagings of glass not over five pounds capacity each, or with inside metal packagings or plastic bottles or drums not over ten pounds capacity each, are excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

§ 173.218 Isopropyl percarbonate, unstabilized. (a) Isopropyl percarbonate, unstabilized, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§178.168, §178.169, §178.170, §178.185, §178.190, 178.191 of this subchapter). Wooden boxes with inside glass, earthenware, or metal containers of not over 2 gallons capacity each which must be maintained at a temperature below 0° F. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

§ 173.219 Potassium perchlorate. (a) Potassium perchlorate must be packed as follows:

(1) As prescribed in §173.154(a)(1) to (a)(11) and (a)(14). Plastic bottles may be substituted for the inside glass bottles prescribed in §173.154(a)(6).

§ 173.220 Magnesium or zirconium scrap consisting of borings, clippings, shavings, sheets, turnings, or scalpings, and magnesium metallic (other than scrap), powdered, pellets, turnings, or ribbon; magnesium aluminum powder. (a) Magnesium or zirconium scrap consisting of borings, shavings, or turnings, must be packed in closed metal barrels or drums, wooden barrels, metal pails, fiber drums, fiberboard boxes with inside polyethylene bags or liner, or four-ply paper bags. Fiberboard boxes with inside polyethylene bags or liner or paper bags are not authorized for less-than-carload or less-than-truckload shipments.

(1) Magnesium or zirconium scrap consisting of clippings, scalpings, or scrap sheets may be shipped in bulk in carload or truckload quantities. Cars must be tight box cars or tightly closed steel covered gondola cars and trucks or trailers must have closed or completely covered bodies.

(2) Limited quantities of magnesium or zirconium scrap consisting of clippings, scalpings, or scrap sheets in closed metal drums, wooden barrels, or wooden boxes, unless otherwise provided, is excepted from labeling (except when offered for transportation by air) and specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter, except §177.817.

(3) When transported by vessel, magnesium scrap may not be carried in paper bags and zirconium scrap may only be packaged in an hermetically sealed metal drum not exceeding 80 pounds net weight.

(b) Magnesium metallic (other than scrap), powder, pellets, turnings, or ribbon, magnesium aluminum powder, must be packed in containers as prescribed in §173.154.

(1) Limited quantities of magnesium metallic (other than scrap), pellets, turnings, or ribbon in fiberboard boxes with inside glass bottles not over 1 pound capacity each, with not more than 25 pounds net weight of product in each outside fiberboard box, in closed metal drums, metal pails, fiber drums, or wooden boxes with inside packagings are, unless otherwise provided, excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(2) Specification 56 (§178.252 of this subchapter). Portable tank. Not authorized for transportation by water. For magnesium powder, or magnesium aluminum powder, the following additional requirements must also be met.

(i) The tank must be pressurized with 2 psig of nitrogen before shipment and the pressure relief valve must have a maximum setting of 3 psig; and

(ii) The tank must have both a sift-proof valve with a locking pin and a plug or blind flange on the bottom opening.

§ 173.221 Liquid organic peroxides, n.o.s., and liquid organic peroxide solutions, n.o.s. (a) Liquid organic peroxides, n.o.s., and liquid organic peroxide solutions, n.o.s. must be packed in packagings which may be equipped with venting devices wherever necessary to prevent excessive pressure buildup, as follows:

(1) Specification 1A, 1D or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Rated capacity may not exceed 5 gallons for Specification 1A. Not authorized for transportation by aircraft.

(2) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass, earthenware, or metal containers, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb any leakage. Metal containers authorized only for materials which will not react dangerously with or be decomposed by contact with metal.

(3) Specification 12B (§178.205 of this subchapter). Fiberboard box with Specification 2E (§178.24a of this subchapter) inside polyethylene bottles, or with glass or metal inside receptacles, not over 1 gallon each. Not more than six 1-gallon polyethylene bottles may be packed in one fiberboard box. Not more than one 1-gallon glass or metal inside receptacle, which must be cushioned with noncombustible packing material in sufficient quantity to absorb the contents of the inner receptacle, may be packed in one fiberboard box. Metal and polyethylene inside receptacles authorized only for material which will not react dangerously with or be decomposed by contact with metal or polyethylene.

(4) Spec. 42B (§178.107 of this subchapter). Aluminum drums not over 15 gallons capacity. Authorized only for peroxides which will not react dangerously with the aluminum or be decomposed by contact with it.

(5) Spec. 17C or 17E (§§178.115 or 178.116 of this subchapter). Metal drums (sing'e-trip) not over 15 gallons capacity. Authorized only for material which will not react dangerously with the drum metal, or be decomposed by contact with it.

(6) Spec. 22C (§178.198 of this subchapter). Plywood drum as prescribed by §178.198–2(a) of this subchapter, with inside spec. 2T (§178.21 of this subchapter) polyethylene container. Authorized only for material which will not react dangerously with or cause decomposition of the polyethylene.

(7) Specification 6D or 37M (nonreuseable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside Specifications 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene containers. Authorized only for materials which will not react dangerously with or cause decomposition of the polyethylene.

(8) Spec. 37P (§178.133 of this subchapter). Steel drums, not over 5-gallons capacity, with one-piece seamless molded polyethylene liner (nonreusable container). Drums exceeding 1-gallon capacity must be constructed of at least 24-gauge metal. Authorized only for materials that will not react with polyethylene and result in container failure.

(9) Specification 12P (§178.211 of this subchapter). Fiberboard box with one inside specification 2U (§178.24 of this subchapter) polyethylene container of not over 6 gallon capacity, or two inside specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(10) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles, not over 5-gallons capacity each, as specified by §178.205–34 of this subchapter. Not more than one bottle shall be packed in one outside box. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.

(11) Specification 16A (§178.185 of this subchapter). Wooden boxes with inside Specification 2U, 2S, or 2SL (§§178.24, 178.35, 178.35a of this subchapter) polyethylene containers, not over 5-gallon capacity each. Specification 2U container must have a minimum wall thickness of 0.015 inch. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner, top pad, and bottom pad. Authorized only for materials which will not react dangerously with or be decomposed by contact with polyethylene.

(12) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(13) Specification 57 (§178.253 of this subchapter). Metal portable tanks. Tanks are authorized only for tert-butyl cumyl peroxide. The tank may not be filled to more than 90-percent capacity.

§ 173.222 Acetyl peroxide and acetyl benzoyl peroxide, solution. (a) Acetyl peroxide must be shipped in solution in a non-volatile solvent and must contain not more than 25 percent by weight of the peroxide. Acetyl benzoyl peroxide must be shipped in solution in a non-volatile solvent and must contain not more than 40 percent by weight of the peroxide. They must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb any leakage.

(2) Specification 1A, 1D, or 1M (§§178.1, 178.4 or 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Rated capacity may not exceed 5 gallons for Specification 1A. Not authorized for transportation by aircraft.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container. Not more than one 1-gallon inside container shall be packed in one outside fiberboard box.

(4) Specification 12P (§178.211 of this subchapter). Fiberboard box with one inside specification 2U (§178.24 of this subchapter) polyethylene container of not over 5 gallon capacity or two inside specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(5) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles, not over 5 gallons capacity each, as specified by §178.205–34 of this subchapter. Not more than one bottle shall be packed in one outside box. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.

(6) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

§ 173.223 Peracetic acid. (a) Peracetic acid must be shipped in solution not exceeding 40 percent strength and must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass, earthenware, or polyethylene containers not over 1-gallon capacity each, cushioned with sterile absorbent cotton or other cushioning material which will not react with the contents to generate heat. Polyethylene container must have a vented closure capable of preventing leakage of liquid contents. Cushioning material must be in sufficient quantity to absorb any leakage. Boxes with inside polyethylene containers must be marked "Keep This Side Up."

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over one quart capacity each, cushioned with sterile absorbent cotton or other cushioning material which will not react with the contents to generate heat. Cushioning material must be in sufficient quantity to completely absorb the contents of the inner container.

(3) Specification 1D or 1M (§178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(4) Spec. 22C (§178.198 of this subchapter). Plywood drum as prescribed by §178.198–2(a) of this subchapter, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container.

(5) Specification 6D or 37M (nonreusable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside Specifications 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene containers not over 55-gallon capacity. Polyethylene container must have a vented closure capable of preventing leakage of liquid contents.

(6) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with inside Specification 2SL (§178.35a of this subchapter) polyethylene container not over 30-gallon capacity. Container must have a vented closure to prevent accumulation of internal pressure and the head with closure must be marked "Keep This End Up."

(7) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(b) Limited quantities of peracetic acid solutions not exceeding 40 percent strength packed in strong wooden or fiberboard boxes, with not more than one inside glass packaging not exceeding 1 pint capacity, cushioned with sterile absorbent cotton or other cushioning material which will not react with the contents to generate heat, and with such

For explanation of abbreviations and reference marks, see last page of this tariff.

cushioning material in sufficient quantity to completely absorb the contents of the bottle, are excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter, except §177.817.

§ 173.224 Cumene hydroperoxide, dicumyl peroxide, diisopropylbenzene hydroperoxide, paramenthane hydroperoxide, pinane hydroperoxide and tertiary butylisopropyl benzene hydroperoxide. (a) Cumene hydroperoxide of strength not exceeding 96 percent in a non-volatile solvent, dicumyl peroxide of strength not exceeding 50 percent in a non-volatile solvent, diisopropylbenzene hydroperoxide of strength not exceeding 60 percent in a non-volatile solvent, paramenthane hydroperoxide of strength not exceeding 60 percent in a non-volatile solvent, and tertiary butylisopropylbenzene hydroperoxide of strength not exceeding 60 percent must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb any leakage.

(2) Spec. 17E (§178.116 of this subchapter). Metal drums (single-trip), with interiors so treated that they will be resistant to the contents.

(3) Specification 103[1], 103W, 103A,[1] 103AW, 111A60F1, 111A60W1, 111A100F2, or 111A100W2 (§§179.200, 179.201 of this subchapter). Tank cars. Authorized for 90 percent or less cumene hydroperoxide in a nonvolatile solvent, dicumyl peroxide of strength not exceeding 50 percent in a nonvolatile solvent, paramenthane hydroperoxide of strength not exceeding 60 percent in a nonvolatile solvent and diisopropylbenzene hydroperoxide of strength not exceeding 60 percent in a nonvolatile solvent only. Specifications 103,[1] 103W, 111A60F1 and 111A60W1 tank cars must have bottom outlets effectively sealed from the inside.

(4) Specification MC-310, MC-311 or MC-312 (§178.343 of this subchapter). Cargo tanks. Authorized for diisopropylbenzene hydroperoxide of strength not exceeding 60 percent in a nonvolatile solvent. Bottom outlets are not authorized. Authorized for paramenthane hydroperoxide of strength not exceeding 60 percent in a nonvolatile solvent. Authorized for pinane hydroperoxide of strength not exceeding 45 percent in a nonvolatile solvent. Authorized for cumene hydroperoxide of strength not exceeding 90 percent in a nonvolatile solvent in MC-311 or MC-312 cargo tanks only.

§ 173.225 Phosphorus trisulfide; phosphorus sesquisulfide; phosphorus heptasulfide; phosphorus pentasulfide.

(a) Phosphorus trisulfide, phosphorus sesquisulfide and phosphorus heptasulfide must be packaged as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside metal containers, hermetically sealed (soldered) or water-tight metal cans with screw-top closures.

(2) Specification 6B or 6C (§§178.98 or 178.99 of this subchapter). Metal barrels or drums, not over 30 gallons capacity each.

(3) Spec. 37A or 37B (§178.131 or §178.132 of this subchapter). Metal drums (single-trip). Gross weight not over 425 pounds.

(b) Phosphorus pentasulfide must be packed as follows:

(1) In any packaging prescribed in §173.154 which will not permit water to come in contact with the lading.

(2) Specification 53[1] or 56 (§§178.251, 178.252 of this subchapter). Metal portable tank.

(3) Metal drum not over 15 gallons capacity. Authorized only for phosphorus pentasulfide fused into a solid mass before transportation.

§ 173.227 Urea peroxide. (a) Urea peroxide must be packed in specification containers as follows:

(1) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be rubber or plastic containers not exceeding 4 ounces each. Gross weight not over 65 pounds.

(2) Spec. 21C (§178.224 of this subchapter). Fiber drums completely coated on the inside with a suitable wax, synthetic coating, or metal foil suitable to the lading; or fiber drums having a metal foil (laminated between two sheets of kraft paper with thermoplastic adhesive) moisture and water barrier wound into the sidewall of the drum and located not more than 2 plies from the interior of drum but not to be wound as the first ply; a metal foil moisture and water barrier must also be present in the fiber or wood heading; exterior of drum sidewall must be protected with a water resistant coating; in addition to the tests prescribed by §178.224-2(a), (b), and (c) of this subchapter, a drum having been given a 4-foot diagonal bottom chime drop must, after being emptied, withstand complete immersion of the bottom in 6 inches of water for 4 hours without leakage to the interior. Authorized net weight not over 225 pounds.

(3) Spec. 22A (§178.196 of this subchapter). Plywood drums with paper bags, Spec. 2J (§178.28 of this subchapter) coated with suitable wax on the inner surface.

[1] Use of existing tank cars authorized, but new construction not authorized.

§ 173.228 Zinc ammonium nitrite. (a) Zinc ammonium nitrite must be packed in specification containers as follows:

(1) Spec. 6B, or 6C (§§178.98, or 178.99 of this subchapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (single-trip). Gross weight not over 300 pounds.

§ 173.229 Chlorate and borate mixtures or chlorate and magnesium chloride mixtures. (a) Chlorate and borate mixtures or chlorate and magnesium chloride mixtures containing more than 50 percent chlorate and no other hazardous additives must be packed as follows:

(1) As prescribed in §173.163.

(b) Limited quantities of chlorate and borate mixtures or chlorate and magnesium chloride mixtures containing no other hazardous additives and containing less than 50 percent chlorate are excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) Tight metal or fiber drums.

(2) Wooden boxes with tight inside metal containers.

(3) Multi-wall paper bags, net weight not over 50 pounds, moisture proof and sift proof, and having a strength capable of withstanding four 4-foot drops onto solid concrete.

(4) Strong fiberboard boxes with inside fiber containers having metal tops and bottoms, net weight not over 4 pounds each; gross weight of completed package not over 65 pounds.

(5) Strong fiberboard boxes with not more than 4 inside paper bags Spec. 2D (§178.23 of this subchapter), having net weight not over 10 pounds each.

(c) Chlorate and borate mixtures or chlorate and magnesium chloride mixtures containing 28 percent or less chlorate and no other hazardous additives, are not subject to the regulations in Parts 170–189 and 397 of this title.

§ 173.230 Sodium, metallic, dispersion in organic solvent. (a) Sodium, metallic, dispersion in organic solvent must be packed in specification containers as follows.

(1) Specification 15A, or 19B (§178.168, §178.191 of this subchapter). Wooden boxes with inside containers which must be metal cans not exceeding one quart capacity, and each such can must be packed in another metal can and cushioned on all sides with at least one inch of incombustible dry nonhydroscopic material which is nonreactive with sodium at temperatures encountered during normal transportation. Both the inner and outer metal cans shall be equipped with an airtight closing device secured by positive means (not friction). Gross weight of completed package must not exceed 100 pounds.

(2) Spec. 17H (§178.118 of this subchapter). Metal drum (single-trip) of not over 55 gallons capacity, with material contained in an inside spec. 17E (§178.116 of this subchapter) metal drum (single-trip) of not over 30 gallons capacity. The inside drum shall be snugly packed in the outside drum by completely and evenly surrounding it with incombustible dry nonhydroscopic material which is nonreactive with sodium at temperatures encountered during normal transportation.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 375-pound test (Mullen or Cady) solid fiberboard with inside metal cans not exceeding one quart capacity. Each such can must be packed in another metal can and cushioned on all sides with at least one inch of incombustible dry nonhydroscopic material which is nonreactive with sodium at temperatures encountered in normal transportation. Both the inner and outer metal cans shall be equipped with an airtight closing device secured by positive means (not friction) and must be individually nested into a double-faced corrugated partition of at least 200-pound test (Mullen or Cady) which is in turn surrounded on all sides by a peripheral double-walled corrugated liner of at least 200-pound test (Mullen or Cady). Authorized gross weight not over 90 pounds.

(4) Specification 15A, or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes with inside polyethylene bottles not exceeding 1-quart capacity each cushioned on all sides with at least 1-inch soda ash and then placed within an airtight metal can closed by a positive means. Metal cans shall be cushioned so as to prevent movement within the outer box. Solvents used must be compatible with the inner polyethylene bottle. Gross weight of the completed package must not exceed 100 pounds.

(5) Specification 17H (§178.118 of this subchapter). Metal drum, with one inside Specification, 5, 5C, 6B, or 6C (§§178.80, 178.83, 178.98, 178.99 of this subchapter) closed head metal drum not over 30 gallons capacity. Inside drum must be completely surrounded with incombustible cushioning material.

§ 173.231 Calcium, metallic, crystalline. (a) Calcium, metallic, crystalline must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside airtight metal containers not over 1-gallon capacity each.

(2) Spec. 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums, gross weight not over 350 pounds.

(3) Spec. 17C or 17H (§§178.115 or 178.118 of this subchapter). Metal drums (single-trip), gross weight not over 350 pounds.

§ 173.232 Aluminum, metallic powder. (a) Aluminum flake powders which have been rendered nondusting by agglomerating or other treatment of the individual particles, aluminum granules, aluminum atomized powder and aluminum paste are not subject to the requirements of this subchapter.

(b) Limited quantities of metallic aluminum powder, other than the powder described in paragraph (a) of this section in earthenware, glass, metal, or plastic inside packagings of not more than 5 pounds capacity each, in strong outside packaging of not over 25 pounds net weight, is excepted from labeling (except that labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter, except §177.817.

(c) Metallic aluminum powder, other than the powder described in paragraph (a) of this section, when not packed in accordance with paragraph (b) of this section, must be packaged as follows:

(1) Steel barrel or drum, not over 650 pounds net weight.
(2) Wooden box, not over 125 pounds gross weight.
(3) Moisture and sift-proof bag, not over 100 pounds net weight.
(4) Fiber drum, not over 650 pounds net weight.
(5) Fiberboard box, not over 650 pounds net weight.
(6) Portable tanks, not over 6,500 pounds gross weight.
(7) In bulk in rail cars and cargo tanks.

§ 173.234 Sodium nitrite and sodium nitrite mixtures. (a) Sodium nitrite and sodium nitrite mixtures must be packed in specification containers as follows:

(1) In containers as prescribed in §173.154.
(2) Specification 44C (§178.237 of this subchapter). Multiwall paper bags. Each bag must be constructed as follows and, in addition, each bag must have one inner ply bonded or coated with polyethylene or other suitable pliable plastic material having a minimum basis weight of 10 pounds, or an additional polyethylene inner ply (free film) of equivalent moisture barrier properties:
   (i) At least 5 plies having a minimum total basis weight of 310 pounds, or at least 4 plies of extensible Kraft paper having a minimum basis weight of 240 pounds. Maximum authorized net weight is 100 pounds; or
   (ii) At least 3-plies of extensible Kraft paper having a minimum basis weight of 180 pounds. Maximum authorized net weight is 50 pounds.
(3) Spec. 21C (§178.224 of this subchapter). Fiber drums: Authorized net weight not over 400 pounds.
(4) Spec. 37A (§178.131 of this subchapter). Metal drums constructed of steel having minimum thickness of 24 gauge. Bolted or lever-lock closure rings authorized provided drums withstand test prescribed by §178.131-11 of this subchapter. Authorized gross weight not over 425 pounds.
(5) Sodium nitrite is authorized for shipment in tight sift-proof covered hopper cars. Cars must be thoroughly cleaned before loading.
(6) Tank cars which must be thoroughly cleaned before loading.

§ 173.235 Ammonium bichromate (ammonium dichromate). (a) Ammonium bichromate (ammonium dichromate) must be packed in specification containers as follows:

(1) In containers as prescribed in §173.154.
(2) Spec. 21C (§178.224 of this subchapter). Fiber drums. Authorized net weight not over 400 pounds.

§ 173.236 Decaborane. (a) Decaborane must be packed in specification containers as follows:

(1) Spec. 6B or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums.
(2) Spec. 17C, 17E, 17H, 37A, or 37B (§§178.115, 178.116, 178.118, 178.131, or 178.132 of this subchapter). Metal drums (single-trip).
(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be metal cans; sliding-lid wooden boxes; fiber cans or boxes, spec. 2G (§178.26 of this subchapter), not over 5 pounds capacity each; or glass bottles not over 1 pound capacity each. Packages containing glass containers must not weigh over 65 pounds gross.

§ 173.237 Chlorine dioxide hydrate, frozen; chloric acid. (a) Chlorine dioxide hydrate, frozen, and chloric acid must be packed in specification packaging as follows:

(1) Specification 12B (§178.205 of this subchapter). Fiberboard boxes, with inside packages of polyethylene or other suitable material. Fiberboard boxes must be reinforced and insulated and sufficient dry ice must be used to maintain the hydrate or acid in a frozen state during transportation. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

§ 173.238 [Reserved]

§ 173.239 Barium azide—50 percent or more water wet. (a) Barium azide—50 percent or more water wet, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 1-pound capacity each. Bottles shall have rubber stoppers wire tied for securement. If shipment is to take place at a time freezing weather is to be anticipated, a suitable antifreeze solution must be used to prevent freezing.
(2) Specification 21C (§178.224 of this subchapter). Fiber drum with inside glass bottle not over 1-pound capacity each. Bottles must have rubber stoppers wire-tied for securement. If shipment is to take place at a time freezing weather is to be anticipated, a suitable antifreeze solution must be used to prevent freezing.

§ 173.239a Ammonium perchlorate. (a) Ammonium perchlorate must be packed in specification containers as follows:

(1) In containers as prescribed in §173.154.
(2) Specification 51[1] or 56 (§§178.251, 178.252 of this subchapter). Metal portable tank. Lower side or hopper-type product discharge openings are not permitted.

[1] Use of existing tanks authorized. Construction not authorized after May 31, 1972.

SUBPART F

CORROSIVE MATERIALS: DEFINITION AND PREPARATION

§ 173.240 Corrosive material; definition. (a) For the purpose of this subchapter, a corrosive material is a liquid or solid that causes visible destruction or irreversible alterations in human skin tissue at the site of contact, or in the case of leakage from its packaging, a liquid that has a severe corrosion rate on steel.

(1) A material is considered to be destructive or to cause irreversible alteration in human skin tissue if when tested on the intact skin of the albino rabbit by the technique described in Appendix A to this part, the structure of the tissue at the site of contact is destroyed or changed irreversibly after an exposure period of 4 hours or less.

(2) A liquid is considered to have a severe corrosion rate if its corrosion rate exceeds 0.250 inch per year (IPY) on steel (SAE 1020) at a test temperature of 130° F. An acceptable test is described in NACE Standard TM-01-69.

(b) If human experience or other data indicate that the hazard of a material is greater or less than indicated by the results of the tests specified in paragraph (a) of this section, the Department may revise its classification or make the material subject to the requirements of Parts 170-189 of this subchapter.

§ 173.241 Outage. (a) The outage (ullage) for packagings containing corrosive liquids, when offered for transportation, must be in accordance with the following requirements:

(1) **General outage requirements.** Packagings must not be com-

pletely filled. The proper vacant space (outage) in a tank car or other shipping container depends on the coefficient of expansion of the liquid and the maximum increase of temperature to which it will be subjected in transit. Outage must be calculated to the total capacity of the container.

(2) Outage requirements for packagings of 110 gallons or less. Sufficient outage must be provided so that the packaging will not be liquid full at 130° F. (55° C.).

(3) Outage requirements for tank cars. In tank cars, outage must be calculated to percentage of the total capacity of the tank, i.e., shell and dome capacity combined. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage. The outage for tank cars must not be less than 2 percent, except that outage for Specification 103A, 103B, 103C, 103E, 103A-AL, 103C-AL, 103AW, 103BW, 103CW, 103EW, 103ANW, 103A-ALW, tank cars must not be less than 1 percent.

(4) Outage requirements for cargo tanks or portable tanks. No cargo tank or portable tank, or compartment thereof, used for the transportation of any corrosive liquid shall be completely filled. The outage for cargo tanks and portable tanks must be no less than 2 percent.

§ 173.242 Bottles containing corrosive liquids. (a) Bottles containing corrosive liquids, as defined by § 173.240, may not be packed in the same package with any other hazardous material, except as specifically provided in paragraphs (b) and (c) of this section and §§ 173.25, 173.257, 173.258, 173.259, 173.260, 173.261, or 173.286.

(b) Bottles containing corrosive liquids cushioned by noncombustible, nonreactive absorbent material and securely packed in tightly closed metal packaging, except hydrofluoric acid which must be over packed in a packaging other than one made of metal, may be packed with other hazardous materials. This exception does not apply to nitric acid exceeding 40-percent concentration, perchloric acid, hydrogen peroxide exceeding 52-percent strength by weight, or nitrohydrochloric acid or nitrohydrochloric acid diluted, which may not be packed in the same package with any other article under any circumstances.

(c) Corrosive liquid solutions in securely closed bottles, in quantities necessary for preparing photographic processing mixtures and efficiently cushioned, may be packed in the same outside shipping container with required amounts of packaged chemicals not classed as hazardous materials by these regulations, provided no dangerous reaction would occur should the contents of bottles be mixed with the packaged chemicals. Marking prescribed in Part 172 of this subchapter is not required.

§ 173.243 Closing and cushioning. (a) All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed or in any case when necessary to prevent breakage or leakage.

§ 173.244 Limited quantities of corrosive materials. (a) Limited quantities of corrosive materials for which exceptions are permitted as noted by reference to this section in § 172.101 of this subchapter are excepted from labeling (except when offered for transportation by air) and specification packaging requirements when packed according to the following paragraphs. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part 177 of this subchapter except § 177.817.

(1) Corrosive liquids in bottles having a rated capacity not over 16 ounces by volume each enclosed in a metal can packed in strong outside packaging.

(2) Corrosive liquids in metal or plastic containers having a rated capacity not over 16 ounces by volume in strong outside packaging.

(3) Corrosive liquids in glass containers having a rated capacity not over 8 fluid ounces by volume in strong outside packaging and cushioned with sufficient absorbent material to completely absorb the liquid contents in the event of breakage, and which will not react chemically with the corrosive material.

(4) Corrosive solids in earthenware, glass, plastic, or paper containers of not more than 5 pounds capacity each packed in metal, wooden or fiberboard outside packaging not exceeding 25 pounds net weight each.

(5) Corrosive solids in metal, rigid fiber or composition cans or cartons or rigid plastic containers; of not more than 10 pounds capacity each, overpacked in metal, wooden or fiberboard outside containers not exceeding 25 pounds net weight each.

(b) Special exceptions for shipment of certain corrosive materials in the ORM-D class are provided in Subpart N of this part.

§ 173.245 Corrosive liquids not specifically provided for. (a) Corrosive liquids, as defined in § 173.240, other than those for which special requirements are prescribed, must be packed in specification containers constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows:

(1) Specification 1A (§ 178.1 of this subchapter). Glass carboys in boxes. Not authorized for transportation by aircraft.

(2) Spec. 1X (§ 178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 1D or 1M (§§ 178.4 or 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Pressure in the carboy may not exceed 10 pounds per square inch at 130° F. (55°C). If the package is vented, there may be no significant release of contents to the environment. Not authorized for transportation by aircraft.

(4) Specification 5A, 5B, 5C, or 5M (§§ 178.81, 178.82, 178.83, 178.90 of this subchapter). Metal barrels or drums.

(5) Specification 5K (§ 178.88 of this subchapter). Nickel barrels or drums. Authorized only for commodities that will not react with nickel and result in container failure.

(6) [Reserved]

(7) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers which must be glass, earthenware, polyethylene or other nonfragile plastic material (bags are not authorized), not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(8) [Reserved]

(9) [Reserved]

(10) [Reserved]

(11) [Reserved]

(12) Specification 12B (§ 178.205 of this subchapter). Fiberboard boxes with inside packagings of metal, polyethylene, or other nonfragile plastic material resistant to the lading, not exceeding 1 gallon each. A metal packaging is authorized only for a material that is not corrosive to metal. Gross weight may not exceed 65 pounds.

(13) Spec. 15P or 22C (§ 178.182 or 178.198 of this subchapter). Glued plywood or wooden box, or plywood drum as prescribed by § 178.198-2(a) of this subchapter, with Spec. 2T (§ 178.21 of this subchapter) polyethylene container.

(14) Spec. 17C, 17E, or 17F (§§ 178.115, 178.116, or 178.117 of this subchapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

(15) Specification 17H (§ 178.118 of this subchapter). Metal drums (single-trip). Authorized only for liquid boiler compounds, liquid water treatment compounds, and viscous cleaning compounds, liquid.

(16) Specification 6D or 37M (nonreusable container) (§§ 178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside Spec. 2S, 2SL, or 2U (§§ 178.35, 178.35a, 178.24 of this subchapter) polyethylene packaging.

(17) Specification 17H, 37A or 37B (§§ 178.118, 178.131, or 178.132 of this subchapter), metal drums (single-trip), with welded side seams, not over 5 gallons capacity each. Drums must be lined throughout with a pliable plastic material impervious to the lading. Specifications 37A and 37B metal drums must be at least 24 gauge steel. Not authorized for transportation by air.

(18) Specification 12A (§ 178.210 of this subchapter). Fiberboard boxes with inside glass, polyethylene, or other nonfragile plastic bottles not over 5-quart capacity each. Not more than 4 inside glass bottles exceeding 5-pint capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 178.210-10 of this subchapter.

(19) Specification 37P (§ 178.133 of this subchapter). Steel drum with polyethylene liner (non-reusable container). Authorized only for materials that will not react with polyethylene and result in container failure. Not authorized for transportation by air.

(20) Specification 16D (§ 178.187 of this subchapter). Wirebound wooden overwrap, with inside specification 2T, 2TL, 2S, or 2SL (§§ 178.21, 178.27, 178.35, 178.35a of this subchapter) polyethylene container. Not authorized for transportation by air.

(21) Specification 12P (§ 178.211 of this subchapter). Fiberboard box with one inside Specification 2U (§ 178.24 of this subchapter) polyethylene container of not over 5-gallon capacity, or two inside Specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(22) Specification 16A (§ 178.185 of this subchapter). Wirebound wooden box (§ 178.185-22 of this subchapter) with inside Specification 2U (§ 178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(23) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles, not over 5 gallons capacity each, as specified by § 178.205-34 of this subchapter. Not more than one bottle shall be packed in one outside box.

(24) Spec. 21P (§178.225 of this subchapter). Fiber drum overpack with inside Spec. 2S, 2SL, or 2U (§§178.35, 178.35a, or 178.24 of this subchapter) polyethylene container.

(25) Specification 12A or 12B (§§178.210 or 178.205 of this subchapter). Fiberboard boxes with inside aluminum packagings which must be compatible with the lading.

(26) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(27) Specification 33A (§178.150 of this subchapter). Polystyrene case (nonreusable container) with inside glass bottles not over 5-pint capacity each. Not more than four 5-pint bottles may be packed in one outside packaging.

(28) Specification steel or nickel cylinders as prescribed for any compressed gas except acetylene are authorized. All cylinder valves must be protected by one of the methods described in §173.301(g)(1), (2), or (3) of this part. See §173.34(e)(16).

(29) Specification MC 303 or 304. Cargo tanks meeting §178.343-2(c) of this subchapter. Specification MC 303 must have tanks fabricated from 12-gauge, Type 316 stainless steel. MC 303 is authorized only for monoethanolamine; *primary amyl alcohol*; and phosphoric acid and solutions thereof.

(30) Specification MC 307 (§§178.340, 178.342 of this subchapter). Cargo tanks meeting §178.343-2(c) of this subchapter.

(31) Specification MC 306, MC 310, MC 311, or MC 312 (§§178.340, 178.341, 178.343 of this subchapter). Cargo tanks. If cargo tank is constructed with bottom outlets, they must meet §178.343-5 of this subchapter. Specification MC 306 must have tanks fabricated from 12 gauge, Type 316 stainless steel. MC 306 is authorized only for monoethanolamine, primary amyl alcohol, phosphoric acid and solutions thereof; MC 306 constructed aluminum is authorized only for monoethanolamine *primary amyl alcohol*.

(32) Specification 103AW, 103A-ALW, 103ANW, 103BW, 103CW, 103EW, 105A100W, 105A200ALW, 109A200ALW, 111A100F2, 111A60ALW2, 111A60W2, 111A60W5, or AAR-201 A80W (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars. Specification 105A200ALW tank cars authorized only for acetic anhydride and ammonium hydroxide. Specification 105A100W tank cars authorized only for ammonium hydroxide and dimethyl chlorothiophosphate. AAR-201A80W and 109A200ALW tank cars authorized only for ammonium hydroxide.

(33) Specification 103ALW, 103DW, 103W, 104W, 111A60ALW1, 111A60W1, 111A100W3, 111A100W6, 115A60W6, or AAR206W (§§179.200, 178.201, 179.220 of this subchapter). Tank cars. (See Note 1.)

Note 1: Authorized only on an interim basis pending the Department's decision on use of bottom outlets for tank cars containing hazardous materials.

(34) Specification 42B (§178.107 of this subchapter). Aluminum drum.

(35) Marine portable tanks meeting the requirements of 46 CFR Part 64 authorized for highway and cargo vessel only when shipped in support of off-shore oil well drilling activities. Tank must be compatible with lading. Not authorized for corrosive materials which also meet the definition of another hazard class. Tanks shall comply with mounting and tie-down requirements of §178.245-4 of this subchapter when transported by highway.

(36) Ammonium hydroxide containing no more than 30 percent ammonia by weight may be transported by motor vehicle in non-specification cargo and portable tanks that meet the requirements of §173.24.

(37) Specification IM 101 and IM 102 portable tanks (§§178.270, 178.271, 178.272 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(38) Specification 57 (§178.253 of this subchapter). Steel portable tank. Authorized for transportation by water when having a minimum design pressure of 9 psig and equipped in accordance with §178.253-4, except that frangible devices are not authorized. Also, for water transportation, no pressure relief device may open at less than 5 psig.

(b) Except when transportation by aircraft or vessel is involved, and except for a hazardous waste or a hazardous substance a material classed as a corrosive material that is corrosive only to steel and does not meet the definition of any other hazard class defined in this subchapter, is excepted from the requirements of this subchapter for rail or highway when transported in a portable tank, cargo tank, or tank car constructed of materials that will not react dangerously with or be degraded by the material being transported. For hazardous wastes and hazardous substances that would otherwise be subject to this paragraph, only the requirements of Parts 171 and 172 of this subchapter apply.

§ 173.245a Corrosive liquids, n.o.s. shipped in bulk. (a) Corrosive liquids, n.o.s. which are listed in the following table, may not be shipped in bulk unless they are packaged as follows:

Corrosive liquid	Authorized tank car	Authorized portable tank[1]
Dichlorobutene and Dichlorobutene mixtures	105A300W, 112A340W	
Ethyl chlorothioformate	.....	DOT 51 monel or monel clad
Ethyl phosphonothioic dichloride, anhydrous	103AW, 111A60W2	DOT 51
Ethyl phosphonous dichloride, anhydrous	.....	DOT 51
Ethyl phosphorodichloridate	103ANW, 103AW, 111A100F2, 111A100W2	
Methylphosphonothioic dichloride, anhydrous	103AW	DOT 51
Methyl phosphonous dichloride[3]	.....	DOT 51 monel or monel clad
Vanadium oxytrichloride and titanium tetrachloride mixture	.....	DOT 51

[1] In an unlined tank, must be loaded and shipped under a blanket of nonflammable, dry inert gas, adequate to displace any significant amount of air.

[2] Specification 103ANW tank car tanks must be fabricated of solid nickel at least 95 percent pure and containing not more than 1 percent iron. Metal test coupons for welding procedure qualification must contain not more than 1 percent iron. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 95.7 percent. Specification 103A tank car tanks must be lead-lined steel or must be made of steel with at least 10 percent nickel cladding. Specification 103AW, 111A100F2, or 111A100W2 tanks must be lead-lined steel or made of steel with a minimum nickel cladding of 1/16 inch thickness. Nickel cladding on tanks must be low carbon nickel in accordance with ASTM B162-80.

[3] Tank must be equipped with a safety relief valve set at not less than 100 psig. In addition, the relief valve must comply with §173.315(k)(1).

(b) Corrosive liquids, n.o.s., except those listed in paragraph (a) of this section, when shipped in bulk, must be packaged as prescribed by §173.245.

§ 173.245b Corrosive solids not specifically provided for. (a) Corrosive solids, as defined in §173.240, other than those for which special requirements are prescribed, must be packaged in containers fully complying with §173.24, as follows:

(1) Metal, wooden, or fiberboard box or case with inside containers which must be earthenware, glass, metal, plastic, or fiber or composition board of not more than 10 pounds net weight capacity each.

(2) Fiberboard box with inside paper bags, not over 50 pounds total net capacity. When shipped by water, each box must include a moisture barrier.

(3) Fiberboard box with one inside plastic bag of not over 120 pounds net weight capacity.

(4) Metal drum.

(5) Fiber drum not exceeding 550 pounds net weight and not over 65-gallon capacity. When shipped by water, each drum must include a moisture barrier.

(6) Open head plastic drum or pail not exceeding 95 pounds net weight and not over 7-gallon capacity or closed head plastic drum not exceeding 550 pounds net weight and not over 55-gallon capacity.

(7) Bag: Each bag filled to weight with product and closed as for shipment must be capable of withstanding four drops from a height of 4 feet onto a solid surface, one drop on each end and one drop on each face, without sifting or rupture. Authorized net weight not to exceed 110 pounds. When shipped by water, each bag must include a moisture barrier.

(8) Metal portable tank or closed bin not over 7,000 pounds gross weight.

(9) Fiberglass or rubber tank or closed bin of not over 74-cubic-foot capacity.

(10) Metal sift-proof cargo tank or tank car, or hopper-type or pneumatic bulk vehicle.

§ 173.246 Antimony pentafluoride, bromide pentafluoride, iodine pentafluoride, bromine trifluoride, and chlorine trifluoride. (a) Antimony pentafluoride must be chemically anhydrous. Materials cited in the heading of this section must be packed in specification packagings as follows:

(1) Specification 3A150, 3AA150, 3B240, 3BN150, 4B240, 4BA240, 4BW240, or 3E1800 (§§178.36, 178.37, 178.38, 178.39, 178.50, 178.51, 178.61, 178.42 of this subchapter). Cylinders. Each valve outlet must be sealed by a threaded cap or a threaded plug. Cylinder valves must be protected as specified for corrosive gases in §173.301(g). No cylinder may be equipped with any safety relief device. Specification 3E1800 cylinders must be packaged in accordance with the requirements of §173.301(k).

(2) Specification 106A500X or 110A500W (§§179.300, 179.301 of this subchapter). Tanks. Authorized for iodine pentafluoride and chlorine trifluoride only. Each tank must be equipped with a valve protection cover and with solid steel plugs in place of fusible plug safety devices. No tank may be equipped with any safety relief device.

(3) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.247 Acetyl bromide; acetyl chloride; acetyl iodide; antimony pentachloride; benzoyl chloride; boron trifluoride acetic

acid complex; chromyl chloride; dichloroacetyl chloride; diphenylmethyl bromide solutions; pyrosulfuryl chloride; silicon chloride; sulfur chloride (mono and di); sulfuryl chloride, thionyl chloride; tin tetrachloride (anhydrous); titanium tetrachloride; trimethyl acetyl chloride. (a) Acetyl bromide, acetyl chloride, acetyl iodide, antimony pentachloride; benzoyl chloride, boron trifluoride-acetic acid complex, chromyl chloride, dichloroacetyl chloride, diphenylmethyl bromide solutions, pyrosulfuryl chloride, silicon chloride, sulfur chloride (mono and di), sulfuryl chloride, thionyl chloride, tin tetrachloride (anhydrous), titanium tetrachloride, and trimethyl acetic chloride must be packaged in specification packagings as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon each, except that inside containers up to 3 gallons each are authorized when only one is packed in an outside box.

(2) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside Specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene packaging. Polyethylene used must be Type III as set forth in Appendix B—Specifications for Plastics to Part 178 of this title. Authorized for acetyl chloride, dichloroacetyl chloride, sulfuryl chloride and trimethyl acetyl chloride only.

(3) Specification 1A, 1D, 1K, or 1M (§§178.1, 178.4, 178.14, 178.17 of this subchapter). Glass carboys in boxes, or expanded polystyrene packagings (not permitted for antimony pentachloride or tin tetrachloride, anhydrous). Not authorized for transportation by aircraft.

(4) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only (not permitted for antimony pentachloride or tin tetrachloride anhydrous).

(5) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside aluminum bottles of 99 percent pure aluminum not over 1 gallon capacity each, having aluminum screw caps with gasket resistant to contents. Authorized for chromyl chloride only.

(6) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers of securely closed soft-lead tubes having not more than 65 fluid ounces capacity each, individually packed in securely closed steel tubes, with not more than 3 such steel tubes fastened together as a unit. The inside units shall be cushioned on all sides with an appropriate fire-resistant cushioning material. Authorized only for titanium tetrachloride.

(7) Specification 5, 5A, 5B, or 17C (§§178.80, 178.81, 178.82, 178.115 of this subchapter). Metal barrels or drums with openings not exceeding 2.3 inches in diameter.

(8) Spec. 5K (§178.88 of this subchapter). Nickel drums, authorized for acetyl chloride, benzoyl chloride, pyro sulfuryl chloride, sulfuryl chloride, and thionyl chloride only. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron.

(9) Spec. 5C (§178.83 of this subchapter). Barrels or drums of type 304 stainless steel not over 30-gallon capacity each. Authorized for chromyl chloride and thionyl chloride only.

(10) Spec. 42D (§178.109 of this subchapter). Aluminum drums not over 30 gallons capacity each. Authorized for chromyl chloride only.

(11) Spec. 60 (§178.255 of this subchapter). Portable tanks.

(12) Specification MC 310, MC 311, MC 312, MC 330 or MC 331 (§§178.343, 178.337 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(13) Specification 103A,[1] 103AW, 105A300W, 111A60W2, or 111A100F2 (§§179.100, 179.101 179.200, 179.201 of this subchapter). Tank cars, except that for tin tetrachloride (anhydrous) specification 105A300W tank cars must be used.

(14) Specification 103A,[1] 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars. Authorized for titanium tetrachloride, anhydrous only. Tank cars must have safety valves of approved design and not subject to rapid deterioration by the lading.

(15) Sulfur chloride packed in glass or earthenware bottles or carboys must be cushioned in the outside container by means of incombustible elastic packing material of such nature that a mixture of the liquid and the packing material will not cause fires or heating.

(16) Specification 106A500X or 110A500W (§§179.300, 179.301 of this subchapter) tanks. Authorized only for antimony pentachloride and titanium tetrachloride (anhydrous). Tanks containing titanium tetrachloride (anhydrous) must not be equipped with safety devices. (See §177.834(m) of this subchapter for special requirements for highway shipments.)

[1] Use of existing tank cars authorized, but new construction not authorized.

(17) Specification 4BA240 or 4BW240 (§§178.51, 178.61 of this subchapter). Cylinders authorized for titanium tetrachloride or tin tetrachloride, anhydrous, without any compressed gas. Specification 4BW carbon steel cylinders authorized for antimony pentachloride. Safety relief devices are authorized only on cylinders containing titanium tetrachloride.

(18) Specification 3E1800 (§178.42 of this subchapter). Cylinder authorized only for thionyl chloride, anhydrous and titanium tetrachloride, anhydrous.

(19) Specification 51 (§178.245 of this subchapter). Portable tank authorized only for titanium tetrachloride, anhydrous, without any compressed gas.

(20) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(21) [Reserved]

§ 173.247a Vanadium tetrachloride and vanadium oxytrichloride. (a) Vanadium tetrachloride and vanadium oxytrichloride must be packed in specification packagings as follows:

(1) Specification 3A, 3AA, 4B240, 4BA240, 4BW240, or 3E 1800 (§§178.36, 178.37, 178.50, 178.51, 178.61, 178.42 of this subchapter). Cylinders.

(2) Specification 51 (§178.245 of this subchapter). Portable tanks.

(3) Specification MC 310, MC 311, or MC 312 (§§178.340, 178.343 of this subchapter). Cargo tanks. Authorized only for vanadium oxytrichloride with an inert non-soluble gas padding, adequate to exclude the presence of air. Specification MC 310 and MC 311 cargo tanks must be in compliance with §178.343-2 (b) or (c) as applicable, and §§178.340-9(a) and 178.343-4(a) of this subchapter. Not authorized for transportation by water. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(4) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.248 Spent sulfuric acid, or spent mixed acid. (a) Spent sulfuric acid, or spent mixed acid, resulting from the use of sulfuric acid in various processes, not containing hydrofluoric acid, must be packaged as follows:

(1) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Carboys in boxes or expanded polystyrene packagings. Authorized for spent sulfuric acid only. Not authorized for transportation by aircraft.

(2) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers, not over 1-gallon each, except that inside containers up to 3 gallons each are authorized when only one is packed in each outside box.

(4) Specification 103A,[1] 103AW, 111A60W2, or 111A100F2 (§§179.200 and 179.201 of this subchapter). Tank cars, provided the product is sufficiently liquid to be unloaded through the dome or manway. Tanks which do not contain products or contaminants that give off noxious or flammable vapors may be equipped with safety vents incorporating lead discs having a ⅛-inch breather hole in the center thereof.

(5) Spec. 103,[1] 103-W, 111A60-F-1, or 111A60-W-1 (§§179.200 and 179.201 of this subchapter). Tank cars, provided the product is too viscous to be unloaded through the dome or manway. Tanks which do not contain products or contaminants that give off noxious or flammable vapors may be equipped with safety vents incorporating lead discs having a ⅛-inch breather hole in the center thereof.

(6) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(7) Spec. 60 (§178.255 of this subchapter). Portable tanks.

(8) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.249 Alkaline corrosive liquids, n.o.s.; Alkaline liquids, n.o.s.; Alkaline corrosive battery fluid; Potassium fluoride solution; Potassium hydrogen fluoride solution; Sodium aluminate, liquid; Sodium hydroxide solution; Potassium hydroxide solution. (a) Alkaline corrosive liquids, n.o.s.; Alkaline liquids, n.o.s.; Alkaline corrosive battery fluid; Potassium fluoride solution; Potassium hydrogen fluoride solution; Sodium aluminate, liquid; Sodium hydroxide solution; and Potassium hydroxide solution; when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein as follows:

(1) In containers prescribed in §173.245.

(2) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes

with inside glass or earthenware containers, not over 2 gallons each, or with metal containers, not over 5 gallons each.

(3) Specification 5 (§178.80 of this subchapter) metal drums. Openings must not exceed 2.3 inches in diameter.

(4) [Reserved]

(5) Specification 103,[1] 103W, 103A,[1] 103AW, 103B,[1] 103BW, 104,[1] 104W, 105A100,[1] 105A100W, 111A60F1, 111A60W1, 111A60W2, 111A100F2, 111A60W5, or 111A100W4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars.

(6) Specification MC 303, MC 310, MC 311 or MC 312 (§178.343 of this subchapter). Cargo tanks. Specification MC 303 is authorized for alkaline corrosive liquids, n.o.s., and alkaline liquids, n.o.s. only and is not authorized for transportation by water. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(7) Specification 57 or 60 (§§178.251, 178.253, 178.255 of this subchapter). Portable tanks. Specification 57 portable tank not authorized for transportation by water.

(8) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with glass inside containers of not over 16 ounces capacity each.

(9) [Reserved]

(10) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with not more than one glass inside container not over 1 gallon capacity containing sodium hydroxide solution not over 25 percent strength and packed in a strong fiberboard box. Dry chemicals for photographic development process not classed as dangerous articles, contained in suitable inside packages, may be packed in the same outside box. The marking requirements of §172.312 of this subchapter shall not apply.

(11) Spec. 29 (§178.226 of this subchapter). Mailing tubes, with not more than one inside polyethylene bottle not over 1-quart capacity each.

(12) Spec. 1H (§178.13 of this subchapter). Metal crate with inside polyethylene container Spec. 2T (§178.21 of this subchapter).

(13) Specification 12B (§178.205 of this subchapter). Fiberboard box with inside metal containers. Not more than four 1-gallon or six 1-quart containers may be packed in each box. Maximum gross weight may not exceed 65 pounds and the completed package must meet the test requirements of §178.210-10 of this subchapter.

(14) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) The hazardous materials named in paragraph (a) of this section, when offered for transportation by aircraft, must be packaged as follows (also authorized for transportation by rail freight, highway, or water):

(1) In packagings as prescribed in paragraphs (a)(8), (10), and (11) of this section and §173.245(a)(7) and (12).

(2) Spec. 5 or 5A (§178.80 or 178.81 of this subchapter). Metal barrels or drums, capacity not exceeding 10 gallons, with openings not exceeding 2.3 inches in diameter.

(3) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon each, or with inside metal cans not over 5 gallons each.

(c) Limited quantities of alkaline corrosive liquids, n.o.s., alkaline liquids, n.o.s., alkaline corrosive battery fluids, and liquid sodium aluminate in inside packagings of not more than 8 fluid ounces capacity each, packed in strong outside packagings, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are excepted from labeling (except labeling is required for transportation by air) and specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(d) Special exceptions for shipment of certain alkalines in the ORM-D class are provided in Subpart N of this part.

§ 173.249a Cleaning compound, liquid; Coal tar dye, liquid; Dye intermediate, liquid; Mining reagent, liquid; and Textile treating compound mixture, liquid. (a) A liquid cleaning compound subject to this section must not contain any corrosive material specifically named in §172.101 of this subchapter, except phosphoric acid, acetic acid, and not over 15 percent sodium or potassium hydroxide.

(b) A liquid dye intermediate is a ring compound, containing amino, hydroxy, sulfonic acid, or quinone group or a combination of these groups, used in the manufacture of dyes, and not otherwise specifically named in §172.101 of this subchapter.

(c) A liquid textile treating compound mixture is a mixture used to treat woven, knit or otherwise manufactured fabrics. It does not include mixtures used only to treat fibers, filaments, or yarns used in making the fabric.

(d) Liquid coal tar dye, liquid cleaning compound, liquid dye intermediate liquid mining reagent, and liquid textile treating compound mixture must be packaged as follows:

(1) In specification packagings as prescribed in §173.245.

(2) In packagings meeting all of the specific requirements prescribed in §173.245 including packaging type and quantity limitations for inside packagings. The packagings are not required to meet the detailed specification requirements of Part 178 of this subchapter except that size and weight limitations for package types as prescribed in Part 178 may not be exceeded. Not authorized for shipment by aircraft.

(3) Removable (open) head fiber drum lined or coated on the inside with a plastic material, not over 55-gallon capacity. Not authorized for shipment by aircraft.

(4) Removable (open) head metal drum, not over 55-gallon capacity. Not authorized for shipment by aircraft.

(5) Removable (open) head polyethylene drum, not over 6.5-gallon capacity. Not authorized for shipment by aircraft.

§ 173.250 Automobiles, other self-propelled vehicles, engines or other mechanical apparatus. (a) Except as provided in paragraph (b) of this section, automobiles and other self-propelled vehicles equipped with wet electric storage batteries are excepted from all other requirements of this subchapter when shipped as prescribed in paragraphs (a)(1) or (2) of this section, unless other hazardous materials are transported on the self-propelled vehicles, in which instance the regulations covering these other materials apply.

(1) When batteries are removed from the self-propelled vehicles and loaded in the transport vehicle therewith, the batteries must be so loaded, blocked, and braced as to prevent short circuits, spillage of battery fluid or movement within the transport vehicle.

(2) When batteries are installed in self-propelled vehicles they must be completely protected against short circuits and so secured that spillage of battery fluid will not occur under conditions normal to transportation.

(b) For transportation by passenger-carrying aircraft, wheelchairs equipped with wet electric storage batteries must be shipped as prescribed in §175.10 of this subchapter.

(c) When wet electric storage batteries or batteries packed in containers with battery fluid are shipped as part of carload or truckload shipments of automobile parts or assembly materials, they are subject to no other requirements of this subchapter when the batteries and battery fluid are boxed or crated and so loaded, blocked and braced as to prevent short circuits of the batteries, spillage of battery fluid and movement of the materials in the transport vehicle under conditions normal to transportation. When other hazardous materials are included in the shipments, the regulations covering these other materials apply.

(d) Engines or mechanical apparatus of such size or weight as to require securement to skids to facilitate handling may have electric storage batteries, wet, necessary for the operation thereof, either securely fastened in the holder provided on the equipment and protected, including battery terminals, in such manner as to prevent damage thereto or short circuits, or completely boxed in containers of sound lumber and with filling holes upright, securely fastened to the skids upon which the engine or mechanical apparatus is mounted to prevent accidental tipping or looseness in transportation. Electric storage batteries, wet, as described herein are exempt from specification packaging.

§ 173.250a Benzene phosphorus dichloride and benzene phosphorus thiodichloride. (a) Benzene phosphorus dichloride and benzene phosphorus thiodichloride must be packaged as follows:

(1) In packagings prescribed in §173.245 which are made of or lined with materials compatible with the lading.

(2) Spec. MC 310, MC 311, or MC 312 (§178.343 of this subchapter) cargo tanks. Corrosion protection must be provided in accordance with spec. MC 312. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(3) Spec. 103AW (§§179.200 and 179.201 of this subchapter) tank cars. Tanks must be lined.

(4) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.251 Boron trichloride and boron tribromide. (a) Boron trichloride must be packed in specification containers as follows:

(1) Specification steel or nickel cylinders as prescribed for any compressed gas, except acetylene.

(2) Specification 105A300W or 106A500X (§§179.100, 179.101, 179.300, 179.301 of this subchapter). Tank cars.

(b) Boron tribromide must be packed in specification packagings as follows:

(1) Specification 15A, 15B, 15P, or 19B (§§178.168, 178.169, 178.170, 178.182, 178.191 of this subchapter). Wooden or plywood boxes with inside glass receptacles not over 1 quart capacity each. Each glass receptacle must have a positive closure (not friction) and as prepared for shipment must be capable of withstanding an internal gage pressure of at least 15 p.s.i. The receptacle must be cushioned with sufficient absorbent incombustible material to completely absorb the contents in the event of leakage and must be packed within a securely closed metal can. Each can must then be cushioned with incombustible material within the prescribed outside packaging. Completed packaging for shipment must be capable of passing the tests prescribed in §178.182-3(a)(1) of this subchapter.

(2) Specification 5C or 5M (§§178.83, 178.90 of this subchapter).

[1] Use of existing tank cars authorized, but new construction not authorized.

Metal drums not exceeding 30 gallons capacity Specification 5C drums must be constructed of at least 14-gauge stainless steel.

(3) Specification 37A (§178.131 of this subchapter). Steel drums not over 30-gallon capacity each with inside glass receptacles not over 1-quart capacity each. Inside containers and cushioning must comply with paragraph (b)(1) of this section. Not more than four 8-ounce glass receptacles or two 1-quart glass receptacles may be packed within one 8-gallon 37A drum. Not more than twelve 8-ounce glass receptacles or six 1-quart glass receptacles may be packed within one 30-gallon 37A drum. Completed package must meet test requirements of §178.131-11 of this subchapter.

§ 173.252 Bromine. (a) Bromine must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1 quart each; or with stone or earthenware jugs not over 1 gallon each.

(2) [Reserved]

(3) Specification 105A300W (§§179.100, 179.101 of this subchapter). Tank car. Each tank must have a nickel cladding material on the inside surface comprising at least 20 percent of the total thickness, or be lined with lead no less than 1/16-inch thick. Openings in tank heads to facilitate application of lead lining are authorized and must be closed in an approved manner. All closures and appurtenances which are in contact with the lading must be lead lined or must be made of metal not subject to rapid deterioration by contact with the lading. All interior welds in nickel clad tanks must be protected by pure nickel butt straps. Except as otherwise provided herein, the water weight capacity of the tank must not be more than 20,400 pounds, and the maximum quantity of liquid bromine loaded into the tank must not be more than 60,000 pounds or 300 percent of the water weight capacity of the tank, whichever quantity is less. The total quantity loaded must not be less than 98 percent of the quantity the tank is authorized to carry.

(i) A tank constructed and maintained in full compliance with the requirements of a Specification DOT-105A500W is authorized for larger capacities of bromine. However, this tank may be marked DOT-105A300W and may be equipped with manway cover plates, safety valves, venting valves, loading valves, and unloading valves that are in compliance with the requirements of a Specification DOT-105A300W tank. The water weight capacity of this tank must not be more than 37,400 pounds, and the maximum quantity of liquid bromine loaded into the tank must not be more than 110,000 pounds or 300 percent of the water weight capacity of the tank, whichever quantity is less.

(ii) Each tank car must be marked "BROMINE" in accordance with the requirements of §172.330 of this subchapter.

(4) Specification MC 310 or MC 312 (§178.343 of this subchapter). Cargo tanks. Each tank must have a shell and head thickness of at least three-eighths-inch. Each tank must have a nickel cladding material on the inside surface comprising at least 20 percent of the total thickness or be lined with lead at least 1/16-inch thick. The cladding material must conform to requirements of ASTM Specification B-162-69. The composite plate must conform to requirements of ASTM Specification A-265-69. The maximum quantity of liquid bromine loaded into the tank must not exceed 300 percent of the water weight capacity of the tank. The total quantity loaded must not be less than 92 percent of the quantity the tank is authorized to carry. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(5) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table. In addition, each tank must have a nickel cladding material on the inside surface comprising at least 20 percent of the total thickness or must be lined with lead at least 5.0 mm thick. The cladding material must conform to requirements of ASTM Specification B-162-69. The composite plate must confirm to requirements of ASTM Specification A-265-69. The total quantity in one tank may not be less than 88 percent nor more than 92 percent of the quantity the tank is authorized to carry.

(b) Outage (vacant space above liquid) for inside containers must be not less than 15 percent of capacity of container.

(c) For other authorized containers an outage of not less than 10 percent is required.

(d) Inside containers must be closed by glass, earthenware, or stone stoppers ground to fit and securely fastened; or bottles may have necks with molded screw threads which must be closed by threaded-type caps with lead or other efficient bromine-resistant gaskets and cushioned by elastic material to insure tight closure. Sealed glass ampoules are also authorized.

(e) Except as provided in paragraphs (g)(2) and (3) of this section, bottles or jugs must be securely cushioned on all sides with incombustible packaging material, such as whiting, mineral wool, infusorial earth (kieselguhr), sifted ashes, powdered china clay, or similar material, at least 1 inch thick, which will not produce heat when mixed with bromine. The use of hay, sawdust, excelsior, or other organic material, either treated or untreated, as a cushioning or packaging material is prohibited.

(f) Not more than 15 quarts of bromine in bottles, nor more than 12 quarts in jugs, may be packed in one box.

(g) Bromine which has been dried in accordance with good commercial practice may also be packed in specification containers as follows:

(1) Specification 5K (§§178.89 of this subchapter) nickel drums, of not over 10 gallons capacity each, and containing not more than 225 pounds net weight of bromine, or Specification 5M (§178.90 of this subchapter) monel drums, of not over 25 gallons capacity each and containing not more than 600 pounds net weight of bromine. Drums must be of metal at least 14-gauge throughout and must have chime reinforcement adequate for their protection. All openings must be in one head and the closing parts (plug, cap, flange, etc.) must be of the same metal as the drum. One opening not over 2 3/8 inches in diameter and one opening not over 3/4-inch standard pipe size are permitted. Each drum must be completely emptied and dried before reuse.

(2) Specification 12A (§178.210 of this subchapter). Fiberboard boxes, constructed of at least 275 pound test (Mullen or Cady) double-wall corrugated fiberboard having not more than six inside glass bottles of not over 1 quart capacity. Each inside glass bottle must be surrounded by a sheet of polyethylene foam at least 1/4 inch thick (see Note 1), and approximately the same height as the bottle, and must also be separated by partitions made of corrugated fiberboard at least 275-pound test (Mullen or Cady). The box must be provided with inside top and bottom pads of polyethylene foam at least 1 1/2 inches thick (see Note 1). Shipper must have established that the completed package closed as for shipment, with inside packagings filled with liquid of same specific gravity as bromine, is capable of withstanding tests prescribed by §178.210-10 of this subchapter. Not authorized for transportation by air.

Note 1. Other materials of equal efficiency and compatibility are also authorized.

(3) Specification 12A (§178.210 of this subchapter). Fiberboard box with inside glass bottles having a capacity not exceeding one quart with closures meeting the requirements of paragraph (d) of this section. Each bottle must be enclosed in a strong metal can surrounded with an appropriate fire-resistant cushioning material. Each box may not contain more than four bottles with each having a capacity not exceeding 1 quart or 12 bottles with each having a capacity not exceeding 8 fluid ounces. The shipper must have established that the completed package closed for shipment, with inside bottles filled with a liquid of the same specific gravity and similar viscosity as bromine, is capable of withstanding the tests prescribed in §178.210-10 of this subchapter. Not authorized for transportation by air.

(4) Specification 33A (§178.150 of this subchapter). Polystyrene case (nonreusable container) having not more than four inside glass jugs of not over 80 fluid ounces (2.5 liters) each. The polystyrene case must be further overpacked in a strong fiberboard box of at least 275-pound test and adequately cushioned. Not authorized for transportation by aircraft.

(5) Specification 15A (§178.168 of this subchapter). Wooden boxes (having an authorized gross weight of not less than 100 pounds) having not more than four inside glass jugs of not over 80 fluid ounces (2.5 liters) each. Jugs must be cushioned with an appropriate absorbent material. Not authorized for transportation by aircraft.

§ 173.253 Chloracetyl chloride. (a) Chloracetyl chloride must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 5 pints capacity each; cushioned by an appropriate fire-resistant cushioning material.

(2) Specification 1M (§178.17 of this subchapter). Glass carboys in expanded polystyrene packagings. Not authorized for transportation by aircraft.

(3) [Reserved]

(4) [Reserved]

(5) Spec. 5K (§178.89 of this subchapter). Nickel drums.

(6) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks having tanks fabricated from Type 316 stainless steel or 99 percent pure nickel. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(7) Specification 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars. Tanks must have a nickel cladding of 1/16-inch minimum thickness. Nickel cladding in tanks must be low carbon nickel in accordance with ASTM B162-80.

(8) Specification 103ANW (§§179.200 and 179.201 of this subchapter). Tank cars. Tanks must be fabricated of solid nickel at least 95 percent pure and containing not more than 1 percent iron. Metal test coupons for welding procedure qualifications must contain not more than 1 percent iron. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 96.7 percent.

(9) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.254 Chlorosulfonic acid and mixtures of chlorosulfonic acid-sulfur trioxide. (a) Chlorosulfonic acid and mixtures of chlorosulfonic acid-sulfur trioxide must be packed in specification containers as follows:

(1) Spec. 5A or 5C (§§178.81 or 178.83 of this subchapter). Metal barrels or drums.

(2) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside box.

(3) [Reserved]

(4) Specification 103A,[1] 103AW, 103CW, 103EW, 111A60W2, 111A60W7, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars.

(5) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(6) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.255 Dimethyl sulfate. (a) Dimethyl sulfate must be packed in specification containers as follows:

(1) Spec. 5A or 5C (§§178.81 or 178.83 of this subchapter). Metal barrels or drums not over 55 gallons each. Spec. 5C metal barrels or drums must be constructed of Type 304 stainless steel.

(2) Spec. 5 (§178.80 of this subchapter). Metal barrels or drums not over 15 gallons each, with openings not exceeding 2 3 inches in diameter, inclosed in strong crates made of lumber at least ⅝ inch thick.

(3) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with one inside glass container not over 1 quart capacity, closed by ground glass stopper or other equally efficient closure securely fastened in place, and cushioned within a hermetically sealed (soldered) metal can with an appropriate fire-resistant absorbent, cushioning material, the can then being cushioned with an appropriate fire-resistant cushioning material in the outside box.

(4) Spec. 103A,[1] 103A-W, 111A100-F-2, or 111A100-W-2 (§§179.200, 179.201 of this subchapter). Tank cars.

(5) Specification MC 310, MC 311 or MC 312 (§178.343 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(6) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with each box containing not more than six inside glass containers not over 1-quart capacity each, closed by plastic screw-cap resistant to the lading, and each completely surrounded by incombustible absorbent cushioning material and enclosed in a metal can having rolled, seamed-on heads of a key-opening type; or in not more than six inside glass containers not over 1-quart capacity each, closed by ground glass stopper, by plastic screw-cap resistant to the lading, or by other equally efficient closure securely fastened in place, and cushioned with incombustible absorbent material in hermetically sealed (soldered) metal can, the can then being cushioned with incombustible cushioning material in the outside container.

(7) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.256 Compounds, cleaning, liquid. (a) Compounds, cleaning, liquid, containing not more than 60 percent hydrofluoric acid, must be packed in specification containers as follows:

(1) As prescribed in §173.264(a)(1) and (2).

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers of natural rubber, ceresine, lead, or other material of equal strength and not subject to destruction by the lading.

(3) Specification 22B (§178.197 of this subchapter). Plywood drums equipped with a liner of rubber, polyethylene or other material impervious to the solution.

(4) Spec. 16A (§178.185 of this subchapter). Wirebound wooden box (§178.185-22 of this subchapter) with inside Specification 2U (§178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(5) Spec. 6D or 21P (§178.102 or §178.225 of this subchapter). Cylindrical steel overpack or fiber drum overpack with inside Spec. 2U (§178.24 of this subchapter) polyethylene container not over 15-gallons capacity.

(6) Spec. 37M (§178.134 of this subchapter) (nonreuseable). Cylindrical steel overpack with inside Specifications 2SL (§178.35a of this subchapter) polyethylene container. Maximum net weight shall not exceed 490 pounds. Authorized only for compounds containing not more than 30 percent hydrofluoric acid.

(7) Specification 37M (§178.134 of this subchapter). Cylindrical steel overpack with inside Specification 2U (§178.24 of this subchapter) polyethylene container. For compounds containing not more than 7 percent hydrofluoric acid by weight, the steel overpack must be a minimum of 22-gauge. For compounds containing more than 7 percent hydrofluoric acid by weight but not over 14 percent hydrofluoric acid by weight, the steel overpack must be a minimum of 20-gauge body and 18-gauge heads. When a full removable head is used, the bolted type ring closure must be a minimum of 16-gauge.

(8) Specification 12P (§178.211 of this subchapter). Fiberboard boxes with one inside Specification 2U (§178.24 of this subchapter) polyethylene container of not over 5-gallon capacity or two inside Specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(9) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(b) Compounds, cleaning, liquid containing not more than 20 percent hydrofluoric acid, by weight, may also be shipped in specification containers as follows:

(1) Specification 57 (§178.253 of this subchapter). Steel portable tank. Authorized for transportation by water when having a minimum design pressure of 9 psig and equipped in accordance with §178.253-4, except that frangible devices are not authorized. Also, for water transportation, no pressure relief device may open at less than 5 psig. Tanks must have a polyethylene liner impervious to the solution.

§ 173.257 Electrolyte (acid) and alkaline corrosive battery fluid. (a) Electrolyte (acid) may not be over 47 percent strength (39° Baume). Electrolyte or alkaline corrosive battery fluid must be packaged as follows (packaging utilizing a bag to contain the electrolyte or battery fluid is not authorized for transportation by air):

(1) As prescribed in §173.272 except that unlined tank cars and metal barrels or drums must not be used.

(2) [Reserved]

(3) When the material is alkaline it may also be shipped when packed in containers as prescribed in §173.245.

(4) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks must be lined with rubber or equally acid-resistant material of equivalent strength and durability. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(5) Spec. 60 (§178.255 of this subchapter). Portable tanks, except that unlined tanks must not be used.

(6) Spec. 12B or 12C (§§178.205 or 178.206 of this subchapter). Fiberboard boxes with inside containers of polyethylene or other electrolyte acid resistant nonfragile materials having secure closures capable of withstanding conditions incident to transportation without leakage and unless containers are rigid or semi-rigid in nature they must be contained in other strong inside containers; minimum thickness of polyethylene or other materials shall be not less than 0.003 inch for any film sheet for multiwall containers or not less than 0.006 inch for single-wall containers; not more than 12 such inside containers shall be packed in one outside box and the marking prescribed in §172.312 shall not be required. Inside containers shall be packed to prevent movement within the box (see §§178.205-34 and 178.206-19 of this subchapter). Dry storage batteries or battery charger device may be packed in the same outside box when adequately separated from other inside containers (see §178.205-33 of this subchapter); gross weight of completed package shall not exceed 65 pounds, except when acid is packed in individual inside containers the gross weight shall be not over 75 pounds. Complete package, closed as for shipment, with inside containers filled with liquid of same specific gravity as commodity to be shipped, must be capable of withstanding at least 2 drops from a height of 4 feet onto solid concrete without leakage from or rupture of inside containers.

(7) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside polyethylene or other electrolyte acid resistant plastic containers, not over 1-gallon each.

(8) Specification 1EX (§178.6 of this subchapter). Carboys in plywood drums. Not authorized for transportation by air.

(9) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test (Mullen or Cady) double-wall corrugated fiberboard or 325-pound test (Mullen or Cady) doublefaced corrugated fiberboard, with not more than 12 inside glass bottles, having acid-proof closures, of not over 32 ounces capacity each. Inside glass bottles must be separated and cushioned by suitable corrugated fiberboard partitions. The box must be equipped with top and bottom pads. (See §178.205-32 of this subchapter).

(10) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes having not more than 1 inside glass bottle, with acid-proof closure, not over 1 gallon capacity. Box shall be constructed of at least 350-pound test (Mullen or Cady) doublefaced corrugated fiberboard of full depth telescope type. Cushioning and closure of box (pressure sensitive tape may be used) must be such that a representative box, with inside glass bottle filled with water, shall be capable of withstanding two drops from a height of 4 feet onto solid concrete without breakage of inner bottle or failure of the closure.

(11) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 1 gallon capacity each. Not more than 4 inside containers exceeding 5 pints capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(12) Specification 37P (§178.133 of this subchapter). Steel drums

[1] Use of existing tank cars authorized, but new construction not authorized

with polyethylene liner (non-reusable container). Not authorized for transportation by air.

(13) Specification 34 (§178.19 of this subchapter). Polyethylene drum.

(14) Spec. 12B (§178.205 of this subchapter). Corrugated fiberboard boxes with plastic bags as defined in §178.205-37 of this subchapter. Marking prescribed in §172.312 of this subchapter shall not be required.

(b) Shipments of electrolyte (acid) or corrosive battery fluid with vehicles or engine driven equipment offered for transportation by, for, or to the Departments of the Army, Navy, or Air Force of the U.S. Government are exempt from Parts 171-179 and 397 of this title when packed as follows:

(1) In one inside glass or polyethylene bottle of not over 1-gallon capacity, tightly and securely closed in a strong outside container. Inside glass bottle shall be cushioned therein on all sides with incombustible absorbent material in sufficient quantity to absorb liquid contents in event of breakage. When shipped within or on a motor vehicle or with engines or other mechanical apparatus the outside container must be so blocked, braced, or stayed that it cannot change position during transit.

(c) Electrolyte acid or corrosive battery fluid contained in polyethylene containers not over 2 quarts capacity each and packaged not more than three containers in Specification 15A, 15B, 15C, 16A, 19A, or 19B wooden boxes (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter), or packaged as prescribed in paragraph (a)(6) of this section, and bearing a corrosive label, may be securely attached to self-propelled vehicles or mobile agricultural machinery, or securely braced on a railcar floor.

(d) Strong, tightly closed metal drums not over 15 gallons capacity each, having not to exceed 25 eight-ounce polyethylene, or other suitable plastic bottles, securely cushioned therein. Shipments authorized only by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government. The drum containing the electrolyte acid or corrosive battery fluid may be securely attached to another steel drum containing a dry, charged storage battery or batteries.

§ 173.258 Electrolyte, acid, or alkaline corrosive battery fluid, packed with storage batteries. (a) Electrolyte, acid, or alkaline corrosive battery fluid, packed with storage batteries, except as provided in §173.257(a)(6), must be packed in specification containers as follows:

(1) Spec. 15D or 16B (§§178.171 or 178.186 of this subchapter). Wooden boxes with inside containers of glass bottles not over 1 gallon each nor over 2 gallons total in each outside container. Inside containers must be well cushioned and separated from batteries by a strong solid wooden partition.

(2) Electrolyte, acid, or alkaline corrosive battery fluid included with storage batteries and filling kits may be packed in strong plywood or wooden boxes when shipments are made by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government in outside containers of their specifications provided the electrolyte, acid, or alkaline corrosive battery fluid is packed in polyethylene bottles not over 32-ounce capacity each and not more than 24 bottles securely separated from storage batteries and kits may be shipped in one outside package.

(3) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with not more than 12 inside packagings of polyethylene or other material resistant to the lading, not over 64-ounce capacity each. Polyethylene packagings that are not rigid or semi-rigid in nature must be contained in other strong inside packagings; minimum thickness of polyethylene or other plastic material may be not less than 0.003-inch for any film sheet for multi-wall packagings or not less than 0.006-inch for single-wall packagings. Inside packagings must be adequately separated from the storage battery. Authorized gross weight not over 65 pounds. (See §178.205-33 of this subchapter.) Not authorized for transportation by air.

§ 173.259 Electrolyte, acid, or alkaline corrosive battery fluid, packed with battery charger, radio current supply device, or electronic equipment and actuating devices. (a) Electrolyte, acid, or alkaline corrosive battery fluid packed with battery charger, radio current supply device or parts thereof, or electronic equipment and actuating devices, with only one device or outfit in each package, in the amount necessary for operation of the device or equipment, provided the containers of electrolyte, acid, or alkaline corrosive battery fluid, are adequately cushioned to prevent breakage, leakage, or damage to other articles packed therewith, must be packed in specification containers or as otherwise authorized herein, as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes, provided the liquid is in bottles securely closed and cushioned as prescribed in paragraph (a) of this section, and separated from charger supply device, and parts, or electronic equipment by a strong solid wooden partition.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, when the liquid is in a strong bottle not exceeding 16 fluid ounces, which must be securely closed and cushioned as prescribed in paragraph (a) of this section. Not more than 12 such packages may be packed under the provisions of §173.25.

(3) Electrolyte, acid, or alkaline corrosive battery fluid, in separate inside acid or alkaline fluid resistant containers not over 5 gallons capacity each included with electronic equipment and actuating devices, are authorized in strong, tightly closed steel drums.

§ 173.260 Electric storage batteries, wet. (a) Electric storage batteries, containing electrolyte acid or alkaline corrosive battery fluid, must be completely protected so that short circuits will be prevented; they must not be packed with other articles except as provided in §§173.250 and 173.258, portable searchlights properly cushioned, battery parts, or hydrometers, securely packed in a separate container. The batteries either with or without other articles must be packed in specification containers as follows:

(1) Spec. 15D or 16B (§§178.171 or 178.186 of this subchapter). Wooden or wirebound wooden boxes except as provided in paragraphs (b) and (c) of this section.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard box as authorized by §§178.205-25(a), 178.205-28(a), and 178.205-35(a) of this subchapter.

(3) Electric storage batteries with case of asphaltum composition, impregnated rubber, steel case type, synthetic resin (plastic), or wooden battery box type, protected against short circuits and firmly secured to skids or pallets capable of withstanding the shocks normally incident to transportation, are exempt from specification packaging requirements for transportation by rail freight, highway, or water. The height of the completed unit must not exceed 1½ times the width of the skid or pallet. The unit must weigh not less than 300 pounds gross and must not fail under a superimposed weight equal to two times the weight of the unit or a superimposed weight of 4,000 pounds if the weight of the unit exceeds 2,000 pounds. Battery terminals must not be relied upon to support any part of the superimposed weight. Unless specifically exempt from marking and labeling, each pallet or skid must be marked and labeled as required by Part 172.

(4) Electric storage batteries weighing 500 pounds or more, with case of asphaltum composition, impregnated rubber, steel case type, synthetic resin (plastic), or wooden battery box type, consisting of carriers' equipment may be shipped by rail freight when mounted on suitable skids and protected against short circuits. Such shipments must not be offered in interchange.

(b) Electric storage batteries with case of asphaltum composition, impregnated rubber, steel case type, synthetic resin (plastic), or wooden battery box type; packing authorized as follows:

(1) One to three batteries not over 25 pounds each in outside box, gross weight not over 75 pounds; specification container not required.

(2) Not more than four batteries not over 15 pounds each may be packed in strong outside fiberboard or wooden boxes, when securely cushioned and packed to prevent short circuits; specification container not required. Authorized gross weight 65 pounds.

(3) Not more than five batteries not over 10 pounds each may be packed in strong outside fiberboard or wooden boxes, when securely cushioned and packed to prevent short circuits; specification container not required. Authorized gross weight 65 pounds.

(c) Single batteries not exceeding 75 pounds each, in addition to requirements of paragraphs (a) and (b) of this section, may be shipped in 5-sided slip covers or in completely closed fiberboard boxes, of solid or double-faced corrugated fiberboard complying with the following: (See paragraph (a)(1) of this section for more than one battery in an outside container.)

(1) Slip cover or fiberboard box must fit snugly and provide inside top clearance of at least ½ inch above battery terminals and filler caps with reinforcement in place. Assembled for shipment, the bottom edges of the slip cover may extend to the base of the battery but must not expose more than 1 inch thereof.

(2) Top of slip cover or fiberboard box design must comply with the following:

(i) Top of slip cover or fiberboard box must have interior reinforcement (insert or saddle) of fiberboard, wood, or other material of equal strength and rigidity so formed that any superimposed weight will bear only and directly downward on the top edges of the battery case or intercell connectors (straps), or plastic battery terminal covers designed to transmit any superimposed weight directly to the top inner wall of the battery case, or fiberboard boxes with chip board and chip board jute lined tubes which shall fit directly over the terminal posts and rest directly on battery cell covers.

(ii) Or be protected by a scored one piece cover-liner of 200-pound test (Mullen or Cady) double-faced corrugated fiberboard extending from the base of the battery on one side, across the top of the battery and to the base of the battery on the opposite side.

(iii) Or a five-sided slip cover having top of only one thickness of fiberboard, with lengthwise inner flaps roll folded to form a reinforcement of such height as to provide clearance required by paragraph (c)(1) of this section which shall rest on the side edges of the battery. Outer end flaps to overlap approximately one inch and shall be butt folded and tucked into a center slot cut in the inner flaps. The requirements of paragraphs (c)(2)(i) and (iv) of this section do not apply.

(iv) When top of slip cover or fiberboard box consists of only one thickness of material, reinforcement must have a plane surface of same interior dimensions and thickness. Reinforcement must be

of such height as to provide minimum clearance required above and must be constructed to remain securely in place or be fastened to slip cover or fiberboard box.

(3) All fiberboard must be at least 200 pound test (Mullen) and completed package (battery and slip cover or fiberboard box) must be capable of withstanding top-to-bottom compression test of at least 500 pounds without damage to battery terminals, battery cell covers, and filler caps.

(d) Nonspillable wet electric storage batteries capable of withstanding the tests prescribed in paragraphs (d)(1) and (2) of this section without leakage of battery fluid are excepted from all other requirements of this subchapter when protected against short circuits and securely packaged so as to withstand conditions normal to transportation.

(1) *Vibration test.* Battery is rigidly clamped to the platform of a vibration machine and a simple harmonic motion having an amplitude of 0.03 inches (0.06 inches maximum total excursion) is applied. The frequency is varied at the rate of one cycle per second per minute between the limits of 10 to 55 cycles per second. The entire range of frequencies and return is traversed in 95 ± minutes for each mounting position (direction of vibrator) of the battery. The battery must be tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for equal time periods.

(2) *Pressure differential test.* Following the vibration test, the battery is stored for six hours at 75°F. ± 7°F. under an external partial pressure of 2 pounds per square inch absolute. The battery must be tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for at least six hours in each position.

(e) Electric storage batteries containing electrolyte or corrosive battery fluid are not subject to the requirements of this subchapter for carriage by highway or rail if:

(1) No other hazardous materials are transported in the same vehicle,

(2) The batteries are loaded or braced so as to prevent damage and short circuits in transit,

(3) Any other material loaded in the same vehicle is blocked, braced, or otherwise secured to prevent contact with or damage to the batteries, and

(4) The transport vehicle is carrying no material shipped by any person other than the shipper of the batteries.

(f) [Reserved]

(g) Electric storage batteries, containing electrolyte or corrosive battery fluid in a cell from which it is injected into the battery cells by a gas generator and initiator assembled with the battery, and which are nonspillable and leakproof, are excepted from Parts 170–189 of this title when examined by the Bureau of Explosives and approved by the Director, OHMT.

§ 173.251 Fire-extinguisher charges. (a) Fire-extinguisher charges consisting of sulfuric acid in glass inside containers securely closed may be packed with bicarbonate of soda in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 5 pints each, and cushioned with an appropriate cushioning material.

(2) Spec. 21C (§178.224 of this subchapter). Fiber drums with a single inside container consisting of a glass bottle not over 64 fluid ounces capacity filled with not over six pounds by weight of sulfuric acid (approximately 50 fluid ounces by volume). Bottle must be suspended in center of outside container by means of adequate supports and surrounded by bicarbonate of soda in sufficient quantity to fill drum and neutralize contents in the event of breakage.

(b) Limited quantities of fire-extinguisher charges as described in paragraphs (b)(1) through (3) of this section are excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter, except §177.817.

(1) Fire-extinguisher charges consisting of sulfuric acid in strong 8-fluid ounce or smaller bottles, securely closed and packed with bicarbonate of soda completely surrounding the bottles of acid in outside fiberboard or wooden boxes. Closure must consist of a metal cap lined with an acid-resistant washer or a composition stopper of material that will not be attacked by the acid.

(2) Fire-extinguisher charges, consisting of chlorosulfonic acid in a hermetically sealed bottle not exceeding 2 ounces capacity, securely packed in a metal container inclosed in another metal container, the inner metal container being cushioned in the outer metal container with an appropriate fire resistant cushioning material and the completed package embedded in potassium carbonate in outside fiberboard or wooden boxes.

(3) Fire-extinguisher charges, consisting of sulfuric acid in 10-ounce or smaller bottles, securely closed, packed in a tight fiber carton. Closure must consist of a metal cap lined with an acid-resistant washer or a composition stopper of material that will not be attacked by the acid. The bottle and carton packed in either potassium carbonate or potassium carbonate and alkali packed in a cylindrical tin can, with slip cover, secured by tape in outside fiberboard or wooden boxes.

§ 173.262 Hydrobromic acid. (a) Hydrobromic acid not over 49 percent strength must be packed in specification containers as follows:

(1) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(2) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) [Reserved]

(4) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon each, except that inside containers not over 3 gallons are authorized when only one is packed in each outside box.

(5) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(6) Specification 103B,[1] 103BW, or 111A60W5 (§§179.200, 179.201 of this subchapter). Tank cars.

(7) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(8) Specification 37P (§178.133 of this subchapter). Steel drum, not over 5 gallons capacity, with polyethylene liner (non-reusable container). A drum exceeding 1 gallon capacity must be constructed of at least 24 gauge metal. Not authorized for transportation by air.

(9) Spec. 22C (§178.198 of this subchapter). Plywood drum as prescribed by §178.198–2(a) of this subchapter, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container.

(10) Spec. 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside spec. 2S (§178.35 of this subchapter) polyethylene container.

(11) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks must be lined with rubber or equally acid-resistant material of equivalent strength and durability. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(12) Specification 37M (§178.134 of this subchapter) (non-reuseable) cylindrical steel overpack with inside Specification 2SL (§178.35a of this subchapter) polyethylene container. Overpack must have rolled hoops and be constructed of 20-gauge body and 18-gauge head.

(13) In IM portable tanks as prescribed in paragraph (b)(5) of this section.

(b) Hydrobromic acid greater than 49 percent strength but not over 63 percent strength must be packed in specification containers as follows:

(1) Spec. 22C (§178.198 of this subchapter). Plywood drum as prescribed by §178.198–2(a) of this subchapter, with Spec. 2T (§178.21 of this subchapter) polyethylene container.

(2) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside Specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene container.

(3) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes with one inside polyethylene bottle, with screw-cap closure, not over one-gallon capacity.

(4) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks must be lined with rubber or equally acid-resistant material of equivalent strength and durability. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(5) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table.

(6) Specification 12A (178.210 of this subchapter). Fiberboard box with not more than four inside glass bottles not over one-quart capacity each, or 12 inside glass bottles not over eight fluid ounces each. Each bottle must be enclosed in a metal can and surrounded by a noncombustible cushioning material. Box shall be constructed of at least 275-pound test (Mullen or Cady) corrugated fiberboard.

§ 173.263 Hydrochloric (muriatic) acid; hydrochloric (muriatic) acid mixtures; hydrochloric (muriatic) acid solution, inhibited; sodium chlorite solution (not exceeding 42 percent sodium chlorite); and cleaning compounds, liquids, containing hydrochloric (muriatic) acid.

(a) Hydrochloric (muriatic) acid, hydrochloric (muriatic) acid mixtures, hydrochloric (muriatic) acid solution, inhibited, sodium chlorite solution not exceeding 42 percent sodium chlorite, and cleaning com-

[1] Use of existing tank authorized, but new construction not authorized.

pounds, liquid, containing hydrochloric (muriatic) acid must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter) Wooden boxes with inside glass, earthenware, polyethylene or other nonfragile plastic containers resistant to the lading (bags are not authorized), not over 1-gallon each, except that inside containers not over 3 gallons each are authorized when only one is packed in each outside box.

(2) [Reserved]

(3) [Reserved]

(4) [Reserved]

(5) Specification 1A or 1K (§§178.1, 178.14 of this subchapter). Carboys in boxes. Not authorized for transportation by aircraft.

(6) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(7) Specification 1D, 1EX (sing'e-trip), or 1M (§§178.4, 178.6, 178.17 of this subchapter). Glass carboys in boxes, plywood drums, or expanded polystyrene packagings. Pressure in the carboy may not exceed 10 pounds per square inch gauge at 130° F. (55° C.). If the package is vented, there may be no significant release of contents to the environment. Not authorized for transportation by aircraft.

(8) Specification 57 (§178.253 of this subchapter). Steel portable tank. Authorized only for cleaning compounds, liquid, containing hydrochloric (muriatic) acid of not over 20 percent total acid by weight. Tank must have a polyethylene liner impervious to the solution. Authorized for transportation by water when having a minimum design pressure of 9 psig and equipped in accordance with §178.253–4, except that frangible devices are not authorized. Also, for water transportation, no pressure relief device may open at less than 5 psig.

(9) Specification 103B,[1] 103BW, or 111A60W5 (§§179.200, 179.201 of this subchapter). Tank cars. These cars are authorized for acid not over 38 percent strength by weight. A safety relief valve or a safety vent of approved design equipped with frangible disc having ⅛-inch breather hole in center thereof or a safety vent of approved design equipped with carbon discs permitting continuous venting may be used, but may not be used for hydrochloric (muriatic) acid of 22° Baume strength or greater and other fuming acids.

(10) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tank lined with rubber or equally acid-resistant material of equivalent strength and durability. An unlined specification MC 311 or MC 312 tank motor vehicle made from Type 304L or 316 stainless steel is authorized for sodium chlorite solutions not exceeding 42 percent sodium chlorite only. Bottom outlets are authorized if they meet the requirements of §178.343–5 of this subchapter.

(11) Spec. 60 (§178.255 of this subchapter). Portable tanks, rubber-lined.

(12) Specification 103CW, 111A60W7 (§§179.200 and 179.201 of this subchapter). Tank cars having tanks of type 304L stainless steel. Authorized for sodium chlorite solution not exceeding 42 percent sodium chlorite only.

(13) Spec. 1H, 15P, or 22C (§§178.13, 178.182, or 178.193 of this subchapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by §178.193–2(a) of this subchapter, with inside Spec. 2T or Spec. 2TL (§§178.21 or 178.27 of this subchapter) polyethylene container.

(14) Specifications 17H, 37A, or 37B (§§178.118, 178.131, 178.132, of this subchapter). Metal drums (sing'e-trip) not over 5 gallons capacity each. Authorized only for 15 percent or less, inhibited hydrochloric (muriatic) acid solution. Drums must be lined throughout with a pliable plastic material impervious to the solution. Specifications 37A and 37B metal drums must be at least 24 gauge steel. Not authorized for transportation by air.

(15) Specification 12A or 12B (§§178.210, or 178.205 of this subchapter). Fiberboard boxes with inside containers of polyethylene, or other nonfragile plastic material resistant to the lading (bags are not authorized), not over 1-gallon capacity each, or not more than one of 3-gallon capacity, suitably cushioned to prevent movement within the box. Gross weight of completed package must not exceed 65 pounds.

(16) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210–10 of this subchapter.

(17) Specification 6D or 37M (nonreusable container) (§§178.102, or 178.134 of this subchapter). Cylindrical steel overpacks with inside Specification 2S, 2SL, 2T, 2TL, or 2U (§§178.35, 178.35a, 178.21, 178.27, 178.24 of this subchapter) polyethylene container.

(18) Specification 37P (§178.133 of this subchapter). Steel drums constructed of at least 24-gauge metal for drums exceeding 1 gallon capacity, with polyethylene liner (nonreusable container). Not authorized for transportation by air.

[1] The use of existing tanks authorized but new construction not authorized.

(19) Spec. 16D (§178.187 of this subchapter). Wirebound wooden overwrap, with inside Spec. 2T, 2TL, 2S, or 2SL (§§178.21, 178.27, 178.35, or 178.35a of this subchapter) polyethylene container.

(20) [Reserved]

(21) Spec. 12C (§178.206 of this subchapter). Fiberboard boxes with inside 5-gallon nominal capacity polyethylene bottles having minimum wall thickness of 0.015 inch and constructed with screw-type closures. Authorized gross weight not over 65 pounds. (See §178.206–19 of this subchapter.)

(22) Spec. 21P (§178.225 of this subchapter). Fiber drum overpack with inside Spec. 2T, 2S, 2SL, or 2U (§§178.21, 178.35, 178.35a, or 178.24 of this subchapter) polyethylene container.

(23) Specification 12P (§178.211 of this subchapter). Fiberboard box with one inside Specification 2U (§178.24 of this subchapter) polyethylene container of not over 5-gallon capacity, each or two inside Specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failure. Not authorized for transportation by air.

(24) Specification 16A (§178.185 of this subchapter). Wirebound wooden box (§178.185–22 of this subchapter) with inside specification 2U (§178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(25) Spec. 22C (§178.193 of this subchapter). Plywood drum as prescribed by §178.193–2(b), with inside Spec. 2TL (§178.27 of this subchapter) polyethylene container not over 5 gallon nominal capacity.

(26) Spec. 33A (§178.150 of this subchapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5-pint bottles may be packed in one outside container.

(27) Specification 12R (§178.212 of this subchapter). Paper-faced expanded polystyrene board box with not more than six inside glass bottles or Specification 2E (§178.24a of this subchapter) inside polyethylene bottles, not over 5 pints capacity each.

(28) Specification 34 (§178.19 of this subchapter). Polyethylene drum.

(29) Specification 12R (§178.212 of this subchapter). Paper-faced expanded polystyrene board box with not more than four specification 2E (§178.24a of this subchapter) inside polyethylene bottles, not over 1-gallon capacity each.

(30) Marine portable tanks meeting the requirements of 46 CFR Part 64 authorized for highway and cargo vessel only when shipped in support of off-shore oil well drilling activities. Tanks shall comply with mounting and tie-down requirements of §178.245–4 of this subchapter. Authorized only for mixtures of hydrochloric and hydrofluoric acid containing 2% or less of hydrofluoric acid.

(31) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Hydrochloric acid of not over 20 percent strength (13.25° Baume) and other corrosive liquids containing not over 20 percent hydrochloric acid in addition to containers prescribed in paragraph (a) of this section may be shipped in specification containers as follows:

(1) [Reserved]

(2) Limited quantities of these materials in inside packaging of not more than 8 fluid ounces capacity each, packed in strong outside packagings, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter, except §177.817.

(c) When hydrochloric acid contains oils or solvents it must not be shipped in containers or tank cars lined with rubber.

(d) Hydrochloric acid mixtures of not over 28 percent strength, or cleaning compounds, liquid, containing not over 28 percent hydrochloric (muriatic) acid, in addition to the provisions of paragraphs (a) and (b) of this section, may be packed in specification containers as follows:

(1) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test (Mullen or Cady) double-wall corrugated fiberboard or 325-pound test (Mullen or Cady) double-faced corrugated fiberboard, with not more than 12 inside glass bottles, having acid-proof closures, of not over 32 ounces capacity each. Inside glass bottles must be separated and cushioned by suitable corrugated fiberboard partitions. The box must be equipped with top and bottom pads. (See §178.205–32 of this subchapter.)

(2) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 1 gallon capacity each. Not more than 4 inside containers exceeding 5 pints capacity each shall be in the outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210–10 of this subchapter.

(e) Special exceptions for the shipment of certain dilute hydrochloric acid solutions in the ORM-D class are provided in Subpart N of this part.

§ 173.264 Hydrofluoric acid; white acid. (a) Hydrofluoric acid and white acid (ammonium bifluoride and hydrochloric acid mixture), each must be packed in specification packaging as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers which are hydrofluoric acid resistant. These containers are authorized only for strengths of acid for which they are adequate, but in no case may the strength of acid exceed 70 percent.

(2) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with Specification 2E (§178.24a of this subchapter) inside polyethylene bottles or inside receptacles of not over 1 pound capacity each, made of natural rubber, lead, or other hydrofluoric resistant plastic. Authorized only for acid not over 70 percent in strength.

(3) Spec. 16D (§178.187 of this subchapter). Wirebound wooden overwrap, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container. Authorized for hydrofluoric acid not over 70 percent strength.

(4) Specification 12A or 12B (§§178.210, 178.205 of this subchapter). Fiberboard boxes with not more than four Specification 2E (§178.24a of this subchapter) inside polyethylene bottles, having a minimum thickness of 0.030 inch and not over 1 gallon (nominal) capacity each. Bottle closures must be made secure by sealing with pressure-sensitive plastic tape or other equally efficient means. Authorized for acid not over 70 percent strength. Authorized gross weight for Specification 12B fiberboard boxes not over 65 pounds; Specification 12A not over 80 pounds.

(5) [Reserved]

(6) [Reserved]

(7) [Reserved]

(8) Specification 103AW, 105A100W, 111A100F2, 111A60W2, 111A100W4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Unlined metal tanks which have been subjected to adequate passivity or neutralization process. Each metal container, before being put into service must be passivated by an efficient method. Authorized only for hydrofluoric acid of 60 to 80 percent strength. If tanks are washed out with water they must be resubjected to passivity before reshipment.

(i) Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent when shipped in unlined metal tank cars must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(ii) Each tank car must be marked "HYDROFLUORIC ACID" in accordance with the requirements of §172.330 of this subchapter.

(9) [Reserved]

(10) [Reserved]

(11) Specification 103BW, 111A100W4, or 111A60W5 (§§179.200, 179.201 of this subchapter). Tank cars, rubber-lined tanks. Authorized only for acid not over 40 percent strength except Specification 111A100W4 tanks are authorized only for acid of 70 percent strength.

(12) [Reserved]

(13) [Reserved]

(14) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks.

Note 1: Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined tank motor vehicles, must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(15) [Reserved]

(16) Spec. 15P or 22C (§§178.182 or 178.198 of this subchapter). Glued plywood or wooden box, or plywood drum as prescribed by §178.193-2(a) of this subchapter, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container. Authorized for acid not over 70 percent strength.

(17) Specification 6D (§178.102 of this subchapter) or 37M (nonreuseable) (§178.134 of this subchapter) cylindrical steel overpacks with inside Specifications 2S, 2SL, or 2T (§§178.35, 178.35a, 178.21 of this subchapter) polyethylene liners. Specification 37M overpack of over 15-gallon capacity must be constructed of at least 20-gauge steel. Authorized only for acid of not over 70 percent strength.

(18) Specification 34 (§178.19 of this subchapter). Polyethylene drum. Authorized only for hydrofluoric acid not over 52 percent strength.

(19) Specification 12P (§178.211 of this subchapter). Fiberboard boxes with one inside Specification 2U (§178.24 of this subchapter) polyethylene container of not over 5-gallon capacity or two inside Specification 2U polyethylene containers of not over 2½-gallon capacity each. Authorized only for acid of 48 to 52 percent.

(20) Marine portable tanks meeting the requirements of 46 CFR Part 64 authorized for highway and cargo vessel only when shipped in support of offshore oil well drilling activities. Tanks shall comply with mounting and tiedown requirements of §178.245-4 of this subchapter when transported by highway. Authorized for hydrofluoric acid mixtures only.

(21) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Hydrofluoric acid, anhydrous (hydrogen fluoride) must be shipped in specification containers as follows:

(1) Specification 3,[1] 3A, 3AA, 3B, 3C, 3E, 4, 4A, 25,[1] or 38[1] (§§178.35, 178.37, 178.38, 178.40, 178.42, 178.48, 178.49 of this subchapter); also Spec. 4B, 4BA, 4BW or 4C (§§178.50, 178.51, 178.61, 178.52, of this subchapter) if not brazed. Cylinders. Filling density must not exceed 85 percent of the pounds water weight capacity of the cylinder. Cylinders used exclusively in this service may, in lieu of the periodic hydrostatic retest required by §173.34(e), be given a complete external visual inspection at the time such periodic retest becomes due. Such inspections shall be made only by competent persons and shall be made on cylinders cleaned to bare metal and results recorded on a suitable data sheet, completed copies of which shall be kept as prescribed in §173.34(e)(5). Points to be checked and recorded on these data sheets are: Date of inspection (month and year) DOT specification number; cylinder identification (registered symbol and serial number, date of manufacture, and if needed for adequate identification, ownership symbol); tare weight; physical condition (record specifically, if present, leakage, corrosion, gouges, dents or digs in shell or heads, broken or damaged footring or protective ring or fire damage); disposition of cylinders (returned to service, to cylinder manufacturer for repairs, or scrapped). A cylinder which passes the inspection prescribed shall have the data recorded in the manner presently prescribed for the recording of the retest date except that an "E" is to follow the date (month and year) indicating requalification by the external inspection method. Cylinders removed from this service for any reason must be rendered unfit for any other regulatory service (see §173.28(l)).

(2) Specification 105A300W, 112A400W, 114A400W, or ARA-V[1] (§§179.100, 179.101 of this subchapter). Tank cars equipped with special valves and appurtenances approved for this particular service. Filling density must not exceed 90 percent of the pounds water weight capacity of the tank. For Specification 114A400W tanks, valves and fittings must be located on top of the tank. Bottom openings in tank prohibited.

(i) Each tank car must be marked "HYDROGEN FLUORIDE" in accordance with the requirements of §172.330 of this subchapter.

(3) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks.

(4) Spec. 51 (§178.245 of this subchapter). Portable tanks.

(5) [Reserved]

(6) Specification 106A500X or 110A500W (§§179.300, 179.301 of this subchapter) tanks. Tanks may not be equipped with safety devices of any type and valves must be protected by metal caps. Tanks may not be filled to a density in excess of 85 percent of the water weight capacity of the tank. (See §177.834(m) of this subchapter for special requirements for highway shipments.)

(c) Containers must not be entirely filled. Unless otherwise provided in this part, sufficient outage (vacant space) must be allowed so that the liquid portion will not completely fill the container at 130° F. in order to prevent leakage or distortion of containers due to the expansion of the contents from increase in temperature during transit.

[1] The use of existing tanks authorized but new construction not authorized.

§ 173.265 Fluosilicic acid (hydrofluorosilicic acid) (hydrofluosilicic acid). (a) Fluosilicic acid (hydrofluorosilicic acid) (hydrofluosilicic acid) must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers of natural rubber, ceresine, or other material of equal efficiency resistant to fluosilicic acid (hydrofluorosilicic acid) (hydrofluosilicic acid).

(2) [Reserved]

(3) [Reserved]

(4) Specification 16A (§178.185 of this subchapter). Wirebound wooden box (§178.185-22 of this subchapter) with inside Specification 2U (§178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(5) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Fluosilicic acid (hydrofluorosilicic acid) (hydrofluosilicic acid) of not exceeding 40 percent strength may also be shipped when packed in specification containers as follows:

(1) [Reserved]

(2) [Reserved]

(3) Specification 103B,[1] 103BW, 111A60W5, or 111A100W2 (§§179.200, 179.201 of this subchapter). Tank cars, rubber-lined or elastomer lined tanks.

(4) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks must be lined with rubber or equally acid-resistant material of equivalent strength and durability. Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(c) Fluosilicic acid (hydrofluorosilicic acid) (hydrofluosilicic acid) containing no free hydrofluoric acid or other ingredient that will attack glass, may also be shipped when packed in specification containers as follows:

(1) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Carboys in boxes or expanded polystyrene packagings. Use of a rubber stopper and gasket is authorized for Specification 1A and 1D carboys only. Not authorized for transportation by aircraft.

For explanation of abbreviations and reference marks, see last page of this tariff.

(2) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers, over 1-gallon capacity each, with rubber or ground-in glass stoppers.

(4) The vacant space in containers of these acids must be sufficient so that when raised to a uniform temperature of 130° F. the vapor pressure shall not exceed 6 pounds per square inch.

(d) Fluosilicic acid (hydrofluorosilicic acid) (hydrofluosilicic acid) of not exceeding 32 percent strength may also be shipped when packed in specification containers as follows:

(1) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with Specification 2E (§178.24a of this subchapter) inside polyethylene bottles or other plastic material resistant to the lading, not over 1-quart capacity each, suitably cushioned to prevent movement within the box. Gross weight of complete package must not exceed 65 pounds.

(2) Spec. 15P or 22C (§§178.182 or 178.198 of this subchapter). Glued plywood or wooden box, or plywood drum as prescribed by §178.198–2(a) of this subchapter, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container.

(3) Spec. 6D or 37M (nonreusable container) (§178.102 or 178.134 of this subchapter). Cylindrical steel overpacks with inside Spec. 2S or 2SL (§178.35 or 178.35a of this subchapter) polyethylene container. Spec. 37M overpack shall be constructed of at least 20-gauge steel and steel and shall not exceed 16 gallons capacity each.

(4) Specification 37P (§178.133 of this subchapter). Steel drums, not over 5-gallons capacity, with polyethylene liner (non-reusable container). Not authorized for transportation by air.

(5) Spec. 21P (§178.225 of this subchapter). Fiber drum overpack with inside Spec. 2S, 2SL or 2U (§§178.35, 178.35a, or 178.24 of this subchapter) polyethylene container.

(6) Specification 34 (§178.19 of this subchapter). Polyethylene drum.

§ 173.266 Hydrogen peroxide solution in water. (a) Hydrogen peroxide solution in water containing over 52 percent hydrogen peroxide by weight must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 1-quart capacity each; bottles must have vented closure and must be packed in metal container vented at bottom, packed in another metal container vented at top; cushioning material shall be used between glass bottle and inner container and between inner and outer metal containers; cushioning material shall be vermiculite or equivalent in an amount at least 10 times the volume of the solution shipped and shall be wet with at least 10 percent water by volume to which has been added a stabilizing agent.

(2) Spec. 42D (§178.109 of this subchapter). Aluminum drums with vented closure in top head; not over 30 gallons capacity; side openings not permitted. Top head must be plainly marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE."

(3) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) under the conditions specified in the IM Tank Table are authorized for shipment of hydrogen peroxide solution in water containing 60 percent or less hydrogen peroxide by weight. Pressure relief devices shall be designed to prevent the entry of foreign matter, the leakage of liquid and the development of any dangerous excess pressure. In addition, the tank shall be designed so that internal surfaces may be effectively cleaned and passivated. The tank shall be clearly marked "FOR HYDROGEN PEROXIDE ONLY." Each tank must be equipped with pressure relief devices conforming to the requirements of the following table:

Concentration of hydrogen peroxide solution	Total venting capacity in standard cubic feet per hour (S.C.F.H.) per pound of hydrogen peroxide solution
52 percent or less	11
Over 52 percent but not greater than 60 percent	22
Over 60 percent but not greater than 70 percent	32

(b) Hydrogen peroxide solution in water containing 52 percent or less hydrogen peroxide by weight must be packaged as prescribed in paragraph (a) or (f) of this section or as follows (vented packagings are not permitted aboard aircraft):

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers of not more than 1-gallon capacity each. Inside containers must be well cushioned with an appropriate fire-resistant cushioning material. Cushioning of inside containers in outside wooden boxes by means of elastic packing, such as wooden strips or large corks fastened securely in position, is authorized if the completed package will pass the swing test prescribed for boxed carboys in Specification 1A (§178.1 of this subchapter).

(2) [Reserved]

(3) Spec. 42D (§178.109 of this subchapter). Aluminum drums with vented closure in top head, not over 55 gallons capacity. Top heads must be plainly marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE."

(4) [Reserved]

(5) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with Specification 2E (§178.24a of this subchapter) inside polyethylene bottles having vented screw-cap closures not over 16-ounce capacity each. Each bottle must be completely contained in a securely closed polyethylene bag or tube constructed of material having minimum film thickness of 0.004 inch. Bottles must be separated from each other by use of fiberboard partitions or other suitable cushioning material. Not more than 12 bottles may be packaged in one box.

(6) Spec. 6D or 37M (nonreusable container) (§§178.102 or 178.134 of this subchapter). Cylindrical steel overpacks with inside spec. 2S or 2SL (§§178.35 or 178.35a of this subchapter) polyethylene container. The closure must be located in one head and must be vented to prevent accumulation of internal pressure and head plainly marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE."

(7) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with inside specification 2SL (§178.35a of this subchapter) polyethylene container, not over 55-gallon capacity, or specification 2U (§178.24 of this subchapter) polyethylene container not over 15-gallon capacity. The closure of the inside 2SL and 2U container must be vented to prevent accumulation of internal pressure and the head with the closure must be marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE."

(8) Specification 34 (§178.19 of this subchapter). Polyethylene drum. Each drum must have a vented closure to prevent accumulation of internal pressure and the head with the closure must be marked "KEEP THIS END UP."

(9) Specification 37P (§178.133 of this subchapter). Steel drums, not over 15-gallon capacity, with inside Specification 2U (§178.24 of this subchapter) polyethylene containers having a minimum thickness of 0.015 mil. The closure of the inside 2U container must be vented to prevent accumulation of internal pressure and the head with the closure must be marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE".

(10) In IM portable tanks as prescribed in paragraph (a)(3) of this section.

(c) Hydrogen peroxide solution in water containing over 8 percent hydrogen peroxide by weight and not exceeding 37 percent must be packaged as prescribed in paragraph (a), (b), or (f) of this section or as follows (vented packagings are not permitted aboard aircraft):

(1) Specification 1A (§178.1 of this subchapter). Glass carboys. The cushioning must be non-combustible mineral material, elastic wooden-strip packing, or large elastic cushions such as corks fastened securely in position. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited. The carboy stoppers must be vented so as to prevent accumulation of internal pressure; use of cork gasket impregnated with paraffin is authorized. Not authorized for transportation by air.

(2) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 1D or 1M (§§178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Pressure in the carboy may not exceed 10 pounds per square inch gauge at 130° F. (55° C.). If the package is vented, there may be no significant release of contents to the environment. For Specification 1D, the cushioning must be non-combustible mineral material, elastic wooden-strip packaging, or large elastic cushions such as corks fastened securely in position; the use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited. Not authorized for transportation by aircraft.

(4) Spec. 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers of polyethylene, or other plastic material resistant to the lading, not over 1-pint capacity or 16 ounces by weight each. Inside containers must be securely cushioned with an appropriate fire-resistant cushioning material.

(5) Spec. 1H, 15P, or 22C (§§178.13, 178.182 or 178.198 of this subchapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by §178.198–2(a) of this subchapter, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container.

(6) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside aluminum bottles constructed of at least 99 percent pure aluminum of not over 5 pounds or 5 pints capacity each. Each bottle shall be individually partitioned and surrounded by incombustible mineral pack-

[1] Use of existing tank cars authorized, but new construction not authorized.

ing material in the outside shipping container. Bottle closure shall be by means of a threaded aluminum cap lined with polyethylene gasket or other equally efficient closing device. A venting device which will not leak liquid under conditions normally incident to transportation is permitted.

(7) [Reserved]

(8) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles not over 1 gallon capacity each with vented closures; such bottles over 32 ounces capacity each must be completely contained in a securely closed polyethylene bag or tube constructed of material having minimum film thickness of 0.003 inch. Alkaline solutions containing sodium hydroxide or other alkaline materials packed in glass or polyethylene bottles not over 1 gallon capacity each and with hydrogen peroxide solution contained in polyethylene bottles not over 1 gallon capacity each, when shipped as a wood bleach preparation, may be packed together in inside chipboard or corrugated fiberboard boxes or separated by corrugated fiberboard partitions; not more than six inside chipboard or corrugated fiberboard boxes having inside bottles not over 32 ounces each, or more than 4 one gallon bottles separated by corrugated fiberboard partitions may be packed in one outside box; completed package with mixed contents must be capable of withstanding a drop from a height of four feet onto solid concrete without failure of any inside container.

(9) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass or polyethylene bottles, not over 1-gallon capacity each. Each bottle closure must be vented and each bottle completely contained in a securely closed polyethylene bag or tube constructed of material having minimum film thickness of 0.003 inch. Shipper must have established that completed package meets test requirements prescribed by §178.210–10 of this subchapter.

(10) Spec. 16D (§178.187 of this subchapter). Wirebound wooden overwrap, with inside Spec. 2T or 2TL (§§178.21 or 178.27 of this subchapter) polyethylene container.

(d) Hydrogen peroxide solution in water containing over 8 percent hydrogen peroxide by weight and not exceeding 10 percent must be packaged as prescribed in paragraph (a), (b), (c) or (f) of this section (vented packagings are not permitted aboard aircraft).

(e) Except for transportation by vessel, hydrogen peroxide solution in water not exceeding 52 percent hydrogen peroxide by weight, when shipped in tank cars, cargo tanks, or portable tanks in carload or truckload quantities only, is not subject to any other requirement of Parts 170–189 and 397 of this title.

(f) Hydrogen peroxide solution in water exceeding 52 percent hydrogen peroxide by weight may also be packed in specification containers as follows:

(1) Specification 103A-ALW, 103CW, 111A60ALW2 or 111A50W7 (§§179.200, 179.201 of this subchapter). Tank cars. The 103CW and 111A60W7 tank cars must be fabricated of Type 304L, 316, or 316L stainless steel. (See §§173.31(a)(4) and 179.3(a) for additional requirements).

(i) Each tank car must be marked "HYDROGEN PEROXIDE" in accordance with the requirements of §172.330 of this subchapter.

(2) Specification MC 310 or MC 312 (§178.343 of this subchapter). Cargo tanks. Tanks must be fabricated of aluminum conforming to Aluminum Association Nos. 1060, 1260, 5254, or 5652. Specification MC 312 may be fabricated of Type 304L, 316 or 316L stainless steel. They must be built to a design working pressure of not less than 40 psig and shall be designed so that internal surfaces may be effectively cleaned and passivated. All openings in the tank shall be located on top of tank. All valves and safety devices shall be provided with overturn protection and dust covers. The tank metal identification plate required shall be marked "DOT MC 310–H_2O_2" or "DOT MC 312–AL–H_2O_2" or "DOT MC 312–SS–H_2O_2", as appropriate, and in addition, the cargo tank shall be clearly marked in letters not less than one inch high "FOR HYDROGEN PEROXIDE ONLY". Designs for venting and pressure relief devices must be examined by the Bureau of Explosives and approved by the Director, OHMT.

§ 173.267 Mixed acid (nitric and sulfuric acid) (nitrating acid). (a) Mixed acid (nitric and sulfuric acid) (nitrating acid), when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 7 pounds capacity each, individually inclosed in tightly closed metal cans and cushioned therein with incombustible mineral material.

(2) Spec. 5C (§178.83 of this subchapter). Metal barrels or drums of Type 304 ELC or 347 stainless steel only (See paragraph (b) of this section.)

(3) Specification 103A,[1] 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars. (See paragraph (b) of this section.)

(4) Specification 1A (§178.1 of this subchapter). Carboys in boxes. Authorized only for mixed nitric and sulfuric acid containing not over 17 percent nitric acid and containing at least 33 percent water. Straight-sided carboys must be used, cushioning must be incombustible mineral material, elastic wooden-strip packing, or large elastic cushions, such as cork, fastened securely in position. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited.

(5) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(6) Specification 1D or 1M (§§178.4, or 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Authorized only for mixed nitric and sulfuric acid, containing not over 17 percent nitric acid and containing at least 33 percent water. Pressure in the carboy may not exceed 10 pounds per square inch gauge at 130° F. (55° C.). If the package is vented, there may be no significant release of contents to the environment. For Specification 1D, cushioning must be incombustible mineral material, elastic wooden strip packing, or large elastic cushions such as cork fastened securely in position; the use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited.

(7) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. (See paragraph (b) of this section.) Bottom outlets are authorized if they meet the requirements of §178.343-5 of this subchapter.

(8) Spec. 60 (§178.255 of this subchapter). Portable tanks. (See paragraph (b) of this section.)

(9) Spec. 5A (§178.81 of this subchapter). Carbon steel barrels or drums. Authorized only for mixed acids containing less than 80 percent nitric acid. (See paragraph (b) of this section.)

(10) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Mixtures of sulfuric acid and nitric acid (nitrating acid), shipped in tank cars, cargo tanks, tank trucks, or metal barrels or drums, shall contain not less than 10 percent sulfuric acid. These mixtures may contain:

(1) Up to 10 percent water with not less than 10 percent sulfuric acid.
(2) Up to 15 percent water with not less than 15 percent sulfuric acid.
(3) Up to 20 percent water with not less than 20 percent sulfuric acid.
(4) Up to 38 percent water with not less than 62 percent sulfuric acid.

(c) Mixed acid (nitric and sulfuric acid) (nitrating acid), when offered for transportation by air must be packaged as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles with glass stoppers held in place by plaster of Paris covered by strong cloth and securely tied. Glass bottles having necks with molded screw threads, must be closed by threaded-type acid-resistant plastic caps equipped with an elastic composition cushion and with glass, porcelain or similar liner impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(2) Or glass bottles having necks with molded screw threads must be closed by threaded-type acid-resistant caps. Caps must be lined with a resilient liner which must be impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(3) Each bottle must be placed in a tightly closed metal container and well cushioned therein on all sides with an appropriate fire-resistant cushioning material. The metal container must be packed in the outside container, and well cushioned by incombustible mineral packing material.

(4) Not more than 1 quart of mixed acid may be shipped in one outside packaging.

§ 173.268 Nitric acid. (a) Nitric acid exceeding 40 percent concentration in any quantity must not be packed with any other article.

(1) Each tank car must be marked "NITRIC ACID" in accordance with the requirements of §172.330 of this subchapter.

(b) Nitric acid in any concentration which does not contain significant quantities of sulfuric acid or hydrochloric acid as impurities, when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) Specification 103CW or 111A60W7 (§§179.200, 179.201 of this subchapter). Tank cars.

(2) The use of spec. 103C–AL special aluminum alloy tank cars is authorized for the transportation of 95 percent or greater nitric acid as provided in special orders of November 14, 1939, June 7, 1940, and August 19, 1941.

(3) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of §178.343–5 of this subchapter.

(4) Specification 5C (§178.83 of this subchapter). Metal barrels or drums. Authorized for concentrations of nitric acid as limited by §178.83–3(c) of this subchapter. Containers weighing less than 85 percent of their original marked weight are not authorized.

(5) [Reserved]

[1] The use of existing tanks authorized but new construction not authorized.

(6) Specification 33A (§178.150 of this subchapter). Polystyrene case (nonreusable container) with inside glass bottles not over 5-pint capacity each. Not more than four 5-pint bottles may be packed in one outside packaging.

(c) Nitric acid of 80 percent or greater concentration which does not contain significant quantities of sulfuric acid or hydrochloric acid as impurities, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b), (d), and (e) of this section, may be packed in specification containers as follows:

(1) Spec. 42B (§§178.107, of this subchapter) Aluminum drums.

(2) Specification 103A-ALW or 111A60ALW2 (§§179.200, 179.201 of this subchapter). Tank cars. Specification 111A60ALW2 tank cars have a safety relief valve start-to-discharge pressure setting of 45 pounds per square inch.

(d) Nitric acid of 90 percent or greater concentration, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b) and (c) of this section, may be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 5 pints capacity each, individually inclosed in tightly closed metal cans and cushioned therein with appropriate fire-resistant cushioning material. (See paragraphs (g) and (h) of this section.)

(2) Specification 105A100-AL-W (§§179.100 and 179.201 of this subchapter). Tank cars. Tanks must be fabricated of aluminum alloy which is compatible with the lading, and must be equipped with safety relief valves made of material which is not adversely affected by the lading.

(e) Nitric acid of concentration of less than 90 percent, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b), (c), and (f) of this section, may be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 5 pints capacity each. (See paragraphs (g) and (h) of this section.)

(f) Nitric acid of concentration of 72 percent or less, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b) and (e) of this section, may be packed in specification containers as follows:

(1) Spec. 1A or 1K (§§178.1, 178.14 of this subchapter). Straight sided carboys in boxes.

(2) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 1D or 1M (§§178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Pressure in the carboy may not exceed 10 pounds per square inch gauge at 130° F. (55° C). If the package is vented, there may be no significant release of contents to the environment.

(4) Cushioning for carboys must be incombustible mineral material, elastic wooden strips, natural cork blocks or rubber blocks. The use of hay, excelsior, loose ground cork, or similar materials, whether treated or untreated, is prohibited.

(5) Spec. 60 (§178.255 of this subchapter). Portable tanks, glass-lined.

(6) [Reserved]

(7) Spec. 12R (§178.212 of this subchapter). Paper-faced expanded polystyrene board boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint bottles shall be packed in one outside shipping container.

(g) Closures for bottles. Glass stoppers ground to fit and held in place by plaster of Paris covered by a strong cloth securely tied; or:

(1) Threaded-type acid-resistant caps with gasket or lining impervious to the acid and sufficiently resilient, or cushioned, to give an acidproof closure; at least 1 complete continuous thread is required to be engaged when bottle is closed for shipment.

(h) Cushioning inside containers. Inside containers must be well cushioned. Except as provided in paragraph (h)(1) of this section, all material for cushioning must be incombustible mineral material such as whiting, mineral wool, infusorial earth, (Kieselguhr), sifted ashes, etc. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited. Where the cushioning material is very fine or powdery, separate partitions for the individual inside containers shall be provided to prevent bottles from shifting and coming in contact with each other, and the box must be tight to prevent sifting of cushioning material.

(1) Cushioning of inside containers in outside specification wooden boxes by means of elastic packings, such as wooden strips, large corks, or pads formed of an expanded polystyrene resin that is resistant to the action of nitric acid, fastened securely in position, is authorized if the completed package will pass the swing test prescribed for boxed carboys.

(i) Nitric acid of any concentration, when offered for transportation by air, must be packaged as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles with glass stoppers held in place by plaster of Paris covered by strong cloth and securely tied. Glass bottles having necks with molded screw threads must be closed by threaded type acid-resistant plastic caps equipped with an elastic composition cushion and with glass, porcelain or similar liner impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(2) Or glass bottles having necks with molded screw threads must be closed by thread-type acid-resistant caps. Caps must be lined with a resilient liner which must be impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(3) Each bottle must be placed in a tightly closed metal container, and well cushioned therein on all sides with an appropriate fire-resistant cushioning material. The metal container must be packed in outside containers, and well cushioned by incombustible mineral packing material.

(4) Not more than 5 pints of nitric acid shall be shipped in one outside package.

(j) Nitric acid of 50 percent or less concentration, when offered for transportation by air, may in addition to the provisions of paragraph (i) of this section be packaged as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, 19B or 12B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191, 178 205 of this subchapter). Wooden or fiberboard boxes with not over 12 inside glass ampoules having a capacity of not over 4 fluid ounces each. Each ampoule must be well cushioned with incombustible mineral packing material, such as vermiculite or other equally efficient material, and be packed in a cylindrical cardboard tube having wall thickness of at least ¼ inch, with the inside coated with wax, and be equipped with metal bottom and with metal screw-cap top. Inside packages must be separated by efficient means.

(k) Specification IM 101 portable tanks (§§178 270 and 178 271 of this subchapter), under conditions specified in the IM Tank Table. Authorized for nitric acid of any concentration.

§ 173.269 Perchloric acid. (a) Perchloric acid in excess of 72 percent must not be shipped. When not exceeding 72 percent strength must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 5 pints capacity each, cushioned with incombustible mineral material in sufficient quantity to absorb any leakage.

(2) Specification 1A, 1D, 1K, or 1M (§§178.1, 178.4, 178.14, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(3) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possession of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(4) Spec. 33A (§178.150 of this subchapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5-pint bottles may be packed in one outside container.

(5) Spec. 12R (§178.212 of this subchapter). Paper-faced expanded polystyrene board boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint bottles shall be packed in one outside shipping container.

(6) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside specification 2S (§178.35 of this subchapter) polyethylene container not exceeding 30-gallon capacity. Maximum net weight may not exceed 380 pounds. Not authorized for transportation by air.

(7) Specification IM 101 portable tanks (§§178 270, 178 271 of this subchapter), under conditions specified in the IM Tank Table. Authorized only for perchloric acid not exceeding 50 percent by weight.

(8) Specification 3H (§178.19 of this subchapter). Polyethylene drum. Authorized for perchloric acid not exceeding 50% strength only. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(b) Cushioning for carboys must be incombustible mineral material, elastic wooden strips, natural cork blocks or rubber blocks. The use of hay, excelsior, loose ground cork, or similar materials, whether treated or untreated, is prohibited.

(c) Perchloric acid in any quantity must not be packed with any other article.

(d) Closures for bottles. Required as follows:

(1) Glass stoppers ground to fit and held in place by plaster of Paris covered by a strong cloth securely tied.

(2) Threaded-type acid-resistant caps with a gasket or lining imper-

vious to the acid and sufficiently resilient, or cushioned, to give an acid-proof closure; at least one complete continuous thread is required to be engaged when bottle is closed for shipment.

(e) Inside containers must be well cushioned with an appropriate fire-resistant cushioning material. The use of hay, excelsior, ground cork, or similar material, either treated or untreated, is prohibited. Where the cushioning material is very fine or powdery, separate partitions for the individual inside containers should be provided to prevent the bottles from shifting and coming in contact with each other, and the box must be tight to prevent sifting of cushioning material.

(f) Cushioning of inside containers in outside wooden boxes by means of elastic packings, such as wooden strips, large corks, or pads formed of an expanded polystyrene resin that is resistant to the action of perchloric acid, fastened securely in position, is authorized if the completed package will pass the swing test prescribed for boxed carboys.

§ 173.270 Phosphorus tribromide. (a) Phosphorus tribromide must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1 gallon capacity each, except that inside containers up to 3 gallons each are authorized when only one container is packed in an outside box.

(2) Specification 5K or 5M (§§178.88, 178.90 of this subchapter). Nickel or Monel drums not over 10 gallons capacity each.

(3) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.271 Methyl phosphonic dichloride, phosphorus oxybromide, phosphorus oxychloride, phosphorus trichloride, and thiophosphoryl chloride. (a) Methyl phosphonic dichloride, phosphorus oxybromide, phosphorus oxychloride, phosphorus trichloride, and thiophosphoryl chloride must be placed in specification containers as follows:

(1) Specification 34 (§178.19 of this subchapter). Polyethylene drum. Authorized for phosphorus oxychloride only. The shipper shall assure conformance with the requirements of §173.24(d) of this Part prior to first shipment.

(2) Spec. 5K (§178.88 of this subchapter). Nickel drums.

(3) Specification 60 (§178.102 of this subchapter). Cylindrical steel overpack with inside Specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene packaging. Polyethylene used must be Type III as set forth in Appendix B—Specifications for Plastics to Part 178 of this Title. Authorized for phosphorus oxychloride and thiophosphoryl chloride only.

(4) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon capacity each, except that inside containers not over 3 gallons each are authorized when only one container is packed in an outside box.

(5) [Reserved]

(6) Spec. 60 (§178.255 of this subchapter). Portable tanks when tanks are lead-lined.

(7) Specification 103ANW (§§179.200, 179.201 of this subchapter). Tank cars. Tanks must be fabricated of solid nickel at least 95 percent pure and containing not more than 1 percent iron. Metal test coupons for welding procedure qualification must contain not more than 1 percent iron. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 96.7 percent.

(8) Specification MC 310,[1] MC 311,[1] or MC 312 (§§178.340, 178.343). Cargo tanks, subject to the following conditions:

(i) Lead-lined or nickel-lined tanks. If nickel-lined, the lining must consist of at least one thirty-second inch of uncontaminated nickel at all points including rivets, welds and other joints, and edges of tank plates.

(ii) Tanks fabricated from Type 316 stainless steel or clad with Type 316 stainless steel having a minimum thickness of 0.2 times the design thickness of the parent metal, are authorized only for phosphorus oxychloride, phosphorus trichloride and thiophosphoryl chloride.

(iii) Tanks made from mild steel or austenitic stainless steel, without lining or cladding. Authorized only for phosphorus trichloride.

(iv) Specification MC 311 or MC 312 cargo tanks. Tanks must be fabricated of solid nickel at least 95 percent pure and not more than 1 percent iron. Metal test coupons for welding procedure qualification must contain not more than 1 percent iron. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 96.7 percent. Authorized only for phosphorous oxychloride and phosphorus trichloride.

(9) Specification 103A,[1] 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars. Specification 103A[1] tanks must be lead-lined steel or made of steel with nickel cladding of at least 10 percent of the shell thickness. Specification 103AW, 111A60W2, or 111A100F2 tanks must be lead-lined steel or made of steel with nickel cladding with a minimum thickness of 1/8 inch. Nickel cladding in tanks must be low carbon nickel in accordance with ASTM B162-80.

(10) Spec. 103E W (§§179.200 and 179.201 of this subchapter). Tank cars made from Type 316 stainless steel. Authorized for phosphorus trichloride and thiophosphoryl chloride only.

(11) Specification 103A,[1] 103AW, 103CW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars. Specification 103CW must be fabricated from Type 430 stainless steel. Authorized for phosphorus trichloride only.

(12) Spec. 5A or 5C (§§178.81 or 178.83 of this subchapter). Metal barrels or drums. Authorized for phosphorus trichloride and thiophosphoryl chloride.

(13) [Reserved]

(14) [Reserved]

(15) [Reserved]

(16) Spec. 17C (§178.115 of this subchapter). Metal drums (single-trip) with no opening exceeding 2.3 inches in diameter. When drums are not constructed of stainless steel they must be lined with a material impervious to the lading. Authorized for phosphorus trichloride only.

(17) Spec. 5M (§178.90 of this subchapter). Monel drums not over 10 gallons capacity each.

(18) Spec. 5B (§178.82 of this subchapter). Metal barrels or drums lined with a material which is compatible with the commodity. Authorized for thiophosphoryl chloride only.

(19) Spec. 1M (§178.17 of this subchapter). Glass carboys in expanded polystyrene packagings. Authorized only for phosphorus oxychloride. Not authorized for transportation by aircraft.

(20) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.272 Sulfuric acid. (a) Sulfuric acid (oleum, oil of vitriol, etc.) must be packed in specification containers as follows:

(b) Limited quantities of sulfuric acid solutions in concentrations of 25 percent or less, in inside packagings of not over 8 fluid ounces capacity each, packed in strong outside packagings and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in event of breakage, are excepted from labeling (except when offered for transportation by air) and the specification packaging of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(c) Sulfuric acid concentration of 51 percent or less. Authorized packaging is described in paragraphs (1) through (16), (24) through (26) of paragraph (i) of this section.

(d) Sulfuric acid concentration of greater than 51 percent to not over 65.25 percent. Authorized packaging is described in paragraphs (1) through (16), and (27) through (29) of paragraph (i) of this section.

(e) Sulfuric acid concentration of greater than 65.25 percent to not over 77.5 percent. Authorized packaging is described in paragraphs (1) through (16), (20) through (22) and paragraph (29) of paragraph (i) of this section.

(f) Sulfuric acid concentration of greater than 77.5 percent to not over 95 percent. Authorized packaging is described in paragraphs (1) through (22) and paragraph (29) of paragraph (i) of this section.

(g) Sulfuric acid concentration of greater than 95 percent to not over 100.5 percent. Authorized packaging is described in paragraphs (i)(1) through (4), (6), (9), (14) through (22), and (29) of paragraph (i) of this section.

(h) **Sulfuric acid concentration of over 100.5 percent.** Authorized packaging is described in paragraphs (i) (1)-(4), (17), and (19)-(23) of this section.

(i) Authorized packagings are described as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1-gallon capacity each, except that inside containers not over 3 gallons each are authorized when only one container is packed in an outside box.

(2) Specification 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have established that the completed package meets the test requirements prescribed in §178.210-10 of this subchapter.

(3) Specification 33A (§178.150 of this subchapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5-pint bottles may be packed in one outside container.

(4) Specification 1X (§178.5 of this subchapter). Boxed carboys, single-trip for export only. For shipment by water to noncontiguous territories or possessions of the United States and foreign countries, shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(5) Specifications 1H, 15P, or 22C (§§178.13, 178.182, 178.198 of this subchapter). Metal crate with an inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by §178.198-2(a) of this subchapter with an inside Specification 2T or 2TL (§§178.21, 178.27 of this subchapter) polyethylene container.

(6) Specification 60 or 37M (nonreusable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks with an inside Specification 2S, 2SL, or 2T (§§178.35, 178.35a, 178.21 of this subchapter) polyethylene container. Overpack of over 30-gallon capacity

[1] Use of existing tanks authorized, but new construction not authorized.

must be constructed of at least 16-gage steel throughout when used for sulfuric acid of 93 percent or greater concentration.

(7) Specification 16D (§178.187 of this subchapter). Wirebound wooden overwrap, with an inside Specification 2T, 2TL, 2S, or 2SL (§§178.21, 178.27, 178.35, 178.35a of this subchapter), polyethylene container.

(8) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with an inside Specification 2T or 2U (§§178.21, 178.24 of this subchapter) polyethylene container not over 15-gallon capacity.

(9) Specification 34 (§178.19 of this subchapter). Polyethylene drum.

(10) Specification 16A (§178.185 of this subchapter). Wirebound wooden box (§178.185-22 of this subchapter) with an inside Specification 2U (§178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(11) Spec. 12P (§178.211 of this subchapter). Fiberboard box with one inside Specification 2U (§178.24 of this subchapter) polyethylene container of not over 5-gallon capacity, or two inside Specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(12) Specification 12B (§178.205 of this subchapter). Fiberboard boxes with inside polyethylene containers or other containers of plastic compatible with the chemical, not over 1-gallon capacity each. Inside containers must be cushioned to prevent movement in the outside box. Not more than four 1-gallon inside containers may be packed in one outside container. Authorized gross weight not over 75 pounds.

(13) Specification 12R (§178.212 of this subchapter). Paperfaced expanded polystyrene board boxes with inside Specification 2E (§178.24a of this subchapter) polyethylene bottles not over 1-gallon capacity each. Not more than four 1-gallon capacity each. Not more than four 1-gallon polyethylene bottles may be packed in one outside packaging.

(14) Specification 12R (§178.212 of this subchapter). Paperfaced expanded polystyrene board boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint bottles may be packed in one outside shipping container.

(15) Specification 1A or 1K (§§178.1, 178.14 of this subchapter). Carboys in boxes. Not authorized for transportation by aircraft.

(16) Specification 1D or 1M (§§178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(17) Specification 5A (§178.81 of this subchapter). Metal barrels or drums. Authorized for sulfuric acid of 77.5 percent or greater concentrations, with or without an inhibitor, provided such acid has a corrosive effect on steel no greater than 93.2 percent sulfuric acid, measured at 100° F.

Note 1: Tapered steel plugs, without gaskets, for standard Specification 5A flanges are authorized. Threaded length must not be less than 1.5 inches. Major diameter of plug must not be over 2⅛½ inches, and minor diameter not less than 2⅛ inches.

(18) Specification 17F (§178.117 of this subchapter). Metal barrels or drums (single-trip only). Authorized for sulfuric acid of 77.5 percent to 98 percent concentrations with or without an inhibitor, provided such acid has a corrosive effect on steel no greater than 93.2 percent sulfuric acid, measured at 100° F.

(19) Specification 5C (§178.83 of this subchapter). Metal barrels or drums of Type 304, 316, or 347 stainless steel or other types of stainless steel of at least equivalent corrosion resistance and physical properties. Authorized for sulfuric acid of 93 percent or greater concentrations.

(20) Specification 60 (§178.255 of this subchapter). Portable tank. Authorized for sulfuric acid of 65.25 percent of greater concentrations provided the corrosive effect in steel is not greater than that of 65.25 percent sulfuric acid, measured at 100° F.

(21) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Authorized for sulfuric acid of concentrations 65.25 percent or greater concentrations, provided the corrosive effect in steel is not greater than that of 65.25 percent sulfuric acid, measured 100° F. Bottom outlets are authorized if they meet the requirements of § 178.343-5 of this subchapter.

(22) Specification 103A,[1] 103AW, 103CW, 105A300W, 111A60W2, 111A100W6, or 111A100F2 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars. Authorized for sulfuric acid of concentrations 65.25 percent or greater, provided the corrosive effect on steel is not greater than that of 65.25 percent sulfuric acid, measured at 100° F. Tank cars used for sulfuric acid, mixed acid (nitric and sulfuric acids) (nitrating acid), and other fuming acids, may be equipped with safety vents incorporating frangible discs having a ⅛-inch breather hole in their center.

The ⅛-inch breather hole is not permitted in frangible discs of safety vents on oleum tank cars. Specification 103CW and 111A100W6 tank cars must have tanks constructed of type 304-L stainless steel. Bottom outlets are not authorized.

(23) Specification 115A60W6 (§179.220 of this subchapter). Tank cars. Tanks must be constructed of Type 304 or 316 stainless steel. Bottom outlets must be rendered inoperative and blanked off.

(24) Specifications 60 (§178.255 of this subchapter). Rubber-lined portable tanks.

(25) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks must be lined with rubber or equally acid-resistant material of equivalent strength and durability. Bottom outlets are authorized if they meet the requirements of § 178.343-5 of this subchapter.

(26) Specification 103B,[1] 103BW, or 111A60W5 (§§179.200, 179.201 of this subchapter). Lined tank cars.

(27) Specification 103AW, 111A100F2, or 111A60W2 (§§179.200, 179.201 of this subchapter). Tank cars having tanks equipped with a phenolic lining impervious to the lading.

(28) Specification MC 310, MC 311 or MC 312 (§178.343 of this subchapter). Cargo tanks must be lined with rubber or equally acid-resistant material of equivalent strength and durability. Bottom outlets are authorized if they meet the requirements of § 178.343-5 of this subchapter. Not authorized for transportation by vessel.

(29) Marine portable tanks meeting the requirements of 46 CFR Part 64 authorized for highway and cargo vessel only when shipped in support of off-shore oil well drilling activities. Tanks shall comply with mounting and tie-down requirements of § 178.245-4 of this subchapter when transported by highway. Authorized for sulfuric acid of concentrations up to 65.25 percent. Concentrations up to 100.5 percent are also authorized if the corrosive effect on steel is not greater than that of 65.25 percent sulfuric acid measured at 100° F.

(30) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table. Sulfuric acid of concentrations greater than 62.5 percent is authorized provided the corrosive effect on steel is not greater than that of 65.25 percent sulfuric acid, measured at 100° F.

§ 173.273 Sulfur trioxide. (a) Sulfur trioxide, stabilized, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1-gallon each.

(2) Spec. 5A or 5C (§§178.81 or 178.83 of this subchapter). Metal barrels or drums, not over 55 gallons capacity each.

(3) Spec. 17F (§178.117 of this subchapter). Metal drums (single-trip).

(4) Specification 103A,[1] 103AW, 105A100W, 111A60W2, or 111A100F2 (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars. Authorized only for stabilized sulfur trioxide. Tank cars must have safety valves of approved design and not subject to rapid deterioration by the lading. Cars equipped with interior heater coils not permitted. Specification 103AW tank cars may be equipped with standpipe electrical heaters approved by the AAR Committee on Tank Cars.

(i) Each tank car must be marked "SULFUR TRIOXIDE" in accordance with the requirements of § 172.330 of this subchapter.

(5) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Authorized only for stabilized sulfur trioxide. Tanks must be equipped with spring-relief safety valves. Tanks equipped with interior heater coils not permitted. Bottom outlets are authorized if they meet the requirements of § 178.343-5 of this subchapter.

(b) Sulfur trioxide, unstabilized, must be packed in specification containers as follows:

(1) Cylinders as prescribed for any compressed gas, except acetylene. Cylinders must be closed by metal plugs or valves. If valves are used, they must be protected by a valve protection cap, and each valve outlet must be capped or plugged. Cylinders must have a minimum service pressure of 400 psig and a maximum capacity of one gallon. Safety relief devices are not permitted. Cylinders must be overpacked in strong outside containers.

(2) Specification MC 311 or MC 312 (§178.343 of this subchapter). Tank motor vehicles. Tanks must be insulated and equipped with a safety relief valve. If the valve incorporates a rupture disc it may not exceed a maximum pressure of one and one-half times the design pressure of the tank. Tanks equipped with interior heater coils not permitted.

(3) Specification 105A300W (§179.100, 179.101 of this subchapter). Tank car. Tank car must be externally coiled and have a safety-relief valve set at not more than 225 psig. Cars equipped with interior heater coils not permitted.

(i) Each tank car must be marked "SULFUR TRIOXIDE" in accordance with the requirements of § 172.330 of this subchapter.

§ 173.274 Fluosulfonic acid. (a) Fluosulfonic acid must be packed in containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside containers not over 1-gallon each, except that inside containers not over 3 gallons each are authorized when only one container is packed in an outside box, as prescribed in Notes 1 and 2 of this section.

[1] Use of existing tanks authorized but new construction not authorized.

Note 1: Bottles manufactured of Pyrex glass or glass of equal acid resistance, authorized only for material containing an excess of sulfur trioxide, with Pyrex glass stoppers or glass stoppers of equal acid resistance, ground to fit and held in place by plaster of Paris covered by strong cloth securely tied; each bottle must be placed in a metal container, well cushioned therein with an appropriate fire resistant cushioning material.

Note 2: Or steel containers, 14 gauge steel throughout, welded heads and side seams, equipped with ¾ inch welded flange and plug. Threads for plug must be 8 or less per inch. Each drum must be tested for leakage with 15 pounds hydrostatic pressure.

(2) Spec. 5A or 17F (single-trip) (§§178.81 or 178.117 of this subchapter). Metal barrels or drums not over 55 gallons capacity each.

(3) Specification 103A,[1] 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars.

(4) Specification MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks.

(5) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.275 Difluorophosphoric acid, anhydrous, monofluorophosphoric acid, anhydrous, hexafluorophosphoric acid, and mixtures thereof. (a) Difluorophosphoric acid, anhydrous, monofluorophosphoric acid, anhydrous, hexafluorophosphoric acid, and mixtures thereof must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes, Spec. 12B (§178.205 of this subchapter) fiberboard boxes, or Spec. 21C (§178.224 of this subchapter) fiber drums with inside polyethylene or other nonfragile plastic bottles resistant to the lading, not over 2 gallons capacity each, closed by means of threaded acid-resistant caps; caps must have at least one complete continuous thread and be additionally sealed to the bottle to prevent turning of cap after bottle is closed.

(2) Spec. 42B, or 42D (§§178.107, 178.109 of this subchapter). Aluminum drums not over 55 gallons capacity.

(3) Spec. 22C (§178.198 of this subchapter). Plywood drums as prescribed by §178.198–2(a) of this subchapter, with inside Spec 2T (§178.21 of this subchapter) polyethylene container.

(4) Spec. 60 (§178.255 of this subchapter). Portable tanks. Authorized for inhibited acids enumerated in this paragraph only.

(5) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with inside Specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene packaging. Net weight may not exceed 550 pounds.

(6) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table. Mixtures of these materials are not authorized in IM portable tanks.

(b) Inside containers must be packed so they cannot change position in the outside container while in transit and inert absorbent cushioning material must be used where necessary.

§ 173.276 Anhydrous hydrazine and hydrazine solution. (a) Anhydrous hydrazine and hydrazine solution must be packed in specification containers as follows:

(1) Specification 1D or 1M (§§178.4 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(2) Spec. 15A, 15B, 15C, 19A or 19B (§§178.168, 178.169, 178.170, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not exceeding 1-gallon capacity each, cushioned by means of vermiculite within tin cans which shall be tightly closed.

(3) Spec. 5, 5A, 5C, or 17E (single-trip) (§§178.80, 178.81, 178.83, or 178.116 of this subchapter). Metal barrels or drums which shall be of type 304 or 347 stainless steel, with openings not exceeding 2 3 inches in diameter.

(4) Specification 103CW, 111A60W7, or 111A100W6 (§§179.200, 179.201 of this subchapter). Tank cars having tanks of Type 304L or 347 stainless steel with molybdenum content not exceeding one-half of 1 percent. The safety relief valve on Specification 103CW tank car tanks may have a start-to-discharge pressure of not more than 45 p.s.i. in place of 35 p.s.i. Specification 111A100W6 tank cars must not be equipped with bottom outlet. Bottom washout permitted. Vapor space in tanks must be filled with nitrogen gas at atmospheric pressure.

(5) Specification 103A–ALW or 111A60ALW2 (§§179.200, 179.201 of this subchapter). Tank cars. The safety relief valve on tanks may not have a start-to-discharge pressure of more than 45 p.s.i. in place of 35 p.s.i. Vapor space in tanks must be filled with nitrogen gas at atmospheric pressure. Authorized for anhydrous hydrazine only.

(6) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks having tanks of Type 304L or 347 stainless steel with molybdenum content not exceeding one-half of 1 percent. Vapor space in tank must be filled with nitrogen gas at not less than atmospheric pressure. Bottom outlets are authorized if they meet the requirements of §178.343–5 of this subchapter.

(7) Spec. 37M (nonreusable container) (§178.134 of this subchapter). Cylindrical steel overpack with inside Spec. 2SL (§178.35a of this subchapter) polyethylene container. Authorized for hydrazine solution only.

(8) Spec. 42B, or 42D (§§178.107, 178.109 of this subchapter) aluminum drums. Authorized for anhydrous hydrazine only.

(9) Specification 12B (§178.205 of this subchapter). Fiberboard box with one inside Specification 2E (§178.24a of this subchapter) polyethylene bottle not over 4½-quart capacity. Polyethylene bottle must be of type III high density polyethylene having a minimum wall thickness of 30 mils and bottle must be securely closed with a screw cap. Authorized for hydrazine solution only.

(10) Specification 34 (§178.19 of this subchapter) polyethylene drum. Authorized for hydrazine solution only.

(11) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table. Authorized only for hydrazine solution containing not more than 64 percent hydrazine by weight.

(12) Specification 57 (§178.253 of this subchapter). Stainless steel portable tank. Authorized for hydrazine, aqueous solution only. Authorized for transportation by water when having a minimum design pressure of 9 psig and equipped in accordance with §178.253–4, except that frangible devices are not authorized. Also, for water transportation, no pressure relief device may open at less than 5 psig.

§ 173.277 Hypochlorite solutions. (a) Hypochlorite solutions containing more than 7 percent available chlorine by weight must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 19A or 19B, (§§178.168, 178.169, 178.170, 178.190, 178.191 of this subchapter). wooden boxes or Spec 12A or 12B (§178.210, 178.205 of this subchapter) fiberboard boxes with inside glass, earthenware, or polyethylene packagings of not more than 1 gallon capacity each. Gross weight must not exceed 65 pounds nor contain more than 4 glass or earthenware inside packagings if their capacity is greater than 5 pints each, or more than six such inside polyethylene packagings.

(2) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(3) Spec. 1H, 15P, or 22C (§§178.13, 178.182, or 178.198 of this subchapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by §178.198–2(a) of this subchapter, with inside Spec. 2T (§178.21 of this subchapter) polyethylene container. Spec. 15P glued plywood or wooden box may contain Spec. 2S (§178.35 of this subchapter) polyethylene drum. Authorized for not over 16 percent sodium hypochlorite solution only.

(4) Specification 6D or 37M (nonreusable container) (§§178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene liners. Authorized for not over 16 percent sodium hypochlorite solution only.

(5) Spec. 12P (§178.211 of this subchapter). Fiberboard box with one inside specification 2U (§178.24 of this subchapter) polyethylene container of not over 5-gallon capacity or two inside Specification 2U polyethylene containers of not over 2½-gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(6) Spec. 34 (§178.19 of this subchapter). Polyethylene drum. Authorized for not over 16 percent sodium hypochlorite solution only. Vented closures are authorized if head with closure is marked "Keep This End Up."

(7) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with inside Specifications, 2S, 2SL, 2T, or 2U (§§178.35, 178.35a, 178.21, 178.24 of this subchapter) polyethylene container. Authorized for not over 16 percent sodium hypochlorite solutions only.

(8) Specification 37P (§178.133 of this subchapter). Steel drums with polyethylene liner (nonreuseable container). Containers must be vented to prevent accumulation of pressure and the head with closure must be marked "KEEP THIS END UP." Authorized for not over 16 percent solutions of sodium hypochlorite only.

(9) Specification MC 310, MC 311, or MC 312 (§178.243 of this subchapter). Cargo tanks. Tanks must be lined with rubber or other materials resistant to the lading. Continued use of nonspecification cargo tanks used to transport hypochlorite solutions prior to January 1, 1983, is authorized.

(10) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Closures for inside containers and carboys must be vented and must be of a material resistant to the lading and capable of preventing leakage of liquid contents.

(c) Specification 57 (§178.253 of this subchapter). Steel portable tank. Authorized for not over 15 percent solutions of sodium hypochlorite only. Authorized for transportation by water when having a minimum design pressure of 9 psig and equipped in accordance with §178.253–4.

[1] Use of existing tanks authorized but new construction not authorized

except that frangible devices are not authorized. Also, for water transportation, no pressure relief device may open at less than 5 psig. Tanks constructed of a steel other than stainless steel must have a polythylene liner impervious to the solution. Vented closures are authorized.

(d) Limited quantities of this material in glass inside packaging of not more than 4 fluid ounces capacity each, packed in strong outside packaging, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements of this subchapter.

(1) [Reserved]

(e) Limited quantities of this material in polyethylene pouches not over 2½ ounces capacity each, heat sealed, and formed of polyethylene, or other suitable plastic, not less than 0 0035–inch in thickness to which must be laminated a 0 0015–inch, 25–pound basis weight white sulphate paper, when securely packed not more than 144 pouches in a strong fiberboard box, are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements, of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174 24 and to Part 177 of this subchapter, except §177.817.

(f) Special exceptions for shipment of certain hypochlorite solutions in the ORM–D class are provided in Subpart N of this part.

§ 173.278 Nitrohydrochloric acid. (a) Nitrohydrochloric acid, which is a mixture of nitric acid not over 1.42 specific gravity and hydrochloric acid not over 1.19 specific gravity in the approximate proportions of one part nitric acid and three parts hydrochloric acid, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers of not over 5 pints capacity each, individually enclosed in tightly closed metal cans and cushioned therein with sufficient incombustible mineral material.

(2) Specification IM 101 portable tanks (§§178 270, 178 271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Nitrohydrochloric acid diluted, is a solution of nitrohydrochloric acid as described in paragraph (a) of this section, which has been diluted to not less than five times the volume of water and must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass containers of not over 5 pints capacity each, individually enclosed in tightly closed metal cans and cushioned therein with sufficient incombustible mineral material.

(2) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Rated capacity may not exceed 5 gallons for Specification 1A and not over 6.5 gallons nominal capacity for Specifications 1D and 1M. Not authorized for transportation by aircraft.

§ 173.279 Anisoyl chloride. (a) Anisoyl chloride must be packed in specification containers as follows:

(1) Spec. 5C (§178.83 of this subchapter). Metal barrels or drums.

(2) Spec. 5 (§178.80 of this subchapter). Metal barrels or drums of stainless steel only, with flanges for closures welded in place and having no opening exceeding 2.3 inches in diameter.

(3) Specification IM 101 portable tanks (§§178 270, 178 271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Limited quantities of this material in inside packagings of not over 8 fluid ounces capacity each, packed in strong outside packaging, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are excepted from labeling (except that labeling is required for transportation by air) and specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

§ 173.280 Trichlorosilanes. (a) Allyl trichlorosilane, amyl trichlorosilane, butyl trichlorosilane, chlorophenyl trichlorosilane, cyclohexenyl trichlorosilane, cyclohexyl tricholorosilane, dichlorophenyl trichlorosilane, diphenyl dichlorosilane, dodecyl tricholorosilane, ethyl phenyl dichlorosilane, hexadecyl trichlorosilane, hexyl trichlorosilane, nonyl trichlorosilane, octadecyl trichlorosilane, octyl trichlorosilane, phenyl trichlorosilane, and propyl trichlorosilane must be packaged as follows;

(1) Specification 15A, 16B or 19B (§§178.168, 178.186, 178.191 of this subchapter). Wooden boxes with inside glass containers not over 1 gallon capacity each, securely closed and cushioned with incombustible absorbent material.

(2) Spec. 17H or 37A (§§178.118 or 178.131 of this subchapter). Metal drums (single-trip), with glass inside containers not over 1 gallon capacity each securely closed and cushioned with incombustible absorbent material.

(3) Spec. 5A (§178 81 of this subchapter). Metal drums not over 55 gallons capacity.

(4) [Reserved]

(5) Specification 5, 5B, 5C, and 17E single-trip (§§178 80, 178 82, 178 83, 178.116 of this subchapter). Metal drums. Not authorized for shipment by air.

(6) Specification steel or nickel cylinders as prescribed for any compressed gas, except acetylene.

(7) Specification 103W, 103A,[1] 103AW, 105A100,[1] 105A100W, 111A60F1, 111A60W1, 111A60W2, 111A100F2, or 111A100W4 (§§179.100, 179.101, 179 200, 179 201 of this subchapter). Tank cars.

(8) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks of steel or stainless steel construction. Bottom outlets are authorized if they meet the requirements of §178.343–5 of this subchapter.

(9) Specification IM 101 portable tanks (§§178 270, 178 271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.281 Benzyl bromide (bromotoluene, alpha). (a) Benzyl bromide (bromotoluene, alpha) must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C or 19B (§§178.168, 178.169, 178.170, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 1–gallon capacity each, closed by means of screw caps which are resistant to action of the contents. Bottles must be packed in metal cans having slip-on or friction closures and cushioned in outside boxes with incombustible material.

(2) Spec. 5K or 5M (§§178 88 or 178 90 of this subchapter). Nickel or monel barrels or drums. Spec. 5M drums shall not be over 10 gallons capacity.

(3) Specification IM 101 portable tanks (§§178 270, 178 271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.282 Isopropyl percarbonate, stabilized. (a) Isopropyl percarbonate, stabilized, must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 2 gallons capacity each which must be maintained at temperature below 75° F. Shipments are authorized only by private or contract motor vehicle.

§ 173.283 Fluoboric acid. (a) Fluoboric acid exceeding 50 percent concentration must be packed as prescribed in §173 264(a) for hydrofluoric acid.

(b) Fluoboric acid of 50 percent concentration or less must be packed as follows:

(1) In specification packaging as prescribed in paragraph (a) of this section.

(2) In specification packaging as prescribed in §173 245(a)(12), (16), (18), (19), (21), (24), and (26).

§ 173.284 Tungsten hexafluoride.

(a) Tungsten hexafluoride must be packed in specification containers as follows:

(1) Specification 3A, 3AA, 3BN, or 3E (§§178.36, 178.37, 178.39, 178.42 of this subchapter). Cylinders. Cylinders shall be equipped with a valve protection cap or be packed in a strong outside container adequate to protect valves. Outlets of any valves must be capped or plugged. As an alternate, the cylinder opening may be closed by the use of a metal plug. Specification 3E cylinders must be shipped in an overpack.

§ 173.286 Chemical kits. (a) Chemical kits, except as otherwise provided in Parts 170–189 of this subchapter, must be packed, marked, and labeled as prescribed by this part for the specific corrosive materials contained therein.

(b) Chemical kits containing limited quantities of corrosive liquids in inside packagings of not over 6 fluid ounces capacity each are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements of this subchapter if all of the following requirements are complied with. In addition, shipments are not

[1] Use of existing drums authorized, but new construction not authorized

subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) The kit may not contain any corrosive liquid for which no exemption from packaging requirements of this Part 173 is permitted by the commodity list in §172.101 of this subchapter.

(2) The kit must be a strong wooden or metal container, or must be packed in a strong wooden or metal container.

(3) The corrosive liquids must be cushioned with sufficient absorbent cushioning material to completely absorb the contents of the individual containers, and must be protected from injury by other materials in the kit.

(4) The contents of the kit must be of a nature and packed so there will be no possibility of the mixture of contents causing dangerous evolution of heat or gas.

(c) Chemical kits containing corrosive liquids and other chemicals not classed as hazardous materials used for photographic processing, except as otherwise provided for in Parts 170–189 of this subchapter, must be packed in specification containers as follows:

(1) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 32 ounces capacity each, securely cushioned and separated from other inside containers. The contents of the kit must be of such nature and so packed that there will be no possibility of the mixture of contents causing dangerous evolution of heat or gas. Shipper must have established that the completed package meets test requirements prescribed by §178.210–10 of this subchapter.

§ 173.287 Chromic acid solution. (a) For the purposes of the regulations in this part, a chromic acid solution is a solution of chromic acid (chromium trioxide) in water, with or without other acids, containing 35 percent or more of chromic acid by weight. (For solutions containing less than 35 percent chromic acid, see paragraph (c) of this section.) Packagings authorized must be of a design and be constructed of materials that will not react dangerously with or be decomposed by the chemical solution packaged therein.

(b) Chromic acid solutions must be packaged in specification containers as follows:

(1) Specification 1A (§178.1 of this subchapter). Glass carboy in a box. Not authorized for transportation by air.

(2) Specifications 5, 5A, 5B (§§178.80, 178.81, 178.82 of this subchapter). Metal barrel or drum with openings not exceeding 2.3 inches in diameter. Authorized for solutions containing chromic acid only.

(3) Specification 17E (§178.116 of this subchapter) steel drum. Authorized for solutions containing chromic acid only.

(4) Specification 12A or 12B (§§178.210 or 178.205 of this subchapter). Fiberboard box with one inside glass container not over 4-fluid ounce capacity, packed in a wax-lined cylindrical fiber carton with metal ends. The bottle closure must consist of a tightly secured, fitted, ground glass stopper. Space between the bottle and the inner surface of the fiber cylinder must be filled with an appropriate fire resistant cushioning material in sufficient quantity to completely absorb the contents of the bottle in the event of breakage. Not authorized for solutions containing nitric acid.

(5) Specification 12R (§178.212 of this subchapter). Paper-faced expanded polystyrene board box with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint bottles may be packaged in one box. Each bottle must be well cushioned. Partitioning and cushioning must be provided to prevent bottles from shifting, or coming in contact with each other, the box wall, or the bottom. Each bottle closure must consist of a tightly secured, fitted, ground glass stopper, or a threaded-type, acid-resistant cap with a gasket or lining impervious to the acid, sufficiently resilient or cushioned to give an acidproof, leakproof closure.

(6) Specification 33A (§178.150 of this subchapter). Polystyrene case (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5-pint bottles may be packaged in one outside container. Each bottle closure must consist of a tightly secured, fitted, ground glass stopper, or a threaded-type, acid-resistant cap with a gasket or lining impervious to the acid, sufficiently resilient or cushioned to give an acidproof, leakproof closure.

(7) Specification 29 (§178.226 of this subchapter). Mailing tube with glass bottles not over 1 ounce capacity each. Each bottle must be well cushioned. Partitioning and cushioning must be provided to prevent bottles from shifting or coming in contact with each other or the tube wall, bottom, or top.

(8) Specification MC 312 (§§178.340, 178.343 of this subchapter). Cargo tanks. Authorized for solutions containing chromic acid only. Not authorized for transportation by water.

(9) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(c) Solutions containing chromic acid in water in concentration not exceeding 35 percent by weight, with or without other acids, and which are not otherwise regulated by Subpart E of this part, must be described as "Corrosive liquids, n.o.s." In addition to the packaging and the limitations prescribed therefor in paragraph (b) of this section, solutions of this composition may also be packaged as follows:

(1) In packaging as prescribed in §173.245, except (a)(4), (14), (15), (18), (19), and (24).

(2) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with inside Specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene container.

(3) Specifications 5, 5A, 5B (§§178.80, 178.81, 178.82 of this subchapter). Metal barrel or drum with openings not exceeding 2.3 inches in diameter. Authorized for solutions containing chromic acid only.

(4) Specification 17E (§178.116 of this subchapter) steel drum. Authorized for solutions containing chromic acid only.

§ 173.288 Chloroformates. (a) Allyl chloroformate, benzyl chloroformate, ethyl chloroformate, and methyl chloroformate must be packaged as follows:

(1) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside glass containers of not over 1-pint capacity each, cushioned with incombustible mineral material.

(2) Specification 1A (§178.1 of this subchapter). Boxed carboys. Glass bottles having nominal capacity of 3 gallons also authorized when packed and tested in accordance with requirements of specification 1A (§178.1 of this subchapter); necks must be protected during shipment. Not authorized for transportation by air.

(b) [Reserved]

(c) Spec. 16D (§178.187 of this subchapter). Wooden wirebound overwrap having one inside Spec. 2SL (§178.35a of this subchapter) polyethylene container not over 55 gallons capacity. Authorized for ethyl chloroformate or methyl chloroformate only.

(d) Specification 6D or 37M (§§178.102, 178.131 of this subchapter). Cylindrical steel overpack with inside Specifications 2S, 2SL, or 2P (§§178.35, 178.35a, 178.21 of this subchapter) polyethylene container. Authorized for ethyl chloroformate and methyl chloroformate only.

(e) Specification 34 (§178.19 of this subchapter). Polyethylene drum.

(f) Specification 111A100W2, 111A100W4, 112A200W, or 112A400F (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars. Authorized only for ethyl chloroformate and methyl chloroformate.

(g) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table. Authorized only for allyl chloroformate and benzyl chloroformate.

§ 173.289 Formic acid and formic acid solutions. (a) Formic acid and formic acid solutions must be packed in specification containers as follows:

(1) In containers prescribed in §173.245, except Spec. 5A, 17C, 17E or 17F (§§178.81, 178.115, 178.116 or 178.117 of this subchapter). Metal barrels or drums.

(2) Specification 103ALW, 103CW, 103EW, 111A60ALW, or 111A100W6 (§§179.200, 179.201 of this subchapter). Tank cars. Specification 103EW tanks must be of Type 316 stainless steel. Specification 111A100W6 tanks must be of Type 304L or 316L stainless steel. Specification 103ALW tanks without bottom outlets and Specification 111A60ALW tanks are authorized only for concentrations of 97 percent or greater and must be equipped with top loading and unloading devices. Specification 111A100W6 tanks are authorized only for concentrations of 80 percent or greater, must have bottom outlets effectively sealed, and must be equipped with top loading and unloading devices. Specifications 103ALW and 111A60ALW are not authorized for transportation by water.

(i) Each tank car authorized under this section must be marked "FORMIC ACID" in accordance with the requirements in §172.330 of this subchapter.

(3) [Reserved]

(4) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of §178.343–5 of this subchapter.

(5) [Reserved]

(6) Spec. 5 (§178.80 of this subchapter). Metal barrels or drums of stainless steel only, with flanges for closures welded in place and having no opening exceeding 2.3 inches in diameter.

(7) Specification 17H (§178.118 of this subchapter). Metal drums (single-trip) equipped with bag type liners of material and construction approved by the Department. Each drum must have two diametrically opposite vent holes ⅛-inch diameter in the side wall at each end in close proximity to the top curl and bottom chime. Interior of welded side seam must be covered or otherwise treated to provide a nonabrasive surface. Not authorized for transportation by air.

(8) Spec. 60 (§178.255 of this subchapter). Portable tanks, marked "FOR FORMIC ACID ONLY".

(9) Specification 1EX (§178.6 of this subchapter). Carboys in plywood drums. Not authorized for transportation by air.

(10) Spec. 1H (§178.13 of this subchapter). Metal crate with inside polyethylene carboy.

(11) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), under conditions specified in the IM Tank Table. The tank must be marked "FOR FORMIC ACID ONLY."

§ 173.290 Mixtures of hydrofluoric and sulfuric acid. (a) Mixtures of hydrofluoric acid and sulfuric acid, containing not more than 80 percent by weight and not less than 70 percent by weight of hydrofluoric acid and sulfuric acid combined, with the hydrofluoric acid content not

less than 25 percent by weight in any case, must be packed in specification containers as follows:

(1) Spec. 5A (§ 178.81 of this subchapter). Unlined metal barrels or drums which have been subjected to an adequate passivation or neutralization process (see Note 1). Containers must be filled to not over 80 percent of capacity at 68° F. If containers are washed out with water, they must be repassivated before shipment.

Note 1. Each metal container, before being put into this service, must be passivated by the following or an equally efficient method: By filling drum to 90 percent of capacity with hydrofluoric acid of 58 percent strength and allowing drum to stand 48 hours at a temperature of 80° F. and then 7 hours at 140° F., the internal pressure maintained at atmospheric pressure by means of a ventilated bung.

(2) Containers not exceeding 55 gallons capacity each are authorized for carload, truckload, less-than-carload, and less-than-truckload shipment. Containers exceeding 55 gallons capacity each are authorized for carload or truckload shipments only but they must be loaded by consignor and unloaded by consignee.

(3) For less-than-carload or less-than-truckload shipments, containers must be of metal at least as heavy as 14 gauge United States standard for not over 20 gallons capacity each or 12 gauge for not over 55 gallons capacity each. Each container must be subjected to at least one of the following tests before shipment: By interior pressure of at least 15 pounds per square inch before filling or by holding for inspection for at least 24 hours after filling. In either case, each container must be vented prior to shipment.

(4) Specification IM 101 portable tanks (§§ 178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.291 Flame retardant compound, liquid. (a) Flame retardant compound, liquid, must be packaged as follows:

(1) Specification 1A (§178.1 of this subchapter). Carboys in boxes which must be closed, and when reused must be reconditioned and tested, as provided in the specification. Not authorized for transportation by aircraft.

(2) Specification 1D or 1M (§§178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Pressure in the carboy may not exceed 10 pounds per square inch gauge at 130° F. (55° C.). If the package is vented, there may be no significant release of contents to the environment. Not authorized for transportation by aircraft.

(3) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(4) [Reserved]

(5) [Reserved]

(6) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon capacity each, except that containers not over 3 gallons are authorized when only one is packed in each outside box.

(7) [Reserved]

(8) Specification 103B,[1] 103BW, or 111A60W5 (§§179.200, 179.201 of this subchapter). Tank cars.

§ 173.292 Hexamethylene diamine solution. (a) Hexamethylenediamine solution must be packed in specification containers as follows:

(1) In containers prescribed in § 173.249.

(2) Specifications MC 300, MC 301, MC 302 or MC 305. Cargo tanks.

§ 173.293 Iodine monochloride. (a) Iodine monochloride must be packed in specification containers as follows:

(1) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside containers not over 1-quart capacity each; or with stone or earthenware jugs not over 1-gallon capacity each.

(2) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Outage (vacant space above liquid) for inside containers must be not less than 15 percent.

(c) Inside containers must be securely closed by hermetical sealing or by glass or stone stoppers ground to fit and securely fastened or by screw caps fitted with gaskets of suitable material resistant to the contents.

(d) Inside containers must be securely cushioned on all sides with incombustible cushioning material which will not produce heat when in contact with iodine monochloride.

§ 173.294 Chloroacetic acid, liquid or solution. (a) Chloroacetic acid, liquid or solution, must be packed in specification containers as follows:

[1] The use of existing tanks authorized but new construction not authorized.

(1) In containers prescribed in § 173.245(a)(1), (2), (3), or (7).

(2) Specification 103ANW, 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars. Specification 103AW, 111A60W2, or 111A100F2 tank cars must be nickel clad with a nickel thickness of at least 20 percent of the shell thickness. Nickel cladding in tanks must be low carbon nickel in accordance with ASTM B162–80.

(3) Specifications MC 310, MC 311, or MC 312 (§178.343 of this chapter). Cargo tanks. Tanks must be fabricated of solid nickel at least 95 percent pure and containing not more than 1 percent iron, Type 304 or 316 stainless steel or be suitably lined. Nickel metal test coupons for welding procedures qualification must contain no more than 1 percent iron.

(4) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Chloroacetic acid, anhydrous, when shipped as a liquid must be shipped in Specification 103ANW tank cars fabricated of nickel containing not more than 1 percent iron or in Specification 103AW or 111A60W2 tank car tanks with nickel cladding of at least 20 percent of the shell thickness or be provided with a suitable corrosive resistant coating or lining. Nickel cladding in tanks must be low carbon nickel in accordance with ASTM B162–80.

§ 173.295 Benzyl chloride. (a) Benzyl chloride must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon capacity each, except that inside containers not over 3 gallons each are authorized when only one is packed in an outside box.

(2) [Reserved]

(3) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(4) Spec. 1X (§178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(5) Spec. 5A or 17C (sing'e-trip) (§§178.81 or 178.115 of this subchapter). Metal barrels or drums with openings not exceeding 2.3 inches in diameter. Authorized for stabilized benzyl chloride only.

(6) Spec. 5K (§178.88 of this subchapter). Nickel drums. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron.

(7) [Reserved]

(8) Spec. 60 (§178.255 of this chapter). Portable tanks. Benzyl chloride must be stabilized when loaded in unlined tanks.

(9) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Authorized for stabilized benzyl chloride only. Bottom outlets are authorized if they meet the requirements of § 178.343–5 of this subchapter.

(10) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Tank motor vehicles fabricated from 99 percent pure nickel plates. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of 96.7 percent. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron. Bottom outlets are authorized if they meet the requirements of § 178.343–5 of this subchapter.

(11) Specification 103A,[1] 103AW, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars.

(12) Specification 103ANW (§§179.200, 179.201 of this subchapter). Tank cars. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 96.7 percent. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron.

(13) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.296 Di iso octyl acid phosphate. (a) Di iso octyl acid phosphate must be packed in specification containers as follows:

(1) Spec. 17E (§178.116 of this subchapter). Metal drums (sing'e-trip) with openings not exceeding 2.3 inches in diameter.

(2) Specifications MC 310, MC 311, or MC 312 (§178.343 of this subchapter). Cargo tanks. Bottom outlets are authorized if they meet the requirements of § 178.343–5 of this subchapter.

(3) Specification 103AW, 103GW, 103EW, 111A60W2, 111A60W7, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars.

(4) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.297 Titanium sulfate solution containing not more than 45 percent sulfuric acid. (a) Titanium sulfate solution containing not more than 45 percent sulfuric acid must be packed in specification containers as follows:

(1) Specifications MC 310, MC 311, or MC 312 (§178.343 of this

subchapter). Cargo tanks, rubber-lined. Bottom outlets are authorized if they meet the requirements of § 178.343-5 of this subchapter.

(2) Specification 103B,[1] 103BW, or 111A60W5 (§§ 179.200, 179.201 of this subchapter). Tank cars.

(3) Spec. 15A, 15B, 15C, 16A or 19A (§§ 178.168, 178.169, 178.170, 178.185 or 178.190 of this subchapter). Wooden boxes with inside glass or earthenware containers, not over 1 gallon capacity each.

(4) Specification 6D (§ 178.102 of this subchapter). Cylindrical steel overpack with inside Specification 2S (§ 178.35 of this subchapter) polyethylene container not over 30-gallons capacity. Overpack of over 15 gallons must be constructed of at least 18-gauge steel throughout.

(5) Specification 21P (§ 178.225 of this subchapter). Fiber drum overpack with inside Specification 2U (§ 178.24 of this subchapter) polyethylene container not over 15-gallon capacity or Specification 2SL (§ 178.35a of this subchapter) polyethylene container not over 55-gallon capacity. Authorized only for solutions containing not over 20 percent sulfuric acid.

(6) Specification IM 101 portable tanks (§§ 178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(7) Specification 34 (§ 178.19 of this subchapter). Polyethylene container without overpack, not over 30-gallon capacity.

---

[1] Use of existing tank cars authorized but new construction not authorized.

§ 173.299 Etching acid liquid, n.o.s. (a) Etching acid liquid shall be a mixture of nitric acid, hydrofluoric acid, having nitric acid in concentrations of not more than 60 percent by weight, hydrofluoric acid in concentrations of not less than 4 percent by weight and water not less than 24 percent by weight, and may contain acetic acid. These mixtures must be packed in specification containers as follows:

(1) Specification 12A (§ 178.210 of this subchapter). Fiberboard boxes with Specification 2E (§ 178.24a of this subchapter) inside polyethylene bottles have a minimum wall thickness of 0.030 inch and screw-cap closures. Net weight per bottle may not be over 10 pounds each. The net weight per package may not be more than 40 pounds.

(2) Specification 6D or 37M (non-reuseable) (§§ 178.102, 178.134 of this subchapter). Cylindrical steel overpack with inside Specification 2S or 2SL (§§ 178.35 or 178.35a of this subchapter) polyethylene container not over 55-gallons capacity. Specification 37M overpack of over 30-gallon capacity must be constructed of at least 20 gauge steel throughout.

(b) All outside shipping containers must be plainly marked "NONREUSABLE CONTAINER." All components of the package must not be reused.

§ 173.299a Tris-(1-aziridinyl) phosphine oxide. (a) Tris-(1-aziridinyl) phosphine oxide must be packed in specification containers as follows:

(1) In containers as prescribed in § 173.245, not over 5 gallons capacity each.

SUBPART G

GASES; DEFINITION AND PREPARATION

§ 173.300 Definitions. For the purpose of Parts 170–189 of this subchapter, the following terminology is defined.

(a) **Compressed gas.** The term "compressed gas" shall designate any material or mixture having in the container an absolute pressure exceeding 40 p.s.i. at 70° F. or, regardless of the pressure at 70° F., having an absolute pressure exceeding 104 p.s.i. at 130° F.; or any liquid flammable material having a vapor pressure exceeding 40 p.s.i. absolute at 100° F. as determined by ASTM Test D-323.

(b) **Flammable compressed gas.** Any compressed gas as defined in paragraph (a) of this section shall be classed as "flammable gas" if any one of the following occurs:

(1) Either a mixture of 13 percent or less (by volume) with air forms a flammable mixture or the flammable range with air is wider than 12 percent regardless of the lower limit. These limits shall be determined at atmospheric temperature and pressure. The method of sampling and test procedure shall be acceptable to the Bureau of Explosives and approved by the Director, OHMT.

(2) Using the Bureau of Explosives' Flame Projection Apparatus (see Note 1), the flame projects more than 18 inches beyond the ignition source with valve opened fully, or, the flame flashes back and burns at the valve with any degree of valve opening.

(3) Using the Bureau of Explosives' Open Drum Apparatus (see Note 1), there is any significant propagation of flame away from the ignition source.

(4) Using the Bureau of Explosives' Closed Drum Apparatus (see Note 1), there is any explosion of the vapor-air mixture in the drum.

Note 1: A description of the Bureau of Explosives' Flame Projection Apparatus, Open Drum Apparatus, Closed Drum Apparatus, and method of tests may be procured from the Bureau of Explosives.

(c) **Non-liquefied compressed gas.** A "non-liquefied compressed gas" is a gas, other than gas in solution, which under the charged pressure is entirely gaseous at a temperature of 70° F.

(d) **Liquefied compressed gas.** A "liquefied compressed gas" is a gas which, under the charged pressure, is partially liquid at a temperature of 70° F.

(e) **Compressed gas in solution.** A "compressed gas in solution" is a non-liquefied compressed gas which is dissolved in a solvent.

(f) **Cryogenic liquid.** A "cryogenic liquid" is a refrigerated liquefied gas having a boiling point colder than −130° F. (−90° C.) at one atmosphere, absolute. A material meeting this definition is subject to requirements of this subchapter without regard to whether it meets the definition of a compressed gas in paragraph (a) of this section. The material is partially described as "****, refrigerated liquid (*cryogenic liquid*)" in § 172.101 of this subchapter.

(g) **Flammable range.** The term "flammable range" shall designate the difference between the minimum and maximum volume percentages of the material in air that forms a flammable compressed gas.

(h) **Service pressure.** The term "service pressure" shall designate the authorized pressure marking on the container. For example, for cylinders marked "DOT 3A1800", the service pressure is 1800 psig (pounds per square inch gauge).

(i) **Refrigerant gas or Dispersant gas.** The term "Refrigerant gas" or "Dispersant gas" applies to all flammable or nonflammable, nonpoisonous refrigerant gases, dispersant gases (fluorocarbons) listed in §§ 172.101, 173.304(a)(2), 173.314(c), 173.315(a)(1) and 173.315(h), and mixtures thereof, or any other compressed gas meeting one of the following:

(1) A nonflammable mixture containing not less than 50% fluorocarbon content, having a vapor pressure not exceeding 260 psig at 130° F.

(2) A flammable mixture containing not less than 50% fluorocarbon content, not over 40% by weight of a flammable component, having a vapor pressure not exceeding 260 psig at 130° F.

§ 173.300a Approval of Independent Inspection agency. (a) Any person who (1) does not manufacture cylinders for use in the transportation of hazardous materials and (2) is not directly or indirectly controlled by any person or firm which manufactures cylinders for use in the transportation of hazardous materials, may apply to the Department of Transportation for approval as an independent inspection agency for the purpose of performing cylinder inspections and verifications required by Part 178 of this subchapter.

(b) Each application filed under this section for approval as an independent inspection agency must:

(1) Be submitted in writing to: Office of Hazardous Materials Transportation, U.S. Department of Transportation, Washington, D.C. 20590;

(2) State the name, address, principal business activity, and telephone number of the applicant and the name and address of each facility where tests and inspections are to be performed;

(3) State the name, address and principal business activity of each person having any direct or indirect ownership interest in the applicant greater than three percent and of each subsidiary or division of the applicant;

(4) If the applicant is not a permanent resident of the United States, include a designation of a permanent resident of the United States as his agent for service of process in accordance with § 107.7 of this title;

(5) Set forth a detailed description of the inspection and testing facilities to be used by the applicant and the applicant's capability to perform the inspections and verify the tests required by Part 178 of this subchapter;

(6) Identify by name each individual whom the applicant proposes to employ as an inspector responsible for certifying inspection and test results and a statement of that person's qualifications; and

(7) Specify the identification or qualification number assigned to each inspector who is supervised by a certifying inspector identified in § 173.300a(b)(6).

(c) Upon the request of the Director, OHMT, the applicant shall allow the Director to inspect the applicant's inspection and testing facilities. In the case of inspection and testing facilities located outside the United States, the applicant shall bear the cost of the inspection.

(d) If, on the basis of information submitted in the application and his own investigation, the Director, OHMT, finds that the applicant is qualified to perform the inspections and verifications required by Part

178 of this subchapter for cylinders to be used in the transportation of hazardous materials, he issues an approval subject to such terms and conditions as he considers necessary. After approval, the Director, OHMT, may authorize, upon request, the independent inspection agency to perform other inspections and functions for which the Director, OHMT, finds the applicant to be qualified. Such additional authorizations will be noted on each inspector's approval documents.

(e) The Director, OHMT, will issue an approval as an independent inspection agency for the purpose of performing inspections and verifications within the United States to any competent and disinterested inspector of cylinders so designated by the Bureau of Explosives before May 1, 1976, who submits a copy of that designation by July 15, 1976, together with the name, the assigned identification or qualification number, and a statement of the qualifications of each person employed as an inspector under that designation to: Office of Hazardous Material Transportation, U.S. Department of Transportation, Washington, D.C. 20590.

(f) Notwithstanding any requirement of this subchapter to the contrary, between May 30, 1976, and August 15, 1976, inspections and verifications required by Part 178 of this subchapter may be performed within the United States by any competent and disinterested inspector so designated by the Bureau of Explosives prior to May 1, 1976.

(g) An approval issued under this section is not transferable and is effective until surrendered or withdrawn or otherwise terminated by the Director, OHMT.

(h) The holder of an approval issued under this section shall notify the Director, OHMT, within 20 days after the date there is any change in the information submitted in the application for the approval.

(i) Upon the request of the Director, OHMT the holder of an approval issued under this section shall allow the Director to inspect the holder's inspection and testing facilities and shall make available for inspection the holder's records pertaining to inspections and verifications required by Part 178 of this subchapter. In the case of inspection and testing facilities located outside the United States and records made available for inspection outside the United States, the holder shall bear the costs of inspection.

§ 173.300b Approval of non-domestic chemical analyses and tests. (a) Any person who manufactures cylinders outside the United States may apply to the Department for approval to have the chemical analyses and tests of those cylinders required by Part 178 of this subchapter performed outside the United States for the purpose of qualifying them for use in the transportation of hazardous materials to, from or within the United States.

(b) Each application filed under this section for approval to perform chemical analyses and tests of cylinders outside the United States must:

(1) Be submitted in writing to: Office of Hazardous Material Transportation, U.S. Department of Transportation, Washington, D.C. 20590;

(2) State the name, address, and telephone number of the applicant and the name, address and a description of each facility at which cylinders are to be manufactured and chemical analyses and tests are to be performed;

(3) If the applicant is not a resident of the United States, include a designation of a permanent resident of the United States as his agent for service of process in accordance with §107.7 of this title;

(4) Set forth complete details concerning the dimension, materials of construction, wall thickness, water capacity, shape, type of joints, location and size of openings and other pertinent physical characteristics of each specification cylinder for which approval is being requested, including calculations for cylinder wall stress and wall thickness which may be shown on a drawing or on separate sheets attached to a descriptive drawing. If units of weights and measures are expressed in the metric system, they must also be stated in the English system equivalents; and

(5) Identify the independent inspection agency to be used.

(c) Upon the request of the Director, OHMT, the applicant shall allow the Director to inspect the applicant's cylinder manufacturing and testing facilities and shall provide such materials and cylinders for analyses and tests as the Director may specify. The applicant shall bear the cost of the inspections, analyses, and tests.

(d) If, on the basis of the information submitted in the application and his own investigation, the Director, OHMT, finds that the applicant has the proper manufacturing equipment and facilities and is otherwise capable of insuring the proper performance of the chemical analyses and tests required by Part 178 of this subchapter for cylinders to be used in the transportation of hazardous materials, he issues an approval, subject to such terms and conditions as he considers necessary.

(e) An approval issued under this section is not transferable and is effective until surrendered or withdrawn or otherwise terminated by the Director, OHMT.

(f) The holder of an approval issued under this section shall notify the Director, OHMT, within 20 days after the date there is any change in the information submitted in the application for the approval.

(g) Upon the request of the Director, OHMT, the holder of an approval issued under this section shall allow the Director to inspect the holder's cylinder manufacturing and testing facilities, any cylinder manufactured under that approval, the holder's inspection and test records, and technical data files pertaining test records, and technical data files pertaining to any cylinder manufactured under that approval. In the case of facilities located outside the United States, or cylinders, records or files made available for inspection outside the United States, the holder shall bear the costs of inspection.

§ 173.300c Termination of approval. (a) The Director, OHMT, may terminate an approval issued under §173.300a or §173.300b of this subpart if he determines:

(1) That information upon which approval was based is fraudulent or substantially erroneous;

(2) That the holder has not complied with Subchapter C of this chapter;

(3) That, in the case of an independent inspection agency, the agency or an employee thereof is or appears to be controlled or improperly influenced by cylinder manufacturing interests;

(4) That the holder is subject to an outstanding final judgment of a Federal court which concerns the enforcement of Subchapter C of this chapter and which has not been satisfied within a reasonable period of time; or

(5) That continuation of the approval is not consistent with the requirements of transportation safety.

(b) The Director, OHMT, before he terminates an approval issued under §173.300a or §173.300b of this subpart, notifies the holder in writing of the reasons therefor and provides the holder an opportunity to show why the approval should not be terminated.

§ 173.301 General requirements for shipment of compressed gases in cylinders.[1] **(a) Gases capable of combining chemically.** A cylinder charged with compressed gas must not contain gases or materials that are capable of combining chemically with each other or with the cylinder material so as to endanger its serviceability. See §173.34(e)(16) regarding the requalification of a cylinder that previously contained a corrosive liquid.

(b) Ownership of container. A container charged with a compressed gas must not be shipped unless it was charged by or with the consent of the owner of the container.

(c) Retest of container. A container for which prescribed periodic retest has become due must not be charged and shipped until such retest has been properly made.

(d) Manifolding containers in transportation. No means of interconnecting such as manifolding of individual containers may be employed for the transportation of compressed gases, except as hereinafter authorized. Containers so manifolded shall be supported and held together as a unit by structurally adequate means. Safety relief devices on manifolded horizontal containers charged with flammable compressed gas shall be arranged to discharge upward and unobstructed to the open air in such a manner as to prevent any impingement of escaping gas upon the containers.

(1) Manifolding is authorized for containers of the following gases: argon, air, carbon dioxide, helium, neon, nitrogen, nitrous oxide, oxygen or sulfur hexafluoride provided that each container is individually equipped with pressure relief devices as required by §173.34(d) or §173.315(i).

(2) Manifolding is authorized for specification cylinders containing the following nonliquefied gases: boron trifluoride, carbon monoxide, ethylene, hydrogen, hydrocarbon gases, methane, nitrogen trifluoride, and tetrafluoroethylene, inhibited, except that aluminum cylinders are not authorized for boron trifluoride or nitrogen trifluoride service. Individual cylinders must be equipped with approved pressure relief devices as required by §173.34(d) or §173.315(i) of this Part. Each cylinder must be equipped with an individual shutoff valve that must be tightly closed while in transit. Manifold branch lines of these and individual shutoff valves must be sufficiently flexible to prevent damage to the valves which otherwise might result from the use of rigid branch lines. A temperature measuring device may be inserted in one cylinder of a manifold installation in place of the shutoff valve.

(3) Manifolding is authorized for specification cylinders containing the following gases: ethane, ethylene, liquefied hydrocarbon gas, hydrogen chloride, liquefied petroleum gas and propylene, except that aluminum cylinders are not authorized for hydrogen chloride service, provided each cylinder is equipped with approved pressure relief devices as required by §173.34(d) or §173.315(i): *And provided further,* that each cylinder is equipped with an individual shutoff valve that must be tightly closed while in transit. Each cylinder must be separately charged and means must be provided to insure that no interchange of cylinder contents can occur during transportation. Manifold branch lines to these individual shutoff valves must be sufficiently flexible to prevent injury to the valves which otherwise might result from the use of rigid branch lines.

(4) Manifolding is authorized for containers of acetylene, provided that each container is individually equipped with approved safety relief devices as required by §173.34(d): *And further provided,* That each container is equipped with an individual shutoff valve, or valves, which shall be tightly closed while in transit. Manifold branch lines to these individual shutoff valves shall be sufficiently flexible to prevent injury to

[1] Requirements covering cylinders are also applicable to spherical pressure vessels.

the valves which otherwise might result from the use of rigid branch lines. All manifold containers shall be transported in a vertical position. For the checking of tare weights or for replacement of solvent the container shall be removed from the manifold. This requirement is not intended to prohibit the charging of the acetylene cylinders while manifolded.

(5) Manifolding is authorized for cargo tanks of the following gas provided individual cargo tanks are equipped with the safety relief valves and gauging devices, as required by §173.315(h) and (i); and *further provided*, That each cargo tank is equipped with individual valve, or valves, which shall be tightly closed while in transit and that each such container must be separately charged: Anhydrous ammonia.

(e) **Container pressure.** The pressure in the container at 70° F. must not exceed the service pressure for which the container is marked or designated, except as provided in §173.302(c).

Note 1. In certain cases with liquefied gases the pressure at 70° F. must be lower than the marked service pressure to avoid having a greater pressure at a temperature of 130° F. than is permitted.

(1) For authorized containers not marked with a service pressure, the service pressure is designated as follows:

Specification marking	Service pressure—psig
DOT 3	1,800
3E	1,800
4	300
8	250
9	200
25	300
33	480
38	250
40	200
41	240

(2) For containers made prior to the effective date of specifications, the service pressure is designated as the same as for the same type of container made in accordance with current specifications.

(f) **Container pressure at 130° F.** The pressure in the container at 130° F. shall not exceed 5/4 times the service pressure, except:

(1) Containers charged with acetylene, liquefied nitrous oxide and liquefied carbon dioxide.

(2) When a cylinder is charged in accordance with §173.302(c), the pressure in the cylinder at 130° F. must not exceed 5/4 times the filling pressure authorized therein.

(g) **Container valve protection.** Containers charged with flammable, corrosive, or noxious gases, must have their valves protected by one of the following methods.

(1) By equipping the containers with securely attached metal caps of sufficient strength to protect the valves from injury during transit.

(2) By boxing or crating the containers so as to give proper protection to the valves.

(3) By so constructing the containers that the valve is recessed into the container or otherwise protected so that it will not be subjected to a blow when the container is dropped on a flat surface.

(4) By loading the containers compactly in an upright position and securely bracing in cars or motor vehicles, when loaded by the consignor and to be unloaded by the consignee.

(5) By equipping with valves strong enough to avoid injury during transit for containers containing non-liquefied gas under pressure not exceeding 300 psi at 70° F.

(h) **Compressed gas containers.** Compressed gases must be in metal containers built in accordance with the DOT specifications, as shown below, in effect at the time of manufacture, and marked as required by the specification and the regulation for retesting if applicable:

Packagings			
DOT-2P	DOT-3D	DOT-4E/W	DOT-8AL
2Q	3E	4B240E[1]	9[1]
ICC-3[1]	3HT	4C	ICC-25[1]
DOT-3A	DOT-3T	4D	DOT-26[1]
DOT-3AL			
DOT-3AX	4	4DA	33[1]
3AA4500	4A	4DS	38[1]
3AA	4AA	4E	DOT-39
DOT-3AAX	4B	4L	43[1]
3B	4B240FLW	5	41[1]
3BN	4B240X[1]	5F	
3C	4BA	8	

[1] Use of existing cylinders authorized, but new construction not authorized

(i) **Foreign cylinders in domestic use.** Except as provided in paragraph (j) of this section, a charged cylinder manufactured outside the United States may not be offered for transportation to, from, or within the United States unless it has been manufactured, inspected, and tested in accordance with the applicable DOT specification set forth in Part 178 of this subchapter.

(j) **Charging of foreign cylinders for export.** Unless it has been manufactured, inspected, and tested in accordance with the applicable DOT specification set forth in Part 178 of this subchapter, a cylinder manufactured outside the United States and received in the United States for charging with compressed gas may be charged and shipped for export only:

(1) Provided that they are retested in accordance with §173.34(e). This retest may be omitted only if the container can be definitely identified as having been retested under this provision within the prescribed retest period, and

(2) Provided further that the maximum filling density and service pressure for each container shall be in accordance with all packing requirements of this part for the compressed gas involved.

(3) Records showing the results of the tests made on all foreign containers must be preserved for inspection until the next scheduled retest date.

(4) Bill of lading or other shipping paper shall, when possible, identify the containers and shall carry the following certification: "These containers have been retested and refilled in accordance with the DOT requirements for export".

(k) **Outside packagings.** Specifications 2P, 2Q, 3E, 3HT, 4BA spherical type, 4D, 4DA, 4DS, 9,[1] 39, 40,[1] and 41[1] must be shipped in strong outside packagings except that the 4BA spherical type may be securely mounted on pallets to provide protection for the spheres and any attachments.

(l) Outside packaging must provide protection for the cylinder. Unless the cylinder has a protective collar or neck ring, the outside packaging must provide protection to the valve against accidental functioning and damage.

(l) Specifications 3AX, 3AAX, and 3T cylinders are authorized for transportation only when horizontally mounted on a motor vehicle and when valves and safety devices are protected, as follows:

(1) Each cylinder must be fixed at one end of the vehicle with provision for thermal expansion at the opposite end attachment.

(2) The valve and safety relief device protective structure must be sufficiently strong to withstand a force equal to twice the weight involved with a safety factor of four, based on the ultimate strength of the material used, and

(3) Each discharge for a safety relief device on a cylinder containing a flammable gas must be upward and unobstructed.

§ 173.302 Charging of cylinders with non-liquefied compressed gases. (a) **Detailed requirements.** Nonliquefied compressed gases (except gas in solution or poisonous gas) for which charging requirements are not definitely prescribed in §173.304(a)(2) must be shipped, subject to §173.301, and §173.305 in specification containers as follows:

(1) Specification 3,[1] 3A, 3AA, 3B, 3C,[1] 3D,[1] 3E, 4,[1] 4A,[1] 4B, 4BA, 4BW, 4C,[1] 25,[1] 26, 33,[1] or 38[1] (§§178.36, 178.37, 178.38, 178.42, 178.50, 178.51, 178.61 of this subchapter). See §§173.34 and 173.301(e).

Note 2. Authorized cylinders containing oxygen which is continuously fed to tanks containing live fish may be shipped irrespective of the provisions of §173.24.

(2) Specification 3HT (§178.44 of this subchapter) cylinders for aircraft use only, having a maximum service life of 24 years. Authorized only for nonflammable gases. Cylinders must be equipped with safety relief devices only of the frangible disc type which meet the requirements of §173.34(d). Each frangible disc must have a rated bursting pressure which does not exceed 90 percent of the minimum required test pressure of the cylinder. Discs with fusible metal backing are not permitted. Spec. 3HT cylinders may be shipped only when packed in strong outside packagings.

(3) Specification 3AX, 3AAX, or 3T (§§178.36, 178.37, 178.45 of this subchapter) cylinders are authorized only for the following nonliquefied gases: air, argon, boron trifluoride, carbon monoxide, ethane, ethylene, helium, hydrogen, methane, neon, nitrogen, or oxygen, except that specification 3T is not authorized for hydrogen. As used in this paragraph methane is a nonliquefied gas which has a minimum purity of 98.0 percent methane and which is commercially free of corroding components.

(4) Specification 39 (§178.65 of this subchapter) Cylinder. For flammable gases, internal volume may not exceed 75 cubic inches. Aluminum cylinders are authorized for oxygen only under the following conditions:

(i) Cylinder threads must be straight threads;

(ii) Cylinder must be equipped only with brass or stainless steel valve; and

(iii) Each cylinder must be cleaned in compliance with the requirements of Federal Specification RR-C-901b, dated August 1, 1967, paragraphs 3.7.2 and 3.8.2. Cleaning agents equivalent to those specified in RR-C-901b, may be used, however any cleaning agent must not be capable of reacting with oxygen. One cylinder selected at random from a group of 200 or less cleaned at the same time, must be tested for oil contamination in accordance with specification RR-C-901b paragraph 4.4.2.3 and meet the standard of cleanliness specified.

(5) Specification 3AL (§178.46 of this subchapter) cylinders are authorized only for the following nonliquefied gases: air, argon, carbon monoxide, diborane, ethylene, helium, mercury free hydrogen, krypton, methane, nitrogen, neon, oxygen and xenon. Flammable gases ship-

[1] Use of existing cylinders authorized, but new construction not authorized

ood in 3AL cylinders are authorized only when transported by highway, rail and cargo-only aircraft. When used in oxygen service, aluminum cylinders must be in compliance with the following conditions:

(i) Cylinder must be equipped only with brass or stainless steel valve;

(ii) Cylinder must have only straight threads in the opening;

(iii) Each cylinder must be cleaned in compliance with the requirements of Federal Specification RR-C-901b, dated August 1, 1967, paragraphs 3.7.2, and 3.8.2. Cleaning agents equivalent to those specified in RR-C-901b may be used; however, any cleaning agent must not be capable of reacting with oxygen. One cylinder selected at random from a group of 200 or less, cleaned at the same time, must be tested for oil contamination in accordance with Specification RR-C-901b, paragraph 4.4.2.3, and meet the standard of cleanliness specified; and

(iv) The pressure in the cylinder may not exceed 3,000 psig at 70° F.

(b) Filling limits. (See § 173.301(e))

(c) Special filling limits for Specifications 3A, 3AX, 3AA, 3AAX, and 3T cylinders. Specifications 3A, 3AX, 3AA, 3AAX, and 3T (§§ 178.36, 178.37, 178.45 of this subchapter) cylinders may be charged with compressed gases, other than liquefied, dissolved, poisonous, or flammable gases to a pressure 10 percent in excess of their marked service pressure, provided:

(1) That such cylinders are equipped with frangible disc safety relief devices (without fusible metal backing) having a bursting pressure not exceeding the minimum prescribed test pressure.

(2) That the elastic expansion shall have been determined at the time of the last test or retest by the water jacket method.

(3) That either the average wall stress or the maximum wall stress shall not exceed the wall stress limitation shown in the following table (see Notes 1 and 2):

Type of steel	Average wall stress limitation	Maximum wall stress limitation
Plain carbon steels over 0.35 carbon and medium manganese steels	53,000	58,000
Steels of analysis and heat treatment specified in spec. 3AA	67,000	73,000
Steel of analysis and heat treatment specified in Spec. DOT-3T	87,000	94,000
Plain carbon steels less than 0.35 carbon made prior to 1920	45,000	48,000

Note 1: The average wall stress shall be computed from the elastic expansion data using the following formula:

$$S = 1.7EE\,XV - 0.4P$$

where:

S = wall stress, pounds per square inch,
EE = elastic expansion (total less permanent) in cubic centimeters,
X = factor = 10^7 experimentally determined for the particular type of cylinder being tested,
V = internal volume in cubic centimeter (1 cubic inch = 16.387 cubic centimeters),
P = test pressure, pounds per square inch.

Formula derived from formula of Note 2 and the following:

$$EE = \frac{(PXVD^2)}{(D^2 - d^2)}$$

Note 2: The maximum wall stress shall be computed from the formula:

$$S = \frac{(P(1.3D^2 + 0.4d^2))}{(D^2 - d^2)}$$

where:

S = wall stress, pounds per square inch,
P = test pressure, pounds per square inch,
D = outside diameter, inches,
d = $D - 2t$, where t = minimum wall thickness determined by a suitable method.

(4) That an external and internal visual examination made at the time of test or retest shows the cylinder to be free from excessive corrosion, pitting, or dangerous defects.

(5) That a plus sign (+) be added following the test date marking on the cylinder to indicate compliance with paragraphs (c), (2), (3), and (4) of this section.

(d) Fluorine. Fluorine must be shipped in Specification 3A1000, 3AA1000, or 3BN400 (§ 178.36, § 178.37 or § 178.39 of this subchapter) cylinders without safety relief device and equipped with valve protection cap. Such containers must not be charged to over 400 psig at 70° F. and must not contain over 6 pounds of gas.

(e) Verification of container pressure. (1) Each day, the pressure in a container representative of that day's compression must be checked by the charging plant after the container has cooled to a settled temperature and a record of this test kept for at least 30 days.

(f) Carbon monoxide. Carbon monoxide must be shipped in a Specification 3A, 3AX, 3AA, 3AAX, 3AL, 3, 3E, or 3T (§§ 178.36, 178.37, 178.46, 178.42, 178.45 of this subchapter) cylinder having a minimum service pressure of 1,800 psig. The pressure in the cylinder must not exceed 1000 psig at 70° F. except that if the gas is dry and sulfur free, a cylinder may be charged to five-sixths the cylinder service pressure or 2,000 psig, whichever is the lesser. Specification 3AL cylinders are authorized only when transported by highway, rail and cargo-only aircraft.

(g) Diborane and diborane mixtures. Diborane and diborane mixed with compatible compressed gas in Specification 3AA1800 (§ 178.37 of this subchapter), cylinders. The maximum filling density of the diborane shall not exceed 7 percent. Diborane mixed with compatible compressed gas must not have a pressure exceeding the service pressure of the cylinder if complete decomposition of the diborane occurs. Cylinder valves must be protected either by metal caps or by over packing cylinder in strong wooden boxes.

§ 173.303 Charging of cylinders with compressed gas in solution (acetylene). (a) Cylinder, filler and solvent requirements. (Refer to applicable parts of Specification 8 and 8AL.) Acetylene gas must be shipped in Spec. 8 or 8AL (§ 178.59 or § 178.60 of this subchapter) cylinders. The cylinders shall consist of metal shells filled with a porous material, and this material must be charged with a suitable solvent. The cylinders containing the porous material and solvent, shall be tested with satisfactory results in accordance with CGA Pamphlet C-12. Representative samples of cylinders charged with acetylene shall be tested with satisfactory results in accordance with CGA Pamphlet C-12.

(1) The specific gravity of acetone solvent in acetylene cylinders must be 0.796 or over at 15.5° C. (59.9° F.).

(2) The amount of solvent added in the refilling operation must not cause the tare weight of the cylinder to exceed its marked tare weight. The tare weight includes the weight of the cylinder shell, porous filling, valve, safety relief devices and solvent, but without removable cap.

(b) Filling limits. The pressure in cylinders containing acetylene gas must not exceed 250 psi at 70° F., and in case the cylinders are marked for a lower allowable charging pressure, at 70° F., then that pressure must not be exceeded.

(c) Data requirements on filler and solvent. Cylinders containing acetylene gas must not be shipped unless they were charged by or with the consent of the owner, and by a person, firm, or company having possession of complete information as to the nature of the porous filling, the kind and quantity of solvent in the cylinders, and the meaning of such markings on the cylinders as are prescribed by the Department's regulations and specifications applying to containers for the transportation of acetylene gas.

(d) Verification of container pressure. (1) Each day, the pressure in a container representative of that day's compression must be checked by the charging plant after the container has cooled to a settled temperature and a record of this test kept for at least 30 days.

§ 173.304 Charging of cylinders with liquefied compressed gas. (a) Detailed charging requirements. Liquefied gases shall be charged in accordance with the specific provisions of paragraph (a)(2) of this section or paragraph (e) of this section. Where charging requirements are not specifically prescribed, liquefied gases, except gas in solution or poisonous gas, must be shipped, subject to the applicable paragraphs under General Requirements for Shipment (see § 173.301), the charging requirements of this section for liquefied compressed gas, or the charging requirements for mixtures (see § 173.305), in containers manufactured under specifications, as follows:

(1) Specification 3,[1] 3A, 3AA, 3B, 3BN, 3D,[1] 3E, 4,[1] 4A,[1] 4B, 4BA, 4B-ET, 4BW, 4E, 9,[1] 25,[1] 26,[1] 38,[1] 39, 40,[1] or 41[1] (§§ 178.36, 178.37, 178.38, 178.39, 178.42, 178.50, 178.51, 178.55, 178.61, 178.65, 178.68 of this subchapter), except that no specification 4E, 9, 39, 40, 41 packaging may be charged and shipped with a mixture containing a pyrophoric liquid, carbon bisulfide (disulfide), ethyl chloride, ethylene oxide, nickel carbonyl, spirits of nitroglycerin, or poisonous material (Class A, B, or irritating material), unless specifically authorized in this part.

(2) The following requirements must be complied with for the gases named (for cryogenic liquids, see § 173.316):

[1] Use of existing cylinders authorized, but new construction not authorized.

Kind of gas	Maximum permitted filling density (percent) (see Note 1)	Containers marked as shown in this column or of the same type with higher service pressure must be used except as provided in § 173.34(e), (b), § 173.301(f) (see notes following table)
Anhydrous ammonia	54	DOT-4, DOT-3AA480, DOT-3AAX480, DOT-3AA480X, DOT-4AA480, DOT-3, DOT-4AA480, DOT-3E1800, DOT-3AL480
Bromotrifluoromethane (R-1381 or H-1301)	124	DOT-3A400, DOT-3AA400, DOT-3E400, DOT-4A400, DOT-4AA400, DOT-4B400, DOT-4BA400, DOT-4B-A400, DOT-3E1800, DOT-39, DOT-3AL400
Carbon dioxide, (see Notes 4, 7, and 9)	68	DOT-3A1800, DOT-3AX1800, DOT-3AA1800, DOT-3AAX1800, DOT-3, DOT-3E1800, DOT-3HT2000, DOT-39, DOT-3AL1800

Kind of gas	Maximum permitted filling density (percent) (see Note 1)	Containers marked as shown in this column or of the same type with higher service pressure must be used except as provided in § 173.34(e), (h), § 173.301(j) (see notes following table)
Carbon dioxide, nitrous oxide mixture (see Notes 7 and 8)	68	DOT-3A1800, DOT-3AX1800, DOT-3AA1800, DOT-3AAX1800, DOT-3, DOT-3E1800, DOT-3T1800, DOT-3HT2000, DOT-39, DOT-3AL1800
Chlorine (see Note 2)	125	DOT-3A480, DOT-3AA480, DOT-25, DOT-3, DOT-3BN480, DOT-3E1800
Chlorodifluoroethane (R-142b) or 1-chloro-1, 1-difluoroethane (see Note 8)	100	DOT-3A150, DOT-3AA150, DOT-3B150, DOT-4B150, DOT-4BA225, DOT-4BW225, DOT-3E1800, DOT-39, DOT-3AL150
Chlorodifluoromethane (R-22) (See Note 8)	105	DOT-3A240, DOT-3AA240, DOT-3B240, DOT-4B240, DOT-4BA240, DOT-4BW240, DOT-4B240ET; DOT-4E240, DOT-39, DOT-41, DOT-3E1800, DOT-3ALA240
Chloropentafluoroethane (R-115) (see Note 8)	110	DOT-3A225, DOT-3AA225, DOT-3B225, DOT-4A225, DOT-4BA225, DOT-4B225; DOT-4BW225, DOT-3E1800, DOT-39, DOT-3AL225
Chlorotrifluoromethane (R-13) (see Note 8)	100	DOT-3A1800, DOT-3AA1800, DOT-3, DOT-3E1800, DOT-39, DOT-3AL1800
Cyclopropane (see Notes 8 and 9)	55	DOT-3A225; DOT-3A480X, DOT-3AA225, DOT-3B225; DOT-4A225; DOT-4AA480, DOT-4B225; DOT-4BA225; DOT-4BW225, DOT-4B240ET; DOT-3, DOT-3E1800, DOT-39, DOT-3AL225
Dichlorodifluoromethane (R-12) (see Note 8)	119	DOT-3A225, DOT-3AA225, DOT-3B225, DOT-4A225, DOT-4B225, DOT-4BA225, DOT-4BW225, DOT-4B240ET; DOT-4E225; DOT-8, DOT-39, DOT-41, DOT-3E1800, DOT-3AL225
Dichlorodifluoromethane and difluoroethane mixture (constant boiling mixture) (R-500) (see Note 8)	Not liquid full at 130° F	DOT-3A240, DOT-3AA240, DOT-3B240, DOT-3E1800, DOT-4A240, DOT-4B240, DOT-4BA240, DOT-4BW240, DOT-4E240, DOT-8, DOT-39
Difluoroethane (R-152a) (see Note 8)	79	DOT-3A150, DOT-3AA150, DOT-3B150, DOT-4B150, DOT-4BA225, DOT-4BW225, DOT-3E1800, DOT-3AL150
Dimethylamine, anhydrous	59	DOT-3A150, DOT-3AA150, DOT-3B150, DOT-4B150, DOT-4BA225, DOT-4BW225, ICC-3E1800
Ethane (see Notes 8 and 9)	35.8	DOT-3A1800, DOT-3AX1800, DOT-3AA1800, DOT-3AAX1800, DOT-3, DOT-3E1800, DOT-3T1800, DOT-39, DOT-3AL1800
Ethane (see Notes 8 and 9)	36.8	DOT-3A2000, DOT-3AX2000, DOT-3AA2000, DOT-3AAX2000, DOT-3T2000, DOT-39, DOT-3AL2000
Ethylene (see Notes 8 and 9)	31.0	DOT-3A1800, DOT-3AX1800, DOT-3AA1800, DOT-3AAX1800, DOT-3, DOT-3E1800, DOT-3T1800, DOT-39, DOT-3AL1800
Ethylene (see Notes 8 and 9)	32.5	DOT-3A2000, DOT-3AX2000, DOT-3AA2000, DOT-3AAX2000, DOT-3T2000, DOT-39, DOT-3AL2000
Ethylene (see Notes 8 and 9)	35.5	DOT-3A2400, DOT-3AX2400, DOT-3AA2400, DOT-3AAX2400, DOT-3T2400, DOT-39, DOT-3AL2400
Hydrogen chloride	65	DOT-3A1800, DOT-3AA1800, DOT-3AX1800, DOT-3AAX1800, DOT-3, DOT-3T1800, DOT-3E1800
Hydrogen sulfide (see Note 10)	82.5	DOT-3A480, DOT-3AA480, DOT-3B480, DOT-4A480, DOT-4B480, DOT-4BA480, DOT-4BW480, DOT-26-480, DOT-3E1800, DOT-3AL480
Insecticide, liquefied gas (see Note 8)	Not liquid full at 130° F	DOT-3A300, DOT-3AA300, DOT-3B300, DOT-4B300, DOT-4BA300, DOT-4BW300, DOT-8, DOT-40, DOT-41, DOT-3E1800
Liquefied nonflammable gases, liquid other than those classified as flammable, corrosive, or poisonous, and mixtures or solutions thereof, charged with nitrogen, carbon dioxide, or air (see Notes 7 and 8)	Not liquid full at 130° F	Specification packaging authorized in paragraph (a)(1) of this section and DOT-3HT, DOT-4D, DOT-4DA, DOT-4DS
Methylacetylene-propadiene, stabilized (see Note 5)	Not liquid full at 130° F	DOT-4B240, without brazed seams, DOT-4BA240, without brazed seams, DOT-3AA240, DOT-3AAX240, DOT-3B240, DOT-3E1800, DOT-4BW240, DOT-4E240, DOT-4B240ET; DOT-4, DOT-41; DOT-3AL240
Methyl chloride	84	DOT-3A225, DOT-3AA225, DOT-3B225, DOT-4A225, DOT-4B225, DOT-4BA225, DOT-4BW225, DOT-3, DOT-4, DOT-25; DOT-26-300, DOT-38, DOT-3E1800; DOT-4B240E1 Cylinders complying with DOT-3A150, DOT-3B150, DOT-4A150, and DOT-4B150 manufactured prior to Dec. 7, 1936 are also authorized
Methyl mercaptan	80	DOT-3AA240, DOT-3AAX240, DOT-3B240, DOT-4B240, DOT-4B240ET, DOT-3E1800, DOT-4BA240, DOT-4BW240
Monomethylamine, anhydrous	60	DOT-3A150, DOT-3AA150, DOT-3B150, DOT-4B150, DOT-4BA225, DOT-4BW225, DOT-3E1800
Nitrosyl chloride	110	DOT-3BN400 only
Nitrous oxide (see Notes 7, 8, and 11)	68	DOT-3A1800, DOT-3AX1800, DOT-3AA1800, DOT-3AAX1800, DOT-3, DOT-3E1800, DOT-3T1800, DOT-3HT2000, DOT-39, DOT-3AL1800
Refrigerant gas, n.o.s. or Dispersant gas, n.o.s. (see Note 8)	Not liquid full at 130° F	DOT-3A240, DOT-3AA240, DOT-3B240, DOT-3E1800, DOT-4A240, DOT-4B240, DOT-4BA240, DOT-4BW240, DOT-4E240, DOT-8, DOT-39, DOT-3AL240
Sulfur dioxide (see Note 8)	125	DOT-3A225, DOT-3AA225, DOT-3B225, DOT-4A225, DOT-4B225, DOT-4BA225, DOT-4BW225, DOT-4B240ET; DOT-3, DOT-4, DOT-25, DOT-26-150, DOT-38, DOT-39, DOT-3E1800, DOT-3AL225
Sulfur hexafluoride	120	DOT-3A1800, DOT-3AA1800, DOT-3AAX2400, DOT-3, DOT-3E1800, DOT-3AL1800, DOT-3T1800
Sulfuryl fluoride	106	DOT-3A480, DOT-3AA480, DOT-3E1800, DOT-4B480, DOT-4BA480, DOT-4BW480
Tetrafluoroethylene, inhibited	90	DOT-3A1200, DOT-3AA1200, DOT-3E1800
Trifluorochloroethylene	115	DOT-3A300, DOT-3AA300, DOT-3B300, DOT-4A300, DOT-4B300, DOT-4BA300, DOT-4BW300, DOT-3E1800
Trimethylamine, anhydrous	57	DOT-3A150, DOT-3AA150, DOT-3B150, DOT-4B150, DOT-4BA225, DOT-4BW225, DOT-3E1800
Vinyl chloride (see Note 5)	84	DOT-4B150, without brazed seams, DOT-4BA225, without brazed seams, DOT-4BA225, DOT-3A150, DOT-3AA150, DOT-25, DOT-3E1800, DOT-3AL150
Vinyl fluoride, inhibited	62	DOT-3A1800, DOT-3AA1800, DOT-3E1800, DOT-3AL1800
Vinyl methyl ether (see Note 5)	68	DOT-4B150, without brazed seams, DOT-4BA225, without brazed seams, DOT-4BW225, DOT-3A150, DOT-3AA150, DOT-3B150, DOT-25, DOT-3E1800

Note 1: The "filling density" is hereby defined as the percent ratio of the weight of gas in a container to the weight of water that the container will hold at 60°F (1 lb. of water = 27.737 cubic inches at 60° F).

Note 2: Cylinders purchased after Oct. 1, 1944, for the transportation of chlorine must contain no aperture other than that provided in the neck of the cylinder for attachment of a valve equipped with an approved safety relief device. Cylinders purchased after Nov. 1, 1935, and charged with chlorine must not contain over 150 pounds of gas.

Note 3: [Reserved]

Note 4: Special carbon dioxide mining devices containing a heating element and charged with not over 6 pounds of carbon dioxide may be filled to a density of not over 85 percent, provided the cylinder is made of steel with a calculated bursting pressure in excess of 39,000 psi, be fitted with a frangible disc that will operate at not over 57 percent of that pressure, and be able to withstand a drop of 10 feet when striking crosswise on a steel rail while under a pressure of at least 3,000 psi. Such devices must be shipped in strong boxes or must be wrapped in heavy burlap and bound by 12-gauge wire with the wire completely covered by friction tape. Wrapping must be applied so as not to interfere with the functioning of the frangible disc safety relief device. Shipments must be described as "liquefied carbon dioxide gas (mining device)" and marked, labeled, and certified as prescribed for liquefied carbon dioxide.

Note 5: All parts of valve and safety relief devices in contact with contents of cylinders must be of a metal or other material, suitably treated if necessary, which will not cause formation of any acetylides.

Note 6: [Reserved]

Note 7: Spec. 3HT cylinders for aircraft use only having a maximum service life of 24 years. Authorized only for nonflammable gases. Cylinders must be equipped with pressure relief devices only of the frangible disc type which meet the requirements of § 173.34(d). Each frangible disc must have a rated bursting pressure which does not exceed 90 percent of the minimum required test pressure of the cylinder. Discs with fusible metal backing are not permitted. Cylinders may be shipped only when packed in strong outside packagings.

Note 8: See § 173.301(h).

Note 9: When used for shipment of flammable gases, the internal volume of a specification 39 cylinder must not exceed 75 cubic inches.

Note 10: Each valve outlet must be sealed by a threaded cap or a threaded solid plug.

Note 11: See § 173.304(a)(4).

(3) Specification 3AL (§ 178.46 of this subchapter) cylinders are authorized for the following liquefied gases: cyclobutane, hydrogen selenide, propylene, silane, carbonyl sulfide, vinyl bromide, and dimethyl ether. Shipments of flammable gases are authorized only when transported by highway, rail and cargo aircraft only.

(4) Specification DOT 3AL (§ 178.46 of this subchapter) cylinders when used in nitrous oxide service must be in compliance with the following conditions:

(i) Cylinder must be equipped only with brass or stainless steel valve; and

(e) Each cylinder must be cleaned in compliance with the requirements of Federal Specification RR-C-901b paragraphs 3.7.2 and 3.8.2. Cleaning agents equivalent to those specified in RR-C-901b may be used; however, any cleaning agent must not be capable of reacting with oxygen. One cylinder selected at random from a group of 200 or less cleaned at the same time must be tested for oil contamination in accordance with Specification RR-C-901b paragraph 4.4.2.3 and meet the standard of cleanliness specified.

(b) Filling limits. Except for carbon dioxide, nitrous oxide and vinyl fluoride, inhibited, the liquid portion of a liquefied gas must not completely fill the packaging at any temperature up to and including 130° F. The liquid portion of vinyl fluoride, inhibited, may completely fill the cylinder at 130° F. provided the pressure at the critical temperature does not exceed one and one-fourth times the service pressure.

(c) Verification of content in cylinder. (1) Liquefied gases must be charged by weight, by volume measurement of liquid, charging line, by the use of proper scales, or when lower in pressure than required for liquefaction a pressure-temperature chart may be used in charging to insure that the service pressure at 70° F. times 5/4 will not be exceeded at 130° F.

(2) Except as noted in paragraph (d)(4) of this section, the amount of liquefied gas charged into a container must be determined by weight, or if charged at a pressure lower than the liquefaction point, by pressure shown on a chart for the specific gas. Weight must be checked, after disconnecting from the charging line, by the use of proper scales.

(d) Requirements for liquefied petroleum gas. (1) Filling density limited as follows:

Minimum specific gravity of the liquid material at 60° F.	Maximum filling density in percent of the water-weight capacity of the container	Minimum specific gravity of the liquid material at 60° F.	Maximum filling density in percent of the water-weight capacity of the container
0.271-0.289	26	0.504-0.510	42
0.290-0.306	27	0.511-0.519	43
0.307-0.322	28	0.520-0.527	44
0.323-0.338	29	0.528-0.536	45
0.339-0.354	30	0.537-0.544	46
0.355-0.371	31	0.545-0.552	47
0.372-0.398	32	0.553-0.560	48
0.399-0.425	33	0.561-0.568	49
0.426-0.440	34	0.569-0.576	50
0.441-0.452	35	0.577-0.584	51
0.453-0.462	36	0.585-0.592	52
0.463-0.472	37	0.593-0.600	53
0.473-0.480	38	0.601-0.608	54
0.481-0.488	39	0.609-0.617	55
0.489-0.495	40	0.618-0.626	56
0.496-0.503	41	0.627-0.634	57

(2) Subject to § 173.301(f), any filling density percentage prescribed in this section is authorized to be increased by 2 for liquefied petroleum gas in Spec. 26 or 3 cylinders or in Spec. 3A marked for 1,800 psig. or higher, service pressure.

(3) Liquefied petroleum gas must be shipped in specification containers as follows:

(i) Specification 3,[1] 3A, 3AA, 3B, 3E, 3AL, 4A[1], 4B, 4BA, 4B240ET, 4BW, 4B240X,[1] 4B240FLW, 4E, 4,[1] 9,[1] 25,[1] 26,[1] 38,[1] 39, or 41[1] (§§ 178.36, 178.37, 178.38, 178.42, 178.46, 178.50, 178.51, 178.55, 178.61, 178.54, 178.68, 178.65 of this subchapter) cylinders. The internal volume of a Specification 39 cylinder must not exceed 75 cubic inches. Shipments of flammable gases in 3AL cylinders are authorized only when transported by highway, rail and cargo-only aircraft.

Note 1: Cylinders marked as complying with DOT Spec. 4B240FLW bearing manufacturer's symbol WOD and serial numbers 47A-1 to 47A-59200, inclusive, varying from the specification requirements as to physical properties of steel, are authorized for the transportation of liquefied petroleum gases.

(ii) Additional containers may be used within the limits of quantity and pressure as follows:

Type of container	Maximum capacity		Maximum charging pressure—p.s.i.g.
	Cubic inches	Gallons	
DOT-2P or DOT-2Q (see Note 1)	31.83	.....	45 p.s.i.g. at 70° F. and 105 p.s.i.g. at 130° F. (see Note 2).
DOT-2P or DOT-2Q (see Note 1)	31.83	.....	35 p.s.i.g. at 70° F. and 100 p.s.i.g. at 130° F.
DOT-3C or DOT-4C	3,881	16±5% tolerance	145 p.s.i.g. at 130° F.

Note 1: Containers must be packed in strong wooden or fiber boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Each completed container filled for shipment must have been heated until contents reached a minimum temperature of 130° F., without evidence of leakage, distortion, or other defect. Each outside shipping container must be plainly marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

Note 2: Containers must be equipped with safety relief devices which will prevent rupture of the containers and dangerous projection of the closing devices when the containers are exposed to the action of fire.

(4) Verification of content. Containers with a water capacity of 200 pounds or more and for use with a liquefied petroleum gas with a specific gravity at 60° F. of 0.504 or greater may have their contents determined by using a fixed length dip tube gauging device. The length of the dip tube shall be such that when a liquefied petroleum gas with a specific volume of 0.03051 cu. ft./lb. at a temperature of 40° F. is charged into the container it just reaches the bottom of the tube. The weight of this liquid shall not exceed 42 percent of the water capacity of the container which must be stamped thereon. The length of the dip tube, expressed in inches carried out to one decimal place and prefixed with the letters "DT" shall be stamped on the container and on the exterior of removable type dip tube; for the purpose of this requirement the marked length shall be expressed as the distance measured along the axis of a straight tube from the top of the boss through which the tube is inserted to the proper level of the liquid in the container. The length of each dip tube shall be checked when installed by weighing each container after filling except when installed in groups of substantially identical containers in which case one of each 25 containers shall be weighed. The quantity of liquefied gas in each container must be checked by means of the dip tube after disconnecting from the charging line. The outlet from the dip tube shall be not larger than a No. 54 drill size orifice. A container representative of each day's filling at each charging plant shall have its contents checked by weighing after disconnecting from the charging line.

(e) Refrigerant gases. Refrigerant gases which are nonpoisonous and nonflammable under this part, must be shipped in cylinders as prescribed in paragraph (a)(1) or (2) of this section, or as follows:

(1) Specifications 2P and 2Q (§§ 178.33, 178.33a of this subchapter). Inside metal containers packed in a strong wooden or fiberboard box of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Pressure in the container must not exceed 85 pounds per square inch absolute at 70° F. Each completed metal container filled for shipment must be heated until content reaches a minimum temperature of 130° F. without evidence of leakage, distortion, or other defect. Each outside shipping container must be plainly marked "Inside Containers Comply With Prescribed Specification."

(f) Engine starting fluid. Engine starting fluid containing compressed gas or gases which are flammable under this part must be shipped in cylinders as prescribed in paragraph (a)(1) of this section, or as follows:

(1) Inside nonrefillable metal containers having capacity not over 32 cubic inches. Containers must be packaged in Spec. 12B (§ 178.205 of this subchapter) fiberboard boxes equipped with top and bottom pads which will provide three complete thicknesses of fiberboard on top and bottom of each box, or Spec. 15A, 15B, 15C, 19A, or 19B (§ 178.168, § 178.169, § 178.170, § 178.190, § 178.191 of this subchapter) wooden boxes. Pressure in the container must not exceed 140 psi, absolute, at 130° F. However, if the pressure exceeds 140 psi, absolute at 130° F., a Spec. 2P (§ 178.33 of this subchapter) container must be used. In any event, the metal container must be capable of withstanding without bursting a pressure of one and one-half times the pressure of the content at 130° F. The liquid content of the material and gas must not completely fill the container at 130° F. Each completed container filled for shipment must have been heated until content reaches a minimum temperature of 130° F., without evidence of leakage, distortion, or other defect. Each outside shipping container must be plainly marked, **"INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."**

§ 173.305 Charging of cylinders with a mixture of compressed gas and other material. (a) Detailed requirements. A mixture of a

[1] Use of existing cylinders authorized, but new construction not authorized.

compressed gas and any other material must be shipped as a compressed gas if the mixture is a compressed gas as designated in §173.300(a) and when not in violation of §173.301(a).

(b) Filling limits. (See §173.301(e).) For mixtures, the liquid portion of the liquefied compressed gas at 130° F. plus any additional liquid or solid must not completely fill the container.

(c) Nonpoisonous and nonflammable mixtures. Mixtures containing compressed gas or gases including insecticides, which mixtures are nonpoisonous and nonflammable under this part must be shipped in cylinders as prescribed in §173.304(a) or as follows:

(1) Specification 2P (§178.33 of this subchapter). Inside metal containers equipped with safety relief devices of a type examined by the Bureau of Explosives and approved by the Director, OHMT, and packed in strong wooden or fiber boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Pressure in the container may not exceed 65 psig at 70° F. Each completed metal container filled for shipment must be heated until content reaches a minimum temperature of 130° F., without evidence of leakage, distortion or other defect. Each outside shipping container must be plainly marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

(d) Poisonous mixtures. A mixture containing any poisonous material, Class A, or irritating material in such proportions that the mixture would be classed as poisonous under §173.326(a) or §173.381(a) must be shipped in packagings as authorized for these poisonous materials.

§ 173.306 Limited quantities of compressed gases. (a) Limited quantities of compressed gases for which exceptions are permitted as noted by reference to this section in §172.101 of this subchapter are excepted from labeling (except when offered for transportation by air) and, unless required as a condition of the exception, specification packaging requirements of this subchapter when packed in accordance with the following paragraphs. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) When in containers of not more than 4 fluid ounces capacity (7.22 cubic inches or less) except cigarette lighters. Special exceptions for shipment of certain compressed gases in the ORM–D class are provided in Subpart N of this part.

(2) When in metal containers filled with a material that is not classed as a hazardous material to not more than 90 percent of capacity at 70° F. then charged with nonflammable, nonliquefied gas. Each container must be tested to three times the pressure at 70° F. and, when refilled, be retested to three times the pressure of the gas at 70° F. Also, one of the following conditions must be met:

(i) Container is not over 1 quart capacity and charged to not more than 170 psig at 70° F. and must be packed in a strong outside packaging, or

(ii) Container is not over 30 gallons capacity and charged to not more than 75 psig at 70° F.

(3) When in a metal container charged with a solution of material's and compressed gas or gases which is nonpoisonous, provided all of the following conditions are met. Special exceptions for shipment of aerosols in the ORM–D class are provided in Subpart N of this part.

(i) Capacity must not exceed 50 cubic inches (27.7 fluid ounces).

(ii) Pressure in the container must not exceed 180 psig at 130° F. If the pressure exceeds 140 psig at 130° F., but does not exceed 160 psig at 130° F., a specification DOT 2P (§178.33 of this subchapter) inside metal container must be used; if the pressure exceeds 160 psig at 130° F., a specification DOT 2Q (§178.33a of this subchapter) inside metal container must be used. In any event, the metal container must be capable of withstanding without bursting a pressure of one and one-half times the equilibrium pressure of the content at 130° F.

(iii) Liquid content of the material and gas must not completely fill the container at 130° F.

(iv) The container must be packed in strong outside packagings.

(v) Each completed container filled for shipment must have been heated until the pressure in the container is equivalent to the equilibrium pressure of the content at 130° F. (55° C.) without evidence of leakage, distortion, or other defect.

(vi) Each outside packaging must be marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED REGULATIONS."

(b) Exemptions for foodstuffs, soap, biologicals, electronic tubes, and audible fire alarm systems. Limited quantities of compressed gases, (except poisonous gases as defined by §173.326) for which exceptions are provided as indicated by reference to this section in §172.101 of this subchapter, when in accordance with one of the following paragraphs are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter, except §177.817. Special exceptions for shipment of certain compressed gases in the ORM–D class are provided in Subpart N of this part.

(1) Foodstuffs or soaps in a nonrefillable metal container not exceeding 50 cubic inches capacity (27.7 fluid ounces), with soluble or emulsified compressed gas, provided the pressure in the container does not exceed 140 p.s.i.g. at 130° F. The metal container must be capable of withstanding without bursting a pressure of one and one-half times the equilibrium pressure of the content at 130° F.

(i) Containers must be packed in strong outside packagings.

(ii) Liquid content of the material and the gas must not completely fill the container at 130° F.

(iii) Each outside packaging must be marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED REGULATIONS."

(2) Cream in refillable metal receptacles with soluble or emulsified compressed gas. Containers must be of such design that they will hold pressure without permanent deformation up to 375 psig and must be equipped with a device designed so as to release pressure without bursting of the container or dangerous projection of its parts at higher pressures. This exception applies to shipments offered for transportation by refrigerated motor vehicles only.

(3) Nonrefillable metal containers charged with a solution containing biological products or a medical preparation which could be deteriorated by heat, and compressed gas or gases, which is nonpoisonous and nonflammable. The capacity of each container may not exceed 35 cubic inches (19.3 fluid ounces). The pressure in the container may not exceed 140 psig at 130° F., and the liquid content of the product and gas must not completely fill the containers at 130° F. One completed container out of each lot of 500 or less, filled for shipment, must be heated, until the pressure in the container is equivalent to equilibrium pressure of the content at 130° F. There must be no evidence of leakage, distortion, or other defect. Container must be packed in strong outside packagings.

(4) Electronic tubes, each having a volume of not more than 30 cubic inches and charged with gas to a pressure of not more than 35 psig and packed in strong outside packagings.

(5) Audible fire alarm systems powered by a compressed gas contained in an inside metal container when shipped under the following conditions:

(i) Each inside container must have contents which are not flammable, poisonous, or corrosive as defined under this part.

(ii) Each inside container may not have a capacity exceeding 35 cubic inches (19.3 fluid ounces).

(iii) Each inside container may not have a pressure exceeding 70 psig at 70° F. and the liquid portion of the gas may not completely fill the inside container at 130° F., and

(iv) Each nonrefillable inside container must be designed and fabricated with a burst pressure of not less than four times its charged pressure at 130° F. Each refillable inside container must be designed and fabricated with a burst pressure of not less than five times its charged pressure at 130° F.

(c) Fire extinguishers. Fire extinguishers charged with limited quantities of a compressed gas to not more than 240 psig at 70° F. are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements of this subchapter when shipped under the following conditions. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and to Part 177 of this subchapter except §177.817.

(1) Each fire extinguisher must be shipped as an inside packaging;

(2) Each fire extinguisher must have contents which are not flammable, poisonous, or corrosive as defined under this part;

(3) Each fire extinguisher under stored pressure may not have an internal volume exceeding 1,100 cubic inches. For fire extinguishers not exceeding 35 cubic inches capacity, the liquid portion of the gas plus any additional liquid or solid must not completely fill the container at 130° F. Fire extinguishers exceeding 35 cubic inches capacity may not contain any liquefied compressed gas;

(4) Each fire extinguisher manufactured on and after January 1, 1976, must be designed and fabricated with a burst pressure of not less than six times its charged pressure at 70° F. when shipped.

(5) Each fire extinguisher must be tested, without evidence of failure or damage, to at least three times its charged pressure at 70° F. but not less than 120 psig before initial shipment. For any subsequent shipment, each fire extinguisher must be in compliance with the retest requirements of the Occupational Safety and Health Administration Regulations of the Department of Labor, 29 CFR 1910.157(e), and;

(6) Each fire extinguisher must be marked to indicate the year of the test (within 90 days of the actual date of the original test) and "MEETS DOT REQUIREMENTS." This marking will be considered a certification that the fire extinguisher was manufactured in accordance with the requirements of this section.

Note: The words "This extinguisher meets all requirements of 49 CFR 173.306" may be displayed in place of "MEETS DOT REQUIREMENTS" on extinguishers manufactured prior to January 1, 1976.

(7) When Specification 2P or 2Q (§§178.33, 178.33a of this subchapter) packagings are used, paragraphs (c)(4)–(6) of this section are not applicable provided each packaging meets the requirements of paragraph (a) of this section.

(d) Truck bodies or trailers on flat cars; automobiles, motorcycles, tractors, or other self-propelled vehicles. (1) Except as specified in §173.21, truck bodies or trailers with automatic heating or

refrigerating equipment of the gas burning type may be shipped with tanks containing fuel and equipment operating or not operating, when used for the transportation of other freight and loaded on flat cars as part of a joint rail-highway movement. The heating or refrigerating equipment is considered to be a part of the truck body or trailer and is not subject to any other requirements of this subchapter.

(2) Automobiles, motorcycles, tractors, or other self-propelled vehicles equipped with liquefied petroleum gas or other compressed gas fuel tanks, provided such tanks are securely closed, are not subject to any other requirements for transportation by rail or highway. For transportation by water, see §§ 176.905 and 176.78(k) of this subchapter. For transportation by air, the fuel tank must be removed or emptied and securely closed.

(3) A cylinder which is a component part of a passenger restraint system and is installed in a motor vehicle, charged with nonliquefied, nonflammable compressed gas and having no more than two actuating cartridges per valve, is excepted from the requirements of Parts 170–189 of this subchapter except:

(i) Unless otherwise authorized by the Department, each cylinder must be in compliance with one of the cylinder specifications in Part 178 of this subchapter and authorized for use in § 173.302 for the gas it contains;

(ii) Each cylinder must be in compliance with the filling requirements of § 173.301; and

(iii) Each actuating cartridge must be approved in accordance with § 173.66 and meet the definition set forth in § 173.100(w).

(4) A cylinder which is part of a tire inflator system in a motor vehicle, charged with a nonliquefied, nonflammable compressed gas is excepted from the requirements of Parts 170–189 of this subchapter, except:

(i) Unless otherwise authorized by the Department, each cylinder must be in compliance with one of the cylinder specifications in Part 178 and authorized for use in § 173.302 for the gas it contains;

(ii) Each cylinder must be in compliance with the filling requirements of § 173.301.

(iii) Each cylinder must be securely installed in the trunk of the motor vehicle and the valve must be protected against accidental discharge.

Note: A cylinder containing a gas generator may be included within the provisions of this exception if the requirements of § 173.34(d) are satisfied.

(e) **Refrigerating machines.** (1) New (unused) refrigerating machines or components thereof are excepted from the specification packaging requirements of this part if they meet the following conditions. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part 177 of this subchapter except § 177.817.

(i) Each pressure vessel may not contain more than 5,000 pounds of Group I refrigerant as classified in American National Standard B9.1 or not more than 50 pounds of refrigerant other than Group I.

(ii) Machines or components having two or more charged vessels may not contain an aggregate of more than 2,000 pounds of Group I refrigerant or more than 100 pounds of refrigerant other than Group I.

(iii) Each pressure vessel must be equipped with a safety device meeting the requirements of American National Standard B9.1.

(iv) Each pressure vessel must be equipped with a shut-off valve at each opening except openings used for safety devices and with no other connection. These valves must be closed prior to and during transportation.

(v) Pressure vessels must be manufactured, inspected and tested in accordance with American National Standard B9.1, or when over 6 inches internal diameter, in accordance with the ASME Code.

(vi) All parts subject to refrigerant pressure during shipment must be tested in accordance with American National Standard B9.1.

(vii) The liquid portion of the refrigerant, if any, may not completely fill any pressure vessel at 130° F.

(viii) The amount of refrigerant, if liquefied, may not exceed the filling density prescribed in § 173.304.

(f) **Accumulators.** The following applies to accumulators, which are hydraulic accumulators containing nonliquefied, nonflammable gas, and nonflammable liquids or pneumatic accumulators containing nonliquefied, nonflammable gas, fabricated from materials which will not fragment upon rupture.

(1) Accumulators installed in motor vehicles, construction equipment, and assembled machinery and designed and fabricated with a burst pressure of not less than five times their charged pressure at 70° F, when shipped, are not subject to the requirements of this subchapter.

(2) Accumulators charged with limited quantities of compressed gas to not more than 200 p.s.i.g. at 70° F are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements of this subchapter when shipped under the following conditions. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part 177 of this subchapter except § 177.817.

(i) Each accumulator must be shipped as an inside packaging.

(ii) Each accumulator may not have a gas space exceeding 2,500 cubic inches under stored pressure, and

(iii) Each accumulator must be tested, without evidence of failure or damage, to at least three times its charged pressure at 70° F, but not less than 120 p.s.i. before initial shipment and before each refilling and reshipment.

(3) Accumulators with a charging pressure exceeding 200 p.s.i.g. at 70° F are excepted from labeling (except when offered for transportation by air) and the specification packaging requirements of this subchapter when shipped under the following conditions:

(i) Each accumulator must be in compliance with the requirements stated in paragraph (f)(2), (i), (ii), and (iii) of this section, and

(ii) Each accumulator must be designed and fabricated with a burst pressure of not less than five times its charged pressure at 70° F when shipped.

(g) **Water pump system tank.** Water pump system tanks charged with compressed air or limited quantities of nitrogen to not over 40 psig for single-trip shipment to installation sites are excepted from labeling (transportation by air not authorized) and the specification packaging requirements of this subchapter when shipped under the following conditions. In addition, shipments are not subject to Subpart F of this subchapter, to part 174 of this subchapter except § 174.24 and part 177 except § 177.817.

(1) The tank must be of steel, welded with heads concave to pressure, having a rated water capacity not exceeding 120 gallons and with outside diameter not exceeding 24 inches. Safety relief devices not required.

(2) The tank must be pneumatically tested to 100 psig. Test pressure must be permanently marked on the tank.

(3) The stress at prescribed pressure must not exceed 20,000 psi using formula:

$$S = Pd/2t$$

where:

S = wall stress in pounds per square inch;
P = prescribed pressure for the tank of at least 3 times charged pressure at 70° F or 100 psig, whichever is greater;
d = inside diameter in inches;
t = minimum wall thickness, in inches

(4) The burst pressure must be at least 6 times the charge pressure at 70° F.

(5) Each tank must be overpacked in a strong outside container in accordance with § 173.301(k).

§ 173.307 Exceptions for compressed gases. (a) The following materials are not subject to the requirements of this subchapter:

(1) Carbonated beverages.

(2) Except as provided in § 175.10(a)(2) of this subchapter, tires when inflated to pressures not greater than their rated inflation pressures.

(3) Balls used for sports.

(4) Refrigerating machines including dehumidifiers and air conditioners, and components thereof such as precharged tubing containing 25 pounds or less of nonflammable liquefied gas.

§ 173.308 Cigarette lighter or other similar device charged with fuel. (a) In addition to the requirements of § 173.21(e), a cigarette lighter or other similar device charged with a flammable gas must be shipped as follows:

(1) No more than 2.3 fluid ounces of liquefied gas may be loaded into each device;

(2) The liquid portion of the gas may not exceed 85 percent of the volumetric capacity of each fluid chamber at 60° F.

(3) Each device, including closures, must be capable of withstanding without leakage or rupture an internal pressure of at least two times the vapor pressure of the fuel at 130° F; and

(4) Devices must be overpacked in packaging that is designed or arranged to prevent movement of the device itself.

(b) When no more than 1,500 devices covered by this section are transported in one motor vehicle by highway, the requirements of Parts 172 and 177 of this subchapter do not apply.

(c) For transportation by water in a closed transport vehicle or a closed freight container, the following warning must be affixed to the access doors: "WARNING—MAY CONTAIN EXPLOSIVE MIXTURES WITH AIR—KEEP IGNITION SOURCES AWAY WHEN OPENING." The warning must be on a contrasting background and must be readily legible from a distance of 25 feet.

§ 173.314 Requirements for compressed gases in tank cars. (a) **Definitions.** For definitions of compressed gases, see § 173.300.

(b) **General requirements.**

(1) Tank cars containing compressed gases must not be shipped unless they were loaded by or with the consent of the owner thereof.

(2) Tank cars must not contain gases capable of combining chemically and must not be loaded with any gas which combines chemically with the gas previously loaded therein, until all residue has been removed and interior of tank thoroughly cleaned.

(3) For cars of the DOT-106A and 110A class, the tanks must be placed in position and attached to car structure by the shipper.

(4) Wherever the word "approved" is used in this part of the regulations, it means approval by the Association of American Railroads Committee on Tank Cars as prescribed in §179.3 of this subchapter.

(5) Each tank car, except series 106A*** or 110A***, containing a flammable compressed gas or flammable compressed gas mixture must be marked with the name of contents (§172.101 of this subchapter) in accordance with the requirements of §172.330 of this subchapter or as otherwise approved by the Department.

(6) Each tank car containing anhydrous ammonia, hydrogen chloride, refrigerated liquid, or chlorine must be marked "ANHYDROUS AMMONIA", "HYDROGEN CHLORIDE" or "CHLORINE," as appropriate, in accordance with the requirements of §172.330 of this subchapter.

(c) **Authorized gases, filling densities, tank cars.** A compressed gas offered for transportation in a tank car must be prepared in accordance with paragraphs (b) through (h) of this section, §173.10, and the following table (for cryogenic liquids, see §173.319):

Kind of gas	Maximum permitted filling density, Note 1	Required tank car, see § 173.31(a) (2) and (3)
Ammonia solution	Note 21	DOT-105A100-W, 105A100AL-W, 105A100AL-W, 109A300-W, 111A100-W-4, Note 20

	68	DOT-106A500X, Note 7.

1 Use of existing tank cars authorized, but new construction not authorized.

Note 1: The filling density for liquefied gases is hereby defined as the percent ratio of the weight of gas in the tank to the weight of water that the tank will hold. For determining the water capacity of the tank in pounds, the weight of a gallon (231 cubic inches) of water at 60° F. in air shall be 8.3282 pounds.

Note 2: Each tank must be equipped with one or more safety relief devices of approved type and discharge area, the discharge outlet of each safety relief device must be connected to a manifold having an unobstructed discharge area of at least 1½ times the total discharge area of the safety relief devices connected to the manifold, all manifolds must be connected to a single common header having an unobstructed discharge outlet pointing upward and extending above top of the car, the header and the header outlet must each have an unobstructed discharge area at least equal to the total discharge area of the manifolds connected to the header, the header outlet must be equipped with an approved ignition device which will instantly ignite any hydrogen discharged through the safety relief device.

Note 3: [Reserved]

Note 4: For tank cars other than DOT-106A and DOT-110A used for the transportation of liquefied flammable gases, interior pipes of loading and unloading valves must be equipped with excess flow valves of approved design.

Note 5: The liquid portion of the gas at 0° F. must not completely fill the tank.

Note 6: Tank must be insulated with an approved material of a thickness so that the thermal conductance is not more than 0.03 B.t.u. per square foot, per degree F. differential in temperature per hour, except that the insulation thickness directly over the center sills may be reduced to give thermal conductance not exceeding 0.04 B.t.u. per square foot, per degree F. differential in temperature per hour, this reduction is to permit an anchorage which must not exceed 7 inches from top of center sills to bottom of tank. Tank must be equipped with one safety relief valve of approved design set to open at a pressure not exceeding ⅘ of the test pressure of the tank and one frangible disc of approved design set to function at a pressure less than the test pressure of the tank. The discharge capacity of each of these safety relief devices must be sufficient to prevent building up of pressure in the tank in excess of 82.5 percent of the tank test pressure. Tanks must be equipped with two pressure regulating valves of approved design set to open at a pressure not to exceed 350 psi on 105A500-W tanks and at a pressure not to exceed 400 psi on 105A500-W tanks. Each regulating valve and safety relief device must have its final discharge piped to the outside of the protective housing.

Note 7: Specification 106A or 110A tanks authorized only for transportation by rail freight and by highway. (See §§ 174.204 and 177.834(m) of this subchapter for special requirements.)

Note 8: Each tank must be equipped with adequate safety relief devices of the fusible plug type having a yield temperature not over 170° F., nor less than 157° F. Each device must be resistant to extrusion of the fusible alloy and leak tight at 130° F. Each valve outlet must be sealed by a threaded cap or a threaded solid plug. In addition, all valves must be protected by a metal cover.

Note 9: All parts of valves and safety relief devices in contact with content of tank must be of a metal or other material suitably treated if necessary, which will not cause formation of any acetylides.

Note 10: Tanks must be made of or clad with a metal not subject to rapid deterioration by the lading, all appurtenances such as manhole covers, venting, loading and discharge valves, safety relief valves, check valves, and eduction pipes, must be made of metal not subject to rapid deterioration by the lading, cork must be used as an insulating material.

Note 11: Tanks for nitrosyl chloride shall be nickel-clad and safety relief devices shall be of the fusible plug type and shall function at a temperature of not exceeding 176° F. and be vapor tight at 130° F.

Note 12: For special tank requirements applying to chlorine, see § 179.102-2 of this subchapter. The quantity of chlorine loaded into a single-unit tank car must not exceed 90 tons. Nominal 16-, 30-, 55-, 85-, or 90-ton tank car tanks must not be loaded in excess of the normal lading weights. Tank cars built to ICC-105A500 may be stenciled either ICC-105A300 or ICC-105A500; tank cars built to ICC or DOT-105A500W, may be stenciled either 105A300W or 105A500W, each tank must must be equipped with safety relief valve required by the stenciled specification. Cars not larger than 55-ton chlorine capacity built to ICC-105A300, or ICC-105A300W may be continued in service if equipped with excess flow valves in accordance with § 179.102-2. DOT-105A cars having forge welded anchors must not be used for the transportation of chlorine.

Note 13: This gas may be transported in authorized tank car tanks stenciled "DISPERSANT GAS" or "REFRIGERANT GAS."

Note 14: Container shall not be equipped with safety relief devices of any description.

Note 15: A filling density of 58.8 percent may be used during the months of November through March, inclusive. When this filling density is used, tank cars must be loaded and shipped directly to consumers for unloading. Storage in transit is not permitted.

Note 16: Openings in tank heads to facilitate application of nickel lining are authorized on tank cars constructed before January 1, 1975. These openings must be closed in an approved (§ 179.3 of this subchapter) manner.

Note 17: See paragraph (g) of this section.

Note 18: See paragraph (f) of this section.

Note 19: See paragraph (f)(2) of this section.

Note 20: See paragraph (f)(1) of this section.

Note 21: See paragraph (f)(2) of this section.

Note 22: See paragraph (f) of this section.

Note 23: Each Specification 105 tank car built after August 31, 1981, shall conform to class DOT-105J.

After December 31, 1986, each specification 105 tank car built before September 1, 1981, and with a water capacity (shell full volume, including manways) exceeding 18,500 U.S. gallons shall conform to class DOT-105J. After December 31, 1986, each specification 111 tank car with a water capacity (shell full volume, including manways) exceeding 18,500 U.S. gallons shall conform to class DOT-111J. Specification 111 tank cars built after March 1, 1984 are not authorized for the transportation of flammable gases.

Note 24: Each Specification 105 tank car built after August 31, 1981, shall conform to class DOT-105S.

After December 31, 1986, each specification 105 tank car built before September 1, 1981, and with a water capacity (shell full volume including manways) exceeding 18,500 U.S. gallons, shall conform to class DOT-105S.

Note 25: Specification 106A and 110A tanks for these commodities are authorized for transportation by rail freight, highway and cargo vessel. (See §§ 174.204, 176.200, 176.230 and 177.834(m) of this subchapter for additional requirements.)

Note 26: For these materials only, Specifications 105A300W and 112T340W or 112J340W tank cars may be equipped with safety relief devices with a start-to-discharge pressure setting of 247.5 psi and 280.5 psi respectively.

Note 27: [Reserved]

Note 28: DOT-114T340W and 114J340W tank cars may be equipped with bottom outlets, except that the bottom outlets must be rendered inoperative and effectively sealed to preclude bottom unloading when transporting flammable gases.

Note 29: A maximum safety relief valve setting of 280.5 psig is authorized on DOT Specification 114A340W, 114T340W, and 114J340W tank car tanks.

(d) **Filling limits. (1) Non-liquefied and liquefied gas.** The gas pressure at 105° F. in any insulated tank car tank of the DOT-105A and 109A-W class or Spec. DOT-111A100-W-4; at 115° F. in any uninsulated tank car tank of the DOT-112A-W and 114A-W class; or at 130° F. in any uninsulated tank car tank of the DOT-106A and 110A-W class must not exceed three-fourths times the prescribed retest pressure of the tank. The gas pressure at 130° F. in any uninsulated tank car tank of the DOT-107A series must not exceed seven-tenths of the marked test pressure of the tank.

Note 1: DOT-107A tanks may be charged with helium to a pressure 10 percent in excess of the marked maximum gas pressure at 130° F. of each tank.

(2) Liquefied gas. In addition to the requirements of paragraph (d)(1) of this section, the liquid portion of the gas at 105° F. must not completely fill an insulated tank, nor at 130° F. must not completely fill an uninsulated tank with the exception that the liquid portion of the gas at 115° F. must not completely fill an uninsulated tank car tank of the DOT-112A-W and 114A-W classes.

(e) Verification of content. The amount of liquefied gas loaded into each tank may be determined either by measurement or calculation of the weight. If by measurement, the weight must be checked after disconnecting the loading line by the use of proper scales. If by calculation, the weight of liquefied petroleum gas, methylacetylene-propadiene, stabilized, dimethylamine, monomethylamine, or trimethylamine may be calculated using the outage tables supplied by the tank car owners and the specific gravities as determined at the plant, and this computation must be checked by determination of specific gravity of product after loading. Carriers may verify calculated weights by use of proper scales. The use of a fixed tube gauge device is authorized for determining the weight of methyl mercaptan in Specification 105A300W tanks instead of weighing.

(f) Special requirements for liquefied petroleum gas and butadiene tank cars. (1) Single unit tank cars. Maximum filling density in single unit tank cars shall be as shown in the following table:

Specific gravity at 60° F.	Maximum permitted filling density			
	Insulated cars		Uninsulated cars	
	April through October	November through March (see Note 1)	April through October	November through March (see Note 1)

Note 1. When these filling densities are used, tank cars must be shipped directly to consumers for unloading. Storage in transit is not permitted.

(2) DOT-106A class tank cars. Maximum filling density in DOT-106A class tank cars shall be as shown in §173.304(d)(1).

(g) Special Requirements for hydrogen chloride, refrigerated liquid and vinyl fluoride, inhibited.

(1) The shipper shall notify the Bureau of Explosives whenever a car is not received by the consignee within 20 days from the date of shipment.

(2) A tank car containing hydrogen chloride, refrigerated liquid must have the auxiliary valve on the pressure relief device closed during transportation.

(h) Foreign tank cars in domestic use. Except as authorized by §171.12a tank cars made in foreign countries, except Canada, must not be used in domestic traffic until they have been tested in this country and proper reports rendered as required by the specifications that apply.

§ 173.315 Compressed gases in cargo tanks and portable tank containers. (a) A compressed gas offered for transportation in a cargo tank or a portable tank must be prepared in accordance with this section (for cryogenic liquids, see § 173.318) and may only be shipped in a tank as provided in §§ 173.32, 173.33 and this section, as follows:

(1) Compressed gases must not be shipped in cargo tanks or portable tank containers except as provided in this section and §§ 173.32 and 173.33, and in the following table (for marking requirements see §§ 172.326 and 172.328 of this subchapter):

Kind of gas	Maximum permitted filling density		Specification container required	
	Percent by weight (see Note 1)	Percent by volume (see par. (f) of this section)	Type (see Note 2)	Minimum design pressure (psig)
Anhydrous ammonia (see Notes 14 and 17 and paragraph (i) of this section)	56	82; see Note 5	DOT-51, MC-330, MC-331; see Notes 12 and 17.	265; see Note 17
Anhydrous dimethylamine	59	See Note 7	DOT-51, MC-330, MC-331.	150
Anhydrous monomethylamine	60	See Note 7	DOT-51, MC-330, MC-331.	150.
Anhydrous trimethylamine	57	See Note 7	DOT-51, MC-330, MC-331.	150
Ammonia solution	See par. (c) of this section.	See Note 7	MC-330, MC-331; see Note 12	100; see par. (c)(1) of this section.
Bromotrifluoromethane (R-13B1 or H-1301); (See Note 9).	133	See Note 7	DOT-51, MC-330, MC-331.	365
Butadiene, inhibited	See par. (b) of this section.	See par. (b) of this section.	DOT-51, MC-330, MC-331.	100
Carbon dioxide, refrigerated liquid	See par. (c) of this section.	95	DOT-51, MC-330, MC-331.	200; see Note 3
Chlorine	125	See Note 7	MC-330, MC-331.	225; see Notes 4 and 8
Chlorodifluoroethane (R-142b) [1-Chloro 1,1-difluoroethane]; (See Note 9).	100	See Note 7	DOT-51, MC-330, MC-331.	100.
Chlorodifluoromethane (R-22); (See Note 9).	105	See Note 7	DOT-51, MC-330, MC-331.	250
Chloropentafluoroethane (R-115); (See Note 9).	See par. (c) of this section.	See Note 7	DOT-51, MC-330, MC-331.	See par. (c)(1) of this section.
Chlorotrifluoromethane (R-13); (See Note 9).	See par. (c) of this section.	See Note 7	DOT-51, MC-330, MC-331.	See par. (c)(1) of this section.
Dichlorodifluoromethane (R-12); (See Note 9).	119	See Note 7	DOT-51, MC-330, MC-331.	150
Difluoroethane (R-152a); (See Note 9)	79	See Note 7	DOT-51, MC-330, MC-331.	150
Dimethyl ether (see Note 16)	59	See Note 7	DOT-51, MC-330, MC-331.	200
Ethane, refrigerated liquid		See par. (c) of this section	MC-331, MC-338	100; see Note 11.
Ethane-propane mixture, liquid refrigerated		See par. (c) of this section.	MC-331, MC-338	275; see Note 11.
Hexafluoropropylene	110	See Note 7	DOT-51, MC-330, MC-331.	250
Hydrogen chloride, refrigerated liquid	103.0	See Note 7	MC-331, MC-338.	100; see Note 11.
	91.6	See Note 7	MC-331, MC-338.	300; see Note 11.
	86.7	See Note 7	MC-331, MC-338.	450; see Note 11.
Liquefied petroleum gas (see Note 15)	See par. (b) of this section.	See par. (b) of this section.	DOT-51, MC-330, MC-331.	See par. (c)(1) of this section.
Methylacetylene-propadiene, stabilized (see Note 13)	53	90	DOT-51, MC-330, MC-331.	200
Methyl chloride	84	89.5	DOT-51, MC-330 MC-331.	150.
Methyl chloride (optional portable tank 2,000 pounds water capacity, fusible plug)	84	See Note 6	DOT-51.	225
Methyl mercaptan	80	90	DOT-51, MC-330, MC-331.	100
Nitrous oxide, refrigerated liquid	See par. (c) of this section.	95	DOT-51, MC-330, MC-331.	200; see Note 3.
Refrigerant gas, n.o.s. or Dispersant gas, n.o.s. (See Note 9).	See par. (c) of this section.	See Note 7	DOT-51, MC-330, MC-331.	See par. (c)(1) of this section.
Sulfur dioxide (tanks not over 1,200 gallons water capacity)	125	87.5	DOT-51, MC-330, MC-331	150; see Note 4
Sulfur dioxide (tanks over 1,200 gallons water capacity)	125	87.5	DOT-51, MC-330, MC-331.	125; see Note 4
Sulfur dioxide (optional portable tank 1,000–2,000 pounds water capacity, fusible plug)	125	See Note 6	DOT-51.	225
Vinyl chloride	84 (see Note 13)	See Note 7	MC-330, MC-331.	150.
Vinyl fluoride, inhibited	66	See Note 7	MC-330, MC-331.	250; see Note 11.
Vinyl methyl ether	68	See Notes 7 and 13.	MC 330, MC 331.	100

Note 1: Maximum filling density for liquefied gases is hereby defined as the percent ratio of the weight of gas in the tank to the weight of water that the tank will hold. For determining the water capacity of the tank in pounds, the weight of a gallon (231 cubic inches) of water at 60° F. in air shall be 8.32828 pounds.

Note 2: See § 173.32 for authority to use other portable tanks and for manifolding cargo tanks; see § 173.301(d). Specification MC 330 cargo tanks may be painted as specified for MC 331 cargo tanks.

Note 3: If cargo tanks and portable tank containers for carbon dioxide, refrigerated liquid and nitrous oxide are designed to comply with the requirements of the ASME Code for Low Temperature Operation, the design pressure may be reduced to 100 p.s.i.g. or the controlled pressure, whichever is greater.

Note 4: In the design of tanks for sulfur dioxide and chlorine a corrosion allowance of 20 percent or 0.10 inch, whichever is less, must be added to the metal thickness. In chlorine tanks the wall thickness must be at least five-eighths inch, including corrosion allowance.

Note 5: Unlagged cargo tanks and portable tank containers for liquid anhydrous ammonia may be filled to 87.5 percent by volume provided the temperature of the anhydrous ammonia being loaded into such tanks is determined to be not lower than 30° F. or provided the filling of such tanks is stopped at the first indication of frost or ice formation on the outside surface of the tank and is not resumed until such frost or ice has disappeared.

Note 6: Tanks equipped with fusible plugs must be filled by weight.

Note 7: Tanks must be filled by weight.

Note 8: Chlorine cargo tank motor vehicles may be shipped only if the contents are to be unloaded at one unloading point.

Note 9: This gas may be transported in authorized cargo tanks and portable tanks marked "DISPERSANT GAS," or "REFRIGERANT GAS."

Note 10: [Reserved]

Note 11: MC 330, MC 331 and MC 338 cargo tanks must be insulated. Cargo tanks must meet all the following requirements. Each tank must have a design service temperature of minus 100° F. or no warmer than the boiling point at one atmosphere of the hazardous material to be shipped therein, whichever is colder, and must comply with the low temperature requirements of the ASME Code. When the normal travel time is 24 hours or less, the tank's holding time as loaded must be at least twice the normal travel time. When the normal travel time exceeds 24 hours, the tank's holding time as loaded must be at least 24 hours greater than the normal travel time. The holding time is the elapsed time from loading until venting occurs under equilibrium conditions. The cargo tank must have an outer jacket made of steel when the cargo tank is used to transport a flammable gas.

Note 12: No aluminum, copper, silver, zinc, or alloy of any of these metals shall be used in the cargo tank construction where it can come into contact with the lading.

Note 13: All parts of valves and safety devices in contact with contents of tank must be of a metal or other material suitably treated if necessary, which will not cause formation of any acetylides.

Note 14: Specifications MC 330 and MC 331 cargo tanks constructed of other than quenched and tempered steel (NQT) are authorized for all grades of anhydrous ammonia. Specifications MC 330 and MC 331 cargo tanks constructed of quenched and tempered steel (QT) (see marking requirements of § 172.328(c) of this subchapter) are authorized for anhydrous ammonia having a minimum water content of 0.2 percent by weight. Any tank being placed in anhydrous ammonia service or a tank which has been in other service or has been opened for inspection, test, or repair, must be cleaned of the previous product and must be purged of air before loading. See § 172.203(h) of this subchapter for special shipping paper requirements.

Note 15: Specifications MC 330 and MC 331 cargo tanks constructed of other than quenched and tempered steel (NQT) are authorized for all grades of liquefied petroleum gases. Only grades of liquefied petroleum gases determined to be "noncorrosive" are authorized in specifications MC 330 and MC 331 cargo tanks constructed of quenched and tempered steel (QT). "Noncorrosive" means the corrosiveness of the gas does not exceed the limitations for classification 1 of the ASTM Copper Strip Classifications when tested in accordance with ASTM D1838–64, "Copper Strip Corrosion by Liquefied Petroleum (LP) Gases". (For (QT) and (NQT) marking requirements see § 172.328(c) of this subchapter. For special shipping paper requirements, see § 172.203(h) of this subchapter.)

Note 16: Specifications MC 330 and MC 331 cargo tanks must be equipped with emergency discharge controls that comply with § 178.337–11(c) of this subchapter.

Note 17: A Specification MC-330 or MC-331 cargo tank or a nonspecification cargo tank meeting, and marked in conformance with, the edition of the ASME Code in effect when it was fabricated, may be used for the transportation of anhydrous ammonia if it:

(1) Has a minimum design pressure not lower than 250 psig.

(2) Was manufactured in conformance with the ASME Code prior to January 1, 1981, according to its ASME name plate and manufacturer's data report.
(3) Is painted white or aluminum.
(4) Complies with Note 12 of this paragraph.
(5) Has been inspected and tested in accordance with § 173.33 as specified for Specification MC-330 or MC-331.
(6) Was used to transport anhydrous ammonia prior to January 1, 1981;
(7) Is operated exclusively in interstate commerce (including its operation by a motor carrier otherwise engaged in interstate commerce) in a state where its operation was permitted by the laws of that State (not including the incorporation of this subchapter) prior to January 1, 1981, and
(8) Is operated in conformance with all other requirements of this subchapter.

(b) Maximum permitted filling densities for cargo and portable tank containers for transportation of butadiene, inhibited, and liquefied petroleum gas are as follows:

Maximum specific gravity of the liquid material at 60° F.	Maximum permitted filling density in percent of the water-weight capacity of the tanks (percent) See Note 1	
	1200 gallons or less	Over 1200 gallons
0.473-0.480	38	41
0.481-0.488	39	42
0.489-0.495	40	43
0.496-0.503	41	44
0.504-0.510	42	45
0.511-0.519	43	46
0.520-0.527	44	47
0.528-0.536	45	48
0.537-0.544	46	49
0.545-0.552	47	50
0.553-0.560	48	51
0.561-0.568	49	52
0.569-0.576	50	53
0.577-0.584	51	54
0.585-0.592	52	55
0.593-0.600	53	56
0.601-0.608	54	57
0.609-0.617	55	58
0.618-0.626	56	59
0.627 and over	57	60

Note 1: Filling is permitted by volume provided the same filling density is used as permitted by weight, except when using fixed length dip tube or other fixed maximum liquid level indicators (paragraph (f) of this section), in which case the maximum permitted filling density shall not exceed 97 percent of the maximum permitted filling density by weight contained in the table.

(1) Odorization. All liquefied petroleum gas shall be effectively odorized as required in Note 2 of this paragraph to indicate positively, by a distinctive odor, the presence of gas down to a concentration in air of not over one-fifth the lower limit of combustibility: *Provided, however,* That odorization is not required if harmful in the use or further processing of the liquefied petroleum gas, or if odorization will serve no useful purpose as a warning agent in such use or further processing.

Note 1: The lower limits of combustibility of the more commonly used liquefied petroleum gases are: Propane, 2.15 percent; butane, 1.55 percent. These figures represent volumetric percentages of gas-air mixtures in each case.

Note 2: The use of 1.0 pound of ethyl mercaptan, 1.0 pound of thiophane, or 1.4 pounds of amyl mercaptan per 10,000 gallons of liquefied petroleum gas shall be considered sufficient to meet the requirements of § 173.315(b)(1). This note does not exclude the use of any other odorant in sufficient quantity to meet the requirements of § 173.315(b)(1).

(c) Except as otherwise provided, the loading of a liquefied gas into a cargo tank or portable tank shall be determined by weight or by a suitable liquid level gauging device. The vapor pressure (psig) at 115° F. must not exceed the design pressure of the cargo tank or portable tank container. The liquid portion of the gas shall not fill the tank at 105° F. if the tank is insulated, or at 115° F. if the tank is uninsulated, except that this requirement shall not apply to:

(1) A tank containing carbon dioxide, refrigerated liquid or nitrous oxide, refrigerated liquid. Such tank is required to be equipped with suitable pressure control valves and may not be filled to a level exceeding 95 percent of the volumetric capacity of the tank.

(2) A tank containing ethane, refrigerated liquid; ethane-propane mixture, refrigerated liquid; or hydrogen chloride, refrigerated liquid. Such tank must be filled to allow at least two percent outage below the inlet of the pressure relief valve or pressure control valve under conditions of incipient opening, with the tank in a level attitude.

(d) If the loading of cargo tanks and portable tank containers with liquefied gases is to be determined by weight, the gross weight shall be checked after the filling line is disconnected in each instance. The gross weight shall be calculated from the tank capacity and tare weight set forth on the metal plate required by the specification, and the maximum filling density permitted for the material being loaded into the tank as set forth in the table, paragraph (a)(1) of this section.

(e) If the loading of cargo tanks and portable tank containers with liquefied gases is to be determined by adjustable liquid level device, each tank and each compartment thereof shall have a thermometer well, so that the internal liquid temperature can easily be determined, and the amount of liquid in the tank shall be corrected to a 60° F. basis. Liquid levels shall not exceed a level corresponding to the maximum filling density permitted for the material being loaded into the tank as set forth in the table in paragraph (a)(1) of this section.

(f) When the loading of cargo tanks and portable tank containers with liquefied gases is determined only by fixed length dip tube or other fixed maximum liquid level indicator, the device shall be arranged to function at a level not to exceed the maximum permitted volume prescribed by the table, paragraph (a)(1) of this section. Loading shall be stopped when the device functions.

(g) Containers, the liquid level of which has been determined by means of a fixed length dip tube gauging device, shall not be acceptable for stowage as cargo on vessels in commerce subject to the jurisdiction of the United States Coast Guard. Nothing contained in this section shall be so construed as to prohibit the transportation on car floats or car ferries of motor vehicles laden with containers nor cargo tanks the liquid level of either of which has been determined by means of fixed length dip tube devices.

(h) Each cargo tank and portable tank, except a tank filled by weight, must be equipped with one or more of the gauging devices described in the following table which indicate accurately the maximum permitted liquid level. Additional gauging devices may be installed but may not be used as primary controls for filling of cargo tanks and portable tanks. Gauge glasses are not permitted on any cargo tank or portable tank. Primary gauging devices used on cargo tanks of less than 3500 gallons water capacity are exempt from the longitudinal location requirements specified in paragraphs (h)(2) and (3) of this section provided: (1) The tank length does not exceed three times the tank diameter; and (2) the cargo tank is unloaded within 24 hours after each filling of the tank.

Kind of gas	Gaging device permitted for filling purposes
Anhydrous ammonia	Rotary tube, adjustable slip tube, fixed length dip tube.
Anhydrous dimethylamine	None.
Anhydrous monomethylamine	None.
Anhydrous trimethylamine	None.
Aqua ammonia solution containing anhydrous ammonia	Rotary tube, adjustable slip tube, fixed length dip tube.
Butadiene, inhibited	Rotary tube, adjustable slip tube, fixed length dip tube.
Carbon dioxide, refrigerated liquid	Rotary tube, adjustable slip tube, fixed length dip tube.
Chlorine	None.
Dichlorodifluoromethane	None.
Difluoroethane	None.
Difluoromonochloroethane	None.
Dimethyl ether	None.
Ethane, refrigerated liquid	Rotary tube, adjustable slip tube, fixed length dip tube.
Ethane-propane mixture, refrigerated liquid	Rotary tube, adjustable slip tube, fixed length dip tube.
Hexafluoropropylene	None.
Hydrogen chloride, refrigerated liquid	None.
Liquefied petroleum gases	Rotary tube, adjustable slip tube, fixed length dip tube.
Methyl chloride	Fixed length dip tube.
Methyl mercaptan	Rotary tube, adjustable slip tube, fixed length dip tube.
Monochlorodifluoromethane	None.
Nitrous oxide, refrigerated liquid	Rotary tube, adjustable slip tube, fixed length dip tube.
Methylacetylene-propadiene, stabilized	Rotary tube, adjustable slip tube, fixed length dip tube.
Refrigerant gas, n.o.s. or Dispersant gas, n.o.s.	None.
Sulfur dioxide	Fixed length dip tube.
Vinyl chloride	None.
Vinyl fluoride, inhibited	None.

(1) The design pressure of the liquid level gauging devices shall be at least equal to the design pressure of the tank.

(2) If the primary gauging device is adjustable, it must be capable of adjustment so that the end of the tube will be in the location specified in subparagraph (h)(3) of this section for at least one of the ladings to be transported, at the filling level corresponding to an average loading temperature. Exterior means must be provided to indicate this adjustment. The gauging device must be legibly and permanently marked in increments not exceeding 20 Fahrenheit degrees (or not exceeding 25 p.s.i.g. on tanks for carbon dioxide, refrigerated liquid or nitrous oxide, refrigerated liquid), to indicate the maximum levels to which the tank may be filled with liquid at temperatures above 20° F. However, if it is not practicable to so mark the gauging device, this information must be legibly and permanently marked on a plate affixed to the tank adjacent to the gauging device.

(3) A dip tube gauging device consists of a pipe or tube with a valve at its outer end with its intake limited by an orifice not larger than 0.060 inch in diameter. If a fixed length dip tube is used, the intake must be located midway of the tank both longitudinally and laterally and at maximum permitted filling level. In tanks for liquefied petroleum gases, the intake must be located at the level reached by the lading when the tank is loaded to maximum filling density at 40° F.

(4) Each opening for a pressure gauge, except on a tank used exclusively for the transportation of carbon dioxide, refrigerated liquid or nitrous oxide, refrigerated liquid, must be restricted at or inside the tank by an orifice no larger than 0.060 inch in diameter.

(i) Each tank must be provided with one or more safety relief devices

For explanation of abbreviations and reference marks, see last page of this tariff.

which, unless otherwise specified in this part, must be safety relief valves of the spring-loaded type. Each valve must be arranged to discharge upward and unobstructed to the outside of the protective housing to prevent any impingement of escaping gas upon the tank. For each chlorine tank the protective housing must be in compliance with the requirements set forth in the applicable specification.

(l) Safety relief valves on each tank must have a total relieving capacity as determined by the flow formulas contained in CGA Pamphlet S-1.2. Safety relief valves must have a total relieving capacity sufficient to prevent a maximum pressure in the tank of more than 120 percent of the design pressure. For an insulated tank the required relieving capacity of the relief valves must be the same as for an uninsulated tank, unless the insulation will remain in place and will be effective under fire conditions. In this case, each insulated tank must be covered by a sheet metal jacket of not less than 16 gauge thickness. An MC 330 cargo tank that has safety relief valves sized by Fetterly's formula dated November 27, 1928, may be continued in service. Copies of this formula may be obtained from the Bureau of Explosives.

(2) Each safety relief valve must be arranged to minimize the possibility of tampering. If the pressure setting or adjustment is external to the valve, the safety relief valve must be provided with means for sealing the adjustment and it must be sealed.

(3) Each safety relief valve on a tank must be set to start-to-discharge at pressure no higher than 110 percent of the tank design pressure and no lower than the design pressure specified in paragraph (a)(1) of this section for the gas transported.

(4) Each safety relief valve must be plainly and permanently marked with the pressure in p.s.i.g. at which it is set to discharge, with the actual rate of discharge of the device in cubic feet per minute of the gas or of air at 60° F. and 14.7 p.s.i.a., and with the manufacturer's name or trade name and catalog number. The start-to-discharge valve must be visible after the valve is installed. The rated discharge capacity of the device must be determined at a pressure of 120 percent of the design pressure of the tank.

(5) Each safety relief valve must have direct communication with the vapor space in the tank.

(6) Each connection to a safety relief valve must be of sufficient size to provide the required rate of discharge through the safety relief valve.

(7) No shut-off valve may be installed between a safety relief valve and the tank except in cases where two or more safety relief valves are installed on the same tank, and one or more safety shut-off valves are arranged to always provide the required relief capacity through at least one of the safety relief valves.

(8) Each safety relief valve outlet must be provided with a protective device to prevent the entrance and accumulation of dirt and water. This device must not impede flow through the valve.

(9) On tanks for carbon dioxide, refrigerated liquid or nitrous oxide, refrigerated liquid, each safety relief device must be installed and located so that the cooling effect of the contents will not prevent the effective operation of the device. In addition to the required safety relief valves, these tanks may be equipped with one or more pressure controlling devices.

(10) Each tank for carbon dioxide, refrigerated liquid also may be equipped with one or more frangible disc devices set to function at a pressure not over two times nor less than 1.5 times the design pressure of the tank.

(11) Each portion of connected liquid piping or hose that can be closed at both ends must be provided with a safety relief valve without an intervening shut-off valve to prevent excessive hydrostatic pressure that could burst the piping or hose.

(12) Subject to conditions of paragraph (a)(1) of this section for the methyl chloride and sulfur dioxide optional portable tanks, one or more fusible plugs examined by the Bureau of Explosives and approved by the Director, OHMT may be used on these tanks in place of safety relief valves of the spring-loaded type. The fusible plug or plugs must be in accordance with CGA Pamphlet S-1.2, to prevent a pressure rise in the tank of more than 120 percent of the design pressure. If the tank is over 30 inches long, each end must have the total specified safety discharge area.

(13) A safety relief valve on a chlorine cargo tank must conform to one of the following standards of The Chlorine Institute, Inc.: Type 1½ JO225, Dwg. H51970, dated October 7, 1968; or Type 1½ JO225, Dwg. H50155, Revision A, dated April 28, 1969.

(j) Storage containers for liquefied petroleum gas for permanent installation on consumer premises may be shipped by private motor carrier only under the following conditions:

(1) Each container must be constructed in compliance with the requirements of the ASME Code (containers built in compliance with earlier editions starting with 1943 are authorized) and must be marked to indicate compliance in the manner specified by the respective Code.

(2) Each container must be equipped with safety devices in compliance with the requirements for safety devices on containers as specified in NFPA Pamphlet No. 58.

(3) The containers shall be so braced or otherwise secured on the vehicle as to prevent relative motion while in transit. Valves or other fittings shall be adequately protected against injury during transportation. (See § 177.834(g) of this subchapter.)

(4) Except as provided in paragraph (j)(5) of this section, containers shall not be shipped when charged with liquefied petroleum gas to more than 5 percent of their water capacity.

(5) Storage containers of less than 1042 pounds water capacity (125 gallons) may be shipped when charged with liquefied petroleum gas in compliance with DOT filling density.

(k) A nonspecification cargo tank meeting, and marked in conformance with, the edition of the ASME Code in effect when it was fabricated, may be used for the transportation of liquefied petroleum gas if it—

(1) Has a minimum design pressure no lower than 250 psig;

(2) Has a capacity of 3,500 gallons or less;

(3) Was manufactured in conformance with the ASME Code prior to January 1, 1981, according to its ASME name plate and manufacturer's data report;

(4) Conforms to NFPA Pamphlet 58;

(5) Has been inspected and tested in accordance with § 173.33 as specified for Specification MC-330 or MC-331;

(6) Is operated exclusively in intrastate commerce (including its operation by a motor carrier otherwise engaged in interstate commerce) in a state where its operation was permitted by the laws of that State (not including the incorporation of this subchapter) prior to January 1, 1981;

(7) Was used to transport liquefied petroleum gas prior to January 1, 1981; and

(8) Is operated in conformance with all other requirements of this subchapter.

(l) Anhydrous ammonia must not be offered for transportation or transported in specification MC 330 and MC 331 cargo tanks constructed of quenched and tempered ("QT") steel except as provided in this paragraph.

(1) The ammonia must have a minimum water content of 0.2 percent by weight. Any addition of water must be made using steam condensate, de-ionized, or distilled water.

(2) Except as otherwise provided in this paragraph, each person offering for transportation or transporting anhydrous ammonia shall perform a periodic analysis for prescribed water content in the ammonia. The analysis must be performed:

(i) From a sample of the ammonia in storage taken at least once every 7 days, or each time ammonia is added to the storage tanks, whichever is less frequent; or

(ii) At the time the cargo tanks are loaded, then a sample of the ammonia taken from at least one loaded cargo tank out of each 10 loads, or from one cargo tank every 24 hours, whichever is less frequent; or

(iii) At the same frequency as described in subparagraph (l)(2)(ii) of this paragraph, from a sample taken from the loading line to the cargo tank.

(3) If water is added at the time of loading:

(i) The sample for analysis must be taken from a point in the loading line between the water injection equipment and the cargo tank; and

(ii) Positive provisions must be made to assure water injection equipment is operating.

(4) If water injection equipment becomes inoperative, suitable corrective maintenance must be performed after which a sample from the first loaded cargo tank must be analyzed for prescribed water content.

(5) The analysis method for water content must be as prescribed in CGA Pamphlet G-2.2, titled "Tentative Standard Method for Determining Minimum of 0.2 percent water in Anhydrous Ammonia," 1975 edition.

(6) Records indicating the results of the analysis taken, as required by this paragraph, must be retained for 2 years and must be open to inspection by representative of the Department.

(7) Each person receiving anhydrous ammonia containing 0.2 percent water by weight may offer for transportation or transport that ammonia without performing the prescribed analysis for water content provided:

(i) The ammonia received was certified as containing 0.2 percent water as prescribed in §§ 172.203(h)(1)(i) and 177.817(a) of this subchapter; and

(ii) The amount of water in the ammonia has not been reduced by any means.

(m) A cargo tank (commonly known as a nurse tank and considered an implement of husbandry) transporting anhydrous ammonia, and operated by a private carrier exclusively for agricultural purposes does not have to meet the specification requirements of Part 178 of this subchapter if it:

(1) Has a minimum design pressure of 250 psig and meets the requirements of the edition of the ASME code in effect at the time it was manufactured and is marked accordingly;

(2) Is equipped with safety relief valves meeting the requirements of CGA pamphlet S1.2;

(3) Is painted white or aluminum;

(4) Has capacity of 3,000 gallons or less;

(5) Is loaded to a filling density no greater than 56 percent; and

(6) Is securely mounted on a farm wagon; and

(7) Is in conformance with the requirements of Part 172 of this subchapter except that shipping papers are not required; and it need not be marked or placarded on one end if that end contains valves, fittings, regulators or gauges when those appurtenances prevent the markings and placard from being properly placed and visible.

§ 173.316 Cryogenic liquids in cylinders. (a) General requirements.

(1) A cylinder may not be loaded with a cryogenic liquid colder than the design service temperature of the packaging.

(2) A cylinder may not be loaded with any material which may combine chemically with any residue in the packaging to produce an unsafe condition.

(3) The jacket covering the insulation on a cylinder used to transport any flammable cryogenic liquid must be made of steel.

(4) A valve or fitting made of aluminum with internal rubbing or abrading aluminum parts that may come in contact with oxygen in the cryogenic liquid form may not be installed on any cylinder used to transport oxygen, cryogenic liquid, unless the parts are anodized in accordance with ASTM Standard B 580.

(5) An aluminum valve, pipe or fitting may not be installed on any cylinder used to transport any flammable cryogenic liquid.

(6) Each cylinder must be provided with one or more pressure relief devices, which must be installed and maintained in compliance with the requirements of this subchapter.

(7) Each pressure relief device must be installed and located so that the cooling effect of the contents during venting will not prevent effective operation of the device.

(8) The maximum weight of the contents in a cylinder with a design service temperature colder than −320° F may not exceed the design weight marked on the cylinder (see §178.57-20(a)(4) of this subchapter).

(b) Pressure control systems. Each cylinder containing a cryogenic liquid must have a pressure control system that conforms to §173.34(d) and is designed and installed so that it will prevent the cylinder from becoming liquid full.

(c) Specification cylinder requirements and filling limits. Specification DOT-4L cylinders (§178.57 of this subchapter) are authorized for the transportation of cryogenic liquids when carried in the vertical position as follows:

(1) For purposes of this section, "filling density," except for hydrogen, is defined as the percent ratio of the weight of lading in the packaging to the weight of water that the packaging will hold at 60° F. (1 lb of water = 27.737 cubic inches at 60° F).

(2) The cryogenic liquids of argon, nitrogen, oxygen, helium and neon must be loaded and shipped in accordance with the following table:

Pressure control valve setting (Maximum elastic discharge pressure, psig)	Maximum permitted filling density density (percent by weight)					
	Air	Argon	Nitrogen	Oxygen	Helium	Neon
45	82.5	133	76	108	12.5	109
75	80.3	130	74	105	12.5	104
105	78.4	127	72	103	12.5	100
170	76.2	122	70	100	12.5	92
230	75.1	119	69	98	12.5	85
295	73.3	115	68	96	12.5	77
360	70.7	113	65	93	12.5	.....
450	65.9	111	61	91	12.5	.....
540	62.9	107	58	88	12.5	.....
625	60.1	104	55	86	12.5	.....
Design service temperature (F)	−320	−320	−320	−320	−452	−411

(3) Hydrogen (minimum 95 percent) parahydrogen must be loaded and shipped as follows:

Column 1	Column 2
Design service temperature	Minus 423° F or colder
Maximum permitted filling density based on cylinder capacity at minus 423° F (see Note 1)	6.7 percent
The pressure control valve must be designed and set to limit the pressure in the cylinder to not more than	17 psig

Note 1: The filling density for hydrogen, cryogenic liquid is defined as the percent ratio of the weight of lading in a packaging to the weight of water that the packaging will hold at minus 423° F. The volume of the packaging at minus 423° F is determined in cubic inches. The volume is converted to pounds of water (1 lb of water = 27.737 cubic inches).

(i) Each cylinder must be constructed, insulated and maintained so that during transportation the total rate of venting shall not exceed 30 SCF of hydrogen per hour.

(ii) In addition to the marking requirements in §178.57-20 of this subchapter, the total rate of venting in SCF per hour (SCFH) shall be marked on the top head or valve protection band in letters at least one-half inch high as follows: "VENT RATE" "SCFH" (with the asterisks replaced by the number representing the total rate of venting, in SCF per hour).

(iii) Carriage by highway is subject to the conditions specified in §177.840(a) of this subchapter.

§ 173.318 Cryogenic liquids in cargo tanks. (a) General requirements.

(1) A cargo tank may not be loaded with a cryogenic liquid colder than the design service temperature of the packaging.

(2) A cargo tank may not be loaded with any material that may combine chemically with any residue in the packaging to produce an unsafe condition (see §178.338-15).

(3) The jacket covering the insulation on a tank used to transport a cryogenic liquid must be made of steel if the cryogenic liquid—

(i) Is to be transported by vessel (see §176.76(h)(1) of this subchapter); or

(ii) Is oxygen or a flammable material.

(4) A valve or fitting made of aluminum with internal rubbing or abrading aluminum parts that may come in contact with oxygen in the cryogenic liquid form may not be installed on any cargo tank used to transport oxygen, cryogenic liquid unless the parts are anodized in accordance with ASTM Standard B580.

(5) An aluminum valve, pipe or fitting, external to the jacket that retains lading during transportation may not be installed on any cargo tank used to transport oxygen, cryogenic liquid or any flammable cryogenic liquid.

(6) A cargo tank used to transport oxygen, cryogenic liquid must be provided with a manhole (see §178.338-6 of this subchapter).

(b) Pressure relief systems and pressure control valves.

(1) *Types of pressure relief systems.*

(i) Except as otherwise provided in this paragraph, each tank in oxygen and flammable cryogenic liquid service must be protected by two independent pressure relief systems which are not connected in series, namely:

(A) A primary system of one or more pressure relief valves; and

(B) A secondary system of one or more frangible discs or pressure relief valves. For a tank in carbon monoxide service, the secondary system must be pressure relief valves only.

(ii) *Tanks in helium and atmospheric gas (except oxygen) cryogenic liquid service.* For a tank used in helium and atmospheric gas (except oxygen) cryogenic liquid service, the tank must be protected by at least one pressure relief system consisting of:

(A) One of more pressure relief valves; or

(B) A combination of one or more pressure relief valves and one or more frangible discs.

(2) *Capacities of pressure relief systems.*—(i) *Tanks in oxygen or flammable cryogenic liquid service.* For tanks in oxygen or flammable cryogenic liquid service, the primary system and the secondary system of pressure relief devices must each have a flow capacity equal to or greater than that calculated by the applicable formula in paragraph 5.3.2 or paragraph 5.3.3 of CGA Pamphlet S-1.2. In addition:

(A) The primary pressure relief system must have his total flow capacity at a pressure not exceeding 120 percent of the tank's design pressure.

(B) The secondary pressure relief system must have this total flow capacity at a pressure not exceeding 150 percent of the tank's design pressure.

(ii) *Tanks in helium and atmospheric gas (except oxygen) cryogenic liquid service.* For tanks in helium and atmospheric gas (except oxygen) cryogenic liquid service, the pressure relief system must have a flow capacity equal to or greater than that calculated by the applicable formula in paragraphs 5.3.2 or 5.3.3 of CGA Pamphlet S-1.2. If the pressure relief system consists of a combination of pressure relief valves and frangible discs, the pressure relief valves must have a total venting capacity equal to or greater than that calculated by the applicable formula in paragraph 4.1.10.1.1 of CGA Pamphlet S-1.2. The pressure relief system must have this total flow capacity at a pressure not exceeding 150 percent of the tank's design pressure.

(3) *Type and construction of pressure relief devices.*—(i) Each pressure relief device must be designed and constructed for a pressure equal to or exceeding the tank's design pressure at the coldest temperature reasonably expected to be encountered.

(ii) Pressure relief devices must be either spring-loaded pressure relief valves of frangible discs. Pressure relief valves must be of a type that automatically open and close at predetermined pressures.

(4) *Setting of pressure relief devices.*—(i) On a tank used in oxygen or flammable cryogenic liquid service, the pressure relief devices must perform as follows.

(A) Each pressure relief valve in the primary relief system must be set-to-discharge at a pressure no higher than 110 percent of the tank's design pressure.

(B) Each pressure relief device in the secondary pressure relief system must be designed to commence functioning at a pressure no lower than 130 percent and no higher than 150 percent of the tank's design pressure.

(ii) On a tank used in helium and atmospheric gas (except oxygen) cryogenic liquid service, the pressure relief devices in the pressure relief system must be designed to commence functioning at no higher than 150 percent of the tank's design pressure.

(5) *Optional pressure relief devices and pressure control valves.* In addition to the required pressure relief devices, a cargo tank in cryogenic liquid (except carbon monoxide) service may be equipped with one or both of the following:

(i) One or more pressure control valves set at a pressure below the tank's design pressure.

(ii) One or more frangible discs set to function at a pressure not less than one and one-half times or more than two times the tank's design pressure.

(6) *Maximum filling rate.* (i) For a tank used in oxygen and flammable cryogenic liquid service, the maximum rate at which the tank is filled must not exceed the liquid flow capacity of the primary pressure relief system rated at a pressure not exceeding 120 percent of the tank's design pressure.

(ii) On tanks used in helium and atmospheric gas (except oxygen) cryogenic liquid service, the maximum rate at which the tank is

For explanation of abbreviations and reference marks, see last page of this tariff.

lifted must not exceed the liquid flow capacity of the pressure relief valves rated at 150 percent of the tank's design pressure.

(7) *Arrangement and location of pressure relief devices.* (i) The discharge from any pressure relief system must be directed upward and be unobstructed to the outside of the protective housing in such a manner as to prevent impingement of gas upon the jacket or any structural part of the vehicle.

(ii) Each pressure relief valve must be arranged or protected to prevent the accumulation of foreign material between the relief valve and the atmospheric discharge opening in any relief piping. The arrangement must not impede flow through the device.

(iii) Each pressure relief valve must be designed and located to minimize the possibility of tampering. If the pressure setting or adjustment is external to the valve, the valve adjustment must be sealed.

(iv) Each pressure relief device must have direct communication with the vapor space of the tank at the mid-length of the top centerline.

(v) Each pressure relief device must be installed and located so that the cooling effect of the contents during venting will not prevent the effective operation of the device.

(8) *Connections.* (i) Each connection to a pressure relief device must be of sufficient size to allow the required rate of discharge through the pressure relief device. The inlet connection must be not less than one-half inch nominal pipe size.

(ii) A shut-off valve may be installed in a pressure relief system only when the required relief capacity is provided at all times.

(9) *Pressure relief devices for piping hose and vacuum-insulated jackets.* (i) Each portion of connected liquid piping or hose that can be closed at both ends must be provided with either a hydrostatic pressure relief valve without an intervening shut-off valve, or a check valve permitting flow from the pipe or hose into the tank. If used, the relief valve must be located so as to prevent its discharge from impinging on the tank, piping, or operating personnel.

(ii) On a vacuum-insulated cargo tank the jacket must be protected by a suitable relief device to release internal pressure. The discharge area of this device must be at least 0.00024 square inch per pound of water capacity of the tank. This relief device must function at a pressure not exceeding the internal design pressure of the jacket, calculated in accordance with the ASME Code, or 25 psig, whichever is less.

(10) *Tank inlet, outlet, pressure relief device and pressure control valve markings.* (i) Each tank inlet and outlet, except pressure relief devices and pressure control valves, must be permanently marked to indicate whether it communicates with "vapor" or "liquid" when the tank is filled to the maximum permitted filling density.

(ii) Each pressure relief valve must be plainly and permanently marked with the pressure, in psig, at which it is set-to-discharge, the discharge rate of the device in SCF per minute (SCFM) of free air, and the manufacturer's name or trade name and catalog number. The marked set-to-discharge pressure valve must be visible with the valve in its installed position. The rated discharge capacity of the device must be determined at a pressure of 120 percent of the design pressure of the tank.

(iii) Each pressure control valve must be plainly and permanently marked with the pressure, in psig, at which it is set-to-discharge.

(c) **Weight of lading requirements.** The weight of a cryogenic liquid in the tank must be determined by weighing or by the use of a liquid level gauging device authorized in § 178.338-14(a) of this subchapter, and may not exceed the lesser of:

(1) The weight of lading in the tank, based on the water capacity stamped on the nameplate (§ 178.338-18(a)(4) of this subchapter) and the appropriate maximum permitted filling density specified in paragraph (f) of this section; or

(2) The maximum weight of lading for which the cargo tank was designed, as marked on the specification plate (see § 178.338-18(b) of this subchapter).

(d) **Outage.** Except for a cargo tank containing helium, cryogenic liquid, a cargo tank offered for transportation must have an outage of at least two percent below the inlet of the pressure relief device or pressure control valve, under conditions of incipient opening, with the tank in a level attitude.

(e) **Temperature.** A flammable cryogenic liquid in a cargo tank at the start of travel must be at a temperature sufficiently cold that the pressure setting of the pressure control valve or the required pressure relief valve, whichever is lower, will not be reached in less time than the marked rated holding time for the cryogenic liquid (see §§ 173.33(d)(1)(ii) and 178.338-9(b) of this subchapter).

(f) **Specification MC-338 (§ 178.338 of this subchapter) cargo tanks** are authorized for the shipment of the following cryogenic liquids subject to the following additional requirements:

(1) For purposes of this section, "filling density" is defined as the percent ratio of the weight of lading in the tank to the weight of water that the tank will hold at the design service temperature (one pound of water = 27.737 cubic inches at 60° F., or one gallon of water = 231 cubic inches at 60° F. and weighs 8.32828 pounds).

(2) Air, argon, helium, nitrogen, and oxygen, cryogenic liquids must be loaded and shipped in accordance with the following table:

PRESSURE CONTROL VALVE SETTING OR RELIEF VALVE SETTING

Maximum set-to-discharge pressure (psig)	Maximum permitted filling density (percent by weight)				
	Air	Argon	Helium	Nitrogen	Oxygen
26			12.5		
30	80.3	129	12.5	74	105
40	79.2		12.5		
50	78.0		12.5		
55	77.3	125	12.5	71	102
60	76.9		12.5		
80	75.3		12.5		
85	75.1	121	12.5		99
100	73.0		12.5		
105	73.7		12.5	67	
120	72.2		12.5		
140	71.4		12.5		
145	70.9	115	12.5	64	94
180	68.9		12.5		
200	67.9	110	12.5	61	91
250	63.9	106	12.5	57	87
275	62.9	105	12.5	56	86
325	59.4	101		53	83
Design service temperature	- 320° F.	- 320° F.	- 452° F.	- 320° F.	- 320° F.

(3) Carbon monoxide, hydrogen (minimum 95 percent para-hydrogen), ethylene, and methane or natural gas, cryogenic liquids must be loaded and shipped in accordance with the following table:

PRESSURE CONTROL VALVE SETTING OR RELIEF VALVE SETTING

Maximum set-to-discharge pressure (psig)	Maximum permitted filling density (percent by weight)			
	Carbon monoxide	Ethylene	Hydrogen	Methane or natural gas
13			6.6	
15	75.0		6.6	40.5
17	74.0		6.6	
20		53.5		40.0
25	73.0			
30	72.0	52.7	6.3	39.1
35				
40		52.0		38.6
45	71.5			
50		51.4	6.0	38.2
55				
60		50.8		
70		50.2	5.7	37.5
90		49.2		
95				
100		48.6	5.4	36.6
115		48.2		
125			5.0	
150			4.5	
175	62.5	45.8		
285	56.0			
Design service temperature	Minus 320° F.	Minus 155° F.	Minus 423° F.	Minus 260° F.

(g) **One-way travel time; marking.** The jacket of a cargo tank to be used to transport a flammable cryogenic liquid must be marked on its right side near the front, in letters and numbers at least two inches high, "One-Way-Travel-Time _____ hrs.", with the blank filled in with a number indicating the one-way travel time (OWTT), in hours, of the cargo tank for the flammable cryogenic liquid to be transported. A cargo tank that is partially unloaded at one or more locations must have additional marking "One-Way-Travel-Time _____ hrs. _____ psig to _____ psig at _____ percent filling density," with the second blank filled in with the pressure existing after partial unloading and the third blank filled in with the set-to-discharge pressure of the control valve or pressure relief valve, and the fourth blank with the filling density following partial unloading. Multiple OWTT markings for different pressure levels are permitted.

(1) OWTT is based on the marked rated holding time (MRHT) of the cargo tank for the cryogenic liquid to be transported in the cargo tank. If the MRHT for the flammable cryogenic liquid is not displayed on or adjacent to the specification plate, this MRHT may be derived.

(2) The MRHT is converted to OWTT, in hours, as follows:

(i) For a tank with an MRHT of 72 hours or less,

$$OWTT = (MRHT - 24)/2$$

(ii) For a tank with an MRHT greater than 72 hours,

$$OWTT = MRHT - 48$$

§ 173.319 Cryogenic liquids in tank cars. (a) **General requirements.**

(1) A tank car containing a flammable cryogenic liquid may not be shipped unless it was loaded by, or with the consent of, the owner of the tank car.

(2) The amount of flammable cryogenic liquid loaded into a tank car must be determined, either by direct measurement or by calculation based on weight, to verify that the tank has not been filled to a level in

excess of the limits specified in paragraph (d)(2) of this section. The weight of any flammable cryogenic liquid loaded, except hydrogen, must be checked by use of scales after disconnecting the loading line.

(3) Whenever a tank car containing any flammable cryogenic lading is not received by the consignee within 20 days from the date of shipment, the shipper of the lading shall notify the Bureau of Explosives.

(4) A tank car may not be loaded with any flammable cryogenic liquid:

(i) That may combine chemically with any residue in the tank to produce an unsafe condition,

(ii) That is colder than the design service temperature of the tank,

(iii) If the average daily pressure rise in the tank exceeded 3 psi during the prior shipment (see §173.31(c)(13)),

(iv) Unless it is marked with the name of contents, in accordance with §172.330 of this subchapter.

(b) When a tank car containing a flammable cryogenic liquid is offered for transportation:

(1) At least 0.5 percent outage must be provided below the inlet of the pressure relief or pressure control valve at the start-to-discharge pressure setting of the valve, with the tank car in a level attitude, and

(2) The absolute pressure in the annular space must be less than 75 microns of mercury.

(c) *Temperature.* A flammable cryogenic liquid must be loaded into a tank car at such a temperature that the average daily pressure rise during transportation will not exceed 3 psi (see paragraph (a)(4)(iii) of this section and §173.31(c)(13)).

(d) A Class DOT–113 tank car is authorized for the shipment of the following cryogenic liquids subject to the following additional requirements:

(1) For purposes of this section, "filling density" is defined as the percent ratio of the weight of lading in the tank to the weight of water that the tank will hold at the design service temperature (one pound of water = 27.737 cubic inches at 60° F, or one gallon of water = 231 cubic inches at 60° F and weighs 8.32828 pounds).

(2) **Ethylene, and hydrogen (minimum 95 percent para-hydrogen),** cryogenic liquids must be loaded and shipped in accordance with the following table:

PRESSURE CONTROL VALVE SETTING OR RELIEF VALVE SETTING

Maximum start-to-discharge pressure (psig)	Maximum permitted filling density (percent by weight)			
	Ethylene	Ethylene	Ethylene	Hydrogen
17				6.60
45	52.8			
75		51.1	51.1

Specification (see §173.31(a)(9))	113D60W 113D60W	113D120W	113D120W	113A175W 113A50W

§ 173.320 **Cryogenic liquids; exceptions.** (a) Atmospheric gases and helium, cryogenic liquids, in Dewar flasks, insulated cylinders, insulated portable tanks, insulated cargo tanks, and insulated tank cars, designed and constructed so that the pressure in such packagings will not exceed 25.3 psig under ambient temperature conditions during transportation are not subject to the requirements of this subchapter when transported by motor vehicle or railcar except as specified in paragraphs (a)(1), (a)(2) and (a)(3) of this section.

(1) Sections 171.15 and 171.16 of this subchapter pertaining to the reporting of incidents, not including a release that is the result of venting through a pressure control valve, or the neck of the Dewar flask.

(2) Subparts A, B, C, and D of Part 172, (§§174.24 for rail and 177.817 for highway) and in addition, Part 172 in its entirety for oxygen.

(3) Subparts A and B of Part 173, and §§174.1 and 177.800, 177.804, 177.807, and 177.823 of this subchapter.

(b) The requirements of this subchapter do not apply to atmospheric gases and helium:

(1) During loading and unloading operations (pressure rises may exceed 25.3 psig); or

(2) When used in operation of a process system; such as a refrigeration system (pressure may exceed 25.3 psig).

(c) For transportation aboard aircraft, see §171.11 of this subchapter.

SUBPART H

POISONOUS MATERIALS, ETIOLOGIC AGENTS, AND RADIOACTIVE MATERIALS; DEFINITIONS AND PREPARATION

§ 173.325 **Classes of poisonous materials.** (a) Poisonous materials for the purpose of this subchapter are divided into three groups according to the degree of hazard in transportation.

(1) Poison A.
(2) Poison B.
(3) Irritating material.

§ 173.326 **Poison A.** (a) For the purpose of Parts 170–189 of this subchapter extremely dangerous poisons, Class A, are poisonous gases or liquids of such nature that a very small amount of the gas, or vapor of the liquid, mixed with air is dangerous to life. This class includes the following:

(1) Bromacetone.
(2) Cyanogen.
(3) Cyanogen chloride containing less than 0.9 percent water.
(4) Diphosgene.
(5) Ethyldichlorarsine.
(6) Hydrocyanic acid (see Note 1 of this paragraph).
(7) [Reserved]
(8) Methyldichlorarsine.
(9) [Reserved]
(10) Nitrogen peroxide (tetroxide).
(11) [Reserved]
(12) Phosgene (diphosgene).
(13) Nitrogen tetroxide-nitric oxide mixtures containing up to 33.2 percent weight nitric oxide.

Note 1: Diluted solutions of hydrocyanic acid of not exceeding 5 percent strength are classed as poisonous articles, Class B (see §173.343).

(b) Poisonous gases or liquids, Class A, as defined in paragraph (a) of this section, except as provided in §173.331, must not be offered for transportation by rail express.

§ 173.327 **General packaging requirements for Poison A materials.** (a) Cylinders must be maintained in compliance with the requirements of §173.34. Valves must be capable of withstanding the test pressure of the cylinders and must have taper-threaded connections directly to the cylinders (no bushings or straight-threaded connections of valves to cylinders permitted). For corrosive commodities, valves may be of the packed type provided the assembly is made gas-tight by means of a seal cap with compatible gasketed joint to the valve body or to the cylinder to prevent loss of commodity through or past the packing; otherwise the valves must be of the packless type with nonperforated diaphrams and handwheels. Each valve outlet must be sealed by a threaded cap or a threaded solid plug. The outlet caps and plugs, luting, and gaskets must be compatible with each other, the valve assembly, and the lading.

(1) The pressure of the poison gas at 130° F must not exceed the service pressure of the cylinder. Cylinders must not be liquid full at 130° F.

(2) Cylinders packed in boxes must have adequate protection for valves. Box and valve protection must be of strength sufficient to protect all parts of cylinders and valves from deformation or breakage resulting from a drop of at least 6 feet onto a concrete floor, impacting at the weakest point. A cylinder not overpacked in a box must be equipped with a protective cap or other means of valve protection which must be capable of preventing damage to or distortion of the valve if it were subjected to an impact test as follows: The cylinder, prepared as for shipment, is allowed to fall from an upright position with the side of the cap or other valve protection striking a solid steel object projecting not more than 6 inches above the floor level.

(b) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(c) No Class A poisons in cargo tanks. No "extremely dangerous poison, class A," may be loaded into or transported in any cargo tank.

(d) It shall not be permissible to transport class A poison if there be any interconnecting means of any character between the containers.

(e) Unless otherwise specified in this subchapter, packaging used for the transportation of any Poison A material may not be completely filled. Sufficient outage must be provided so that the packaging will not be liquid full at 130° F (55° C.).

(f) Each tank car, except series 106A*** and 110A***, containing Poison A materials must be marked with the name of contents (§172.101 of this subchapter) in accordance with the requirements of §172.330 of this subchapter.

§ 173.328 **Poison A materials not specifically provided for.** (a) Poison A materials, as defined in §173.326, other than those for which special packaging requirements are prescribed in this part, must be packaged as follows:

(1) Specification 33[1] or 3D[1] metal cylinders of not over 125 pounds water capacity (nominal). Gaskets if used between the protection cap and neck of cylinder must be renewed for each shipment. Cylinders not fitted with valve protection extension ring must be packed in wooden boxes complying with the construction, marking, and labeling, requirements of §173.25.

[1] Use of existing cylinders authorized, but new construction not authorized.

For explanation of abbreviations and reference marks, see last page of this tariff.

(2) Specification 3A1800, 3AA1800, 3AL1800 or 3E1800 (§§178.36, 178.37, 178.42, 178.46 of this subchapter) cylinders.

(i) Specifications 3A, 3AA and 3AL cylinders must not exceed 125 pounds water capacity (nominal). Cylinders must have valve protection or be packed in strong wooden or metal boxes as described in §173.327(a)(2). Specification 3AL cylinders containing arsine or phosphine may only be transported by highway and rail.

(ii) Specification 3E1800 cylinders must be packed in strong wooden or metal boxes.

(3) Cyanogen chloride containing less than 0.9 percent water may also be packaged as prescribed by §173.332(a)(2) of this subchapter.

§ 173.329 Bromacetone; chloropicrin and methyl chloride mixtures; chlorpicrin and nonflammable, nonliquefied compressed gas mixtures. (a) Bromacetone, when offered for transportation by carriers by rail freight, highway, or water, must be packed in specification containers as follows:

(1) As prescribed in §173.328.

(2) Specification 15A, 15B, 15C, 16A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.191 of this subchapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, Specification 2C (§178.22 of this subchapter). Bottles must not contain over 1-pound of liquid each, may not be filled to over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

(b) **Chloropicrin and methyl chloride mixtures.** Chloropicrin and methyl chloride mixtures, in addition to containers prescribed in §173.328, when offered for transportation by carriers by rail freight, highway, or water, may be shipped in specification containers as follows:

(1) Specification 3A, 3AA, 3B, 3C,[1] 3E, 4A,[1] 4B, 4BA, 4BW, or 4C[1] (§§178.35, 178.37, 178.38, 178.42, 178.50, 178.51, 178.61 of this subchapter). Cylinders having not over 250 pounds water capacity (nominal). Valves or other closing devices must be protected to prevent damage in transit, by screw-on metal caps or by packing the cylinders in strong boxes or crates. Cylinders having a wall thickness of less than 0.10 inch must be packed in boxes or crates complying with the construction marking and labelling requirements of §173.25.

(c) **Chloropicrin and nonflammable, nonliquefied compressed gas mixtures.** Chloropicrin and nonflammable, nonliquefied compressed gas mixtures, in addition to containers prescribed in §173.328, when offered for transportation by carriers by rail freight, highway, or water, must be shipped in specification containers as follows:

(1) Specification 3A, 3AA, 3B, 3C,[1] 3E, 4A,[1] 4B, 4BA, 4BW, or 4C[1] (§§178.36, 178.37, 178.38, 178.42, 178.50, 178.51, 178.61, of this subchapter). Cylinders having not over 250 pounds water capacity (nominal). Valves or other closing devices must be protected to prevent damage in transit, by screw-on metal caps or by packing the cylinders in strong boxes or crates. Cylinders having a wall thickness of less than 0.10 inch must be packed in boxes or crates complying with the construction, marking, and labelling requirements of §173.25.

§ 173.330 Chemical ammunition. (a) Projectiles, shells, bombs, and grenades containing Poison A materials but not equipped or packaged with ignition elements, bursting charges, detonating fuzes, or explosive components, may be shipped only by, for, or to the Department of Defense. Each shipment must be packaged, marked, and labeled as required by their regulations. Each package must be labeled with POISON GAS label marked "NONEXPLOSIVE" and also marked with the proper shipping name. (See §§173.53(r) and 173.59 for explosive chemical ammunition.)

(b) Chemical ammunition containing poisonous liquids or gases, Class A, must not be offered for transportation by rail express.

§ 173.331 Gas identification sets. (a) Gas identification sets containing Poison A materials, irritating materials, and chlorine must be packaged in Specification 15A, 15B, 19A, or 19B (§§178.168, 178.169, 178.190, or 178.191 of this subchapter). Wooden boxes under the following conditions:

(1) Gas identification sets containing Poison A materials and irritating materials may be shipped in amounts not exceeding 5 cubic centimeters, if a liquid, or 5 grams, if a solid, when mixed with or absorbed in activated charcoal or silica gel, or other absorbent medium, and packed in strong glass bottles of not less than 4 fluid ounces capacity. The Poison A materials and chlorine may be shipped if the gas itself is absorbed in activated charcoal or silica gel, or other absorbent medium, and packed in the same type 4-ounce bottles as described above. Each bottle as herein specified must be surrounded with appropriate absorbent cushioning material, and enclosed in a hermetically sealed metal can. Each can must be surrounded on all sides by at least 1 inch of dry, fine sawdust or wood pulp. The cans must be packed in Specification 15A, 15B, 19A, or 19B (§§178.168, 178.169, 178.190, 178.191 of this subchapter) wooden boxes. The bottles must be closed with ground-in glass stoppers securely fastened. The cushioning material around the bottle must be at least 1 inch thick. The cans must be made from metal of thickness not less than 30 gauge, United States standard. There must be not more than a total of 100 grams or cubic centimeters or a combination of both, in each outside wooden box.

(b) Gas identification sets containing Poison A materials and irritating materials must be packaged as follows:

(1) The liquids or liquefied gases in hermetically sealed glass tubes containing not to exceed 40 cubic centimeters each. Each tube must be securely cushioned and packed in an individual mailing tube with screw-thread metal cover. Not more than 12 such mailing tubes, cushioned with corrugated fiberboard, may be packed in a closed fiberboard container, not to exceed 4 such fiberboard containers, containing an aggregate of not to exceed 48 glass tubes cushioned and packed in an outside steel cylinder of not less than 0.145-inch wall thickness, which is closed by a plate, bolted to a flange welded to cylinder wall. Suitable gasket must be placed between flange and head plate, and closure must prevent leakage of any gas.

(c) Gas identification training sets containing Poison A materials and irritating materials must be packaged as follows:

(1) The Poison A materials and irritating material, in amounts not exceeding 5 cubic centimeters, if a liquid, or 20 grams, if a solid, when mixed with or absorbed in activated charcoal, silica gel, crepe rubber, or other absorbent medium, must be packed in strong glass bottles of not less than 2 fluid ounces capacity, equipped with a polyethylene liner; each bottle as herein specified must have a metal screw-cap closure, equipped with a built-in compression type spring and an insert in the opening of the bottle to match so that when tightened an airtight seal is obtained. Twelve bottles, containing articles as described in this paragraph and not exceeding 100 cubic centimeters or grams, or a combination of both, must be placed in a modified styrene plastic carrying case, in three rows of four bottles each and fitted with a fiberboard cell or separator. The void space around the individual bottles, and around all interior sides of the carrying case, must be filled with dry, fine sawdust or vermiculite. A sheet of sponge rubber must be fitted to the inside of the top and bottom of the carrying case to provide additional cushioning and insure a snug fit of the bottles when the top is secured. The carrying case must be fitted into a snug fitting fiberboard box, domestic type. The case must then be packed in a nailed wooden box, specification 15A or 15B (§§178.168, 178.169 of this subchapter), which must be fitted with a waterproof case liner.

§ 173.332 Hydrocyanic acid, liquid (prussic acid) and hydrocyanic acid liquefied. (a) Hydrocyanic acid, liquid (prussic acid) and hydrocyanic acid liquefied, must be packed in specification containers as follows:

(1) As prescribed in §173.328.

(2) Specification 3A480, 3AA480, 3A480X[1], or 3AL1800 (§§178.36, 178.37, 178.46 of this subchapter). Metal cylinders of not over 278 pounds water capacity (nominal); a valve protection cap must be used and be at least ⅜ inch thick, gas-tight, with ⅛-inch faced seat for gasket and with a United States standard form thread; the cap must be capable of preventing injury or distortion of the valve when it is subjected to an impact caused by allowing the cylinder, prepared as for shipment, to fall from an upright position with side of cap striking a solid steel object projecting not more than 6 inches above floor level. Shipments in 3AL cylinders are authorized only when transported by highway and rail.

(b) Cylinders must be charged with not more than 0.6 pound of liquid for 1-pound water capacity of cylinder. Each filled cylinder must be tested for leakage before shipment and must show absolutely no leakage; this test must consist in passing over the closure of the cylinder, without the protection cap attached, a piece of Guignard's sodium picrate paper to detect any escape of hydrocyanic acid from the cylinder. Other equally efficient test methods may also be used in lieu of the picrate paper.

(c) Liquid hydrocyanic acid completely absorbed in inert material may also be shipped in specification containers as follows:

(1) Specification 15A, or 19B (§178.168, 178.191 of this subchapter). Wooden boxes with inside containers consisting of metal cans, spec. 2N (§178.32 of this subchapter), not over 14 pounds water capacity each. The liquid contents of each can must not exceed 0.33 pound of liquid for 1-pound water capacity of the can. Each can containing 4 ounces or more of liquid must be fitted with fiber caps not less than 0.08 inch thick flanged about 1 inch and fitting snugly over each end of the can. Each can must be tested for leakage after being filled and again after being maintained at ordinary room temperature for a period of at least three weeks. Each can must have its outer surface protected against rust by the use of enamel or lacquer, or each can must be completely wrapped in waterproof paper.

(2) The box lining must consist of not more than two pieces of waterproof paper, one piece completely surrounding the contents and running lengthwise of the box, and the other piece completely surrounding the contents and running crosswise of the box. In each instance, the wrapping must overlap at least 4 inches.

(3) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, constructed in accordance with requirements for a gross weight of 65 pounds but having a gross weight of not over 70 pounds, with inside

[1] Use of existing cylinders authorized, but new construction not authorized.

containers consisting of metal cans, Spec. 2N (§178.32 of this subchapter). The liquid contents of each can must not exceed 0.33 pound of liquid for 1-pound water capacity of the can and the total weight of liquid in each can must not exceed 41 ounces. Each can must be tested for leakage after being filled and again after being maintained at ordinary room temperature for a period of at least three weeks. Each can must have its outer surface protected against rust by the use of enamel or lacquer. Not more than twelve cans shall be packed in the outside fiberboard box and each can shall be separated from the other by 200-pound minimum test fiberboard partitions. Each box shall be provided with 200-pound minimum test fiberboard liner and top and bottom pads of the same material. In addition to the required closure of the boxes, two metal straps measuring ½ inch by .015 inch must be applied around the girth of each box.

(d) Specification 105A500W or 105A600W (§§179.100 and 179.101 of this subchapter). Tank cars. Tank must be restenciled 105A300W and be equipped with safety valves of the type and size used on Spec. 105A300W (§§179.100 and 179.101 of this subchapter). Tank car tank must be equipped with approved dome fittings and safety devices, and with cork insulation at least 4 inches in thickness. Each tank car must be marked "HYDROCYANIC ACID" in accordance with the requirements of §172.330 of this subchapter. Written procedures covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection, and testing practices shall be examined by the Bureau of Explosives and approved by the Director, OHMT before any tank car is offered for transportation of hydrocyanic acid. The maximum permitted filling density is 63 percent of the water capacity of the tank.

§ 173.333 Phosgene or diphosgene. (a) Phosgene or diphosgene must be packed in specification containers as follows:

(1) As prescribed in §173.328, the filling density (see §173.304(a)(2) Table Note 1) must not exceed 125 percent and a cylinder must not contain more than 150 pounds of phosgene.

(2) Spec. 106A500X (§§179.300, 179.301 of this subchapter) tanks. Authorized only for phosgene. Tanks must not be equipped with safety devices of any type. Outage must be sufficient to prevent tanks from becoming liquid full at 130° F. (55° C.). Additional requirements are prescribed for rail shipments under §174.200 of this subchapter, and for highway shipments under §177.834(m) of this subchapter.

(b) Each filled cylinder must be tested for leakage before shipment and must show absolutely no leakage; this test must consist in immersing the cylinder and valve, without the protection cap attached, in a bath of water at a temperature of approximately 150° F. for at least thirty minutes, during which time frequent examinations must be made to note any escape of gas. The valve of the cylinder must not be loosened after this test and before shipment.

§ 173.334 Organic phosphates mixed with compressed gas. (a) Hexaethyl tetraphosphate, parathion, tetraethyl dithio pyrophosphate, tetraethyl pyrophosphate, or other Poison B organic phosphate, n.o.s. (including a compound or mixture), may be mixed with a compressed gas which must be nonflammable. This mixture must not contain more than 20 percent by weight of organic phosphate and must be packaged as follows:

(1) Specification 3A240, 3AA240, 3B240, 4A240, 4B240, 4BA240, or 4BW240 (§§178.36, 178.37, 178.38, 178.49, 178.50, 178.51, 178.61, of this subchapter) cylinders meeting the following requirements:

(i) Each cylinder may be charged with not more than 10 pounds of the mixture, to a maximum filling density of not more than 80 percent of the water capacity;

(ii) Each cylinder must be charged in compliance with §173.301(e) and (l);

(iii) No cylinder may be equipped with an eduction tube or a fusible plug;

(iv) No cylinder may be equipped with any valve unless the valve is a type approved by the Department for this installation.

(v) Cylinders must be overpacked in a box so arranged to protect each valve or other closing device from damage. No more than four cylinders may be packed in a box except that in a wooden box, up to 12 cylinders may be so packed. Each box with its closing device protection must be sufficiently strong to protect all parts of each inside cylinder from deformation or breakage if the completed package were dropped six feet onto solid concrete, impacting at the weakest point.

(b) Cylinders must be packed in strong wooden boxes with valves or other closing devices protected from injury, with not more than twelve cylinders in one outside wooden box. A single-trip outside fiberboard box may be used when not more than four such cylinders are to be shipped in one outside container. Valves must be adequately protected. Box and valve protection must be of strength sufficient to protect all parts of inside containers and valves from deformation or breakage resulting from a drop of at least six feet onto a concrete floor, impacting at the weakest point.

§ 173.336 Nitrogen dioxide, liquid; nitrogen peroxide, liquid; and nitrogen tetroxide, liquid. (a) Nitrogen dioxide, liquid, nitrogen peroxide, liquid, and nitrogen tetroxide, liquid must be packed in specification containers as follows:

(1) As prescribed in §173.328.

(2) Specification 3A480, 3AA480, 3AL1800, or 25[1] (§178.36, §178.37, or §178.46 of this subchapter) metal cylinders with valve removed are authorized. Valve opening must be closed by means of a solid metal plug with tapered thread properly luted to prevent leakages; valve protection cap must be used and be at least ¼ inch thick, gastight, with ¼-inch faced seat for gasket and with United States standard form thread. Shipments in 3AL cylinders are authorized only when transported by highway and rail.

(i) Each cylinder must be cleaned in compliance with the requirements of Federal Specification RR-C-901b paragraphs 3.7.2 and 3.8.2. Cleaning agents equivalent to those specified in RR-C-901b may be used, however, any cleaning agent must not be capable of reacting with oxygen. One cylinder selected at random from a group of 200 or less cleaned at the same time must be tested for oil contamination in accordance with Specification RR-C-901b paragraph 4.4.2.3 and meet the standard of cleanliness specified.

(3) Specification 106A500X or 110A500W (§§179.300, 179.301 of this subchapter) tanks. Each tank must be equipped with gas tight valve protection caps. Tanks must not be equipped with safety devices of any type. Outage must be sufficient to prevent tanks from becoming liquid full at 130° F. (55°C.). (See §§174.600 and 177.834(m) of this subchapter for special requirements for rail and highway shipments.) Specification 110A500W tanks must be stainless steel.

(4) Specification 105A500 W (§§179.100, 179.101 of this subchapter). Tank cars. Authorized for nitrogen tetroxide only. Tanks must be lagged with not less than a four-inch thickness of cork. All valves and fittings must be protected by a securely attached cover made of metal not subject to deterioration by the lading, and all valve openings, except the safety valve, must be fitted with screw plugs or caps to prevent leakage in the event of valve failure. Safety valve must be equipped with an approved stainless steel or platinum frangible disc. Each tank car must be marked "NITROGEN TETROXIDE" in accordance with the requirements of §172.330 of this subchapter. Written procedures covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection, and testing practices must be examined by the Bureau of Explosives and approved by the Director, OHMT before any tank car is offered for transportation of nitrogen tetroxide.

§ 173.337 Nitric oxide. (a) Nitric oxide must be packed in specification containers as follows:

(1) Spec. 3A1800, 3AA1800, 3E1800, or 3AL1800 (§178.36, §178.37, §178.42, or §178.46 of this subchapter) cylinders charged to a pressure of not more than 750 psi at 70° F. Cylinders must be equipped with a valve of stainless steel and valve seat of material which will not be deteriorated by contact with nitric oxide or nitrogen dioxide. Cylinders or valves may not be equipped with safety devices of any type. Valve outlets must be sealed by a solid threaded cap or plug and an inert gasketing material.

(i) Specification 3E1800 cylinders must be packed in strong wooden boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Each outside packaging must be plainly marked "Inside containers comply with prescribed specifications."

(ii) Specification 3A, 3AA, and 3AL cylinders must have their valves protected by metal caps or other equally protective guards securely attached to the cylinders and be of sufficient strength to protect the valves from injury during transit, or by packing in strong wooden boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Each outside package must be plainly marked "Inside containers comply with prescribed specifications." Shipments in 3AL cylinders are authorized only when transported by highway and rail.

(iii) Each cylinder must be cleaned in compliance with the requirements of Federal Specification RR-C-901b paragraphs 3.7.2 and 3.8.2. Cleaning agents equivalent to those specified in RR-C-901b may be used; however, any cleaning agent must not be capable of reacting with oxygen. One cylinder selected at random from a group of 200 or less cleaned at the same time must be tested for oil contamination in accordance with Specification RR-C-901b paragraph 4.4.2.3 and meet the standard of cleanliness specified.

(2) Specification 106A500X (§§179.300, 179.301 of this subchapter) tank car tanks. Nitric oxide charge in each tank may not exceed 200 psig at 70° F. Each tank must be equipped with gas-tight valve protection cap (see §179.302 of this subchapter). Each valve outlet must be sealed by a threaded solid plug or a threaded cap with inert luting or gasket material. Valves must be of stainless steel and the caps, plugs, and valve seats must be of material that will not be deteriorated by contact with nitric oxide or nitrogen dioxide. The tank may not be equipped with any safety relief device.

---

[1] Use of existing cylinders authorized, but new construction not authorized.

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 173.343 Poison B. (a) For the purposes of Parts 170–189 of this chapter and except as otherwise provided in this part, Class B poisons are those substances, liquid or solid (including pastes and semisolids), other than Class A poisons or irritating materials, which are known to be so toxic to man as to afford a hazard to health during transportation; or which, in the absence of adequate data on human toxicity, are presumed to be toxic to man because they fall within any one of the following categories when tested on laboratory animals:

(1) Oral toxicity. Those which produce death within 48 hours in half or more than half of a group of 10 or more white laboratory rats weighing 200 to 300 grams at a single dose of 50 milligrams or less per kilogram of body weight, when administered orally.

(2) Toxicity on inhalation. Those which produce death within 48 hours in half or more than half of a group of 10 or more white laboratory rats weighing 200 to 300 grams, when inhaled continuously for a period of one hour or less as a concentration of 2 milligrams or less per liter of vapor, mist, or dust, provided such concentration is likely to be encountered by man when the chemical product is used in any reasonable foreseeable manner.

(3) Toxicity by skin absorption. Those which produce death within 48 hours in half or more than half of a group of 10 or more rabbits tested at a dosage of 200 milligrams or less per kilogram body weight, when administered by continuous contact with the bare skin for 24 hours or less.

(b) The foregoing categories shall not apply if the physical characteristics or the probable hazards to humans as shown by experience indicate that the substances will not cause serious sickness or death. Neither the display of danger or warning labels pertaining to use nor the toxicity tests set forth above shall prejudice or prohibit the exemption of any substances from the provisions of Parts 170–189 to this chapter.

§ 173.344 General packaging requirements for Poison B liquids. (a) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(b) Packagings containing liquid material may not be completely filled. Outage must be as follows:

(1) For packagings of 110 gallons or less, sufficient outage must be provided so that the packaging will not be liquid full at 130° F. (55° C.).

(2) The proper vacant space (outage) in a tank car or other shipping container depends on the coefficient of expansion of the liquid and the maximum increase of temperature to which it will be subjected in transit. Outage must be calculated to the total capacity of the container.

(3) Liquid poison must not be loaded into domes of tank cars.

(4) In tank cars, outage must be calculated to percentage of the total capacity of the tank, i.e., shell and dome capacity combined. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage.

(5) The outage for tank cars must not be less than 1 percent.

(6) No cargo tank or compartment thereof used for the transportation of any liquid poison shall be completely filled; sufficient space shall be left vacant in every case to prevent leakage from or distortion of any such cargo tank by expansion of the contents due to rise in temperature in transit, and such free space (outage) shall be sufficient in every case so that such cargo tank shall not become entirely filled with the liquid at 130° F.

§ 173.345 Limited quantities of Poison B liquids. (a) Limited quantities of Poison B liquids for which exceptions are permitted as noted by reference to this section in § 172.101 of this subchapter or as provided in § 173.359(c), in tightly closed inside packagings, securely cushioned when necessary to prevent breakage, are excepted from the specification packaging requirements when packed according to the following paragraphs. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §§ 174.24 and 174.680 and to Part 177 of this subchapter except §§ 177.817 and 177.841(e).

(1) In glass packagings not over 1-quart capacity each, or in metal containers or polyethylene bottles not over 1-gallon capacity each, packed in outside steel or wooden boxes, barrels, or drums.

(2) In glass packagings not over 1 pint capacity each, or in metal or polyethylene packagings (other than bags) not over 1 quart capacity each, packed in a strong outside fiberboard box or molded expanded polystyrene case.

(b) Special exceptions for shipment of certain drugs and medicines in the ORM–D class are prescribed in Subpart N of this part.

§ 173.346 Poison B liquids not specifically provided for. (a) Poison B liquid, as defined in § 173.343, other than those for which special requirements are prescribed, must be packaged as follows:

(1) Spec. 5, 5A, 5B, or 5C (§§ 178.80, 178.81, 178.82, or 178.83 of this subchapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C or 17E (§§ 178.115 or 178.116 of this subchapter). Metal drums (single-trip containers), with openings not exceeding 2.3 inches in diameter.

(3) Specification 37B (§ 178.132 of this subchapter). Metal drums (single-trip containers), welded side seams, openings not over 2.3 inches in diameter, capacity not over 10 gallons. Not authorized for transportation by air.

(4) Spec. 37A or 37B (§ 178.131 or § 178.132 of this subchapter). Metal drums (single-trip containers), with welded side seams, not over 5 gallons; authorized for pastes only.

(5) [Reserved]

(6) Specification 34 (§ 178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of § 173.24(d) of this Part prior to first shipment.

(7) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes with glass or earthenware inside containers not over 1 quart capacity each, or with metal inside containers not over 1 gallon capacity each. Packages containing glass or earthenware containers must not weigh over 65 pounds gross.

(8) Spec. 12D (§ 178.207 of this subchapter). Fiberboard boxes with inside container which must be glass or earthenware not over one gallon each; authorized for not more than 75 pounds gross weight; not to contain more than 4 such inside containers if their capacity is greater than 5 pints each. Use of this container will be permitted until further order of the Department.

(9) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§ 178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon capacity each, except that inside containers not over 3 gallons are authorized when only one is packed in each outside container; or with inside metal containers, not over 10 gallons capacity each.

(10) Specification 103,[1] 103W, 103A,[1] 103ALW, 103AW, 103BW, 104,[1] 104W, 105A100,[1] 105A 100W, 105A200ALW, 109A300ALW, 111A60ALW1, 111A60F1, 111A60W1, 111A60W2, 111A100F2, 111A100W4, 112A400W, 114A400W, or 115A60W6 (§§ 179.100, 179.101, 179.200, 179.201, 179.220, 179.221 of this subchapter). Tank cars. Specification 103BW tank cars must be rubberlined and are authorized only for arsenic acid as prescribed in § 173.348 of this subchapter.

(11) Cylinders as prescribed for any compressed gas, except acetylene, are also authorized.

(12) Specifications MC 300, MC 301, MC 302, MC 303, MC 304, MC 305, MC 306, MC 307, MC 310, MC 311, or MC 312 (§§ 178.341, 178.342, 178.343 of this subchapter). Cargo tanks. Tank motor vehicles designed and constructed to Specification MC 304 or MC 307 except for bottom outlets equipped with external ball valves may be used only for toluene diisocyanate.

(13) Specification 1A, 1D, or 1M (§§ 178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(14) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(15) Spec. 21C (§ 178.224 of this subchapter). Fiber drums, with inside glass containers not over one gallon capacity each.

(16) Spec. 42B, or 42D (§§ 178.107, 178.109 of this subchapter). Aluminum drums.

(17) [Reserved]

(18) Spec. 15P or 22C (§ 178.182 or § 178.198 of this subchapter). Glued plywood or wooden box, or plywood drum as prescribed by § 178.198–2(a) of this subchapter, with inside spec. 2T (§ 178.21 of this subchapter) polyethylene container.

(19) Specification 37P (§ 178.133 of this subchapter). Steel drums, not over 5 gallons capacity, with polyethylene liner (non-reusable container). Drums exceeding 1 gallon capacity must be constructed of at least 24-gauge metal. Hole in steel drum body must be suitably plugged. Authorized only for materials that will not react with polyethylene and result in container failure. Not authorized for transportation by air.

(20) Specification 6D or 37M (§§ 178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside Specifications 2S or 2SL (§§ 178.35, 178.35a of this subchapter) polyethylene containers. Authorized for materials that will not react with polyethylene and result in container failure.

(21) Spec. 12A (§ 178.210 of this subchapter). Fiberboard boxes with not more than one inside glass bottle not over 1-gallon capacity. Shipper must have established that the completed package meets test requirements prescribed by § 178.210–10 of this subchapter.

(22) Spec. 29 (§ 178.226 of this subchapter). Mailing tubes, with polyethylene bottles not over 2 quarts capacity each.

(23) [Reserved]

(24) Specification 12P (§ 178.211 of this subchapter). Fiberboard boxes with one inside Specification 2U (§ 178.24 of this subchapter) polyethylene container of not over 5 gallon capacity or two inside Specification 2U polyethylene containers of not over 2½ gallon capacity each. Wire staples are not authorized for assembly or closure of boxes, except

[1] The use of existing tanks authorized but new construction not authorized.

when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(25) Specification 16A (§178.165 of this subchapter). Wirebound wooden box (see §178.165-22 of this subchapter) with inside Specification 2U (§178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(26) Spec. 12B or 12A (§§178.205 or 178.210 of this subchapter). Fiberboard boxes with inside polyethylene bottles having a minimum wall thickness of 0.015 inch and provided with screw-cap closures, not over 1-gallon capacity each. Except for polyethylene bottles having a minimum wall thickness exceeding 0.015 inch, each bottle shall be enclosed in a box constructed of at least 200-pound test (Mullen or Cady) corrugated fiberboard and not more than four such boxes shall be packed in one outside specification shipping container. When Spec. 12A boxes are used, shipper must have established that completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(27) Specification 51 (§178.245 of this subchapter). Portable tank. For rail transportation see §174.63 of this subchapter.

(28) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter), are authorized for transportation of poison B liquids, n.o.s., with no subsidiary hazard, under conditions specified in the IM Tank Table.

§ 173.347 Aniline oil. (a) Aniline oil must be packed in specification containers as follows:

(1) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.158, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside metal containers not over 10 gallons capacity each, or glass bottles not over 1-pound capacity each. Not more than 25 glass bottles shall be packed in one outside box.

(2) Specification 103,[1] 103W, 103A,[1] 103AW, 104W, 105A100W, 111A60F1, 111A60W1, 111A60W2, 111A100F2, 112A200W, 112A400F, or 114A340W (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars.

(3) Specification MC 300, MC 301, MC 302, MC 303, MC 304, MC 305, MC 306, or MC 307 (§§178.340, 178.341, 178.342 of this subchapter) cargo tanks. Bottom outlets on Specification MC 304 cargo tanks must be equipped with valves conforming with §178.342-5(a) of this subchapter.

(4) Spec. 5, 5A, or 5B (§§178.60, 178.81, or 178.82 of this subchapter). Metal barrels or drums. Net weight in 110 gallon drums must not exceed 915 pounds.

(5) Spec. 17C (§178.115 of this subchapter). Metal drums (sing'e-trip).

(6) Spec. 17E (§178.116 of this subchapter). Metal drums (sing'e-trip) not over 5 gallons capacity each.

(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with metal inside containers not over 1 gallon capacity each; not to contain more than 4 such inside containers if their capacity is greater than 5 pints each.

(8) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles or metal containers not over 1 gallon capacity each. Not more than four inside containers having capacity of 1 gallon each, shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(9) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

(b) Openings in metal barrels or drums must not exceed 2.3 inches in diameter.

(1) Gaskets not less than one-eighth inch thick must be used at bung and filling holes. Gaskets must be made of hard fiber impregnated with glycerin, metal-covered cork, impregnated asbestos sheets, or metal-covered asbestos.

(c) Filled drums must be so placed that bungs will be subjected to hydrostatic head of oil contained therein for a period of not less than 12 hours.

(1) The exterior of filled drums must be carefully examined for evidence of aniline oil, any traces of which must be removed by washing off with water or, preferably, weak acetic acid. The space between rolling hoops immediately around the bung should be painted to aid in the detection of leaks at this point.

(d) All returnable drums must bear the following notice, "**PREVENT DAMAGE TO FOODSTUFFS OR OTHER FREIGHT. DRAIN THIS DRUM THOROUGHLY. TIGHTEN BUNGS, WITH GASKET SECURELY IN PLACE BEFORE RETURNING. USE NEW GASKETS WHEN NECESSARY. ANILINE OIL STAINS ON THE OUTSIDE OF DRUMS SHOULD BE WASHED OFF WITH WATER OR, PREFERABLY WEAK ACETIC ACID**", shellacked to head of drum near the consignee's name and address.

[1] The use of existing tanks authorized but new construction not authorized.

§ 173.348 Arsenic acid. (a) Arsenic acid must be packed in specification containers as follows:

(1) As prescribed in §173.346. When shipped in metal barrels or drums, or cargo tanks or tank cars, without lead lining, the arsenic acid must contain not over 0.05 percent nitric acid.

(2) Specification 1A, 1D or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(3) Specification 12A or 12B (§§178.210, 178.205 of this subchapter). Fiberboard boxes with Specification 2E (§178.24a of this subchapter) inside polyethylene bottles made of high-density (Type III) polyethylene having minimum wall thickness of 0.015 inch with screw-cap closures, not over 1-gallon capacity each. Specification 12A fiberboard boxes may have not more than four inside polyethylene bottles which must be packed to provide a snug fit. Specification 12B fiberboard boxes may not contain more than one inside polyethylene bottle and not more than four such boxes may be overpacked in a strong outside fiberboard box under provisions of §173.25.

(4) Specification 21P (§178.225 of this subchapter). Fiber drum overpack with inside Specification 2S, 2SL, or 2U (§§178.35, 178.35a, 178.24 of this subchapter) polyethylene packaging of not over 30-gallon capacity.

(5) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

§ 173.349 Carbolic acid (phenol) liquid. (a) Carbolic acid (phenol) liquid (liquid tar acid containing over 50 percent benzo-phenol), must be packed in specification containers as follows:

(1) As prescribed in §173.346.

(2) Specification 1A, 1D, or 1M (§§178.1, 178.4, 178.17 of this subchapter). Glass carboys in boxes or expanded polystyrene packagings. Not authorized for transportation by aircraft.

(3) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5-pints capacity each. Not more than 6 inside glass bottles of 5-pints capacity each shall be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(4) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this Part prior to first shipment.

§ 173.350 Chemical ammunition. (a) Chemical ammunition consisting of projectiles, shells, bombs, grenades and other containers filled with Poison B materials, without ignition elements, bursting charges, detonating fuzes, or other explosive components, must be packed for shipment in strong outside wooden or metal boxes. Boxes must be marked with proper shipping name and labeled as prescribed by this part for gases, liquids, or chemicals contained therein.

(b) Chemical ammunition, when shipped as such, must not be equipped or packed with explosive or ignition elements. (See §§173.53(r) and 173.59 for explosive chemical ammunition.)

§ 173.351 Hydrocyanic acid solutions. Hydrocyanic acid solutions not over 5 percent hydrocyanic acid must be packaged in specification containers as follows:

(a) As prescribed in §173.332.

(b) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190 or 178.191 of this subchapter) wooden boxes with inside glass bottles not over 1 pound capacity each for solutions of not over 5 percent hydrocyanic acid and not over 5 pints capacity each for solutions of not over 2 percent strength. Completed package, with glass packaging filled with water, must be capable of withstanding six four-foot drops onto solid concrete in the following order: bottom, four sides, and top, without breakage.

§ 173.352 Sodium and potassium cyanide solutions and cyanide solution, n.o.s. (a) Sodium and potassium cyanide solutions, and cyanide solutions, n.o.s. must be packed in specification packagings as follows:

(1) Spec. 5, 5A, or 5B (§§178.60, 178.81, or 178.82 of this subchapter). Metal barrels or drums without galvanizing inside, with openings not exceeding 2.3 inches in diameter.

(2) Specification 17E or 37B (§§178.116, 178.132 of this subchapter). Metal drums (sing'e-trip), with welded side seams, with openings not exceeding 2.3 inches in diameter. Specification 37B not authorized for transportation by air.

(3) Specification 15A, 15B, 15C, 16A, 19A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon capacity each, or inside metal containers not over 10 gallons capacity each, and without galvanizing.

(4) Specification 103,[1] 103W, 103A,[1] 103AW, 105A400W, 111A60F1, 111A60W1, 111A60W2, 111A100F2, 112A400W, or 114A400W (§§179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars.

(5) Specifications MC-300, MC-301, MC-302, MC-303, MC-304, MC-305, MC-306, MC-307, or MC-312 (§178.341, 178.342, 178.343 of this chapter). Cargo tanks.

(6) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table

(7) Specification 6D (§178.102 of this subchapter) Cylindrical steel overpack with inside Specification 2S or 2SL (§§178.35, 178.35a of this subchapter) polyethylene packaging. Not authorized for transportation by air.
(8) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

§ 173.353 Methyl bromide and methyl bromide mixtures. (a) Methyl bromide, liquid (bromomethane); methyl bromide and ethylene dibromide mixture liquid; or methyl bromide and more than 2% chloropicrin mixture, liquid; must be packed in specification containers as follows:
(1) Specification 5A (§178.81 of this subchapter). Metal drums not exceeding 30 gallons capacity or metal drums of bilge type not exceeding 33 gallons capacity and with openings not exceeding 2 3 inches in diameter. Not authorized for mixtures containing any compressed gas.
(2) Specification 15A, 15B, 15C, 16A, 19A, 19B or 12B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191, 178.205 of this subchapter). Wooden, wire-bound wooden, or fiberboard boxes, with inside metal cans containing not over 1 pound each, or inside metal cans with a minimum wall thickness of 0.007-inch containing not over 1¼-pound each. The 1-pound can must be able to withstand an interior pressure of 130 psig without leakage or permanent distortion and pressure of contents must not exceed 130 psig at 130°F. (55°C.). The 1¼-pound can must be able to withstand an interior pressure of 140 psig without leakage or permanent distortion and pressure of contents must not exceed 140 psig at 130°F. (55°C.). Outage shall be such that the cans will not become liquid full at 130°F. Cans must be of tinplate or lined with suitable material and must have concave or pressure ends.
(3) Specification 3AA225, 3AA225, 3B225, 3E1800, 4A225[1], 4B225, 4BA225, or 4BW225 (§§178.36, 178.37, 178.38, 178.42, 178.49, 178.50, 178.51, 178.61 of this subchapter). Metal cylinders. Valves and other closing devices must be protected to prevent damage in transit by equipping the cylinder with protection required by §173.301(g). Cylinders having a wall thickness of less than 0.08 inch must be packed in boxes or crates (see §173.25).
(4) Spec. 4D300 or 4DA500 (§178.53 or §178.58 of this subchapter). Metal spheres, must be packed in strong boxes or crates (see §173.25).
(5) Specification 105A100,[1] 105A100W, or 111A100-W-4 (§§179.100, 179.101, 179.200, 179.201 of this subchapter) tank cars. Outage must be sufficient to prevent tank cars from becoming liquid full at 105°F.
(6) Specification 106A500X (§§179.300, 179.301 of this subchapter) tanks. Outage must be sufficient to prevent tanks from becoming liquid full at 130°F. (55°C.). (See §§174.200 and 177.834(m) of this subchapter for special requirements for rail and highway shipments.)
(7) Specification 12B (§178.205 of this subchapter). Fiberboard box with inside tinplated metal cans containing not more than 6 ounces net weight of product per can. Cans must be capable of withstanding a pressure of 75 pounds per square inch at 130°F. without leakage or permanent distortion. Not more than 12 cans may be packed snugly in the outside fiberboard box and gross weight of completed package shall not exceed 30 pounds. Authorized only for methyl bromide and ethylene dibromide mixtures.
(8) Specification 51 (§178.245 of this subchapter). Steel portable tanks having a design pressure of not less than 250 pounds per square inch and equipped with a spring-load safety relief device.
(b) [Reserved]
(c) Outage must be sufficient to prevent cylinders or spheres from becoming entirely filled with liquid at 130°F. (55°C.) and when the vacant space (outage) is charged with a nonflammable nonliquefied compressed gas, the pressure in the cylinder or sphere at 130°F. (55°C.) must not exceed 5/4 the marked service pressure of the cylinder or sphere.
(d) Spec. 17C (§178.115 of this subchapter). Metal drums (single-trip) not over 5¼ gallons marked capacity each and having no opening exceeding 2 3 inches in diameter. Authorized only for mixtures of methyl bromide and ethylene dibromide, liquid containing not over 40 percent by weight of methyl bromide.
(e) Specifications MC 330 and MC 331 (§178.337 of this subchapter). Cargo tanks having a design pressure not less than 250 pounds per square inch equipped with an approved spring-relief safety valve. Outage must be sufficient to prevent tank from becoming entirely filled with liquid at 130°F.

§ 173.353a Methyl bromide, liquid, and nonflammable, nonliquefied compressed gas mixtures. (a) Methyl bromide, liquid and nonflammable, nonliquefied compressed gas mixtures must be packed in specification containers as noted in §173.353a(a)(2), (3), (4), (5), (6), (8), and (c).
(b) Liquid may contain 2 percent or less by weight chloropicrin.

§ 173.354 Motor fuel antiknock compound or tetraethyl lead. (a) Motor fuel antiknock compound (a mixture of one or more organic lead compounds such as tetraethyl lead, triethylmethyl lead, diethyldimethyl lead, ethyltrimethyl lead, and tetramethyl lead, with one or more halogen compounds such as ethylene dibromide and ethylene dichloride, hydrocarbon solvents or other equally efficient stabilizers) or tetraethyl lead must be packed in specification containers as follows:
(1) Specification 15A or 19B (§178.168, §178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers of not over 1 pint capacity each, or metal cans, enclosed in hermetically sealed (soldered) strong metal cans.
(2) Spec. 5 or 5A (§§178.80 or 178.81 of this subchapter). Metal barrels or drums, with openings not exceeding 2 3 inches in diameter.
(3) Specification steel or nickel cylinders as prescribed for any compressed gas, except acetylene.
(4) Specification 105A300-W (§§179.100 and 179.101 of this subchapter). Tank car. Each tank car must be marked "MOTOR FUEL ANTIKNOCK COMPOUND" in accordance with the requirements of §172.330 of this subchapter. Tank car not authorized for tetraethyl lead. Openings in tank heads to facilitate application of nickel lining are authorized on tank cars constructed before January 1, 1975. These openings must be closed in an approved (§179.3 of this subchapter) manner.
(5) Specification MC 330 or MC 331 (§178.337 of this subchapter) cargo tanks. (See Note 1). These cargo tanks are authorized for motor fuel antiknock compound only. A frangible disc may be used in series with and inboard of the pressure relief valve. The relief valve and the frangible disc must be set to function in a range of no less than 100 percent and no greater than 110 percent of the maximum allowable working pressure.
NOTE 1: Spec. MC 300, MC 301,[1] MC 302 or MC 303 (§§178.321, 178.323, or §178.324 of this chapter) cargo tanks in motor fuel antiknock compound service prior to October 1, 1955 may be continued in service.
(6) Spec. 51 (§178.245 of this subchapter). Portable tanks having a minimum design pressure of 100 pounds per square inch. Authorized for motor fuel antiknock compound only. A frangible disc may be used in series with and inboard of the pressure relief valve. The relief valve and the frangible disc must be set to function in a range of no less than 100 percent and no greater than 110 percent of the maximum allowable working pressure.
(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed on at least 375-pound test (Mullen or Cady) solid fiberboard with inside metal cans enclosed in hermetically sealed (soldered) metal cans, not over 5 pounds capacity each. Each inside metal container must be enclosed in a taped, double-faced corrugated liner constructed of at least 200-pound test (Mullen or Cady) fiberboard and fitted with die-cut end caps constructed of at least 200-pound test (Mullen or Cady) double-walled corrugated fiberboard. Authorized gross weight not over 90 pounds.
(b) Outage must be sufficient to prevent any container from becoming entirely filled with liquid at 130°F.
(c) Steel tanks conforming or equivalent to ASME specifications which contain solid or semisolid residual motor fuel antiknock compound (including rust, scale, or other contaminants) may be shipped by rail freight or highway. The tank must have been designed and constructed to be capable of withstanding full vacuum. All openings must be closed with gasketed blank flanges or vapor tight threaded closures. Each tank must be secured and braced to prevent movement under conditions normally incident to transportation.

§ 173.355 Phenyldichlorarsine. (a) Phenyldichlorarsine must be packed in specification containers as follows:
(1) Spec. 5A (§178.81 of this subchapter). Metal barrels or drums, made of not less than 12 gauge steel, and limited to 30 gallons capacity, with openings not exceeding 2 3 inches in diameter. Each metal barrel or drum must be tested before each filling to 20 pounds hydrostatic test.

§ 173.356 Thiophosgene. (a) Thiophosgene must be packed in specification containers as follows:
(1) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside containers which must be tightly closed glass bottles not exceeding 1 pint capacity each, securely packed in absorbent incombustible cushioning material. Cushioning material must be capable of absorbing entire contents of the container.
(2) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside glass bottles not over 1-quart capacity each, securely packed in absorbent incombustible cushioning material in sufficient quantity to absorb any leakage.
(3) Specification 5C (§178.83 of this subchapter). Steel barrels or drums made of Type 304 stainless steel.
(4) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.357 Chloropicrin and chloropicrin mixtures containing no compressed gas or Poison A liquid. (a) Chloropicrin. Chloropicrin, when offered for transportation by carriers by rail freight, highway, or water, must be packed in specification containers as follows:
(1) Specification 15A, 15B, 15C, 16A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.191 of this subchapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, Spec. 2C (§178.22 of this subchapter). Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

[1] Use of existing cylinders authorized, but new construction not authorized.

[1] Use of existing cylinders authorized, but new construction not authorized.

(2) Spec. 12B (§178.205 of this subchapter). One-piece corrugated fiberboard boxes at least 200-pound test with inside glass bottles or tubes in hermetically sealed metal cans in individual unsealed one-piece corrugated fiberboard boxes, Spec. 12B at least 200-pound test. Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 12 pounds.

(3) Spec. 12B (§178.205 of this subchapter). One-piece corrugated fiberboard boxes at least 200-pound test with not more than one inside glass bottle or tube in a hermetically sealed metal can. Bottles must contain not over 1 pound of liquid, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard.

(4) Specification 34 (§178.19 of this subchapter). Polyethylene drum. The shipper shall assure conformance with the requirements of §173.24(d) of this part prior to first shipment.

(b) *Chloropicrin and chloropicrin mixtures containing no compressed gas or Poison A liquid.* Chloropicrin and mixtures of chloropicrin containing no compressed gas or Poison A liquid, in addition to containers prescribed in paragraph (a) of this section, when offered for transportation by carriers by rail freight, highway, or water, may be shipped in specification containers as follows:

(1) Specification 3A, 3AA, 3B, 3C[1], 3D[1], 3E, 4A[1], 4B, 4BA, 4BW, or 4C[1] (§§178.36, 178.37, 178.38, 178.40, 178.41, 178.42, 178.49, 178.50, 178.51, 178.52, 178.61 of this subchapter). Metal cylinders. Valves and other closing devices must be protected to prevent damage in transit by equipping the cylinders with valve protection, required by §173.301(g) of this subchapter. A cylinder closed by means of a solid plug may have the closure protected by a metal collar. Cylinders having a wall thickness of less than 0.08 inch must be packaged in boxes or crates. Each cylinder having a water capacity over 275 pounds must have a minimum design pressure of 225 p.s.i.g., unless the specification requires a higher minimum design pressure.

(2) Specification 5A or 5B (§§178.81, 178.82 of this subchapter). Metal drums not exceeding 33-gallon capacity with welded seams. Specification 5B authorized only for chloropicrin mixtures containing not over 45 percent chloropicrin by weight. Removable head containers not authorized.

(3) Specification 17C or 17E (§§178.115, 178.116 of this subchapter). Metal drums (sing'e-trip) with openings not over 2 3 inches in diameter. Capacity not to exceed 30 gallons for Spec. 17E. Authorized only for mixtures of chlorpicrin and technical grade dichloropropene containing not more than 15 percent chlorpicrin by weight.

(4) Specification 106A500X (§§179.300, 179.301 of this subchapter) tanks. Valves must be protected by metal caps. Tanks must not be equipped with safety devices of any type. Outage must be sufficient to prevent tanks from becoming liquid full at 130° F. (55° C.). (See §177.834(m) of this subchapter for special requirements for highway shipments.)

(5) Spec. 105A300–W, 105A400–W, or 105A500–W (§§179.100 and 179.101 of this subchapter). Tank cars.

(c) *Chloropicrin and mixtures of chloropicrin containing no compressed gas or Poison A liquid,* must be packaged as follows:

(1) Specification 15A, 15B, 15C, 16A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.191 of this subchapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, Spec. 2C (§178.22 of this subchapter). Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

(2) Spec. 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes, metal strapped, with chloropicrin absorbed in an efficient absorbing material packed in hermetically sealed metal cans not over 1 quart capacity each.

(3) Spec. 12B (§178.205 of this subchapter). One-piece corrugated fiberboard boxes at least 200-pound test with inside glass bottles or tubes in hermetically sealed metal cans in individual unsealed one-piece corrugated fiberboard boxes. Spec. 12B at least 200-pound test. Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 12 pounds.

(4) Spec. 12B (§178.205 of this subchapter). One-piece corrugated fiberboard boxes at least 200-pound test with not more than one inside glass bottle or tube in a hermetically sealed metal can. Bottles must contain not over 1 pound of liquid, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard.

§ 173.358 Hexaethyl tetraphosphate, methyl parathion, organic phosphate compound, organic phosphorous compound, parathion, tetraethyl dithio pyrophosphate, and tetraethyl pyrophosphate, liquid. (a) Hexaethyl tetraphosphate, methyl parathion, organic phosphate compound, organic phosphorous compound, parathion, tetraethyl dithio pyrophosphate, and tetraethyl pyrophosphate, liquid must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5B (§§178.80, 178.81, 178.82 of this subchapter). Metal barrels or drums, with openings not exceeding 2 3 inches in diameter.

(2) Spec. 17C or 17E (§§178.115, 178.116 of this subchapter). Metal drums (sing'e-trip), with openings not exceeding 2 3 inches in diameter. Spec. 17E drums authorized for not over 5 gallons capacity each.

(3) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside metal containers of not over 5 gallons capacity each.

(4) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside glass bottles not over 1 gallon capacity each, securely cushioned in liquid-tight metal cans.

(5) Specification 21C (§178.224 of this subchapter). Fiber drums, with inside glass or metal containers not over 1 gallon capacity each.

(6) Spec. 37A (§178.131 of this subchapter). Metal drums (sing'e-trip), with inside glass containers not over 1-gallon capacity each.

(7) Specification cylinders as prescribed for any compressed gas except acetylene. DOT 3AL cylinders are authorized only for parathion and methyl parathion service.

(8) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides and top without breakage.

(9) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with not more than one inside container of polyethylene, or other nonfragile plastic material, and closed by a screw cap of similar material, not over 16 ounces, surrounded by absorbent cushioning and packed in a one gallon securely closed metal can which shall be surrounded with absorbent cushioning material within the outside fiberboard box.

(10) Spec. 42B (§178.107 of this subchapter). Aluminum drums.

(11) Specification 105A200ALW or 105A300W (§§179.100, 179.101 of this subchapter). Tank cars. Authorized for parathion, methyl parathion, and liquid organic phosphate compounds only. The nominal water capacity of a tank car must not exceed 12,000 gallons.

(12) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with an inside Specification 2S (§178.35 of this subchapter) polyethylene container. Each full removable head overpack over 5 gallons capacity must be closed by means of a 12-gauge steel bolted ring closure with drop forged lugs, one of which is appropriately threaded. For an overpack not over 30 gallons capacity, the threaded lug must have at least a ⅜-inch bolt and locking nut, and for an overpack over 30 gallons capacity the bolt and locking nut must be at least ½-inch. Authorized only for materials that will not react with polyethylene and result in container failure.

(13) Specification 51 (§178.245 of this subchapter). Portable tanks. Tanks must have no bottom opening except one 3-inch maximum plugged opening for maintenance purposes is authorized. Contents of the tank must be under no gas pressure except its own vapor pressure and the commodity must be loaded into, and unloaded from, the tank while the tank is mounted on the vehicle chassis. Authorized for parathion, methyl parathion, and organic phosphate compound only and by private motor carrier only.

(14) Specification MC 310, MC 311, MC 312, MC 330 or MC 331 (§§178.343, 178.337 of this subchapter). Cargo tank. Bottom outlets, if any, must be equipped with valves conforming with §178.337–11(c) of this subchapter. MC 311 or MC 312 must have a minimum material thickness of ⅜-inch and designed for a product weight of 13 pounds per gallon or over. Contents of the tank must be under no gas pressure except its own vapor pressure. Authorized for parathion, methyl parathion and organic phosphate compound only, and by private motor carrier only.

(15) Specification 17E (§178.116 of this subchapter). Steel drum (sing'e-trip) which must be made of not less than 18-gauge body and heads. Authorized only for methyl parathion, organic phosphate compound, and parathion. Shipments authorized by private motor carrier only.

(16) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter). Authorized only for organic phosphate compound and organic phosphorous compound, liquid, depending on the toxicity of the material and for methyl parathion, under conditions specified in the IM Tank Table.

§ 173.359 Hexaethyl tetraphosphate mixtures; methyl parathion mixtures; organic phosphorus compound mixtures; organic phosphate compound mixtures; parathion mixtures; tetraethyl dithio pyrophosphate mixtures; and tetraethyl pyrophosphate mixtures, liquid (includes solutions, emulsions, or emulsifiable liquids). (a) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures (solutions, emulsions, or emulsifiable liquids) containing not more than 50 percent hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate by weight, must be packed in specification containers as follows:

[1] Use of existing cylinders authorized, but new construction not authorized.

For explanation of abbreviations and reference marks, see last page of this tariff.

(1) Spec. 5, 5A, or 5B (§§178.80, 178.81, or 178.82 of this subchapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C (§178.115 of this subchapter). Metal drums (single-trip), with openings not exceeding 2.3 inches in diameter.

(3) Spec. 17E or 37B (§178.116 or §178.132 of this subchapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter. Capacity not to exceed 10 gallons for Spec. 17E drums. Spec. 37B drums must be constructed of at least 24-gauge metal with welded side seams, of capacity not over 5½ gallons, and must be tested as prescribed by §§178.116-12 and 178.116-13 of this subchapter. Authorized only for mixtures not classed as flammable under these regulations.

(4) Specification 15A, 15B, 15C, 15E, or 19B (§§178.168, 178.169, 178.170, 178.172, 178.191 of this subchapter). Wooden boxes, with inside metal containers not over 10 gallons capacity each.

(5) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside glass bottles not over 1 gallon capacity each, securely cushioned in liquid-tight metal cans.

(6) Specification 21C (§178.224 of this subchapter). Fiber drums, with inside glass or metal containers not over 1-gallon capacity each.

(7) Spec. 37A (§178.131 of this subchapter). Metal drums (single-trip), with inside glass containers not over 1 gallon capacity each.

(8) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes as authorized by §178.205-19(a) of this subchapter.

(9) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(10) Spec. 42B (§178.107 of this subchapter). Aluminum drums.

(11) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside high-density polyethylene bottles not over 1-gallon capacity each. Polyethylene bottles must have a minimum wall thickness of 0.015 inch and be equipped with screw-cap closures additionally taped for securement. Each polyethylene bottle shall be packed in an inside fiberboard box. Not more than four inside fiberboard boxes with inside polyethylene bottles shall be packed in one outside shipping container. Polyethylene used in construction of inside polyethylene bottles must be of a type compatible with the lading and shall prevent permeation of contents to a degree that would cause a hazardous condition in transportation and handling.

(12) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside securely closed metal containers not over 1-gallon capacity each. Fiberboard boxes shall be constructed of not less than 500-pound test (Mullen or Cady) double-wall corrugated fiberboard. Not more than six 1-gallon metal containers shall be packed in one outside container. Authorized gross weight not over 65 pounds.

(13) Spec. 105A300-W (§§179.100 and 179.101 of this subchapter). Tank cars. Authorized for organic phosphate compound mixtures, only.

(14) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with an inside Specification 2S (§178.35 of this subchapter) polyethylene container. Each full removable head overpack over 5 gallons capacity must be closed by means of a 12-gauge steel bolted ring closure with drop forged lugs, one of which is appropriately threaded. For an overpack not over 30 gallons capacity, the threaded lug must have at least a ⅜-inch bolt and locking nut, and for an overpack over 30 gallons capacity the bolt and locking nut must be at least ½-inch. Authorized only for materials that will not react with polyethylene and result in container failure.

(15) Specification 51 (§178.245 of this subchapter). Portable tanks. Tanks must have no bottom opening except one 3-inch maximum plugged opening for maintenance purposes is authorized. Contents of the tank must be under no gas pressure except its own vapor pressure and the commodity must be loaded into, and unloaded from, the tank while the tank is mounted on the vehicle chassis. Authorized for methyl parathion mixtures, organic phosphate compound mixtures, and parathion mixtures only and by private motor carrier only.

(16) Specification MC 310, MC 311, MC 312, MC 330 or MC 331 §§178.343, 178.337 of this subchapter). Cargo tank. Bottom outlets, if any, must be equipped with valves conforming with §178.337-11(c) of this subchapter. MC 311 or MC 312 must have a minimum material thickness of 7/16 inch and designed for a product weight of 13 pounds per gallon or over. Contents of the tank must be under no gas pressure except its own vapor pressure. Authorized for parathion mixtures, methyl parathion mixtures and organic phosphate compound mixtures only, and by private motor carrier only.

(17) Specification 37D (§178.137 of this subchapter). Nonreusable steel drum which must be made of not less than 21-gauge body and 20-gauge heads. Authorized only for methyl parathion mixtures, parathion mixtures, and organic phosphate compound mixtures, not exceeding a weight of 12 pounds per gallon.

(18) Specification 17E (§178.116 of this subchapter). Steel drum (single-trip), which must be made of not less than 18-gauge body and heads. Authorized for methyl parathion mixtures, organic phosphate compound mixtures, and parathion mixtures only, and by private motor carrier only.

(19) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized for these materials when shipped under conditions specified for a poisonous liquid not listed by name in the IM Tank Table.

(b) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures (solutions, emulsions, or emulsifiable liquids) containing more than 50 percent hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate by weight, must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5B (§§178.80, 178.81, or 178.82 of this subchapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C, 17E, or 37B (§178.115, §178.116, or §178.132 of this subchapter). Metal drums (single-trip) with openings not exceeding 2.7 inches in diameter. Spec. 17E drums authorized for not over 5 gallons capacity each. Spec. 37B drums must be constructed of at least 24-gauge metal with welded side seam, of not over 5½ gallons capacity, and must be tested as prescribed by §§178.116-12 and 178.116-13 of this subchapter.

(3) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside metal containers not over 5 gallons capacity each.

(4) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes, with inside glass bottles not over 1-gallon capacity each, securely cushioned in liquid-tight metal cans.

(5) Specification 21C (§178.224 of this subchapter). Fiber drums, with inside glass or metal containers not over 1-gallon capacity each.

(6) Spec. 37A (§178.131 of this subchapter). Metal drums (single-trip), with inside glass containers not over 1 gallon capacity each.

(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(8) Spec. 42B (§178.107 of this subchapter). Aluminum drums.

(9) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with not more than six inside high-density polyethylene bottles having screw-cap closures, not over 1-quart capacity each. Fiberboard boxes must have full-height corrugated fiberboard liner, top and bottom pads, and bottles must be separated by corrugated fiberboard partitions. Plastic used in construction of bottles must be of a type compatible with the lading.

(10) Specification 6D (§178.102 of this subchapter). Cylindrical steel overpack with an inside Specification 2S (§178.35 of this subchapter) polyethylene container. Each full removable head overpack over 5 gallons capacity must be closed by means of a 12-gauge steel bolted ring closure with drop forged lugs, one of which is appropriately threaded. For an overpack not over 30 gallons capacity, the threaded lug must have at least a ⅜-inch bolt and locking nut, and for an overpack over 30 gallons capacity the bolt and locking nut must be at least ½-inch. Authorized only for materials that will not react with polyethylene and result in container failure.

(11) Specification 12B30 (§178.205 of this subchapter). Fiberboard boxes of not less than 275-pound test double wall corrugated with a 5-mil one piece polyethylene bag form-fitted to the inner wall. Authorized only for pressure sealed polyethylene capsules containing not over 3 milliliters each.

(12) Specification 37D (§178.137 of this subchapter). Nonreusable steel drum which must be made of not less than 21-gauge body and 20-gauge heads. Authorized only for methyl parathion mixtures, parathion mixtures, and organic phosphate compound mixtures, not exceeding a weight of 12 pounds per gallon.

(13) Specification 17E (§178.116 of this subchapter). Steel drum (single-trip), which must be made of not less than 18-gauge body and heads. Authorized for methyl parathion mixtures, organic phosphate compound mixtures, and parathion mixtures only, and by private motor carrier only.

(c) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures (solutions, emulsions, or emulsifiable liquids) containing not more than 25 percent hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate by weight, in inside metal containers not over 8 fluid ounces capacity each, packed in strong outside containers together with sufficient absorbent material to completely absorb the liquid in the event of leakage, are excepted from specification packaging requirements of this part.

§ 173.360 Perchloro-methyl-mercaptan. (a) Perchloro-methyl-mercaptan in any quantity must not be packed with any other article.

When offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) [Reserved]

(2) Specification 15A, 15B, 15C, 16A, or 19B (§§178.168, 178.169, 178.170, 178.185, 178.191 of this subchapter). Wooden boxes, with inside glass bottles not over 2 quarts capacity each, individually enclosed in tightly closed metal cans and cushioned therein with incombustible material. Net weight not to exceed 100 pounds in one outside box.

(3) [Reserved]

(4) Spec. 5K or 5M (§178.83 or §178.90 of this subchapter). Nickel or monel barrels or drums.

(5) Specification 51 (§178.245 of this subchapter). Portable tanks, monel-clad. Tanks with bottom discharge outlets are prohibited. For rail transportation see §174.63 of this subchapter.

(6) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.361 Aldrin mixtures, liquid, with more than 60 percent aldrin. (a) Aldrin mixtures, liquid, with more than 60 percent aldrin must be shipped in specification containers as follows:

(1) As prescribed in §173.346.

(2) Spec. 6B, or 6C (§§178.98, 178.99 of this subchapter). Metal barrels or drums. Authorized only for viscous mixtures or those which may become partially solid.

(3) Spec. 17C or 17H (§178.115 or §178.118 of this subchapter). Metal drums (single-trip). Drums with opening exceeding 2.3 inches in diameter authorized only for viscous mixtures or those which may become partially solid.

(4) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.362 4-Chloro-o-toluidine hydrochloride. (a) 4-Chloro-o-toluidine hydrochloride must be shipped in specification containers as follows:

(1) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with glass polyethylene, or equally efficient inside containers not over 1 quart capacity each, securely packed in a tightly closed metal container.

(2) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside glass, polyethylene, or equally efficient containers not over 1-quart capacity each. Glass containers must be securely packed in tightly closed metal containers.

(3) Spec. 17C or 17H (§§178.115 or 178.118 of this subchapter). Metal drums (single-trip).

(4) Spec. 6B or 6C (§§178.98, or 178.99 of this subchapter). Metal barrels or drums.

(5) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.362a Dinitrophenol solutions. (a) Dinitrophenol solutions must be packed in specification containers as follows:

(1) In containers prescribed in §173.346.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard box with glass, earthenware, or metal inside containers not over 1 gallon capacity each, not to contain more than 4 inside glass or earthenware containers if their capacity is greater than 5 pints each.

(3) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.363 General packaging requirements for Poison B solids. (a) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(b) Testing inside containers. All inside containers, except those made of glass, must be able to pass a test by dropping, after filling, from a height of 4 feet to solid concrete without rupture or sifting of contents, except that for bags with contents weighing 25 pounds, a drop test of 2 feet is required.

§ 173.364 Limited quantities of Poison B solids. (a) Unless otherwise excluded by paragraph (a)(3) of this section, Limited Quantities of Poison B solids for which exceptions are permitted, as noted by reference to this section in §172.101 of this subchapter, are excepted from specification packaging requirements of this part if in tightly closed inside packaging securely cushioned when necessary to prevent breakage according to the following subparagraphs. (In addition, these shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except §174.24 and §174.680, or to Part 177 of this subchapter except §177.817 and §177.841(e)).

(1) In inside glass, earthenware, or composition bottles or jars, or metal packaging, or lock-corner sliding-lid wooden boxes, not over 5 pounds capacity each; or inside chipboard, pasteboard, or fiber cartons, cans, boxes, or tightly closed strong plastic bags or bottles compatible with product, not over 1 pound capacity each, packed in an outside wooden or fiberboard box, or wooden barrel or keg, or molded expanded polystyrene case. Net weight of contents of each outside container may not exceed 100 pounds.

(2) In inside plastic bottles or jars, chipboard, pasteboard or fiber cartons, cans, or boxes, of not over 5 pounds capacity each, packed in outside fiberboard or wooden boxes. Not more than 6 of these cartons shall be packed in any outside container.

(3) The following materials, are excluded from this exception: Cyanides (other than as specified in 173.370(b) and (d)), hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphorus compound mixtures, and organic phosphate mixtures.

(b) Special exceptions for shipment of certain drugs and medicines in the ORM-D class are prescribed in Subpart N of this part.

§ 173.365 Poison B solids not specifically provided for. (a) Poison B solids, as defined in §173.343, other than those for which special requirements are prescribed, must be packaged as follows:

(1) Specification 5, 5A, 5B, 6B, or 6C (§§178.80, 178.81, 178.82, 178.98, 178.99 of this subchapter). Metal barrels or drums.

(2) Specification 17E, 17H, 37A, or 37B (§§178.116, 178.118, 178.131, 178.132 of this subchapter). Metal drums (single-trip). Gross weight may not exceed 460 pounds. Regardless of the gross weight marking embossed on the drum, a drum constructed of 22-gauge steel is authorized for material fused solid in the drum with a gross weight not to exceed 880 pounds and for waste material containing arsenic trioxide with a gross weight not to exceed 550 pounds.

(3) Specification 44D (§178.238 of this subchapter). Multiwall paper bags. Where extensible Kraft is used, the minimum total basis weight must be 260 pounds and the outer wall may be no less than 60 pounds basis weight. Bag must have a metal foil inner liner. Net weight not over 50 pounds each. For transportation by vessel, bags must be unitized or containerized. Not authorized for transportation by aircraft. Authorized only for carbamate pesticide mixtures containing not more than 15 percent active ingredient.

(4) [Reserved]

(5) Specification 12B (§178.205 of this subchapter). Fiberboard boxes, with inside wide-mouth, high-density polyethylene jars of 2½-pound capacity with a minimum wall thickness of 0.020 inch, or of 3-pound capacity with a minimum wall thickness of 0.035 inch. Each jar must have a screw-cap closure and not more than six jars are authorized per box. Completed package must meet test requirements of §178.210-10 of this subchapter.

(6) Spec. 12B or 12C (§§178.205 or 178.206 of this subchapter). Fiberboard boxes, with inside containers which must be metal cans not over 25 pounds capacity each; glass bottles not over 1 gallon capacity each; fiber cans or boxes, Spec. 2G (§178.26 of this subchapter); sliding-top wooden boxes, lined to prevent sifting, not over 25 pounds capacity each; or paper bags, Spec. 2D (§178.23 of this subchapter). Packages containing glass or earthenware containers must not weigh over 65 pounds gross nor contain more than 4 inside containers of over 5 pints capacity each. Outside containers must be not over 5,000 cubic inches capacity nor contain over 50 pounds net weight each, except as provided in §178.205-23 of this subchapter.

Test: The completed package prepared as for shipping must be capable of standing a drop of 4 feet to solid concrete without breakage of the container or any sifting of contents.

(7) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with securely closed inside fiberboard or chipboard boxes not over 6 pounds net weight each. Interior containers must be at least .028 inch thick for those not over 2½ pounds net weight each and at least .034 inch thick for others. Outside packages must contain not over 36 pounds net weight of material each.

Test: The individual interior containers as well as the completed package prepared as for shipping must be capable of standing a drop of 4 feet to solid concrete without breakage of the container or any sifting of contents.

(8) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes with inside paper bags, securely closed and packed within a waterproof duplex bag. Spec. 2J (§178.28 of this subchapter). Net weight not to exceed 100 pounds in one outside box.

(9) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside metal cans not over 25 pounds capacity each; glass or earthenware containers not over 1-gallon capacity each; except that inside containers of not over 5 gallons capacity each and containing not over 25 pounds net weight are authorized when only one inside container is packed in each outside box. Fiber cans or boxes, Spec. 2G (§178.26 of this subchapter), or sliding-top wooden boxes, lined to prevent sifting, not over 25 pounds capacity each. Net weight not to exceed 100 pounds in one outside box.

(10) Spec. 16B (§178.193 of this subchapter). Wooden kits lined as prescribed by Spec. 2K (§178.29 of this subchapter). Net weight not over 30 pounds each.

(11) Specification 56 (§178.252 of this subchapter). Metal portable tank. Authorized only for *p-nitrobenzyl bromide*.

(12) Spec. 22A (§178.196 of this subchapter). Plywood drums. Net weight not over 115 pounds each.

(13) Specification 103,[1] 103W, 103A,[1] 103AW, 111A60F1, 111A60W1, 111A60W2, or 111A100F2 (§§179.200, 179.201 of this subchapter). Tank cars.

(14) Specification 21C (§178.224 of this subchapter). Fiber drums. Maximum net weight may not exceed 225 pounds except that a 21C400 fiber drum may have a net weight not exceeding 350 pounds.

(15) Specification 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads need not have a perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having a minimum thickness of 0.004-inch. Not more than 25 pounds net weight of product may be packed in one outside box. Not authorized for transportation by air.

(16) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than 4 inside glass bottles of 5 pounds capacity each shall be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210–10 of this subchapter.

(17) Spec. 37P (§178.133 of this subchapter). Steel drums with polyethylene liner (nonreusable container), not over 15-gallons capacity.

§ 173.366 Arsenic (arsenic trioxide) or arsenic acid (solid). (a) Arsenic (arsenic trioxide) or arsenic acid (solid) must be packed in specification containers as follows:

(1) As prescribed in §173.365.

(2) [Reserved]

(b) Import shipments of arsenic (arsenic trioxide) may also be shipped when packed as follows:

(1) Inclosed in strong waterproofed cloth containers, securely sewn and closed so as to provide a sift-proof package, and then packed in strong, tight, metal-strapped wooden boxes constructed of material not less than three-fourths inch thick throughout.

(2) In strong and tight metal drums inclosed in a strong outside wooden barrel.

(3) In tight metal drums of not over 25-gallon capacity and a maximum gross weight of 460 pounds. Drums must be constructed of at least 22-gauge steel.

§ 173.367 Arsenical compounds, n.o.s.; arsenate of lead; calcium arsenate; Paris green; and arsenical mixtures. (a) Arsenical compounds n.o.s., arsenate of lead, calcium arsenate, Paris green, and arsenical mixtures must be packed in specification containers as follows:

(1) As prescribed in §173.365.

(2) Specification 36A or 36B (§§178.230, 178.233 of this subchapter). Triplex bags. Authorized only for arsenical insecticides and fungicides containing 10 percent or less of arsenic trioxide. Not authorized for transportation by air.

(3) Specification 44B (§178.236 of this subchapter). Multiwall paper bags with inside paper bags, Specification 2D (§178.23 of this subchapter). Net weight not over 50 pounds each. Not authorized for transportation by air.

(4) Specification 44C (§178.237 of this subchapter). Multiwall paper bags. For carload and truckload shipments only. Net weight not over 50 pounds each.

(5) Specification 44D (§178.238 of this subchapter). Multiwall paper bags. Where extensible Kraft is used the minimum total basis weight must be 260 pounds and the outer wall may be no less than 60 pounds basis weight. Net weight not over 50 pounds each. Not authorized for transportation by air.

(6) Specification 44E (§178.239 of this subchapter). Multi-wall paper bags constructed with minimum total basis weight of 160 pounds. For carload or truckload shipments only by rail or highway transportation; loaded by the consignor and unloaded by the consignee or his duly authorized agent. Net weight not over 50 pounds each. Where extensible Kraft is used, the minimum total basis weight for 40-pound net weight bags must be 190 pounds and for 20-pound net weight bags it must be 150 pounds. Not authorized for transportation by air or water.

(b) Arsenical compounds n.o.s. containing not more than 6 percent arsenic of which not more than 0.5 percent is water soluble must be packed in specification containers as follows:

(1) As prescribed in paragraph (a)(1), (2) or (3) of this section.

(2) Specification 44B (§178.236 of this subchapter). Paper bags with two added inside thicknesses of No. 1 Kraft paper one sheet having a Mullen test of 50 and the other sheet having a Mullen test of 40. Net weight not over 50 pounds each. Not authorized for transportation by air.

[1] Use of existing cylinders authorized, but new construction not authorized.

§ 173.368 Arsenical dust, arsenical flue dust, and other poisonous noncombustible by-product dusts; also arsenic trioxide, calcium arsenate, and sodium arsenate. (a) Arsenic dust, arsenical flue dust, and other poisonous noncombustible by-product dusts from metal recovery operations not subject to dangerous spontaneous heating, and arsenic trioxide, calcium arsenate, or sodium arsenate, when delivery is made to plants with private sidings only, may, in addition to packagings prescribed in §173.367, be shipped in bulk in the following kinds of transport vehicles, if those transport vehicles are assigned exclusively to this type of service;

(1) Sift-proof, self-clearing, hopper or bottom outlet steel cars.

(2) Sift-proof, all steel flat bottom gondola cars with fixed sides and ends equipped with waterproof and dustproof wooden or steel covers well secured in place for all openings.

(3) Sift-proof box cars of all steel construction, or

(4) "Sift-proof, self-clearing, hopper-type or dump-type motor vehicles having bodies with waterproof and dust-proof covers well secured in place.";

(b) Transport vehicles assigned exclusively to this service must be marked "ARSENICAL SERVICE ONLY," in addition to other required markings, and are not subject to §174.615 or §177.841 of this subchapter while in that service.

§ 173.369 Carbolic acid (phenol), not liquid. (a) Carbolic acid (phenol), not liquid must be packed in specification containers as follows:

(1) Spec. 5, 5A, 5B, 5C, 6B, or 6C (§§178.80, 178.81, 178.82, 178.83, 178.98, or 178.99 of this subchapter). Metal barrels or drums.

(2) [Reserved]

(3) [Reserved]

(4) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with inside containers which must be metal cans not over 25 pounds capacity each.

(5) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes with glass or earthenware inside containers not over 1 quart capacity each, or with metal inside containers not over 1 gallon capacity each. Packages containing glass or earthenware containers must not weigh over 65 pounds gross; packages containing metal cans not over 84 pounds gross as provided in §178.205–23 of this subchapter, 65 pounds for others.

(6) Spec. 12D (§178.207 of this subchapter). Fiberboard boxes with inside containers which must be: Glass or earthenware not over 1 gallon or 5 pounds capacity each; authorized for not more than 75 pounds gross weight, not to contain more than 4 such inside containers if their capacity is greater than 5 pints each.

(7) Specification 15A, 15B, 15C, 16A, 19A or 19B (§§178.168, 178.169, 178.170, 178.185, 178.190, 178.191 of this subchapter). Wooden boxes with inside glass or earthenware containers not over 1-gallon or 5 pounds capacity each, except that inside containers not over 3 gallons or 15 pounds capacity each are authorized when only 1 is packed in each outside box; or with inside metal containers not over 10 gallons capacity each.

(8) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside metal containers, Spec. 2F (§178.25 of this subchapter). Net weight not to exceed 250 pounds in one outside box.

(9) Spec. 17E or 17H (§178.116 or §178.118 of this subchapter). Metal drums (single-trip).

(10) [Reserved]

(11) Specification 37A or 37B (§§178.131, 178.132 of this subchapter). Metal drums (single-trip). Not authorized for transportation by air.

(12) Specification 42B (§§178.107 of this subchapter). Aluminum drums.

(13) Specification 103,[1] 103W, 103ALW, 103A,[1] 103AW, 103A-ALW, 111A60ALW1, 111A60F1, 111A60W1, 111A60W2, 111A100F2, or 115A60W6 (§§179.200, 179.201, 179.220, 179.221 of this subchapter). Tank cars.

(i) Tank cars must not be entirely filled. Sufficient interior space must be left vacant to prevent leakage from or distortion due to the contents liquefying and expanding from increase of temperature during transit.

(ii) Solid phenol must not be loaded into domes of tank cars.

(iii) In tank cars, outage must be calculated to percentage of the total capacity of the tank, i.e., shell and dome capacity combined. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage.

(iv) The outage for tank cars must not be less than one percent.

(14) Specifications MC 300, MC 301, MC 302, MC 303, MC 305, MC 306, MC 307, MC 310, MC 311, or MC 312 (§§178.341, 178.342, 178.343 of this subchapter). Cargo tanks.

(i) No cargo tank or compartment thereof shall be completely filled; sufficient space shall be left vacant in every case to prevent leakage from or distortion of any such cargo tank by expansion of

the contents due to rise in temperature in transit, and such free space (outage) shall be sufficient in every case so that such cargo tank shall not become entirely filled with the commodity at 130° F.

(15) Spec. 12A (§178.210 of this subchapter). Fiberboard boxes with inside glass, polyethylene, or other nonfragile plastic bottles not over 5 pounds capacity each. Not more than 4 inside glass bottles of 5 pounds capacity each shall be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by §178.210-10 of this subchapter.

(16) Spec. 21C (§178.224 of this subchapter). Fiber drums with not more than one inside metal container, Spec. 2A (§178.20 of this subchapter), having maximum net weight of 50 pounds.

(b) Carbolic acid (phenol), not liquid, in tightly closed inside packagings, securely cushioned when necessary to prevent breakage and packaged as follows, is excepted from the specification packaging requirements of this part.

(1) In inside glass, earthenware, polyethylene or other nonfragile plastic bottles or jars not over 1 pound capacity each, or metal containers not over 5 pounds capacity each, packed in outside wooden boxes, barrels or kegs, or fiberboard boxes. Net weight of contents in fiberboard boxes shall not exceed 65 pounds; and not more than 100 pounds in wooden boxes, barrels or kegs.

§ 173.370 Cyanides and cyanide mixtures, dry. (a) Cyanides and cyanide mixtures, dry, except cyanide of calcium and mixtures thereof, unless otherwise provided for in this section, if containing the cyanide equivalent of 10 percent or more of potassium cyanide, must be packaged as follows:

(1) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside metal containers, Spec. 2F (§178.25 of this subchapter), not over 25 pounds capacity each; or hermetically sealed (soldered) metal lining, Spec. 2F (§178.25 of this subchapter), or in glass bottles not over 5 pounds capacity each.

(2) Specification 12B40 (§178.205 of this subchapter). Fiberboard box with inside polyethylene bottles having a minimum thickness of 0.030-inch and not over 5-pound capacity each. Maximum net weight of contents must not exceed 25 pounds per box.

(3) Spec. 12B or 12C (§§178.205 or 178.206 of this subchapter). Fiberboard boxes with metal inside containers, Spec. 2F (§178.25 of this subchapter) not over 25 pounds capacity each.

(4) Spec. 5, 5A, 5B, 6B or 6C (§§178.80, 178.81, 178.82, 178.98, 178.99 of this subchapter). Metal barrels or drums.

(5) Spec. 37A or 37B (§178.131 or §178.132 of this subchapter), metal drums (single-trip containers).

(6) Bulk in watertight metal cars or in watertight container car metal containers.

(7) Spec. 17H (§178.118 of this subchapter) metal drums. Gross weight not over 450 pounds.

(8) Specification 45B (§178.240 of this subchapter). Bags, cloth, and paper, lined. Authorized only for sodium cyanides of globular or pellet form, diameter not less than ¾-inch. Net weight not over 100 pounds. Not authorized for transportation by air.

(9) Bulk in watertight metal-bodied covered motor vehicles.

(10) [Reserved]

(11) Spec. 21C (§178.224 of this subchapter). Fiber drums. Authorized net weight not over 225 pounds.

(12) Specification 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads may not require perimeter liner. Products must be contained within a tightly closed polyethylene or other equally efficient plastic container constructed of material having minimum thickness of 0.004-inch. Not more than 25 pounds net weight of product may be packed in one outside box. Not authorized for transportation by air.

(13) Bulk in strong, water-tight, metal portable containers of not over 70 cubic feet capacity each and approved by the Director, OHMT.

(b) **Exceptions for cyanides, and cyanide mixtures, except cyanide of calcium and mixtures thereof.** Cyanides and cyanide mixtures, except cyanide of calcium and mixtures thereof, when described and packaged as follows, are excepted from the specification packaging requirements of this part:

(1) Cyanides, or cyanide mixtures, in tightly closed glass, earthenware, metal, or polyethylene inside containers, not over 1 pound each, securely cushioned and packed in outside wooden or fiberboard boxes, or in wooden barrels. Net weight of cyanides or cyanide mixtures in any outside container, not over 25 pounds.

(2) Cyanide mixtures in tightly closed glass, earthenware, or metal inside containers, securely cushioned and packed in outside wooden or fiberboard boxes, or in wooden barrels. Net weight of cyanide mixtures in any outside container not over 5 pounds.

(3) Cyanides of copper, zinc, lead, and silver are excepted from all packaging requirements except §§173.24 and 173.363.

(c) **Cyanide of calcium and mixtures thereof.** Cyanide of calcium and mixtures thereof must be packed in specification containers as follows:

(1) As prescribed in paragraph (a)(2), (3), (4), (6), (9), or (11) of this section.

(2) Specification 15A, 15B, 15C, or 19B (§§178.168, 178.169, 178.170, 178.191 of this subchapter). Wooden boxes with inside metal containers, Spec. 2F (§178.25 of this subchapter) not over 25 pounds capacity each; or hermetically sealed (soldered) metal lining, Spec. 2F (§178.25 of this subchapter).

(3) Spec. 37A or 37B (§178.131 or §178.132 of this subchapter), metal drums (single-trip containers); welded side seams required for Spec. 37B drums and all seams and closures must be watertight and hermetically sealed.

(d) **Exceptions for cyanide of calcium and mixtures thereof.** Cyanide of calcium and mixtures thereof, when described and packaged as follows, are excepted from the specification packaging requirements of this part.

(1) Cyanide of calcium and mixtures thereof in tightly closed metal inside containers having not over 1 pound net weight each, or metal cans having not over 5 pounds net weight each. Not more than 25-1-pound containers or more than 1-5-pound container securely cushioned may be packed in the outside container which must be wooden or fiberboard boxes, or wooden barrels.

§ 173.371 Dinitrobenzol (dinitrobenzene). (a) Dinitrobenzol must be packaged as follows:

(1) As prescribed in §173.346 or §173.365 according to its physical form at 130° F. (55° C.).

§ 173.372 Mercury bichloride (mercuric chloride). (a) Mercury bichloride (mercuric chloride) must be packed in specification containers as follows:

(1) As prescribed in §173.365.

(2) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes with inside strong paper bags in tightly closed inside wooden boxes.

§ 173.373 Ortho-nitroaniline and paranitroaniline. (a) Ortho-nitroaniline and paranitroaniline must be packed in specification containers as follows:

(1) As prescribed in §173.365.

(2) [Reserved]

(3) Spec. 21C (§178.224 of this subchapter). Fiber drums. Authorized net weight not over 400 pounds.

(4) In addition to specification containers prescribed in this section, paranitroaniline may be shipped by highway in bulk in strong, watertight, metal bodied covered hopper motor vehicles.

(5) Specification 56 (§178.252 of this subchapter). Metal portable tank. Authorized for para-nitroaniline only. For rail transportation see §174.63 of this subchapter.

(6) Specification MC 304, MC 307, MC 310, MC 311, or MC 312 (§§178.340, 178.342, 178.343 of this subchapter). *Cargo tanks.* If the cargo tank is constructed with bottom outlets, they must meet §§178.342-5(a) and 178.343-5 of this subchapter. Cargo tank must be insulated and have a steel inner tank. Authorized only for ortho-nitroaniline loaded in a liquefied state at a temperature not over 180 F. Not authorized for transportation by water.

§ 173.374 Nitrochlorobenzene, meta or para. (a) Nitrochlorobenzene, meta or para, must be packed in specification containers as follows:

(1) As prescribed in §173.365.

(2) Specification 21C (§178.224 of this subchapter). Fiber drums. Authorized only for nitrochlorobenzene, para, flaked. Net weight not to exceed 400 pounds.

(3) Spec. 17E (§178.116 of this subchapter). Metal drums (single-trip).

(4) Specification MC-312 (§178.343 of this subchapter). Insulated cargo tank equipped with heating coils. Authorized only for nitrochlorobenzene, para, solid. Not authorized for transportation by water.

(5) Specification 105A400W, 112A400W or 114A400W (§§179.100, 179.101 of this subchapter). Tank cars.

§ 173.375 Sodium azide. (a) Sodium azide must be packed in specification containers as follows:

(1) Specification 15A or 19B (§§178.168, 178.191 of this subchapter). Wooden boxes, with inside paper bags, securely closed, packed within a waterproof duplex bag, Spec. 2J (§178.28 of this subchapter). Net weight not to exceed 100 pounds in one outside box.

(2) Specification 21C (§178.224 of this subchapter). Fiber drums with inside polyethylene moisture barrier. Maximum net weight may not exceed 115 pounds.

(3) Specification 56 (§178.252 of this subchapter). Stainless steel portable tank designed for top loading and unloading only. Tanks may be equipped with a bottom clean out plug. No part of the tank or fittings that come in contact with the sodium azide may contain any metal such as copper, lead, silver or mercury which can form explosive azide com-

pounds. Each transport vehicle must be loaded by the consignor and unloaded by the consignee or by persons trained by the consignor. Not authorized for transportation by water.

§ 173.376 Aldrin and aldrin mixtures, dry, with more than 65 percent aldrin. (a) Aldrin and aldrin mixtures, dry, with more than 65 percent aldrin, must be packed in specification containers as follows:

(1) As prescribed in § 173.365.

§ 173.377 Hexaethyl tetraphosphate mixtures; methyl parathion mixtures; organic phosphorus compound mixtures; organic phosphate compound mixtures; parathion mixtures; tetraethyl dithio pyrophosphate mixtures; and tetraethyl pyrophosphate mixtures, dry. (a) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures in which the liquid is absorbed in concentrations greater than 2 percent but not exceeding 27 percent in an inert dry material so as to form a dry mixture, must be packed in specification containers as follows:

(1) Specification 12B or 12C (§178.205 or §178.206 of this subchapter), fiberboard boxes, with inside containers which must be metal or fiber cans not over 12 pounds capacity each, or paper bags, Spec. 2D, (§178.23 of this subchapter), not over 20½ pounds capacity each. Fiberboard boxes manufactured and marked for a gross weight of 65 pounds may have a gross weight of 70 pounds provided net weight of contents does not exceed 62 pounds. Inside containers and the completed package must be capable of withstanding the tests prescribed in paragraphs (c), (d), and (e) of this section.

(2) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter), wooden boxes with inside metal or fiber cans not over 12 pounds capacity each, or paper bags, Spec. 2D (§178.23 of this subchapter), not over 20½ pounds capacity each. Inside containers must be capable of withstanding the tests prescribed in paragraphs (c) and (d) of this section.

(3) Spec. 5, 5B, or 6C (§§178.80, 178.82, 178.99 of this subchapter), Metal barrels or drums.

(4) Spec. 17C, 17H or 37A (§§178.115, 178.118, or 178.131 of this subchapter), metal drums (sing'e-trip). Spec. 37A metal drums authorized for not over 100 pounds net weight.

(5) Spec. 21C (§178.224 of this subchapter). Fiber drums. Authorized net weight not over 250 pounds.

(b) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures in which the liquid is absorbed in concentrations greater than 27 percent in an inert dry material so as to form a dry mixture, must be packed in specification containers as follows:

(1) Spec. 12B or 12C (§§178.205 or 178.206 of this subchapter), fiberboard boxes, with inside containers which must be metal cans not over 12 pounds capacity each. Inside containers and the completed package must be capable of withstanding the tests prescribed in paragraphs (c), and (e) of this section.

(2) Specification 15A, 15B, or 19B (§§178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside metal cans not over 12 pounds capacity each. Inside containers must be capable of withstanding the tests prescribed in paragraph (c) of this section.

(3) Spec. 5, 5B or 6C (§§178.80, 178.82, 178.99 of this subchapter). Metal barrels or drums.

(4) Spec. 17C, 17H, or 37A (§§178.115, 178.118, or 178.131 of this subchapter), metal drums (sing'e-trip). Spec. 37A metal drums authorized for not over 100 pounds net weight.

(5) Specification 21C (§178.224 of this subchapter). Fiber drums. Authorized only for mixtures in which the liquid is absorbed in concentration not greater than 55 percent. Maximum net weight may not exceed 225 pounds.

(6) Specification 12B (§178.205 of this subchapter). Fiberboard box, with inside Specification 2D (§178.23 of this subchapter) paper bags not over 5-pound capacity each and having an additional foil liner. Completed package may not exceed 65 pounds gross weight and must meet the test requirements of paragraphs (d) and (e) of this section. Authorized only for mixtures in which the liquid is absorbed in concentrations no greater than 67 percent.

(c) Inside metal or fiber cans when closed as for shipment must be capable of withstanding two four-foot drops onto solid concrete without breakage of the container or any sifting of the contents. One drop must be on side of can and the other diagonally on the top rim or chime.

(d) Inside paper bags when closed as for shipment must be capable of withstanding two four-foot drops onto solid concrete without breakage of the container or any sifting of the contents. One drop must be made on bottom of bag and the other on either large face.

(e) Completed packages when closed as for shipment must be capable of withstanding two four-foot drops onto solid concrete without breakage of the container or any sifting of the contents. One drop must be made on bottom of package and the other drop on the smallest adjacent side area.

(f) Dry mixtures containing not more than 2 percent by weight of hexaethyl tetraphosphate, methyl parathion, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate and in which the liquid is absorbed in an inert material, are excepted from specification packaging requirements of this part.

(g) Dry mixtures containing more than 2 percent but not exceeding 15 percent by weight of hexaethyl tetraphosphate, methyl parathion mixture, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate, and in which the liquid is absorbed in an inert material, in addition to containers prescribed in paragraphs (a) and (b) of this section, may be packed in specification containers as follows:

(1) Spec. 44B (§178.236 of this subchapter). Multiwall paper bags with inside paper bags, Spec. 2D (§178.23 of this subchapter), not over 5 pounds capacity each. Net weight of material in outside container not over 30 pounds each. Not authorized for transportation by air.

(2) Spec. 12B (§178.205 of this subchapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and top and bottom pad of at least 275-pound test fiberboard. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.003 inch. Not more than 50 pounds net weight of product may be packed in one outside box.

(h) Dry mixtures containing more than 2 percent but not exceeding 5 percent by weight of hexaethyl tetraphosphate, methyl parathion mixtures, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate, and in which the liquid is absorbed in an inert material, in addition to containers prescribed in paragraphs (a), (b), and (g) of this section, may be packed in specification containers as follows:

(1) Spec. 44D (§178.238 of this subchapter). Multiwall paper bags not over 50 pounds net weight each. Where extensible kraft is used the minimum total basis weight shall be 260 pounds. Not authorized for transportation by air.

(i) Dry mixtures containing more than 2 percent but not exceeding 12 percent by weight of hexaethyl tetraphosphate, methyl parathion mixtures, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate or tetraethyl pyrophosphate, and in which the liquid is absorbed in an inert material, in addition to containers prescribed in paragraphs (a), (b), and (g) of this section, may be packed in specification containers as follows:

(1) Spec. 44D (§178.238 of this subchapter). Multiwall paper bags not over 50 pounds net weight each. Outer ply to be not less than 60 pounds basis weight. Not authorized for transportation by air.

(j) Dry mixtures containing more than 2 percent but not exceeding 16.5 percent by weight of hexaethyl tetraphosphate, methyl parathion mixtures, organic phosphorus compound mixtures, organic phosphate compound mixtures, parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate, and in which the liquid is absorbed in an inert material, in addition to containers prescribed in paragraphs (a) and (b) of this section, may be packed in specification containers as follows:

(1) Specification 44B (§178.236 of this subchapter). Multiwall paper bags having not more than 5 Specification 2D (§178.23 of this subchapter) inner bags, each fabricated with a foil liner and containing not more than ten pounds net weight. Maximum net weight of material in each outside container may not exceed 50 pounds. For water transportation, the material must also be in containers as prescribed in paragraph (j)(4) of this section or palletized and unit packed as prescribed in subparagraph (5) of this section. Not authorized for transportation by air.

(2) Specification 44D (§178.238 of this subchapter). Multiwall paper bags consisting of 6-ply extensible kraft paper having a minimum total basis weight of 300 pounds. Bags must have a metal foil inner liner and contain not over 60 pounds net weight. For transportation by water, material must be in containers as prescribed in paragraph (j)(4) of this section or palletized and unit packed as prescribed in paragraph (j)(5) of this section. Not authorized for transportation by air.

(3) Specification 44D (§178.238 of this subchapter). Multiwall paper bags consisting of a 5-ply extensible kraft paper having a minimum total basis weight of 300 pounds. Bags may have outer sheet of 60-pound kraft in place of 70-pound basis weight but must have a metal foil inner liner. Maximum net weight may not exceed 54 pounds each. For transportation by water, material must be in containers as prescribed by paragraph (j)(4) of this section or palletized and unit packed as prescribed by paragraph (j)(5) of this section. Not authorized for transportation by air.

(4) Containers must be loaded and sealed at the shipper's plant or warehouse and unsealed and unloaded only at the ultimate destination, unless the Coast Guard Captain of the Port desires to inspect the containers at his Port.

(5) Pallets must be designed to accommodate straps. The bags, fully enclosed by fiberboard or plastic film must be securely strapped to the pallet. The layer or layers of fiberboard or plastic film must fully protect the bags from excessive stress concentration caused by the strapping and normal handling loads.

§ 173.379 Cyanogen bromide. Cyanogen bromide must be packaged in tightly closed metal inside containers not over 1-pound

capacity each, securely cushioned and packaged in an outside wooden box. Net weight may not exceed 25 pounds in one outside packaging.

§ 173.381 Irritating materials; definition and general packaging requirements. (a) For the purpose of Parts 170–189 of this subchapter, an irritating material is a liquid or solid substance which upon contact with fire or when exposed to air gives off dangerous or intensely irritating fumes, such as brombenzylcyanide, chloroacetophenone, diphenylaminechloroarsine, and diphenylchloroarsine, but not including any poisonous material. Class A.

(b) **Cushioning.** All packagings must be hermetically closed. Inside packagings must be cushioned as prescribed when necessary to prevent breakage or leakage.

(c) **Outage.** No packaging used for the transportation of any liquid irritating material may be completely filled. For packagings with a capacity of 110 gallons or less, sufficient outage must be provided so the packaging will not be liquid full at 130° F. (55° C.).

(d) The transportation of an irritating material is not permitted if there is any type of interconnection between packagings.

(e) Any pressure in a cylinder at 130° F. (55° C.) must not exceed ⅔ the marked service pressure of the cylinder.

§ 173.382 Irritating materials, not specifically provided for. (a) Irritating materials, as defined in § 173.381 for which special packaging is not otherwise prescribed, except as provided in paragraph (b) of this section, must be packaged as follows:

(1) Spec. 5, 5A, 5B or 5C (§§ 178.80, 178.81, 178.82 or 178.83 of this subchapter) metal barrels or drums; or spec. 17C (sing'e-trip) (§ 178.115 of this subchapter) metal drums not over 5 gallons capacity each.

(2) Spec. 6B or 6C (§§ 178.98, 178.99 of this subchapter). Metal barrels or drums.

(3) Specification 15A, 15B, or 19B (§§ 178.168, 178.169, 178.191 of this subchapter). Wooden boxes with inside metal containers not over 1-gallon capacity each. Net weight not to exceed 80 pounds in one outside box.

(4) Cylinders as prescribed for any compressed gas, except acetylene, are also authorized for use. These cylinders must be qualified, maintained, and filled in accordance with §§ 173.34 and 173.301(g), if used for material with pressure exceeding 25 pounds per square inch at 70° F., they must also be retested as required by § 173.34.

(b) Chloroacetophene, diphenylaminechloroarsine, irritating material, n.o.s., or xylyl bromide, charged with a nonflammable gas exceeding 25 psig at 70° F. must be packaged as specified in paragraph (a)(4) of this section.

§ 173.383 Chemical ammunition. (a) Chemical ammunition consisting of projectiles, shells, bombs, or other containers, except grenades, filled with an irritating material without ignition elements, bursting charges, detonating fuzes, or other explosive components, must be packaged for shipment in strong outside wooden or metal boxes. Boxes must be marked with name of contents and labeled as prescribed in this part for gases, liquids, or chemicals contained therein.

(b) Chemical ammunition, when shipped as such, must not be equipped or packed with explosive or ignition elements (see §§ 173.53(f) and 173.59 for explosive chemical ammunition).

§ 173.384 Monochloroacetone, stabilized. (a) Monochloroacetone, stabilized, must be packed in specification containers as follows:

(1) Specification 5, 5A, or 17C (sing'e-trip) (§§ 178.80, 178.81, 178.115 of this subchapter). Metal barrels or drums.

(2) Specification 15A, 15B, 15C, 16A, or 19B (§§ 178.168, 178.169, 178.170, 178.185, 178.191 of this subchapter). Wooden boxes with inside glass bottles or tubes in metal cans hermetically sealed or with covers securely taped. The metal cans must be in corrugated fiberboard cartons, Specification 2C (§ 178.22 of this subchapter). Bottles must not contain more than 1 pound of liquid each, must not be filled to more than 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least one-half inch of absorbent material. Cans must be made of metal at least 32-gauge U.S. Standard. The total amount of liquid per package must not exceed 24 pounds.

§ 173.385 Tear gas grenades, tear gas candles, or similar devices. (a) Tear gas grenades, tear gas candles, or similar devices containing lachrymatory (tear producing) substances, for civil or military use must be packed in specification containers as follows (see § 173.101(d) and (e) for packing tear gas cartridges):

(1) Specification 15A, 15B, 15C, or 19B (§§ 178.168, 178.169, 178.170, 178.191 of this subchapter). Metal-strapped wooden boxes. Functioning elements not assembled in grenades or devices must be in a separate compartment of these boxes, or in inside or separate outside boxes, Spec. 15A, 15B, 15C, or 19B and must be so packed and cushioned that they may not come in contact with each other or with the walls of box during transportation. Not more than 50 grenades and 50 functioning devices shall be packed in one box and the gross weight of the outside box must not exceed 75 pounds.

(2) Spec. 37A (§ 178.131 of this subchapter). Metal drum (sing'e-trip). Functioning elements must be packed in separate compartment. Not more than 24 grenades and 24 functioning devices shall be packed in one outside container and the gross weight of the container must not exceed 75 pounds.

(3) Specification 12B (§ 178.205 of this subchapter). Fiberboard box with inside tear gas devices meeting Specifications 2P or 2Q (§§ 178.33, 178.33a of this subchapter). Each inside container must be placed into spiral wound tubes fitted with metal ends or a double-faced fiberboard box with suitable padding. Not more than 30 inside containers shall be placed in one outside box and gross weight shall not exceed 35 pounds.

(b) These articles may not be assembled with or packed in the same compartment with mechanically or manually operated firing, igniting, bursting, or other functioning elements, unless of a type or design examined by the Bureau of Explosives and approved by the Director, OHMT.

(c) No shipment of packages containing articles under this section may be made until samples thereof have been examined by the Bureau of Explosives or examined under their supervision, and approved by the Director, OHMT.

Note 1: Grenades or other similar devices may be shipped completely assembled when offered by or consigned to the U.S. Department of Defense, provided the functioning element is so packed that it cannot accidentally function. The outside containers must be metal strapped wooden boxes, Spec. 15A, 15B, 15C, or 19B (§§ 178.168, 178.169, 178.170, 178.191 of this subchapter).

§ 173.386 Etiologic agents; definition and scope. (a) **Definition.** For the purpose of Parts 170–189 of this subchapter:

(1) An "etiologic agent" means a viable microorganism, or its toxin, which causes or may cause human disease, and is limited to those agents listed in 42 CFR 72.3 of the regulations of the Department of Health and Human Services.

(2) A "diagnostic specimen" means any human or animal material including, but not limited to, excreta, secreta, blood, and its components, tissue, and tissue fluids, being shipped for purposes of diagnosis.

(3) A "biological product" means a material prepared and manufactured in accordance with the provisions of 9 CFR Part 102 (Licensed veterinary biological products), 21 CFR Part 601 (Licensing), 21 CFR § 312.1 (Conditions for exemption of new drugs for investigational use), 9 CFR Part 103 (Biological products for experimental treatment of animals), or 21 CFR § 312.9 (New drugs for investigational use in laboratory research animals or in vitro tests), and which in accordance with these provisions, may be shipped in interstate commerce.

(b) **Applicability.** Except as provided in paragraph (d), no person may ship any material, including a diagnostic specimen or a biological product, containing an etiologic agent unless this material is packaged and prepared for shipment in accordance with § 173.24 and the other applicable regulations of this subchapter.

(c) **General provisions.** The requirements of these regulations (Parts 170–189 of this subchapter) supplement the requirements of the Department of Health and Human Services' regulations contained in 42 CFR Part 72.

(d) **Exceptions.** The following substances are not subject to any requirements of this subchapter if the items as packaged do not contain any material otherwise subject to the requirements of Parts 170–189 of this subchapter:

(1) Diagnostic specimens.

(2) Biological products.

(3) Cultures of etiologic agents of 50 milliliters (1.666 fluid ounces) or less total quantity in one outside package.

§ 173.387 Packaging requirements for etiologic agents. (a) Except as provided in § 173.386(d) no person may ship a package containing over 4 liters gross volume of an etiologic agent.

(b) In addition to the requirements of 42 CFR Part 72, each package containing an etiologic agent must be designed and constructed so that, if it were subject to the environment and test condition prescribed in this section, there would be no release of the contents to the environment, and the effectiveness of the packaging would not be significantly reduced.

(1) Environmental conditions.

(i) Heat—direct sunlight in an ambient temperature of 130° F. in still air.

(ii) Cold—an ambient temperature of −40° F. in still air and shade.

(iii) Reduced pressure—ambient atmospheric pressure of 0.50 atmosphere (7.3 p s i a.).

(iv) Vibration—vibration normally incident in the mode of transportation the package is to be shipped.

(2) Test conditions.

(i) Water spray—a water spray heavy enough to keep the entire exposed surface of the package (except the bottom) continuously wet during a period of 30 minutes. Packages for which the outer layer consists of metal, wood, ceramic, or plastic, or combination thereof, are exempt from this test.

(ii) Freedrop—a freedrop through a distance of 30 feet onto a flat, essentially unyielding horizontal target surface, the package striking the surface in a position for which maximum damage is expected.

(iii) Penetration—impact of the hemispheric end of a steel cylinder 1.25 inches in diameter and weighing 15 pounds, dropped from a

height of 40 inches on to the exposed surface of the package expected to be most vulnerable to puncture. The long axis of the cylinder must be perpendicular to the impacted surface. This test is not required for a package subject to Paragraph (b)(2)(iv) of this section.

(iv) Penetration (required for packages exceeding 15 pounds gross weight only)—a freedrop of the package through a distance of 40 inches, striking the top end of a vertical cylindrical mild steel solid bar on an essentially unyielding surface, in a position for which maximum damage is expected. The bar must be 1.5 inches in diameter. The top of the bar must be horizontal, with its edge rounded to a radius not exceeding one-quarter inch. The bar must be of such length as to cause maximum damage to the package, but not less than 8 inches long. The long axis of the bar must be vertical to the unyielding horizontal impact surface of the package.

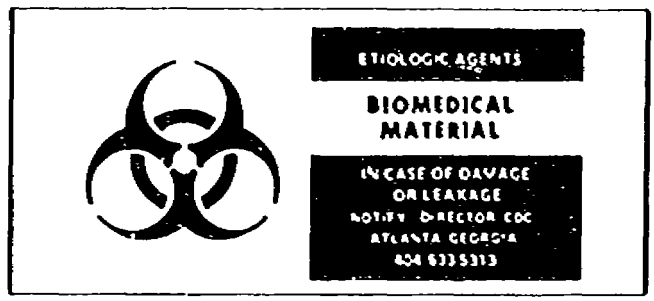
(3) Testing procedure.

(i) At least one sample of each type package (maximum size and gross weight), filled with water, must be subjected to the water spray test unless exempted by paragraph (b)(2)(i) of this section.

(ii) This sample package then must be given the freedrop and one of the penetration tests, as applicable. Separate wetted sample packages may be used for the freedrop and the penetration test.

(iii) If the sample package is exempted from the water spray test by paragraph (b)(2)(i) of this section, at least one sample of each type package (maximum size and gross weight), filled with water, must be subjected consecutively to the freedrop and the penetration test.

§ 173.388 Labeling of packages containing etiologic agents. (a) Each package containing an etiologic agent, except a diagnostic specimen or a biological product, must be labeled as prescribed by the regulations of the Department of Health and Human Services, 42 CFR § 72.3(d). For information, this label is required to be a rectangle measuring 51 mm. (2 inches) high and 102.5 mm (4 inches) long, predominantly red printing on a white background, and appears as follows:



SUBPART I

RADIOACTIVE MATERIALS

§ 173.401 Scope. (a) This subpart sets forth requirements for the transportation of radioactive materials by carriers and shippers subject to this subchapter. The requirements prescribed in this subpart are in addition to, but not in lieu of, other requirements set forth in this subchapter and in 10 CFR Part 71 for the packaging and transportation of radioactive materials.

(b) This subpart does not apply to:

(1) Radioactive materials produced, used, transported, or stored within an establishment other than during the course of transportation.

(2) Radioactive materials contained in a medical device, such as a heart pacemaker, which is implanted in a human being or live animal.

(3) Radiopharmaceuticals that have been injected into, or ingested by, and are still in human beings or live animals.

§ 173.403 Definitions. In this subpart:

(a) "A_1" means the maximum activity of special form radioactive material permitted in a Type A package.

(b) "A_2" means the maximum activity of radioactive material, other than special form or low specific activity radioactive material, permitted in a Type A package. These values are either listed in § 173.435 or may be derived in accordance with the procedure prescribed in § 173.433.

(c) "Closed transport vehicle" means a transport vehicle equipped with a securely attached exterior enclosure that during normal transportation restricts the access of unauthorized persons to the cargo space containing the radioactive materials. The enclosure may be either temporary or permanent, and in the case of packaged materials may be of the "see-through" type, and must limit access from top, sides, and ends.

(d) "Containment system" means the components of the packaging intended to retain the radioactive contents during transportation.

(e) "Conveyance" means:

(1) For transport by public highway or rail: any transport vehicle or large freight container;

(2) For transport by vessel: any vessel, or any hold, compartment, or defined deck area of a vessel; and

(3) For transport by aircraft: any aircraft.

(f) "Depleted uranium" means uranium containing less uranium-235 than the naturally occurring distribution of uranium isotopes.

(g) "Design" means the description of a special form material, a package, or a packaging, that enables those items to be fully identified. The description may include specifications, engineering drawings, reports showing compliance with regulatory requirements, and other relevant documentation.

(h) "Enriched uranium" means uranium containing more uranium-235 than the naturally occurring distribution of uranium isotopes.

(i) "Exclusive use" (also referred to in other regulations as "sole use" or "full load") means the sole use of a conveyance by a single consignor and for which all initial, intermediate, and final loading and unloading are carried out in accordance with the direction of the consignor or consignee. Any loading or unloading must be performed by personnel having radiological training and resources appropriate for safe handling of the consignment. Specific instructions for maintenance of exclusive use shipment controls must be issued in writing and included with the shipping paper information provided to the carrier by the consignor.

(j) "Fissile material" means any material consisting of or containing one or more fissile radionuclides. Fissile radionuclides are plutonium-238, plutonium-239, plutonium-241, uranium-233 and uranium-235. Neither natural nor depleted uranium are fissile material. Fissile materials are classified according to the controls needed to provided nuclear criticality safety during transportation, as provided in § 173.455. Certain exclusions are provided in § 173.453.

(k) "Freight container" means a reusable container having a volume of 1.81 cubic meters (64 cubic feet) or more, designed and constructed to permit being lifted with its contents intact and intended primarily for containment of packages in unit form during transportation. A small freight container is one which has either one outer dimension less than 1.5 meters (4.9 feet) or an internal volume of not more than 3.0 cubic meters (106 cubic feet). All other are designated as "large freight containers."

(l) "Highway route controlled quantity" means a quantity within a single package which exceeds:

(1) 3000 times the A_1 value of the radionuclides as specified in § 173.433 for special form radioactive material;

(2) 3000 times the A_2 value of the radionuclides as specified in § 173.433 for normal form radioactive material; or

(3) 30,000 curies, whichever is least.

(m) "Limited quantity of radioactive material" means a quantity of radioactive material not exceeding the material's package limits specified in § 173.423 and which conform with requirements specified in § 173.421.

(n) "Low specific activity material (LSA)" means any of the following:

(1) Uranium or thorium ores and physical or chemical concentrates of those ores.

(2) Unirradiated natural or depleted uranium or unirradiated natural thorium.

(3) Tritium oxide in aqueous solutions provided the concentration does not exceed 5.0 millicuries per milliliter.

(4) Material in which the radioactivity is essential uniformly distributed and in which the estimated average concentration of contents does not exceed:

(i) 0.0001 millicurie per gram of radionuclides for which the A_2 quantity is not more than .05 curie;

(ii) 0.005 millicurie per gram of radionuclides for which the A_2 quantity is more than .05 curie, but not more than 1 curie; or

(iii) 0.3 millicurie per gram of radionuclides for which the A_2 quantity is more than 1 curie.

(5) Objects of nonradioactive material externally contaminated with radioactive material, provided that the radioctive material is not readily dispersible and the surface contamination, when averaged over an area of 1 square meter, does not exceed 0.0001 millicurie (220,000 disintegrations per minute) per square centimeter of radionuclides for which the A_2 quantity is not more than .05 curie, or 0.001 millicurie (2,200,000 disintegrations per minute) per square centimeter for other radionuclides.

(o) "Multilateral approval" means approval by both the appropriate competent authority of the country of origin and of each country through or into which the shipment is to be transported. This definition does not imply approval from countries over which radioactive materials are carried in aircraft, if there is no scheduled stop in that country.

(p) "Natural thorium" means thorium with the naturally occurring distribution of thorium isotopes (essentially 100 weight percent thorium-232).

(q) "Natural uranium" means uranium with the naturally occurring distribution of uranium isotopes (approximately 0.711 weight percent uranium-235 and the remainder essentially uranium-238).

(r) "Non-fixed radioactive contamination" means radioactive contamination that can be readily removed from a surface by wiping with an absorbent material. Non-fixed (removable) radioactive contamination is not significant if it does not exceed the limits specified in § 173.443.

(s) "Normal form radioactive material" means radioactive material which was not been demonstrated to qualify as "special form radioactive material."

(t) "Package" means, for radioactive materials, the packaging together with its radioactive contents as presented for transport.

(u) "Packaging" means, for radioactive materials, the assembly of components necessary to ensure compliance with the packaging requirements of this subpart. It may consist of one or more receptacles, absorbent materials, spacing structures, thermal insulation, radiation shielding, and devices for cooling or absorbing mechanical shocks. The conveyance, tie-down system, and auxiliary equipment may sometimes be designated as part of the packaging.

(v) "Radiation level" means the radiation dose-equivalent rate expressed in millirem per hour (mrem/h). Neutron flux densities may be converted into radiation levels according to Table 1:

TABLE 1.—NEUTRON FLUX DENSITIES TO BE REGARDED AS EQUIVALENT TO A RADIATION LEVEL OF 1 MILLIREM PER HOUR (MREM/H)[1]

Energy of neutron	Flux density equivalent to 1 mrem/h (Neutrons per square centimeter per second) (n/cm² s)
Thermal	268 0
5 keV	228 0
20 keV	112 0
100 keV	32 0
500 keV	12 0
1 MeV	7 2
5 MeV	7 2
10 MeV	6 8

[1] Flux densities equivalent for energies between those listed above may be obtained by linear interpolation.

(w) "Radioactive article" means any manufactured instruments and articles such as an instrument, clock, electronic tube or apparatus, or similar instruments and articles having radioactive material as a component part.

(x) "Radioactive contents" means the radioactive material, together with any contaminated liquids or gases, within the package.

(y) "Radioactive material" means any material having a specific activity greater than 0.002 microcuries per gram (uCi/g) (see definition of "specific activity").

(z) "Special form radioactive material" means radioactive material which satisfies the following conditions:

(1) It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

(2) The piece or capsule has at least one dimension not less than 5 millimeters (0.197 inch); and

(3) It satisfies the test requirements of § 173.469. Special form encapsulations designed in accordance with the requirements of § 173.389(g) in effect on June 30, 1983, and constructed prior to July 1, 1985 may continue to be used. Special form encapsulations either designed or constructed after June 30, 1985 must meet the requirements of this paragraph.

(aa) "Specific activity" of a radionuclide, means the activity of the radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the activity per unit mass of the material.

(bb) "Transport index" means the dimensionless number (rounded up to the first decimal place) placed on the label of a package to designate the degree of control to be exercised by the carrier during transportation. The transport index is determined as follows:

(1) The number expressing the maximum radiation level in millirem per hour at one meter (3.3 feet) from the external surface of the package; or

(2) For Fissile Class II packages or packages in a Fissile Class III shipment, the number expressing the maximum radiation level at one meter (3.3 feet) from the external surface of the package, or the number obtained by dividing 50 by the allowable number of packages which may be transported together, whichever is larger.

(cc) "Type A package" means a Type A packaging together with its limited radioactive contents. A Type A package does not require competent authority approval, since its contents are limited to A_1 or A_2.

(dd) "Type B package" means a Type B packaging together with its radioactive contents.

(ee) "Type B(M) package" means a Type B packaging, together with its radioactive contents, that for international shipments requires multilateral approval of the package design, and may require approval of the conditions of shipment. Type B(M) packages are those Type B package designs which have a maximum normal operating pressure of more than 7 kilograms per square centimeter (100 pounds per square inch) gauge or a relief device which would allow the release of radioactive material to the environment under the hypothetical accident conditions specified in 10 CFR Part 71.

(ff) "Type B(U) package" means a Type B packaging, together with its radioactive contents, that for international shipments, requires unilateral approval only of the package design and of any stowage provisions that may be necessary for heat dissipation.

(gg) "Type A packaging" means a packaging designed to retain the integrity of containment and shielding required by this part under normal conditions of transport as demonstrated by the tests set forth in §§ 173.465 or 173.466, as appropriate.

(hh) "Type B packaging" means a packaging designed to retain the integrity of containment and shielding required by this part when subjected to the normal conditions of transport and hypothetical accident test conditions set forth in 10 CFR Part 71.

(ii) "Uncompressed gas" means, for the purpose of this subpart, gas at a pressure not exceeding the ambient atmospheric pressure at the time and location the containment system is closed. All other radioactive gases are considered to be compressed.

(jj) "Unilateral approval" means approval by the competent authority of the country of origin only.

(kk) "Unirradiated thorium" means thorium containing not more than 10^{-7} grams uranium-233 per gram of thorium-232.

(ll) "Unirradiated uranium" means uranium containing not more than 10^{-6} grams plutonium per gram of uranium-235 and a fission product activity of not more than 0.25 millicuries of fission products per gram of uranium-235.

§ 173.411 General design requirements.

Except for a package that contains a limited quantity or excepted instrument or article under §§ 173.421 through 173.424, each package used for shipment of radioactive materials shall be designed so that—

(a) The package can be easily handled and properly secured in or on conveyance during transport;

(b) A package with a gross weight exceeding 10 kilograms (22 pounds) and up to 50 kilograms (110 pounds) has a means for manual handling;

(c) A package with a gross weight of 50 kilograms (110 pounds) or more can be safely handled by mechanical means;

(d) Each lifting attachment on the package, when used in the intended manner, with a minimum safety factor of three, does not impose an unsafe stress on the structure of the package. In addition, the lifting attachment shall be so designed that failure under excessive load would not impair the ability of the package to meet all other requirements of this subpart. Each attachment or other feature on the outer surface of the packaging that could be used to lift the package must be removable or otherwise capable of being made inoperable for transport, or shall be designed with strength equivalent to that required for lifting attachments;

(e) The external surface, as far as practicable, may be easily decontaminated;

(f) The outer layer of packaging will avoid, as far as practicable, pockets or crevices where water might collect; and

(g) Each feature that is added to the package at the time of transport and that is not a part of the package, will not reduce the safety of the package.

§ 173.412 Additional design requirements for Type A packages.

In addition to meeting the general design requirements prescribed in § 173.411, each Type A packaging shall be designed so that:

(a) The smallest overall external dimension of the package is not less than 10 centimeters (4 inches);

(b) The outside of the packaging incorporates a feature, such as a seal, that is not readily breakable, and that, while intact, is evidence that the package has not been opened. In the case of packages shipped in exclusive use closed transport vehicles, the cargo compartment may be sealed instead of the individual packages;

(c) As far as practicable, the external surfaces are free from protrusions and are designed and finished so that they can be easily decontaminated;

(d) Containment and shielding would be maintained during transportation and storage in a temperature range of −40°C (−40°F) to 70°C (158°F) with account being taken of the possibility of brittle fracture;

(e) It is able to withstand the effects of any acceleration, vibration, or vibration resonance that may arise during normal transportation, without any deterioration of the effectiveness of closing devices or of the integrity of the package as a whole and without loosening or unintentional release of nuts, bolts, or other securing devices even after repeated use;

(f) It includes a containment system securely closed by a positive fastening device that cannot be opened unintentionally or by pressure that may arise within the package during normal transport. Special form, as demonstrated in accordance with § 173.469 may be considered as a component of the containment system;

(g) The materials of the packaging and any components or structures

For explanation of abbreviations and reference marks, see last page of this tariff.

are physically and chemically compatible with each other and with the contents, taking into account the behavior of each under irradiation;

(h) For each component of the containment system account is taken, where applicable, of radiolytic decomposition of materials and the generation of gas by chemical reaction and radiolysis;

(i) The containment system will retain its radioactive contents under the reduction of ambient pressure to .25 kilograms per square centimeter (3 5 pounds per square inch);

(j) Each valve through which the radioactive contents could otherwise escape is protected against damage and unauthorized operation and, except for a pressure relief device, has an enclosure to retain any leakage;

(k) Any radiation shield that encloses a component of the packaging specified as part of the containment system will prevent the unintentional escape of that component from the shield;

(l) Failure of any tie down attachment on the packaging under excessive load will not impair the ability of the package to meet other requirements of this subpart;

(m) When subjected to the tests specified in § 173.465 or evaluated against these tests by any of the methods authorized by § 173.461(a), the packaging will prevent:

(1) Loss or dispersal of the radioactive contents; and

(2) Any significant increase in the radiation levels recorded or calculated at the external surfaces for the condition before the test;

(n) Each packaging designed for liquids will:

(1) Meet the conditions prescribed in paragraph (m) of this section when subjected to the tests specified in § 173.466 or evaluated against these tests by any of the methods authorized by § 173.461(a);

(2) For any package with a liquid volume not exceeding 50 cubic centimeters (1.7 fluid ounces), have sufficient suitable absorbent material to absorb twice the volume of the liquid contents. The absorbent material shall be compatible with the package contents and suitably positioned to contact the liquid in the event of leakage; and

(3) For any package with a liquid volume exceeding 50 cubic centimeters (1.7 fluid ounces), either:

(i) Have sufficient absorbent material as prescribed in paragraph (n)(2) of this section; or

(ii) Have a containment system composed of primary inner and secondary outer containment components designed to assure retention of the liquid contents within the secondary outer components in the event that the primary inner components leak; and

(o) Each package designed for compressed or uncompressed gases other than tritium or argon-37 not exceeding 200 curies will be able to prevent loss of contents when the package is subjected to the tests prescribed in § 173.466 or evaluated against these tests by any of the methods authorized by § 173.461(a).

§ 173.413 Requirements for Type B packages.

Each Type B(U) or Type B(M) package must be designed and constructed to meet the applicable requirements in 10 CFR Part 71.

§ 173.415 Authorized Type A packages.

The following packages are authorized for shipment, if they do not contain quantities exceeding A_1 or A_2 as appropriate:

(a) U.S. Department of Transportation (DOT) Specification 7A (§ 178 350 of this subchapter) Type A general packaging. Each shipper of a Specification 7A package must maintain on file for at least one year after the latest shipment, and shall provide to DOT on request, a complete documentation of tests and an engineering evaluation or comparative data showing that the construction methods, packaging design, and materials of construction comply with that specification. Specification 7A packagings designed in accordance with the requirements of § 178 350 in effect on June 30, 1983, and constructed prior to July 1, 1985, may continue to be used. Packagings either designed or constructed after June 30, 1985, must meet the requirements of § 178 350 applicable at the time of their design or construction.

(b) DOT Specification 55 metal-encased shielded packaging constructed before April 1, 1975. Such packaging constructed after March 31, 1975, is not authorized unless it is requalified under DOT Specification 7A. Each packaging designed for liquids must also meet the requirements of § 173.412 (m) and (n). Use of this packaging as DOT Specification 55 is not authorized after June 30, 1985.

(c) Any Type B, B(U) or B(M) packaging, pursuant to § 173.416.

(d) Any foreign made packaging that bears the marking "Type A" and which was used for the import of radioactive materials. Such packagings may be subsequently used for domestic and export shipments of radioactive materials. These packagings shall conform with requirements of the country of origin (as indicated by the packaging marking) applicable to Type A packagings. (The information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under OMB control number 2137–0533).

§ 173.416 Authorized Type B packages.

Each of the following packages is authorized for shipment of quantities exceeding A_1 or A_2, as appropriate:

(a) DOT Specification 55 metal-encased shielded packaging constructed before April 1, 1975, for domestic shipments only of special form radioactive materials of 300 curies or less. Such packaging constructed after March 31, 1975 may not be designated as DOT Specification 55. Use of this packaging is not authorized after June 30, 1985 unless approved in accordance with paragraph (b) of this section.

(b) Any Type B, Type B(U) or Type B(M) packaging that meets the applicable requirements in the regulations of the U.S. Nuclear Regulatory Commission (10 CFR Part 71) and that has been approved by that Commission may be shipped pursuant to § 173.471.

(c) Any Type B(U) or B(M) packaging that meets the applicable requirements of the regulations of the International Atomic Energy Agency (IAEA) in its "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)" and for which the foreign competent authority certificate has been revalidated by DOT pursuant to § 173.473. Authorized only for export and import shipments.

(d) DOT Specification 6M (§ 178.104 of this subchapter) metal packaging, only for solid or gaseous radioactive materials that will not undergo pressure generating decomposition at temperatures up to 121°C (250°F) and that do not generate more than 10 watts of radioactive decay heat.

(e) For contents in other than special form; DOT Specification 20WC (§ 178.194 of this subchapter), wooden protective jacket, when used with a single, snug-fitting inner DOT Specification 2R (§ 178 34 of this subchapter), or a DOT Specification 55 container constructed prior to April 1, 1975. Such packagings constructed after March 31, 1975, may not be designated as DOT Specification 55. For liquid contents, the inner packaging must comply with § 173.412 (m) and (n).

(f) For contents in special form only; DOT Specification 20WC (§ 178.194 of this subchapter), wooden protective jacket, with a single snug-fitting inner Type A packaging that has a metal outer wall and conforms to § 178 350 of this subchapter, or an inner DOT Specification 55 packaging constructed prior to April 1, 1975. Such packagings constructed after March 31, 1975, may not be designated as DOT Specification 55. Radioactive decay heat may not exceed 100 watts.

(g) For contents in special form only; DOT Specification 21WC (§ 178.195 of this subchapter), wooden protective overpack, with a single inner DOT Specification 2R (§ 178 34 of this subchapter) or an inner DOT Specification 55 container constructed prior to April 1, 1975. Such packagings constructed after March 31, 1975, may not be designated as DOT Specification 55. Contents shall be loaded within the inner packaging in such a manner as to prevent loose movement during transportation. The inner packaging shall be securely positioned and centered within the overpack so that there will be no significant displacement of the inner packaging if subjected to the 9 meter (30 feet) drop test described in 10 CFR Part 71.

§ 173.417 Authorized packaging—fissile materials.

(a) Except as provided in § 173.453, fissile materials containing not more than A_1 or A_2 as appropriate, shall be packaged in one of the following packagings:

(1) DOT Specification 6L (§ 178.103 of this subchapter), metal packaging, for materials prescribed in paragraph (b)(1) of this section.

(2) DOT Specification 6M, § 178.104 of this subchapter), metal packaging, for materials prescribed in paragraph (b)(2) of this section.

(3) Any packaging listed in § 173.415, limited to the following radioactive materials:

(i) 500 grams of uranium-235 in a single shipment as Fissile Class III or not more than 40 grams of uranium-235 per package as Fissile Class II. For Fissile Class II shipments, the transport index assigned to each package shall not be less than 0.4 for each gram of uranium-235 above 15 grams up to the maximum of 40 grams (transport index of 10).

(ii) 320 grams of plutonium-239 as plutonium-beryllium neutron sources in special form. Total radioactivity content may not exceed 20 curies. The transport index to be assigned to each package must be 0 5 for each 20 grams, or fraction thereof, of fissile plutonium.

(4) Any other Type A, Type B, Type B(U), or Type B(M) packaging for fissile radioactive materials that also meets the applicable standards for fissile materials in the regulations of the U.S. Nuclear Regulatory Commission (10 CFR Part 71), and is used in accordance with § 173.471.

(5) Any other Type A, Type B, Type B(U), or Type B(M) packaging that also meets the applicable requirements for fissile material packaging in Section VI of the International Atomic Energy Agency "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)", and for which the foreign competent authority certificate has been revalidated by the Director, OHMT, in accordance with § 173.473. Authorized only for export and import shipments.

(6) A DOT Specification 6J (§ 178.100 of this subchapter) or 17H (§ 178.118 of this subchapter) 55-gallon steel drum, subject to the following conditions:

(i) The quantity may not exceed 350 grams of uranium-235 in any nonpyrophoric form, enriched to any degree in the uranium-235 isotope.

(ii) Each drum must have a minimum 18 gauge body and bottom head and 16 gauge removable top head with one or more corrugations in the cover near the periphery.

(iii) Closure must conform to §178.103-5(a) of this subchapter.

(iv) At least four equally spaced 12 millimeter (0.5 inch) diameter vent holes shall be provided on the sides of the drum near the top, each covered with weatherproof tape; or equivalent device.

(v) Appropriate primary inner containment of the contents and sufficient packaging material, such as plastic or metal jars or cans shall be provided such that Specification 7A (§178.350 of this subchapter) provisions are satisfied by the inner packaging.

(vi) Each inner container shall be capable of venting if subjected to the thermal test described in 10 CFR Part 71.

(vii) Liquid contents shall be packaged in accordance with §173.412(m) and (n).

(viii) The maximum weight of contents including internal packaging may not exceed 91 kilograms (200 pounds) with fissile material content limited as shown in Table 2:

TABLE 2.—FISSILE MATERIAL CONTENT AND TRANSPORT INDEX FOR SPECIFICATION 6J or 17H Packages

Maximum U-235 per package (grams)	Minimum transport index per package as Fissile Class II	Maximum packages per transport vehicle as Fissile Class III
350	1.8	72
300	1.0	129
250	0.5	258
200	0.3	500
150	0.1	500
100	0.1	500
50	(1)	(1)

(1) Fissile Class I.

(7) Any metal cylinder that meets the performance requirements of §§173.415 and 178.350 of this subchapter for Specification 7A Type A packaging may be used as a Fissile Class I package for the transport of residual "heels" of enriched solid uranium hexafluoride without a protective overpack in accordance with Table 3:

TABLE 3.—ALLOWABLE CONTENT OF URANIUM HEXAFLUORIDE (UF_6) "HEELS" IN A SPECIFICATION 7A CYLINDER

Maximum cylinder diameter		Cylinder volume		Maximum Uranium-235 enrichment (weight percent)	Maximum "heel" weight per cylinder			
					UF_6		Uranium-235	
Inches	Centimeters	Cubic Feet	Liters		kg	(lb)	kg	(lb)
5	12.7	0.311	8.8	100.0	0.045	0.1	0.031	0.07
8	20.3	1.359	39	12.5	0.227	0.5	0.19	0.04
12	30.5	2.410	68	5.0	0.454	1.0	0.15	0.03
30	76	25.64	725	5.0	11.3	25.0	3.83	0.84
48	122	108.9 (10 ton)	3084	4.5	22.7	50	6.90	1.52
		142.7 (13 ton)	4041	4.5	22.7	50	6.90	1.52

(8) DOT Specifications 20PF-1, 20PF-2 or 20PF-3 (§178.120 of this subchapter) or Specifications 21PF-1 or 21PF-2 (§178.121 of this subchapter) phenolic-foam insulated overpack with snug-fitting inner metal cylinders, for materials prescribed in paragraph (b) (5) of this section.

(b) Fissile radioactive materials with radioactive content exceeding A_1 or A_2 shall be packaged in one of the following packagings:

(1) DOT Specification 6L (§178.103 of this subchapter), metal packaging. Authorized only for uranium-235, plutonium-239 or plutonium-241, as metal, oxide, or compounds that do not decompose at temperatures up to 149°C (300°F). Radioactive decay heat output may not exceed 5 watts. Radioactive materials in normal form shall be packaged in one or more tightly sealed metal cans or polythylene bottles within a DOT Specification 2R (§178.34 of this subchapter) containment vessel. Packages are authorized as Fissile Class II and III with material's limited in accordance with Table 4:

TABLE 4.—AUTHORIZED CONTENTS IN KILOGRAMS (KG) AND CONDITIONS FOR SPECIFICATION 6L PACKAGES

Uranium-235		Plutonium[1]		Fissile Class II transport index	Fissile Class III maximum number of packages per transport vehicle
H/X<3	3<H/X<10	H/X<10	10<H/X<20		
14	3.6[3]	—	—	1.3	80
—	—	2.5	2.4	1.8	50

[1] Plutonium solutions are not authorized.
[2] H/X is the ratio of hydrogen to fissile atoms in the inner containment with all sources of hydrogen in the containment considered.
[3] Volume not to exceed 3.6 liters.

(2) DOT Specification 6M (§178.104 of this subchapter), metal packaging. Authorized only for solid radioactive materials that will not decompose at temperatures up to 121°C(250°F). Radioactive decay heat output may not exceed 10 watts. Radioactive materials in other than special form shall be packaged in one or more tightly sealed metal cans or polyethylene bottles within a DOT Specification 2R (§178.34 of this subchapter) containment vessel. For fissile materials:

(i) Fissile Class I packages are limited to the following amounts of fissile radioactive materials: 1.6 kilograms of uranium-235; 0.9 kilograms of plutonium (except that due to the 10-watt thermal decay heat limitation, the limit for plutonium-238 is 0.02 kilograms); and 0.5 kilograms of uranium-233. The maximum ratio of hydrogen to fissile material must not exceed three, including all of the sources of hydrogen within the DOT Specification 2R containment vessel.

(ii) Maximum quantities of fissile material for Fissile Class II and Fissile Class III, and other restrictions are given in Table 5. For a Fissile Class II package, the minimum transport index to be assigned is shown in Table 5 and for a Fissile Class III shipment, the allowable number of similar packages per conveyance and per transport vehicle is shown. Each Fissile Class III shipment is also subject to the requirements in §173.457. Where a maximum ratio of hydrogen to fissile material is specified in Table 5, only the hydrogen interspersed with the fissile material need be considered. For a uranium-233 shipment, the maximum inside diameter of the inner containment vessel must not exceed 12.1 centimeters (4.75 inches). Where necessary, a tight fitting steel insert shall be used to reduce a larger diameter inner containment vessel specified in §178.104-3(b) of this subchapter to the 12 centimeter (4.75 inch) limit.

TABLE 5.—AUTHORIZED CONTENTS FOR SPECIFICATION 6M PACKAGES[1]

Uranium-233[5]			Uranium-235[6][7]			Plutonium[2][3][8]			Fissile class II transport index	Fissile class III maximum number of packages per transport vehicle
Metal or alloy	Compounds		Metal or alloy	Compounds		Metal or alloy	Compounds			
[8]H/X=0	H/X=0	H/X=3	H/X=0	H/X=0	H/X=3	H/X=0	H/X=0	H/X=3		
3.6	4.6	2.9	7.2	7.6	5.3	3.1	4.1	3.4	0.1	1,250
[4]4.2	5.2	3.5	8.7	9.6	6.4	3.4	4.5	4.1	0.2	625
[4]5.2	6.8	4.5	11.2	13.9	8.3	4.2	.....	4.5	0.5	250
....	.....	.....	13.5	16.0	10.1	4.5	.....	.....	1.0	125
....	.....	.....	....	26.0	16.1	....	.....	.....	5.0	25
....	.....	.....	....	32.0	19.5	....	.....	.....	10.0	12

[1] Quantity in kilograms.
[2] Minimum percentage of plutonium-240 is 5 weight percent.
[3] 4.5 kilogram limitation of plutonium due to 10 watt decay heat limitation.
[4] For a mixture of uranium-235 and plutonium an equal amount of uranium-235 may be substituted for any portion of plutonium authorized.
[5] Maximum inside diameter of Specification 2R containment vessel not to exceed 12 centimeter (4.75 inch) (see par. (b)(2)(ii) of this section).
[6] Granulated or powered metal with any particle less than 8 millimeter (0.25 inch) in the smallest dimension is not authorized.
[7] Maximum permitted uranium-235 enrichment is 93.5 percent.
[8] H/X is the ratio of hydrogen to fissile atoms in the inner containment.

For explanation of abbreviations and reference marks, see last page of this tariff.

(3) Type B, or Type B(U) or B(M) packaging that meets the standards for packaging of fissile materials in 10 CFR Part 71, and is approved by the U.S. Nuclear Regulatory Commission in accordance with § 173.471.

(4) Type B(U) or B(M) packaging that meets the applicable requirements for fissile radioactive materials in Section VI of the IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)" and for which the foreign competent authority certificate has been revalidated by the Director, OHMT in accordance with § 173.472. Authorized only for import and export shipments.

(5) DOT Specification 20PF-1, 20PF-2, or 20PF-3 (§ 178.120 of this subchapter) or Specification 21PF-1 or 21PF-2 (§ 178.121 of this subchapter) phenolic-foam insulated protective overpacks, with snug-fitting inner metal cylinders meeting all of the applicable requirments of §§ 173.24, 173.411, and 173.412. Handling procedures and packaging criteria shall be in accordance with U.S. Department of Energy Report No. ORO-651 or ANSI Standard N-14.1-1982. Quantities of uranium hexafluoride are authorized as shown in Table 6, with each package to be shipped as Fissile Class II, and assigned a minimum transport index as also shown:

TABLE 6.—AUTHORIZED QUANTITIES OF URANIUM HEXAFLUORIDE (UF_6) AS FISSILE CLASS II

Protective overpack specification number	Maximum inner cylinder diameter		Maximum weight of UF_6 contents		Maximum U-235 enrichment (weight percent)	Fissile Class II transport index
	Centimeter	Inch	Kilograms	Pounds		
20PF-1	12.7	5	25	55	100	0.1
20PF-2	20.3	8	118	255	12.5	4.0

	27.6	8.30	2.279	5.020	5.0	5.0

[1] For 76 centimeter cylinders, the maximum permitted H:U atomic ratio is 0.068
[2] Model 30A inner cylinder (Reference, ORO-651).
[3] Model 30B inner cylinder (Reference, ORO-651).

§ 173.418 Authorized packaging-pyrophoric radioactive materials.

(a) Pyrophoric radioactive materials, as referenced in § 172.101 of this subchapter, in quantities not exceeding A_2 per package shall be packaged in Type A packagings which are constructed of materials which will not react nor be decomposed by the contents. Contents must be:

(1) In solid form and must not be fissile unless excepted by § 173.453;

(2) Contained in sealed and corrosion resistant receptacles with positive closures (friction or slip-fit covers or stoppers are not authorized);

(3) Free of water and any contaminants which would increase the reactivity of the material; and

(4) Made inert to prevent self-ignition during transport by either:

(i) Mixing with large volumes of inerting materials such as graphite or dry sand, or other suitable inerting material, or blended into a matrix of hardened concrete; or

(ii) By filling the innermost receptacle with an appropriate inert gas.

(b) In addition to the applicable requirements of § 173.24 each package must be capable of passing the test conditions of § 173.465 without leakage of contents.

§ 173.419 Authorized packaging-oxidizing radioactive materials.

Certain oxidizing radioactive materials, as referenced in § 172.101 of this subchapter, and which are not fissile materials and not in quantities exceeding A_2, shall be packed in suitable inside packagings of glass, metal or compatible plastic and suitably cushioned with a material which will not react with the contents. Inner packaging and cushioning shall be enclosed within an outside packaging of wood, metal, or plastic. The package shall be capable of meeting the applicable test requirements of § 173.465 without leakage of contents. For shipment by air, the maximum quantity in any package may not exceed 11.3 kilograms (25 pounds).

§ 173.420 Uranium hexafluoride (fissile and low specific activity).

(a) In addition to any other applicable requirements of this subchapter, uranium hexafluoride, fissile or low specific activity, shall be packaged in conformance with the following requirements:

(1) Before initial filling and during periodic inspection and test, packagings shall be cleaned in accordance with American National Standard N14.1-1982;

(2) Packagings used for the transportation of uranium hexafluoride on or before June 30, 1987 are authorized for continued use until further notice. Packagings manufactured after June 30, 1987 shall be designed, fabricated, and marked in accordance with—

(i) American National Standard N14.1-1982; or

(ii) Specifications for DOT Class 106A multi-unit tank car tanks (§§ 179.300, 179.301, and 179.302 of this subchapter).

(3) Uranium hexafluoride must be in solid form when offered for transportation;

(4) The volume of the solid uranium hexafluoride at 70°F must not exceed 61% of the volumetric capacity of the packaging; and

(5) The pressure in the package at 70°F must be less than 14.8 psia.

(b) Packagings of uranium hexafluoride must be periodically inspected, tested and marked in accordance with American National Standard N14.1-1982.

(c) Each repair to a packaging for uranium hexafluoride shall be performed in conformance with American National Standard N14.1-1982.

§ 173.421 Limited quantities of radioactive materials.

Radioactive materials whose activity per package does not exceed the limits specified in § 173.423 are excepted from the specification packaging, shipping paper and certification marking, and labeling requirements of this subchapter and requirements of this subpart if:

(a) The materials are packaged in strong, tight packages that will not leak any of the radioactive materials during conditions normally incident to transportation;

(b) The radiation level at any point on the external surface of the package does not exceed 0.5 millirem per hour;

(c) The nonfixed (removable) radioactive surface contamination on the external surface of the package does not exceed the limits specified in § 173.443(a);

(d) The outside of the inner packaging or if there is no inner packaging, the outside of the packaging itself bears the marking "Radioactive";

(e) Except as provided in § 173.424, the package does not contain more than 15 grams of uranium-235; and

(f) The material is otherwise prepared for shipment as specified in § 173.421-1.

§ 173.421-1 Additional requirements for excepted radioactive materials.

(a) Excepted radioactive materials prepared for shipment under the provisions of § 173.421, § 173.422, § 173.424, or § 173.427 must be certified as being acceptable for transportation by having a notice enclosed in or on the package, included with the packing list, or otherwise forwarded with the package. This notice must include the name of the consignor or consignee and the statement "This package conforms to the conditions and limitations specified in 49 CFR 173.421 for excepted radioactive material, limited quantity, n.o.s., UN2910; 49 CFR 173.422 for excepted radioactive material, instruments and articles, UN2911; 49 CFR 173.424 for excepted radioactive material, articles manufactured from natural or depleted uranium or natural thorium, UN2909; or 49 CFR 173.427 for excepted radioactive material, empty packages, UN2908", as appropriate.

(b) An excepted radioactive material classed radioactive material and prepared for shipment under the provisions of § 173.421, § 173.422, § 173.424, § 173.427 or § 173.421-2 is not subject to the requirements of this subchapter, except for:

(1) Sections 171.15, 171.16, 174.750, 176.710 and 177.861 of this subchapter pertaining to the reporting of incidents and decontamination when transported by a mode other than air; or

(2) Sections 171.15, 171.16, 175.45, and 175.700(b) of this subchapter pertaining to the reporting of incidents and decontamination if transported by aircraft. After May 2, 1989, it is also necessary to comply with §§ 173.448(f) and 175.700(c) of this subchapter.

(Approved by the Office of Management and Budget under control number 2137-0039)

§ 173.421-2 Requirements for multiple hazard limited quantity radioactive materials.

(a) Except as provided in paragraph (b) of this section or in § 173.4 of this subchapter, when a limited quantity radioactive material meets the definition of another hazard class, it shall be:

(1) Classed for the additional hazard;

(2) Packaged to conform with requirements specified in §§ 173.421(a)-(e) or 173.422(a)-(g), as appropriate; and

(3) Offered for transportation in accordance with requirements applicable to the hazard for which it is classed.

(b) When a limited quantity radioactive material meets the definition of an ORM-A, B, or C, or is a combustible liquid in a packaging having a rated capacity of 110 gallons or less, it shall be:

(1) Classed radioactive material if:

(i) The material is not a hazardous waste or hazardous substance; and

(ii) The material is offered for transportation in a mode to which requirements of this subchapter pertaining to the specific material and hazard class do not apply;

(2) Classed combustible liquid or ORM-A, B, or C, as appropriate, if:

(i) The material is a hazardous waste or hazardous substance; or

(ii) The material is offered for transportation in a mode to which requirements of this subchapter pertaining to the specific material and hazard class do apply;

(3) Packaged to conform with requirements specified in §§ 173.421(a)-(e) or 173.422(a)-(g), as appropriate; and

(4) Offered for transportation in accordance with requirements applicable to the hazard for which it is classed.

(c) A limited quantity radioactive material which is classed other than radioactive material under provisions of paragraphs (a) or (b) of this section is excepted from requirements of §§ 173.421-1(a), 172.203(d), and 172.204(c) (4) of this subchapter if the entry "Limited quantity radioactive material" appears on the shipping paper in association with the basic description.

(d) After May 2, 1989, a limited quantity radioactive material classed other than radioactive material may not be offered for transportation aboard a passenger-carrying aircraft unless that material is intended for use in, or incident to, research, medical diagnosis or treatment.

§ 173.422 Exceptions for instruments and articles.

Instruments and manufactured articles (including clocks, electronic tubes or apparatus) or similar devices having radioactive materials in gaseous or non-dispersible solid form as a component part are excepted from the specification packaging, shipping paper and certification, marking and labeling requirements of this subchapter and requirements of this subpart, if:

(a) The activity of the instrument or article does not exceed the relevant limit listed in table 7 § 173.423;

(b) The total activity per package does not exceed the relevant limit listed in Table 7 in § 173.423;

(c) The radiation level at 10 centimeters (4 inches) from any point on the external surface of any unpackaged instrument or article does not exceed 10 millirem per hour;

(d) The radiation level at any point on the external surface of a package bearing the article or instrument does not exceed 0.5 millirem per hour, or, for exclusive use domestic shipments, 2 millirem per hour;

(e) The nonfixed (removable) radioactive surface contamination on the external surface of the package does not exceed the limits specified in § 173.443(a);

(f) Except as provided in § 173.424, the package does not contain more than 15 grams of uranium-235; and (g) [Reserved]

(h) The instrument or article is otherwise prepared for shipment as specified in § 173.421-1.

§ 173.423 Table of activity limits—excepted quantities and articles.

The limits applicable to instruments, articles and limited quantities subject to exceptions under §§ 173.421 and 173.422 are shown in Table 7:

TABLE 7.—ACTIVITY LIMITS FOR LIMITED QUANTITIES, INSTRUMENTS, AND ARTICLES

Nature of contents	Instruments and Articles		Material's package limits
	Instrument and article limits [1]	Package limits	
Solids			
Special form	10 $^{-2}A_1$	A_1	10 $^{-3}A_1$
Other forms	10 $^{-2}A_2$	A_2	10 $^{-3}A_2$
Liquids			
Tritium water			
< 0.1 Ci/liter			1000 Curies
0.1 Ci to 1.0 Ci/liter			100 Curies
> 1.0 Ci/liter			1 Curie
Other liquids	10 $^{-3}A_2$	10 $^{-1}A_2$	10 $^{-4}A_2$
Gases			
Tritium [2]	20 Curies	200 Curies	20 Curies
Special form	10 $^{-3}A_1$	10 $^{-2}A_1$	10 $^{-3}A_1$
Other forms	10 $^{-3}A_2$	10 $^{-2}A_2$	10 $^{-3}A_2$

[1] For mixture of radionuclides see § 173.433(b).

[2] These values also apply to tritium in activated luminous paint and tritium absorbed on solid carriers.

§ 173.424 Excepted articles containing natural uranium or thorium.

Manufactured articles in which the sole radioactive material content is natural or depleted uranium or natural thorium are excepted from the specification packaging, shipping paper and certification, marking and labeling requirements of this subchapter and requirements of this subpart if:

(a) The outer surface of the uranium or thorium is enclosed in an inactive sheath made of metal or other durable protective material;

(b) The conditions specified in § 173.421 (b), (c) and (d) are met; and

(c) The article is otherwise prepared for shipment as specified in § 173.421-1.

§ 173.425 Transport requirements for low specific activity (LSA) radioactive materials.

In addition to other applicable requirements specified in this subchapter, low specific activity (LSA) materials shall be transported in accordance with paragraph (a) of this section, or if transported as exclusive-use may be transported in accordance with paragraph (b) or (c) of this section.

(a) DOT Specification 7A (§ 178.350 of this subchapter) Type A package. The requirements of § 173.412 (a), (b), (d), and (n) do not apply.

(b) Packaged shipments of LSA material consigned as exclusive use shall either be in accordance with paragraph (a) of this section or shall comply with the following in which case they are excepted from specification packaging, marking and labeling:

(1) Materials must be packaged in strong, tight packages so that there will be no leakage of radioactive material under conditions normally incident to transportation.

(2) Packages must not have any significant removable surface contamination (see § 173.443).

(3) External radiation levels must comply with § 173.441.

(4) Shipments must be loaded by consignor and unloaded by consignee from the conveyance or freight container in which originally loaded.

(5) There must be no loose radioactive material in the conveyance.

(6) Shipment must be braced so as to prevent shifting of lading under conditions normally incident to transportation.

(7) Except for shipments of unconcentrated uranium or thorium ores, the transport vehicle must be placarded with the placards prescribed in accordance with Subpart F of Part 172 of this subchapter, as appropriate.

(8) The exterior of each outside package must be stenciled or otherwise marked "Radioactive—LSA".

(9) Specific instructions for maintenance of exclusive use shipment controls must be provided by the shipper to the carrier. Such instructions must be included with the shipping paper information.
(10) Transportation by aircraft is prohibited.
(c) Unpackaged (bulk) shipments of LSA materials shall be transported only in exclusive use closed transport vehicles and shall comply with the following:
(1) Authorized materials are limited to the following:
(i) Uranium or thorium ores and physical or chemical concentrates of those ores.
(ii) Uranium metal or natural thorium metal, or alloys of these materials.
(iii) Materials of low radioactive concentration, if the average estimated radioactivity concentration does not exceed 0.001 millicurie per gram and the contribution from materials with an A_2 value (see § 173.435) of less than 0.05 curie does not exceed one percent of the total radioactivity.
(iv) Objects of nonradioactive material externally contaminated with radioactive material, if the radioactive material is not readily dispersible and the surface contamination, when averaged over one square meter, does not exceed 0.0001 millicurie per square centimeter of radionuclides for which the A_2 value is less than 0.05 or 0.001 millicurie per square centimeter of other radionuclides. Such objects must be suitably wrapped or enclosed.
(2) Bulk liquids must be transported in the following:
(i) Specification 103CW, 111A60W7 (§§ 179.200, 179.201, 179.202 of this subchapter) tank cars. Bottom openings in tanks prohibited.
(ii) Specification MC 310, MC 311, MC 312, or MC 331 (§§ 178.343 or 178.337 of this subchapter) cargo tanks. Authorized only where the radioactivity concentration does not exceed 10 percent of the specified low specific activity levels (see § 173.403(n)). The requirements of § 173.412(n) do not apply to these cargo tanks. Bottom fittings and valves are not authorized. Trailer-on-flat-car service is not authorized.
(3) External radiation levels must comply with § 173.441(b).
(4) Shipments must be loaded by the consignor, and unloaded by the consignee from the conveyance or freight container in which originally loaded.
(5) Except for shipments of unconcentrated uranium or thorium ores, the transport vehicle must be placarded with the placards prescribed in Subpart F of Part 172 of this subchapter, as appropriate.
(6) There must be no leakage of radioactive materials from the vehicle.
(7) Specific instructions for maintenance of exclusive use shipment controls must be provided by the shipper to carrier. Such instructions must be included with the shipping paper information.
(8) Transportation by aircraft is prohibited.
(d) Except for transportation by aircraft, low specific activity material that conforms with the provisions specified in 10 CFR 20.306 is excepted from all requirements of this subchapter pertaining to radioactive materials when offered for transportation for disposal or recovery. A material which meets the definition of another hazard class is subject to the provisions of this subchapter relating to that hazard class.

§ 173.427 Empty radioactive materials packaging.

A packaging which previously contained radioactive materials and has been emptied of contents as far as practical, is excepted from the shipping paper and certification, marking and labeling requirements of this subchapter, and from requirements of this subpart, provided that:
(a) It complies with the requirements of § 173.421(b), (c) and (e);
(b) The packaging is in unimpaired condition and is securely closed so that there will be no leakage of radioactive material under conditions normally incident to transportation;
(c) Internal contamination does not exceed 100 times the limits specified in § 173.443;
(d) Any labels previously applied in conformance with Subpart E of Part 172 of this subchapter are removed, obliterated or covered and the "Empty" label prescribed in § 172.450 is affixed to the packaging; and
(e) The packaging is prepared for shipment as specified in § 173.421-1.

§ 173.431 Activity limits for Type A and Type B packages.

(a) A Type A package shall not contain a quantity of radioactivity greater than A_1 (for special form radioactive material) or A_2 (for normal form radioactive material) as listed in § 173.435, or for radioactive materials not listed in § 173.435, as determined in accordance with § 173.433.
(b) The limits on activity contained in a Type B, Type B(U), or Type B(M) package are those prescribed in § 173.416 or in the applicable approval certificate under §§ 173.471 or 173.473.

§ 173.433 Requirements for determination of A_1 and A_2 values for radionuclides.

(a) Single radionuclides.
(1) For single radionuclides of known identity, the values of A_1 and A_2 are those given in the table in § 173.435. The values of A_1 and A_2 are also applicable for radionuclides contained in (α,n) or (γ, n) neutron sources.
(2) For any single radionuclide of known identity, which is not listed in § 173.435, the values of A_1 and A_2 shall be determined in accordance with the following:
(i) If the radionuclide emits only one type of radiation, A_1 is determined in accordance with paragraphs (a)(2)(i)(A), (B), (C), and (D) of this section. For radionuclides emitting different kinds of radiation, A_1 is the most restrictive value of those determined for each kind of radiation. However, in both cases, A_1 is restricted to a maximum of 1000 curies. If a parent nuclide decays into a shorter lived daughter, of a half-life not greater than 10 days, A_1 is calculated for both the parent and the daughter, and the more limiting of the two values is assigned to the parent nuclide.
(A) For gamma emitters, A_1 is determined by the expression: $A_1 = 9/\Gamma$ curie
where Γ is the gamma-ray constant, corresponding to the dose in roentgens per hour at 1 meter per curie; the number 9 results from the choice of 1 rem per hour at a distance of 3 meters as the reference dose-equivalent rate.
(B) For x-ray emitters, A_1 is determined by the atomic number (Z) of the nuclide:
$Z < 55$ A_1 = 1000 curies
for $Z > 55$ A_1 = 200 curies
(C) For beta emitters, A_1 is determined by the maximum beta energy ($E_{\beta max}$) according to Table 8:

Table 8—A_1 for Beta Emitters

$E_{\beta max}$ (MeV)	A_1(curies)
< 0.5	1000
0.5 < 1.0	300
1.0 < 1.5	100
1.5 < 2.0	30
> 2.0	10

(D) For alpha emitters, A_1 is determined by the expression: $A_1 = 1000\ A_2$
where A_2 is the value listed in Table 9:

Table 9—A_2 Values

Atomic number	A_2 Half-life less than 1,000 days	A_2 Half-life 1,000 days to 10^9 years	A_2 Half-life greater than 10^9 years
1 to 81	3 curies	50 millicuries	3 curies
82 and above	2 millicuries	2 millicuries	3 curies

(ii) For assignment of A_2 values, A_2 is the more restrictive of the following values:
(A) The corresponding A_1.
(B) The value A_2 obtained from Table 9.
(3) For any single radionuclide whose identity is unknown, the value of A_1 is 2 curies and the value of A_2 is 0.002 curies. However, if the atomic number of the radionuclide is less than 82, the value of A_1 is 10 curies and the value of A_2 is 0.4 curies.
(b) ***Mixture of radionuclides, including radioactive decay chains.***
(1) For mixed fission products, where a detailed analysis of the mixture is not carried out, the following activity limits apply:
(i) A_1 = 10 curies.
(ii) A_2 = 0.4 curies.
(2) A single radioactive decay chain is considered to be a single radionuclide when the radionuclides are present in their naturally occurring portions and no daughter nuclide has a half-life either longer than 10 days or longer than that of the parent nuclide. The activity to be taken into account and the A_1 or A_2 value to be applied are those corresponding to the parent nuclide of that chain. When calculating A_1 or A_2 values, radiation emitted by daughters must be taken into account. However, in the case of radioactive decay chains in which any daughter nuclide has a half-life either longer than 10 days or greater than that of the parent nuclide, the parent and daughter nuclides are considered to be mixtures of different nuclides.
(3) In the case of a mixture of different radionuclides, where the identity and activity of each radionuclide is known, the permissible activity of each radionuclide $R_1, R_2, \ldots R_n$ must be such that $F_1 + F_2 + \ldots F_n$ is not greater than unity, when—

$$F_1 = \frac{\text{Total activity of } R_1}{A(R_1)}$$

$$F_2 = \frac{\text{Total activity of } R_2}{A(R_2)}$$

$$F_n = \frac{\text{Total activity of } R_n}{AR_n}$$

Where $A(R_1, R_2 \ldots R_n)$ is the value of A_1 or A_2 as appropriate for the nuclide $R_1, R_2 \ldots R_n$.

(4) When the identity of each radionuclide is known but the individual activities of some of the radionuclides are not known, the formula given in subparagraph (3) of this paragraph must be applied to establish the values of A_1 or A_2 as appropriate. All the radionuclides whose individual activities are not known (but whose total activity is known) must be classed in a single group and the most restrictive value of A_1 or A_2 applicable to any one of them shall be used as the value of A_1 and A_2 in the denominator of the fraction.

(5) When the identity of each radionuclide is known but the individual activity of the radionuclides is not known, the most restrictive value of A_1 or A_2 applicable to any one of the radionuclides present in the applicable value.

(6) When the identity of the radionuclides is not known, the value of A_1 is 2 curies and the value of A_2 is 0.002 curies. However, if alpha emitters are known to be absent, the value of A_2 is 0.4 curies.

§ 173.434 Activity-mass relationships for uranium and natural thorium.[1]

Radioactive material	Curies per gram	Grams per Curie
Uranium—(Wt% ^{235}U present)		
0.45	5.0×10^{-7}	2.0×10^{6}
0.72 (natural)	7.06×10^{-7}	1.42×10^{6}
1.0	7.6×10^{-7}	1.3×10^{6}
1.5	1.0×10^{-6}	1.0×10^{6}
5.0	2.7×10^{-6}	3.7×10^{5}
10.0	4.8×10^{-6}	2.1×10^{5}
20.0	1.0×10^{-5}	1.0×10^{5}
35.0	2.0×10^{-5}	5.0×10^{4}
50.0	2.5×10^{-5}	4.0×10^{4}
90.0	5.8×10^{-5}	1.7×10^{4}
93.0	7.0×10^{-5}	1.4×10^{4}
95.0	9.1×10^{-5}	1.1×10^{4}
Natural thorium	2.2×10^{-7}	4.6×10^{6}

[1] The figures for uranium include representative values for the activity of uranium-234 which is concentrated during the enrichment process. The activity for thorium includes the equilibrium concentration of thorium-228.

§ 173.435 Table of A_1 and A_2 values for radionuclides.

Symbol of radionuclide	Element and atomic number	A_1(Ci) (Special Form)	A_2(Ci) (Normal Form)

[1] For shipments solely within the United States the A_1 value is 20 curies for americium and plutonium contained in Am Be or Pu Be neutron sources or in nuclear powered pacemakers.

[2] The values of A_1 and A_2 must be calculated in accordance with the procedure specified in § 173.433 of this subchapter, taking into account the activity of the fission products and of the uranium-233 in addition to that of the thorium.

[3] The values of A_1 and A_2 must be calculated in accordance with the procedure specified in § 173.433 of this subchapter, taking into account the activity of the fission products and plutonium isotopes in addition to that of the uranium.

§ 173.441 Radiation level limitations. (a) Except as provided in paragraph (b) of this section, each package of radioactive materials offered for transportation shall be designed and prepared for shipment so that under conditions normally incident to transportation the radiation level does not exceed 200 millirem per hour at any point on the external surface of the package, and the transport index does not exceed 10.

(b) A package which exceeds the radiation level limits specified in paragraph (a) of this section shall be transported by exclusive use shipment only and if the radiation levels for such shipment must not exceed the following during transportation:

(1) 200 millirem per hour (2 millisievert per hour) on the external surface of the package unless the following conditions are met, in which case the limit is 1000 millirem per hour (10 millisievert per hour).

(i) The shipment is made in a closed transport vehicle;

(ii) The package is secured within the vehicle so that its position remains fixed during transportation; and

(iii) There are no loading or unloading operations between the beginning and end of the transportation;

(2) 200 millirem per hour (2 millisievert per hour) at any point on the outer surface of the vehicle, including the top and underside of the vehicle; or in the case of a flat-bed style vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load (or enclosure is used), and on the lower external surface of the vehicle;

(3) 10 millirem per hour (0.1 millisievert per hour) at any point 2 meters (6.6 feet) from the outer lateral surfaces of the vehicle (excluding the top and underside of the vehicle); or in devices and operate under provisions of a State or Federally regulated radiation protection program.

(4) 2 millirem per hour in any normally occupied position in the car or transport vehicle, except that this provision does not apply to private motor carriers when the personnel are operating under a radiation protection program and wear radiation exposure monitoring devices.

(c) For shipments made under the provisions of paragraph (b) of this section, the shipper shall provide specific written instructions for maintenance of the exclusive use shipment controls to the carrier. The instructions shall be included with the shipping paper information.

(d) Packages exceeding the radiation level or transport index prescribed in paragraph (a) of this section shall not be transported by aircraft.

(e) The written instructions required for exclusive use shipments must be sufficient so that, when followed, they will cause the carrier to avoid actions which will unnecessarily delay delivery or unnecessarily result in increased radiation levels or radiation exposures.

(The information collection requirements contained in paragraph (c) were approved by the Office of Management and Budget under control number 2137-0535)

§ 173.442 Thermal limitations. Each package of radioactive material shall be designed, constructed, and loaded so that—

(a) The heat generated within the package because of the radioactive contents will not, at any time during transportation, affect the integrity of the package under conditions normally incident to transportation; and

(b) The temperature of the accessible external surfaces of the loaded package will not, assuming still air in the shade at an ambient temperature of 38°C (100°F), exceed either—

(1) 50°C (122°F) in other than an exclusive use shipment; or

(2) 82°C (180°F) in an exclusive use shipment.

§ 173.443 Contamination control. (a) The level of non-fixed (removable) radioactive contamination on the external surfaces of each package offered for shipment shall be kept as low as practicable. The level of non-fixed radioactive contamination may be determined by wiping an area of 300 square centimeters of the surface concerned with an absorbent material, using moderate pressure, and measuring the activity on the wiping material. Sufficient measurements shall be taken in the most appropriate locations to yield a representative assessment of the non-fixed contamination levels. Except as provided in paragraph (b) of this section, the amount of radioactivity measured on any single wiping material when averaged over the surface wiped shall not exceed the limits given in Table 10 at any time during transport. Other methods of assessment of equal or greater efficiency may be used. When other methods are used the detection efficiency of the method used shall be taken into account and in no case shall the non-fixed contamination on the external surfaces of the package exceed ten times the limits listed in Table 10.

TABLE 10.—REMOVABLE EXTERNAL RADIOACTIVE CONTAMINATION—WIPE LIMITS

Contaminant	Maximum permissible limits	
	uCi/cm²	dpm/cm²
Beta gamma emitting radionuclides, all radionuclides with half-lives less than ten days, natural uranium, natural thorium, uranium-235, uranium-238, thorium 232, thorium 228 and thorium-230 when contained in ores or physical concentrates	10^{-5}	22
All other alpha emitting radionuclides	10^{-6}	2.2

(b) Except as provided in paragraph (d) of this section, in the case of packages transported as exclusive use shipments by rail or public highway only, the removable (non-fixed) radioactive contamination at any time during transport shall not exceed ten times the levels prescribed in paragraph (a) of this section. The levels at the beginning of transport shall not exceed the levels prescribed in paragraph (a) of this section.

(c) Except as provided in paragraph (d) of this section, each transport vehicle used for transporting radioactive materials as an exclusive use shipment which utilizes the provisions of paragraph (b) of this section shall be surveyed with appropriate radiation detection instruments after each use. A vehicle shall not be returned to service until the radiation dose rate at each accessible surface is 0.5 millirem per hour or less, and there is no significant removable (non-fixed) radioactive surface contamination as specified in paragraph (a) of this section.

(d) Paragraph (b) and (c) of this section do not apply to any closed transport vehicle used solely for the transportation by public highway of radioactive material packages with contamination levels that do not exceed 10 times the levels prescribed in paragraph (a) of this section if:

(1) A survey of the interior surfaces of the empty vehicle shows that the radiation dose rate at any point does not exceed 10 millirem per hour at the surface or 2 millirem per hour at 1 meter (3.3 feet) from the surface;

(2) Each vehicle is stenciled with the words "For Radioactive Materials Use Only" in letters at least 76 millimeters (3 inches) high in a conspicuous place on both sides of the exterior of the vehicle; and

(3) Each vehicle is kept closed except for loading or unloading.

§ 173.444 Labeling requirements. Each package of radioactive materials, unless excepted by §§173.421, 173.422, 173.424, 173.425(b), or 173.427 shall be labeled as provided in Subpart E of Part 172 of this subchapter.

§ 173.446 Placarding requirements. See Subpart F of Part 172 of this subchapter.

§ 173.447 Storage incident to transportation-general requirements. The following requirements apply to temporary storage during the course of transportation but not to Nuclear Regulatory Commission or Agreement State licensed facilities or U.S. Government owned or contracted facilities.

(a) The number of packages bearing Radioactive Yellow II or Radioactive Yellow III labels stored in any one storage area, such as a transit area, terminal building, store-room, or assembly yard, shall be limited so that the sum of the transport indexes in any individual group of packages does not exceed 50. Groups of these packages must be stored so as to maintain a spacing of at least 6 meters (20 feet) from other groups of packages containing radioactive materials.

(b) Mixing of different kinds of packages, including Fissile Class I packages with Fissile Class II packages, is authorized in accordance with §173.459 of this subchapter.

§ 173.448 General transportation requirements. (a) Each shipment of radioactive materials shall be secured in order to prevent shifting during normal transportation conditions.

(b) Except as may be specifically required by the competent authority in the applicable certificate, a package of radioactive materials may be carried among packaged general cargo without special stowage provisions, if:

(1) The heat output in watts does not exceed 0.1 times the minimum package dimension in centimeters; or

(2) The average surface heat flux of the package does not exceed 15 watts per square meter and the immediately surrounding cargo is not in sacks or bags or otherwise in a form that would seriously impede air circulation for heat removal.

(c) Packages bearing labels prescribed in §172.403 of this subchapter may not be carried in compartments occupied by passengers, except in those compartments exclusively reserved for couriers accompanying those packages.

(d) Mixing of different kinds of packages, including Fissile Class I packages with Fissile Class II packages, is authorized in accordance with §173.459.

(e) No person shall offer for transportation aboard a passenger-carrying aircraft any single package with a transport index greater than 3.0 or an overpack with a transport index greater than 3.0.—

(f) No person shall offer for transportation aboard a passenger carrying aircraft any radioactive material unless that material is intended for use in, or incident to, research, or medical diagnosis or treatment.

(g) If an overpack is used to consolidate individual packages of radioactive materials, the packages shall comply with the packaging, marking, and labeling requirements of this subchapter, and the following:

(1) The overpack shall be labeled as prescribed in §172.403 of this subchapter except as follows:

(i) the "contents" entry on the label may state "mixed" unless each inside package contains the same radionuclide(s).

(ii) The "activity" entry on the label must be determined by adding together the number of curies of the radioactive materials packages contained therein.

(iii) For a non-rigid overpack, the required label together with required package markings shall be affixed to the overpack by means of a securely attached, durable tag. The transport index shall be determined by adding together the transport indexes of the radioactive materials packages contained therein.

(iv) For a rigid overpack, the transport index shall be determined by:

(A) Adding together the transport indexes of the radioactive materials packages contained in the overpack; or

(B) Except for fissile radioactive materials, direct measurements as prescribed in §173.403(bb) which have been taken by the person initially offering the packages contained within the overpack for shipment.

(2) The overpack shall be marked as prescribed in Subpart D of Part 172 of this subchapter and §173.25(a).

(3) The transport index of the overpack shall not exceed 3.0 for passenger-carrying aircraft shipments, or 10.0 for cargo aircraft only shipments.

§ 173.451 Fissile materials—general requirements. (a) Except as provided in §173.453, each package containing fissile radioactive materials must comply with §§173.451 through 173.459.

§ 173.453 Fissile materials—exceptions. The requirements of §§173.451 through 173.459 do not apply to:

(a) A package containing not more than 15 grams of fissile radionuclides. If the material is transported in bulk, the quantity limitation applies to the conveyance;

(b) A package containing irradiated natural or depleted uranium including the products of irradiation if the irradiation has taken place only in the thermal reactor;

(c) A package containing homogeneous solutions or mixtures where:

(1) The minimum ratio of the number of hydrogen atoms to the number of atoms of fissile radionuclides (H:X) is 5200;

(2) The maximum concentration of fissile radionuclides is 5 grams per liter; and

(3) The maximum mass of fissile radionuclides in the package is 500 grams, except that for a mixture where the total mass of plutonium and uranium-233 does not exceed 1% of the mass of uranium-235 the limit is 800 grams. If the material is transported in bulk, the quantity limitations apply to the conveyance;

(d) A package containing uranium enriched in uranium-235 to a maximum of 1% by weight, and with a total plutonium and uranium-233 content of up to 1% of the mass of uranium-235, if the fissile radionuclides are distributed homogeneously throughout the package contents, and do not form a lattice arrangement within the package;

(e) A package containing any fissile material if it does not contain more than 5 grams of fissile radionuclides in any 10-liter volume, and if the material is packaged so as to maintain this limit of fissile radionuclide concentration during normal transport;

(f) A package containing not more than one kilogram of plutonium of which not more than 20% by mass may consist of plutonium-239, plutonium-241, or any combination of those radionuclides;

(g) A package containing liquid solutions of uranyl nitrate enriched in uranium-235 to a maximum of 2% by weight, with total plutonium and uranium-233 not more than 0.1% of the mass of uranium-235; or

(h) A package containing thorium or uranium with not more than 0.72% by weight of fissile material used for shipment solely within the United States.

§ 173.455 Classification of fissile materials packages. (a) Except as provided in §173.453, each package of fissile materials shall be classified as follows:

(1) **Fissile Class I.** Packages that may be transported in unlimited number, and in any arrangement, and that require no nuclear criticality safety controls during transportation. A transport index is not assigned to Fissile Class I packages for the purposes of nuclear criticality safety control, although, the external radiation levels may require a transport index number.

(2) **Fissile Class II.** Packages that may be transported together in any arrangement but in numbers that do not exceed an aggregate transport index of 50. For the purposes of nuclear criticality safety control, individual packages may have a transport index of not less than 0.1 and not more than 10. However, the external radiation levels may require a higher transport index number. These shipments require no nuclear criticality safety control by the shipper during transportation.

(3) **Fissile Class III.** Shipments of packages of fissile materials that do not meet the requirements of Fissile Class I or Fissile Class II and that are controlled in transportation as prescribed in §173.457 by appropriate arrangements between the shipper and the carrier.

(b) The numerical values for package assignments as Fissile Class I, the transport indexes for Fissile Class II packages, and the conveyance and vehicle limitations for Fissile Class III shipments shall be determined in accordance with 10 CFR Part 71.

§ 173.457 Transportation of Fissile Class III shipments—specific requirements. (a) Fissile Class III shipments shall incorporate transportation controls which are performed by the shipper or carrier, as appropriate, and which:

(1) Provide nuclear criticality safety;

(2) Protect against loading, storing, or transporting that shipment with any other fissile material; and

(3) Include in the shipping papers the description required by §172.203(d) of this subchapter.

(b) Fissile Class III shipments shall be transported:

(1) In a conveyance (transport vehicle if transported by public highway or rail) assigned to the exclusive use of the shipper with a specific restriction for the exclusive use to be provided in the appropriate arrangements between shipper and carrier and with instructions to that effect issued with the shipping papers;

(2) Except for shipments by aircraft, with an escort in a vehicle having the capability, equipment, authority, and instructions to provide administrative controls necessary to assure compliance with this section;

(3) In a conveyance (transport vehicle if transported by public highway or rail) containing no other packages of radioactive material that are required to bear one of the labels prescribed in §172.403 of this subchapter. Specific arrangements must be made between the shipper and the carrier, with instructions to that effect issued with the shipping papers; or

(4) Under any other procedure specifically authorized by the Director, OHMT in accordance with Part 107 of this subchapter. (Approved by the Office of Management and Budget under OMB control number 2137-0535)

(The information collection requirements contained in paragraph (b) were approved by the Office of Management and Budget under control number 2137-0535)

§ 173.459 Mixing of fissile material packages. Shipments of fissile materials packages and the commingling of fissile materials packages with other radioactive materials packages shall be in accordance with the provisions of this section.

(a) Mixing of fissile material packages with other types of radioactive materials, including Fissile Class I with Fissile Class II packages is authorized if the total transport index in any conveyance (transport vehicle if transported by public highway or rail) or storage location does not exceed 50.

(b) For Fissile Class II packages shipped under the exclusive use provisions of §173.441(b), the transport index number which is calculated for nuclear criticality control purposes shall not exceed 10 for any single package nor a total of 50 for the conveyance (transport vehicle if transported by public highway or rail).

(c) Fissile Class II packages may be shipped with an external radiation level greater than 10 millirem per hour at 1 meter (3.3 feet), and combined with other packages of the same or different designs in a Fissile Class III shipment, under the conditions prescribed in §173.457, if:

(1) Each package in the shipment has been assigned a transport

For explanation of abbreviations and reference marks, see last page of this tariff.

index for criticality control purposes in accordance with the Fissile Class II criteria;

(2) The transport index which has been assigned in the package approval for nuclear criticality control purposes does not exceed 10 for any single package;

(3) The total transport index for nuclear criticality control purposes does not exceed 100 for all packages in the shipment;

(4) The shipment complies with §173.441(b); and

(5) The shipment is not transported by vessel.

(d) A Fissile Class III shipment of packages may be combined with other packages of the same or different design when each package has been assigned a transport index for nuclear criticality control purposes in accordance with Fissile Class II criteria, and may be combined with Fissile Class II packages into a Fissile Class III shipment under the conditions prescribed in §173.457, if:

(1) The transport index which has been assigned in the package approval for nuclear criticality control purposes does not exceed 50 for any single package;

(2) The total transport index for nuclear criticality control purposes for all packages in the shipment does not exceed 100;

(3) The shipment satisfies the provisions of §173.441(b) if any package has a radiation level exceeding 10 millirem per hour at 1 meter (3 3 feet) from any accessible external surface of the package; and

(4) The shipment is not transported by vessel.

§ 173.461 Demonstration of compliance with tests. (a) Compliance with the test requirements in §§173.463 through 173.469 shall be shown by any of the methods prescribed in this paragraph, or by a combination of these methods appropriate for the particular feature being evaluated:

(1) By performance of tests with prototypes or samples of the packaging or special form material as normally presented for transportation, in which case the contents of the packaging for the test shall simulate as closely as practicable the expected normal radioactive contents. The use of non-radioactive substitute contents is encouraged provided that the results of the testing take into account the radioactive characteristics of the contents for which it is being tested;

(2) By reference to a previous, satisfactory demonstration of compliance of a sufficiently similar nature;

(3) By performance of tests with models of appropriate scale incorporating those features that are significant with respect to the item under investigation, when engineering experience has shown results of those tests to be suitable for design purposes. When a scale model is used, the need for adjusting certain test parameters, such as the penetrator diameter or the compressive load, must be taken into account; or

(4) By engineering evaluation or comparative data.

(b) With respect to the initial conditions for the tests under §§173.463 through 173.469, except for the water immersion tests, compliance shall be based upon the assumption that the package is in equilibrium at an ambient temperature of 38°C (100°F).

§ 173.462 Preparation of specimens for testing. (a) Each specimen (i.e., sample, prototype or scale model) shall be examined before testing to identify and record faults or damage, including:

(1) Divergence from the specifications or drawings;

(2) Defects in construction;

(3) Corrosion or other deterioration; and

(4) Distortion of features.

(b) Any deviation found under paragraph (a) of this section from the specified design shall be corrected or suitably taken into account in the subsequent evaluation.

(c) The containment system of the packaging shall be clearly specified.

(d) The external features of the specimen shall be clearly identified so that reference may be made to any part of it.

§ 173.463 Packaging and shielding—testing for integrity. After each of the applicable tests specified in §173.465 and §173.466, the integrity of the packaging, or of the packaging and its shielding, shall be retained to the extent required by §173.412(m) for the packaging being tested.

§ 173.465 Type A packaging tests. (a) The proposed packaging with proposed contents must be capable of withstanding the tests prescribed in this section. One prototype may be used for all tests if the requirements of paragraph (b) of this section are complied with.

(b) **Water spray test.** The water spray test must precede each test or test sequence prescribed in this section. The water spray test shall simulate exposure to rainfall of approximately 5 centimers (2 inches) per hour for at least one hour. The time interval between the end of the water spray test and the beginning of the next test shall be such that the water has soaked-in to the maximum extent without appreciable drying of the exterior of the specimen. In the absence of evidence to the contrary, this interval may be assumed to be two hours if the water spray is applied from four different directions simultaneously. However, no time interval may elapse if the water spray is applied from each of the four directions consecutively.

(c) **Free drop test.** The free drop test consists of a fall onto the target in a manner that causes maximum damage to the safety features being tested, and:

(1) For packages weighing 5,000 kilograms (11,000 pounds) or less, the distance of the fall measured from the lowest point of the packaging to the upper surface of the target shall not be less than 1.2 meters (4 feet).

(2) For packages weighing more than 5,000 kilograms (11,000 pounds), the distance of the fall shall not be less than the distance specified in Table 11, for the applicable packaging weight:

TABLE 11.—FREE-FALL DISTANCE FOR PACKAGINGS WEIGHING MORE THAN 5,000 KILOGRAMS

Packaging weight		Free fall distance	
Kilograms	Pounds	Feet	Meters
>5 000 to 10,000	>11,000 to 22 000	3	0 9
>10,000 to 15,000	>22 000 to 33,000	2	0 6
More than 15,000	More than 33 000	1	0 3

(3) For Fissile Class II packagings, the free drop specified in subparagraph (1) or (2) of this paragraph shall be preceded by a free drop from a height of .3 meter (1 foot) on each corner. For cylindrical packagings, the .3 meter (1 foot) drop shall be onto each of the quarters of each rim.

(4) For fiberboard or wood rectangular packages not exceeding 50 kilograms (110 pounds) in weight, a separate specimen of the proposed packaging shall be subjected to a free drop onto each corner from a height of .3 meter (1 foot).

(5) For fiberboard cylindrical packages weighing not more than 100 kilograms (220 pounds) a separate specimen of the proposed packaging shall be subjected to a free drop onto each of the quarters of each rim from a height of .3 meter (1 foot).

(6) The target shall have a flat, horizontal surface of such mass and rigidity that any increase in its resistance to displacement or deformation upon impact by the specimen would not significantly increase the damage to the specimen.

(d) **Compression test.** The compression test shall last for a period of at least 24 hours and consists of a compressive load equivalent to the greater of the following:

(1) Five times the weight of the actual package; or

(2) 1300 kilograms per square meter (265 pounds per square foot) multiplied by the vertically projected area of the package. The compressive load shall be applied uniformly to two opposite sides of the packaging specimen, one of which must be the base on which the package would normally stand.

(e) **Penetration test.** For the penetration test the packaging specimen shall be placed on a rigid, flat, horizontal surface that will not move while the test is being performed. The test shall consist of:

(1) A bar of 3 2 centimeters (1.25 inches) in diameter with a hemispherical end, weighing 6 kilograms (13 2 pounds) being dropped with its longitudinal axis vertical, onto the center of the weakest part of the packaging specimen, so that, if it penetrates far enough, it will hit the containment system. The bar must not be deformed by the test; and

(2) The distance of the fall of the bar measured from its lower end to the upper surface of the packaging specimen shall not be less than 1 meter (3 3 feet).

§ 173.466 Additional tests for Type A packagings designed for liquids and gases. (a) In addition to the tests prescribed in §173.465, Type A packagings designed for liquids and gases shall be capable of withstanding the following tests:

(1) **Free drop test.** The packaging specimen shall fall onto the target in a manner which will cause it to suffer the maximum damage to its containment. The distance of the fall measured from the lowest part of the packaging specimen to the upper surface of the target shall be not less than 9 meters (30 feet).

(2) **Penetration test.** The specimen must be subjected to the test specified in §173.465(e) except that the distance of the fall shall be 1.7 meters (5 5 feet).

§ 173.467 Tests for demonstrating the ability of Type B and fissile radioactive materials packagings to withstand accident conditions in transportation. Each Type B packaging or packaging for fissile material shall meet the test requirements prescribed in 10 CFR Part 71 for ability to withstand accident conditions in transportation.

§ 173.469 Tests for special form radioactive materials. (a) Special form radioactive materials must meet the test requirements of paragraph (b) of this section. Each solid radioactive material or capsule specimen to be tested shall be manufactured or fabricated so that it is representative of the actual solid material or capsule which will be transported with the proposed radioactive content duplicated as closely as practicable. Any differences between the material to be transported and the test material such as the use of non-radioactive contents shall be taken into account. In addition:

(1) A different specimen may be used for each of the tests;

(2) The specimen must not break or shatter when subjected to the impact, percussion, or bending tests;

(3) The specimen must not melt or disperse when subjected to the heat test; and

(4) After each test, leaktightness or indispersibility of the specimen shall be determined by a method no less sensitive than the leaching assessment prescribed in paragraph (c) of this section. For a capsule resistant to corrosion by water, and which has an internal void volume greater than 0.1 milliliters, an alternative to the leaching assessment is a demonstration of leaktightness of 10^{-6} torr-l/s (1.3×10^{-4} atm-cm3/S) based on air at 25°C (77°F) and one atmosphere differential pressure for solid radioactive content, or 10^{-5} torr-l/s (1.3×10^{-3} atm-cm³/s) for liquid or gaseous radioactive content.

(b) **Test methods:** (1) **Impact Test.** The specimen must fall onto the target from a height of not less than 9 meter (30 feet). The target must be as specified in § 173.465(c)(6);

(2) **Percussion Test.**

(i) The specimen shall be placed on a sheet of lead that is supported by a smooth solid surface, and be struck by the flat face of a steel billet so as to produce an impact equivalent to that resulting from a free fall of 1.4 kilograms (3 pounds) through 1 meter (3.3 feet;

(ii) The flat face of the billet shall be 25 millimeters (1 inch) in diameter with the edges rounded off to a radius of 3 millimeters ±0.3 millimeters (.12 inch ±.012 inch);

(iii) The lead shall be of a hardness within 3.5 to 4.5 on the Vickers scale, and not more than 25 millimeters (1 inch) thick, and shall cover an area greater than that covered by the specimen;

(iv) A fresh surface of lead shall be used for each impact; and

(v) The billet must strike the specimen in a manner that causes maximum damage.

(3) **Bending test.**

(i) This test applies only to long, slender sources with a length of 10 centimeters (4 inches) or more and with a length at least 10 times the minimum width;

(ii) The specimen must be securely clamped in a horizontal position so that one half of its length protrudes from the face of the clamp;

(iii) The position of the specimen must be such that it will suffer maximum damage when its free end is struck by the flat face of a steel billet;

(iv) The billet must strike the specimen in a manner that produces an impact equivalent to that resulting from a free vertical fall of 1.4 kilograms (3 pounds) through 1 meter (3.3 feet); and

(v) The flat face of the billet must be 25 millimeters (1 inch) in diameter with the edges rounded off to a radius of 3 millimeters ±0.3 millimeters (.12 inch ±.012 inch)

(4) **Heat test.** The specimen shall be heated in air to a temperature of not less than 800°C (1472°F), held at that temperature for a period of 10 minutes, and the allowed to cool.

(c) **Leaching assessment methods.**

(1) For indispersible solid material—

(i) The specimen shall be immersed for seven days in water at ambient temperature. The water must have a pH of 6–8 and a maximum conductivity of 10 micromho per centimeter at 20°C (68°F);

(ii) The water and specimen shall then be heated to a temperature of 50°C ± 5° (122°F ± 9°) and maintained at this temperature for four hours;

(iii) The activity of the water shall then be determined;

(iv) The specimen shall then be stored for at least seven days in still air with humidity not less than 90 percent at 30°C (86°F);

(v) The specimen shall then be immersed in water with the same pH and maximum conductivity specifications as in subparagraph (1)(i) of this paragraph. The water and specimen must be heated to 50°C ± 5° (122°F ± 9°) and maintained at that temperature for four hours;

(vi) The activity of the water shall then be determined. The activities determined in subparagraph (1)(iii) and this subparagraph shall not exceed 0.05 microcuries.

(2) For encapsulated material—

(i) The specimen shall be immersed in water at ambient temperature. The water must have a pH of 6–8 and a maximum conductivity of 10 micromho per centimeter. The water and specimen shall be heated to a temperature of 50°C ± 5° (122°F ± 9°) and maintained at this temperature for four hours;

(ii) The activity of the water shall then be determined;

(iii) The specimen shall then be stored for at least seven days in still air at a temperature not less than 30°C (86°F);

(iv) Step (i) shall be repeated; and

(v) The activity of the water shall be determined. The activities determined in paragraph (c)(2)(ii) and this paragraph (c)(2)(v) shall not exceed 0.05 microcuries.

§ 173.471 Requirements for U.S. Nuclear Regulatory Commission approved packages. In addition to the applicable requirements of the U.S. Nuclear Regulatory Commission (USNRC) and Parts 171–177 of this subchapter, any shipper of a Type B, Type B(U), Type B(M), or fissile material package that has been approved by the USNRC in accordance with 10 CFR Part 71 shall also comply with the following requirements:

(a) The shipper shall be registered with the USNRC as a party to the approval, and the shipment must be made in compliance with the terms of the approval;

(b) The outside of each package shall be durably and legibly marked with the package identification marking indicated in the USNRC approval;

(c) Each shipping paper related to the shipment of the package shall bear the package identification marking indicated in the USNRC approval;

(d) Before the first export shipment of the package, the shipper shall obtain a U.S. Competent Authority Certificate for that package design or if one has already been issued, the shipper shall register with the U.S. Competent Authority as a user of the certificate. Upon registration as a user of the certificate the shipper will be furnished with a copy of it. The shipper shall then submit a copy of the U.S. Competent Authority Certificate applying to that package design to the national competent authority of each country into or through which the package will be transported, unless a copy has already been furnished;

(e) The U.S. Competent Authority responsible for administering the requirements of Section VIII of the IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)," is the:

Research and Special Programs Administration, Office of Hazardous Materials Transportation (OHMT), U.S. Department of Transportation, Washington, D.C. 20590.

(f) Each request for a U.S. Competent Authority Certificate as required by the IAEA regulations shall be submitted in writing to the address set forth in paragraph (e) of this section. The request shall be in duplicate and include copies of the applicable USNRC approval and a reproducible drawing showing the make-up of the package. Each request is considered in the order in which it is received. To allow sufficient consideration by OHMT, requests should be received at least 45 days before the requested effective date; and

(g) Import and export shipments may be made in accordance with § 171.12 of this subchapter.

(The information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under control number 2137-0512. The information collection requirements contained in paragraph (d) were approved under control number 2137-0515. The information collection requirements contained in paragraph (e) were approved under control number 2137-0514.)

§ 173.472 Requirements for exporting DOT Specification Type B and fissile packages. (a) Any shipper who exports a DOT Specification Type B or fissile material package authorized by §§ 173.416 or 173.417 shall comply with paragraphs (b) through (f) of this section.

(b) The shipper shall register with the U.S. Competent Authority as a user of the appropriate U.S. Competent Authority Certificate and the shipment shall be made in accordance with the certificate;

(c) The outside of each package must be durably and legibly marked with the package identification marking indicated in the U.S. Competent Authority Certificate;

(d) Each shipping paper related to the shipment of the package must bear the package identification marking indicated in the U.S. Competent Authority Certificate;

(e) Before the first export shipment of the package, the shipper must submit a copy of the U.S. Competent Authority Certificate applying to that package design to the national competent authority of each country into or through which the package will be transported, unless a copy has already been furnished; and

(f) Import and export shipments may be made in accordance with § 171.12 of this subchapter.

(The information collection requirements contained in paragraphs (b) and (e) were approved by the Office of Management and Budget under control number 2137-0515.)

§ 173.473 Requirements for foreign-made packages. In addition to the applicable requirements of Parts 171 through 177 of this subchapter, each shipper of a foreign-made Type B, Type B(U), Type B(M), or fissile material package for which a competent authority certificate is required by the IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)" shall also comply with the following requirements:

(a) Prior to the first shipment of such a package of radioactive materials into or from the U.S., the shipper shall:

(1) Have the foreign competent authority certificate revalidated by the U.S. Competent Authority, unless this has been done previously. The request must be in duplicate and contain all the information required by Section VIII of the IAEA regulations. Each request is considered in the order in which it is received. To allow sufficient consideration by OHMT, requests should be received at least 45 days before the requested effective date.

(2) Submit a copy in English of the foreign competent authority certificate with the request for revalidation;

(3) Register its identity in writing with the U.S. Competent Authority as a user of the package covered by the foreign competent authority certificate and its revalidation. If the shipper is requesting the revalidation, this automatically done by OHMT; and

(4) Supply to the carrier, upon request, the applicable competent authority certificates. However, the competent authority certificates are not required to accompany the packages to which they apply.

(b) The outside of each package shall be durably and legibly marked with the same competent authority identification marking indicated on the competent authority certificate and revalidation;

(c) Each shipping paper for a shipment of radioactive materials shall bear a notation of the package identification marking indicated on the competent authority certificate or revalidation;

(d) All requirements of the foreign competent authority certificate and the U.S. Competent Authority revalidation shall be fulfilled; and

(e) Import and export shipments may be made in accordance with § 171.12 of this subchapter.

(The information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under control number 2137-0517)

§ 173.474 Quality control for construction of packaging. (a) Prior to the first use of any packaging for the shipment of radioactive material, the shipper shall determine, that:

(1) The packaging meets the quality of design and construction requirements as specified in this subchapter; and

(2) The effectiveness of the shielding, containment, and, when required, the heat transfer characteristics of the package, are within the limits specified for the package design.

§ 173.475 Quality control requirements prior to each shipment of radioactive materials. Before each shipment of any radioactive material's package, the shipper shall ensure by examination or appropriate tests, that:

(a) The packaging is proper for the contents to be shipped;

(b) The packaging is in unimpaired physical condition, except for superficial marks;

(c) Each closure device of the packaging, including any required gasket, is properly installed, secured, and free of defects;

(d) For fissile material, each moderator and neutron absorber, if required, is present and in proper condition;

(e) Each special instruction for filling, closing, and preparation of the packaging for shipment has been followed;

(f) Each closure, valve, or other opening of the containment system through which the radioactive content might escape is properly closed and sealed;

(g) Each packaging containing liquid in excess of an A_2 quantity and intended for air shipment has been tested to show that it will not leak under an ambient atmospheric pressure of not more than 0.25 atmosphere, absolute, (0.25 kilograms per square centimeter or 3.6 psia). The test must be conducted on the entire containment system, or on any receptacle or vessel within the containment system, to determine compliance with this requirement;

(h) The internal pressure of the containment system will not exceed the design pressure during transportation; and

(i) External radiation and contamination levels are within the allowable limits specified in this subchapter.

§ 173.476 Approval of special form radioactive materials. (a) Each shipper of special form radioactive materials shall maintain on file for at least one year after the latest shipment, and provide to the RSPA on request, a complete safety analysis, including documentation of any tests, demonstrating that the special form material meets the requirements of § 173.469. An IAEA Certificate of Competent Authority issued for the special form material may be used to satisfy this requirement.

(b) Prior to the first export shipment of a special form radioactive material from the United States, each shipper shall obtain a Competent Authority Certificate for the specific material. For special form material manufactured outside the United States an IAEA Certificate of Competent Authority from the country of origin may be used to meet this requirement. For special form material's manufactured in the United States each shipper shall obtain a U.S. Competent Authority Certificate for the specific material. Each petition for a U.S. Competent Authority Certificate shall be submitted in accordance with § 173.471(e) and must include the following information:

(1) A detailed description of the material or if a capsule, a detailed description of the contents. Particular reference must be made to both physical and chemical states;

(2) If a capsule is to be used, a detailed statement of its design and dimensions, including complete engineering drawings and schedules of material, and methods of construction; and

(3) A statement of the tests that have been made and their results; evidence based on calculative methods to show that the material is able to pass the tests; or other evidence that the special form radioactive material complies with § 173.469.

(c) Paragraphs (a) and (b) of this section do not apply in those cases where A_1 equals A_2 and the material is not described on the shipping papers as "Radioactive Material, Special Form, n.o.s."

(The information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under control number 2137-0518. The information collection requirements contained in paragraph (b) were approved under control number 2137-0519)

§ 173.477 Approval for export shipments. (a) Each export shipment of a package for which an IAEA certificate of competent authority has been issued or revalidated in accordance with §§ 173.471, 173.472, or 173.473 shall have multilateral approval, if the shipment includes:

(1) A vented Type B(M) package;

(2) A Type B(M) packaging containing radioactive materials with an activity greater than $3 \times 10^3 A_1$, or $3 \times 10^3 A_2$, as appropriate, or 3×10^4 curies, whichever is less;

(3) A Fissile Class III shipment; or

(4) Transportation by special arrangement.

(b) Each application for shipment approval shall contain:

(1) The period of time for which the approval is sought;

(2) A description of the contents, the expected modes of transportation, the type of conveyance to be used, and the proposed route; and

(3) An explanation of how the special precautions and special administrative and operational controls referred to in the package design certificates are to be put into effect.

(c) The packaging and shipment approvals may be combined into a single approval issued in accordance with §§ 173.471, 173.472 or 173.473.

(d) Approval by competent authorities is not required for packagings designed for materials covered by §§ 173.421 through 173.427 nor for Type A packagings designed for non-fissile radioactive materials.

(The information collection requirements contained in paragraph (b) were approved by the Office of Management and Budget under control number 2137-0532)

§ 173.478 Notification to competent authorities for export shipments. (a) Before the first export shipment of any packaging with contents exceeding A_1 or A_2, the shipper shall ensure that copies of each applicable competent authority certificate issued in accordance with §§ 173.471, 173.472, or 173.473 have been submitted to the competent authority of each country through which or into which it is to be transported. The shipper is not required to await an acknowledgment from the competent authority prior to shipping the radioactive material, nor is the competent authority required to acknowledge receipt of the certificate.

(b) For each of the shipments described in this paragraph, the shipper shall notify the competent authority of each country through which or into which the shipment is to be transported. This notification must be received by each competent authority at least 15 days before the shipment starts for the following:

(1) Type B(U) packagings containing radioactive materials with an activity greater than $3 \times 10^3 A_1$, $3 \times 10^3 A_2$, as appropriate, or 3×10^4 curies, whichever is the least;

(2) Type B(M) packages;

(3) Fissile Class III shipments under Section VIII of the IAEA "Regulations for the Safe Transport of Radioactive Materials, Safety Series No. 6, 1973 Revised Edition (as amended)"; or

(4) Transportation by special arrangements.

(c) The shipper notification must include—

(1) Sufficient information to enable the packaging to be identified, including all applicable certificate numbers and identification marks; and

(2) Information as to the date of shipment, the expected date of arrival, and the proposed routing.

(d) The shipper is not required to send a separate notification if the required information has been included in the application for shipment approval.

(The information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under control number 2137-0515. The information collection requirements contained in paragraphs (b) and (c) were approved under control number 2137-0532)

SUBPART J

OTHER REGULATED MATERIAL; DEFINITION AND PREPARATION

§ 173.500 Definitions. (a) An Other Regulated Material (ORM) is a material that

(1) May pose an unreasonable risk to health and safety or property when transported in commerce; and

(2) Does not meet any of the definitions of the other hazard classes specified in this subchapter, or

(3) Has been reclassed an ORM (specifically or permissively) according to this subchapter.

Note: There is no change in the applicability of Subparts K, L, and M of this Part for materials classed as ORM A, B, or C when they are hazardous substances or hazardous wastes (see § 172.101(c)(1)).

(b) ORM-S are divided into classes as follows:

(1) An ORM-A material is a material which has an anesthetic, irritating, noxious, toxic, or other similar property and which can cause extreme annoyance or discomfort to passengers and crew in the event of leakage during transportation.

(2) An ORM-B material is a material (including a solid when wet with water) capable of causing significant damage to a transport vehicle from leakage during transportation. Materials meeting one or both of the following criteria are ORM-B materials:

(i) A liquid substance that has a corrosion rate exceeding 0.250 inch per year (IPY) on aluminum (nonclad 7075-T6) at a test temperature of 130° F. An acceptable test is described in NACE Standard TM-01-69.

(ii) Specifically designated by name in § 172.101 of this subchapter.

(3) An ORM-C material is a material which has other inherent characteristics not described as an ORM-A or ORM-B but which make it unsuitable for shipment, unless properly identified and prepared for transportation. Each ORM-C material is specifically named in § 172.101 of this subchapter.

(4) An ORM-D material is a material such as a consumer commodity which, though otherwise subject to the regulations of this subchapter, presents a limited hazard during transportation due to its form, quantity and packaging. They must be materials for which exceptions are provided in § 172.101 of this subchapter. A shipping description applicable to each ORM-D material or category of ORM-D materials is found in § 172.101 of this subchapter.

(5) An ORM-E is a material that is not included in any other hazard class, but is subject to the requirements of this subchapter. Materials in this class include:

(i) Hazardous waste.

(ii) Hazardous substances as defined in § 171.8 of this subchapter.

§ 173.505 Exceptions for Other Regulated Material (ORM). (a) The following ORMs, unless otherwise provided by § 172.101 of this subchapter, are not subject to the requirements of this subchapter, except §§ 173.6, 173.21 and 173.24 and Subparts C and D of Part 172 of this subchapter when packaged as follows:

(1) ORM—A, B, or C liquid, not over one pint in one packaging;

(2) ORM—A or B solid, not over five pounds in one packaging;

(3) ORM—C solid, not over twenty-five pounds in one packaging.

(b) Strong outside packagings as specified in § 173.1200 and marking requirements specified in § 172.316 of this subchapter are not required for materials classed as ORM-D when unitized in cages, carts, or similar overpacks and when shipped by a private or contract motor carrier from a distribution center to retail outlet.

§ 173.510 General packaging requirements. (a) Except as provided in § 173.505, ORM materials must be prepared for shipment in compliance with the following:

(1) Each material must be offered for transportation and transported in compliance with Subparts B, C, and D of Part 172 of this subchapter and Subparts A and B of Part 173. [Note: Packaging for certain PCB's for disposal, and for storage for disposal is prescribed by EPA in 40 CFR 761.60 and 761.65.]

(2) For packagings of 110 gallon capacity or less, sufficient outage (ullage) must be provided so the packaging will not be liquid full at 130° F. (55° C.).

(3) When a liquid or solid has an absolute vapor pressure exceeding 16 p.s.i. at 100° F. (38° C.), the primary packaging must be capable of withstanding the inside vapor pressure at 130° F. without leakage.

(4) Any material classed as an ORM material, which may cause a hazard in transportation due to its reaction with water, must be packaged with either an inner or outer water proof packaging.

(5) Portable tanks, tank cars, cargo tanks, hopper and dump type transport vehicles must be free from leaks and all discharge openings must be securely closed during transportation.

SUBPART K

OTHER REGULATED MATERIAL; ORM-A

§ 173.605 Ammonium hydrosulfide solution, ammonium polysulfide solution, bromochloromethane, dibromodifluoro-methane, dichlorodifluoroethylene; dichloromethane, 1,1,1-trichloroethane, perfluoro-2-butene, tetrachloroethylene, and trichloroethylene. (a) Ammonium hydrosulfide solution, ammonium polysulfide solution, bromochloromethane, dibromodifluoro-methane, dichlorodifluoroethylene, dichloromethane, 1,1,1-trichloroethane, perfluoro-2-butene, tetrachloroethylene, and trichloroethylene, when offered for transportation on a passenger-carrying aircraft, must be prepared for shipment in compliance with § 173.510 and must be packaged as follows:

(1) Wooden box with inside earthenware, glass, metal, or plastic packagings of not more than 2 gallons capacity each, with sufficient cushioning and absorbent material to prevent breakage and leakage.

(2) Fiberboard box with inside earthenware, glass, metal, or plastic packagings of not more than 1 gallon capacity each, with sufficient cushioning and absorbent material to prevent breakage and leakage.

(3) Metal drum of not more than 10 gallons capacity.

(4) Outside packaging with inside earthenware, glass, plastic, or metal packagings of not more than 4 fluid ounces capacity each, with sufficient cushioning and absorbent material to prevent breakage and leakage. The maximum amount that may be shipped in any one outside packaging is 5 gallons.

§ 173.610 Camphene. (a) Camphene, when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged in a wooden, metal, or rigid plastic packaging.

(b) Camphene, when offered for transportation by air, must be prepared for shipment in compliance with § 173.510 and must be packaged as prescribed in § 173.154.

§ 173.615 Carbon dioxide, solid (dry ice). (a) Solid carbon dioxide, when offered for transportation by aircraft or water, must be packed in packaging designed and constructed to permit the release of carbon dioxide gas to prevent a build-up of pressure that could rupture the packaging. For each shipment by air exceeding five pounds per package, advance arrangements between the shipper and each carrier must be made.

(b) Railroad cars and motor vehicles containing solid carbon dioxide, when accepted for transportation on board ocean vessels, must be conspicuously marked on two sides "WARNING—CO_2 SOLID (DRY ICE)."

(c) Other packagings, when accepted for transportation on board ocean vessels, must be marked "CARBON DIOXIDE, SOLID—DO NOT STOW BELOW DECKS."

(d) Not more than 440 pounds of solid carbon dioxide may be transported in any one cargo pit or bin on any aircraft except by specific and special arrangement between the shipper and the aircraft operator.

(e) Carbon dioxide, solid (Dry ice) is excepted from the shipping paper and certification requirements of this subchapter if the requirements of paragraphs (a) and (d) of this section are complied with and the package is marked "Carbon dioxide, solid" or "Dry ice" and marked with an indication that the material being refrigerated is used for diagnostic or treatment purposes (e.g. Frozen medical specimens).

§ 173.620 Carbon tetrachloride, ethylene dibromide (1,2-dibromoethane), and tetrachloroethane. (a) Carbon tetrachloride, ethylene dibromide, and tetrachloroethane, when offered for shipment by cargo aircraft only and water, must be prepared for shipment in compliance with § 173.510 and must be packaged as follows:

(1) As prescribed in §§ 173.344, 173.345 or 173.346, meeting the packaging requirements applicable to Poison B liquids.

(2) Uniform Freight Classification (UFC), Rule 40, Section 5. Metal barrel or drum, not over 55 gallons capacity. Not authorized for transportation by air.
(3) Wooden box with inside containers, not over 200 pounds gross weight. Not authorized for transportation by air.
(4) Uniform Freight Classification (UFC), Rule 41, Sections 2 and 3. Fiberboard box, with inside containers, not over 90 pounds gross weight. Not authorized for transportation by air.
(5) Tank cars or motor vehicle tank trucks. Not authorized for transportation by air.
(6) Specification 51 (§178.245 of this subchapter). Portable tanks. Not authorized for transportation by air.
(7) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.
(b) Carbon tetrachloride, ethylene dibromide, and tetrachloroethane, when offered for shipment by passenger-carrying aircraft, must be prepared for shipment in compliance with §173.510 and must be packaged to meet the packaging requirements of §173.345.

§ 173.630 Chloroform. (a) Chloroform, when offered for transportation by aircraft, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Wooden box with inside earthenware, glass, metal, or plastic packaging of not more than 2 gallons capacity each.
(2) Fiberboard box with inside earthenware, glass, metal, or plastic packaging of not more than 1 gallon capacity each.
(3) Metal drum, not over 55 gallons capacity.
(4) Outer packaging with inside earthenware, glass, metal, or plastic packagings of not more than 4 fluid ounces capacity each, not exceeding 5 gallons total content.
(b) Chloroform, when offered for shipment by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) As prescribed in §§173.344, 173.345 or 173.346 meeting the packaging requirements applicable to Poison B liquids.
(2) Uniform Freight Classification (UFC), Rule 40, Section 5. Metal barrel or drum, not over 55 gallons capacity.
(3) Wooden box with inside containers, not over 200 pounds gross weight.
(4) Uniform Freight Classification (UFC), Rule 41, Section 2 and 3. Fiberboard box with inside containers, not over 90 pounds gross weight.
(5) Specification IM 101 portable tanks (§§178.270, 178.271 of this subchapter) are authorized under conditions specified in the IM Tank Table.

§ 173.635 Ferrophosphorus. (a) Ferrophosphorus, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Steel barrel or drum;
(2) Wooden barrel or keg;
(3) Wooden box with inside container; or
(4) Sift-proof railroad freight car.
(5) Fiber drums having an aluminum foil barrier.

§ 173.645 Ferrosilicon. (a) Ferrosilicon, containing 30 percent or more but not more than 70 percent silicon, when offered for shipment by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Steel barrel or drum;
(2) Wooden barrel or keg; or
(3) Wooden box, not over 500 pounds gross weight.
(b) Ferrosilicon, containing 30 percent or more but not more than 70 percent silicon, when offered for shipment by cargo aircraft only must be prepared for shipment in compliance with §§173.510 and 173.154.

§ 173.650 Hexachloroethane. (a) Hexachloroethane, when offered for shipment by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) As prescribed in §§173.363, 173.364 and 173.365, meeting the packaging requirements applicable to Poison B solids.
(2) Uniform Freight Classification (UFC), Rule 40, Section 5. Metal barrel or drum, not over 55 gallons capacity each.
(3) Wooden box with inside containers, not over 200 pounds gross weight.
(4) Uniform Freight Classification (UFC), Rule 41, Sections 2 and 3. Fiberboard box with inside containers, not over 90 pounds gross weight.

§ 173.655 Naphthalene or naphthalin. (a) Naphthalene or naphthalin, when offered for shipment by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Wooden barrel or keg;
(2) Wooden box;
(3) Fiberboard box;
(4) Metal barrel or drum; or
(5) Burlap (jute) bag, not over 224 pounds net weight. Authorized only when the melting point is 167° F. or higher.
(b) Naphthalene or naphthalin, when offered for shipment by cargo aircraft only, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) As prescribed for passenger-carrying aircraft in paragraph (c) of this section, or
(2) As prescribed in §173.154.
(c) Naphthalene or naphthalin, when offered for transportation by passenger-carrying aircraft, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Earthenware, glass, metal, or plastic inside packagings of not more than 5 pounds capacity each, in strong outside packaging not over 25 pounds net weight.

SUBPART L

OTHER REGULATED MATERIAL; ORM-B

§ 173.800 Ammonium hydrogen sulfate, ammonium fluoride, barium oxide, chloroplatinic acid, copper chloride, ferric chloride, lead chloride, molybdenum pentachloride, potassium hydrogen sulfate, sodium aluminate, sodium hydrogen sulfate, and or sodium hydrogen sulfite, (each in solid form). (a) Ammonium hydrogen sulfate, ammonium fluoride, barium oxide, chloroplatinic acid, copper chloride, ferric chloride, lead chloride, molybdenum pentachloride, potassium hydrogen sulfate, sodium aluminate, sodium hydrogen sulfate, or sodium hydrogen sulfite, when offered for transportation by passenger-carrying aircraft, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Earthenware, glass, metal, or plastic inside packagings of not more than 5 pounds net capacity each. Inside packagings must be packed in strong outside packaging, containing not more than 25 pounds net weight.

§ 173.850 Lime, unslaked; quicklime; and calcium oxide. (a) Unslaked lime, quicklime, or calcium oxide when offered for transportation by cargo aircraft only or water, must be prepared for shipment in compliance with §173.510 and must be packed in waterproof packaging as follows:
(1) Steel barrel or drum;
(2) Wooden barrel or keg;
(3) Wooden box;
(4) Multi-wall paper bag, not over 100 pounds net weight;
(5) Paper-lined burlap bag, not over 100 pounds net weight; or
(6) Sift-proof railroad freight car.
(7) Sift-proof bulk freight container with net weight not over 40,000 pounds.
(8) Portable tank with gross weight not over 7,000 pounds.
(b) Unslaked lime, quicklime, or calcium oxide, when offered for transportation by passenger-carrying aircraft, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Earthenware, glass, metal, or plastic inside packagings, of not more than 5 pounds net capacity each. Inside packagings must be packed in strong outside packaging, containing not more than 25 pounds net weight.

§ 173.860 Mercury, metallic. (a) Except as limited by paragraphs (b) and (c) of this section, metallic mercury, when offered for transportation by aircraft, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:
(1) Earthenware, glass, or plastic inside packagings of not more than 5 pounds capacity each packed in strong outside packagings. Either the inside or the outside packaging must have complete enveloping inner linings or bags of strong, leak-tight, and puncture resistant material impervious to mercury.

(2) Iron or steel flasks packed in outside packagings. Either the inside or the outside packaging must have completely enveloping inner linings or bags of strong, leak-tight, and puncture resistant material impervious to mercury.

(b) Manufactured devices of which mercury is a component part (except tubes as described in paragraph (c) of this section) packed in outside packagings having completely enveloping inner linings or bags of strong, leak-tight, and puncture resistant material impervious to mercury, may be transported by aircraft if prepared for shipment in compliance with §173.510.

(c) Electron tubes, vapor tubes, and similar tubes of which mercury is a component part, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) In outside packaging with all seams and joints sealed with self-adhesive, pressure-sensitive tape which will prevent the escape of mercury from the outside packagings; authorized only if the item contains not over one pound (454 grams) of mercury.

(2) In outside packaging having completely enveloping inner linings or bags of strong, leak-tight, and puncture resistant material impervious to mercury.

(3) In manufacturer's original packaging if each item does not contain more than 0.18-ounce (5 grams) of mercury per tube, and if the outside package does not contain more than 1.1 ounces (30 grams) total net quantity.

(4) In the manufacturer's original packagings if tubes are completely jacketed in sealed leak-tight metal cases.

(5) In manufacturer's original packaging if each item does not contain more than 100 milligrams of mercury per tube and if the outside package does not contain more than one gram total net quantity. Packages conforming to these quantity limitations are not subject to any other requirements of this subchapter.

§ 173.861 Gallium metal, liquid. Gallium metal, liquid, when offered for transportation, must be packaged in earthenware, glass, or plastic inside packagings of not more than 5 pounds net capacity each packed in strong outside packagings. Either the inside or outside packagings must have complete enveloping linings or bags of strong, leak-tight, and puncture-resistant material impervious to liquid gallium metal.

§ 173.862 Gallium metal, solid. Gallium metal, solid, when offered for transportation, must be packaged in glass or rigid plastic inside packagings of not more than 5 pounds net capacity each, enclosed in a sealed bag of strong, leak-tight, and puncture-resistant material impervious to liquid gallium. The sealed bag must be placed in a packaging constructed of wood, fiberboard, or plastic which is lined with a strong, leak-tight, and puncture-resistant material impervious to liquid gallium. This packaging must be enclosed in an outer packaging which contains dry ice or other means of refrigeration sufficient to maintain the gallium in a completely solid state during the entire anticipated time the gallium will be in transportation to its destination.

SUBPART M

OTHER REGULATED MATERIAL; ORM—C

§ 173.906 Inflatable life-rafts, escape slides, and evacuation slides. An inflatable life-raft, escape slide or evacuation slide serviced and ready for use as a life-saving appliance aboard a vessel or aircraft, containing small quantities of hazardous materials which are required as part of the life-saving appliance, including non-flammable compressed gas packaged in cylinders in accordance with this subchapter, Class C explosives that are pyrotechnic signal devices, and flammable liquids in repair kits, must be packed in a strong outside packaging.

§ 173.910 Ammonium sulfate nitrate. (a) Ammonium sulfate nitrate, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) Steel barrel or drum;
(2) Wooden barrel or keg;
(3) Wooden box with inside packagings;
(4) Fiberboard box with inside packagings, not over 90 pounds gross weight;
(5) Fiber drum, not over 150 pounds gross weight; or
(6) Paper bag, not over 200 pounds net weight, moisture, and sift-proof, of strength not less than the equivalent of bags made of 8-ounce burlap.

§ 173.915 Battery parts. Battery parts, when exhausted and unwashed, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packed in a metal or wooden barrel with sufficient absorbent material to absorb any liquid present in the parts.

§ 173.920 Bleaching powder. (a) Bleaching powder (or chlorinated lime) containing less than 39 percent available chlorine, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) Steel barrel or drum;
(2) Wooden barrel or keg;
(3) Wooden or fiberboard box, with inside containers; or
(4) Fiber drum with inside metallic or polyethylene liner, not over 275 pounds gross weight.

§ 173.945 Calcium cyanamide, not hydrated. (a) Calcium cyanamide, not hydrated, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) Steel barrel or drum; or
(2) Wooden barrel or keg.

(b) Calcium cyanamide, not hydrated, when offered for transportation by cargo aircraft only, must be prepared for shipment in compliance with §§173.510 and 173.154.

(c) Calcium cyanamide, not hydrated, when offered for transportation by passenger-carrying aircraft, must be prepared for shipment in compliance with §173.510 and must be packed in earthenware, glass, metal, or plastic inside packagings of not over 1 pound each, adequately cushioned to prevent breakage and leakage. Inside packagings must be packed in a strong outside package containing not more than 25 pounds each.

§ 173.952 Castor beans and castor pomace. (a) Castor beans and castor pomace, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) Sift-proof, five-ply paper bag, not over 100 pounds net weight.
(2) Sift-proof, paper or plastic lined burlap bag, not over 100 pounds net weight.
(3) Sift-proof, paper or plastic lined cotton bag, not over 100 pounds net weight.

§ 173.955 Coconut meal pellets. (a) Coconut meal pellets which contain at least 6 percent water, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) Burlap (jute) bag;
(2) Multi-wall paper bag; or
(3) Polyethylene-lined burlap or paper bag.

§ 173.960 Copra. Copra, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged in a burlap bag.

§ 173.965 Cotton and other fibers. Cotton and the fibers jute, hemp, flax, sisal, coir, kapok, or similar vegetable fibers, when offered for transportation by water, must be packaged in bales, securely and tightly bound with rope, wire, or other similar means.

§ 173.985 Exothermic ferrochrome, ferromanganese, and silicon-chrome. Exothermic ferrochrome, ferromanganese, and silicon-chrome, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged in a steel barrel or drum, not over 750 pounds gross weight.

§ 173.995 Fish scrap and fish meal. (a) Except as provided in paragraph (b) of this section, fish scrap and fish meal, containing at least 6 percent but not more than 12 percent water, when offered for transportation by water, must be prepared for shipment in compliance with §173.510 and must be packaged as follows:

(1) Burlap (jute) bag;
(2) Multi-wall paper bag;
(3) Polyethylene-lined burlap or paper bag;
(4) Rail car; or
(5) Freight container.

(b) Fish scrap and fish meal may not be offered for transportation if the temperature of the material exceeds 120° F. (49° C.).

For explanation of abbreviations and reference marks, see last page of this tariff.

(c) When fish scrap or fish meal is offered for transportation by vessel in bulk in freight containers the following additional requirements must be met:
(1) The fish meal must contain at least 100 PPM antioxidant (ethoxyquin) at the time of shipment.
(2) Each shipment must be accompanied by a statement in which the shipper certifies:
(i) The moisture content of the fish meal;
(ii) The concentration of antioxidant (ethoxyquin) in the material in PPM at the time of loading into the freight container.
(iii) The fat content of the fish meal;
(iv) Date and place of production of the fish meal and
(v) The physical state of the material (ground, pelletized, or mixture).

§ 173.1010 Lead dross or scrap containing 3 percent or more free acid. Lead dross or scrap, containing 3 percent or more free acid when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged in steel barrels or drums or wooden barrels, boxes, or kegs.

§ 173.1015 Lithium batteries, for disposal. (a) Lithium batteries, for disposal, comprised of one or more cells, may be offered for transportation to a permitted storage facility and disposal site by motor vehicle only, if the battery:
(1) When new, contained not more than 12 grams of lithium per cell;
(2) Is equipped with an effective means of preventing external short circuits;
(3) Is classified and offered for transportation as an ORM–C; and
(4) Is overpacked in a strong fiberboard box, or metal or fiber drum which complies with § 173.24.
(b) Paragraph (a) does not apply to lithium batteries which, when new, were excepted from regulation under § 173.206(f).

§ 173.1020 [Reserved]

§ 173.1025 Ferrous metal borings, shavings, turnings, or cuttings (excluding stainless steel). Ferrous metal borings, shavings, turnings, or cuttings, other than stainless steel, when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged in a metal barrel or drum.

§ 173.1040 Pesticide, water-reactive. Water reactive pesticide not otherwise subject to this subchapter, and including fungicides, herbicides, etc., which contain manganese ethylene bis-dithio carbamate, when offered for transportation by water, must be packaged in water resistant packaging in compliance with § 173.510.

§ 173.1045 Petroleum coke, uncalcined. Uncalcined petroleum coke, when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged in metal barrels or drums.

§ 173.1060 RESERVED

§ 173.1065 Rubber curing compound, solid. (a) Solid rubber curing compounds, when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged as follows:
(1) Metal barrel or drum;
(2) Fiber drum;
(3) Wooden barrel or keg;
(4) Wooden or fiberboard box;
(5) Sift-proof multi-wall paper bag; or
(6) Sift-proof lined burlap bag.

§ 173.1070 Sawdust or wood shavings. (a) Sawdust or wood shavings, when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged as follows:
(1) Steel barrel or drum;
(2) Wooden barrel or keg;
(3) Wooden or fiberboard box;
(4) Bag; or
(5) Bales, slatted and compactly bound with wire or metal bands.

§ 173.1080 Sulfur. (a) Sulfur, flowers of sulfur (sulfur flower), when offered for transportation by water, must be prepared for shipment in compliance with § 173.510 and must be packaged as follows:
(1) Metal barrel or drum;
(2) Wooden barrel or keg;
(3) Wooden or fiberboard box;
(4) Sift-proof multi-wall paper bag;
(5) Sift-proof paper-lined burlap bag;
(6) Sift-proof rail car; or
(7) Sift-proof or lined freight container.

§ 173.1090 Asbestos.
(a) Asbestos includes any of the following hydrated mineral silicates: chrysotile, crocidolite, amosite, anthophyllite asbestos, tremolite asbestos, actinolite asbestos, and every product containing any of these minerals.
(b) Commercial asbestos is any material or product containing asbestos that has commercial value because of its asbestos content.
(c) Asbestos which is immersed or fixed in a natural or artificial binder material (such as cement, plastic, asphalt, resins or mineral ore) and manufactured products containing asbestos or any materials or products whose commercial value is not dependent on their asbestos content, are not subject to the requirements of this subchapter.
(d) Commercial asbestos must be offered for transportation and transported in:
(1) Rigid, leaktight packagings such as metal or fiber drums, portable tanks, hopper-type rail cars, or hopper-type motor vehicles;
(2) Bags or other non-rigid packagings in closed freight containers, motor vehicles, or rail cars that are loaded by and for the exclusive use of the consignor and unloaded by the consignee;
(3) Bags or other non-rigid packagings which are dust and sift-proof. When transported by other than private carrier by highway, such packagings containing asbestos must be palletized and unitized by methods such as shrink-wrapping in plastic film or wrapping in fiberboard secured by strapping. Pallets need not be used during transportation by vessel for loads with slings that are unitized by methods such as shrink-wrapping, if the slings adequately and evenly support the loads and the unitizing method prevents shifting of the bags or other non-rigid packagings during conditions normally incident to transportation; or
(4) Bags or other non-rigid packagings which are dust and sift-proof in strong outside fiberboard or wooden boxes.

SUBPART N

OTHER REGULATED MATERIAL; ORM—D

§ 173.1200 Consumer Commodity. (a) In order to be transported under the proper shipping name of "Consumer commodity," a material must meet that definition. It may be reclassed and offered for shipment as ORM–D material (See § 173.500) provided that an ORM–D exception is authorized in specific sections applicable to the material, and that it is prepared in accordance with the following paragraphs. (The gross weight of each package must not exceed 65 pounds and each package offered for transportation aboard aircraft must meet the requirements of § 173.6.)

(1) **Flammable liquids must be:**
(i) In inside metal containers, each having a rated capacity of 1 quart or less, packed in strong outside packagings;
(ii) In inside containers, each having a rated capacity of 1 pint or less, packed in strong outside packagings.
(iii) In inside containers, each having a rated capacity of one gallon or less, packed in strong outside packagings. The provisions of this exception apply only if the flash point of the material is 73° F. or higher.

(2) **Corrosive liquids must be:**
(i) In bottles, each having a rated capacity of 1 pint or less, each enclosed in a metal can, packed in strong outside packagings.
(ii) In metal or plastic containers, each having a rated capacity of 1 pint or less, packed in strong outside packagings.
(iii) In metal or plastic inside containers, each having a rated capacity of not over 1 quart, packed in strong outside packaging provided the liquid mixture contains 15 percent or less corrosive material and the remainder of the mixture does not meet the definition of a hazardous material as defined in the subchapter. Not authorized for transportation by air.

(3) Corrosive solids must be:

(i) In earthenware, glass, plastic or paper containers each having a net weight of 5 pounds or less, packed in strong metal, wooden, or fiberboard outside packagings, each having a net weight of 25 pounds or less.

(ii) In metal, rigid fiber, or composition cans or cartons or rigid plastic containers each having a net weight of 10 pounds or less, packed in strong outside packagings each having a net weight of 25 pounds or less.

(iii) In metal, rigid fiber, or composition cans or cartons or rigid plastic containers, each having a rated capacity of not over 20 pounds, overpacked in metal, wooden or fiberboard outside containers not exceeding 50 pounds net weight provided the solid mixture contains 10 percent or less corrosive material and the remainder of the mixture does not meet the definition of a hazardous material as defined in this subchapter.

(4) Flammable solids except for charcoal briquettes must be in inside containers each having a net weight of 1 pound or less, packed in strong outside packagings each having a net weight of 25 pounds or less. Charcoal briquettes may be shipped in packagings having a net weight of 65 pounds or less.

(5) Oxidizers must be in inside containers each having a rated capacity of 1 pint or less for liquids or a net weight of 1 pound or less for solids, packed in strong outside packaging each having a net weight of 25 pounds or less.

(6) Organic peroxides must be:

(i) In inside containers which must be securely packed and cushioned with noncombustible cushioning material in strong outside packagings containing not over 1 pint or 1 pound net quantity of the material's. Cushioning is not required when the liquid is contained in strong, securely closed, plastic packagings, not over 1 ounce capacity each, properly packed to prevent leakage or breakage.

(ii) In strong outside packagings of 24 or less inside fiberboard containers, each having 70 or less securely closed tubes having a maximum fluid capacity of ½-ounce each and securely packed in noncombustible cushioning material. Each fiberboard container may not contain more than 1 pint of liquid.

(7) Poison B liquids or solids must be in inside containers, each having a rated capacity of 8 ounces or less by volume for liquids or of 8-ounces or less net weight for solids packed in strong outside packagings.

(8) Compressed gases must be:

(i) In inside containers, each having a water capacity of 4-fluid ounces or less (7.22 cubic inches or less), packed in strong outside packagings.

(ii) In inside metal container charged with a solution of material's and compressed gas or gases which is nonpoisonous, meeting all of the following:

(A) Capacity may not exceed 50 cubic inches (27.7 fluid ounces);

(B) Pressure in the container may not exceed 180 p.s.i.g. at 130° F. (55° C.). If the pressure exceeds 140 p.s.i.g. at 130° F., (55° C.) but does not exceed 160 p.s.i.g. at 130° F., (55° C.) a specification DOT 2P (§178.33 of this subchapter) inside metal container must be used; if the pressure exceeds 160 p.s.i.g. at 130° F., (55° C.), a specification DOT 2Q (§178.33a of this subchapter) inside metal container must be used. In any event the metal container must be capable of withstanding, without bursting, a pressure of one and one-half times the equilibrium pressure of the contents at 130° F. (55° C.);

(C) Liquid content of the material and gas not completely fill the container at 130° F. (55° C.);

(D) The containers must be packed in strong outside packagings; and

(E) Each completed container filled for shipment must have been heated until the pressure in the container is equivalent to the equilibrium pressure of the content at 130° F. (55° C) without evidence of leakage, distortion, or other defect.

(iii) In a non-refillable inside metal container of 50 cubic-inch capacity or less (27.7 fluid ounces), with foodstuffs or soaps and with soluble or emulsified compressed gas, provided the pressure in the container does not exceed 140 p.s.i.g. at 130° F. (55° C.). The metal container must be capable of withstanding, without bursting, a pressure of one and one-half times the equilibrium pressure of the contents at 130° F. (55° C.) and must comply with the following provisions:

(A) Containers must be packed in strong outside packagings, and

(B) Liquid content of the material and gas may not completely fill the container at 130° F. (55° C.).

(iv) In refillable inside metal containers with cream and soluble or emulsified compressed gas packed in strong outside packagings. Containers must be of such design that they will hold pressure without permanent deformation up to 375 p.s.i.g. and must be equipped with a device designed so as to release pressure without bursting of the container or dangerous projection of its parts at higher pressures.

(v) In non-refillable inside metal containers charged with a solution, containing biological products or a medical preparation which could be deteriorated by heat, and compressed gas or gasses which is nonpoisonous and nonflammable. The capacity of each container may not exceed 35 cubic inches (19.3 fluid ounces). The pressure in the container may not exceed 140 p.s.i.g. at 130° F. (55° C.), and the liquid content of the product and gas may not completely fill the container at 130° F. (55° C.). One completed container out of each lot of 500 or less, filled for shipment, must be heated, until the pressure in the container is equivalent to the equilibrium pressure of the content at 130° F. (55° C.). There may be no evidence of leakage, distortion, or other defect. Container must be packed in strong outside packagings.

(vi) In electronic tubes, each having a volume of not more than 30 cubic inches and charged with gas to a pressure of not more than 35 p.s.i.g. and packed in strong outside packagings.

(vii) In an inside metal container as a component of an audible fire alarm system powered by a compressed gas meeting the following provisions:

(A) Each inside container must have contents which are not flammable, poisonous, or corrosive as defined under this Part;

(B) Each inside container may not have a capacity exceeding 35 cubic inches (19.3 fluid ounces);

(C) Each inside container may not have a pressure exceeding 70 p.s.i.g. at 70° F. (21° C.) and the liquid portion of the gas may not completely fill the inside container at 130° F. (55° C.);

(D) Each inside container must be designed and fabricated with a burst pressure of not less than five times its charged pressure at 130° F. (55° C.); and

(E) Each fire alarm system must be packed in a strong outside packaging.

§ 173.1201 Small arms ammunition.

(a) Small arms ammunition which has been classed as a Class C explosive may be re-classed and offered for transportation as ORM-D material (See 173.500 of this part) if it is packaged in accordance with paragraph (b) of this section. Small arms ammunition that may be shipped as ORM-D is limited to:

(1) Ammunition for rifle, pistol, or shotgun;

(2) Ammunition with inert projectiles or blank ammunition;

(3) Ammunition having no tear gas, incendiary, or detonating explosive projectiles; and

(4) Ammunition not exceeding 50 caliber for rifle or pistol cartridges or 8 gauge for shotshells.

(b) Packaging for small arms ammunition as ORM-D must be as follows:

(1) Ammunition must be packed in inside boxes, or in partitions which fit snugly in the outside packaging or in metal clips;

(2) Primers must be protected from accidental initiation;

(3) Inside boxes, partitions or metal clips must be packed in securely closed strong outside packagings; and

(4) Maximum gross weight is limited to 65 pounds per package.

SUBPART O

OTHER REGULATED MATERIAL; ORM-E.

§ 173.1300 Hazardous waste, liquid or solid, n.o.s.; hazardous substance, liquid or solid, n.o.s.

Hazardous waste, liquid or solid, n.o.s., or Hazardous substance, liquid or solid, n.o.s., may not be offered for transportation unless packaged in accordance with §173.510.

APPENDIX A - METHOD OF TESTING CORROSION TO SKIN

1. Corrosion to the skin is measured by patch-test technique on the intact skin of the albino rabbit, clipped free of hair. A minimum of six subjects are to be used in this test.

2. Introduce under a square cloth patch, such as surgical gauze measuring not less than 1 inch by 1 inch and two single layers thick, 0.5 milliliter (in the case of liquids) or 0.5 gram (in the case of solids and semi-solids) of the substance to be tested

For explanation of abbreviations and reference marks, see last page of this tariff.

3. Immobilize the animals with patches secured in place by adhesive tape.

4. Wrap the entire trunk of each animal with an impervious material, such as rubberized cloth, for the 4 hour period of exposure. This material is to aid in maintaining the test patches in position and retards the evaporation of volatile substances. It is not applied for the purpose of occlusion.

5. After 4 hours of exposure, the patches are to be removed and the resulting reactions are to be evaluated for corrosion.

6. Following this initial reading, all test sites are washed with an appropriate solvent to prevent further exposure.

7. Readings are again to be made at least at the end of a total of 48 hours (44 hours after the first reading).

8. Corrosion will be considered to have resulted if the substances in contact with the rabbit skin has caused destruction or irreversible alteration of the tissue on at least two out of each six rabbits tested. Tissue destruction is considered to have occurred if, at any of the readings, there is ulceration or necrosis. Tissue destruction does not include merely sloughing of the epidermis, or erythema, edema, or fissuring.

APPENDIX B—PROCEDURE FOR TESTING CHEMICAL COMPATIBILITY AND RATE OF PERMEATION IN POLYETHYLENE PACKAGING AND RECEPTACLES

1. The purpose of this procedure is to determine the chemical compatibility and permeability of liquid hazardous materials packaged in polyethylene packaging and receptacles. Alternatives for this procedure are permitted as specified in § 173.24(d)(3) of this subchapter.

2. Compatibility and rate of permeation are determined by subjecting full size polyethylene containers (or smaller containers as permitted in paragraph 6 of this Appendix) and hazardous material lading to one of the following combinations of time and temperature:

a. Test Method 1: 180 days at a temperature no lower than 18°C. (64°F)

b. Test Method 2: 28 days at a temperature no lower than 50°C. (122°F)

c. Test Method 3: 14 days at a temperature no lower than 60°C. (140°F)

3. Regardless of which test method is used, at least three sample containers shall be tested for each combination of hazardous material and size and design of container. Fill containers to rated capacity with the specific hazardous material (at the concentration to be transported) and close as for shipment. For the first and last 24 hours of storage under the selected test method, place the containers with closures downward, except that containers fitted with a vent are so placed on each occasion for five minutes only.

4. For testing under Test Method 2 or 3 in those instances where it is not practicable to use full size containers, smaller containers may be used. The small container shall be manufactured by the same process as the larger container (for example, using the same method of molding and processing temperatures) and be made of identical resins, pigments and additives.

5. Determine filled container weight or net weight of contents both before and after storage under the selected test method. Rate of permeation is determined from loss of hazardous materials contents, during the conduct of the test, expressed as a percentage of the original weight.

6. After storage under the selected test method, the container shall be drained, rinsed, filled to rated capacity with water and, with filled container at ambient temperature, dropped from a height of 1.2 meters (3.94 feet) onto solid concrete.

7. Each of the following constitute test failure:

a. Visible evidence of permanent deformation due to vapor pressure build-up or collapse of walls, deterioration, swelling, crazing, cracking, excessive corrosion, oxidation, embrittlement, leakage, rupture or other defects likely to cause premature failure or a hazardous condition.

b. For materials meeting the definition of a poison according to this subchapter, a rate of permeation in excess of 0.5% determined over the test period. For all other hazardous materials a rate of permeation in excess of 2.0% determined over the test period.

PART 174—CARRIAGE BY RAIL

SUBPART A

GENERAL REQUIREMENTS

§ 174.1 Purpose and scope. This part prescribes requirements in addition to those contained in Parts 171, 172, 173, and 179 of this subchapter, to be observed with respect to the transportation of hazardous materials in or on rail cars.

§ 174.3 Unacceptable hazardous materials shipments. A shipment of a hazardous material that is not prepared for transportation in accordance with Parts 171, 172 and 173 of this subchapter may not be accepted for transportation or transported by rail except as provided in § 174.47(b).

§ 174.5 Carrier's materials and supplies. This subchapter applies to the transportation of a carrier's materials and supplies moving by rail, except that the shipper's certification is not required when these materials and supplies are being transported by the carrier who owns them. The requirements of this subchapter do not apply to railway torpedoes or fusees when carried in engines or rail cars. Railway torpedoes must be in closed metal boxes when not in use.

§ 174.7 Responsibility for compliance. Unless this subchapter specifically provides that another person is to perform a particular duty, each carrier, including a connecting carrier, shall perform the duties specified and comply with each applicable requirement of this part, and shall instruct his employees in relation thereto.

§ 174.8 Inspection. (a) Methods of manufacture, packing, and storage of hazardous material, insofar as they affect safety in transportation by rail, must be open to inspection by a duly authorized representative of the Department, an initial carrier, and the Bureau of Explosives.

(b) At any point where a train is required to be inspected, each loaded placarded rail car and each rail car immediately adjacent thereto must be inspected. The cars may continue in transit only when the inspection indicates that the cars are in a safe condition for transportation. (See §§ 174.9 and 174.10.) The inspection of a rail car other than a tank car or a rail car containing Class A explosives must include a visual inspection for obvious defects of the running gear and any leakage of contents from the car and to determine whether all required placards are in place and conform to the information given on the train consist or other shipping document as required by § 174.26(b).

(c) For inspection requirements applicable to rail cars containing Class A explosives, see §§ 174.10 and 174.104.

§ 174.9 Inspection of tank cars. (a) Each loaded placarded tank car must be inspected by the carrier before acceptance at the originating point and when received in interchange to see that it is not leaking and that the air and hand brakes, journal boxes, and trucks are in proper condition for service.

(b) An empty tank car which previously contained a hazardous material and which is tendered for movement or received in interchange must have all manhole covers, outlet valve reducers, outlet valve caps, outlet valve cap plugs, end plugs, and plugs or caps or other openings securely in their proper places, except that heater coil inlet and outlet pipes must be left open for drainage.

(c) The safety valves on a tank car may not be tested while the car is loaded. Whenever a test of the safety valves or tank becomes due while a loaded car is in transit, unless the car is leaking or in a manifestly insecure condition, it must be forwarded to its destination, carded on each side with a card exhibiting the following notice:

Safety valves overdue for test.
Tank overdue for test.
Moving under authority of 49 CFR 174.9(c).

A prompt report of each such movement, showing the identifying initials and number of each car, must be made to the Bureau of Explosives by the carrier carding the cars.

§ 174.10 Inspection of cars at interchange. (a) Each rail car containing explosives requiring EXPLOSIVES A placards (see § 174.104) which is offered by a connecting line must be visually inspected externally by the receiving line. If practicable, the receiving carrier should also inspect the lading. The car may not be forwarded until all discovered violations have been corrected.

(b) If the car shows evidence of or if there is any reason to suspect that it has received rough treatment, the lading must be inspected and placed in proper condition before the car is permitted to proceed. When interchange occurs and the inspection is performed after daylight hours, electric flashlights should be used and naked lights may not be used.

(c) A shipment of hazardous materials offered by a connecting carrier must comply with this subchapter, and the revenue waybill, freight bill, manifest of lading, card waybill, switching order, transfer slip ticket, or other billing, must bear the placard notation and endorsement prescribed by § 174.25 of this subpart.

(d) A car containing packages of hazardous materials other than explosives may not be offered in interchange if the packages are in a leaking condition.

(e) In the case of a tank car which has developed small leaks in the course of its movement to an interchange point and which requires a short movement to effect delivery for unloading by the consignee, the movement may be made if it can be made safely adhering to the precautions prescribed by § 174.50.

§ 174.11 Canadian shipments and packings. A Canadian shipment or package may be transported by rail car within the United States if it is in compliance with the requirements of this subchapter or the TDG Regulations and the regulations of the Canadian Transport Commission as provided in § 171.12a of this subchapter.

§ 174.12 Intermediate shippers and carriers. (a) Each origin carrier, including a freight forwarder, must have on file a copy of the shipper's certified shipping paper, as prescribed in Part 172 of this subchapter, for each shipment of hazardous materials it handles. An intermediate shipper or carrier may not forward or transport a shipment of hazardous materials if it does not meet the requirements of this subchapter.

(b) An intermediate carrier offering or delivering for transportation any loaded motor vehicle, trailer, semi-trailer, or container containing any hazardous material must show on the shipping paper the information required by § 172.201 of this subchapter and a description of the type vehicle or container.

§ 174.14 Movements to be expedited. (a) A carrier must forward each shipment of hazardous materials promptly and within 48 hours (Saturdays, Sundays, and holidays excluded), after acceptance at the originating point or receipt at any yard, transfer station, or interchange point, except that where biweekly or weekly service only is performed, a shipment of hazardous materials must be forwarded on the first available train.

(b) A tank car loaded with any flammable liquid or gas, or a poison gas, may not be received and held at any point, subject to forwarding orders, so as to defeat the purpose of this section or of § 174.204 of this subchapter.

§ 174.16 Removal and disposition of hazardous materials at destination. (a) **Delivery at non-agency stations.** A shipment of explosives may not be unloaded at non-agency stations unless the consignee is there to receive it or unless properly locked and secure storage facilities are provided at that point for its protection. If delivery cannot be so made, the shipment must be taken to next or nearest agency station for delivery.

(b) **Delivery at agency stations.** A carrier shall require the consignee of each shipment of hazardous materials to remove the shipment from carrier's property within 48 hours (exclusive of Saturdays, Sundays, and holidays) after notice of arrival has been sent or given. If not so removed, the carrier shall immediately dispose of the shipments as follows:

(1) **Class A explosives:** If safe storage is available, by storage at the owner's expense; if safe storage is not available, by return to the shipper, safe, or destruction under supervision of a competent person; or if safety requires, by destruction under supervision of a competent person.

(2) **Hazardous materials, except Class A explosives, in carload shipments:** By storage on the carrier's property; by storage on other than the carrier's property, if safe storage on the carrier's property is not available; or by sale at expiration of 15 calendar days after notice of arrival has been sent or given to the consignee, provided the consignor has been notified of the non-delivery at the expiration of a 48-hour period and orders for disposition have not been received.

(3) **Hazardous materials, except Class A explosives, in less-than-carload shipments:** By return to the shipper if notice of non-

delivery was requested and given the consignor as prescribed by the carrier's tariff, and orders for return to shipper have been received; by storage on the carrier's property, by storage on other than the carrier's property, if sale storage on the carrier's property is not available; or by sale at expiration of 15 calendar days after notice of arrival has been sent or given to the consignee, provided the consignor has been notified of non-delivery at expiration of a 48-hour period and orders for disposition have not been received.

§ 174.18 Astray shipments. An astray package of hazardous materials other than explosives, of known destination and in proper condition for safe transportation, must be forwarded immediately on an "astray bill", showing the information required by Subpart C of Part 172 of this subchapter. When necessary to replace a label and doubt exists as to the kind, the FLAMMABLE LIQUID label must be applied. For astray shipments of explosives, see §174.103.

§ 174.20 Local or carrier restrictions. (a) When local conditions make the acceptance, transportation, or delivery of hazardous materials unusually hazardous, local restrictions may be imposed by the carrier.

(b) Each carrier must report to the Bureau of Explosives for publication the full information as to any restrictions which it imposes against the acceptance, delivery, or transportation of hazardous materials, over any portion of its lines under this section.

SUBPART B

GENERAL OPERATING REQUIREMENTS

§ 174.24 Shipping papers. (a) Except as provided in paragraph (b) of this section, no person may accept for transportation by rail any hazardous material which is subject to this subchapter unless he has received a shipping paper prepared in the manner specified in Subpart C of Part 172 of this subchapter. In addition, the shipping paper must include a certificate, if required by §172.204 of this subchapter. However, no member of the train crew of a train transporting the hazardous material is required to have a shipper's certificate on the shipping paper in his possession if the original shipping paper containing the certificate is in the originating carrier's possession.

(b) This subpart does not apply to a material classed as an ORM–A, B, C, or D, unless it is a:

(1) Hazardous substance, or

(2) Hazardous waste.

§ 174.25 Additional information on waybills, switching orders and other billings. (a) Each waybill, switching ticket, switching order or other billing used in place thereof, prepared by the carrier from bills-of-lading, shipping orders or other shipping papers, and each shipping order used as a waybill for a rail car required to be placarded by Subpart F of Part 172 of this subchapter must, in addition to containing the information required by §§172.202 and 172.203 of this subchapter, be plainly marked by the carrier with:

(1) In the case of a flatcar carrying trailers or containers, an indication of which trailers or containers contain the hazardous materials; and

(2) The placard endorsement specified in the following table for the hazardous material or class concerned near the space on the face of the billing provided for the car number:

(i) In letters not less than ⅜ of an inch, or (ii) In bold, upper case letters not less than 1/16 of an inch high inside a rectangle made with any symbol such as asterisk (*), dollar sign ($), capital (X), or the symbol for number (#).

Hazardous material or class	Placard notation	Placard endorsement
Explosives, class A	Placarded EXPLOSIVES A	Explosives
Explosive chemical ammunition containing class A poison.	Placarded EXPLOSIVES A and POISON GAS	Explosives and poison gas.
Explosives, class B	Placarded EXPLOSIVES B	Dangerous.
Explosives, class C	Placarded DANGEROUS	Dangerous.
Blasting Agent	Placarded BLASTING AGENT	Dangerous.
Flammable liquids	Placarded FLAMMABLE	Dangerous.
Flammable solids	Placarded FLAMMABLE SOLID	Dangerous.
Oxidizer	Placarded OXIDIZER	Dangerous.
Corrosive material	Placarded CORROSIVE	Dangerous.
Nonflammable gases	Placarded NON FLAMMABLE GAS	Dangerous.
Flammable gases	Placarded FLAMMABLE GAS	Dangerous.
Poisonous gases or liquids, class A	Placarded POISON GAS	Poison gas.
Poison, class B	Placarded POISON	Dangerous.
Radioactive material (Yellow III label only).	Placarded RADIOACTIVE	Radioactive material.
Organic peroxide	Placarded ORGANIC PEROXIDE	Dangerous.
Irritating material	Placarded DANGEROUS	Dangerous.
Combustible liquid	Placarded COMBUSTIBLE	None.
Chlorine	Placarded CHLORINE	Dangerous.
Fluorine	Placarded POISON	Dangerous.
Oxygen, cryogenic liquid	Placarded OXYGEN	Dangerous.
Tank cars which contain a residue of a hazardous material other than a combustible liquid	See Sec. 174.25(c)	Dangerous.
Tank cars which contain a residue of a combustible liquid	See Sec. 174.25(c)	None.

(b) When the initial movement of a loaded rail car required to be placarded is a switching operation, the switching order, switching receipt, or switching ticket, and all copies thereof, prepared by the shipper, or by the carrier under the shipper's written authority, must contain the following:

(1) The shipping description consisting of:

(i) The proper shipping name specified for the material in §172.101 or §172.102 (when authorized) of this subchapter;

(ii) The hazardous class specified for the material in the same table;

(iii) The identification number (preceeded by "UN" or "NA" as appropriate) prescribed for the material in the same Table; and

(iv) The total quantity (by weight, volume, or as otherwise appropriate) of the hazardous material covered by the description.

(2) Except when a certified bill of lading is tendered to the carrier, the shipper's certification and signature specified in §172.204 of this subchapter.

(3) The placard notation specified in the Table in §174.25(a).

(4) For any entry for a material that is a hazardous substance, the letters "RQ" entered either before or after the basic description.

(c) The shipping paper for a tank car that contains only the residue of a hazardous material must contain the words "RESIDUE: Last Contained * * *", followed by the basic description of the hazardous material last contained in the tank car and the placard notation specified in the second column of the table in paragraph (a)(2) of this section followed by the word "RESIDUE." For example, "RESIDUE: Last Contained Petroleum Naptha, Combustible liquid, UN 1255, Placarded: COMBUSTIBLE-RESIDUE". For a tank car that contains a residue that is a hazardous substance, the letters "RQ" must also be entered on the shipping paper either before or after the basic description.

(d) At each station, or other point, where any other shipment of material is loaded into a properly certified and placarded rail car containing a shipment of Explosives A, and when a shipment of Explosives A, is transferred or reloaded, or a carload shipment of Explosives A, is reconsigned, the carrier must make a record of the car, originating point, carrier's name and date of car certificate. In addition, the blocking and bracing must be inspected as required in §174.104 and certified as being in compliance with the requirements of this part by the person making the inspection who shall sign the car certificates immediately below the signature which appears on Certificate Number 2 of the original car certificates attached to the car.

§ 174.26 Notice to train crews of placarded cars. (a) At each terminal or other place where trains are made up or switched by crews other than train crews accompanying the outbound movement of cars, the carrier shall execute consecutively numbered notices showing the location in each train of each rail car placarded EXPLOSIVE A or POISON GAS. A copy of each notice must be delivered to the train and engine crew concerned, and a copy thereof showing delivery to the train and engine crew must be kept on file by the carrier at each point where the notice is given. At points where train or engine crews are changed, the notice must be transferred from crew to crew. See paragraph (b) of this section for other placarded cars.

(b) The train crew must have a document indicating the position in the train of each loaded placarded car containing hazardous materials, except when the position is changed or the placarded car is placed in the train by a member of the train crew. A train consist may be used to meet this requirement.

(c) A member of the train crew of a train transporting hazardous

material's must have in his possession a copy of the shipping papers for the shipment of hazardous material's being transported showing the information required by §§ 172.202 and 172.203 of this subchapter.

§ 174.33 Lost or destroyed labels and placards. Each carrier shall maintain an adequate supply of the labels and placards specified in Subparts E and F of Part 172 of this subchapter on hand to replace those that become lost or destroyed. The carrier shall replace each lost or destroyed label or placard, as the case may be, based on the information on the shipping papers.

§ 174.45 Reporting hazardous material's incidents. When any incident occurs during transportation in which a hazardous material is involved, a report may be required. (See §§ 171.15 and 171.16 of this subchapter.)

§ 174.47 Correction of violations. (a) A shipment of explosives discovered to be in violation of any of the requirements of this subchapter may not be forwarded until all discovered violations have been corrected.

(b) Unless leaking, or in a manifestly insecure condition, each package of hazardous material's other than explosives in transit must be forwarded to its destination and a report made of any violation observed.

§ 174.48 Leaking packages other than tank cars. (a) Leaking packages other than tank cars may not be forwarded until repaired or reconditioned. Leaking or defective packages may be overpacked as required by paragraph (b) of this section. (See §§ 171.15 and 171.16 of this subchapter for reporting requirements.)

(b) Packages of hazardous material's that are damaged or found leaking during transportation, and hazardous material's that have spilled or leaked during transportation, may be forwarded to destination or returned to the shipper in a salvage drum in accordance with the requirements of § 173.3(c) of this subchapter.

§ 174.49 Flammable vapors. A placarded box car, trailer-on-flatcar container-on-flatcar or car known to contain flammable liquids, gases, or vapors may not be entered with a lighted open flame lantern, torch, or other fire, until all car doors are opened and sufficient time has been allowed for ventilation and escape of any vapors.

§ 174.50 Leaking tank cars. (a) A tank car discovered in a leaking condition in transit may not be unnecessarily moved until the unsafe condition has been corrected. In the case of a small leak, short movements may be made if a receptacle is attached under the leak to prevent the spread of the liquid over tracks.

(b) Each leaking tank car must be protected against ignition of the liquid or vapor by flame from sources such as lanterns, torches, flares, fusees, switch lights, switch-thawing flames, fires on sides of tracks, hot coals, lighted pipes, cigars, or cigarettes. All spectators should be kept at a safe distance.

(c) Highly volatile liquids can not be transferred by a vacuum pump unless the pump is placed so that the liquid flows to it from the tank by gravity.

(d) Whenever the leaking condition of a tank car requires the transfer of lading or makes the tank unfit for reloading, the car must be stenciled on both sides in letters three inches in size, adjacent to the car number, "LEAKY TANK. DO NOT LOAD UNTIL REPAIRED". The location of the leak must be indicated and marked with the symbol "X". The owner must be immediately notified by telegram and advised of the exact location of the leak. The stenciling may not be removed until the tank is repaired.

(e) Open-flame lights may not be brought near a placarded tank car that is leaking.

(f) A leaking tank car containing any hazardous material may be switched to a location distant from habitation and highways if the move can be safely made.

SUBPART C

GENERAL HANDLING AND LOADING REQUIREMENTS

§ 174.55 General requirements. (a) Except as otherwise specifically provided, each package of hazardous material's being transported by rail car must be loaded and blocked and braced as prescribed in this subchapter. For recommended methods of blocking and bracing in cars, truck bodies, or trailers, see Bureau of Explosives Pamphlet Nos. 6 and 6C. See loading and storage chart (§ 174.81) before loading labeled material's together.

(b) Packages of hazardous material's must be loaded and securely blocked and braced to prevent the packages from changing position, falling to the floor, or sliding into each other under shocks normally incident to transportation. This requirement does not preclude the use of loading methods that are designed to permit limited movement of the load and that are approved by the Department.

(c) Each package of hazardous material's bearing markings "THIS SIDE UP" or "THIS END UP" must be handled and loaded, blocked and braced, in the car to remain in the position indicated by the markings during transportation.

(d) A heavy package or container of hazardous material's may be trucked, rolled or moved by skid, fork truck, or other handling devices. It may not be dropped from any truck, platform, or rail car. Planks for rolling trucks from platforms to cars must have beveled edges.

(e) A carrier shall store hazardous material's in a secure location while they are being held for loading or delivery. The carrier shall insure that persons not having business with the carrier do not have access to these hazardous material's.

§ 174.57 Cleaning cars. All hazardous material which has leaked from a package in any rail car or on other railroad property must be carefully removed.

§ 174.59 Marking and placarding of rail cars. No person may transport a rail car carrying hazardous material's unless it is marked and placarded as required by this subchapter. Placards and car certificates lost in transit must be replaced at the next inspection point, and those not required must be removed at the next terminal where the train is classified. For Canadian shipments, required placards lost in transit, must be replaced either by those required by Part 172 of this subchapter or by those authorized under § 171.12a.

§ 174.61 Truck bodies, trailers or freight containers on flatcars. (a) A truck body, trailer or freight container containing a hazardous material must be designed and loaded so that it will not rupture or become seriously damaged under conditions normally incident to transportation. Each unit must be secured on a flatcar so that it cannot permanently change position during transit. Packages of hazardous material's contained therein must be loaded and braced as provided by §§ 174.101, 174.112, 174.115 and 174.55. Placards must be applied when prescribed by Part 172 of this subchapter and Part 174.

(b) Except as specified in § 173.21, a truck body, trailer, or freight container equipped with heating or refrigerating equipment which has fuel or any article classed as a hazardous material may be loaded and transported on a flat car as part of a joint rail highway movement. The heating or refrigerating equipment is considered to be a part of the truck body or trailer and is not subject to any other requirements of this subchapter. The truck body, trailer, or freight container must be secured on the flatcar so that it cannot change position during transit.

(c) A cargo tank or multi-unit tank car tank containing hazardous material's may not be transported in trailer-on-flatcar, or container-on-flatcar service except under conditions approved by the Federal Railroad Administrator.

§ 174.63 Freight containers, portable tanks, and IM portable tanks. (a) A freight container or portable tank containing a hazardous material must be designed and loaded so that it will not rupture, or become seriously damaged under conditions normally incident to transportation. Each unit must be secured in a closed or gondola car, on a flatcar, or in a truck body on a flatcar so that it cannot permanently change position during transit. The ends, sidewalls, or doors of a truck body or trailer may not be relied upon to prevent the shifting of a freight container or portable tank.

(b) A Specification 51, 52, 53, 56 or 57 portable tank may not be transported on flatcars or on flat trailers on flatcars, except under conditions approved by the Federal Railroad Administrator. For cargo tanks and multi-unit tank car tanks, see § 174.61(c).

(c) A Specification 51, 52, 53, 56 or 57 portable tank may be shipped only in a rail car that provides specific facilities for bracing and tie-down of these tanks. If TOFC or COFC service is utilized, the tank should be secured in its trailer body in compliance with Bureau of Explosives Pamphlet 6C.

(d) An IM 101 or IM 102 portable tank:

(1) May not be transported in container-on-flat car service (COFC) except under conditions approved by the Associate Administrator for Safety, FRA; and,

(2) May not be transported in trailer-on-flatcar (TOFC) service except under conditions approved by the Associate Administrator for Safety, FRA.

§ 174.67 Tank car unloading. (a) In unloading tank cars, the following rules must be observed (see Subpart F of this Part for gases):

(1) Unloading operations must be performed only by reliable persons properly instructed in unloading hazardous materials and made responsible for careful compliance with this part.

(2) Brakes must be set and wheels blocked on all cars being unloaded.

(3) Caution signs must be so placed on the track or cars to give necessary warning to persons approaching the cars from the open end of a siding and must be left up until after the cars are unloaded and disconnected from the discharge connection. The signs must be of metal or other comparable material, at least 12 inches high by 15 inches wide in size, and bear the words, "STOP—Tank Car Connected", or "STOP—Men at Work", the word "STOP" being in letters at least 4 inches high and the other words in letters at least 2 inches high. The letters must be white on a blue background.

(4) Before a manhole cover or outlet valve cap is removed from a tank car, the car must be relieved of all interior pressure by cooling the tank with water or by venting the tank by raising the safety valve or opening the dome vent at short intervals. However, if venting to relieve pressure will cause a dangerous amount of vapor to collect outside the car, venting and unloading must be deferred until the pressure is reduced by allowing the car to stand overnight or otherwise cooling the contents. These precautions are not necessary when the car is equipped with a manhole cover which hinges inward or with an inner manhole cover which does not have to be removed to unload the car, and when pressure is relieved by piping vapor into a condenser or storage tank.

(b) After the pressure is released, the seal must be broken and the manhole cover removed as follows: (1) Screw type. The cover must be loosened by placing a bar between the manhole cover lug and knob. After two complete turns, so that vent openings are exposed, the operation must be stopped, and if there is any sound of escaping vapor, the cover must be screwed down tightly and the interior pressure relieved as prescribed in paragraph (a)(4) of this section, before again attempting to remove the cover.

(2) Hinged and bolted type. All nuts must be unscrewed one complete turn, after which same precautions as prescribed for screw type cover must be observed.

(3) Interior type. All dirt and cinders must be carefully removed from around the cover before the yoke is unscrewed.

(c) When the car is unloaded through a bottom outlet valve, the manhole cover must be adjusted as follows: (1) Screw type. The cover must be put in place, but not entirely screwed down, so that air may enter the tank through the vent holes in threaded flange of the cover.

(2) Hinged and bolted type. A nonmetallic block must be placed under one edge of the cover.

(3) Interior type. The screw must be tightened up in the yoke so that the cover is brought up within one-half inch of the closed position.

(d) When unloading through the bottom outlet of a car equipped with an interior manhole type cover, and in each case where unloading is done through the manhole (unless a special cover with a safety vent opening and a tight connection for the discharge outlet is used), the manhole must be protected by asbestos or metal covers against the entrance of sparks or other sources of ignition of vapor, or by being covered and surrounded with wet burlap or similar cloth material. The burlap or other cloth must be kept damp by the replacement or the application of water as needed.

(e) Seals or other substances must not be thrown into the tank and the contents may not be spilled over the car or tank.

(f) The valve rod handle or control in the dome must be operated several times to see that outlet valve in bottom of tank is on its seat before valve cap is removed.

(g) The valve cap, or the reducer when a large outlet is to be used, must be removed with a suitable wrench after the set screws are loosened and a pail must be placed in position to catch any liquid that may be in the outlet chamber. If the valve cap or reducer does not unscrew easily, it may be tapped lightly with a mallet or wooden block in an upward direction. If leakage shows upon starting the removal, the cap or reducer may not be entirely unscrewed. Sufficient threads must be left engaged and sufficient time allowed to permit controlled escape of any accumulation of liquid in the outlet chamber. If the leakage stops or the rate of leakage diminishes materially, the cap or reducer may be entirely removed. If the initial rate of leakage continues, further efforts must be made to seat the outlet valve (see paragraph (f) of this section). If this fails, the cap or reducer must be screwed up tight and the tank must be unloaded through the dome. If upon removal of the outlet cap the outlet chamber is found to be blocked with frozen liquid or any other matter, the cap must be replaced immediately and a careful examination must be made to determine whether the outlet casting has been cracked. If the obstruction is not frozen liquid, the car must be unloaded through the dome. If the obstruction is frozen liquid and no crack has been found in the outlet casting, the car may, if circumstances require it, be unloaded from the bottom by removing the cap and attaching unloading connections immediately. Before opening the valve inside the tank car, steam must be applied to the outside of the outlet casting or wrap casting with burlap or other rags and hot water must be applied to melt the frozen liquid.

(h) Unloading connections must be securely attached to unloading pipes on the dome or to the bottom discharge outlets before any discharge valves are opened.

(i) Tank cars may not be allowed to stand with unloading connections attached after unloading is completed. Throughout the entire period of unloading, and while car is connected to unloading device, the car must be attended by the unloader.

(j) If necessary to discontinue unloading a tank car for any reason, all unloading connections must be disconnected. All valves must first be tightly closed, and the closures of all other openings securely applied.

(k) As soon as a tank car is completely unloaded, all valves must be made tight, the unloading connections must be removed and all other closures made tight, except that heater coil inlet and outlet pipes must be left open for drainage. The manhole cover must be reapplied by the use of a bar or wrench, the outlet valve reducer and outlet valve cap replaced by the use of a wrench having a handle at least 36 inches long, and the outlet valve cap plug, end plug, and all other closures of openings and of their protective housings must be closed by the use of a suitable tool.

(l) Railroad defect cards may not be removed.

(m) If oil or gasoline has been spilled on the ground around connections, it must be covered with fresh, dry sand or dirt.

(n) All tools and implements used in connection with unloading must be kept free of oil, dirt, and grit.

§ 174.69 Removal of placards and car certificates after unloading. When lading requiring placards or car certificates is removed from rail cars other than tank cars, placards and car certificates must be removed by the party unloading the car. For a tank car which contained a hazardous material, the person responsible for removing the lading must assure, in accordance with the provisions of § 172.510 (c) of this subchapter, that the tank car is properly placarded for any residue which remains in the tank car.

§ 174.81 Segregation and separation requirements for hazardous materials in rail cars. (a) Charged electric storage batteries must not be loaded in the same car nor stored with any Class A explosive.

(b) Cyanides or cyanide mixtures must not be loaded or stored with acids or corrosive liquids.

(c) Gas identification sets may be loaded and transported with all articles named in the segregation and separation chart, except those in column c.

(d) Nitric acid, when loaded in the same car with other acids or other corrosive liquids in carboys, must be separated from the other carboys. A 2 by 6 inch plank, set on edge, should be nailed across the floor at least 12 inches from the nitric acid carboys, and the space between the plank and the carboys of nitric acid should be filled with sand, sifted ashes, or other incombustible absorbent material.

(e) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one car shall be classed as flammable solid for purposes of transportation when examined for this classification by the Bureau of Explosives and approved by the Director, OHMT.

(f) Hazardous materials may not be loaded, transported, or stored together, except as provided in the following table:

Segregation and Separation Chart of Hazardous Materials

Footnotes

1. (Reserved)

2. Unless loaded in opposite ends of car, corrosive liquids must not be loaded with flammable solids, oxidizing materials, ammunition for cannon with or without projectiles, or propellant explosives, except that shippers loading carload shipments of corrosive liquids and flammable solids or oxidizing materials and who have obtained prior approval from the Department may load such materials together when it is known that the mixture of contents will not cause a dangerous evolution of heat or gas.

3. Explosives, class A, and explosives, class B must not be loaded or stored with chemical ammunition containing incendiary charges or white phosphorus either with or without bursting charges.

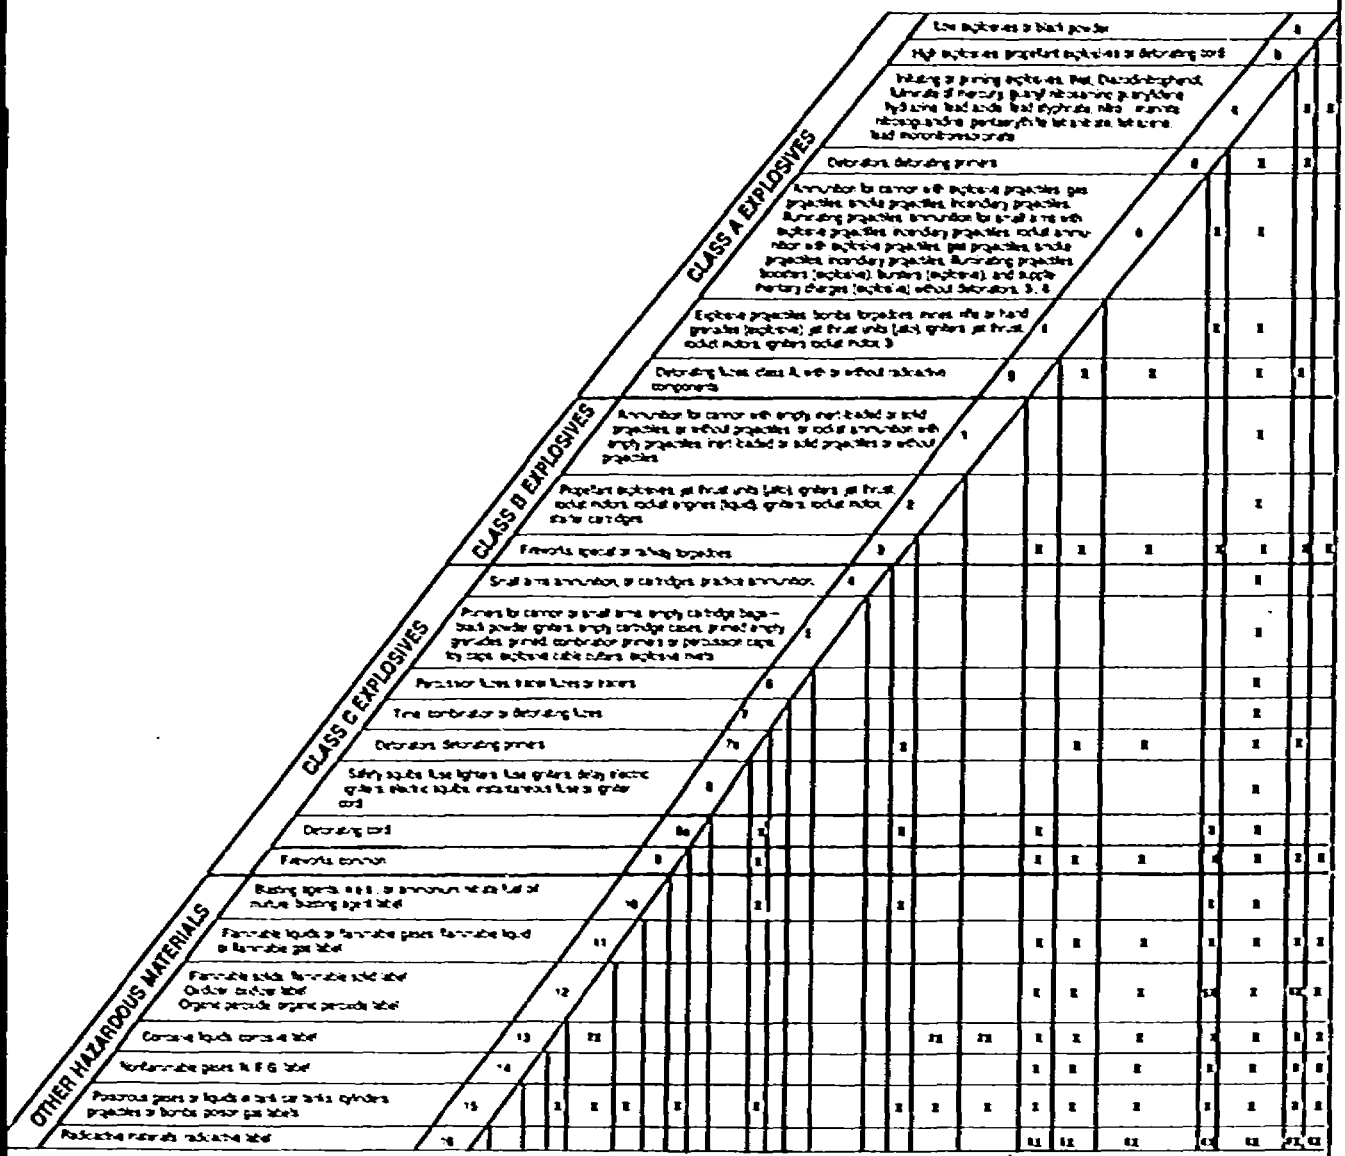
4. Bursters (explosive), boosters (explosive), or supplementary charges (explosive) without detonators when shipped by, to, or for the Departments of the Army, Navy, and Air Force of the United States Government may be loaded with any of the articles named except those in columns c, d, 3, 9, 11, 12, 13, 14, 15 and 16.

5. Does not include ammonium nitrate, fertilizer grade, which may be loaded, transported or stored with high explosives, or with detonators containing no more than 1 gram of explosive each, excluding ignition and delay charges.

6. Normal uranium, depleted uranium, and thorium metal in solid form may also be loaded and transported with articles named in columns a, b, c, d, e, f, and g.

Instructions

The letter X at an intersection shows that these materials must not be loaded or stored together. Example: Detonating fuzes, class A, with or without radioactive components, (g), must not be loaded or stored with high explosives or propellant explosives, (b).



CLASS A EXPLOSIVES
CLASS B EXPLOSIVES
CLASS C EXPLOSIVES
OTHER HAZARDOUS MATERIALS

SUBPART D

HANDLING OF PLACARDED CARS

§ 174.83 Switching of cars containing hazardous materials. (a) In switching operations where the use of hand brakes is necessary, a loaded placarded tank car, or a draft which includes a loaded placarded tank car, may not be cut off until the preceding car or cars clear the ladder track and the draft containing the loaded placarded tank car, or a loaded placarded tank car, shall in turn clear the ladder before another car is allowed to follow. In switching operations where hand brakes are used, it must be determined by trial whether a loaded placarded car, or a car occupied by a rider in a draft containing a placarded car, has its hand brakes in proper working condition before it is cut off.

(b) Any car placarded "EXPLOSIVES A" or "POISON GAS" and any Class DOT–113 tank car placarded "FLAMMABLE GAS" may not be:

(1) cut off while in motion,

(2) coupled into with more force than is necessary to complete the coupling, or

(3) Struck by any car moving under its own momentum.

(c) When transporting a car placarded "EXPLOSIVES A" in a terminal, yard, or on a side track, or siding, it must be separated from the engine by at least one non-placarded car.

(d) The doors of each closed car placarded "EXPLOSIVES A" must be closed, securely fastened, and the lading securely braced before it is moved.

§ 174.84 Switching of flatcars carrying placarded trailers, freight containers, portable tanks or IM portable tanks. (a) A placarded flatcar or a flatcar carrying a placarded trailer, freight container, portable tank or IM portable tank under this subchapter may not be cut off while in motion.

(b) No rail car moving under its own momentum may be permitted to strike any placarded flatcar or any flatcar carrying a placarded trailer, freight container, portable tank or IM portable tank.

(c) No placarded flatcar or any flatcar carrying a placarded trailer, freight container, portable tank or IM portable tank may be coupled into with more force than is necessary to complete the coupling.

§ 174.85 Placement of freight cars placarded "EXPLOSIVES A" in yards, on sidings, or side tracks. A rail car placarded "EXPLOSIVES A" while in a yard or on a siding or side track must be placed so that it will be safe from all probable danger of fire. A car so placarded may not be placed under a bridge or overhead highway crossing, not in or alongside a passenger shed or station except for loading or unloading purposes.

§ 174.86 Position in train of cars placarded "EXPLOSIVES A" or "POISON GAS" when accompanied by cars carrying guards or technical escorts. A rail car placarded "EXPLOSIVES A" or "POISON GAS" in a moving or standing train must be next to and ahead of any car occupied by the guards or technical escorts accompanying this car. However, if a car occupied by guards or technical escorts is equipped with a lighted heater or stove, it must be the fourth car behind any car requiring "EXPLOSIVES A" placards.

§ 174.87 Placarded cars prohibited in passenger trains, limited in mixed trains. (a) A placarded rail car may not be transported in a passenger train. However, it may be transported in a mixed train, but only at such times and between such points that freight train service is not in operation and subject to the following limitations:

(1) A placarded car (other than one placarded "COMBUSTIBLE") may not be transported next to an occupied caboose or a car carrying passengers in mixed trains, except as provided in § 174.86.

(2) When a car containing hazardous materials requiring labels is moved in a mixed train and it is not occupied by an employee of the carrier, placards must be applied to the car as required by Subpart F of Part 172 of this subchapter.

§ 174.88 Position in train of cars placarded "EXPLOSIVES A". In a moving or standing train, a car placarded "EXPLOSIVES A" may not be placed nearer than the sixth car from the engine or an occupied caboose. However, when the length of the train will not permit this car to be so placed, it must be placed as near the middle of the train as possible, but not less than the second car from the engine or occupied caboose.

§ 174.89 Position in train of cars placarded "RADIOACTIVE". In a moving or standing train, a car placarded "RADIOACTIVE" may not be placed next to any other loaded placarded car (other than one placarded "COMBUSTIBLE"), an engine, occupied caboose, or carload of undeveloped film. Cars placarded "RADIOACTIVE" may be placed next to each other.

§ 174.90 Separating cars placarded "EXPLOSIVES A" or "POISON GAS" from other cars in trains. (a) In a moving or standing train, a car placarded "EXPLOSIVES A" or "POISON GAS" may not be placed next to:

(1) A passenger car or combination car that may be occupied except as provided in § 174.86;

(2) Any loaded placarded car other than a car placarded with the same placard or one placarded "COMBUSTIBLE";

(3) An engine;

(4) A wooden underframe car (except on narrow gauge railroads);

(5) A loaded flatcar, except that loaded cars placarded "EXPLOSIVES A" may be placed next to each other. A flatcar equipped with permanently attached ends of rigid construction is considered to be an open-top car. (See paragraph (a)(6) of this section.)

(6) An open-top car when any of the lading protrudes beyond the car ends or when any of the lading extending above the car ends is liable to shift so as to protrude beyond the car ends;

(7) A car with automatic refrigeration or heating apparatus in operation, or a car with open-flame apparatus in service, or with an internal combustion engine in operation;

(8) A car containing lighted heaters, stoves, or lanterns;

(9) A car occupied by any person, including any attendant for the cargo contained therein; or

(10) An occupied caboose, except as provided in § 174.86.

(b) In a moving or standing train, a car placarded "EXPLOSIVES A" may not be placed next to a car placarded "POISON GAS".

§ 174.91 Position in train of loaded placarded tank car other than car placarded "COMBUSTIBLE". Except for a tank car placarded "COMBUSTIBLE", a loaded placarded tank car in a moving or standing train may not be nearer than the sixth car from the engine, occupied caboose, or passenger car. However, when the length of the train will not permit a loaded placarded tank car to be so placed, it must be placed as near the middle of the train as possible and not nearer than the second car from the engine, occupied caboose, or passenger car.

§ 174.92 Separating loaded placarded tank cars other than cars placarded "COMBUSTIBLE" from other cars in trains. (a) In a moving or standing train a loaded placarded tank car, other than one placarded "COMBUSTIBLE", may not be placed next to:

(1) A passenger car or combination car, other than a car occupied by technical escorts and authorized personnel accompanying shipments;

(2) Any car placarded "EXPLOSIVES A", "RADIOACTIVE", or "POISON GAS";

(3) An engine or occupied caboose;

(4) A wooden underframe car (except on narrow gauge railroads);

(5) A loaded flatcar, other than a specially equipped car in trailer-on-flatcar or container-on-flatcar service or a flatcar loaded with vehicles secured by means of a device designed for that purpose and permanently installed on the flatcar, and of a type generally accepted for handling in interchange between railroads subject to the following:

(i) A flatcar equipped with permanently attached ends of rigid construction is considered to be an open-top car (see paragraph (a)(6) of this section); and

(ii) This exception for cars in trailer-on-flatcar service does not apply to loaded flatbed trucks, loaded flatbed trailers, loaded open-top trailers, or loaded trucks or trailers without securely closed doors.

(6) An open-top car when any of the lading protrudes beyond the car ends or when any of the lading extending above the car ends is liable to shift so as to protrude beyond the car ends;

(7) A car with automatic refrigeration or heating apparatus in operation or a car with open-flame apparatus in service or with an internal combustion engine in operation;

(8) A car occupied by any person, including any attendant for the cargo contained therein.

§ 174.93 Position in train of a tank car displaying RESIDUE placards. Except for a tank car placarded COMBUSTIBLE—RESIDUE, a tank car displaying RESIDUE placards in a moving or standing train may not be placed nearer than the second car from an engine or occupied caboose.

SUBPART E

DETAILED REQUIREMENTS FOR EXPLOSIVES

§ 174.100 Forbidden explosives. (a) Explosives described in §173.51 of this subchapter and initiating explosives, dry, may not be accepted for transportation by rail.

(b) Leaking or damaged packages of explosives may not be accepted for transportation by rail. Unless the carrier has knowledge or the shipper has substantiated to the carrier that a stain is due to contact with material other than a liquid explosive ingredient, the carrier shall refuse any package that shows excessive dampness, mold, or other outward sign of any oily stain, or other indication that absorption of the explosive is not perfect, or that the amount of the liquid part is greater than the absorbent can carry.

§ 174.101 Loading explosives. (a) Boxes containing Class A explosives must be loaded so that the ends of wooden boxes will not bear against sides of any fiberboard boxes and so that the ends of any box will not cause a pressure point on a small area of another box.

(b) Explosive bombs, unfuzed projectiles, rocket ammunition and rocket motors, Class A or Class B explosives, which are not packed in wooden boxes, or large metal packages of incendiary bombs, each weighing 500 pounds or more, may be loaded in stock cars or in flat bottom gondola cars only if they are adequately braced. Boxed bombs, rocket ammunition and rocket motors, Class A or Class B explosives, which due to their size cannot be loaded in closed cars, may be loaded in open-top cars or on flatcars, provided they are protected from the weather and accidental ignition.

(c) Boxes of high explosives, low explosives or black powder packed in long cartridges, bags, or sift-proof liners, and containing no liquid explosive ingredient, may be loaded on their sides or ends.

(d) Class A explosives may not be loaded higher than any permanent car lining unless additional lining is provided as high as the lading.

(e) When the lading of a car includes any explosives, the weight of the lading must be distributed insofar as possible to equalize the weight on each side of the car and over the trucks.

(f) Except when boxed, metal kegs containing explosives must be loaded on their sides with their ends toward the ends of the car. Packages of explosives may not be placed in the space opposite the doors unless the doorways are boarded on the inside as high as the lading. This paragraph does not apply to palletized packages if they are braced so they cannot fall or slide into the doorways during transportation.

(g) Wooden kegs, fiber kegs, barrels, and drums must be loaded on their sides or ends, to best suit the conditions.

(h) Package containing any Class A explosives (see § 174.104), detonators or detonating primers must be securely blocked and braced to prevent the packages from changing position, falling to the floor, or sliding into each other, under conditions normally incident to transportation. Explosives must be loaded so as to avoid transfer at stations. For recommended methods of blocking and bracing, see Bureau of Explosives Pamphlets No. 6 and 6A. Heavy packages or containers must be trucked, rolled, or moved by skids, fork trucks, or other handling devices and may not be dropped from trucks, platforms, or cars. Planks or rolling trucks from platforms to cars must have beveled ends. Loading platforms and the shoes of each workman must be free from grit. All possible precautions must be taken against fire. Explosives must be kept in a safe place and inaccessible to unauthorized persons while being held by a carrier for loading or delivery.

(i) To prevent delays of local freight trains, when there are shipments of explosives for different destinations loaded in a "peddler car" or "way car" the shipment for each destination must be stayed separately.

(j) Forwarding and transfer stations for explosives must be provided with the necessary materials for staying.

(k) Shippers must furnish the material for staying packages of explosives loaded by them.

(l) Class A explosives may not be loaded, transported, or stored in a rail car equipped with any type of lighted heater or open-flame device, or electric devices having exposed heating coils, or in a rail car equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(m) [Reserved]

(n) A container car or freight container on a flatcar or a gondola car other than a drop-bottom car, when properly loaded, blocked, and braced to prevent change of position under conditions normally incident to transportation, may be used to transport any Class A explosive except black powder packed in metal containers. A freight container must be designed, constructed, and maintained so as to be weather tight and capable of preventing the entrance of sparks. In addition:

(1) A freight container must be of such design and so braced as to show no evidence of failure of the container or the bracing when subjected to impact from each end of at least 8 miles per hour. Its efficiency shall be determined by actual test, using dummy loads equal in weight and general character to material to be shipped.

(2) A container car or car which is loaded with freight containers must be placarded with the explosives placards as required by Subpart F of Part 172 of this subchapter and with properly executed car certificates as required by § 174.104.

(3) Lading must be so loaded, blocked, and braced within the freight container that it will not change position under impact from each end of at least 8 miles per hour.

(o) Class A or Class B explosives may be loaded and transported in a tight closed truck body or trailer on a flatcar car. Wooden boxed bombs, rocket ammunition, and rocket motors, Class A or Class B explosives, which due to their size cannot be loaded in tight, closed truck bodies or trailers, may be loaded in or on open-top truck bodies or trailers. However, they must be protected against accidental ignition. In addition:

(1) Each truck body or trailer must meet the requirements of Part 177 of this subchapter, applicable to shipments of explosives by motor vehicle.

(2) Each truck body or trailer must be so secured on the rail car so that it will not permanently change position or show evidence of failure or impending failure of the method of securing the truck body or trailer under impact from each end of at least 8 miles per hour. Its efficiency shall be determined by actual test, using dummy loads equal in weight and general character to the material to be shipped. For recommended methods of blocking and bracing, see Bureau of Explosives Pamphlet 6C.

(3) Lading must be so loaded, blocked, and braced within or on the truck body or trailer that it will not change position under impact from each end of at least 8 miles per hour. For recommended methods of blocking and bracing see Bureau of Explosives Pamphlet 6C.

(4) Each rail car containing explosives and each rail car loaded with truck bodies, trailers or containers containing explosives must be placarded with explosives placards as required by Subpart F of Part 172 of this subchapter and with properly executed car certificates as required by § 174.104.

(5) Each fuel tank of a heater or refrigerating machinery on the truck bodies or trailers must be drained and all automatic heating or refrigerating machinery must be made inoperative by disconnection of the automatic controls or the source of power for their operations.

§ 174.102 Forbidden mixed loading and storage. (a) Class A explosives and initiating or priming explosives may not be transported together in the same rail car. Additionally, they may not be transported or loaded in the same rail car or stored on carrier property with charged electric storage batteries or with any hazardous material for which a **NONFLAMMABLE GAS, FLAMMABLE GAS, FLAMMABLE LIQUID, FLAMMABLE SOLID, OXIDIZER, ORGANIC PEROXIDE, RADIOACTIVE** or **CORROSIVE** label is required.

(b) Explosives may not be loaded together or with other hazardous materials, except as provided in § 174.81. See § 174.104 for loading shipments of explosives or any other material in a placarded and certified car containing a shipment of Class A explosives.

§ 174.103 Disposition of damaged or astray shipments. (a) Packages of explosives found damaged or broken in transit may be repaired when practicable and not dangerous. A broken box of high explosives that cannot be repaired must be reinforced by stout wrapping paper and twine, placed in another strong box and surrounded by dry, fine sawdust or dry and clean cotton waste or elastic wads made from dry newspapers. A ruptured can or keg must be sealed and enclosed in a strong cloth bag of good quality and boxed. Damaged packages thus protected and properly marked may be forwarded. The box and waybill must be marked to indicate that it has been repacked.

(b) Care must be exercised in repacking damaged containers so that no spark is produced by contact of metal or other hard surfaces which could ignite loose particles of explosive compositions that may be strewn on car floors or freight. In addition, the car floors must be thoroughly swept, and washed with a plentiful supply of water. Iron-wheel trucks, metal hammers, or other metal tools that may produce sparks may not be used. Metal tools must be limited to those made of brass, bronze, or copper.

(c) Each package of explosives showing evidence of leakage of liquid ingredients must:

(1) Be refused if leakage is discovered before acceptance;

(2) Be disposed of to a person who is competent and willing to remove them from the carrier's property, if the leakage is discovered while the shipment is in transit; or

(3) Be removed immediately by consignee, if the leakage is discovered at the shipment's destination.

(d) When the disposition required by paragraph (c) of this section cannot be made, the leaking package must be packed in other boxes large enough to permit enclosure and the leaking boxes must be surrounded by at least 2 inches of dry, fine sawdust or dry and clean cotton

waste, and be stored in a station magazine or other safe place until the arrival of an inspector of the Bureau of Explosives, or other authorized person, to superintend the destruction or disposition of the condemned material.

(e) If careful inspection shows that an astray shipment of explosives is in proper condition for safe transportation, it must be forwarded immediately to its destination if known, or returned to the shipper by the most practicable route.

(f) When a package in an astray shipment is not in proper condition for safe transportation (see paragraphs (a), (c), and (d) of this section), or when the name and address of the consignee and the shipper are unknown, disposition must be made as prescribed by paragraphs (c) and (d) of this section.

§ 174.104 Class A explosives; car selection, preparation, inspection, and certification. (a) Except as provided in § 174.101(b), (n), and (o), Class A explosives being transported by rail may be transported only in a certified and properly placarded closed car of not less than 80,000 pounds capacity, with steel underframes and friction draft gear or cushioned underframe, except that on a narrow-gauge railroad they may be transported in a car of less capacity as long as the car of greatest capacity and strength available is used.

(b) Each rail car used for transporting Class A explosives must meet the following requirements as applicable:

(1) The car must be equipped with air brakes, hand brakes, and roller bearings which are in condition for service.

(2) The car may not have any holes or cracks in the roof, sides, ends, or doors through which sparks may enter, or unprotected decayed spots which may hold sparks and start a fire.

(3) The roof of the car must be carefully inspected from the outside for decayed spots, especially under or near the running board, and such spots must be covered or repaired to prevent their holding fire from sparks. A car with a roof generally decayed, even if tight, may not be used.

(4) The doors must close tightly so that sparks cannot get in at the joints, and, if necessary to achieve this degree of tightness, the doors must be stripped. The stripping should be placed on the inside and fastened to the door frames where it will form a shoulder against which the closed doors are pressed by means of wedges or cleats in door shoes or keepers. The openings under the doors should be similarly closed. The hasp fastenings must be examined with the doors closed and fastened, and the doors must be cleated when necessary to prevent them from shifting. When the car is opened for any reason, the wedges or cleats must be replaced before car containing explosives is permitted to proceed.

(5) The roller bearings and the trucks must be carefully examined and put in such condition as to reduce to a minimum the danger of hotboxes or other failure necessitating the setting out of the car before reaching its destination.

(6) The car must be carefully swept out before it is loaded. For less-than-carload shipments the space in which the packages are to be loaded must be carefully swept. If evidence of a potential hazardous residue is apparent after the floor has been swept, the carrier must either decontaminate the car or provide a suitable substitute car.

(7) Any holes in the floor or lining must be repaired and special care taken that there are no projecting nails or bolts or exposed pieces of metal which may work loose or produce holes in packages of explosives during transit. Protruding nails in the floor or lining which have worked loose must be drawn, and if necessary for the purpose of fastening the floor or lining, new nails must be driven through other parts thereof.

(8) Metal floor plates must be completely covered with wood, plywood, or fiber or composition sheets of adequate thickness and strength to prevent contact of the floor plates with the packages of explosives under conditions incident to transportation, except that the covering of metal floor plates is not necessary for carload shipments loaded by the Department of Defense provided the explosives are of such nature that they are not liable to leakage of dust, powder, or vapor which might become the cause of an explosion.

(9) If the car is equipped with automobile loading devices, it may not be used unless the loading device is securely attached to the roof of the car with fastenings supplementing those already provided and so fixed that it cannot fall.

(10) The car must be equipped with high-friction composition brake shoes (except metal deck flat cars used for COFC/TOFC service may be equipped with high phosphorus cast iron brakeshoes) and brake rigging designed for this type of brake shoe. Each brake shoe on the car must be at least three-eighths inch thick, and in safe and suitable condition for service.

(11) The car must have either a metal subfloor with no combustible material exposed beneath the car, or metal spark shields extending from center sill to side sills and from end sills to at least 12 inches beyond the extreme treads of the inside wheels of each truck, which are tightly fitted against the subfloor so that there is no vacant space or combustible material exposed. The metal subfloor or spark shields may not have an accumulation of oil, grease, or other debris which could support combustion.

(c) Before Class A explosives may be loaded into a rail car, the car must have been inspected and certified to be in compliance with the requirements of paragraph (b) of this section by a qualified person designated under § 215.15 of this title. The certification shall be made in Car Certificate No. 1 on the form prescribed in paragraph (f) of this section.

(d) If the carrier furnishes the car to a shipper for loading Class A explosives, the shipper or his authorized employee shall, before commencing the loading of the car, inspect the interior thereof, and after loading certify to the proper condition of the car and the loading. This certification shall be made on the first signature line in Car Certificate No. 2 on the form prescribed in paragraph (f) of this section. In addition, the finished load must be inspected and certified to be in compliance with the requirements of this part by a qualified person designated under § 215.15 of this title before the car goes forward. This certification shall be made on the second signature line in Car Certificate No. 2 on the form prescribed in paragraph (f) of this section. If the loading is performed by the carrier, Car Certificate No. 2 may only be signed by a qualified person designated under § 215.15 of this title.

(e) If a trailer or container containing Class A explosives is loaded on a flatcar, the loading and securing of the load on the car must be supervised by a representative of the shipper or carrier. The certification shall be made in Car Certificate No. 3 on the form prescribed in paragraph (f) of this section.

(f) Each car certificate for use in connection with the inspection of rail cars for the carriage of Class A explosives shall be printed on strong tag board measuring 7 by 7 inches, or 6 by 8 inches. It must be duly executed in triplicate by the carrier, and by the shipper if he loads the shipments. The original must be filed by the carrier at the forwarding station in a separate file and the other two must be attached to the car, one to each outer side on a fixed placard board or as otherwise provided.

.....RAILROAD

CAR CERTIFICATE

No. 1 .....Station .....
19....

I hereby certify that I have this day personally examined Car Number..... and that the car is in condition for service and complies with the FRA Freight Car Safety Standards [49 CFR Part 215] and with the requirements for freight cars used to transport explosives prescribed by the DOT Hazardous Materials Regulations (49 CFR Part 174).

.....
Qualified Person Designated Under 49 CFR 215.15

No. 2 .....Station .....
19....

I have this day personally examined the above car and hereby certify that the explosives in p on this car, or in or on vehicles or in containers have been loaded and braced, that placards have been applied, according to the regulations prescribed by the Department of Transportation, and that the doors of cars so equipped fit or have been shipped so that sparks cannot enter.

.....
Shipper or his authorized agent

Qualified Person Designated Under 49 CFR 215.15

No. 3 .....Station .....
19....

I hereby certify that I have this day personally supervised the loading of the vehicles o containers on and their securement to the above car.

.....
Shipper or railway employee inspecting loading and securement

Note 1: A shipper must decline to use a car not in proper condition.
Note 2: All certificates, where applicable, must be signed.
Note 3: Car certificates remaining on hand as of the effective date of these regulations may be used until stocks are exhausted but not after July 1, 1977.

§ 174.105 Routing shipments, Class A explosives. Before a shipment of Class A explosives destined to a point beyond the lines o the initial carrier is accepted from the shipper, the initial carrier sha ascertain that the shipment can go forward by the route designated. T avoid delays en route, the initial carrier must be in possession of full rate information before forwarding the shipment.

§ 174.106 "Order-Notify" or "C.O.D." shipments, Class A explosives. (a) A carrier may not accept for transportation Class A explosives, detonators, or detonating primers in any quantity when consigned to "order-notify" or "C.O.D.", except on a through bill of lading to a place outside the United States.

(b) A carrier may not accept for transportation Class A explosives detonators, or detonating primers which the shipper consigns to himself unless the shipper has a resident representative to receive them at the delivery point.

(c) A carrier may not accept Class A explosives for transportation subject to "stop-off privileges en route for partial loading or unloading.

§ 174.107 Shipping days for Class A explosives. (a) Where practicable, each carrier should designate regular days for receiving from shippers less-than-carload lots of Class A explosives for each station where the carrier accepts such shipments.

(b) To enable the carrier to provide proper cars at stations where less-than-carload shipments of Class A explosives are accepted for loading by the carrier, the shipper shall give to the carrier not less than 24-hours notice of his intention to offer such shipments, and state their destinations. When a regular day to receive all explosives shipments offered at such a station has been designated, this notice may be waived by the

carrier, but the explosives shipments must be delivered on such days in time to permit proper inspection, billing, and loading on that day.

§ 174.109 Non-agency shipments. If a shipment of explosives is accepted by a carrier at a non-agency station, the shipper shall make provision for proper certification and placarding of cars, examination of shipments, and the loading and staying of packages in cars. Waybills, switching orders, switching tickets, or other shipping papers must be prepared as prescribed in Part 172 of this subchapter.

§ 174.110 Car magazine. When specially authorized by the carrier, Class A explosives in quantity not exceeding 150 pounds may be carried in construction or repair cars if the packages of explosives are placed in a "magazine" box made of sound lumber not less than 1 inch thick, covered on the exterior with metal, and provided with strong handles. The box must be plainly stenciled on the top, sides, and ends, in letters not less than 2 inches high, "EXPLOSIVES—DANGEROUS—HANDLE CAREFULLY". The box must be provided with strong hinges and with a lock for keeping it securely closed. Vacant space in the box must be filled with a cushioning material such as sawdust or excelsior, and the box must be properly stayed to prevent movement within the car. The car must be placarded with EXPLOSIVES A placards when the magazine contains Explosives A.

§ 174.112 Loading Class B explosives (Also see §174.101). (a) Class B explosives may not be loaded, transported or stored in a rail car equipped with any type of lighted heater or open-flame device, or in a rail car equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(b) Except as provided in §174.101(b), (n) or (o), Class B explosives must be transported in a closed car or container car which is in good condition, and into which sparks cannot enter. The car does not require the car certificates prescribed in §174.104(c)–(f). If the doors are not tight, they must be stripped to prevent the entrance of sparks. Wood floored cars must be equipped with spark shields (see §174.104). Packages of Class B explosives must be blocked and braced to prevent their movement and possible damage due to movement of other freight during transportation. For recommended methods of blocking and bracing see Bureau of Explosives Pamphlet No. 6.

(c) Class B explosives may not be transported in a truck body, trailer, or container on a flatcar unless:

(1) The truck body, trailer, or container is closed and tight;

(2) All automatic heating or refrigerating machinery with which the truck body, trailer, or container is equipped is inoperative; and

(3) Packages of Class B explosives are blocked and braced within the truck body, trailer, or container to prevent their movement and possible damage due to movement of other freight during transportation (ends, sidewalls, or doors of the truck body, trailer, or container may not be relied on to prevent the shifting of heavy loads). For recommended methods of blocking and bracing see Bureau of Explosives Pamphlet No. 6C. See §174.101(o).

§ 174.114 Record to be made of change of seals on "EXPLOSIVES A" laden cars. (a) When a car seal is changed on a car requiring "EXPLOSIVES A" placards while en route or before delivery to a consignee, a record of the change showing the following information must be made on or attached to the waybill or other form of memorandum which must accompany the car to its destination:

Railroad ..... Place ..... Date .....

Car Initials ..... Car Number .....

Number or description of seal broken .....

Number or description of seal used to reseal car .....

Reasons for opening car .....

Condition of load .....

Name and occupation of person opening car .....

§ 174.115 Loading Class C explosives. (a) Class C explosives may be loaded into any closed car in good condition, or into any container car in good condition. Car certificates are not required. Packages of Class C explosives must be blocked and braced to prevent their movement and possible damage due to movement of other freight during transportation. For methods of recommended loading and bracing see Bureau of Explosives Pamphlet No. 6.

(b) Class C explosives may not be transported in a truck body, trailer, or container on a flatcar unless:

(1) The truck body, trailer, or container is closed and tight;

(2) All automatic heating or refrigerating machinery with which the truck body, trailer, or container is equipped is inoperative; and

(3) Packages of Class C explosives are blocked and braced within the truck body, trailer, or container to prevent their movement and possible damage due to movement of other freight during transportation. Ends, sidewalls, or doors of the truck body, trailer, or container may not be relied on to prevent shifting of heavy loads. For recommended methods of blocking and bracing see Bureau of Explosives Pamphlet No. 6C.

SUBPART F

DETAILED REQUIREMENTS FOR GASES

§ 174.200 Special handling requirements. (a) Flammable gases may not be loaded, transported, or stored in a rail car equipped with any type of lighted heater or open-flame device, or in a rail car equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(b) Flammable gases may not be loaded in a truck body or trailer equipped with any type of lighted heater or any automatic heating or refrigerating apparatus when such truck bodies or trailers are loaded on flatcars except as provided in paragraph (c) of this section.

(c) Heating or refrigeration apparatus may be operated on a motor vehicle loaded on a flatcar when the motor vehicle is loaded with flammable gases only if:

(1) The lading space is not equipped with any electrical apparatus that is not non-sparking or explosion-proof;

(2) There is no combustion apparatus in the lading space;

(3) There is no connection for the return of air from the lading space to any combustion apparatus; and

(4) The heating system conforms to §393.77 of this title and does not heat any part of the lading over 130 degrees F.

§ 174.201 Compressed gas cylinders. (a) Except as provided in paragraphs (b) and (c) of this section, cylinders containing compressed gases being transported in a rail car must be:

(1) Securely lashed in an upright position so as to prevent their overturning;

(2) Loaded into racks securely attached to the car;

(3) Packed in boxes or crates of such dimensions as to prevent their overturning; or

(4) Loaded in a horizontal position.

(b) Specification DOT–4L (§178.57 of this subchapter) cylinders being transported in a rail car must be loaded in an upright position and be securely braced.

(c) Cylinders containing compressed gases may be transported in stock cars, gondola cars and flatcars. However, they may not be transported in hopper bottom cars.

§ 174.204 Tank car delivery of gases, including cryogenic liquids. (a) A tank car containing compressed gas may not be unloaded unless it is consigned for delivery and unloaded on a private track (see §171.8 of this subchapter). However, if a private track is not available, it may be delivered and unloaded on carrier tracks subject to the following conditions:

(1) A tank car of DOT–106A or 110A type (§179.300 or §179.301 of this subchapter) may not be delivered and the loaded unit tanks may not be removed from the car frame on carrier tracks. However, a carrier may give permission for the unloading of these containers on carrier tracks only if a private siding is not available within a reasonable trucking distance of the final destination. In addition, before the car is accepted for transportation, the shipper must obtain from the delivering carrier and file with the originating carrier, written permission for the removal and the consignee must furnish an adequately strong mechanical hoist by which the tanks can be lifted from the car and deposited directly upon vehicles furnished by the consignee for immediate removal from carrier property.

(2) The following tank cars may not be delivered and unloaded on carrier tracks unless the lading is piped directly from the car to permanent storage tanks of sufficient capacity to receive the entire contents of the car; however, such cars may be stored on a private track (see §171.8

of this subchapter) or on carrier tracks designated by the carrier for such storage:

(i) A tank car containing flammable cryogenic liquid; or

(ii) A tank car, except for a DOT–106A or 110A multi-unit tank car tank (§ 179.300 or § 179.301 of this subchapter), containing anhydrous ammonia; hydrogen chloride, refrigerated liquid; hydrocarbon gas, liquefied; or liquefied petroleum gas; and having interior pipes for liquid and gas discharge valves equipped with check valves.

§ 174.208 Rail cars, truck bodies, or trailers with fumigated or treated lading. (a) A carrier may not accept or transport a rail car or a rail car loaded with a truck body or trailer, containing lading which has been fumigated or treated with a flammable liquid or gas within the preceding 48 hours, unless the truck body or trailer and the car, in the case of a closed car, has been ventilated to remove any danger of fire or explosion due to the presence of flammable vapor.

(b) A rail car or a rail car loaded with a truck body or trailer containing lading which has been fumigated or treated with a poisonous liquid, gas, or solid, must be placarded on each door (or as close as possible to the door if it is not possible to placard the door) with the placard described in § 173.9 of this subchapter.

§ 174.280 Poison gases with foodstuffs. A carrier may not transport any package of gaseous material bearing a poison label in the same car with material which is marked as or known to be foodstuff, feed, or any other edible material intended for consumption by humans or animals.

§ 174.290 Poison A shipped by, for, or to the Department of Defense. (a) Poison A shipped by, for, or to the Department of Defense may be transported by rail only if it is loaded and handled in accordance with the requirements of this section.

(b) Poison A may be transported in:

(1) DOT–5A or WD–5A[1] metal drums, by boxcar, gondola car (flat bottom), or stock car in carload lots. See § 174.55(a)(1) through (4) and § 174.600 for blocking, bracing, and stowage requirements;

(2) Tanks which are authorized under this subchapter for Poison A, Specification DOT 106A (§§ 179.300 and 179.301 of this subchapter), mounted on or secured to a multi-unit car or gondola car (flat bottom) in carload lots only;

(3) Bombs, by boxcar, or gondola car (flat bottom) in carload lots only; or

(4) Projectiles or ammunition for cannon with gas filled projectiles, by boxcar in carload or less-than-carload lots.

(c) Each shipment of one or more carloads of Poison A, as described in paragraph (b) of this section, must be accompanied by a Department of Defense qualified escort supplied with equipment to handle leaks and other packaging failures which could result in escape of the gas. The escort shall remain with the shipment during the entire time that it is in the custody of the carrier and in the event of leakage or escape of gas, shall make repairs and perform decontamination as necessary.

(d) When Poison A is transported in a tank, the tank must be securely mounted on a rail car especially provided for it or on a gondola car prepared with substantial wooden frames and blocks.

(e) Bombs, projectiles, and cannon ammunition being transported by rail must be loaded, blocked and braced as shown in Bureau of Explosives Pamphlet No. 6A, or Department of Defense specifications. When a shipment is loaded in a gondola car it must be securely blocked and braced and not loaded higher than the sides of the car.

(f) When Poison A is transported in drums with filling holes in the heads, they must be loaded on their bottoms. They may be loaded in rows, lengthwise of the car and any space between the sides of the car and the nearest row of drums must be "filled in" with wooden boards or lumber nailed to sides of the car sufficient in length and width to contact both hoops of drums, or they may be loaded across the car in staggered stacks of which the number of drums in alternate stacks is reduced by one drum. All drums in stacks following the first stack loaded in the end of the car must be placed tightly into the angle of the space formed by the sidewalls of the drum in the preceding stack. Any space between the sides of the car and the drums in stacks having the greater number of drums must be filled in with wooden boards or lumber nailed to sides of the car sufficient in length and width to contact both hoops of the drums.

(g) When Poison A is transported in drums with filling holes in the sides, they must be loaded on their sides with the filling holes up. They must be loaded lengthwise of the car in rows and any space between the sides of the car and the nearest row of drums must be filled in with wooden boards or lumber nailed to sides of the car sufficient in length and width to contact both hoops of the drums.

(h) When Poison A is transported in drums in a boxcar, they must be loaded from ends of the car toward the space between the car doors, and there braced by center gates and wedges. See Sketch 1, Bureau of Explosives Pamphlet No. 6.

(i) The doorways of a boxcar in which Poison A is being transported must be protected by one of the methods prescribed in Sketch 1, Bureau of Explosives Pamphlet No. 6A.

[1] War Department specification container.

SUBPART G

DETAILED REQUIREMENTS FOR FLAMMABLE LIQUIDS

§ 174.300 Special handling requirements. (a) Flammable liquids may not be loaded, transported, or stored in a rail car equipped with any type of lighted heater or open-flame device, or in a rail car equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(b) A truck body or trailer which is loaded with a flammable liquid and equipped with a lighted heater or any automatic heating or refrigerating apparatus may not be loaded on a flatcar except as provided in paragraph (c) of this section.

(c) Heating or refrigeration apparatus on a motor vehicle loaded with flammable liquids may be operated while the motor vehicle is loaded on a flatcar only if:

(1) The lading space is not equipped with any electrical apparatus that is not non-sparking or explosion-proof;

(2) There is no combustion apparatus in the lading space;

(3) There is no connection for the return of air from the lading space to any combustion apparatus; and

(4) The heating system conforms to § 393.77 of this title and does not heat any part of the lading over 130 degrees F.

(d) Cylinders containing pyrophoric liquids, unless packed in a strong box or case and secured therein to protect valves, must be loaded with all valves and safety relief devices in the vapor space. All cylinders must be secured so that no shifting may occur in transit.

(e) Metal barrels or drums containing flammable liquids may be transported in a steel gondola or flatcar or in a stock car. However, they may not be transported in a hopper bottom car.

§ 174.304 Flammable liquids in tank cars. A tank car containing a flammable liquid, other than liquid road asphalt or tar, may not be transported by rail unless it is originally consigned or subsequently reconsigned to a party having a private track on which it is to be delivered and unloaded (see § 171.8 of this subchapter) or to a party using railroad siding facilities which are equipped for piping the liquid from the tank car to permanent storage tanks of sufficient capacity to receive the entire contents of the car.

§ 174.380 Poisonous flammable liquids with foodstuffs. A carrier may not transport any package of flammable liquid bearing a poison label in the same car with material which is marked as or known to be foodstuffs, feed, or any other edible material intended for consumption by humans or animals.

SUBPART H

DETAILED REQUIREMENTS FOR FLAMMABLE SOLIDS

§ 174.410 Special handling requirements for matches. (a) Each carload lot of strike-anywhere (friction) matches must be loaded as compactly as possible to avoid motion within the car, especially lengthwise of the car. Protruding nails, metal band anchors or other projections on sidewalls, ends, door posts, studding, or car floors likely to puncture packages must be removed or adequately covered to prevent damage to the containers of matches. Car doorways must be boarded on the inside to keep the packages from contacting the doors, and the inside lining of the car must be supplemented when necessary by strips nailed to the car and close enough together to keep the boxes from being jammed against the studding and broken by high pressures on small areas. The strongest dimension of the box must be loaded lengthwise of the car. Partial layers of boxes must be interlocked with the lower layers. The cars used must be made secure against the entrance of sparks or rain.

(b) Each carload lot of strike-anywhere matches handled subject to stop-off privileges must be loaded in accordance with paragraph (a) of this section and when necessary the load must be rearranged or blocked and braced by each consignee before forwarding.

(c) Each less-than-carload lot of strike-anywhere matches must be loaded so that it cannot fall and so that other packages of freight cannot fall on or injure it. Whenever practicable the packages of matches must be placed so as to facilitate ready removal in case of fire.

(d) A carload or less-than-carload lot of strike-anywhere matches which has been damaged by fire, or by water in extinguishing a fire, in transit or on a carrier's property must be reloaded in properly prepared cars, and braced or blocked before being forwarded to destination, to a freight claim department or claim adjuster, or to the original shipper or other party for salvage. Care must be taken to examine and repair damaged outside packages before reloading into car. All loose matches must first be destroyed. Individual interior boxes and paper-wrapped cartons or packages, must then be carefully placed in tight outside packages complying, as nearly as practical, with container specifications, but under no condition shall the outside package be of less strength than required by Specification 15A or 12C (§§178.168, 178.206 of this subchapter), nor of greater capacity than authorized. Charred cases may not be used. Boards used in repairing wooden cases must be so nailed that they will not allow any interior boxes, cartons, or packages to fall out. If the individual boxes or paper-wrapped packages do not fit snugly in the outside package, the vacant spaces must be filled tightly with dry and clean cotton waste, or elastic wads of dry newspapers or dry waste paper.

§ 174.450 Fires. (a) **Cotton.** When fire occurs in a rail shipment of cotton in transit at a point where it cannot be reconditioned and where arrangements cannot be made with the originating carrier to sell it, all burnt cotton in the shipment must be stored under observation in as safe a place as practicable where it shall be held for not less than 10 days after all evidence of fire has been extinguished before forwarding. The billing must be changed to read "Burnt Cotton" and the cotton must be forwarded as a hazardous material. (See § 173.159 of this subchapter.)

(b) **Charcoal.** When fire occurs in a rail shipment of charcoal in transit, water should not be used if it is practicable to locate and remove the burning charcoal. Any charcoal which has become wet in extinguishing a fire must be removed from the car and not reshipped and the remainder of the charcoal must be held under observation in a dry place for at least five days before forwarding.

§ 174.480 Poisonous flammable solids with foodstuffs. A carrier may not transport any package of flammable solid material bearing a poison label in the same car with material which is marked as or known to be foodstuffs, feed, or any other edible material intended for consumption by humans or animals.

SUBPART I

DETAILED REQUIREMENTS FOR OXIDIZERS

§ 174.510 Special handling requirements for nitrates. A nitrate listed in § 173.182(b) of this subchapter being transported by rail may only be transported in a clean closed car, which is free of loose boards, cracks, holes, and exposed decayed spots. The interior of the car must be swept clean and be free of any projections capable of damaging bags when the nitrate is so packaged. The doors of the car must have tight closures. Ammonium nitrate (no organic coating), ammonium nitrate fertilizer (materials tested in accordance with and meeting the definition in the Fertilizer Institute's publication "Definition and Test Procedures for Ammonium Nitrate Fertilizer", dated May 7, 1971), ammonium nitrate mixed fertilizer, or ammonium nitrate phosphate may be transported in bulk in a clean covered hopper car having journals and boxes in good condition.

§ 174.515 Cleaning cars; potassium permanganate. After potassium permanganate is unloaded from a rail car, the car must be thoroughly cleaned unless the car is used exclusively in the carriage of potassium permanganate.

§ 174.580 Poisonous oxidizers with foodstuffs. A carrier may not transport any package of oxidizer material bearing a poison label in the same car with material which is marked as or known to be foodstuff, feed, or any other edible material intended for consumption by humans or animals.

SUBPART J

DETAILED REQUIREMENTS FOR POISONOUS MATERIALS

§ 174.600 Special handling requirements for Poison A materials. A tank car containing Poison A may not be transported by rail unless it is originally consigned or subsequently reconsigned to a party having a private track on which it is to be delivered and unloaded (see § 171.8 of this subchapter) or to a party using railroad siding facilities which are equipped for piping the liquid or gas from the tank car to permanent storage tanks or sufficient capacity to receive the entire contents of the car.

§ 174.615 Cleaning cars. (a) A rail car which has contained arsenic, arsenate of lead, sodium arsenate, calcium arsenate, Paris green, calcium cyanide, potassium cyanide, sodium cyanide, or other poisonous materials which show any evidence of leakage from packages, must be thoroughly cleaned after unloading before the car is returned to service.

(b) After poisonous materials are unloaded from a rail car, that car must be thoroughly cleaned unless the car is used exclusively in the carriage of poisonous materials.

§ 174.680 Poisons with foodstuffs. A carrier may not transport any package of material bearing a poison label in the same car with material which is marked as or known to be foodstuffs, feed, or any other edible material intended for consumption by humans or animals.

SUBPART K

DETAILED REQUIREMENTS FOR RADIOACTIVE MATERIALS

§ 174.700 Special handling requirements for radioactive materials. (a) Each rail shipment of low specific activity materials as defined in §173.403 of this subchapter must be loaded so as to avoid spillage and scattering of loose material. Loading restrictions are prescribed in §173.425 of this subchapter.

(b) The number of packages of radioactive materials that may be transported in any rail car or stored at any single location is limited to that number which does not make a total transport index number (as defined in §173.403(bb) of this subchapter, and determined by adding together the transport index numbers on the labels of the individual packages) of more than 50. This provision does not apply to exclusive use shipments as described in §§173.403, 173.425, 173.441, and 173.547.

(c) Each package of radioactive material bearing **RADIOACTIVE YELLOW–II** or **RADIOACTIVE YELLOW–III** labels when being placed in a rail car, depot, or other place may not be placed closer than three feet to an area (or dividing partition between areas) which may be continuously occupied by any passenger, rail employee, or shipment of animals, nor closer than 15 feet to any package containing undeveloped film (if so marked). If more than one package of radioactive materials is present, the distance must be computed from the table below on the basis of the total transport index number (determined by adding together the transport index numbers on the labels of the individual packages) of packages in the car or storeroom:

Total transport index	Minimum separation distance in feet to nearest undeveloped film [1]	Minimum distance in feet to area of persons, or minimum distance in feet from dividing partition of a combination car [2]
None	0	0
0.1 to 10.0	15	3
10.1 to 20.0	22	4
20.1 to 30.0	29	5
30.1 to 40.0	33	6
40.1 to 50.0	36	7

[1] In feet to nearest undeveloped film.

[2] In feet to area of persons, or minimum distance in feet from dividing partition of a combination car.

Note: The distance in the table must be measured from the nearest point on the packages of radioactive materials.

(d) Each fissile Class III radioactive material shipment (as defined in §173.455(a)(3) of this subchapter) must be transported in accordance with one of the methods prescribed in §173.457 of this subchapter. The transport controls must be adequate to assure that no fissile Class III shipment is transported in the same rail car with any other fissile radioactive material shipment. In loading and storage areas each fissile Class III shipment must be segregated by a distance of at least 20 feet from other packages required to bear one of the "radioactive" labels described in Part 172 of this subchapter.

(e) A flatcar may be used to transport radioactive materials in a container weighing 15,000 pounds or more. A gondola car (other than a drop bottom car) may be used to transport any of the following:

(1) Radioactive materials in containers weighing 5,000 pounds or more;

(2) Strong wooden boxes with inside containers of solid radioactive material, securely braced and cushioned; or

(3) Radioactive material in concrete-filled metal drums or in concrete vaults weighing 700 pounds or more.

(f) A person may not remain unnecessarily in a rail car containing radioactive materials.

(g) In the case of packages shipped under the exclusive use provisions of §173.441(b) for packages with external radiation levels in excess of 200 millirem per hour at the package surface:

(1) The rail car shall meet the requirements for a closed transport vehicle (§173.403 of this subchapter);

(2) Provisions shall be made to secure the packages so that their position within the rail car remains fixed under conditions normally incident to transportation; and

(3) The radiation level shall not exceed 2 millirem per hour in any normally occupied position in the transport vehicle or adjacent rail car.

§ 174.715 Cleanliness of cars after use. (a) Each transport vehicle used for transporting radioactive materials as exclusive use, as defined in §173.403 of this subchapter, must be surveyed with appropriate radiation detection instruments after each use. A vehicle may not be returned to service until the radiation dose rate at any accessible surface is 0.5 millirem per hour or less, and there is no significant removable radioactive surface contamination, as defined in §173.443 of this subchapter.

(b) This section does not apply to any rail car used solely for transporting radioactive materials if a survey of the interior surface of the car shows that the radiation dose rate does not exceed 10 millirem per hour at the interior surface or 2 millirem per hour at 3 feet from any interior surface. The car must be stenciled with the words "**FOR RADIOACTIVE MATERIALS USE ONLY**" in lettering at least 3 inches high in a conspicuous place on both sides of the exterior of the car and it must be kept closed at all times other than during loading and unloading.

§ 174.750 Incidents involving leakage. (a) In addition to the incident reporting requirements of §§171.15 and 171.16 of this subchapter, the carrier shall also notify the shipper at the earliest practicable moment following any incident in which there has been breakage, spillage, or suspected radioactive contamination involving radioactive materials shipments. Vehicles, buildings, areas, or equipment in which radioactive materials have been spilled may not be again placed in service or routinely occupied until the radiation dose rate at any accessible surface is less than 0.5 millirem per hour and there is no significant removable radioactive surface contamination (see §173.443 of this subchapter).

(b) The package or materials should be segregated as far as practicable from personnel contact. If radiological advice or assistance is needed, the U.S. Department of Energy (DOE) should also be notified. In case of obvious leakage, or if it appears likely that the inside container may have been damaged, care should be taken to avoid inhalation, ingestion, or contact with the radioactive material. Any loose radioactive materials should be left in a segregated area and held pending disposal instructions, from qualified persons. Information involving the handling of radioactive materials in the event of a wreck may be found in Bureau of Explosives Pamphlet No. 1 and No. 2.

SUBPART L

DETAILED REQUIREMENTS FOR CORROSIVE MATERIALS

§ 174.800 Special handling requirements for corrosive materials. (a) Carboys of corrosive liquids may not be transported by rail in a container car. Packages of corrosive liquids being transported in a rail car must be loaded, blocked, and braced so that they cannot change position during transportation due to shocks normally incident to transportation. Car doors may be sealed in an open position. Carboys of acid may be transported on a flat or stock car.

(b) When a less-than-carload shipment of corrosive liquids is loaded in a rail car with other freight, the carboys must be placed near the doorway of the car and must have wooden strips not less than 3 inches in height nailed to the car floor about 8 inches from the bracing. These strips must be arranged so that the liquid from a broken carboy will drain toward the doorway and outside the car. The space between the strips and the floor braces or blocking used for staying the carboy boxes must be covered with at least 1 inch thickness of clean and dry sand or earth, not sawdust or other combustible material.

(c) A carrier may not accept any carboy previously used for the shipment of corrosive liquids for transportation as an empty carboy unless it has been thoroughly and completely drained. The carrier must handle them with the necks up.

§ 174.810 Special handling requirements for wet electric storage batteries. (a) Electric storage batteries (wet) for shipment by rail must be completely protected so that short circuits will be prevented and may not be loaded or stored with explosives.

(b) Wet electric storage batteries, and electrolyte must be packed as required by §173.258 of this subchapter for transportation by rail and must be blocked and braced in the rail car so they cannot change

position during transportation due to shocks normally incident to transportation. They must be loaded so that other freight cannot fall onto or slide against them. They may be transported in a gondola car or on a flatcar. However, they may not be transported in a hopper bottom car.

(c) Wet electric storage batteries are not authorized in refrigerator or "plug-door" type cars unless cars are provided with vents which will prevent an accumulation of gas within the car.

§ 174.812 Special handling requirements for nitric acid. (a) Carboys of nitric acid may not be transported in a boxcar or in a truck body or trailer on a flatcar more than two tiers high except that completely boxed carboys, DOT-1D, may be loaded three tiers high.

(b) Nitric acid, being transported by rail, with other corrosive liquids in carboys, must be separated from the other carboys. A 2 x 6 inch plank, set on edge, must be nailed across the car floor at least 12 inches from the nitric acid carboys and the space between the plank and the carboys of nitric acid must be filled with sand, sifted ashes, or other noncombustible absorbent material.

SUBPART M

DETAILED REQUIREMENTS FOR OTHER REGULATED MATERIALS

§ 174.840 Special loading and handling requirements for asbestos. Asbestos must be loaded, handled, and unloaded, and any asbestos contamination of rail cars removed, in a manner that will minimize occupational exposure to airborne asbestos particles released incident to transportation. (See § 173.1090 of this subchapter.)

PART 175—CARRIAGE BY AIRCRAFT

SUBPART A

GENERAL INFORMATION AND REGULATIONS

§ 175.1 Purpose and scope. This part prescribes requirements, in addition to those contained in Parts 171, 172 and 173 of this subchapter, applicable to aircraft operators transporting hazardous materials aboard (including attached to or suspended from) aircraft.

§ 175.3 Unacceptable hazardous materials shipments. Hazardous materials that are not prepared for shipment in accordance with this subchapter may not be accepted for transportation or transported aboard an aircraft.

§ 175.5 Applicability. (a) This part applies to the acceptance for transportation, loading and transportation of hazardous materials in any aircraft in the United States and in aircraft of United States registry anywhere in air commerce. This part does not apply to:

(1) Aircraft owned and operated by a government when not engaged in carrying persons or property for commercial purposes;

(2) Aircraft which are not owned by a government nor engaged in carrying persons or property for commercial purposes but which are under the exclusive direction and control of a government for a period of not less than 90 days as specified in a written contract or lease. An aircraft is under the exclusive direction and control of a government when the government exercises responsibility for:

(i) Approving crew members and determining that they are qualified to operate the aircraft;

(ii) Determining the airworthiness and directing maintenance of the aircraft; and

(iii) Dispatching the aircraft, including the times of departure, airports to be used, and type and amount of cargo to be carried;

(3) Aircraft of United States registry under lease to and operated by foreign nationals outside the United States if:

(i) Hazardous materials forbidden aboard aircraft by §172.101 of this subchapter are not carried on the aircraft; and

(ii) Other hazardous materials are carried in accordance with the regulations of the State (nation) of the aircraft operator.

§ 175.10 Exceptions. (a) This subchapter does not apply to:

(1) Aviation fuel and oil in tanks that are in compliance with the installation provisions of 14 CFR, Chapter 1.

(2) Hazardous materials required aboard an aircraft in accordance with the applicable airworthiness requirements and operating regulations. Unless otherwise approved by the Director, Office of Hazardous Materials Transportation, items of replacement for such hazardous materials must be transported in accordance with this subchapter except that—

(i) In place of the required packagings, packagings specially designed for the transport of aircraft spares and supplies may be used, provided such packagings provide at least an equivalent level of protection to those that would be required by this subchapter.

(ii) Aircraft batteries are not subject to quantity limitations such as those provided in §172.101 or §175.75(a) of this subchapter; and

(iii) A tire assembly with a serviceable tire is not subject to the provisions of this subchapter provided the tire is not inflated to a guage pressure exceeding the maximum rated pressure for that tire.

(3) Hazardous materials loaded and carried in hoppers or tanks of aircraft certificated for use in aerial seeding, dusting, spraying, fertilizing, crop improvement, or pest control, to be dispensed during such an operation.

(4) Non-radioactive medicinal and toilet articles carried by a crewmember or passenger in checked or carry-on baggage, and aerosols, with no subsidiary risk, for sporting or home use, when carried in checked baggage only, when:

(i) The total capacity of all the containers used by a crew member or passenger does not exceed 75 ounces (net weight ounces and fluid ounces);

(ii) The capacity of each container other than an aerosol container does not exceed 16 fluid ounces or 1 pound of material.

(5) Small-arms ammunition for personal use carried by a crewmember or passenger in his baggage (excluding carry-on baggage) if securely packed in fiber, wood, or metal boxes.

(6) [Reserved]

(7) Oxygen, or any hazardous material used for the generation of oxygen, carried for medical use by a passenger in accordance with 14 CFR §121.574 or §135.114.

(8) Human beings and animals with an implanted medical device, such as a heart pacemaker, that contains radioactive material or with radiopharmaceuticals that have been injected or ingested.

(9) Smoke grenades, flares, or similar devices carried only for use during a sport parachute jumping activity.

(10) Personal smoking materials intended for use by any individual when carried on his person except lighters with flammable liquid reservoirs and containers containing lighter fluid for use in refilling lighters.

(11) Smoke grenades, flares, and pyrotechnic devices affixed to aircraft carrying no person other than a required flight crewmember during any flight conducted at and as a part of a scheduled air show or exhibition of aeronautical skill. The affixed installation accommodating the smoke grenades, flares, or pyrotechnic devices on the aircraft must be approved by the FAA for its intended use.

(12) Hazardous materials which are loaded and carried on or in cargo aircraft only and which are to be dispensed or expended during flight for weather control, forest preservation and protection, flood control or avalanche control purposes when the following requirements are met.

(i) Operations may not be conducted over densely populated areas, in a congested airway, or near any airport where air carrier passenger operations are conducted.

(ii) Each operator shall prepare and keep current a manual containing operational guidelines and handling procedures, for the use and guidance of flight, maintenance, and ground personnel concerned in the dispensing or expending of hazardous materials. The manual must be approved by the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the FAA Civil Aviation Security Office in the region where the operator is located. Each operation must be conducted in accordance with the manual.

(iii) No person other than a required flight crewmember, FAA inspector, or person necessary for handling or dispensing the hazardous material may be carried on the aircraft.

(iv) The operator of the aircraft must have advance permission from the owner of any airport to be used for the dispensing or expending operation.

(v) When dynamite and blasting caps are carried for avalanche control flights, the explosives must be handled and, at all times, be under the control of the blaster who is licensed under a state or local authority identified in writing to the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the FAA Civil Aviation Security Office in the region where the operator is located.

(13) Carbon dioxide, solid (dry ice) in quantities not exceeding 5 pounds per package packed as prescribed by §173.615(a) of this subchapter and used as a refrigerant for the contents of the package. The package must be marked with the name of the contents being cooled, the net weight of the dry ice or an indication that the net weight is 5 pounds or less, and also marked "Carbon Dioxide, Solid" or "Dry Ice."

(14) A transport incubator unit necessary to protect life or an organ preservation unit necessary to protect human organs provided:

(i) The compressed gas used to operate the unit is in an authorized DOT specification cylinder and is marked, labeled, filled and maintained as prescribed by this subchapter;

(ii) Each battery used in the operation of the unit is of the nonspillable type;

(iii) The unit is constructed so that valves, fittings, and gauges are protected from damage;

(iv) The pilot in command is advised when the unit is on board, and when it is intended for use;

(v) The unit is accompanied by a person qualified to operate it;

(vi) The unit is secured in the aircraft in a manner so as not to restrict access to or use of any required emergency or regular exit or of the aisle in the passenger compartment; and,

(vii) Smoking within ten feet of the unit is prohibited.

(15) Alcoholic beverages, perfumes, colognes and liquefied gas lighters that have been examined by the Bureau of Explosives (B of E) and approved by the Director, Office of Hazardous Materials Transportation, carried aboard a passenger-carrying aircraft by the operator for use or sale on the aircraft.

(16) Alcoholic beverages, perfumes and colognes purchased through duty free sales, carried by passengers or crew as carry-on baggage.

(17) Carbon dioxide, solid (dry ice) intended for use in food and beverage service aboard aircraft and dry ice in quantities not exceeding 4 pounds per passenger when used to pack perishables in carry-on baggage provided the package permits the release of carbon dioxide gas.

(18) Carbon dioxide gas cylinders worn by passengers for the operation of mechanical limbs and spare cylinders of a similar size for the same purpose in sufficient quantities to ensure an adequate supply for the duration of the journey.

For explanation of abbreviations and reference marks, see last page of this tariff.

(19) Wheel chairs with non-spillable batteries, as defined in § 173.260(d) of this subchapter, as checked baggage, provided that the battery is disconnected, the battery terminals are insulated to prevent accidental short circuits, and the battery is securely attached to the wheel chair.

(20) Wheel chairs with spillable batteries, as checked baggage, provided that the wheel chair can be loaded, stowed, secured, and unloaded always in an upright position. The battery must be disconnected, the terminals insulated to prevent accidental short circuits, and the battery securely attached to the wheel chair. The pilot-in-command must be advised either orally or in writing of the location of the wheel chair aboard the aircraft prior to departure. If the wheel chair cannot be loaded, stowed, secured and unloaded always in an upright position, the battery must be removed and the wheel chair may then be carried as checked baggage without restriction. The removed battery must be carried in strong, rigid, outside packagings as follows:

(i) Outside packagings must be leaktight, impervious to battery fluid, loaded aboard the aircraft in accordance with the required orientation markings and be protected against upset by securing to pallets or by securing them in cargo compartments using appropriate means of securement (other than by bracing with freight or baggage) such as by use of restraining straps, brackets or holders;

(ii) Batteries must be protected against short circuits, secured upright in their outside packagings, and surrounded by compatible absorbent material sufficient to absorb their total liquid contents; and

(iii) Outside packagings must be marked to indicate proper orientation, and with the words "Battery, wet, with wheel chair", and be labeled with a Corrosive label.

(21) Catalytic hair curlers containing hydrocarbon gas, not more than one per passenger or crew member, when carried in checked baggage, provided that the safety cover is securely fitted over the heating element. Gas refills for such curlers are not permitted in checked or carry-on baggage.

(22) A mercurial barometer carried as carry-on-baggage only, by a representative of a government weather bureau or similar official agency, provided that individual advises the operator of the presence of the barometer in his baggage. The barometer must be packaged in a strong outer packaging having sealed inner liner or bag of strong, leak proof and puncture-resistant material impervious to mercury, which will prevent the escape of mercury from the package irrespective of its position. The pilot-in-command must be informed of the presence of any such barometer by the operator of the aircraft.

§ 175.20 Compliance. Unless the regulations in this subchapter specifically provide that another person must perform a duty, each operator shall comply with all the regulations in Parts 106, 171, 172, and 175 of this subchapter and shall thoroughly instruct his employees in relation thereto. (See 14 CFR 121.135, 121.401, 121.433a, 135.232, 135.327 and 135.333.)

§ 175.25 Informing passengers about hazardous materials restrictions. (a) Each aircraft operator who engages in for hire transportation of passengers shall display notices to passengers concerning the requirements and penalties associated with the carriage of hazardous materials aboard aircraft. Such a notice shall be prominently displayed in each location at an airport where the aircraft operator issues tickets, checks baggage, and maintains aircraft boarding areas.

(1) Each notice must contain the following information:

Federal law forbids the carriage of hazardous materials aboard aircraft in your luggage or on your person.

A violation can result in penalties of up to $25,000 and 5 years imprisonment. (49 U.S.C. 1809)

Hazardous materials include explosives, compressed gases, flammable liquids and solids, oxidizers, poisons, corrosives and radioactive materials.

Examples: Paints, lighter fluid, fireworks, tear gases, oxygen bottles, and radio-pharmaceuticals.

There are special exceptions for small quantities (up to 75 ounces total) of medicinal and toilet articles carried in your luggage and certain smoking materials carried on your person.

For further information contact your airline representative.

(2) The information contained in paragraph (a)(1) of this section must be printed:

(i) In legible English;

(ii) In lettering of at least three eighths of an inch in height for the first three paragraphs and one quarter inch in height for the last three paragraphs; and

(iii) On a background of contrasting color.

(3) Size and color of the notice are optional. Additional information, if not inconsistent with required information, may be included.

§ 175.30 Accepting and inspecting shipments. (a) No person may accept a hazardous material for transportation aboard an aircraft unless the hazardous material is:

(1) Authorized, and is within the quantity limitations specified for carriage aboard aircraft according to § 172.101 of this subchapter or as otherwise specifically provided by this subchapter.

(2) Described and certified on a shipping paper prepared in duplicate in accordance with Subpart C of Part 172 or as authorized by § 171.11 of this subchapter. The originating aircraft operator must retain one copy of each shipping paper for 90 days;

(3) Labeled and marked in accordance with Subparts D and E of Part 172 or as authorized in § 171.11 of this subchapter, and placarded (when required) in accordance with Subpart F of Part 172 of this subchapter; and,

(4) Labeled with a "CARGO AIRCRAFT ONLY" label (see § 172.448 of this subchapter) if the material as presented is not permitted aboard passenger-carrying aircraft.

(b) Except as provided in paragraph (d) of this section, no person may carry a hazardous material in a package, outside container or overpack aboard an aircraft unless the package, outside container or overpack is inspected by the operator of the aircraft immediately before placing it:

(1) Aboard the aircraft; or,

(2) In a unit loading device or on a pallet prior to loading aboard the aircraft.

(c) A hazardous material may only be carried aboard an aircraft if, based on the inspection prescribed in paragraph (b) of this section, the operator determines that the package, outside container overpack containing the hazardous material:

(1) Has no holes, leakage or other indication that its integrity has been compromised; and

(2) For radioactive materials, does not have a broken seal except that packages contained in overpacks need not be inspected for seal integrity.

(d) The requirements of paragraphs (b) and (c) of this section do not apply to:

(1) An ORM-D material packed in a freight container and offered for transportation by one consignor;

(2) Dry ice (carbon dioxide, solid); or

(3) [Reserved]

(e) An overpack containing packages of hazardous materials may be accepted only if the operator has taken all reasonable steps to establish that—

(1) The overpack does not contain a package bearing the "CARGO AIRCRAFT ONLY" label unless—

(i) The overpack affords clear visibility of and easy access to the package; or

(ii) The package contains a material which may be carried inaccessibly under the provisions of § 175.85(c)(1); or

(iii) Not more than one package is overpacked.

(2) The proper shipping names, identification numbers, labels and special handling instructions appearing on the inside packages are clearly visible or reproduced on the outside of the overpack, and

(3) Has determined that a statement to the effect that the inside packages comply with the prescribed specifications appears on the outside of the overpack, when specification packagings are prescribed.

§ 175.31 Reports of discrepancies.

(a) Each person who discovers a discrepancy, as defined in paragraph (b) of this section, relative to the shipment of a hazardous material following its acceptance for transportation aboard an aircraft shall, as soon as practicable, notify the nearest FAA Civil Aviation Security Office by telephone and shall provide the following information:

(1) Name and telephone number of the person reporting the discrepancy.

(2) Name of the aircraft operator.

(3) Specific location of the shipment concerned.

(4) Name of the shipper.

(5) Nature of discrepancy.

(b) Discrepancies which must be reported under paragraph (a) of this section are those involving hazardous materials which are improperly described, certified, labeled, marked, or packaged, in a manner not ascertainable when accepted under the provisions of § 175.30(a) of this subchapter, including:

(1) Packages which are found to contain hazardous materials—

(i) Other than as described or certified on shipping papers;

(ii) In quantities exceeding authorized limits;

(iii) In inside containers which are not authorized or have improper closures;

(iv) In inside containers not oriented as shown by package markings;

(v) With insufficient or improper absorption materials, when required; or

(2) Packages or baggage which are found to contain hazardous materials subsequent to their being offered and accepted as other than hazardous materials.

§ 175.33 Notification of pilot-in-command. (a) Except as provided in § 175.10, when a hazardous material subject to the provisions of this subchapter is carried in an aircraft, the operator of the aircraft shall provide the pilot-in-command at least the following information in writing as early as practicable prior to departure:

(1) The proper shipping name, hazard class and identification number of the material as specified in § 172.101 of this subchapter or the ICAO Technical Instructions. If a hazardous material is described by the proper shipping name, hazard class, and identification number appearing in:

(i) Section 172.101 of this subchapter, any additional description requirements provided in §§ 172.202 and 172.203 of this subchapter must also be shown in the notification.

(ii) The ICAO Technical Instructions, any additional information required to be shown on shipping papers by § 171.11 of this subchapter must also be shown in the notification.

(2) The total number of packages;

(3) The net quantity or gross weight, as applicable, for each package except those containing radioactive materials and those for which there is no limit imposed on the maximum net quantity per package;

(4) The location of the packages aboard the aircraft;

(5) Confirmation that no damaged or leaking packages have been loaded on the aircraft;

(6) For radioactive materials, the number of packages, overpacks or freight containers their category, transport index (if applicable), and their location aboard the aircraft; and

(7) Confirmation that the package must be carried on cargo aircraft only if its transportation aboard passenger-carrying aircraft is forbidden.

(8) An indication, when applicable, that a hazardous material is being carried under terms of an exemption.

(b) A copy of the written notification to pilot-in-command shall be readily available to the pilot-in-command during flight.

§ 175.35 Shipping papers aboard aircraft. (a) A copy of the shipping papers required by § 175.30(a)(2) must accompany the shipment it covers during transportation aboard an aircraft.

(b) The documents required by paragraph (a) of this section and § 175.33 may be combined into one document if it is given to the pilot-in-command before departure of the aircraft.

§ 175.40 Keeping and replacement of labels. (a) Aircraft operators who engage in the transportation of hazardous materials must keep an adequate supply of the labels specified in Subpart E of Part 172 of this subchapter, on hand at each location where shipments are loaded aboard aircraft.

(b) Lost or detached labels for packages of hazardous materials must be replaced in accordance with the information provided on the shipping papers.

§ 175.45 Reporting hazardous materials incidents. (a) Each operator who transports hazardous materials shall report to the nearest FAA Civil Aviation Security Office by telephone at the earliest practicable moment after each incident that occurs during the course of transportation (including loading, unloading or temporary storage) in which as a direct result of any hazardous materials:

(1) A person is killed;

(2) A person receives injuries requiring his or her hospitalization;

(3) Estimated carrier or other property damage, or both, exceeds $50,000;

(4) Fire, breakage, or spillage or suspected radioactive contamination occurs involving shipment of radioactive materials (see § 175.700(b));

(5) Fire, breakage, spillage, or suspected contamination occurs involving shipment of etiologic agents. In addition to the report required by paragraph (a) of this section, a report on an incident involving etiologic agents should be telephoned directly to the Director, Center for Disease Control, U.S. Public Health, Atlanta, Georgia, area code 404-633-5313; or

(6) A situation exists of such a nature that, in the judgment of the carrier, it should be reported to the Department even though it does not meet the criteria of paragraph (a) (1), (2), or (3) of this paragraph, e.g., a continuing danger to life exists at the scene of the incident.

(7) If the operator conforms to the provisions of this section, the carrier requirements of § 171.15, except § 171.15(c) of this subchapter shall be deemed to have been satisfied.

(b) The following information shall be furnished in each report:

(1) Name of reporting person;

(2) Name and address of carrier represented by reporter;

(3) Phone number where reporter can be contacted;

(4) Date, time, and location of incident;

(5) The extent of the injuries, if any; and

(6) Classification, name and quantity of hazardous material involvement and whether a continuing danger to life exists at the scene.

(c) Each operator who transports hazardous materials shall report in writing, in duplicate, on DOT Form F 5900.1 within 15 days of the date of discovery, each incident that occurs during the course of transportation (including loading, unloading, or temporary storage) in which, as a direct result of hazardous materials, any of the circumstances set forth in paragraph (a) of this section occurs or there has been an unintentional release of hazardous materials from a package. Each operator making a report under this section shall send that report to the Research and Special Programs Administration, Information Systems Manager, Department of Transportation, Washington, D.C. 20590, with a separate copy to the FAA facility indicated in paragraph (a) of this section.

(d) [Reserved]

SUBPART B

LOADING, UNLOADING AND HANDLING

§ 175.75 Quantity limitations aboard aircraft. (a) Except as provided in § 175.85(c)(3), no person may carry on an aircraft:

(1) A hazardous material except as permitted by this subchapter;

(2) More than 50 pounds net weight of hazardous material (and in addition thereto, 150 pounds net weight of nonflammable compressed gas) permitted to be carried aboard passenger-carrying aircraft:

(i) In an inaccessible cargo compartment,

(ii) In any freight container within an accessible cargo compartment, or

(iii) In any accessible cargo compartment in a cargo aircraft only in a manner that makes it inaccessible unless in a freight container;

(3) Packages containing radioactive materials when their combined transport index number (determined by adding together the transport index numbers shown on the labels of the individual packages and or overpacks):

(i) In passenger-carrying aircraft, exceeds 50.0 or, for any single package, exceeds 3.0, or

(ii) In cargo aircraft only, exceeds 200.00 (for fissile radioactive materials, see § 175.702(b)(2)(iv) or, for any single package, exceeds 10.0.

(b) No limitation applies to the number of packages of ORM material aboard an aircraft.

§ 175.78 Stowage compatibility of cargo. (a) Packages containing hazardous materials which might react dangerously with one another may not be stowed in an aircraft next to each other or in a position that would allow a dangerous interaction in the event of leakage. As a minimum, the segregation prescribed in the following Table must be maintained.

Table 1

	A	B	C	D	E	F	G
A Explosives and Blasting Agents or ICAO Class 1	Note 3	Note 4	Note 4	Note 4	Note 4	Note 4	X
B Compressed gases or ICAO Class 2	Note 4	.....	.....	.....	.....	.....	
C Flammable liquids or ICAO Class 3	Note 4	.....	.....	.....	.....	X	
D Flammable liquids and solids (labeled SPONTANEOUSLY COMBUSTIBLE) or ICAO Division 4.2	Note 4	.....	.....	.....	.....	X	X
E Flammable solids (labeled DANGEROUS WHEN WET) or ICAO Division 4.3	Note 4	.....	.....	.....	.....	X	X
F Oxidizers or ICAO Division 5.1 and Organic peroxides or ICAO Division 5.2	Note 4	.....	X	X	X	.....	X
G Corrosive materials or ICAO Class 8	X	.....	.....	X	X	X	..

Note 1: The letters across the top of the Table have the same meaning as the letters along the left side of the Table.

Note 2: An "X" at the intersection of a row and a column in the Table means that packages containing the indicated classes of hazardous materials may not be stowed next to or in contact with each other, or in a position which would allow interaction in the event of leakage of the contents.

Note 3: For import or export shipment, explosives other than explosives of ICAO Division 1.4, Compatibility Group S, that do not belong to the same compatibility group according to the ICAO Technical Instructions may not be stowed together, except that compatibility groups C, D and E may be stowed together. Explosives of ICAO Division 1.4, Compatibility Group S may be stowed with explosives of all compatibility groups with the exception of A and L.

Note 4: Explosives, other than safety explosives (ICAO Division 1.4, Compatibility Group S) must not be stowed together with this class.

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) No person may stow a package labeled BLASTING AGENTS on an aircraft next to, or in a position that will allow contact with a package of special fireworks or railway torpedoes.

§ 175.79 Orientation of cargo. (a) A package containing hazardous materials marked "THIS SIDE UP" or "THIS END UP", or with arrows to indicate the proper orientation of the package, must be stored and loaded aboard an aircraft in accordance with such markings.

(b) A package containing liquid hazardous materials not marked as indicated in paragraph (a) of this section, must be stored and loaded with closures up (other than side closures in addition to top closures).

§ 175.81 Securing of packages containing hazardous materials. (a) Packages containing hazardous materials must be secured in an aircraft in a manner that will prevent any movement in flight which would result in damage to or change in the orientation of the packages.

(b) Packages containing radioactive materials must be secured in a manner that insures that the separation requirements of §§ 175.701 and 175.702 will be maintained at all times during flight.

§ 175.85 Cargo location. (a) Except as provided in § 175.10, no person may carry a hazardous material subject to the requirements of this subchapter in the cabin of a passenger-carrying aircraft or on the flight deck of any aircraft. Hazardous materials may be carried in a main deck cargo compartment of a passenger-aircraft provided that the compartment is inaccessible to passengers and that it meets all certification requirements for a Class B aircraft cargo compartment as provided in 14 CFR 25.857(b).

(b) Each package containing a hazardous material acceptable only for cargo aircraft must be loaded in such a manner that a crew member or other authorized person can see, handle and when size and weight permit, separate such packages from other cargo during flight.

(c) Notwithstanding the provisions of paragraph (b) of this section:

(1) When packages of the following hazardous materials are carried on cargo aircraft only, they may be carried in a location which is inaccessible to a crewmember during flight and are not subject to the weight limitation specified in paragraph (a)(2) of § 175.75 of this subchapter.

(i) Radioactive (ICAO Class 7) materials,
(ii) Poison B, (ICAO Division 6.1) liquids and solids (except those labeled FLAMMABLE),
(iii) Irritating (ICAO Division 6.1) materials,
(iv) Etiologic (ICAO Division 6.2) agents,
(v) Flammable liquids with a flashpoint above 73°F (23°C.) that do not meet the definition of another hazardous class,
(vi) Materials classified as Class 9 materials according to the ICAO Technical Instructions and that are being transported under that classification as provided in § 171.11 of this subchapter, and,
(vii) ORM-A, C, D or E materials.

(2) When packages of hazardous materials acceptable for cargo-only or passenger-carrying aircraft are carried on cargo aircraft only where other means of transportation are impracticable or not available, packages may be carried in accordance with procedures approved in writing by the FAA Air Transportation Security Field Office responsible for the operator's overall aviation security program or the FAA Air Transportation Security Division in the region where the operator is located.

(3) When packages of hazardous materials acceptable for cargo-only or passenger-carrying aircraft are carried on small, single pilot, cargo aircraft only being used where other means of transportation are impracticable or not available, they may be carried without quantity limitation as specified in § 175.75 in a location that is not accessible to the pilot if:

(i) No person other than the pilot, an FAA inspector, the shipper or consignee of the material or a representative of the shipper or consignee so designated in writing, or a person necessary for handling the material is carried on the aircraft;
(ii) The pilot is provided with written instructions on characteristics and proper handling of the materials; and
(iii) Whenever a change of pilots occurs while the material is on board, the new pilot is briefed under a hand-to-hand signature service provided by the operator of the aircraft.

(d) [Reserved]

(e) No person may carry a material subject to the requirements of this subchapter that is acceptable for carriage in a passenger-carrying aircraft (other than magnetized materials) unless it is located in the aircraft in a place that is inaccessible to persons other than crew-members.

(f) Paragraphs (a) and (e) of this section do not apply to a person operating an aircraft under § 175.310 which, because of its size and configuration, makes it impossible for that person to comply.

(g) No person may load magnetized material (which might cause an erroneous magnetic compass reading) on an aircraft, in the vicinity of a magnetic compass, or compass master unit, that is a part of the instrument equipment of the aircraft, in a manner that affects its operation. If this requirement cannot be met, a special aircraft swing and compass calibration may be made.

§ 175.88 Inspection of unit load devices. A unit load device may not be loaded on an aircraft unless the device has been inspected and found to be free from any evidence of leakage from, or damage to, any package containing hazardous materials.

§ 175.90 Damaged shipments. (a) Packages or overpacks containing hazardous materials must be inspected for damage or leakage after being unloaded from an aircraft. When packages or overpacks containing hazardous materials are carried in a unit load device, the area where the unit load device was stowed must be inspected for evidence of leakage or contamination immediately upon removal of the unit load device from the aircraft, and the packages or overpacks inspected for evidence of damage or leakage when the unit load device is unloaded. In the event of leakage or suspected leakage, the compartment in which the package, overpack, or unit load device was carried must be inspected for contamination and any dangerous level of contamination removed.

(b) Except as provided for in § 175.700, the operator of an aircraft shall remove from the aircraft any package subject to this subchapter that appears to be damaged or leaking. In the case of a package which appears to be leaking, the operator must insure that the remainder of the packages in the same shipment are in proper condition for transport aboard the aircraft and that no other package has been contaminated.

(c) No person shall place a package that is damaged or appears to be damaged or leaking aboard an aircraft subject to this part.

(d) If a package containing an etiologic agent is found to be damaged or leaking, the person finding the package shall:

(1) Avoid handling the package or keep handling to a minimum;
(2) Inspect packages adjacent to the leaking package for contamination and withhold from further transportation any contaminated packages until it is ascertained that they can be safely transported;
(3) Comply with the reporting requirement of § 171.15 of this subchapter; and
(4) Notify the consignor or consignee.

SUBPART C

SPECIFIC REGULATIONS APPLICABLE ACCORDING TO CLASSIFICATION OF MATERIAL

§ 175.305 Self-propelled vehicles. (a) Self-propelled vehicles are exempt from the drainage requirements of § 173.120 of this subchapter when carried in aircraft designed or modified for vehicle ferry operations and when all of the following conditions are met:

(1) Authorization for this type operation has been given by the appropriate authority in the government of the country in which the aircraft is registered;
(2) Each vehicle is secured in an upright position;
(3) Each fuel tank is filled in a manner and only to a degree that will preclude spillage of fuel during loading, unloading, and transportation; and
(4) Each area or compartment in which a self-propelled vehicle is being transported is suitably ventilated to prevent the accumulation of fuel vapors.

§ 175.310 Transportation of flammable liquid fuel in small, passenger-carrying aircraft. A small aircraft or helicopter operated entirely within the State of Alaska or into a remote area elsewhere in the United States may carry, in other than scheduled passenger operations, not more than 20 gallons of flammable liquid fuel, if:

(a) Transportation by air is the only practical means of providing suitable fuel;
(b) The flight is necessary to meet the needs of a passenger;
(c) The fuel is carried in metal containers that are either:

(1) In strong tight metal containers of not more than 5 gallons capacity, each packed inside a DOT Specification 12B fiberboard box or each packed inside a DOT Specification 15A, 15B, 15C, 16A, 19A or 19B wooden box, or in the case of a small aircraft in Alaska, each packed inside a wooden box of at least one-half inch thickness;

(2) Airtight, leakproof, inside containers of not more than 10 gallons capacity and of at least 28-gauge metal, each packed inside a DOT Specification 15A, 15B, 15C, 16A, 19A, or 19B wooden box or, in the case of a small aircraft in Alaska, each packed inside a wooden box of at least one-half inch thickness;

(3) DOT Specification 17E containers of not more than 5 gallons capacity; or

(4) Fuel tanks attached to flammable liquid fuel powered equipment under the following conditions:

(i) Each piece of equipment is secured in an upright position;

(ii) Each fuel tank is filled in a manner that will preclude spillage of fuel during loading, unloading, and transportation; and

(iii) (Deleted)

(d) In the case of a helicopter, the fuel is carried on external cargo racks;

(e) Each area or compartment in which the fuel is loaded is suitably ventilated to prevent the accumulation of fuel vapors;

(f) Before each flight, the pilot-in-command:

(1) Informs each passenger of the location of the fuel and the hazards involved; and

(2) Prohibits smoking, lighting matches, the carrying of any lighted cigar, pipe, cigarette or flame, and the use of anything that might cause an open flame or spark, while loading or unloading or in flight; and

(g) Fuel is transferred to the fuel tanks only while the aircraft is on the surface.

§ 175.320 Cargo aircraft only; only means of transportation. (a) Notwithstanding §172.101 of this subchapter, when means of transportation other than air are impracticable or not available, hazardous materials listed in the following table may be carried on a cargo aircraft only, subject to the conditions stated in the table and in paragraph (b) of this section and, when appropriate, paragraph (c) of this section:

Material description	Class	Conditions
Detonators and detonating primers	Class A explosives	Permitted only when no other hazardous material is aboard the aircraft.
Detonators and detonating primers	Class C explosives	Permitted only when there are no Class A explosives aboard aircraft.
Fuel, aviation, turbine engine, Methyl alcohol, or Toluene	Flammable liquid	Permitted in DOT specification metal drums having rated capacities of 55 gallons or less. May not be transported in the same aircraft with materials classed as Class A, B, or C explosives, blasting agents, corrosive materials or oxidizing materials. Permitted in installed tanks each having a capacity of more than 110 gal. subject to the conditions specified in paragraph (c) of this section.
Gasoline	Flammable liquid	Permitted in metal drums having rated capacities of 55 gal or less. May not be transported in the same aircraft with materials classed as class A, B, or C explosives, blasting agents, corrosive materials or oxidizing materials. Permitted in installed tanks each having a capacity of more than 110 gal. Subject to the conditions specified in para. (c) of this section.
High explosives	Class A explosives	Limited to explosives to be used for blasting. Permitted only when no other cargo is aboard the aircraft or when being transported in the same aircraft with an authorized shipment of any 1 or more of the following materials to be used for blasting: Ammonium nitrate fuel oil mixtures Blasting agent, n.o.s. Detonating cord Propellant explosive (solid) Class B (water gel's only). Propellant explosive (liquid) Class B (water gel's only).
Oil, n.o.s.; petroleum oil, or petroleum oil, n.o.s.	Flammable liquid	Permitted in metal drums having rated capacities of 55 gal. or less. May not be transported in the same aircraft with materials classed as Class A, B, or C explosives, blasting agents, corrosive materials, or oxidizing materials. Permitted in installed tanks each having a capacity of more than 110 gal. Subject to the conditions specified in para. (c) of this section.
Combustible liquid, n.o.s.	Combustible liquid	Permitted in installed tanks each having a capacity of more than 110 gal. subject to the conditions specified in par. (c) of this section.

(b) The following conditions apply to the carriage of hazardous materials performed under the authority of this section:

(1) No person other than a required flight crewmember, an FAA inspector, the shipper or consignee of the material or a representative of the shipper or consignee so designated in writing, or a person necessary for handling the material may be carried on the aircraft.

(2) The operator of the aircraft must have advance permission from the owner or operator of each manned airport where the material is to be loaded or unloaded or where the aircraft is to land while the material is on board. When the destination is changed after departure because of weather or other unforeseen circumstances, permission from the owner or operator of the alternate airport should be obtained as soon as practicable before landing.

(3) At any airport where the airport owner or operator or authorized representative thereof has designated a location for loading or unloading the material concerned, the material may not be loaded or unloaded at any other location.

(4) If the material concerned can create destructive forces or have lethal or injurious effects over an appreciable area as a result of an accident involving the aircraft or the material, the loading and unloading of the aircraft and its operation in takeoff, en route, and in landing must be conducted at a safe distance from heavily populated areas and from any place of human abode or assembly.

(5) If the aircraft is being operated by a holder of a certificate issued under 14 CFR Part 121, Part 127, or Part 135, operations must be conducted in accordance with conditions and limitations specified in the certificate holder's operations specifications or operations manual accepted by the FAA. If the aircraft is being operated under 14 CFR Part 91, operations must be conducted in accordance with an operations plan accepted and acknowledged in writing by the Civil Aviation Security Office serving the operator's location or the place where the material is to be loaded.

(6) Each pilot of the aircraft must be provided written instructions stating the conditions and limitations of the operation being conducted and the name of the airport official[s] granting the advance permission required by the first sentence of paragraph (b)(2) of this section.

(7) The aircraft and the loading arrangement to be used must be approved for safe carriage of the particular materials concerned by the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the appropriate FAA Civil Aviation Security Office serving the place where the material is to be loaded.

(8) When Class A explosives are carried aboard cargo aircraft only under the provisions of this section, the aircraft operator shall take all possible action to insure that routes over heavily populated areas are avoided commensurate with considerations of flight safety. During the approach and landing phase, the aircraft operator shall request appropriate vectors when under radar control to avoid heavily populated areas.

(9) During loading and unloading, no person may smoke, carry a lighted cigarette, cigar, or pipe, or operate any device capable of causing an open flame or spark within 50 feet of the aircraft.

(10) If the movement involves international transportation, permission for the shipment may also be required from the appropriate authorities of the countries of origin, destination, transit and overflight prior to departure.

(c) The following additional conditions apply to the carriage of flammable liquids and combustible liquids in tanks each having a capacity of more than 110 gallons under the authority of this section:

(1) The tanks and their associated piping and equipment and the installations thereof must have been approved for the material to be transported by the appropriate FAA Regional Office.

(2) In the case of aircraft being operated by a certificate holder, the operator shall list the aircraft and the approval information in its operating specifications. If the aircraft is being operated by other than a certificate holder, a copy of the FAA Regional Office approval required by this section must be carried on the aircraft.

(3) The crew of the aircraft must be thoroughly briefed on the operation of the particular bulk tank system being used.

(4) During loading and unloading and thereafter until any remaining fumes within the aircraft are dissipated:

(i) Only those electrically operated bulk tank shutoff valves that have been approved under a supplemental type certificate may be electrically operated.

(ii) No engine or electrical equipment, avionic equipment, or auxiliary power units may be operated, except position lights in the steady position and equipment required by approved loading or unloading procedures, as set forth in the operator's operations manual, or for operators that are not certificate holders, as set forth in a written statement.

(iii) No person may fill a container, other than an approved bulk tank, with a flammable or combustible liquid or discharge a flammable or combustible liquid from a container, other than an approved bulk tank, while that container is inside or within 50 feet of the aircraft.

(iv) When filling an approved bulk tank by hose from inside the aircraft, the doors and hatches must be fully open to insure proper ventilation.

(v) Static ground wires must be connected between the storage tank or fueler and the aircraft, and between the aircraft and a positive ground device.

§ 175.630 Special requirements for poisons and etiologic agents. (a) Hazardous materials bearing the POISON or

ETIOLOGIC AGENT label may not be carried in the same compartment of an aircraft with material which is marked as or known to be foodstuffs, feed, or any other edible material intended for consumption by humans or animals unless either poisons or etiologic agents and the foodstuffs, feed, or other edible material are loaded in separate unit load devices which, when stowed on the aircraft, are not adjacent to each other, or the poisons or etiologic agents are loaded in one closed unit load device and the foodstuffs, feed or other materials are loaded in another closed unit load device.

(b) No person may operate an aircraft that has been used to transport any package bearing a POISON label unless, upon removal of such package, the area in the aircraft in which it was carried is visually inspected for evidence of leakage, spillage, or other contamination. All contamination discovered must be either isolated or removed from the aircraft. The operation of an aircraft contaminated with such poisons is considered to be the carriage of poisonous materials under paragraph (a) of this section.

§ 175.640 Special requirements for other regulated materials. Asbestos must be loaded, handled, and unloaded, and any asbestos contamination of aircraft removed, in a manner that will minimize occupational exposure to airborne asbestos particles released incident to transportation. (See § 173.1090 of this subchapter.)

§ 175.700 Special limitations and requirements for radioactive materials. (a) In addition to other requirements, no person may carry in a passenger-carrying aircraft any package required to be labeled in accordance with § 172.403 of this subchapter with a Radioactive Yellow-II or Radioactive Yellow-III label unless:

(1) For a package required to be labeled Radioactive Yellow-II, the transport index does not exceed 1.0;

(2) For a package required to be labeled Radioactive Yellow-III, the transport index does not exceed 3.0;

(3) The package is carried on the floor of the cargo compartment, or freight container; and

(4) The package is carried in the aircraft in accordance with §§ 175.701 and 175.703(c).

(b) In addition to the reporting requirements of § 175.45, the carrier must also notify the shipper at the earliest practicable moment following any incident in which there has been breakage, spillage, or suspected radioactive contamination involving radioactive materials shipments. Aircraft in which radioactive materials have been spilled may not again be placed in service or routinely occupied until the radiation dose rate at any accessible surface is less than 0.5 millirem per hour and there is no significant removable radioactive surface contamination as determined in accordance with § 173.443 of this subchapter. When contamination is present or suspected, the package and or materials it has touched must be segregated as far as practicable from personnel contact until needed radiological advice or assistance is obtained. The Regional Office of the U.S. Department of Energy or appropriate State or local radiological authorities can provide advice or assistance, and should be notified in cases of obvious leakage, or if it appears likely that the inside container may have been damaged. For personnel safety the carrier must take care to avoid possible inhalation, ingestion, or contact with radioactive materials that may have leaked or spilled from its package. Any loose radioactive materials and associated packaging materials must be left in a segregated area pending disposal instructions from responsible radiological authorities.

(c) Except as provided in §§ 173.4, 173.421–1, and 173.421–2 of this subchapter, no person may carry any radioactive material aboard a passenger-carrying aircraft unless that material is intended for use in, or incident to, research, medical diagnosis or treatment.

(d) Type B(M) packages may not be offered or accepted for transportation, nor transported, on passenger-carrying aircraft.

§ 175.701 Separation distance requirements for packages containing radioactive materials in passenger-carrying aircraft. (a) General. No person may carry in a passenger-carrying aircraft any package required by § 172.403 of this subchapter to be labeled Radioactive Yellow-II, or Radioactive Yellow-III unless the package is placed in the aircraft in accordance with the minimum separation distances prescribed in paragraph (b) or (c) of this section.

(b) Separation distances. (1) Except as provided in paragraph (c) of this section, the minimum separation distances prescribed in paragraph (b)(2) of this section are determined by measuring the shortest distance between the surfaces of the radioactive materials package and the surfaces bounding the space occupied by passengers or animals. If more than one package of radioactive materials is placed in a passenger-carrying aircraft, the minimum separation distance for these packages shall be determined in accordance with paragraph (b)(2) of this section on the basis of the sum of the transport index numbers of the individual packages or overpacks.

(2) The following table prescribes minimum separation distances for the carriage of packages containing radioactive materials labeled Radioactive Yellow-II or Radioactive Yellow-III in passenger-carrying aircraft:

Transport Index or sum of transport indexes of all packages in the aircraft or predesignated area	Minimum separation distances	
	Centimeters	Inches
0.1 to 1.0	30	12
1.1 to 2.0	50	20
2.1 to 3.0	70	28
3.1 to 4.0	85	34
4.1 to 5.0	100	40
5.1 to 6.0	115	46
6.1 to 7.0	130	52
7.1 to 8.0	145	57
8.1 to 9.0	155	61
9.1 to 10.0	165	65
10.1 to 11.0	175	69
11.1 to 12.0	185	73
12.1 to 13.0	195	77
13.1 to 14.0	205	81
14.1 to 15.0	215	85
15.1 to 16.0	225	89
16.1 to 17.0	235	93
17.1 to 18.0	245	97
18.1 to 20.0	260	102
20.1 to 25.0	290	114
25.1 to 30.0	320	126
30.1 to 35.0	350	138
35.1 to 40.0	375	148
40.1 to 45.0	400	157
45.1 to 50.00	425	167

(c) Predesignated areas. A package required by § 172.403 of this subchapter to be labeled Radioactive Yellow-II or Radioactive Yellow-III may be carried in a passenger-carrying aircraft in accordance with a system of predesignated areas established by the aircraft operator. Each aircraft operator that elects to use a system of predesignated areas shall submit a detailed description of the proposed system to the Director, OHMT for approval prior to implementation of the system. A proposed system of predesignated areas is approved if the Director, OHMT determines that it is designed to assure that:

(1) The packages can be placed in each predesignated area in accordance with the minimum separation distances prescribed in paragraph (b)(2) of this section; and

(2) The predesignated areas are separated from each other by minimum distance equal to at least four times the distances required by paragraphs (b)(1) and (b)(2) of this section for the predesignated area containing packages with the largest sum of transport indexes.

§ 175.702 Requirements for carriage of packages containing radioactive materials in a cargo aircraft only. (a) As used in this section, the term "group of packages" means packages that are separated from each other in an aircraft by a distance of 20 feet (6 meters) or less.

(b) No person may carry in a cargo aircraft only any package required by § 172.403 of this subchapter to be labeled Radioactive Yellow-II or Radioactive Yellow-III unless:

(1) The total transport index for all of the packages does not exceed 50.0 and the package is carried in accordance with § 175.701(a); or

(2) The total transport index for all of the packages exceeds 50.0 and:

(i) The separation distance between the surfaces of the radioactive materials packages and the surfaces bounding the space occupied by persons or animals is at least 30 feet (9 meters);

(ii) The transport index for any group of packages does not exceed 50.0; and

(iii) Each group of packages is separated from every other group in the aircraft by not less than 20 feet (6 meters), measured from the outer surface of each group; and

(iv) The total transport index for all packages containing fissile radioactive materials does not exceed 50.0.

§ 175.703 Other special requirements for the acceptance and carriage of packages containing radioactive materials. (a) No person may carry in an aircraft any package of radioactive materials required by § 172.403 of this subchapter to be labeled Radioactive Yellow-II or Radioactive Yellow-III closer than the distances shown in the following table to any package marked as containing undeveloped film:

Transport Index	Minimum separation distance to nearest undeveloped film for various times of transit									
	Up to 2 hours		2 to 4 hours		4 to 8 hours		8 to 12 hours		Over 12 hours	
	Meters	Feet	Meters	Feet	Meters	Feet	Meters	Feet	Meters	Feet
0.1 to 1.0	0.3	1	0.6	2	0.9	3	1.2	4	1.5	5
1.1 to 5.0	0.9	3	1.2	4	1.8	6	2.4	8	3.3	11
5.1 to 10.0	1.2	4	1.8	6	2.7	9	3.3	11	4.5	15
10.1 to 20.0	1.5	5	2.4	8	3.6	12	4.8	16	6.6	22
20.1 to 30.0	2.1	7	3.0	10	4.5	15	6.0	20	8.7	29
30.1 to 40.0	2.4	8	3.3	11	5.1	17	6.6	22	9.9	33
40.1 to 50.0	2.7	9	3.6	12	5.7	19	7.2	24	10.8	36

(b) No person may accept for carriage in an aircraft packages of radioactive materials, other than limited quantities, contained in a rigid or non-rigid overpack, including a fiberboard box or plastic bag, unless they have been prepared for shipment in accordance with § 173.448(g) of this subchapter.

(c) No person may carry in an aircraft any package containing Fissile Class III radioactive materials (as defined in § 173.455(a)(3) of this subchapter), except:

(1) In a cargo aircraft only which has been assigned for the exclusive use of the shipper for the specific shipment of fissile radioactive material. Instructions for the exclusive use must be developed by the shipper and carrier, and the instructions issued with the shipping papers; or

(2) In an aircraft in which there are no other packages required to bear a radioactive label as prescribed in § 172.403 of this subchapter. Specific arrangements must be made between the shipper and carrier, with instructions to that effect issued with the shipping papers.

(d) No person may offer or accept for transportation, nor transport, by air:

(1) Any Type B(U) or Type B(M) package with an accessible surface temperature in excess of 50°C (122°F);

(2) Continuously vented Type B(M) packages, packages which require external cooling by an ancillary cooling system or packages subject to operational controls during transport; or

(3) Liquid pyrophoric radioactive materials.

(e) Packages with radiation levels at the package surface or a transport index in excess of the limits specified in § 173.441(a) of this subchapter may not be transported by aircraft except under special arrangements approved by RSPA.

§ 175.705 Inspection of aircraft for contamination by radioactive materials. (a) Aircraft used routinely for the carriage of radioactive materials shall be periodically checked for radioactive contamination. The frequency of checks shall be related to the likelihood of contamination and the extent to which radioactive materials are carried.

(b) An aircraft must be taken out of service if the level of contamination exceeds that provided in § 175.700(b).

For explanation of abbreviations and reference marks, see last page of this tariff.

PART 176—CARRIAGE BY VESSEL

SUBPART A

GENERAL

§ 176.1 Purpose and scope. This part prescribes requirements in addition to those contained in Parts 171, 172, and 173 of this subchapter to be observed with respect to the transportation of hazardous materials by vessel.

§ 176.3 Unacceptable hazardous materials shipments. (a) A carrier may not transport by vessel any shipment of a hazardous material that is not prepared for transportation in accordance with Parts 172 and 173 of this subchapter.

(b) A carrier may not transport by vessel any explosive or explosive composition described in § 176.5(c).

§ 176.5 Application to vessels. (a) Except as provided in paragraphs (b) and (e) of this section, this subchapter applies to each domestic or foreign vessel when in the navigable waters of the United States, regardless of its character, tonnage, size, or service, and whether self-propelled or not, whether arriving or departing, underway, moored, anchored, aground, or while in dry dock.

(b) With the exception of paragraph (c) of this section, this subchapter does not apply to:

(1) A public vessel not engaged in commercial service;

(2) A vessel constructed or converted for the principal purpose of carrying flammable or combustible liquid cargo in bulk in its own tanks, when only carrying these liquid cargoes;

(3) A vessel of 15 gross tons or smaller when not engaged in carrying passengers for hire;

(4) A vessel used exclusively for pleasure;

(5) A vessel of 500 gross tons or smaller when engaged in fisheries;

(6) A tug or towing vessel except when towing another vessel having explosives, flammable liquids or flammable compressed gas on board on deck in which case the tug or towing vessel shall make such provisions to guard against and extinguish fire as the Coast Guard may prescribe;

(7) A cable vessel, dredge, elevator vessel, fireboat, icebreaker, pile driver, pilot boat, welding vessel, salvage vessel, or wrecking vessel; or

(8) A foreign vessel transiting the territorial sea of the United States without entering the internal waters of the United States, if all hazardous materials being carried on board are being carried in accordance with the requirements of the IMDG Code.

(c) [Reserved]

(d) The bulk carriage of hazardous materials by water is governed by 46 CFR Subchapters *D, I, O,* and *N*.

(e) The transportation of military explosives on board vessels is governed by 46 CFR Part 146.

§ 176.9 "Order-Notify" or "C.O.D." shipments. (a) A carrier may not transport Class A explosives, detonators, or detonating primers which are—

(1) Consigned to "Order-notify" or "C.O.D.", except on a through bill of lading to a place outside the United States; or

(2) Consigned by the shipper to himself unless he has a resident representative to receive the shipment at the port of discharge.

§ 176.11 Exceptions. (a) A hazardous material may be offered and accepted for transportation by vessel when in conformance with the requirements of the IMDG Code in place of the corresponding requirements of this subchapter pertaining to packaging, marking, labeling, classification, description, certification, and placarding. All hazardous materials must otherwise be stowed and carried in accordance with this subchapter.

(1) Hazardous materials prepared in compliance with the above requirements may also be offered and accepted for transportation and transported by a motor vehicle used in connection with the discharge or loading of a vessel and not operating on a public street or highway.

(2) This exception does not apply to the following:

(i) A hazardous material classed as Explosive A or B, or Radioactive material, or

(ii) A material which is a hazardous material under this subchapter, but which is not a hazardous material under the provisions of the IMDG Code.

(b) Canadian shipments and packages may be transported by vessel if they are transported in accordance with this subchapter. (See § 171.12a of this subchapter.)

(c) The requirements of this subchapter governing the transportation of combustible liquids do not apply to the transportation of combustible liquids in containers of 110 gallons or less on board vessels.

(d) Transport vehicles, containing hazardous materials loaded in accordance with specific requirements of this subchapter applicable to such vehicles, may be transported on board a ferry vessel or carfloat, subject to the applicable requirements specified in § 176.76, 176. 100, and Subpart E of this part.

(e) Hazardous materials classed and shipped as ORM—D are not subject to the requirements of this Part unless they are offered for transportation as hazardous wastes.

(f) The stowage requirements of § 172.101 of this subchapter notwithstanding, a hazardous material which is classed, labeled and described in accordance with § 172.102 may be stowed as provided in that section.

(g) The requirements of this subchapter do not apply to atmospheric gases used in a refrigeration system.

§ 176.13 Responsibility for compliance. Unless this subchapter specifically provides that another person must perform a duty, each carrier, including a connecting carrier, shall comply with all applicable regulations in this part, and shall thoroughly instruct his employees in relation thereto.

§ 176.15 Enforcement. (a) An enforcement officer of the U.S. Coast Guard may at any time and at any place, within the jurisdiction of the United States, board any vessel for the purpose of enforcement of this subchapter and inspect any shipment of hazardous materials as defined in this subchapter.

§ 176.18 Assignment and certification. (a) The National Cargo Bureau, Inc., is authorized to assist the Coast Guard in administering this subchapter with respect to the following:

(1) Inspection of vessels for suitability for loading hazardous materials;

(2) Examination of stowage of hazardous materials;

(3) Making recommendations for stowage requirements of hazardous materials cargo; and

(4) Issuance of certificates of loading setting forth that the stowage of hazardous materials is in accordance with the requirements of this subchapter.

(b) A certificate of loading issued by the National Cargo Bureau, Inc., may be accepted by the Coast Guard as prima facie evidence that the cargo is stowed in conformity with the requirements of this subchapter.

SUBPART B

GENERAL OPERATING REQUIREMENTS

§ 176.24 Shipping papers. A carrier may not transport a hazardous material by vessel unless the material is properly described on the shipping paper in the manner prescribed in Part 172 of this subchapter.

§ 176.27 Certificate. (a) A carrier may not transport a hazardous material by vessel unless he has received a certificate prepared in accordance with §172.204 of this subchapter.

(b) In the case of an import or export shipment of hazardous materials which will not be transported by rail, highway, or air, the shipper may certify on the bill of lading or other shipping paper that the hazardous material is properly classed, described, marked, packaged, and labeled according to Part 172 of this subchapter or in accordance with requirements of the IMDG Code. See §171.12 of this subchapter.

§ 176.30 Dangerous cargo manifest. (a) The carrier, its agents, and any person designated for this purpose by the carrier or agents shall prepare a dangerous cargo manifest, list, or stowage plan. This document may not include a material which is not subject to the requirements of 49 CFR or the IMDG Code. This document must be kept in a designated holder, on or near the vessel's bridge. It must contain the following information:

(1) Name of vessel and official number. (If the vessel has no official number, the international radio call sign must be substituted.);

(2) Nationality of vessel;

(3) Shipping name and identification number of each hazardous material on board as listed in the §172.101 or 172.102 of this subchapter or as listed in the IMDG Code.

(4) The number and description of packages (barrels, drums, cylinders, boxes, etc.) and gross weight for each type of packaging;

(5) Classification of the hazardous material in accordance with either:

(i) The Hazardous Materials Table, §172.101 of this subchapter; or

(ii) The International Maritime Organization's Dangerous Goods Code as follows:

(A) For Classes 7, 8 and 9, either the class name or numerical designation of the Class must be used.

(B) For Classes 1, 3, 4, 5, and 6, either the division name or numerical designation of the division must be used.

(C) For Class 2, the class name or numerical designation of the Class must be accompanied by the description "Flammable gas", "Nonflammable gas" or "Poison gas", as appropriate.

(6) Any additional description required by §172.203 of this subchapter.

(7) Stowage location of the hazardous material on board the vessel.

(8) In the case of a vessel used for the storage of explosives or other hazardous materials, the following additional information is required:

(i) Name and address of vessel's owner;

(ii) Location of vessel's mooring;

(iii) Name of person in charge of vessel;

(iv) Name and address of the owner of the cargo; and

(v) A complete record, by time intervals of one week, of all receipts and disbursements of hazardous materials. The name and address of the consignor must be shown against all receipts and the name and address of the consignee against all deliveries.

(b) The hazardous material information on the dangerous cargo manifest must be the same as the information furnished by the shipper on the shipping order or other shipping paper, except that the IMO "correct technical name" and the IMO class may be indicated on the manifest as provided in paragraphs (a)(3) and (a)(5) of this section. The person who supervises the preparation of the manifest, list, or stowage plan shall ensure that the information is correctly transcribed, and shall certify to the truth and accuracy of this information to the best of his knowledge and belief by his signature and notation of the date prepared.

(c) The carrier and its agents shall insure that the master, or a licensed deck officer designated by the master and attached to the vessel, or in the case of a barge, the person in charge of the barge, acknowledges the correctness of the dangerous cargo manifest, list or stowage plan by his signature.

(d) For barges, manned or unmanned, the requirements of this section apply except for the following: (1) In the case of a manned barge, the person in charge of the barge shall prepare the dangerous cargo manifest.

(2) In the case of an unmanned barge, the person responsible for loading the barge is responsible for the preparation of a dangerous cargo manifest, list, or stowage plan and must designate an individual for that purpose.

(3) For all barges, manned or unmanned, the dangerous cargo manifest must be on board the barge in a readily accessible location and a copy must be furnished to the person in charge of the towing vessel.

(e) Each carrier who transports or stores hazardous materials on a vessel shall retain a copy of the dangerous cargo manifest, list, or stowage plan for at least one year, and shall make that document available for inspection in accordance with §176.36(b) of this subchapter.

§ 176.31 Exemptions. If a hazardous material is being transported by vessel under the authority of an exemption and a copy of the exemption is required to be on board the vessel, it must be kept with the dangerous cargo manifest.

§ 176.33 Labels. Each carrier shall maintain an adequate supply of the labels required in Subpart E of Part 172 of this subchapter to replace those that become lost or detached. Replacement must be based on information taken from the shipping order, delivery receipt, or other shipping paper covering the shipment.

§ 176.36 Preservation of records. (a) When this part requires shipping orders, manifest, cargo lists, stowage plans, reports, or any other papers, documents or similar records to be prepared, the carrier shall preserve them or copies of them in his place of business or office in the United States for a period of one year after their preparation.

(b) Any record required to be preserved must be made available upon request to an authorized representative of the Department of Transportation.

§ 176.39 Inspection of cargo. (a) Manned vessels. The carrier, its agents, and any person designated for this purpose by the carrier or agents shall cause an inspection of each hold or compartment containing hazardous materials to be made after stowage is complete, and at least once every 24 hours thereafter, weather permitting, in order to ensure that the cargo is in a safe condition and that no damage caused by shifting, spontaneous heating, leaking, sifting, wetting, or other cause has been sustained by the vessel or its cargo since loading and stowage. However, freight containers or individual barges need not be opened. A vessel's holds equipped with smoke or fire detecting systems having an automatic monitoring capability need not be inspected except after stowage is complete and after periods of heavy weather. The carrier, its agents, and any person designated for this purpose by the carrier or agents shall cause an entry to be made in the vessel's deck log book for each inspection of the stowage of hazardous materials performed.

(b) Unmanned and magazine vessels. An inspection of the cargo must be made after stowage has been completed to ensure that stowage has been accomplished properly and that there are no visible signs of damage to any packages or evidence of heating, leaking, or sifting. This inspection must be made by the individual who is responsible to the carrier and who is in charge of loading and stowing the cargo on the unmanned vessels or the individual in charge in the case of a magazine vessel.

(c) The carrier, its agents, and any person designated for this purpose by the carrier or agents of each ocean-going vessel carrying hazardous materials shall, immediately prior to entering a port in the United States, cause an inspection of that cargo to be made.

(d) When inspecting a cargo of hazardous materials capable of evolving flammable vapors, any artificial means of illumination must be of an explosion-proof type.

§ 176.45 Emergency situations. (a) When an accident occurs on board a vessel involving hazardous materials, and the safety of the vessel, its passengers or crew are endangered, the master shall adopt such procedures as will, in his judgment, provide maximum safety for the vessel, its passengers, and its crew. When the accident results in damaged packages or the emergency use of unauthorized packagings, these packages may not be offered to any forwarding carrier for transportation. The master shall notify the nearest Captain of the Port, U.S. Coast Guard, and request instructions for disposition of the packages.

(b) Hazardous materials may be jettisoned only if the master believes this action necessary to prevent or substantially reduce a hazard to human life or reduce a substantial hazard to property.

§ 176.48 Situation requiring report. (a) When a fire or other hazardous condition exists on a vessel transporting hazardous materials, the master shall notify the nearest Captain of the Port as soon as possible and shall comply with any instructions given by the Captain of the Port.

(b) When an incident occurs during transportation in which a hazardous material is involved, a report may be required (See §§171.15 and 171.16 of this subchapter).

(c) If a package, portable tank, freight container, highway or railroad vehicle containing hazardous materials is jettisoned or lost, the master shall notify the nearest Captain of the Port as soon as possible of the location, quantity, and type of the material.

§ 176.50 Acceptance of damaged or leaking packages. A carrier may not transport by vessel any package that is so damaged as to

permit the escape of its contents, that appears to have leaked, or that gives evidence of failure to properly contain the contents unless it is restored or repaired to the satisfaction of the master of the vessel. A package containing radioactive materials (other than low specific activity materials) may not be repaired or restored.

§ 176.52 Rejection of shipments in violation. (a) A carrier may not knowingly transport by vessel any hazardous material offered under a false or deceptive name, marking, invoice, shipping paper or other declaration, or without the shipper furnishing written information about the true nature of the material at the time of delivery.

(b) If a shipment in violation is found in transit, the master of the vessel shall adopt procedures which in his judgment provide maximum safety to the vessel, its passengers and its crew and which are in compliance with § 176.45. If the vessel is in port, the material may not be delivered to any party, and the master shall immediately notify the nearest Captain of the Port and request instructions for disposition of the material.

§ 176.54 Repairs involving welding or burning. (a) Except as provided in paragraph (b) of this section, repairs or work involving welding or burning, or the use of power-actuated tools or appliances which may produce intense heat may not be undertaken on any vessel having on board explosives or other hazardous materials as cargo.

(b) Paragraph (a) of this section does not apply if:

(1) The repairs or work are approved by the local Coast Guard Captain of the Port or his authorized representative; or

(2) Emergency repairs to the vessel's main propelling or boiler plant or auxiliaries are necessary.

SUBPART C

GENERAL HANDLING AND STOWAGE

§ 176.57 Supervision of handling and stowage. (a) Hazardous materials may be handled or stowed on board a vessel only under the direction and observation of a qualified person assigned for this duty.

(b) For a vessel engaged in voyages coastwise, or on rivers, bays, sounds or lakes, including the Great Lakes when the voyage is not foreign-going, the person may be an employee of the carrier and assigned to this duty by the carrier, or a licensed officer attached to the vessel and assigned by the master of the vessel.

(c) For a domestic vessel engaged in a foreign-going or intercoastal voyage, the person must be an officer possessing an unexpired license issued by the U.S. Coast Guard and assigned to this duty by the carrier or master of the vessel.

(d) For a foreign vessel, the person must be an officer of the vessel assigned to this duty by the master of the vessel.

§ 176.58 Preparation of the vessel. Each hold or compartment in which hazardous materials are to be transported must be swept clean of all debris before the hazardous materials are stowed therein. Bilges must be examined and all residue of previous cargo removed.

§ 176.60 "No Smoking" signs. When smoking is prohibited during the loading, stowing, storing, transportation, or unloading of hazardous materials by this part, the carrier and the master of the vessel are jointly responsible for posting "NO SMOKING" signs in conspicuous locations.

§ 176.63 Stowage locations. (a) The table in § 172.101 of this subchapter specifies generally the locations authorized for stowage of the various hazardous materials on board vessels. This part prescribes additional requirements with respect to the stowage of specific hazardous materials in addition to those authorized in § 172.101 of this subchapter. This section sets forth the basic physical requirements for the authorized locations.

(b) To qualify as "on deck" stowage, the location must be on the weather deck. If it is in a house on the weather deck, it must have a permanent structural opening to the atmosphere, such as a door, hatch, companionway or manhole, and must be vented to the atmosphere. It may not have any structural opening to any living quarters, cargo, or other compartment unless the opening has means for being closed off and secured. Any deck house containing living quarters, a steering engine, a refrigerating unit, a refrigerated stowage box, or a heating unit may not be used unless that area is isolated from the cargo stowage area by a permanent, and tight metallic bulkhead. Stowage in a shelter or 'tween deck is not considered to be "on deck." A barge which is vented to the atmosphere and is stowed on deck on a barge-carrying ship is considered to be "on deck." When an entry in § 172.101 of this subchapter requires "on-deck" stowage and is qualified by the requirement "shade from radiant heat", the stowage must be protected from the direct rays of the sun by means of structural erections or awnings, except that such protection is not required for shipment in portable tanks.

(c) To qualify as "under deck" stowage, the location must be in a hold or compartment below the weather deck capable of being ventilated and allotted entirely to the carriage of cargo. It must be bounded by permanent steel decks and bulkheads or the shell of the vessel. The deck openings must have means for effectively closing the hold or compartment against the weather, and in the case of superimposed holds, for effectively closing off each hold. A hold or compartment containing a crew passage formed by battens or by mesh or wire screen bulkhead may not be used for the stowage of any hazardous material unless a watchman is provided for this area.

(d) To qualify as "under deck away from heat", the location must be under deck and have built-in means for ventilation. If it is subject to heat from any artificial source, it only qualifies for the stowage of those hazardous materials for which "on deck" stowage is authorized.

§ 176.65 Alternative stowage procedures. When a hazardous material is to be loaded on board a vessel and it is shown to the satisfaction of the Coast Guard Captain of the Port for the place where the vessel is being loaded that it is impracticable to comply with a stowage location requirement specified in the table in § 172.101 of this subchapter or a handling or stowage requirement prescribed in this part, the Captain of the Port may authorize in writing the use of an alternate stowage location or method of handling or stowage subject to such conditions as he finds will ensure a level of safety at least equal to that afforded by the regulatory requirement concerned.

§ 176.69 General stowage requirements for hazardous materials. (a) Hazardous materials (except as provided in (c) of this section and ORM) must be stowed in a manner that will facilitate inspection during the voyage, its removal from a potentially dangerous situation, and the removal of packages in case of fire.

(b) Each package marked "THIS SIDE UP" must be stowed so as to remain in the position indicated during transportation.

(c) If a vessel designed for and carrying hazardous materials in freight containers or a vessel designed for and carrying hazardous materials in barges is equipped with a fixed fire extinguishing and fire detection system, the freight containers or barges need not be stowed in the manner required by paragraph (a) of this section. When freight containers or barges containing hazardous materials are stowed on deck, they need not be stowed in the manner required by paragraph (a) of this section if fire fighting equipment capable of reaching and piercing the freight container or barge is on board the vessel.

§ 176.72 Handling of break-bulk hazardous materials. (a) A metal bale hook may not be used for handling any package of hazardous materials.

(b) The use of equipment designed to lift or move cargo by means of pressure exerted on the packages may not be used for handling any package of hazardous materials if the device can damage the package or the package is not designed to be moved in that manner.

(c) Pallets, slings, cargo nets and other related equipment used in loading packages of hazardous materials must give adequate support to the packages. The packages must be contained so that they are not able to fall during loading.

§ 176.74 On deck stowage of break-bulk hazardous materials. (a) Packages containing hazardous materials must be secured by enclosing in boxes, cribs or cradles and proper lashing by use of wire rope, strapping or other means, including shoring and bracing, or both. Lashing of deck cargo is permitted if eye pads are used to attach the lashings. Lashings may not be secured to guard rails. Bulky articles must be shored.

(b) A packaging susceptible to weather or water damage must be protected so that it will not be exposed to the weather or to sea water.

(c) Not more than fifty percent of the total open deck area should be used for stowage of hazardous materials (except ORM material).

(d) Fireplugs, hoses, sounding pipes, and access to these must be free and clear of all cargo.

(e) Crew and passenger spaces and areas set aside for the crew's use may not be used to stow any hazardous material.

(f) A hazardous material may not be stowed within a horizontal distance of 25 feet of an operating or embarkation point of a lifeboat.

(g) Hazardous materials must be stowed to permit safe access to the crew's quarters and to all parts of the deck required in navigation and necessary working of the vessel.

(h) When runways for use of the crew are built over stowed hazardous materials, they must be constructed and fitted with rails and lifelines so as to afford complete protection to the crew when in use.

§ 176.76 Highway vehicles, railroad vehicles, freight containers, and portable tanks containing hazardous materials. (a) Except as provided in paragraphs (b) through (f) of this section, hazardous materials (other than Class A explosives unless otherwise approved by the Commandant (G-MTH)) authorized to be transported by vessel may be carried on board a vessel in a highway vehicle, railroad vehicle, or freight container subject to the following conditions:

(1) The material must be in proper condition for transportation according to the requirements of this subchapter;

(2) All packages in the transport vehicle or container must be secured to prevent movement in any direction. However, vertical restraint is not required if the shape of the packages and the stuffing pattern precludes shifting of the load;

(3) Bulkheads made of dunnage which extend to the level of the cargo must be provided unless the packages are stowed flush with the sides or ends;

(4) Dunnage must be secured to the floor when the cargo consists of dense materials or heavy packages;

(5) Each package marked "THIS SIDE UP" must be so stowed.

(6) Any slack spaces between packages must be filled with dunnage;

(7) The weight in a container must be distributed throughout as evenly as possible and the maximum permissible weight must not be exceeded.

(8) Adjacent levels of baggaged and baled cargo must be stowed in alternate directions so that each tier binds the tier above and below it.

(9) Packages containing solids should be stowed on top of packages containing liquids.

(10) The lading must be contained entirely within the freight container or vehicle body without overhang or projection except that oversized machinery such as tractors or vehicles with batteries attached may overhang or project outside the intermodal container provided all of that portion of the lading that consists of hazardous materials is contained entirely within the freight container. No open-bed container or vehicle is permitted to carry hazardous materials unless it is equipped with a means of properly securing the lading.

(b) A highway vehicle containing hazardous materials may be carried only on board a trailership, ferry vessel or a carfloat.

(c) A railroad vehicle containing hazardous materials may be carried only on board a trainship, railroad car ferry or a carfloat.

(d) A transport vehicle or freight container equipped with heating or refrigeration equipment may be operated on board a vessel. However, the equipment may not be operated in any hold or compartment in which any flammable liquid or gas is stowed. Any heating or air conditioning equipment having a fuel tank containing a flammable liquid or gas may be stowed only "on deck". Equipment electrically powered and designed to operate within an environment containing flammable vapors may be operated below deck in a hold or compartment containing a flammable liquid or gas. (See § 176.79)

(e) A transport vehicle, loaded with any hazardous material which is required to be stowed "on deck" by § 172.101 of this subchapter, may be stowed one deck below the weather deck when transported on a trainship or trailership which is unable to provide "on deck" stowage because of the vessel's design. Otherwise, the transport vehicle or container must be transported "on deck".

(f) Each transport vehicle, freight container, and portable tank being transported by vessel must be placarded in accordance with the requirements of Subpart F of Part 172 of this subchapter.

(g) A hazardous material may be carried on board a vessel in a portable tank subject to the following conditions:

(1) The material must be in proper condition for transportation according to the requirements of this subchapter.

(2) Small passenger vessels of 100 gross tons, or less, may carry a hazardous material in a portable tank only when 16 or less passengers are on board and only when specifically authorized by the Officer-in-Charge, Marine Inspection, by endorsement of the vessel's Certificate of Inspection.

(3) Portable tanks containing Flammable liquids or gases, Combustible liquids with flashpoints below 141° F. that are insoluble in water, or organic peroxides, spontaneously combustible materials, or water reactive materials must be stowed on deck irrespective of the stowage authorized in § 172.101 of this subchapter. Portable tanks containing hazardous materials not restricted to on deck stowage by the previous sentence must be stowed in accordance with the requirements specified in § 172.101 of this subchapter.

(4) ORM and corrosive materials must be stowed as authorized in the Hazardous Materials Table in § 172.101 of this subchapter.

(5) Aluminum, magnesium, and their alloys are specifically prohibited as materials of construction of portable tanks.

(h) Cryogenic liquids. For shipment of cryogenic liquids on board a vessel the packaging must be designed and filled so that:

(1) Any cryogenic liquid being transported in a cargo tank, regardless of the pressure in the package, must be contained in a steel jacketed Specification MC-338 (§ 178.338 of this subchapter) insulated cargo tank, or a cargo tank approved under the provisions of § 173.33(b)(2) of this subchapter.

(2) Any valve or fitting with moving or abrading parts that may come in contact with any cryogenic liquid may not be made of aluminum.

(3) For a flammable cryogenic liquid being transported in a cargo tank, the elapsed time between the loading of the cargo tank and the subsequent unloading of the cargo tank at its final destination may not exceed the marked rated holding time (MRHT) of the cargo tank for the cryogenic liquid being transported, which must be displayed on or adjacent to the specification plate.

(4) Portable tanks, cargo tanks, and tank cars containing cryogenic liquids must be stowed "on deck" regardless of the stowage authorized in § 172.101 of this subchapter. Cargo tanks or tank cars containing cryogenic liquids may be stowed one deck below the weather deck when transported on a trailership or trainship that is unable to provide "on deck" stowage because of the vessel's design. Tank cars must be Class DOT-113 or AAR-204W tank cars.

§ 176.77 Stowage of barges containing hazardous materials on board barge-carrying vessels. (a) A barge which contains hazardous materials may be transported on board a barge-carrying vessel if it is stowed in accordance with the requirements of this section.

(b) A barge which contains hazardous materials for which only "on deck" stowage is authorized must be stowed above the weather deck and be vented to the atmosphere.

(c) A barge which contains hazardous materials for which both "on deck" and "below deck" storage is authorized may be stowed above or below the weather deck.

§ 176.78 Use of power-operated industrial trucks on board vessels. (a) A power-operated truck (including a power-operated tractor, forklift, or other specialized truck used for cargo handling) may not be used on board a vessel in a space containing a hazardous material unless the truck complies with the requirements of this section.

(b) Each truck must have a specific designation of Underwriter's Laboratories or Factory Mutual Laboratories. Any repair or alteration to a truck must be equivalent to that required on the original designation.

(c) Description of designations. The recognized testing laboratory type designations are as follows:

(1) An "E" designated unit is an electrically-powered unit that has minimum acceptable safeguards against inherent fire hazards.

(2) An "EE" designated unit is an electrically-powered unit that has, in addition to all the requirements for the "E" unit, the electric motor and all other electrical equipment completely enclosed.

(3) An "EX" designated unit is an electrically-powered unit that differs from the "E" and "EE" unit in that the electrical fittings and equipment are so designed, constructed, and assembled that the unit may be used in certain atmospheres containing flammable vapors or dusts.

(4) A "G" designated unit is a gasoline-powered unit having minimum acceptable safeguards against inherent fire hazards.

(5) A "GS" designated unit is a gasoline-powered unit that is provided with additional safeguards to the exhaust, fuel, and electrical systems.

(6) An "LP" designated unit is similar to a "G" unit except that it is powered by liquefied petroleum gas instead of gasoline.

(7) An "LPS" designated unit is a unit similar to a "GS" unit except that liquefied petroleum gas is used for fuel instead of gasoline.

(8) A "D" designated unit is a unit similar to a "G" unit except that it is powered by a diesel engine instead of a gasoline engine.

(9) A "DS" designated unit is a unit powered by a diesel engine provided with additional safeguards to the exhaust, fuel, and electrical systems.

(d) Explosives. A truck may not be used in a hold or compartment containing explosives unless its use is approved by the Commandant (G-MTH). In a space in which packaged small arms ammunition without explosive bullets is stowed, a power operated truck (except "E", "G", or "LP") may be used if approved by the local Captain of the Port.

(e) Other hazardous materials.

(1) Only an "EX", "EE", "GS", "LPS", or "DS" truck may be used in a hold or compartment containing flammable liquids, flammable compressed gases, flammable solids, oxidizers, organic peroxides, articles of a fibrous nature, or bulk sulfur.

(2) Only a designated truck may be used to handle any other hazardous material not covered in paragraph (d) or (e)(1) of this section.

(f) Minimum safety features. In addition to the construction and design safety features required, each truck must have at least the following minimum safety features:

(1) The truck must be equipped with a warning horn, whistle, gong, or other device that may be heard clearly above normal shipboard noises.

(2) When the truck operation may expose the operator to danger from a falling object, the truck must be equipped with a driver's overhead guard. When the overall height of the truck with forks in the lowered position is limited by head room the overhead guard may be omitted. This overhead guard is only intended to offer protection from impact of small packages, boxes, bagged material, or similar hazards.

(3) A fork lift truck which handles small objects or unstable loads must be equipped with a load backrest extension having height, width,

and strength sufficient to prevent any load, or part of it, from falling toward the mast is in a position of maximum backward tilt. It must be constructed in a manner that does not interfere with good visibility.

(4) The forks on a fork lift truck must be secured to the carriage so as to prevent any unintentional lifting of the toe which could create a hazard. The forks may not display permanent deformation when subjected to a test load of three times the rated capacity.

(5) Each fork extension or other attachment must be secured to prevent unintentional lifting or displacement on primary forks.

(6) Tires extending beyond the confines of the truck shall be provided with a guard to prevent the tires from throwing particles at the operator.

(7) Unless the steering mechanism is a type that prevents road reactions from causing the steering handwheel to spin, a mushroom type steering knob must be used to engage the palm of the operator's hand, or the steering mechanism must be arranged in some other manner to prevent injury. The knob must be mounted within the perimeter of the wheel.

(8) All steering controls must be confined within the clearance of the truck or guarded so that movement of the controls will not result in injury to the operator when passing stanchions, obstructions or other.

(g) Special operating conditions.

(1) A truck may not be used on board a vessel unless prior notification of its use is given to the master or senior deck officer on board.

(2) Before a truck is operated on board a vessel, it must be in a safe operating condition as determined by the master or senior deck officer on board.

(3) Any truck that emits sparks or flames from the exhaust system must immediately be removed from service and may not be returned to service until the cause of these sparks or flames has been eliminated.

(4) A truck may not be operated on board a vessel when the temperature of any part of the truck is found to be in excess of a safe operating temperature.

(5) All truck motors must be shut off immediately when an emergency condition arises on board a vessel.

(6) All truck motors must be shut off immediately when a breakage or leakage of packages containing flammable liquids or gases, flammable solids, oxidizers, or organic peroxides occurs or is discovered.

(7) The rated capacity of the truck must be posted on the truck at all times in a conspicuous place. This capacity may not be exceeded.

(8) At least one Coast Guard approved marine type size 1 Type B, or UL approved 5BC portable fire extinguisher, or its approved equivalent, must be affixed to the truck in a readily accessible position or must be kept in close proximity, available for immediate use.

(9) The vessel's fire fighting equipment, both fixed (where installed) and portable, must be kept ready for immediate use in the vicinity of the space being worked.

(h) Refueling.

(1) A truck using gasoline as fuel may not be refueled in the hold or on the weather deck of a vessel unless a portable non-spilling fuel handling system of not over five gallons capacity is used. Gasoline may not be transferred to a portable non-spilling fuel handling device on board the vessel.

(2) A truck using liquefied petroleum gas as fuel may not be refueled in the hold or on the weather deck of a vessel unless it is fitted with a removable tank and the hand-operated shutoff valve of the depleted tank is closed. In addition, the motor must be run until it stalls from lack of fuel and then the hand-operated shut off valve closed before the quick disconnect fitting to the fuel tank is disconnected.

(3) A truck using diesel oil as fuel may not be refueled on the weather deck or in the hold of a vessel unless a portable container of not over a five gallon capacity is used. A truck may be refueled or a portable container may be refilled from a larger container of diesel fuel on the weather deck of a vessel if a suitable pump is used for the transfer operation and a drip pan of adequate size is used to prevent any dripping of fuel on the deck.

(4) Refueling must be performed under the direct supervision of an experienced and responsible person specifically designated for this duty by the person in charge of the loading or unloading of the vessel.

(5) Refueling may not be undertaken with less than two persons specifically assigned and present for the complete operation, at least one of whom must be experienced in using the portable fire extinguishers required in the fuel area.

(6) At least one Coast Guard approved marine type size 1 Type B or UL approved 5BC portable fire extinguisher or its approved equivalent, must be provided in the fueling area. This is an addition to the extinguisher required by paragraph (g)(8) of this section.

(7) The location for refueling trucks must be designated by the master or senior deck officer on board the vessel. "NO SMOKING" signs must be conspicuously posted in the area.

(8) The location designated for refueling must be adequately ventilated to insure against accumulation of any hazardous concentration of vapors. When a truck is being refueled, the ventilation requirements of § 176.79 apply.

(9) Before any truck in a hold is refueled or before any fuel handling device or unmounted liquefied petroleum gas cylinder is placed in a hold, the motors of all trucks in the same hold must be stopped.

(10) All fuel handling devices and unmounted liquefied petroleum gas containers must be removed from a hold before any truck motor is started and the trucks are placed in operation in that hold.

(i) Replacing batteries. Batteries for electrically powered trucks and for the ignition systems of internal combustion powered trucks may be changed in the hold of a vessel subject to the following conditions:

(1) Only suitable handling equipment may be employed.

(2) Adequate precautions must be taken to avoid damage to the battery, short circuiting of the battery, and spillage of the electrolyte.

(j) Charging of batteries. Batteries of industrial trucks may be recharged in a hold of a vessel subject to the following conditions:

(1) The batteries must be housed in a suitable, ventilated, portable metal container with a suitable outlet at the top for connection of a portable air hose, or must be placed directly beneath a suitable outlet at the top for connection of a portable air hose. The air hose must be permanently connected to an exhaust duct leading to the open deck and terminate in a gooseneck or other suitable weather head. If natural ventilation is not practicable or adequate, mechanical means of exhaust must be employed in conjunction with the duct. The air outlet on the battery container must be equipped with an interlock switch so arranged that the charging of the battery cannot take place unless the air hose is properly connected to the box.

(2) If mechanical ventilation is used, an additional interlock must be provided between the fan and the charging circuit so that the fan must be in operation in order to complete the charging circuit for operation. It is preferable that this interlock switch be of a centrifugal type driven by the fan shaft.

(3) The hold may not contain any hazardous materials.

(4) The charging facilities may be part of the truck equipment or may be separate from the truck and located inside or outside the cargo hold. The power supply or charging circuit (whichever method is used) must be connected to the truck by a portable plug connection of the breakaway type. This portable plug must be so engaged with the truck battery charging outlet that any movement of the truck away from the charging station will break the connection between the plug and receptacle without exposing any live parts to contact with a conducting surface or object and without the plug falling to the deck where it may become subject to damage.

(5) All unmounted batteries must be suitably protected or removed from an area in the hold of the vessel before any truck is operated in that area.

(k) Stowage of power-operated industrial trucks on board a vessel.

(1) Trucks may be stowed in any location on board a vessel subject to the following conditions:

(i) Each gasoline-powered truck must have all the fuel expended from the fuel system.

(ii) Each liquefied petroleum gas-operated truck must have the fuel tank removed and all the fuel expended from the fuel system.

(2) Any truck not meeting the conditions set forth in paragraph (k)(1) of this section must be stowed on the open deck except for intervals such as lunch hours, between work shifts, and interdock and intraport movements. If a truck is stowed in a fixed metal enclosure located on or above the weather deck, this enclosure must have access from the weather deck only and must have adequate ventilation arranged to remove vapors from both the upper and lower portions of the space.

(l) Packaging and stowage of fuel on board a vessel.

(1) Packaging. Flammable liquids and gases to be used as fuels for trucks must be packaged in DOT specification containers, A.S.M.E. containers, or portable safety containers approved by a recognized testing laboratory and authorized for the contents.

(2) Marking and labeling. The appropriate DOT label must be affixed to each container of flammable liquid or flammable gas.

(3) Stowage. Each container must be stowed on or above the weather deck as designated by the master. However, a DOT specification container, A.S.M.E. container, or portable safety container having a capacity of five gallons or less and approved by a recognized testing laboratory may be stowed below deck in a paint locker and diesel fuel may be stowed in any location designated by the master.

§ 176.79 Spaces exposed to carbon monoxide or other hazardous vapors. When hazardous materials are transported by vessel in an enclosed space which is exposed to carbon monoxide or other hazardous vapors from exhausts of power-operated industrial trucks or other mechanized equipment, the space must be provided with adequate ventilation to prevent the accumulation of dangerous vapors. The senior deck officer shall insure that a test of the carbon monoxide content of the atmosphere is made as frequently as conditions require to detect the presence of any dangerous concentration of vapors in areas where persons may be working. The test must be made by a person acquainted with the test equipment and procedure. The carbon monoxide concentration in any hold or intermediate deck where any person is working may not exceed 50 parts per million (0.005 percent) as a time weighted average. Persons may not be permitted to remain in any hold or intermediate deck where the concentration exceeds 75 parts per million (0.0075 percent). Portable blowers of adequate size and location may be used to remove any vapors not removed by installed ventilation systems.

SUBPART D

GENERAL SEGREGATION REQUIREMENTS

§ 176.80 Application. (a) This subpart sets forth segregation requirements in addition to any segregation requirements set forth elsewhere in this subchapter.

(b) Hazardous materials in limited quantities when loaded in transport vehicles and freight containers, are excepted from the segregation requirements of this subpart and any additional segregation specified in this subchapter for transportation by vessel.

§ 176.83 Segregation requirements for cargo vessels and passenger vessels. (a) The following table (Table I) specifies the categories of explosives which may not be loaded or stowed together within the same hold or compartment. The letter "X" at an intersection of a horizontal and vertical column indicates that these categories may not be stowed together in the same hold or compartment.

(b) The following table (Table II) specifies the minimum separation requirements that apply when transporting different classes of hazardous materials on board a vessel, other than a ferry vessel. The symbols used in the table below mean the following:

(1) "1"—Away from.
(2) "2"—Separated from.
(3) "3"—Separated by a complete cargo compartment or hold from.
(4) "4"—Separated longitudinally by an intervening complete cargo compartment or hold from.
(5) "0"—No general segregation specified; individual entries in the Hazardous Material Table in §172.101 of this subchapter should be consulted.
(6) "*"—Consult Table I of this section for segregation requirements between different explosives.

(c) Definition of terms.

(1) Legend

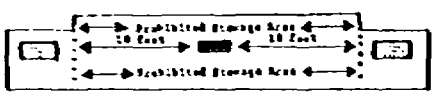
(i) Reference package ***

(ii) Incompatible package ***

(iii) Deck resistant to liquid and fire ***

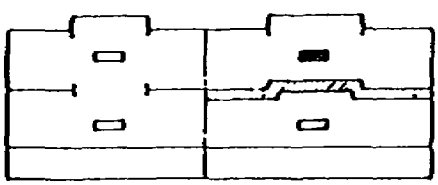
NOTE: Solid vertical lines represent transverse watertight bulkheads between holds.

(2) Away from. "Away from" means effectively segregated so that materials may not interact dangerously in the event of an accident. These materials may be stowed in the same cargo compartment, hold, deck area or barge provided a minimum horizontal separation of 10 feet, projected vertically, is provided.



(3) Separate from.

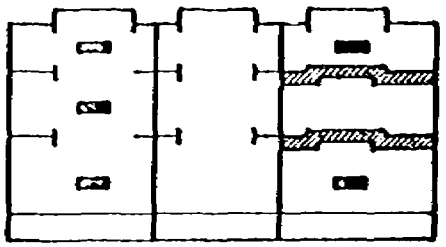
(i) "Separate from" means in separate holds when stowed "under deck". If the intervening deck is resistent to fire and liquid, a vertical separation, i.e., in different cargo compartments, is considered equivalent to this requirement. For "on deck" stowage, "away from" segregation is authorized.



(ii) On barge-carrying vessels, separate barges are required if the barges are constructed of steel. Otherwise separate holds are required.

(4) Separate by a complete cargo compartment or hold from.

(i) "Separate by a complete cargo compartment or hold from" means either a vertical or horizontal separation. If the decks are not resistant to fire and liquid, a longitudinal separation by an intervening complete cargo compartment is required. For "on deck" stowage this segregation means a separation by a corresponding horizontal distance.



*When the stowage location of the incompatible package is in this relation to the reference package, at least one of the intervening decks in the vertical plane must be resistant to fire and liquid.

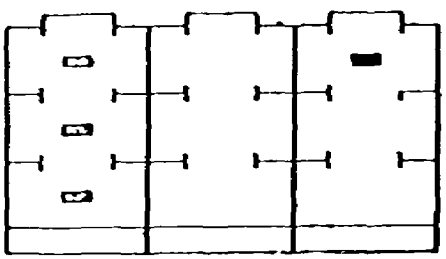
(ii) For barges aboard barge-carrying vessels, the following requirements apply:

(A) For barges loaded on ships having vertical holds, separate barge holds are required.

(B) For barges loaded on ships having horizontal barge levels, separate barge levels are required.

(5) Separate longitudinally by an intervening complete cargo compartment or hold or engine room from.

(i) "Separate longitudinally by an intervening complete cargo compartment or hold or engine room from" means a horizontal separation by a complete intervening hold (two intervening bulkheads) or engine room. Vertical separation alone does not meet this requirement. For "on deck" stowage, this segregation means a separation by the vessel's bridge or superstructure.



(ii) For barges aboard barge-carrying vessels the following requirements apply:

(A) For barges loaded on ships having vertical holds, separation by an intervening barge hold or engine room is required.

(B) For barges loaded on ships having horizontal barge levels, separate barge levels and a longitudinal separation by at least two intervening barges are required.

(d) In applying the minimum separation requirements specified in Table II to freight containers containing hazardous materials, the following additional requirements apply:

(1) Class segregation. Materials for which any segregation is specified in Table II may not be stowed in the same freight container.

(2) Vertical stowage requirements. Freight containers either closed or open may not be stowed in the same vertical line when segregation is required unless separated by a deck resistant to fire and liquid. When a solid substance is required to be stowed "Away from" another substance, it may be stowed above the other provided a minimum distance of eight feet intervenes. When "Separate by a complete cargo compartment or hold from" is required, freight containers separated by a deck resistant to fire and liquid may not be stowed in the same vertical line unless two such decks intervene.

(3) Horizontal stowage requirements.

(i) "Away from":

(A) For closed freight containers stowed on or under deck there are no restrictions in regard to freight container location in relation to other freight containers.

For explanation of abbreviations and reference marks, see last page of this tariff.

Segregation and Separation Chart of Hazardous Materials—Table I

Footnotes

[1]Explosives, class A, and explosives, class B, must not be loaded or stowed with chemical ammunition containing incendiary charges or white phosphorus either with or without bursting charges. Chemical ammunition of the same classification containing incendiary or white phosphorus may be loaded and stowed together.

[2]Bursters (explosive), boosters (explosive), or supplementary charges (explosive) without detonators when shipped by, to, or for the Department's of the Army, Navy, and Air Force of the United States Government may be stowed with any of the articles named, except those in columns 3, 4, 10 and 16.

[3]Detonating cord transported as class C explosive under provisions of §173.61(d) of this subchapter shall, as a minimum, be stowed "Separated from" other consignments of detonating cord.

Instructions

The letter X at an intersection of horizontal rows and vertical columns shows that those materials must not be loaded or stowed together.

(B) For open containers stowed on or under deck, a minimum separation of 20 feet must be provided in the fore and aft direction unless separated by a bulkhead resistant to fire and water or a minimum athwartships separation of 8 feet must be provided.

(ii) "Separated from"—

(A) For closed freight containers on or under deck a fore and aft separation of at least 20 feet must be provided unless separated by a bulkhead resistant to fire and water or a minimum athwartships separation of 16 feet must be provided.

(B) For open freight containers stowed on deck a minimum separation of 20 feet must be provided in the fore and aft direction or a minimum separation of 16 feet must be provided in the athwartships direction.

(C) Open freight containers stowed under deck must be separated by a bulkhead resistant to fire and water.

(iii) "Separate by a complete cargo compartment or hold from":

(A) For closed or open freight containers on deck a minimum separation of 20 feet must be provided in the fore and aft direction or a minimum separation of 24 feet must be provided in the athwartships direction.

(B) Closed freight containers under deck must be segregated by one bulkhead resistant to fire and water.

(C) Open freight containers under deck must be segregated by two bulk-heads resistant to fire and water.

(iv) "Separated longitudinally by an intervening complete cargo compartment or hold from":

(A) Closed or open freight containers on deck must be separated by a distance of 80 feet.

(B) Closed freight containers under deck must be separated by at least two bulkheads resistant to fire and water or one bulkhead resistant to fire and water and a total distance of at least 80 feet provided the containers are not stowed less than 20 feet from the intervening bulkhead.

(C) Open freight containers under deck must be separated by at least two bulkheads resistant to fire and water.

(e) In applying the minimum separation requirements specified in Table II to portable tanks and railroad and highway vehicles containing hazardous materials, paragraph (d) of this section pertaining to freight containers applies.

(f) A ferry vessel (when operating either as a passenger or cargo vessel) which cannot provide the type of separation required in this section may carry incompatible hazardous materials in separate highway or railroad vehicles if they are stowed to give the maximum possible separation.

SUBPART E

SPECIAL REQUIREMENTS FOR TRANSPORT VEHICLES LOADED WITH HAZARDOUS MATERIALS AND TRANSPORTED ON BOARD FERRY VESSELS

§ 176.88 Application. The requirements in this subpart are applicable to transport vehicles containing hazardous materials being transported on board ferry vessels and are in addition to any prescribed elsewhere in this subchapter. Vessels in a service similar to a ferry service, but not over a designated ferry route, may be treated as a ferry vessel for the purpose of this subpart if approved in writing by the District Commander.

§ 176.89 Control of transport vehicles. (a) A transport vehicle containing hazardous materials may be transported on board a ferry vessel, subject to the following conditions:

(1) The operator or person in charge of the vehicle shall deliver to the vessel's representative a copy of the shipping papers and certificate required by §§ 176.24 and 176.27;

(2) The vehicle shall be placed at the location indicated by the vessel's representative;

(3) The parking brakes of the vehicle shall be set securely to prevent movement;

(4) The motor of a highway vehicle shall be shut off and not restarted until the vessel has completed its voyage and docked;

(5) All vehicle lights shall be cut off and not relighted until the vessel has completed its voyage and docked;

(6) The operator of a highway vehicle shall remain with the vehicle;

(7) No repairs or adjustments must be made to the vehicle while it is on the vessel;

(8) No hazardous materials are to be released from the vehicle; and

(9) Any instructions given by the vessel's representative during the voyage, and during "roll on" and "roll off" operations must be observed.

(b) Smoking by any person in or around a vehicle is prohibited.

§ 176.90 Private automobiles. A private automobile which is carrying any explosive (except permitted fireworks or small arms ammunition) may not be transported on a passenger-carrying ferry vessel unless the explosive is in compliance with packaging, labeling, marking, and certification requirements of this subchapter. Permitted fireworks and small arms ammunition may be carried without the required packaging, labeling, marking, or certification if they are in light containers.

§ 176.91 Motorboats. A motorboat may be transported on board a ferry vessel with gasoline in the tank and two other containers not exceeding six gallons capacity each if they are in the motorboat, closed, and in good condition.

§ 176.92 Cylinders laden in vehicles. Any cylinder of compressed gas which is required to have a valve protection cap fitted in place may be transported on board a ferry vessel without having the valve protection cap in place when it is laden in a transport vehicle and is not removed from the vehicle while on the vessel.

§ 176.93 Vehicles having refrigerating or heating equipment. (a) A transport vehicle fitted with refrigerating or heating equipment using a flammable liquid or gas, or diesel oil as fuel, may be transported on a ferry vessel. However, the refrigerating or heating equipment may not be operated while the vehicle is on the vessel, unless the equipment complies with the following requirements:

(1) The installation is rigidly mounted and free of any movement other than normal vibration in operation;

(2) An easily accessible shutoff control is fitted to the fuel and electrical supply of the refrigerating or heating equipment; and

(3) The fuel storage tank, the fuel lines, the carburetor and any other fuel devices are tight and show no signs of leakage.

(b) If the vehicle operator desires to operate the refrigerating or heating equipment while on the vessel and the equipment is not fitted

with automatic starting and stopping devices, it must be started before the vehicle is taken on board. It may continue in operation while the vehicle is on the vessel, but if the motor stops it may not be restarted.

(c) In the case of a ferry vessel on a voyage exceeding 30 minutes duration, stowage must be provided for transport vehicles having refrigerating or heating equipment operated by internal combustion engines which will permit ready diffusion of exhaust gasses to the open air. Passenger vehicles may not be stowed in a position adjacent to vehicles operating internal combustion motors which expose the occupants of the passenger vehicles to excessive concentrations of exhaust fumes from such motors.

(d) A transport vehicle containing solid carbon dioxide as a refrigerant may be transported on a ferry vessel only if it is stowed in a well ventilated location.

SUBPART F

SPECIAL REQUIREMENTS FOR BARGES

§ 176.95 Application. The requirements prescribed in this subpart are applicable to the transportation of packaged hazardous materials on board barges. The requirements prescribed elsewhere in this subchapter for vessels similarly apply, except as provided in this subpart, to the transportation of packaged hazardous materials on board barges.

§ 176.96 Materials of construction. Only barges constructed of steel may be used to transport hazardous materials.

§ 176.97 Prohibition of dump scows. Dump scows are barges having cargo carrying compartments of the hopper type and fitted with a bottom dump or a side dump. This type of barge is prohibited from the carriage of any class of hazardous material.

§ 176.98 Stowage of hazardous materials on board barges. A material for which "on deck" stowage only is required by Column (7) of the Hazardous Materials Table (§ 172.101 of this subchapter) may be stowed "under deck" on unmanned barges.

§ 176.99 Permit requirements for certain hazardous materials. The permits required by §§ 176.100 and 176.415 for loading, unloading, and handling Class A Explosives, blasting agents, and certain ammonium nitrates must be obtained when these materials are loaded on, unloaded from, or handled on board a barge or barge carrying vessel. However, a barge loaded with these materials being placed on, removed from, or handled on board a barge carrying vessel is not subject to these permit requirements.

SUBPART G

DETAILED REQUIREMENTS FOR EXPLOSIVES

§ 176.100 Permit for Class A explosives. Before a shipment of Class A explosives may be discharged from, loaded on, handled, or restowed on board a vessel at any place in the United States, its territories, or its possessions (except the Panama Canal Zone), the carrier must obtain a permit from the Captain of the Port or his authorized representative. Exceptions to this permit requirement may be given only by the Captain of the Port or his authorized representative.

§ 176.105 Loading and unloading explosives. (a) In any particular port, Class A or Class B explosives (except special fireworks), may not be loaded on a vessel until all other cargo has been loaded on board the vessel. No explosives may be loaded or unloaded at the same time that other cargo is being handled.

(b) All explosives must be handled carefully. Packages of explosives may not be thrown, dropped, rolled, dragged, or slid over each other or over a deck.

(c) Packaged Class A explosives must be loaded and discharged from a vessel by using a chute as provided for in § 176.163 or by a mechanical pallet, skipboard, tray or pie plate, fitted with a cargo net or sideboards. A stuffed mattress at least 4 feet wide by 6 feet long and not less than 4 inches thick, or a heavy jute or hemp mat of these dimensions, must be used for depositing explosives lifted by mechanical means or slid on a chute. The maximum load handled in a pallet, skipboard, tray, or pie plate may not exceed 2,640 pounds. A rope net sling with a pallet, skidboard, pie plate or similar base must be loaded so that a minimum displacement of items occurs when it is lifted; the cargo net must completely encompass the bottom and sides of the load. Not more than one-third of the vertical dimension of any package may extend above the sideboard of a tray. A landing mattress and cargo net are not needed for palletized Class A explosives.

(d) Detonators, detonating primers, detonating fuzes, fulminate of mercury, and other initiating or priming explosives defined in this subchapter constitute distinct types of explosives. They must be handled with extreme care. A chute and mattress may not be used when loading or discharging this type of explosive.

(e) A "can" hook may not be used for raising or lowering a barrel, drum, or other container of explosives.

(f) A fire hose of sufficient length to cover the area of the loading operation and connected with an adequate water supply must be laid out and ready for use.

§ 176.110 Condition of package. A package of an explosive which is damp, moldy, stained or in any condition that indicates leakage may not be transported by vessel. The shipper must substantiate any claim that a stain is due to accidental contact with grease, oil, or a similar substance. In case of doubt, the package may not be transported.

§ 176.115 On deck stowage of explosives. (a) The following requirements apply to the stowage of explosives on deck:

(1) An explosive may not be stowed on or under a bridge deck.

(2) An explosive may not be stowed nearer than 25 feet in a horizontal plane to the crew's quarters.

(b) Explosives being transported on deck on a vessel between receiving points and delivery points within the same harbor, bay, sound, lake, or river including explosive anchorages must be covered with a fire resistant or flame-proof tarpaulin securely lashed in place.

§ 176.120 Preparation of decks, gangways, hatches, and cargo ports. (a) All decks, gangways, and hatches over or through which explosives must be passed or handled in loading or unloading must be freed of all loose material and must be swept broom clean before loading and unloading.

(b) All hatches and cargo ports opening into a compartment in which any explosives are stowed must be kept closed, except during loading or unloading of the compartment. After loading, hatches must be securely closed against the weather. If tarpaulins are used, they must be securely battened.

§ 176.125 Handling over deck loads on break-bulk vessels. A deck load over which explosives must be passed may not exceed the height of the hatch coaming, bulwark, or three feet, whichever is greater.

§ 176.130 Securing and dunnaging of packages of explosives. (a) Each package of explosives must be secured and dunnaged to prevent movement in any direction. Vertical restraints are not required if the shape of the package and the stuffing pattern precludes shifting of the load.

(b) Each keg of black powder must be stowed in an upright position with the bungs up and each tier must be completely dunnaged.

(c) Each package of explosives must be braced and dunnaged so

that it is not likely to be pierced by the dunnaging or crushed by any superimposed weight.

§ 176.135 Location of magazines. (a) Each magazine must be located in a hold, preferably a 'tween deck hold, that is dry and well ventilated. It may not be located in horizontal proximity to crew or passenger accommodations or below their living spaces. A magazine may not be built on or under the principal bridge structure or any navigation spaces. Except for inspection purposes, the hold or compartment in which a magazine is constructed must be closed off to all traffic after the explosives are stowed.

(b) A magazine may not be constructed in contact with a collision bulkhead or a bulkhead forming a boiler room, engine room, coal bunker or galley boundary unless there is no practicable alternative. If it is necessary to construct a magazine contacting one of these bulkheads, a cofferdam space of at least one foot must be provided between the permanent bulkhead and the magazine bulkhead. The cofferdam space must remain open to the free circulation of air and may not be used for stowage or storage purposes.

(c) When a magazine is constructed over a 'tween deck hatch, the hatch girders or strongbacks and the hatch covers forming the 'tween deck hatch must be of a design and size to carry the imposed load with safety. Covers of the 'tween deck and over-deck hatch must completely close the hatch opening and fit securely in place. 'Tween deck hatch covers of wood forming the base of a magazine must be completely covered with bulkhead panels approved by the Coast Guard under 46 CFR 164.008, or an equivalent thermal insulative material acceptable to the Captain of the Port. The joints of the panels must be staggered midway between the joints formed by the wooden hatch covers and the magazine must be constructed in accordance with the applicable provisions of §176.138, except that the panels must be completely covered with wood dunnage. No metal structural parts may protrude within any magazine. If the stowage of explosives extends into the over-deck hatch coaming, this coaming must be sheathed with wood. A magazine located in a hatchway may be constructed to occupy only a part of the hatchway. A portable magazine may be stowed in the square of a hatchway; it must be lashed or lommed to prevent movement.

(d) Any construction and location of a magazine for the stowage of explosives other than as provided in this subpart may be authorized only by the Commandant, (G-MTH).

§ 176.138 Construction of magazines. (a) All magazine construction, and other conditioning of holds, deck, or hatches on a vessel, must be completed before the actual loading of explosives on that vessel is initiated.

(b) The following requirements must be observed in the construction of a magazine for stowage of explosives requiring magazine stowage:

(1) Each magazine must be constructed of steel or wood;

(2) Each magazine constructed of steel must have the interior completely protected by wood sheathing not less than ¾-inch thick to form a smooth surface free of any projections. All metal stanchions within the magazine must be boxed with wood not less than ¾-inch thick. When the floor of a magazine would be on a steel deck or tank top, a floor of wood not less than 1 ¼-inch commercial lumber, constructed on bearers, must be installed. This floor may be portable, but must be tight to prevent movement;

(3) Each magazine constructed of wood must have the bulkheads forming the sides and ends constructed of 1-inch lumber, ¾-inch tongue and groove sheathing, or ¾-inch plywood, secured to uprights of at least 3-by 4-inch size, spaced not more than 18 inches apart and secured at the top, bottom, and center with horizontal bracing. When ¾-inch plywood is used, the uprights may be spaced on 24-inch centers. Uprights may not be stepped directly to a metal deck. A 2-by 4-inch header must be fitted against the underside of the overhead deck to receive the top of the uprights. Top of uprights fitted against channel beams may be wedged directly to the beam with 2-by 4-inch spacers fitted between. Upright framing must be secured so that nails do not penetrate the interior of the magazine. When a magazine is constructed as a permanent compartment in a vessel, increased size and finish of lumber and other methods of fastening may be used, provided all fastenings are recessed below the surface of the boarding to avoid any projections within the interior of the magazine. All boarding must be fitted and finished to form a smooth surface within the interior of the magazine.

(i) The construction must separate all containers of explosives from contact with metal surfaces of the structures of the vessel. When a metal stanchion, post, or other obstruction is located in the interior area of the magazine, this obstruction must be completely covered with wood at least ¾-inch thick secured with nails or screws. All screws or nails used in the interior of the magazine for fastening must be counter-sunk below the surface of the wood. Flooring of each magazine must be not less than 1¼-inch commercial lumber, constructed on bearers. This floor may be portable but must be tight to prevent movement. Each door of a magazine must be of substantial construction, fitted reasonably tight in its jamb, and provided with a locking method of a tamper-proof type. The door must be easily accessible;

(4) Plywood ¾-inch thick may be used if the bulkheads forming the sides of a magazine are to be constructed directly against the ship's side and battens are fitted, and if the plywood is securely fastened to vertical furring strips of not less than 1-by 3-inch material, spaced not more than 18 inches apart;

(5) A magazine constructed in accordance with the provisions of paragraphs (b)(2) and (3) of this section, in which it is proposed to stow containers of explosives within 12 inches of the overhead beams or hatch coaming must have such beams and coaming sheathed with wood as prescribed by the provisions of paragraph (b)(2) of this section for stanchions; and

(6) When a Class A explosive magazine exceeds 40 feet in any direction, a partition bulkhead must be fitted in the magazine as near half length as practicable, extending from the deck to at least the top of the stowage. This partition bulkhead must be constructed to the same scantlings as the sides of the magazine, except the boardings may be spaced not more than 6 inches apart alternately on both sides of the uprights. Nail points may not protrude beyond the surface of any boardings. The bulkhead must be constructed before loading commences. This bulkhead is not required when the explosives are palletized.

§ 176.141 Entire hold or compartment forming magazine. When a complete hold or compartment is used for the stowage of explosives requiring magazine stowage, the entire hold or compartment may be considered a magazine. Any frames or bulkhead stiffeners protruding into the hold or compartment must be effectively sheathed to provide a smooth surface. Overhead beams need not be sheathed when the explosives are stowed more than 12 inches from these beams. If explosives are stowed up to the overhead beams and in the square of the hatch formed by the coaming, the overhead beams, including the hatch coaming, must be effectively sheathed. The installation of sheathing must be in accordance with the specifications for the construction of a magazine. However, when cargo battens are fitted to the vessel's shell or a bulkhead forming part of the hold or compartment, the sheathing may be secured vertically to the battens.

§ 176.144 Ventilation of magazines. Each magazine must be effectively ventilated. Each cowl ventilator's weather deck opening must be covered with a 30x30 or finer mesh wire screen, if it leads into a magazine or to an area in the same hold adjacent to a magazine. A magazine which occupied only a portion of a hold, and is not fitted with a ventilator entering into the magazine must be constructed to leave an open space of not more than one inch below the overhead frame.

§ 176.147 Metal lockers for stowage of fireworks. Each metal locker for the stowage of special fireworks which are permitted to be transported on board passenger vessels must meet the following requirements:

(a) **Size.** The cubic capacity of the locker may not exceed 150 cubic feet.

(b) **Division.** If the locker is more than 5 feet in height, it must be fitted with a division shelf at about ½ height constructed to carry the imposed load without deflection.

(c) **Gauge.** The thickness of steel used in the construction of the locker may not be less than 16 gauge steel.

(d) **Type of construction.** The locker must have a completely smooth interior surface. No stiffener element may project beyond any interior surface. The locker must be fitted with a top and bottom closure unless it is "built-in" to the structure of the vessel with the overhead and deck forming the top and bottom of the locker. "Built-in" construction is not authorized if the overdeck or underdeck is wood.

(e) **Closures.** Closures may be the removable plate or hinged door type if the locker is flame tight when closed. A locker having a portable plate closure must have an accessible side opening to permit insertion of a fire hose nozzle for flooding. The opening must be at least 3 inches in diameter, not more than 12 inches below the top of the locker, and fitted with a metal flap cover to preserve the flame tight requirement.

(f) **Location.** The locker must be readily accessible from a companionway or cargo hatch. In vessels constructed of wood, the locker must be easily observable by a watchman on his rounds. The locker must be secured to prevent shifting in a seaway.

§ 176.150 Portable magazine for stowage of explosives. (a) Each portable magazine used for the stowage of explosives on board a vessel must meet the following requirements:

(1) It must be watertight, constructed of wood or of metal lined with wood at least ¾-inch thick and with a capacity of no more than 110 cubic feet.

(2) All inner surfaces must be smooth and free of any protruding nails, screws, or other projections.

(3) If constructed of wood, the scantlings and arrangement must be not less than those required by §176.138. It must be provided with a strong close-fitting, hinged cover or door with hasps and padlock.

(4) When constructed of metal, the metal must be not less than ⅛-inch thick.

(5) Runners, bearers, or skids must be provided to elevate the magazine at least 4 inches from the deck. Pad eyes, ring bolts, or other suitable means must be provided for securing. The magazine must be lashed, chocked, or braced to prevent movement in any direction.

(6) The magazine must be stowed in the square of a 'tween deck hatch unless another stowage is authorized by § 176.155.

(7) The magazine must be marked on the top and four sides, in letters at least 3 inches high, as follows:

"EXPLOSIVES—HANDLE CAREFULLY—KEEP LIGHTS AND FIRE AWAY".

(b) A portable magazine may be used for the stowage of explosives exceeding 110 cubic feet under such conditions of construction, handling, and stowage that meet the approval of the Commandant (G-MTH).

§ 176.155 Stowage of small quantities of explosives. (a) A District Commander may approve the stowage of small quantities of explosives in a location other than "under deck", such as in an isolated compartment, mast or deck house, or in a magazine (which may be portable) secured "on deck" if:

(1) No other stowage is available;

(2) The compartment or stowage area is sheathed with wood;

(3) The boundary of the compartment or magazine is at least 8 feet from the vessel's side; and

(4) The boundary of the explosives stowage area is separated from other incompatible explosives and other hazardous materials by at least one permanent steel deck or bulkhead and a distance of 25 feet or by at least two steel decks or bulkheads and a distance of 10 feet. An intervening steel deck or bulkhead is not required on deck if the separation distance between these materials is not less than 40 feet in any direction.

§ 176.156 Stowage of explosives with combustible liquids. Class A or B explosives may not be stowed in the same hold or compartment with combustible liquids.

§ 176.157 Stowage of explosives in holds containing coal. An explosive may not be stowed in a hold containing coal or in a hold above or adjacent to a hold containing coal.

§ 176.158 Stowage of explosives with fireworks. Fireworks may not be stowed in the same hold in which there is a magazine containing explosives.

§ 176.159 Stowage of explosives and non-dangerous cargo. Each magazine in which explosives are stowed must be protected from damage which may be caused by any heavy cargo stowed in the same hold. When any shafting, steel bar, pipe, heavy machinery, or similar type of cargo is stowed in the same hold with explosives, it must be isolated, dunnaged, or secured to prevent damage to the magazine under any conditions likely to be encountered during the voyage.

§ 176.163 Requirements of equipment for handling explosives. (a) A chute for loading and unloading explosives must be constructed of smooth planed boards not less than one inch thick with side guards of the same material at least 4 inches high. Only brass screws may be used to assemble the sides and bottom. D-shaped wooden strips or runners not more than six inches apart and running the length of the chute must be fastened to the upper surface of the slide by glue and wooden dowels extended through the bottom of the chute. Four lashing rings must be provided, one at each outside corner of the chute, for purposes of securing during use.

(b) A roller conveyor constructed of aluminum or other non-sparking material may be used for loading or unloading explosives. The conveyor must be grounded when in use.

(c) [Reserved]

(d) Before any explosives are loaded or unloaded from a vessel, the master of the vessel must examine the condition and working order of all slings, carts, baskets, booms, chutes, mattresses, tackle and other equipment to be used in the transfer operation. This includes equipment belonging to the vessel, stevedores, and any contractors.

(e) Any equipment which in the judgment of the master of the vessel is not in a safe working condition must be rejected. He shall prohibit its use and take the precautions necessary to ensure that the rejected equipment is not used to load or unload explosives. The master of the vessel shall ensure that all equipment used in the handling of explosives is in good working order. If any part of the equipment shows any defect or is damaged in use, work must be stopped immediately and the damaged or defective equipment repaired or replaced before permitting the loading or unloading to continue.

§ 176.165 Installation of loading chute and roller conveyor. A chute or roller conveyer to be used in loading or unloading explosives may not be positioned or inclined in a manner which will permit any sliding package to violently strike any other package on or at the bottom of the chute or conveyer. Personnel may be stationed alongside the chute or conveyer to control the velocity of the packages to prevent any violent shock. Each chute must be wiped with machine oil before any package of explosives is transferred.

§ 176.167 Lights, tools, and equipment. (a) No artificial light except electric lights or electric lamps or floodlights may be used on board a vessel during the loading or unloading of explosives.

(b) The carrier shall provide flashlights of a non-sparking type for persons required to enter holds in which explosives are stowed.

(c) No person on board a vessel loading, unloading or transporting explosives may carry firearms, matches, bale hooks, or metallic tools of other than the nonsparking type on board.

(d) No person engaged in loading or unloading Class A or Class B explosives may wear boots or shoes shod or strengthened with iron nails or other metal, unless the boots or shoes are covered with rubber, leather, felt or other non-sparking material.

§ 176.169 Fires. (a) No fire is permitted on any dock, lighter, or vessel involved in the loading or unloading of explosives during the loading or unloading unless the fire is necessary.

(b) If a fire is necessary it must be properly safeguarded and under the direct observation of a competent person assigned for that purpose by the master of the vessel for the entire period of cargo transfer.

§ 176.171 Smoking. (a) Smoking is prohibited on and near any vessel loading or unloading explosives at a waterfront facility. The Coast Guard officer having jurisdiction may designate smoking areas at a safe distance from the vessel. "NO SMOKING" signs must be posted during operations of handling, loading, or unloading the cargo. At least one "NO SMOKING" sign must be conspicuously posted on the pier at a reasonable distance from the vessel during the handling, loading or unloading of explosives.

(b) Smoking is prohibited on and near any vessel handling, loading or unloading explosives at an explosives anchorage. However, the Coast Guard officer having jurisdiction may, with the concurrence of the master or person in charge of the vessel, designate a compartment as a smoking area. "NO SMOKING" signs must be posted conspicuously outside the entrance to this compartment and in other parts of the vessel during the loading or unloading operations.

§ 176.173 Liquor or drugs. A person who the master of a vessel finds, in his judgment, to be under the influence of liquor or drugs, may not be permitted on board during the loading, unloading, or transporting of explosives.

§ 176.177 Magazine vessels. (a) **General.** The requirements of this section are applicable to magazine vessels and are in addition to any prescribed elsewhere in this subchapter.

(b) **Type vessel authorized.** A single deck vessel with or without a house on deck is the only type vessel that may be used as a magazine vessel. A magazine vessel may not be moved while explosives are on board.

(c) **Location of explosives.** Class A and Class B explosives in excess of 5,000 pounds, stored in any magazine vessel must be stowed below deck. No explosive may be stowed on deck unless the vessel is fitted with a deck house having a stowage area which meets the requirements in this subpart for the stowage of explosives. Detonators, Class A explosives, and detonating primers, Class A explosives may not be stored on the same magazine vessel with other Class A explosives or Class B explosives.

(d) **Explosives storage spaces.** Any compartment on a magazine vessel used for the stowage of explosives must be completely ceiled with wood so as to provide a smooth interior surface. Each metal stanchion in the compartment must be boxed in the same manner. An overhead ceiling is not required when the overdeck is weathertight. All nail and bolt heads must be countersunk and any exposed metal must be covered with wood.

(e) **Initiating explosives, detonators and detonating primers.** No initiating or priming explosive may be stowed in the same compartment with any other explosive when there is any high explosive on the same magazine vessel. Detonators and detonating primers must be stowed at least 25 feet from any bulkhead forming a boundary of a compartment containing any other explosives.

(f) **Dry storage spaces.** A magazine vessel having a dry storage space capable of being used for any purpose whatsoever must have a cofferdam at least 24 inches wide fitted between the dry storage space and each adjacent compartment containing explosives. The cofferdam must be constructed of wood or steel, formed by two tight athwartship bulkheads extending from the skin of the vessel to the overdeck. If the cofferdam extends to the weather deck, a watertight hatch must be fitted in the deck to provide access to the cofferdam.

(g) **Lighting.** Non-sparking, battery-powered, self-contained electric lanterns or non-sparking hand flashlights are the only means of artificial light authorized.

(h) **Living quarters.** Living quarters must be fitted on the inside with asbestos board or other equivalent fire resistant material. Bracketed ship's lamps are the only lighting fixtures authorized to be used in the living quarters. Any stove used for heating or cooking must be securely fastened and may not be mounted closer than 6 inches to the deck or sides of the house. Any smoke pipe for the stove which passes through the roof of the house must be kept at least 3 inches away from any woodwork. Each smoke pipe must be protected by a layer of asbestos, an air space of at least 1 inch, and a metal collar of at least 16

gauge sheet secured only on the weather side of the roof. There may be no opening from any living quarters into any stowage compartment.

(l) **Storage of other hazardous materials.** Magazine vessels having explosives on board may not be used for the storage of any other hazardous material.

(j) **Magazine vessel's stores.** Articles for use as stores on board any magazine vessel must be in compliance with the requirements of 46 CFR Part 147.

(k) **Matches.** Safety matches requiring a prepared surface for ignition are the only type of matches authorized for use on board a magazine vessel. They must be kept in a metal box or can with a metal cover and stored in the custodian's living quarters.

(l) **Firearms.** Firearms and ammunition (other than cargo) are not permitted on board a magazine vessel.

(m) **Fire extinguishing equipment.** No explosive may be received, stored, or dispensed from any magazine vessel, unless four 2½-gallon extinguishers of the soda-acid type and four 2-gallon pails filled with dry sand are placed about the vessel. The contents of each liquid extinguisher continuously exposed to a temperature lower than 40° F. (45° C.) must be modified or otherwise protected to prevent freezing.

(n) **Supervision.** A magazine vessel containing explosives must be continuously attended by a custodian employed for that purpose by the vessel's owner.

(o) **Unauthorized persons on magazine vessels.** The custodian of a magazine vessel shall prevent unauthorized persons from coming on board unless it is necessary to abate a hazard to human life or a substantial hazard to property.

(p) **Repacking of explosives on board.** No explosive may be repacked on board a magazine vessel. Any broken or damaged package must be placed in an open box and carried to a safe location for repacking or other disposition.

(q) **Work boat.** Each magazine vessel must be equipped with a work boat.

(r) **Life preservers.** One approved personal flotation device must be available for each person employed on a magazine vessel.

(s) **Fenders.** Each magazine vessel must be fitted with fenders in sufficient number and size to prevent any vessel being up alongside from coming in contact with the hull.

SUBPART H

DETAILED REQUIREMENTS FOR COMPRESSED GASES

§ 176.200 General stowage requirements. (a) Each package of compressed gas being transported by vessel must be prevented from making direct contact with the vessel's deck, side or bulwark by dunnage, shoring, or other effective means.

(b) When cylinders of compressed gas being transported by vessel are stowed horizontal, each tier must be stowed in the cantlines of the lower tier and the valves on cylinders in adjacent tiers must be at alternate ends of the stow. Each tier may be stepped back and the ends alternated in order to clear the flange. Lashing must be provided to prevent any movement.

(c) When cylinders of compressed gas being transported by vessel are stowed in a vertical position they must be stowed upright in a block and cribbed or boxed in with suitable sound lumber. The box or crib must be dunnaged at least 4 inches off any metal deck. The cylinders in the box or crib must be braced to prevent any movement. The box or crib must be securely chocked and lashed to prevent any movement.

(d) A compressed gas packaging, bearing a Poison label, must be stowed away from all foodstuffs.

(e) Compressed gas may not be stowed "on deck" over a hold or compartment containing coal.

§ 176.205 Under deck stowage requirements. (a) When compressed gas is stowed below deck, it must be stowed in a hold or compartment capable of being ventilated with no source of artificial heat and clear of crew and passenger living spaces. No bulkhead or deck of the hold or compartment may be a common boundary with any boiler room, engine room, coal bunker, galley or boiler room uptake.

(b) When flammable compressed gas is stowed below deck, it must be stowed in a hold or compartment which complies with paragraph (a) of this section and the following requirements:

(1) Each hold or compartment must be ventilated.

(2) Each hold or compartment must be equipped with an overhead water sprinkler system or fixed fire smothering system.

(3) Each electrical power line in the hold or compartment must be protected by a strong metal covering to prevent crushing by cargo being stowed against it.

(4) Except when fitted with electrical fixtures of the explosion-proof type, each electrical circuit serving the hold or compartment must be disconnected from all sources of power. No circuit may be energized until the flammable compressed gas cargo and any vapors have been removed from the hold or compartment. Portable lighting of the explosion-proof type may be used if the source of power is from electrical outlets outside the hold or compartment and above the weather deck.

(5) Any opening in a common bulkhead of an adjacent hold or compartment must be securely closed off and made gas tight, unless the adjacent hold or compartment is also used for the stowage of flammable compressed gas.

(6) Full and efficient hatch covers must be used. Tarpaulins, if fitted, must be protected by dunnaging before overstowing with any cargo. Each tarpaulin must be in one piece and free of rents, tears, and holes.

(7) A fire screen must be fitted at the weather end of each vent duct leading from the hold or compartment. The fire screen must completely cover the open area. It must consist of two layers of fine brass wire screen at least 20 x 20 mesh or finer, spaced not less than ½ inch or more than 1½ inches apart. The screen may be removable if means for securing it in place when in service are provided.

(8) The hold or compartment may not be fitted with any gooseneck type vent trunk head.

(9) All electrical apparatus located in the hold or compartment must have a positive means for disconnecting from power outside the hold or compartment containing any flammable compressed gas.

§ 176.210 On deck stowage requirements. Cylinders of compressed gas being transported by vessel must be protected from the direct rays of the sun by structural erections or awnings. A tarpaulin covering the cylinders is not acceptable if it comes in contact with them.

§ 176.220 Smoking or open flame and posting of warning signs. (a) Smoking or the use of open flame is prohibited in any hold or compartment containing a flammable compressed gas, near any flammable compressed gas stowed on deck, or near any ventilator leading to a hold containing this material.

(b) A sign carrying the legend:

FLAMMABLE VAPORS
KEEP LIGHTS AND FIRE AWAY

NO SMOKING

must be conspicuously posted at each approach to an "on deck" flammable compressed gas stowage area and near each cargo hold ventilator leading to a hold containing this material. The sign must be painted on a white background using red letters. The letters may not be less than 3 inches high.

§ 176.225 Stowage of chlorine. Chlorine may not be stowed in the same hold or compartment with metallic sodium or potassium, phosphorus, copper or brass leaf sheets, powdered antimony, turpentine, ammonia, finely divided organic material, coal gas, hydrogen, or acetylene.

§ 176.230 Stowage of flammable compressed gases. Flammable compressed gases transported in Specification 106A and 110A multi-unit tank car tanks must be stowed on deck only, and must be shaded from radiant heat.

SUBPART I

DETAILED REQUIREMENTS FOR FLAMMABLE LIQUIDS AND COMBUSTIBLE LIQUIDS

§ 176.305 General stowage requirements. (a) Except as otherwise provided in § 176.76(g), a package containing a flammable liquid and equipped with a vent or safety relief device must be stowed "on deck" only.

(b) The following requirements apply to each hold or compartment in which a flammable or combustible liquid is being transported:

(1) The hold or compartment must be ventilated except that the stowage of packaged flammable liquids with a capacity of 110 gallons or less and with flash points above 73° F. may be in non-ventilated holds.

(2) Stowage of these liquids within 20 feet of a bulkhead which forms a boundary or deck of a boiler room, engine room, coal bunker, galley, or boiler room uptake is not permitted. If the amount of the liquid to be stowed in a hold will not permit compliance with the requirement for a 20-foot separation, less separation distance is authorized if at least one of the following conditions exists:

(i) The bulkhead or deck is covered with at least 3 inches of insulation on the entire area subject to heat;

(ii) A temporary wooden bulkhead at least 2 inches thick is constructed in the hold at least 3 inches off an engine room or 6 inches off a boiler room bulkhead, covering the entire area of the bulkhead that is subject to heat and the space between the permanent bulkhead and the temporary wooden bulkhead is filled with bulk asbestos or mineral wool; or

(iii) A temporary wooden bulkhead is constructed of at least one inch thick tongue and groove sheathing, located 3 feet from the boiler room or engine room bulkhead, and filled with sand to a height of 6 feet above the tank top, or, if the cargo compartment is located between decks, 3 feet of sand.

(3) Combustible liquids may be stowed in a hold within 20 feet of a common bulkhead with the engine room if the means of vessel propulsion is internal combustion engines; and

(4) Each cargo opening in a bulkhead of an adjacent hold must be securely closed off and made gas tight, unless the adjacent hold is also used for the stowage of a flammable or combustible liquid.

(c) In addition to the requirements specified in paragraph (b) of this section, the following requirements apply to each hold or compartment in which a flammable liquid is transported:

(1) Full and effective hatch covers must be used. Tarpaulins, if fitted, must be protected by dunnaging before overstowing with any cargo. Each tarpaulin must be in one piece and free of rents, tears, and holes;

(2) If flammable liquids in excess of one ton are stowed under deck in any one hold or compartment, a fire screen must be fitted at the weather end of each vent duct leading from that hold or compartment. The fire screen must completely cover the open area. It must consist of two layers of fine brass wire screen at least 20 × 20 mesh or finer spaced not less than ½ inch or more than 1½ inches apart. The screen may be removable if means for securing it in place when in service are provided;

(3) Each electrical power line in the hold or compartment must be protected by a strong metal covering to prevent crushing by cargo being stowed against it;

(4) Except when fitted with electrical fixtures of the explosion-proof type, each electrical circuit serving the hold or compartment must be disconnected from all sources of power from a point outside the hold or compartment containing the flammable liquid. No circuit may be energized until the flammable liquids and any vapors have been removed from the hold or compartment. Portable lighting of the explosion-proof type may be used if the source of power is from electrical outlets outside the hold or compartment and above the weather deck;

(5) Flammable liquids in excess of one ton, except flammable liquids with a flashpoint above 73° F., may not be transported in any hold or compartment that is fitted with a gooseneck type of vent head.

(d) On a passenger vessel, each hold or compartment used to transport flammable liquids must be equipped with an overhead water sprinkler system or fixed fire smothering system.

(e) On a passenger vessel, each hold or compartment used to transport a flammable liquid under a passenger space must have an overdeck of an A-60 type construction (see 46 CRF 72.05-10(c)(1)) or equivalent or have its underside covered with at least 3 inches of noncombustible insulation.

(f) No flammable liquid in a drum or wooden case, having inside packagings of more than one quart capacity each, may be stowed as a beam filler. A wooden barrel, a wooden box or a fiberboard box, with any flammable liquid in inside packagings of not more than one quart capacity each, may not be stowed as a beam filler unless it is possible to stow and observe any "THIS SIDE UP" marking.

§ 176.315 Fire protection requirements. (a) For each 21,000 U.S. gallons (or part thereof) of any flammable or combustible liquid being transported on board a vessel in a portable tank, tank car, or a tank truck, there must be provided at least one B-V semiportable foam (40 gallon capacity) (see 46 CFR 95.50), dry chemical (100 lbs. minimum capacity) or equivalent fire extinguisher, or a fire hose fitted with an approved portable mechanical foam nozzle with pick-up tube and two 5 gallon cans of foam liquid concentrate. Each foam system must be suitable for use with each flammable or combustible liquid it is intended to cover. Each fire extinguisher must be accessible to the tank it is intended to cover.

(b) The fire hose at each fire hydrant in the vicinity of flammable or combustible liquid stowage areas must be fitted with an approved combination spray nozzle.

(c) The pressure must be maintained in the vessel's fire mains during the loading and unloading of the flammable or combustible liquid.

(d) Two 15-pound capacity hand portable dry chemical or two portable 2½-gallon foam-type extinguishers must be accessible to any packaged flammable or combustible liquid and suitable for use with the lading.

(e) The requirements of this section do not apply to portable tanks and their contents authorized under 46 CFR 93.35 or 46 CFR Part 64.

§ 176.320 Use of hand flashlights. Each hand flashlight used in a hold or compartment containing any flammable liquid, or on deck near any flammable liquid, must be of the non-sparking type.

§ 176.325 Smoking or open flame and posting of warning signs. (a) Smoking or the use of open flame is prohibited in any hold or compartment containing a flammable or combustible liquid, near any flammable or combustible liquid stowed on deck, or near any ventilator leading to a hold containing such material.

(b) A sign carrying the legend:

FLAMMABLE VAPORS
KEEP LIGHTS AND FIRE AWAY

NO SMOKING

must be conspicuously posted at each approach to a flammable or combustible liquid stowed "on deck" and near each cargo-hold ventilator leading to a hold or compartment containing this material. This sign must be painted on a white background using red letters. The letters may not be less than 3 inches high.

§ 176.331 Transportation of flammable liquids with foodstuffs. Each package containing a flammable liquid which bears a Poison label must be stowed separate from foodstuffs.

§ 176.340 Combustible liquids in portable tanks. (a) Combustible liquids may be transported by vessel in portable tanks only as specified below:

(1) Portable tanks authorized in § 173.119 of this subchapter.

(2) Portable tanks approved and maintained in accordance with 46 CFR 98.35, constructed prior to October 1, 1974. Such tanks may continue in service only until October 1, 1984.

(3) Portable tanks approved by the Commandant of the Coast Guard (G—MTH).

SUBPART J

DETAILED REQUIREMENTS FOR FLAMMABLE SOLIDS, OXIDIZERS, ORGANIC PEROXIDES, AND BLASTING AGENTS

§ 176.400 Stowage of blasting agents, oxidizers and organic peroxides. (a) No blasting agents oxidizer or organic peroxide being transported by vessel may be stowed in the same hold or compartment with any readily combustible material such as a combustible liquid, a textile product, or with a finely divided substance such as an organic powder.

(b) No blasting agents, oxidizer or organic peroxide being transported by vessel may be stowed in a hold or compartment containing sulfur in bulk, or in any hold or compartment above, below, or adjacent to one containing sulfur in bulk.

§ 176.405 Stowage of charcoal. (a) Before stowing charcoal on a vessel for transportation, the hold or compartment in which it is to be stowed must be swept broom clean. All residue of former cargo, including a petroleum product, a vegetable or animal oil, nitrate, or sulfur, must be removed.

(b) Charcoal packed in bags and offered for transportation on board a vessel in a quantity over one ton must be loaded so that the bags are laid horizontally and stacked with space for efficient air circulation. If the bags are not compactly filled and closed to avoid free space within, vertical and horizontal dunnage strips must be laid between the bags. Space for ventilating must be maintained near bulkheads, the shell of the vessel, the deck and the overhead. No more than 40 tons of charcoal may be stowed in a hold or compartment when other stowage space is available. If the unavailability of hold or compartment space requires the stowage of a larger amount, the arrangement of the stow for ventilation must be adjusted to ensure a sufficient venting effect.

(c) Any loose material from bags broken during loading must be removed. Broken bags may be repacked or have the closures repaired and the repaired bags restowed.

(d) Charcoal "screenings" packed in bags must be stowed to provide spaces for air circulation between tiers regardless of the quantity stowed.

§ 176.410 Blasting agents, ammonium nitrate and ammonium nitrate-mixtures. (a) This section prescribes requirements to be observed with respect to transportation of each of the following hazardous materials by vessel:

(1) Blasting agents and ammonium nitrate-fuel oil mixtures.
(2) Ammonium nitrate (no organic coating).
(3) Ammonium nitrate (organic coating).
(4) Ammonium nitrate-carbonate mixture.
(5) Ammonium nitrate fertilizer *(containing no more than 0.2 percent carbon)*
(6) Ammonium nitrate mixed fertilizer.
(7) Ammonium nitrate phosphate.

(b) This section does not apply to any non-acidic ammonium nitrate mixed fertilizer containing 13 percent or less ammonium nitrate, less than 5 percent organic material, no other oxidizing material, and which does not meet the criteria for any other hazard class set forth in Part 173 of this subchapter.

(c) When blasting agents or any of the ammonium nitrates listed in paragraph (a) of this section is transported by vessel;

(1) It must be stowed well away from any steam pipe, electric circuit, or other source of heat;

(2) Smoking may not be permitted except in designated areas away from the material and "NO SMOKING" signs must be posted in accordance with §176.60;

(3) Fire hoses must be connected, laid out, and tested before loading or unloading commences; and

(4) A fire watch must be posted in the hold or compartment where the material is being loaded or unloaded.

(d) When blasting agents or any of the ammonium nitrates listed in paragraph (a) of this section are transported in bags by vessel:

(1) The requirements specified in paragraph (c) of this section must be complied with;

(2) The temperature of the bagged material may not exceed 130° F;

(3) Minimum dunnage and sweatboards must be used to prevent any friction or abrasion of bags, and to allow for the circulation of air and access of water in the event of fire;

(4) The bags must be stowed from side to side, out to the sweatboards;

(5) A space of 18 inches must be provided between any transverse bulkhead and the bags;

(6) The bags must be stowed so as to provide an 18-inch athwartship trench along the centerline of the compartment, continuous from bottom to top;

(7) The bags must be stowed so as to provide an 18-inch amidship trench running fore and aft from bulkhead to bulkhead;

(8) The bags may not be stowed closer than 18 inches from any overhead deck beam;

(9) The bags must be stowed so as to provide vent flues 14 inches square at each corner of the hatch continuous from top to bottom;

(10) Trenching must be accomplished by alternating the direction of the bags in each tier (bulkheading); and

(11) The bags must be blocked and braced as necessary to prevent shifting of the bagged cargo adjacent to any trench area.

(e) Blasting agents or any of the ammonium nitrates listed in paragraph (a) of this section may be transported by vessel with dynamite, commercial boosters, or other non-priming, non-initiating types of explosives which are compatible with dynamite:

(1) In the same hold or compartment with the explosives or in a hold or compartment adjacent to the explosives if the blasting agents or ammonium nitrate is packaged in strong metal cans, metal or fiber drums, barrels, kegs, or wooden or fiberboard boxes with noncombustible inside packagings; or

(2) In proximity to the explosives, if the two are separated by a steel deck or bulkhead, or a fire retardant wooden bulkhead built to the specifications of §176.138(b)(3). The deck or bulkhead must be sheathed on the oxidizing material's stowage side with an appropriate fire-resistant insulation.

(f) An ammonium nitrate mixture containing any ingredient which would accelerate the decomposition of ammonium nitrate under conditions incident to transportation may not be transported by vessel.

§ 176.415 Permit requirements for blasting agents, ammonium nitrates, and certain ammonium nitrate mixtures. (a) Except as provided in paragraph (b) of this section, before any of the following material is loaded on or unloaded from a vessel at any waterfront facility in the United States, its territories, or its possessions (except Panama Canal Zone), the carrier concerned must obtain written permission from the nearest District Commander, U.S. Coast Guard or Captain of the Port:

(1) Ammonium nitrate (organic coating).

(2) Ammonium nitrate mixtures containing more than 60 percent ammonium nitrate, ammonium nitrate-phosphate, or blasting agents or ammonium nitrate-fuel oil mixtures, packaged in a paper bag, burlap bag, or other nonrigid combustible packaging, or any rigid container with combustible inside packagings.

(3) Any other ammonium nitrate or ammonium nitrate mixture not listed in §176.410(a) or (b).

(b) Any of the following may be loaded on or unloaded from a vessel at any waterfront facility without a permit:

(1) Ammonium nitrate (no organic coating) in a rigid container with noncombustible inside packaging.

(2) Ammonium nitrate fertilizer (containing no more than 0.2 percent carbon) if the nearest District Commander, U.S. Coast Guard or Captain of the Port is notified at least 24 hours in advance of any loading or unloading in excess of 1,000 pounds in any one vessel (See footnote 1 to §173.182).

(3) Ammonium nitrate-phosphate in a rigid container with noncombustible inside packaging.

(4) Ammonium nitrate-carbonate mixture containing 40 percent or more fine calcium carbonate or dolomite.

(5) Non-acidic ammonium nitrate mixed fertilizer containing less than 5 per cent organic material and 60 percent or less ammonium nitrate.

(6) Blasting agents or ammonium nitrate-fuel oil mixtures in a rigid container with non-combustible inside packaging.

(c) Before a permit may be issued the following requirements must be met in addition to any others the District Commander or Captain of the Port may require:

(1) If the material is ammonium nitrate (organic coating), ammonium nitrate-phosphate, or blasting agents or ammonium nitrate-fuel oil mixture in non-rigid combustible packaging or in a rigid container with combustible inside packaging, it must be loaded or unloaded at a facility remote from populous areas or high value or high hazard industrial facilities so that in the event of fire or explosion loss of lives and property may be minimized.

(2) If the material is ammonium nitrate (organic coated) in rigid metal drums with non-combustible inside packagings, an ammonium nitrate mixture containing more than 60 percent ammonium nitrate, or ammonium nitrate-phosphate, in rigid containers with combustible inside packagings, it must be loaded or unloaded at a facility removed from congested areas or high value or high hazard industrial facilities;

(3) Each facility at which the material is to be loaded or unloaded must conform with the requirements of the port security and local regulations and must have an abundance of water readily available for fire fighting; and

(4) Each facility at which the material is to be loaded or unloaded must be located so that each vessel to be loaded or unloaded has an unrestricted passage to open water. Each vessel must be moored bow to seaward, and must be maintained in a mobile status during loading, unloading, or handling operations by the presence of tugs or the readiness of engines. Each vessel must have two wire towing hawsers, each having an eye spice, lowered to the water's edge, one at the bow and the other at the stern.

(5) If the material is ammonium nitrate (organic coated), ammonium nitrate-phosphate, an ammonium nitrate mixture containing more than 60 percent ammonium nitrate, or blasting agents or ammonium nitrate-fuel oil mixtures in non-rigid combustible packaging and loaded in freight containers or roll-on, roll-off highway vehicles, it may be loaded or unloaded at a non-isolated facility provided that facility meets the approval of the Coast Guard Captain of the Port.

§ 176.419 Flammable solids or oxidizers transported with foodstuffs. Each package containing a flammable solid or an oxidizer, bearing a Poison label and being transported on a vessel must be stowed separate from foodstuffs.

SUBPART K

[RESERVED]

SUBPART L

DETAILED REQUIREMENTS FOR POISON A, POISON B, AND IRRITATING MATERIALS

§ 176.600 General stowage requirements. (a) Each package bearing a Poison label and being transported on a vessel must be stowed well away from living quarters and any ventilation ducts serving living quarters and separate from foodstuffs.

(b) Each package bearing both a Poison Gas label and a Flammable Gas label must be segregated as a flammable compressed gas.

§ 176.605 Care following leakage or sifting of poisons A or B. A hold or compartment containing a package of Poison A or B which has leaked or sifted must be thoroughly cleaned and decontaminated after the cargo is unloaded and before the hold or compartment is used for the stowage of any other cargo.

SUBPART M

DETAILED REQUIREMENTS FOR RADIOACTIVE MATERIALS

§ 176.700 General stowage requirements.

(a) Radioactive materials must not be stowed in the same hold with mail bags.

(b) A package of radioactive materials which in still air has a surface temperature more than 5°C(9°F) above the ambient air may not be overstowed with any other cargo. If the package is stowed under deck, the hold or compartment in which it is stowed must be ventilated.

(c) Each Fissile Class III shipment must be stowed in a separate hold compartment, or defined deck area and be separated by a distance of at least six meters (20 feet) from all other Radioactive Category II- or III-Yellow labeled packages.

(d) For a shipment of radioactive materials requiring supplemental operational procedures, the shipper must furnish the master or person in charge of the vessel a copy of the necessary operational instructions.

(e) A person may not remain unnecessarily in a hold, or compartment, or in the immediate vicinity of any package on deck, containing radioactive materials.

(The information collection requirements in paragraph (d) were approved by the Office of Management and Budget under control numbers 2137-0534, 2137-0535 and 2137-0536.)

§ 176.704 Requirements relating to transport indexes.

(a) The sum of the transport indexes for all packages of radioactive materials not in freight container on board a vessel, may not exceed 200.

(b) Except as provided in paragraph (e) of this section, the sum of transport indexes for packages not in a freight container may not exceed 50 in any hold, compartment, or defined deck area. Each group of radioactive material packages must be separated by a distance of at least six meters (20 feet) at all times.

(c) Except as provided in paragraph (e) of this section, the number of freight containers with packages of radioactive materials contained therein must be limited so that the total sum of the transport indexes in the containers in any hold or defined deck area does not exceed 200, and:

(1) The sum of transport indexes for any individual freight container, or group of freight containers, does not exceed 50; and

(2) Each freight container or group of freight containers is handled and stowed in such a manner that groups are separated from each other by a distance of at least six meters (20 feet).

(d) The limitations specified in paragraphs (a), (b), and (c) of this section do not apply to consignments of low specific activity materials if the packages are marked "RADIOACTIVE LSA" and no Fissile Class II or Fissile Class III radioactive materials are included in the shipment.

(e) For exclusive use shipments, the limitations specified in paragraphs (b) and (c) of this section do not apply if—

(1) For packages not in freight containers, the sum of the transport indexes of Fissile Class II packages does not exceed 50 in each hold;

(2) For packages in freight containers, the radiation level does not exceed 200 millirem per hour at any point on the surface and 10 millirem at two meters (6 feet) from the outside surface of the freight container and the sum of transport indexes of Fissile Class II packages does not exceed 50 in each freight container and 200 in each hold or defined deck area; and

(3) Each group of Fissile Class II packages is separated from other radioactive material by a distance of at least six meters (20 feet) at all times.

(f) The limitations specified in paragraphs (a) through (e) of this section do not apply when the entire vessel is reserved or chartered for use by a sing'e shipper under exclusive use conditions if the number of Fissile Class II and Fissile Class III packages of radioactive materials aboard the vessel does not exceed the amount authorized in §§ 173.451 through 173.459 of this subchapter. The entire shipment operation must be approved by the Office of Hazardous Materials Transportation (OHMT) in advance.

§ 176.708 Segregation distance table. (a) Table III applies to the stowage of packages of radioactive materials on board a vessel with regard to transport index numbers which are shown on the labels of individual packages. Radioactive Category II or III-Yellow labeled packages may not be stowed any closer to living accommodations, regularly occupied working spaces, spaces that may be continually occupied by any person (except those spaces exclusively reserved for couriers specifically authorized to accompany such packages), and undeveloped film than the distance specified in Table III. Where only one consignment of a radioactive substance is to be loaded on board a vessel under exclusive use conditions, the appropriate segregation distance may be established by demonstrating that the direct measurement of the radiation level at regularly occupied working spaces and living quarters is less than 0.75 millirem per hour. More than one consignment may be loaded onboard a vessel with the appropriate segregation distance established by demonstrating that direct measurement of the radiation level at regularly occupied working spaces and living quarters is less than 0.75 millirem per hour, provided that the vessel has been chartered for the exclusive use of a competent person specialized in the carriage of radioactive material. Stowage arrangements shall be predetermined for the entire voyage, including any radioactive substances to be loaded at ports of call enroute. The radiation level shall be measured by a responsible person skilled in the use of monitoring instruments.

TABLE B

Sum of transport indexes of the packages	Minimum distance in feet from living accommodation of regularly occupied working space	Minimum distance in feet from undeckedged fire and plates: 1 day voyage			2 day voyage			4 day voyage			10 day voyage			20 day voyage			30 day voyage			40 day voyage			50 day voyage

Note

(1) X—indicates that thickness of screening cargo is sufficient without any additional segregation distance

(2) By using 6 feet of intervening unit density cargo for persons and 10 feet for fire and plates, no distance shielding is necessary for any length of voyage specified

(3) Using 1 steel bulkhead or steel deck—multiply segregation distance by 0.8. Using 2 steel bulkheads or steel decks - multiply segregation distance by 0.64

(4) "Cargo of Unit Density" means cargo stowed at a density of 1 ton (long) per 36 cubic feet, where the density is less than this the depth of cargo specified must be increased in proportion.

(5) "minimum distance" means the least in any direction whether vertical or horizontal from the outer surface of the nearest package

(6) The total consignment on board at any time must not exceed transport indexes totaling 200 except if carried under the provisions of § 176.704(f). The figures below the double line of the table should be used in such a contingency.

(7) Not to be carried unless screening by other cargo and bulkheads can be arranged in accordance with the other columns.

Sum of transport indexes of the packages	Minimum distance in feet from living accommodation of regularly occupied working space	Minimum distance in feet from undeckedged fire and plates: 1 day voyage			2 day voyage			4 day voyage			10 day voyage			20 day voyage			30 day voyage			40 day voyage			50 day voyage

Note

(1) X—indicates that thickness of screening cargo is sufficient without any additional segregation distance

(2) By using 6 feet of intervening unit density cargo for persons and 10 feet for fire and plates, no distance shielding is necessary for any length of voyage specified

(3) Using 1 steel bulkhead or steel decks—multiply segregation distance by 0.64

(4) "Cargo of Unit Density" means cargo stowed at a density of 1 ton (long) per 36 cubic feet, where the density is less than this the depth of cargo specified must be increased in proportion.

(5) "minimum distance" means the least in any direction whether vertical or horizontal from the outer surface of the nearest package

(6) The total consignment on board at any time must not exceed transport indexes totaling 200 except if carried under the provisions of § 176.704(f). The figures below the double line of the table should be used in such a contingency.

(7) Not to be carried unless screening by other cargo and bulkheads can be arranged in accordance with the other columns.

§ 176.710 Care following leakage or sifting of radioactive materials. (a) In case of fire, collision, or breakage involving any shipment of radioactive materials, other than materials of low specific activity, the radioactive materials must be segregated from unnecessary contact with personnel. In case of obvious leakage, or if the inside container appears to be damaged, the stowage area (hold, compartment, or deck area) containing this cargo must be isolated as much as possible to prevent radioactive material from entering any person's body through contact, inhalation, or ingestion. No person may handle the material or remain in the vicinity unless supervised by a qualified person.

(b) A hold or compartment in which leakage of radioactive materials has occurred may not be used for other cargo until it is decontaminated in accordance with the requirements of § 176.715.

(c) For reporting requirements, see § 171.15 of this subchapter.

§ 176.715 Contamination control. (a) Each hold, compartment, or deck area used for the transportation of low specific activity radioactive materials under exclusive use conditions shall be surveyed with appropriate radiation detection instruments after each use. Such holds, compartments, and deck areas may not be used again until the radiation dose rate at any accessible surface is less than 0.5 millirem per hour, and the removable (non-fixed) radioactive surface contamination is not greater than the limits prescribed in § 173.443 of this subchapter.

For explanation of abbreviations and reference marks, see last page of this tariff.

SUBPART N

DETAILED REQUIREMENTS FOR CORROSIVE MATERIALS

§ 176.800 General stowage requirements. (a) Each package of a corrosive material being transported on a vessel must be stowed well away from living quarters, foodstuffs, and cargo of an organic nature.

(b) Each package of a corrosive material must be stowed so as to be readily observable except when stowed in a freight container or a barge, carried aboard a vessel, that is readily available.

(c) A package of corrosive material may not be stowed over any combustible substance.

(d) Glass carboys containing corrosive material may not be stowed on board any vessel, other than a barge, more than two tiers high unless each carboy is boxed or crated with neck protection extending to the sides of the carboy box. This protective construction must be strong enough to permit stacking one on top of the other.

(e) A corrosive material may not be stowed over a hold or compartment containing cotton unless the deck is of steel and the hatch is fitted with a tight coaming. In addition, the deck must be tight against leakage and the corrosive material may not be stowed over the square of the hatch.

§ 176.805 On deck stowage. (a) When break-bulk corrosive materials being transported on a vessel are stowed "on deck",

(i) Provisions must be made for leakage from any package to drain away from other cargo into an overboard scupper or freeing port. The drainage may not enter an enclosed drainage system other than a direct overboard scupper. If this stowage is not practical, sufficient clean dry sand must be placed under and around the lower tier of packages to absorb any leakage.

(ii) Dunnage must be provided on the deck and arranged so that any leakage will be apparent.

(iii) Any leakage that occurs must be washed down, using liberal quantities of water.

SUBPART O

DETAILED REQUIREMENTS FOR OTHER REGULATED MATERIALS (ORM)

§ 176.900 Stowage of cotton and fibers generally. (a) Cotton or fibers being transported on a vessel must be securely baled and bound. Each cotton or fiber bale must be covered with bagging on at least three-fourths of its surface, including both ends. Cut cotton linters may be accepted for transportation by vessel when baled and covered with bagging on the soft sides only if the bale is compressed to a density of at least 32 pounds per cubic foot and it is bound with at least six bands per bale. Any poorly compressed bale or any bale having damaged bindings may not be transported by vessel.

(b) Each wet bale must be stowed separately from any dry bales, preferably in a 'tween deck space and not overstowed. Any bale which is saturated with water may not be transported by vessel.

(c) Bales showing contact with oil or grease may not be accepted for transportation by vessel.

(d) Cotton or fibers must be stowed in a hold or compartment in accordance with the following requirements:

(1) All traces of oil or residue in the hold or compartment must be removed;

(2) A recently painted hold or compartment may not be used unless it is thoroughly dry;

(3) Each ventilation cowl serving the hold or compartment must be fitted with a spark screen;

(4) When a bulkhead of the hold or compartment is common with a boiler room, engine room, coal bunker, or galley and subjected to heat, a wooden bulkhead must be erected between the bulkhead and any cotton or fibers. This wooden bulkhead must be at least 6 inches from a boiler room bulkhead, and at least 2 inches from an engine room, coal bunker, or galley bulkhead;

(5) Each 'tween deck hatch must be closed with hatch covers, tarpaulins, and dunnage; however, metal hatch covers which are sealed by other means to provide equivalent protection may be used.

(6) Each hold or compartment must be equipped with a carbon dioxide, steam smothering, or overhead water sprinkler system or other approved fixed smothering system. Before loading, the extinguishing system must be examined to ensure that it is in good working condition; and

(7) Each hold or compartment must be clear of all debris and swept broom clean before loading.

(e) Naked lights or any fire likely to produce sparks are not permitted on the vessel, dock area, or any lighters alongside during loading or unloading of cotton or fibers.

(f) Upon completion of stowage, each hatch opening must be completely closed. Where required, tarpaulins must be fitted and secured in place to provide a tight hold. During a period of temporary stoppage of loading or unloading, a hatch may be left open. However, a fire watch, designated by the master or officer-in-charge, must be stationed in the hold or compartment in which the cotton or fibers are stowed.

(g) At least one fire hose must be connected while cotton or fibers are being loaded or unloaded. Each fire pump must be operated before any loading or unloading. Pressure must be maintained on each fire main during the loading and the fire hose laid out ready for immediate use. Portable fire extinguishers must be placed to be readily available. The fire hose, fire pumps and fire extinguishers may be the vessel's equipment or shore equipment.

(h) Smoking is not permitted on a vessel during the loading or unloading of cotton or fibers except at those times and in those places designated by the master or officer-in-charge. "NO SMOKING" signs must be conspicuously posted in appropriate places and the officer in charge of the loading or unloading must see that they are observed.

(i) All cotton or fibers must be segregated in accordance with the requirements applicable to flammable solids (see § 176.83(b)) but may not be stowed in the same hold with other flammable solids.

(j) Cotton or fibers may be stowed in the same hold over bulk sulfur if the sulfur has been trimmed and leveled and the hold is thoroughly cleaned of sulfur dust. A tight floor of two 1 inch crossed clean dunnage boards must be laid on the sulfur before cotton or fibers are stowed. These substances may be stowed alongside each other in the same hold if they are separated by a tight dustproof wood bulkhead.

(k) Cotton or fibers may not be stowed in a 'tween deck hold over bulk sulfur in a lower hold unless the 'tween deck hold has been thoroughly cleaned of all sulfur dust and the 'tween deck hatch covers are in place and covered with tarpaulins and dunnage.

(l) Cotton or fibers may not be stowed in the same hold with any combustible liquid. Cotton or fibers may be stowed in a hold adjacent to any hold above, or any hold below one containing these materials if the holds are separated by a tight steel bulkhead or deck.

§ 176.901 Stowage of cotton or fibers with rosin or pitch. Cotton or fibers being transported on a vessel may not be stowed in the same hold or compartment with rosin or pitch being transported on the same vessel. When separate stowage is not practicable, the cotton or fibers may be stowed in the same hold or compartment with rosin or pitch if they are separated by clean dunnage or a cargo of a non-combustible nature. When stowage within the same hold or compartment involves large amounts of cotton or fibers and rosin or pitch, the rosin or pitch must be floored off with at least two layers of 1 inch dunnaging and the cotton or fibers stowed above.

§ 176.902 Stowage of cotton or fibers with vegetable, animal, or rosin oil. (a) When practicable, fish oil, whale oil, vegetable oil, animal oil, or rosin oil being transported on a vessel may not be stowed in the same hold or compartment with any cotton or fibers being transported on the same vessel. When separate stowage is not practicable, the cotton and fibers must be stowed so that there is no contact with any of those oils. If cotton or other fibers are transported over any of those oils, a tight 2 inch floor of dunnage boards must be laid over the oils before the cotton or fibers are placed on top.

(b) Cotton or fibers may not be stowed in a hold below one in which any of those oils are stowed unless the 'tween deck hatch is fitted with a tight coaming and the deck is of steel and made tight against leakage.

§ 176.903 Stowage of cotton fibers with coal. Cotton or fibers being transported on a vessel may not be stowed in the same hold with coal. They may be stowed in adjacent holds if the holds are separated by a tight steel bulkhead and the cotton or fibers are dunnaged at least 2 inches off the bulkhead. Cotton or fibers may be stowed in a hold above or below one in which coal is stowed if there is a tight steel intervening deck and all hatch covers are in place and covered with tarpaulins.

§ 176.904 Cotton or fibers with synthetic nitrate of soda. Cotton or fibers being transported on a vessel may not be stowed in the same hold with synthetic nitrate of soda. They may be stowed in adjacent holds if the holds are separated by a tight steel bulkhead. Cotton or fibers may be stowed in a hold above or below one in which synthetic nitrate of soda is stowed if there is a tight steel intervening deck and all hatch covers are in place and covered with tarpaulins.

§ 176.905 Motor vehicles or mechanical equipment powered by internal combustion engines. (a) A motor vehicle or any mechanized equipment powered by an internal combustion engine is subject to the requirements of this subchapter when carried as cargo on a vessel if the engine or fuel tank contains fuel or if either battery cable is connected. Such vehicles or equipment are excepted from the requirements of this subchapter if the following requirements are met:

(1) For a motor vehicle or mechanical equipment having an internal combustion engine employing fuel classed as flammable by this subchapter, the fuel tank is empty, the engine is run until it stalls for lack of fuel, both battery cables are disconnected, and no hazardous material is stowed in the vehicle or equipment, or

(2) For motor vehicle or mechanical equipment having an internal combustion engine employing liquid fuel classed as combustible by this subchapter, the fuel tank contains 110 gallons of fuel or less, both battery cables are disconnected and no hazardous material is stowed in the vehicle or equipment.

(b) Before being loaded on a vessel, each vehicle must be inspected for leaks. A vehicle showing any signs of leakage may not be transported.

(c) Each vehicle stowed in a hold or compartment must have the battery cables disconnected and secured away from the battery terminals, unless it is stowed in a hold or compartment designated by the administration of the country in which the vessel is registered to be specially suited for vehicles. See 46 CFR 70.10–44 and 90.10–38 for U.S. vessels.

(d) The fuel tank of a vehicle being transported as cargo on a vessel may not be more than one-fourth full.

(e) All equipment used for handling vehicles must be designed so that the fuel tank and fuel system are protected from stress that might cause rupture or other damage incident to handling.

(f) Whenever possible each vehicle must be stowed to allow for its inspection during transit.

(g) Two hand-held, portable, dry chemical fire extinguishers of at least 10 pounds capacity each must be separately located in an accessible location in each hold or compartment in which any motor vehicle is stowed.

(h) "NO SMOKING" signs must be conspicuously posted at each access opening to the hold or compartment.

(i) Except when being transported in a space specially suited for vehicles, the following additional requirements apply to the stowage of any vehicles containing a flammable liquid:

(1) Each portable electrical light and hand flashlight used in the stowage area must be an approved, explosion-proof type. All electrical connections for any portable light must be made to outlets outside the space in which any vehicle is stowed;

(2) Each hold or compartment must be ventilated and fitted with an overhead water sprinkler system or fixed fire extinguishing system;

(3) Each hold or compartment must be equipped with a smoke or fire detection system; and

(4) All electrical equipment in the hold or compartment other than fixed explosion-proof lighting must be disconnected from its power source at a location outside the hold or compartment during the handling and transportation of any vehicle. Where the disconnecting means is a switch or circuit breaker, it must be locked in the open position until all vehicles have been discharged.

(j) Motor vehicles may be refueled when necessary in the hold of a vessel in accordance with § 176.78.

(k) Motor vehicles with fuel in their tanks may be stowed in a closed freight container if the following warning is affixed to the access doors: "WARNING—MAY CONTAIN EXPLOSIVE MIXTURES WITH AIR—KEEP IGNITION SOURCES AWAY WHEN OPENING." The warning must be on a contrasting background and must be readily legible from a distance of 25 feet.

(l) No hazardous materials other than motor vehicles or mechanized equipment and their equipment may be stowed in the same hold or compartment with any vehicle having a flammable liquid or flammable compressed gas in its tank.

§ 176.906 Stowage and handling of asbestos. Asbestos must be stowed, handled, and unloaded, and any asbestos contamination of vessels removed, in a manner that will minimize occupational exposure to airborne asbestos particles released incident to transportation. (See § 173.1090 of this subchapter.)

PART 177—CARRIAGE BY PUBLIC HIGHWAY

SUBPART A

GENERAL INFORMATION AND REGULATIONS

§ 177.800 Purpose of regulations in Parts 170–189 of this chapter. (a) To promote the uniform enforcement of law and to minimize the dangers to life and property incident to the transportation of hazardous materials, by private, common and contract carriers, by motor vehicle engaged in interstate or foreign commerce, the regulations in Parts 170–189 of this subchapter are prescribed to define these articles for motor vehicle transportation purposes, and to state the precautions that must be observed by the carrier in handling them while in transit. It is the duty of each such carrier to make the prescribed regulations effective and to thoroughly instruct employees in relation thereto.

§ 177.801 Scope of regulations in Parts 170–189 of this chapter. (a) Hazardous materials except such as may not be accepted and transported under Parts 170–189 of this subchapter, may be accepted and transported by private, common and contract carriers by motor vehicle engaged in interstate or foreign commerce, provided they are in proper condition for transportation and are certified as being in compliance with Parts 170–189 of this subchapter, and provided the method of manufacture, packing, and storage, so far as they affect safety in transportation, are open to inspection by a duly authorized representative of the initial carrier or of the Bureau of Explosives. Shipments of explosives or other dangerous articles not in proper condition for transportation, or loaded or stayed as required, or certified as to proper packing, marking and description as required in Parts 170–189 of this subchapter, must not be accepted for transportation or transported.

§ 177.802 Application of regulations in Parts 170–189 of this chapter. (a) Parts 170–189 of this subchapter apply to all private, common and contract carriers by motor vehicle transporting hazardous materials as defined by Department of Transportation "Regulations for Transportation of Hazardous Materials by Land and Water in Rail Freight, Express and Baggage Services and by Motor Vehicle (Highway) and Water". When shipments are accepted by motor vehicle for further transportation by rail express (see also paragraph (c) of this section), rail baggage (see also paragraph (d) of this section), rail freight or by water on board vessel, they must, in addition to Parts 170–189 of this subchapter, comply with the applicable regulations for the service by which they are to be transported.

§ 177.803 Export and import shipments by domestic carriers by motor vehicles. See §171.12 of this subchapter.

§ 177.804 Compliance with Federal Motor Carrier Safety Regulations. Motor carriers and other persons subject to this Part shall comply with 49 CFR Parts 390 through 397 (excluding §§397.3 and 397.9) to the extent those rules apply.

§ 177.805 Canadian shipments and packagings. (a) Canadian shipments and packagings may be carried under conditions specified in §171.12a of this subchapter.

§ 177.806 U.S. Government material. (a) Shipments of hazardous materials offered by or consigned to the Department of Defense (DOD) of the U.S. Government must be packaged, including limitations of weight, in accordance with the regulations in this subchapter or in containers of equal or greater strength and efficiency as required by DOD regulations.

(1) Hazardous materials sold by the DOD in packagings that are not marked in accordance with the requirements of this subchapter may be shipped from DOD installations if the DOD certifies in writing that the packagings are equal to or greater in strength and efficiency than the packaging prescribed in this subchapter. The shipper shall obtain such a certification in duplicate for each shipment. He shall give one copy to the originating carrier and retain the other for no less than 1 year.

(b) Shipments of radioactive materials, made by or under the direction or supervision of the U.S. Department of Energy or the Department of Defense, and which are escorted by personnel specially designated by or under the authority of those agencies, for the purpose of national security, are exempt from the regulations in Parts 170–189 of this subchapter.

§ 177.807 Reporting hazardous materials incidents. When an incident occurs during transportation in which a hazardous material is involved, a report may be required (see §§171.15 and 171.16 of this subchapter.

§ 177.808 Connecting carrier shipments. (a) Shipments of hazardous materials offered by connecting transportation lines must comply with Parts 170–189 of this subchapter.

§ 177.809 Carrier's material and supplies. The regulations in Parts 170–189 of this subchapter apply to all shipments of hazardous materials, including carrier's material and supplies.

§ 177.810 Vehicular tunnels. Except as regards radioactive materials, nothing contained in Parts 170–189 of this subchapter shall be so construed as to nullify or supersede regulations established and published under authority of State statute or municipal ordinance regarding the kind, character, or quantity of any hazardous material permitted by such regulations to be transported through any urban vehicular tunnel used for mass transportation. For radioactive materials, see §177.825 of this part.

§ 177.811 Astray shipments. (a) Any carrier in possession of an astray shipment of hazardous materials (other than explosives) shall forward it promptly to its destination, if known, after inspection has shown the package to be in proper condition for transportation.

(b) If the package of hazardous materials is not labeled and the exact classification of the contents is not determinable, the carrier shall apply a **FLAMMABLE LIQUID** label.

§ 177.812 Containers required. Containers required for hazardous materials are prescribed in Part 173 of this subchapter.

§ 177.813 Inefficient containers. (a) The results of experience gained by examination of broken or leaking containers must be recorded by the Bureau of Explosives to the end that further use of any particular kind of container shown by experience to be inefficient, may be prohibited by the Department.

§ 177.814 Retention of manufacturer's certificate and retest reports. (a) Each motor carrier who uses a cargo tank vehicle shall have in his files a certificate or manufacturer's data report signed by a responsible official of the manufacturer or fabricator of the cargo tank, or a competent testing agency, certifying that the cargo tank identified in the certificate was manufactured and tested in accordance with the requirements contained in the specification under which the cargo tank was constructed. The certificate and any other data furnished as required by the specification must be retained at the principal office of the carrier during the time that the cargo tank is used by the carrier and for one year thereafter.

(1) Except for specifications MC 330 and MC 331 cargo tanks, a motor carrier may himself perform the tests and inspections to determine whether the tank meets the requirements of the specification. If the motor carrier performs the tests and inspections and determines that the tank conforms to the specification, he may use the tank if he retains the test data, in place of a certificate, in his files at his principal office for as long as he uses the tank and one year thereafter.

(2) A motor carrier using a specification MC 330 cargo tank for which such carrier is unable to obtain the manufacturer's data report required by the specification may copy the information contained on the cargo tank's identification plate and ASME Code plate and retain such information as required by this section.

(3) Each motor carrier who uses a specification cargo tank which he does not own and has not tested or inspected shall obtain a copy of the manufacturer's certificate or manufacturer's data report and retain it in his files at his principal office during the time he uses the tank and for one year thereafter. A motor carrier using a specification MC 330 cargo tank which he does not own may copy the information contained on the cargo tank's identification plate and ASME Code plate if the manufacturer's data report is not available from the owner of the tank.

(b) Upon a written request to, and with the approval of, the Regional Director of Motor Carrier Safety, for the region in which a motor carrier has his principal place of business, a motor carrier may retain the certificate and other data specified in paragraph (a) of this section at a regional or terminal office. The address and jurisdictions of the Regional Directors of Motor Carrier Safety are shown in § 390.40 of Chapter III of this title.

(c) **Withdrawal of certification.** See § 177.824(i) of this subchapter.

(d) A copy of retest and inspection reports required by §§ 173.33 and 177.824 of this subchapter and all records of repairs to each cargo tank vessel must be retained in the same file with the manufacturer's certificate or manufacturer's data report for that tank as specified in paragraph (a) of this section. This provision does not apply to a motor carrier leasing a cargo tank for less than 30 days if the lessor has the records required by this section in his files.

§ 177.815 Lost or destroyed label's. Each carrier shall maintain an adequate supply of the labels specified in Subpart E of Part 172 of this subchapter to replace those that become lost or destroyed. The carrier shall replace each lost or destroyed label based on the information on the shipping papers.

§ 177.816 Training. (a) Applicability. No carrier may transport a flammable cryogenic liquid in a cargo tank on a public highway unless the driver of the vehicle has received the training specified in paragraph (b) of this section. This section applies only to an originating carrier when an interchange operation is involved.

(b) Training required. Each carrier subject to paragraph (a) of this section must:

(1) Provide the required training in written form;

(2) Provide the required training before a driver may drive a motor vehicle transporting a flammable cryogenic liquid in a cargo tank and at least one every 24 months thereafter;

(3) Include in the training program instructions pertaining to:

(i) Requirements in this subchapter applicable to cryogenic liquids, generally;

(ii) Requirements in the Federal Motor Carrier Safety Regulations, Parts 390–397 of this title, applicable to drivers;

(iii) The properties and potential hazards of the particular material to be transported;

(iv) The safe operation of the type of cargo tank the driver will be operating, including its handling characteristics, emergency features and loading limitations; and

(v) Procedures to be followed in case of accident or other emergency, including unanticipated pressure increase or decrease.

(c) Record of training. A record certifying that current training has been provided in accordance with paragraph (b) of this section shall be retained in the driver's qualification file (see §391.51 of this title) for as long as the driver is employed by that carrier and for 90 days thereafter. The record shall include:

(1) The driver's name and operators license number;

(2) The date the driver was provided the training and the due date for subsequent training;

(3) A copy of the written training material required by paragraph (b) of this section or a reference indicating the location of a readily available copy; and

(4) The name and address of the person providing the training.

§ 177.817 Shipping papers. (a) General requirements. A carrier may not transport a hazardous material unless it is accompanied by a shipping paper that is prepared in accordance with §§ 172.200, 172.201, 172.202, and 172.203 of this subchapter.

(b) Shipper certification. An initial carrier may not accept a hazardous material offered for transportation unless the shipping paper describing the material includes a shipper's certification which meets the requirements in § 172.204 of this subchapter. Except for a hazardous waste, the certification is not required for shipments to be transported entirely by private carriage and for bulk shipments to be transported in a cargo tank supplied by the carrier.

(c) Requirements when interlining with carriers by rail. A motor carrier shall mark on the shipping paper required by this section, if it offers or delivers a freight container or transport vehicle to a rail carrier for further transportation:

(1) A description of the freight container or transport vehicle; and

(2) The kind of placard affixed to the freight container or transport vehicle.

(d) This section does not apply to any material, other than a hazardous substance or a hazardous waste, that is classed as an ORM–A, B, C, or D. (See §172.200 of this subchapter.)

(e) Shipping paper accessibility—accident or inspection. A driver of a motor vehicle containing hazardous material, and each carrier using such a vehicle, shall ensure that the shipping paper required by this section is readily available to, and recognizable by, authorities in the event of accident or inspection. Specifically, the driver and the carrier shall:

(1) Clearly distinguish the shipping paper, if it is carried with other shipping papers or other papers of any kind, by either distinctively tabbing it or by having it appear first; and

(2) Store the shipping paper as follows:

(i) When the driver is at the vehicle's controls, the shipping paper shall be: (A) Within his immediate reach while he is restrained by the lap belt; and (B) either readily visible to a person entering the driver's compartment or in a holder which is mounted to the inside of the door on the driver's side of the vehicle.

(ii) When the driver is not at the vehicle's controls, the shipping paper shall be: (A) In a holder which is mounted to the inside of the door on the driver's side of the vehicle; or (B) on the driver's seat in the vehicle.

§ 177.818 Special instructions; flammable cryogenic liquids. (a) No carrier may operate, and no driver may drive, a motor vehicle transporting a flammable cryogenic liquid in a package exceeding 125 gallons water capacity unless written instructions containing the following information are carried with the required shipping papers:

(1) General precautions,

(2) Manual venting instructions,

(3) Emergency procedures, and

(4) The names and telephone numbers of persons to be contacted in case of emergency or accident.

§ 177.821 Hazardous materials forbidden or limited for transportation. (a) Nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate forbidden to common carriers. Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, except as defined in § 173.53(e) of this chapter, may not be accepted for transportation or be transported by any common carrier by motor vehicle.

(b) Rejection of leaking containers of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate. Any individual container used for the transportation of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, or any boot used therewith, found in such a condition as to permit leakage, shall be discarded and shall not thereafter be repaired for further use.

(c) Hazardous materials forbidden or limited for transportation. No motor carrier may accept for transportation or transport any hazardous material listed in Hazardous Materials Table (§ 172.101 of this chapter), as "forbidden" for transportation by all motor carriers; nor, if there be any prohibition or limitation regarding the transportation of any particular hazardous material by a particular kind of motor carrier, may any such article be accepted for transportation or be transported by that kind of carrier, except as indicated in this part. (See § 177.870.)

(d) Leaking or damaged packages of high explosive must not be accepted for transportation or transported. Should any package of high explosive when offered for shipment show excessive dampness or be moldy or show outward signs of any oily stain or other indication that absorption of the liquid part of the explosive is not perfect, or that the amount of the liquid part is greater than the absorbent can carry, the package must be refused in every instance. The shipper must substantiate any claim that a stain is due to contact with material other than the liquid explosive ingredient of the explosive. In case of doubt the package must be rejected.

(e) [Reserved]

(f) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight transported in one car or motor vehicle may be classed as a flammable solid when examined for this classification by the Bureau of Explosives and approved by the Director, OHMT. Maximum quantity in any inside packaging must not exceed 8 pounds and inside packagings must be arranged and protected to prevent simultaneous ignition of the contents. The complete package must be a type examined by the Bureau of Explosives and approved by the Director, OHMT. Each outside package must bear a flammable solid label.

§ 177.822 Acceptable articles. (a) Any motor carrier may accept for transportation or transport any acceptable hazardous material listed in the Hazardous Materials Table, § 172.101 of this subchapter: *Provided, however,* That no provision of this section shall be so construed as to permit the acceptance or transportation of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate other than as defined in § 173.53(e) of this subchapter, by any common carrier.

(b) Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol nitrate. Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, other than as defined in § 173.53(e) of this subchapter, may be transported only by motor carriers other than common carriers in containers complying with specification MC 200 (§ 178.315 of this subchapter). No form of trailer may be attached.

§ 177.823 Marking and placarding motor vehicles. (a) A carrier may not move a transport vehicle containing a hazardous material unless the vehicle is marked and placarded in accordance with Part 172 or as authorized in § 171.12a of this subchapter, or unless, in an emergency:

(1) The vehicle is escorted by a representative of a state or local government;

(2) The carrier has permission from the Department; or:

(3) Movement of the transport vehicle is necessary to protect life or property.

§ 177.824 Retesting and inspection of cargo tanks. (a) Ge

eral. In accordance with § 173.33 of this subchapter (cargo tank use authorization) every cargo tank and every compartment of a cargo tank authorized as a qualified container, except those cargo tanks having a capacity of 3,000 gallons or less used exclusively for the transportation of flammable liquids, must fulfill the applicable requirements as set forth in this section.

(1) Each cargo tank, except a specification MC 330, MC 331, or MC 338 cargo tank, must be in compliance with the testing requirements prescribed in paragraphs (a), (b), (c), and (d) of this section. Each cargo tank must be in accordance with the marking requirement of paragraph (h) of this section.

(2) Every cargo tank whether constructed in accordance with DOT specifications or being operated as a novel tank under exemption authorization shall not continue in service unless it has successfully fulfilled the testing requirements as set forth in this section.

(b) **Visual inspection requirements.** Every cargo tank shall receive an external visual inspection at least once in every 2-year period. The first such inspection shall be required at the time the next hydrostatic retest is due or prior to January 31, 1969, whichever comes first. This inspection shall be made by a responsible and experienced inspector who shall record the condition of the items set forth below. The inspection record shall be approved and signed by an authorized representative of the owner or operator. A written report of each inspection shall be retained in carrier's or owner's files for a period of 2 years after the date of inspection. Where insulation precludes external visual inspection, the cargo tank shall receive a visual internal inspection for corroded areas, defects in welds or tank sheets. Where visual inspection is precluded by both internal coating and external insulation or when the cargo tank is not equipped with a manhole, the tank shall be hydrostatically tested at 5-year intervals except as otherwise provided in paragraph (c) of this section. The tank shall not be placed in or returned to service if evidence of any unsafe condition is discovered and until such condition has been corrected. Inspection shall consist of the following items:

(1) The tank shall be inspected for: Corroded areas, bad dents, and defects in welds; defects in piping, valves, and gaskets; and other conditions, including leakage, which indicate weakness in the tank that might render it unsafe for transportation service.

(2) Devices for tightening manhole covers must be operative and leakage at manhole covers and gaskets must be corrected.

(3) Spring-loaded safety-relief valves rated in excess of 7 p.s.i.g. shall be removed from the cargo tank and tested.

(4) All emergency devices and valves must be free from corrosion, distortion, and any damage which will prevent their normal operation.

(5) Missing or loose bolts or nuts on any flanged connection or blank flange must be replaced or tightened.

(6) Required markings on the tank shall be legible.

(7) The entire vehicle shall be inspected for and comply with the Motor Carrier Safety Regulations, Part 393, Chapter III, of this title.

(c) **Hydrostatic or pneumatic testing requirements.** In addition to the visual inspection requirements as contained in paragraph (b) of this section, hydrostatic or pneumatic testing of cargo tanks (or compartments) is required to be conducted in accordance with the provisions contained in paragraph (d) of this section to qualify as an authorized container if:

(1) The cargo tank has been out of service (transporting dangerous articles) 1 year or more, or

(2) The cargo tank has been involved in an accident in which it may have been dented, torn, or otherwise damaged so as to affect its product retention integrity, or

(3) The shell of the cargo tank as originally manufactured has been modified, or

(4) The cargo tank is operating under exemption authorization. Such tanks shall be hydrostatically tested once every calendar year unless otherwise provided for in the exemption, and shall successfully fulfill the requirements set forth in paragraph (d) of this section. No two such required tests shall be closer than 6 months.

(d) **Hydrostatic or pneumatic testing procedure.** The requalification as an authorized container of cargo tanks (or compartments) required to be hydrostatically or pneumatically tested in accordance with paragraph (a) of this section shall be based on successfully meeting the requirements of this paragraph.

(1) General.

(i) If a cargo tank is compartmented each compartment shall be similarly tested with the adjacent compartment empty and at atmospheric pressure.

(ii) All closures shall be in place while the test is being made. During the test all relief devices shall be clamped, plugged or otherwise rendered inoperative. Relief devices shall be returned to their operative condition immediately after the tests are completed.

(iii) The tank or compartment must hold the prescribed pressure for at least 10 minutes. All tank valves, piping, and other accessories in communication with the lading must be pressure tested and proven tight at the tank design pressure.

(iv) All pressure bearing portions of the heating system of a cargo tank (or compartment) employing such media as steam or hot water for heating the lading shall be tested under hydrostatic pressure and proven to be tight at 14.06 kg./sq. cm (200 psig). Systems employing flues for heating the lading shall be suitably tested to insure against product leakage into the flues or into the atmosphere.

(2) Hydrostatic test. For hydrostatic testing, the tank (including its domes, if any) must be completely filled with water or a liquid having a viscosity similar to water. Pressure must be gauged at the top of the tank applied in accordance with Table I following paragraph (d)(3) of this section.

(3) Pneumatic test. Pneumatic pressure must be applied in accordance with Table I of this paragraph. During the pneumatic test the entire surface of all joints under pressure must be coated with a solution of soap and water, heavy oil, or other materials suitable for the purpose of foaming or bubbling to indicate the presence of leaks. Other methods equally sensitive for determining leaks may be used.

TABLE I

Container type	Test pressure KG/SQ. CM.
MC 300, 301, 302, 303, 305, 306	0.2109 (3 psig)
MC 304, 307	1.76[1] (25[1] psig)
MC 310, 311, 312	0.2109[1] (3[1] psig)

[1] Or 1½ times design pressure whichever is greater.

(4) Required results. A cargo tank) or compartment) required to be hydrostatically or pneumatically tested in accordance with paragraph (a) of this section may not be returned to service as a specification cargo tank unless it has successfully retained the applicable test pressure (see Table I in paragraph (d)(3) of this section) without leakage, undue distortion, excessive permanent expansion, or evidence of impending failure. The suitability of any repairs shall be determined by the same method of test.

(i) Cargo tanks (or compartments) with heating systems shall successfully withstand the hydrostatic pressure and examination specified in paragraph (d)(1)(iv) of this section.

(e) **Compressed gas and cryogenic liquid cargo tanks, specifications MC-330, MC-331, and MC-338.**

(1) **Specification MC-330 and MC-331.** Each cargo tank constructed in compliance with specification MC-330 or MC-331 (§ 178.337 of this subchapter) must be inspected and tested in accordance with § 173.33 of this subchapter.

(2) **Specification MC-338 insulated cargo tanks.** Each insulated cargo tank constructed in compliance with specification MC-338 (§ 178.338 of this subchapter) must be tested, except for the retest pressure, in accordance with § 178.338—16(a) of this subchapter, and must be in compliance with § 173.33 of this subchapter. If the tank is opened for any reason, the cleanliness must be verified after closure in accordance with § 178.338-15.

(f) **Reporting requirements.** Each motor carrier shall file with the Chief, Federal Programs Division, Office of Motor Carrier Safety Field Operations, Federal Highway Administration, Department of Transportation, Washington, D.C. 20590, a written listing of all MC 330 or MC 331 cargo tanks he has in service. Each motor carrier, upon placing in service or withdrawing from service any MC 330 or MC 331 cargo tank (other than a cargo tank used in interchange service which is reported upon by another motor carrier), shall file a supplemental report with the Office of Motor Carrier Safety Field Operations.

(1) The initial listing and each subsequent report must include the following information:

(i) The carrier's name, address, and telephone number.

(ii) One of the following statements: "Cargo tank placed in service" or "Cargo tank withdrawn from service," as appropriate, followed by the date of placement or removal;

(iii) The carrier's equipment number, manufacturer's name, manufacturer's serial number, specification MC 330 or MC 331, and "QT" (quenched and tempered) or "NQT" (not quenched and tempered).

(2) A copy of each report required by this paragraph must be retained by the carrier at its principal place of business during the period the tank is in the carrier's service and for 1 year thereafter. However, upon a written request to, and with the approval of, the Regional Director of Motor Carrier Safety, for the region in which a motor carrier has his principal place of business, the carrier may maintain the reports at a regional or terminal office.

(g) **Special testing required by the Department.** Upon the showing of probable cause of the necessity for retest, the Department may require any cargo tank to be retested at any time in accordance with the requirements prescribed for its periodic retest.

(h) **Test and inspection date markings.** The month and year of the last test or visual inspection, as appropriate, must be durably and legibly marked on the tank in letters not less than 1¼ inches high. These markings must be near the metal certification plate.

(i) **Withdrawal of certification.** If, as the result of an accident or for any other reason a cargo tank no longer meets the applicable specification, the carrier shall remove the metal certification plate or make it illegible (see § 173.24(c)(1)(v) of this subchapter). The details of the conditions necessitating withdrawal of the certification must be recorded and signed on the written certificate for that cargo tank. The vehicle owner shall retain the certificate for at least 1 year after withdrawal of the certification.

§ 177.825 Routing and training requirements for radioactive materials. (a) The carrier shall ensure that any motor vehicle which contains a radioactive material for which placarding is required is operated on routes that minimize radiological risk. The carrier shall consider available information on accident rates, transit time, population density and activities, time of day and day of week during which transportation will occur. In performance of this requirement the carrier shall tell the driver that the motor vehicle contains radioactive materials and shall indicate the general route to be taken. This requirement does not apply when:

(1) There is only one practicable highway route available considering operating necessity and safety, or

(2) The motor vehicle is operated on a preferred highway under conditions described in paragraph (b) of this section.

(b) Unless otherwise permitted by this section, a carrier and any person who operates a motor vehicle containing a package of highway route controlled quantity radioactive materials as defined in §173.403(l) of this subchapter shall ensure that the vehicle operates over preferred routes selected to reduce time in transit, except that an Interstate System bypass or beltway around a city shall be used when available.

(1) A preferred route consists of either or both:

(i) An Interstate System highway for which an alternative route is not designated by a State routing agency as provided in this section, and

(ii) A State-designated route selected by a State routing agency (see §171.8 of this subchapter) in accordance with the DOT "Guidelines for Selecting Preferred Highway Routes for Highway Route Controlled Quantity Shipments of Radioactive Materials".

(2) When a deviation from a preferred route is necessary (including emergency deviation, to the extent time permits), routes shall be selected in accordance with paragraph (a) of this section. A motor vehicle may deviate from a preferred route under any of the following circumstances:

(i) Emergency conditions that would make continued use of the preferred route unsafe.

(ii) To make necessary rest, fuel and vehicle repair stops.

(iii) To the extent necessary to pick up, deliver or transfer a highway route controlled quantity package of radioactive materials.

(c) A carrier (or his agent) who operates a motor vehicle which contains a package of highway route controlled quantity radioactive materials as defined in §173.403(l) of this subchapter shall prepare a written route plan and supply a copy before departure to the motor vehicle driver and a copy to the shipper (before departure for exclusive use shipments, or otherwise within fifteen working days following departure). Any variation between the route plan and routes actually used, and the reason for it, shall be reported in an amendment to the route plan delivered to the shipper as soon as practicable but within 30 days following the deviation. The route plan shall contain:

(1) A statement of the origin and destination points, a route selected in compliance with this section, all planned stops, and estimated departure and arrival times; and

(2) Telephone numbers which will access emergency assistance in each State to be entered.

(d) No person may transport a package of highway route controlled quantity radioactive materials as defined in §173.403(l) of this subchapter, on a public highway unless:

(1) The driver has received within the two preceding years, written training on:

(i) Requirements in Parts 172, 173, and 177 of this subchapter pertaining to the radioactive materials transported;

(ii) The properties and hazards of the radioactive materials being transported; and

(iii) Procedures to be followed in case of an accident or other emergency.

(2) The driver has in his immediate possession a certificate of training as evidence of training required by this section, and a copy is placed in his qualification file (see §391.51 of this title), showing:

(i) The driver's name and operator's license number;

(ii) The dates training was provided;

(iii) The name and address of the person providing the training;

(iv) That the driver has been trained in the hazards and characteristics of highway route controlled quantity radioactive materials; and

(v) A statement by the person providing the training that information on the certificate is accurate.

(3) The driver has in his immediate possession the route plan required by paragraph (c) of this section and operates the motor vehicle in accordance with the route plan.

(e) A person may transport irradiated reactor fuel only in compliance with a plan if required under §173.22(c) of this subchapter that will ensure the physical security of the material. Variation for security purposes from the requirements of this section is permitted so far as necessary to meet the requirements imposed under such a plan, or otherwise imposed by the U.S. Nuclear Regulatory Commission in 10 CFR Part 73.

§ 177.826 Carrier's registration statement; flammable cryogenic liquids. (a) No person may transport a flammable cryogenic liquid in a portable tank or a cargo tank unless he has filed a registration statement by certified mail, return receipt requested, with the Director, OHMT, RSPA in accordance with paragraphs (b), (c) and (d) of this section.

(b) The registration statement must contain the following information:

(1) The carrier's name and principal place of business.

(2) Locations where cargo tanks used to transport flammable cryogenic liquids are domiciled.

(3) The serial number or vehicle identification number of each cargo tank used by the carrier to transport flammable cryogenic liquids, and the name of each flammable cryogenic liquid transported in each cargo tank.

(c) The registration statement must be filed:

(1) Initially between January 1 and February 28, 1985 (this initial statement is only required to contain information regarding operations that took place during the 90 days prior to the date of the statement); and

(2) Subsequently, between January 1 and February 28 of each odd numbered year after 1985.

(d) For equipment obtained or operations begun between the two-year filing intervals specified in paragraph (c) of this section, the information must be provided on the registration statement filed during the next required filing period.

SUBPART B

LOADING AND UNLOADING

Note: For prohibited loading and storage of hazardous materials, see §177.848

§ 177.834 General requirements. (a) **Packages secured in a vehicle.** Any tank, barrel, drum, cylinder, or other packaging, not permanently attached to a motor vehicle, which contains any flammable liquid, compressed gas, corrosive material, poisonous material, or radioactive material must be secured against movement within the vehicle on which it is being transported, under conditions normally incident to transportation.

(b) **No hazardous materials on pole trailers.** No hazardous materials may be loaded into or on or transported in or on any pole trailer.

(c) **No smoking while loading or unloading.** Smoking on or about any motor vehicle while loading or unloading any explosive, flammable liquid, flammable solid, oxidizing material, or flammable compressed gas is forbidden.

(d) **Keep fire away, loading and unloading.** Extreme care shall be taken in the loading or unloading of any explosive, flammable liquid, flammable solid, oxidizing material, or flammable compressed gas into or from any motor vehicle to keep fire away and to prevent persons in the vicinity from smoking, lighting matches, or carrying any flame or lighted cigar, pipe, or cigarette.

(e) **Handbrake set while loading and unloading.** No hazardous material shall be loaded into or on, or unloaded from, any motor vehicle unless the handbrake be securely set and all other reasonable precautions be taken to prevent motion of the motor vehicle during such loading or unloading process.

(f) **Use of tools, loading and unloading.** No tools which are likely to damage the effectiveness of the closure of any package or other container, or likely adversely to affect such package or container, shall be used for the loading or unloading of any explosive or other dangerous article.

(g) **Prevent relative motion between containers.** Containers of explosives, flammable liquids, flammable solids, oxidizing materials, corrosive materials, compressed gases, and poisonous liquids or gases, must be so braced as to prevent motion thereof relative to the vehicle while in transit. Containers having valves or other fittings must be so loaded that there will be the minimum likelihood of damage thereto during transportation.

(h) **Precautions concerning containers in transit; fueling road units.** Reasonable care should be taken to prevent undue rise in temperature of containers and their contents during transit. There must be no tampering with such container or the contents thereof nor any discharge of the contents of any container between point of origin and point of billed destination. Discharge of contents of any container, other than a cargo tank, must not be made prior to removal from the motor vehicle. Nothing contained in this paragraph shall be so construed as to prohibit the fueling of machinery or vehicles used in road construction or maintenance.

(i) **Attendance requirements.** (1) Loading. A cargo tank must be attended by a qualified person at all times when it is being loaded. The person who is responsible for loading the cargo tank is also responsible for ensuring that it is so attended.

(2) Unloading. A motor carrier who transports hazardous materials by a cargo tank must ensure that the cargo tank is attended by a qualified person at all times during unloading. However, the carrier's obligation to ensure attendance during unloading ceases when:

(i) The carrier's obligation for transporting the material's is fulfilled;
(ii) The cargo tank has been placed upon the consignee's premises; and
(iii) The motive power has been removed from the cargo tank and removed from the premises.

(3) A person "attends" the loading or unloading of a cargo tank if, throughout the process, he is awake, has an unobstructed view of the cargo tank, and is within 7.62 meters (25 feet) of the cargo tank.

(4) A person is "qualified" if he has been made aware of the nature of the hazardous material which is to be loaded or unloaded, he has been instructed on the procedures to be followed in emergencies, he is authorized to move the cargo tank, and he has the means to do so.

(5) A delivery hose, when attached to the cargo tank, is considered a part of the vehicle.

(j) **Prohibited loading combinations.** In any single driven motor vehicle or in any single unit of a combination of motor vehicles, hazardous materials shall not be loaded together if prohibited by loading and storage chart, §177.848. This section shall not be so construed as to forbid the carrying of materials essential to safe operation of motor vehicles. (See Motor Carrier Safety Regulations, Part 393 of this Title.)

(k) [Reserved]

(l) **Use of cargo heaters when transporting certain hazardous material.** Transportation includes loading, carrying, and unloading.

(1) **When transporting explosives.** A motor vehicle equipped with a cargo heater of any type may transport explosives only if the cargo heater is rendered inoperable by: (i) Draining or removing the cargo heater fuel tank; and (ii) disconnecting the heater's power source.

(2) **When transporting certain flammable material—**

(i) **Use of combustion cargo heaters.** A motor vehicle equipped with a combustion cargo heater may be used to transport flammable liquid or flammable gas only if each of the following requirements are met:

(A) It is a catalytic heater.
(B) The heater's surface temperature cannot exceed 130° F. (54° C.)—either on a thermostatically controlled heater or on a heater without thermostatic control when the outside or ambient temperature is 60° F. (15.6° C.) or less.
(C) The heater is not ignited in a loaded vehicle.
(D) There is no flame, either on the catalyst or anywhere in the heater.
(E) The manufacturer has certified that the heater meets the requirements under paragraph (l)(2)(i) of this section by permanently marking the heater "**MEETS DOT REQUIREMENTS FOR CATALYTIC HEATERS USED WITH FLAMMABLE LIQUID AND GAS.**"
(F) The heater is also marked "**DO NOT LOAD INTO OR USE IN CARGO COMPARTMENTS CONTAINING FLAMMABLE LIQUID OR GAS IF FLAME IS VISIBLE ON CATALYST OR IN HEATER.**"
(G) Heater requirements under §393.77 of this title are complied with.

(ii) **Effective date for combustion heater requirements.** The requirements under paragraph (l)(2)(i) of this section govern as follows—

(A) Use of a heater manufactured after November 14, 1975, is governed by every requirement under (l)(2)(i) of this section;
(B) Use of a heater manufactured before November 15, 1975, is governed only by the requirements under (l)(2)(i)(A), (C), (D), (F) and (G) of this section until October 1, 1976; and
(C) Use of any heater after September 30, 1976, is governed by every requirement under (l)(2)(i) of this section.

(iii) **Restrictions on automatic cargo-space-heating temperature control devices.** Restrictions on these devices have two dimensions: restrictions upon use and restrictions which apply when the device must not be used.

(A) **Use restrictions.** An automatic cargo-space-heating temperature control device may be used when transporting flammable liquid or flammable gas only if each of the following requirements is met:

(1) Electrical apparatus in the cargo compartment is nonsparking or explosion proof.
(2) There is no combustion apparatus in the cargo compartment.
(3) There is no connection for return of air from the cargo compartment to the combustion apparatus.
(4) The heating system will not heat any part of the cargo to more than 130° F. (54° C.).
(5) Heater requirements under §393.77 of this title are complied with.

(B) **Protection against use.** Flammable liquid or flammable gas may be transported by a vehicle, which is equipped with an automatic cargo-space-heating temperature control device that does not meet each requirement of paragraph (l)(2)(iii)(A) of this section, only if the device is first rendered inoperable, as follows:

(1) Each cargo heater fuel tank, if other than LPG, must be emptied or removed.
(2) Each LPG fuel tank for automatic temperature control equipment must have its discharge valve closed and its fuel feed line disconnected.

(m) Tanks constructed and maintained in compliance with spec. 106A or 110A (§§179.300, 179.301 of this subchapter) that are authorized for the shipment of hazardous materials by highway in Part 173 of this subchapter must be carried in accordance with the following requirements:

(1) Tanks must be securely chocked or clamped on vehicles to prevent any shifting.
(2) Equipment suitable for handling a tank must be provided at any point where a tank is to be loaded upon or removed from a vehicle.
(3) No more than two cargo carrying vehicles may be in the same combination of vehicles.
(4) Compliance with §§174.200 and 174.204 of this subchapter for combination rail freight, highway shipments and for trailer-on-flat-car service is required.

(n) Specification 56, 57, IM 101, and IM 102 portable tanks, when loaded, may not be stacked on each other nor placed under other freight during transportation by motor vehicle.

§ 177.835 Explosives. (See also §§177.834(a) to (j))

(a) **Engine stopped.** No explosives shall be loaded into or on or be unloaded from any motor vehicle with the engine running.

(b) **Care in loading, unloading, or other handling of explosives.** No bale hooks or other metal tools shall be used for the loading, unloading, or other handling of explosives, nor shall any package or other container of explosives, except barrels or kegs, be rolled. No packages of explosives shall be thrown or dropped during process of loading or unloading or handling of explosives. Special care shall be exercised to the end that packages or other containers containing explosives shall not catch fire from sparks or hot gases from the exhaust tailpipe.

(1) Whenever tarpaulins are used for covering explosives, they shall be secured by means of rope, wire or other equally efficient tie downs. Explosives placards or markings required by §177.823 shall be secured, in the appropriate locations, directly to the equipment transporting the explosives. If the vehicle is provided with placard boards, the placards must be applied to these boards.

(c) **Explosives on vehicles in combination.** Class A explosives may not be loaded into or carried on any vehicle of a combination of vehicles if:

(1) More than two cargo carrying vehicles are in the combination;
(2) Any full trailer in the combination has a wheel base of less than 184 inches;
(3) Any vehicle in the combination is a cargo tank which is required to be marked or placarded under §177.823; or
(4) The other vehicle in the combination contains any:
(i) Initiating explosive,
(ii) Packages of radioactive materials bearing "Yellow III" labels,
(iii) Class A or B poisons, or
(iv) Hazardous materials in a portable tank or a DOT specification 106A or 110A tank.

(d) [Reserved]

(e) **No sharp projections inside body of vehicles.** No motor vehicle transporting any kind of explosive shall have on the interior of the body in which the explosives are contained, any inwardly projecting bolts, screws, nails, or other inwardly projecting parts likely to produce damage to any package or container of explosives during the loading or unloading process or in transit.

(f) **Explosives vehicles, floors tight and lined.** Motor vehicles transporting class A or class B explosives shall have tight floors; shall have that portion of the interior in contact with the load lined with either non-metallic material or non-ferrous metals, except that the lining is not required for truck load shipments loaded by the Departments of the Army, Navy or Air Force of the United States Government provided the explosives are of such nature that they are not liable to leakage of dust,

powder, or vapor which might become the cause of an explosion. The interior of the cargo space must be in good condition so that there will not be any likelihood of containers being damaged by exposed bolts, nuts, broken side panels or floor boards, or any similar projections.

(g) No detonating primer may be transported on the same motor vehicle with any class A or class B explosive (except other detonating primers or detonators), blasting agent or detonating cord, class C explosive. No detonator may be transported on the same motor vehicle with any class A or class B explosive (except other detonators or detonating primers), blasting agent or detonating cord, class C explosive unless—

(1) It is packed in a specification MC 201 (§178.318 of this subchapter) container, or

(2) The package conforms with requirements prescribed in §173.103(d) of this subchapter, and its use is restricted to instances when—

(i) There is no class A or class B explosive or blasting agent loaded on the motor vehicle; and

(ii) A separation of 24 inches is maintained between each package of detonators and each package of detonating cord; or

(3) It is packed and loaded in accordance with a method approved by the Department. One method approved by the Department is as follows:

(i) The detonators are in packagings as prescribed in §173.66 of this subchapter which in turn are loaded into suitable containers or separate compartments. Both the detonators and the container or compartment must meet the requirements of the Institute of Makers of Explosives' Standard (IME Safety Library Publication No. 22).

(h) **Lading within body or covered, tailgate closed.** Except as provided in paragraphs (g), (k), and (m) of this section, dealing with the transportation of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, other than as defined in §173.53(e) of this subchapter, all of that portion of the lading of any motor vehicle which consists of explosives shall be contained entirely within the body of the motor vehicle or within the horizontal outline thereof, without overhang or projection of any part of the load and if such motor vehicle has a tailboard or tailgate, it shall be closed and secured in place during such transportation. Every motor vehicle transporting explosives must either have a closed body or have the body thereof covered with a tarpaulin, and in either event care must be taken to protect the load from moisture and sparks, except that subject to other provisions of these regulations, explosives other than black powder may be transported on flat-bed vehicles if the explosive portion of the load on each vehicle is packed in fire and water resistant containers or covered with a fire and water resistant tarpaulin.

(i) **Explosives to be protected against damage by other lading.** No motor vehicle transporting any explosive may transport as a part of its load any metal or other articles or materials likely to damage such explosive or any package in which it is contained, unless the different parts of such load be so segregated or secured in place in or on the motor vehicle and separated by bulkheads or other suitable means as to prevent such damage.

(j) **Transfer of explosives en route.** No class A or class B explosives shall be transferred from one container to another, or from one motor vehicle to another vehicle, or from another vehicle to a motor vehicle, on any public highway, street, or road, except in case of emergency. In such cases red electric lanterns, red emergency reflectors or red flags shall be set out in the manner prescribed for disabled or stopped motor vehicles. (See Motor Carrier Safety Regulations, Part 392 of this Title.) In any event, all practicable means, in addition to those hereinbefore prescribed, shall be taken to protect and warn other users of the highway against the hazard involved in any such transfer or against the hazard occasioned by the emergency making such transfer necessary.

(k) **Loading requirements for liquid nitroglycerin, desensitized liquid nitroglycerin, or diethylene glycol dinitrate.** Liquid nitroglycerin, desensitized liquid nitroglycerin, or diethylene glycol dinitrate, other than as defined in §173.53(e) of this chapter, may be accepted for transportation and transported only by motor carriers other than common carriers if it be loaded into or on a truck having the type of body specified in Spec. MC 200 (§178.315 of this subchapter). No liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate may be loaded directly above any other explosive, or in any quantity in excess of 900 quarts on one motor vehicle or 10 quarts in any one individual container. Additional quantities of explosives, other than nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, excepting any type of blasting or percussion cap or other detonating device, may be carried on such motor vehicle in a closed or covered bed or body which shall be firmly bolted or fastened above the lid of the compartment containing the nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate. In no case shall the net load be more than 7,500 pounds. (See paragraph (m) of this section and Spec. MC 201 (§178.318 of this subchapter).

(l) **Separation of tools and supplies for preparing charges.** Motor vehicles transporting liquid nitroglycerin; desensitized liquid nitroglycerin or diethylene glycol dinitrate, may also transport the tools and supplies necessary for preparing and firing charges thereof: *Provided*, That such tools and supplies be properly secured in place so as to prevent their coming in contact with the body above specified.

(m) **Detonators or other explosives.** Any explosive, including desensitized liquid explosives as defined in §173.53(e) of this subchapter, other than liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, transported on any motor vehicle transporting liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, must be segregated, each kind from every other kind, and from tools or other supplies. Detonators must be packed in specification MC 201 (§178.318 of this subchapter) containers.

§ 177.836 Nonexplosive material. (a) No restrictions are prescribed in Parts 170–189 of this subchapter for the packing, handling, and transportation of material relating to ammunition for cannon, but containing no explosive or other dangerous article, such as cartridge cases, "dummy" or "drill" cartridges, etc., sandloaded projectiles, sandloaded bombs, empty projectiles, empty mines, empty bombs, solid projectiles, or empty torpedoes. Rotating bands should be protected against deformation by method of packing or loading.

§ 177.837 Flammable liquids. (See also §§177.834(a) to (j).)

(a) **Engine stopped.** Unless the engine of the motor vehicle is to be used for the operation of a pump, no flammable liquid shall be loaded into, or on, or unloaded from any motor vehicle while the engine is running.

(b) **Bonding and grounding containers other than cargo tanks prior to and during transfer of lading.** For containers which are not in metallic contact with each other, either metallic bonds or ground conductors shall be provided for the neutralization of possible static charges prior to and during transfers of flammable liquids between such containers. Such bonding shall be made by first connecting an electric conductor to the container to be filled and subsequently connecting the conductor to the container from which the liquid is to come, and not in any other order. To provide against ignition of vapors by discharge of static electricity, the latter connection shall be made at a point well removed from the opening from which the flammable liquid is to be discharged.

(c) **Bonding and grounding cargo tanks before and during transfer of lading.** (1) When a cargo tank is loaded through an open filling hole, one end of a bond wire shall be connected to the stationary system piping or integrally connected steel framing, and the other end to the shell of the cargo tank to provide a continuous electrical connection. (If bonding is to the framing, it is essential that piping and framing be electrically interconnected.) This connection must be made before any filling hole is opened, and must remain in place until after the last filling hole has been closed. Additional bond wires are not needed around All-Metal flexible or swivel joints, but are required for nonmetallic flexible connections in the stationary system piping. When a cargo tank is unloaded by a suction-piping system through an open filling hole of the cargo tank, electrical continuity shall be maintained from cargo tank to receiving tank.

(2) When a cargo tank is loaded or unloaded through a vapor-tight (not open hole) top or bottom connection, so that there is no release of vapor at a point where a spark could occur, bonding or grounding, is not required. Contact of the closed connection must be made before flow starts and must not be broken until after the flow is completed.

(3) Bonding or grounding is not required when a cargo tank is unloaded through a nonvapor-tight connection into a stationary tank provided the metallic filling connection is maintained in contact with the filling hole.

(d) **Pyroforic liquids in cylinders.** Cylinders containing pyroforic liquids, unless packed in a strong box or case and secured therein to protect valves, must be loaded with all valves and safety relief devices in the vapor space. All cylinders must be secured so that no shifting may occur in transit.

(e) **Manholes and valves closed.** A person shall not drive a cargo tank and a motor carrier shall not require or permit a person to drive a cargo tank containing a flammable liquid (regardless of quantity) unless:

(1) All manhole closures on the cargo tank are closed and secured, and

(2) All valves and other closures in liquid discharge systems are closed and free of leaks.

§ 177.838 Flammable solids and oxidizing materials. (See also §§177.834(a) to (j).)

(a) **Lading within body or covered; tailgate closed; pick-up and delivery.** All of that portion of the lading of any motor vehicle transporting flammable solids or oxidizing material's shall be contained entirely within the body of the motor vehicle and shall be covered by such body, by tarpaulins, or other suitable means, and if such motor vehicle has a tailboard or tailgate, it shall be closed and secured in place during such transportation: *Provided, however*, That the provisions of this paragraph need not apply to "pick-up and delivery" motor vehicles when such motor vehicles are used in no other transportation than in and about cities, towns, or villages. Shipment in water-tight bulk containers do not have to be covered by a tarpaulin or other means.

(b) **Articles to be kept dry.** Special care shall be taken in the loading of any motor vehicle with flammable solids or oxidizing materials which are likely to become hazardous to transport when wet, to keep them from being wetted during the loading process and to keep them dry during transit. Special care shall also be taken in the loading of any motor vehicle with flammable solids or oxidizing materials, which are likely to become more hazardous to transport by wetting, to keep them from being wetted during the loading process and to keep them dry during transit. Examples of such

dangerous materials are charcoal screenings, ground, crushed, or pulverized charcoal, and lump charcoal.

(c) **Loading ventilation, precautions against spontaneous combustion.** Whenever a motor carrier has knowledge concerning the hazards of spontaneous combustion or heating of any article to be loaded on a motor vehicle, such article shall be so loaded as to afford sufficient ventilation of the load to provide reasonable assurance against fire from this cause; and in such a case the motor vehicle shall be unloaded as soon as practicable after reaching its destination. Charcoal screenings, or ground, crushed, granulated, or pulverized charcoal, in bags, shall be so loaded that the bags are laid horizontally in the motor vehicle, and so piled that there will be spaces for effective air circulation, which spaces shall not be less than 4 inches wide; and air spaces shall be maintained between rows of bags. Bags shall not be piled closer than 6 inches from the top of any motor vehicle with a closed body.

(d) **Loose or baled nitrate of soda bags.** Loose or baled unwashed, empty bags, having contained nitrate of soda, may be transported in truckload lots only in motor vehicles, and such motor vehicles must have closed or covered bodies lined with paper; such shipments are required to be loaded by the shipper and to be unloaded by the consignee.

(e) **Staying or blocking of packages of matches.** Special care shall be exercised in the loading of packages containing "strike-anywhere" matches to prevent the shifting or jamming of any such package during transit. To this end, the packages shall be compactly loaded with the strongest dimensions of each box or other container loaded lengthwise of the motor vehicle.

(f) **Smooth vehicle interior for matches.** Unless strike-anywhere matches are contained in wooden outside boxes, special care shall be taken to provide that the inside surfaces of any motor vehicle into which such matches are to be loaded and with which surfaces the containers might come in contact, shall be smooth, without protrusions of any sort, such as bolts, nuts, sharp edges, or corners, etc., and there shall be provided for this purpose smooth wooden inner linings, if the interior of the motor vehicle is not otherwise smooth in accordance with this requirement.

(2) **Flammable liquids.** Matches must not be loaded next to a package bearing a flammable liquid label.

(f) Nitrates, except ammonium nitrate having organic coating, listed in § 173.182(b) of this subchapter must be loaded in closed or open type motor vehicles, which must be swept clean and be free of any projections capable of injuring bags when so packaged. When shipped in open type motor vehicles, the lading must be suitably covered. Ammonium nitrate having organic coating must not be loaded in all-metal vehicles, other than those made of aluminum or aluminum alloys, of the closed type.

(g) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight transported in one rail car or motor vehicle may be classed as a flammable solid when examined for this classification by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT. Maximum quantity in any inside packaging must not exceed 8 pounds. Inside packagings must be arranged and protected to prevent simultaneous ignition of the contents. The complete package must be a type examined by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT. In addition, inside packages which have been examined by the Bureau of Explosives or the Bureau of Mines and approved by the Director, OHMT, may be overpacked in DOT–12A65, 12B65, or 12H65 fiberboard boxes provided all insider containers are firmly packed to prevent movement and the net weight of smokeless powder in any one box does not exceed 16 pounds. Each outside packaging must bear a FLAMMABLE SOLID label.

§ 177.839 Corrosive liquids. (See also §§ 177.834(a) to (j).)

(a) **Nitric acid.** In addition to the requirements set forth in paragraph (b) of this section no carboy or other container of nitric acid shall be loaded above any container containing any other kind of material. The loading of carboys or other containers of nitric acid shall be limited to two tiers high.

(b) **Carboys and frangible containers.** In general, individual carboys and frangible containers of corrosive liquids, including charged electric storage batteries, must, when loaded by hand, be individually loaded into and unloaded from any motor vehicle in which they are to be, or have been, transported. All reasonable precautions must be taken to prevent, by all practicable means, the dropping of any such containers or batteries containing corrosive liquids. No such container or battery may be loaded into a motor vehicle having an uneven floor surface. It shall be permissible to load on or transport in any motor vehicle any authorized carboys or frangible shipping containers, containing corrosive liquids, more than one tier high above any floor only if such carboys or other containers are boxed or crated, or are in barrels or kegs, as required by Parts 170 through 189 of this subchapter, and only if such containers are so stacked that the weight of each tier above the first is entirely supported by the boxes, crates, barrels, kegs, or other authorized means of enclosing the carboys or frangible containers. Only so many tiers as may adequately be so supported without danger of crushing or breaking, shall be permitted. Means must be provided to prevent by all practicable means, in all cases, the shifting of containers or batteries during transit. Nothing contained in this section shall be so construed as to prevent the use of cleats or other retaining means for the purpose of preventing shifting of containers or batteries. For the purposes of this section a false floor or platform, secured against relative motion within the body of the motor vehicle, shall be deemed to be a floor. (For recommendations for handling leaking or broken packages, see § 177.858(a).)

(c) **Storage batteries.** In addition to the requirements set forth in paragraph (b) of this section, all storage batteries containing any electrolyte shall be so loaded, if loaded with other lading, that all such batteries will be protected against other lading falling onto or against them; and adequate means shall be provided in all cases for the protection and insulation of battery terminals against short circuits.

(d) **Corrosives in cargo tanks.** A person shall not drive a cargo tank and a motor carrier shall not require or permit a person to drive a cargo tank containing corrosives (regardless of quantity) unless:

(1) All manhole closures on the cargo tank are closed and secured; and

(2) All valves and other closures in liquid discharge systems are closed and free of leaks.

§ 177.840 Compressed gases, including cryogenic liquids. (See also §§ 177.834(a) to (j).)

(a) **Floors or platforms essentially flat.** Cylinders containing compressed gases shall not be loaded onto any part of the floor or platform of any motor vehicle which is not essentially flat; cylinders containing compressed gases may be loaded onto any motor vehicle not having a floor or platform only if such motor vehicle be equipped with suitable racks having adequate means for securing such cylinders in place therein. Nothing contained in this section shall be so construed as to prohibit the loading of such cylinders on any motor vehicle having a floor or platform and racks as hereinbefore described.

(b) **Cylinders.** To prevent their overturning, cylinders containing compressed gases must be securely lashed in an upright position; loaded into racks securely attached to the motor vehicle; packed in boxes or crates of such dimensions as to prevent their overturning; or loaded in a horizontal position. Specification DOT–4L cylinders must be loaded in an upright position and securely braced.

(2) **Cylinders for hydrogen, cryogenic liquid.** A Specification DOT–4L cylinder containing hydrogen, cryogenic liquid may only be transported on a motor vehicle as follows:

(i) The vehicle must have an open body equipped with a suitable rack or support having a means to hold the cylinder upright when subjected to an acceleration of 2 "g" in any horizontal direction;

(ii) The combined total of the hydrogen venting rates as marked on the cylinders transported on one motor vehicle may not exceed 60 SCF per hour.

(iii) The vehicle may not enter a tunnel; and

(iv) Highway transportation is limited to private and contract carriage and to direct movement from point of origin to destination.

(b) Portable tank containers containing compressed gases shall be loaded on motor vehicles only as follows:

(1) Onto a flat floor or platform of a motor vehicle.

(2) Onto a suitable frame of a motor vehicle.

(3) In either such case, such containers shall be safely and securely blocked or held down to prevent movement relative to each other or to the supporting structure when in transit, particularly during sudden starts and stops and changes of direction of the vehicle.

(4) Requirements of subparagraphs (1) and (2) of this paragraph (b) shall not be construed as prohibiting stacking of containers provided the provisions of subparagraph (3) of this paragraph (b) are fully complied with.

(c) [Reserved]

(d) **Engine to be stopped in tank motor vehicles, except for transfer pump.** No flammable compressed gas shall be loaded into or on or unloaded from any cargo tank with the engine running unless the engine is used for the operation of the transfer pump of the vehicle. Unless the delivery hose is equipped with a shut-off valve at its discharge end, the engine of the motor vehicle shall be stopped at the finish of such loading or unloading operation while the filling or discharge connections are disconnected.

(e) Chlorine cargo tanks shall be shipped only when equipped (1) with a gas mask of a type approved by the U.S. Bureau of Mines for chlorine service; (2) with an emergency kit for controlling leaks in fittings on the dome cover plate.

(f) No chlorine cargo tank used for transportation of chlorine shall be moved, coupled or uncoupled, when any loading or unloading connections are attached to the vehicle, nor shall any semi-trailer or trailer be left without the power unit unless such semi-trailer or trailer be chocked or equivalent means be provided to prevent motion.

(g) Each liquid discharge valve on a cargo tank, other than an engine fuel line valve, must be closed during transportation except during loading and unloading.

(h) The driver of a motor vehicle transporting a flammable cryogenic liquid in a package exceeding 125 gallons of water capacity shall avoid unnecessary delays during transportation. If unforeseen conditions cause an excessive pressure rise, the driver shall manually vent the tank

at a remote and safe location. For each shipment, the driver shall make a written record of the cargo tank pressure and ambient (outside) temperature:

(1) At the start of each trip,

(2) Immediately before and after any manual venting,

(3) At least once every five hours, and

(4) At the destination point.

(i) No person may transport a flammable cryogenic liquid in a cargo tank unless the pressure of the lading is equal to or less than that used to determine the marked rated holding time (MRHT) and the one-way travel time (OWTT), marked on the tank in conformance with §173.318(g) of this subchapter, is equal to or greater than the elapsed time between the start and termination of travel. This prohibition does not apply if, prior to expiration of the OWTT, the tank is brought to full equilibration as specified in paragraph (j) of this section.

(j) Full equilibration of a cargo tank transporting a flammable cryogenic liquid may only be done at a facility that loads or unloads a flammable cryogenic liquid and must be performed and verified as follows:

(1) The temperature and pressure of the liquid must be reduced by a manually controlled release of vapor; and

(2) The pressure in the cargo tank must be measured at least ten minutes after the manual release is terminated.

(k) A carrier of carbon monoxide, cryogenic liquid must provide each driver with a self-contained air breathing apparatus that is approved by the National Institute of Occupational Safety and Health; for example, Mine Safety Appliance Co., Model 401, catalog number 461704.

§ 177.841 Poisons. (See also §§177.834(a) to (j))

(a) **Arsenical compounds in bulk.** Care shall be exercised in the loading and unloading of "arsenical dust", "arsenic trioxide", and "sodium arsenate", allowable to be loaded into sift-proof, steel hopper-type or dump-type motor-vehicle bodies equipped with water-proof, dust-proof covers well secured in place on all openings, to accomplish such loading with the minimum spread of such compounds into the atmosphere by all means that are practicable; and no such loading or unloading shall be done near or adjacent to any place where there are or are likely to be, during the loading or unloading process assemblages of persons other than those engaged in the loading or unloading process, or upon any public highway or in any public place.

(1) The motor vehicles must be marked in accordance with §173.368(b) of this chapter.

(2) Before any motor vehicle may be used for transporting any other articles, all detectable traces of arsenical materials must be removed therefrom by flushing with water, or by other appropriate method, and the marking removed.

(b) **No Class A or irritating materials in cargo tanks.** No poison, Class A, or irritating material may be loaded into or transported in any cargo tank.

(c) **Class A poisons or irritating materials.** The transportation of a Class A poison or an irritating material is not permitted if there is any interconnection between packagings.

(d) **Poisons in cargo tanks.** A person shall not drive a cargo tank and a motor carrier shall not require or permit a person to drive a cargo tank containing poisons (regardless of quantity) unless:

(1) All manhole closures on the cargo tank are closed and secured; and

(2) All valves and other closures in liquid discharge systems are closed and free of leaks.

(e) A carrier may not transport a package bearing a poison label in the same motor vehicle with material that is marked as or known to be foodstuff, feed or any edible material intended for consumption by humans or animals unless the inside package is overpacked in a liquid-tight and dust-proof container identified as package 4000 in the National Motor Freight Classification 100-I or when overpacked in a metal drum as specified in §173.25(c) of this subchapter. No motor carrier may transport a packaging containing a material which is required to be labeled "Poison", "Poison gas", or "Irritant" in the driver's compartment (including a sleeper berth) of a motor vehicle.

§ 177.842 Radioactive material. (a) The number of packages of radioactive materials in any motor vehicle, trailer, or storage location must be limited so that the total transport index number, as defined in §173.403 of this subchapter and determined by adding together the transport index numbers on the labels of the individual packages, does not exceed 50. This provision does not apply to exclusive use shipments described in §§173.441(b), 173.457, and 173.425 of this subchapter.

(b) Packages of radioactive material bearing "radioactive yellow-II" or "radioactive yellow-III" labels must not be placed in a motor vehicle or in any other place closer than the distances shown in the following table to any area which may be continuously occupied by passengers, employees, or shipments of animals, nor closer than the distances shown in the table below to any package containing undeveloped film (if so marked). If more than one of these packages is present, the distance shall be computed from the following table on the basis of the total transport index number (determined by adding together the transport index numbers on the labels of the individual packages) of packages in the vehicle or storeroom. Where more than one group of packages is present in any single storage location, a single group may not have a total transport index greater than 50. Each group of packages must be handled and stowed not closer than 6 meters (20 feet) (measured edge to edge) to any other group.

(c) Shipments of low specific activity materials, as defined in §173.403 of this subchapter, must be loaded so as to avoid spillage and scattering of loose materials. Loading restrictions are set forth in §173.425 of this subchapter.

(d) Packages must be so blocked and braced that they cannot change position during conditions normally incident to transportation.

Total transport index	Minimum separation distances in feet to nearest undeveloped film for various times of transit					Minimum distance in feet to area of persons, or minimum distance in feet from dividing partition of cargo compartments
	Up to 2 hours	2-4 hours	4-8 hours	8-12 hours	Over 12 hours	
None	0	0	0	0	0	0
0.1 to 1.0	1	2	3	4	5	1
1.1 to 5.0	3	4	6	8	11	2
5.1 to 10.0	4	6	9	11	15	3
10.1 to 20.0	5	8	12	16	22	4
20.1 to 30.0	7	10	15	20	29	5
30.1 to 40.0	8	11	17	22	33	6
40.1 to 50.0	9	12	19	24	36	7

Note 1. The distance in the table must be measured from the nearest point on the packages of radioactive materials

(e) Persons should not remain unnecessarily in a vehicle containing radioactive materials.

(f) Each fissile class III radioactive material shipment (as defined in §173.455(a)(3) of this subchapter) must be transported in accordance with one of the methods prescribed in §173.457 of this subchapter. The transport controls must be adequate to assure that no fissile class III shipment is transported in the same transport vehicle with any other fissile radioactive material shipment. In loading and storage areas each fissile class III shipment must be segregated by a distance of at least 20 feet from other packages required to bear one of the "Radioactive" labels described in §172.403 of this subchapter.

(g) For shipments transported under exclusive use conditions the radiation dose rate must not exceed 2 millirem per hour in any position normally occupied in the motor vehicle. For shipments transported as exclusive use under the provisions of §173.441(b) for packages with external radiation levels in excess of 200 millirem per hour at the package surface, the motor vehicle must meet the requirements of a closed transport vehicle (§173.403 of this subchapter).

§ 177.843 Contamination of vehicles. (a) Each motor vehicle used for transporting radioactive materials under exclusive use conditions in accordance with §173.425(c) or §173.443(c) shall be surveyed with radiation detection instruments after each use. A vehicle may not be returned to service until the radiation dose rate at each accessible surface is 0.5 millirem per hour or less and the removable (non-fixed) radioactive surface contamination is not greater than the level prescribed in §173.443(a).

(b) This section does not apply to any vehicle used solely for transporting radioactive material if a survey of the interior surface shows that the radiation dose rate does not exceed 10 millirem per hour at the interior surface or 2 millirem per hour at 3 feet from any interior surface. These vehicles must be stenciled with the words "For Radioactive Materials Use Only" in lettering at least 3 inches high in a conspicuous place, on both sides of the exterior of the vehicle. These vehicles must be kept closed at all times other than loading and unloading.

(c) In case of fire, accident, breakage, or unusual delay involving shipments of radioactive material, see §177.861.

§ 177.844 Other regulated materials. Asbestos must be loaded, handled, and unloaded, and any asbestos contamination of transport vehicles removed, in a manner that will minimize occupational exposure to airborne asbestos particles released incident to transportation. (See §173.1090 of this subchapter.)

SUBPART C—SEGREGATION AND SEPARATION

CHART OF HAZARDOUS MATERIALS

§ 177.848 Segregation and separation chart of hazardous materials.

(a) Charged electric storage batteries must not be loaded in the same vehicle with explosives, class A.

(b) Cyanides or cyanide mixtures must not be loaded or stored with acids or any other acidic materials which could release hydrocyanic acid from cyanides.

(c) Gas identification sets may be loaded and transported with all articles named in the segregation and separation chart, except those in column c.

(d) Nitric acid, when loaded in the same motor vehicle with other corrosive liquids in carboys, must be separated from the other carboys. A 2 by 6 inch plank set on edge, should be nailed across the motor vehicle floor at least 12 inches from the nitric acid carboys, and the space between the plank and the carboys of nitric acid should be filled with sand, sifted ashes, or other incombustible absorbent material.

(e) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one motor vehicle shall be classed as a flammable solid for purposes of transportation when examined for this classification by the Bureau of Explosives and approved by the Director, OHMT.

(f) Hazardous materials must not be loaded, transported, or stored together, except as provided in the following table:

Segregation and Separation Chart of Hazardous Materials

Footnotes

1. Except as prescribed in § 173.81(c) or 177.835(g) loading and transportation of detonators or detonating primers with materials named in rows b, c, e, f, 3, 8a or 10 is prohibited.

2. Corrosive liquids must not be loaded above or adjacent to flammable solids, oxidizing materials, ammunition for cannon with or without projectiles or propellant explosives, except that shippers loading truckload shipments of corrosive liquids and flammable solids or oxidizing materials packages and who have obtained prior approval from the Department may load such materials together when it is known that the mixture of contents would not cause a dangerous evolution of heat or gas.

3. Explosives, class A, and explosives, class B must not be loaded or stored with chemical ammunition containing incendiary charges or white phosphorus either with or without bursting charges.

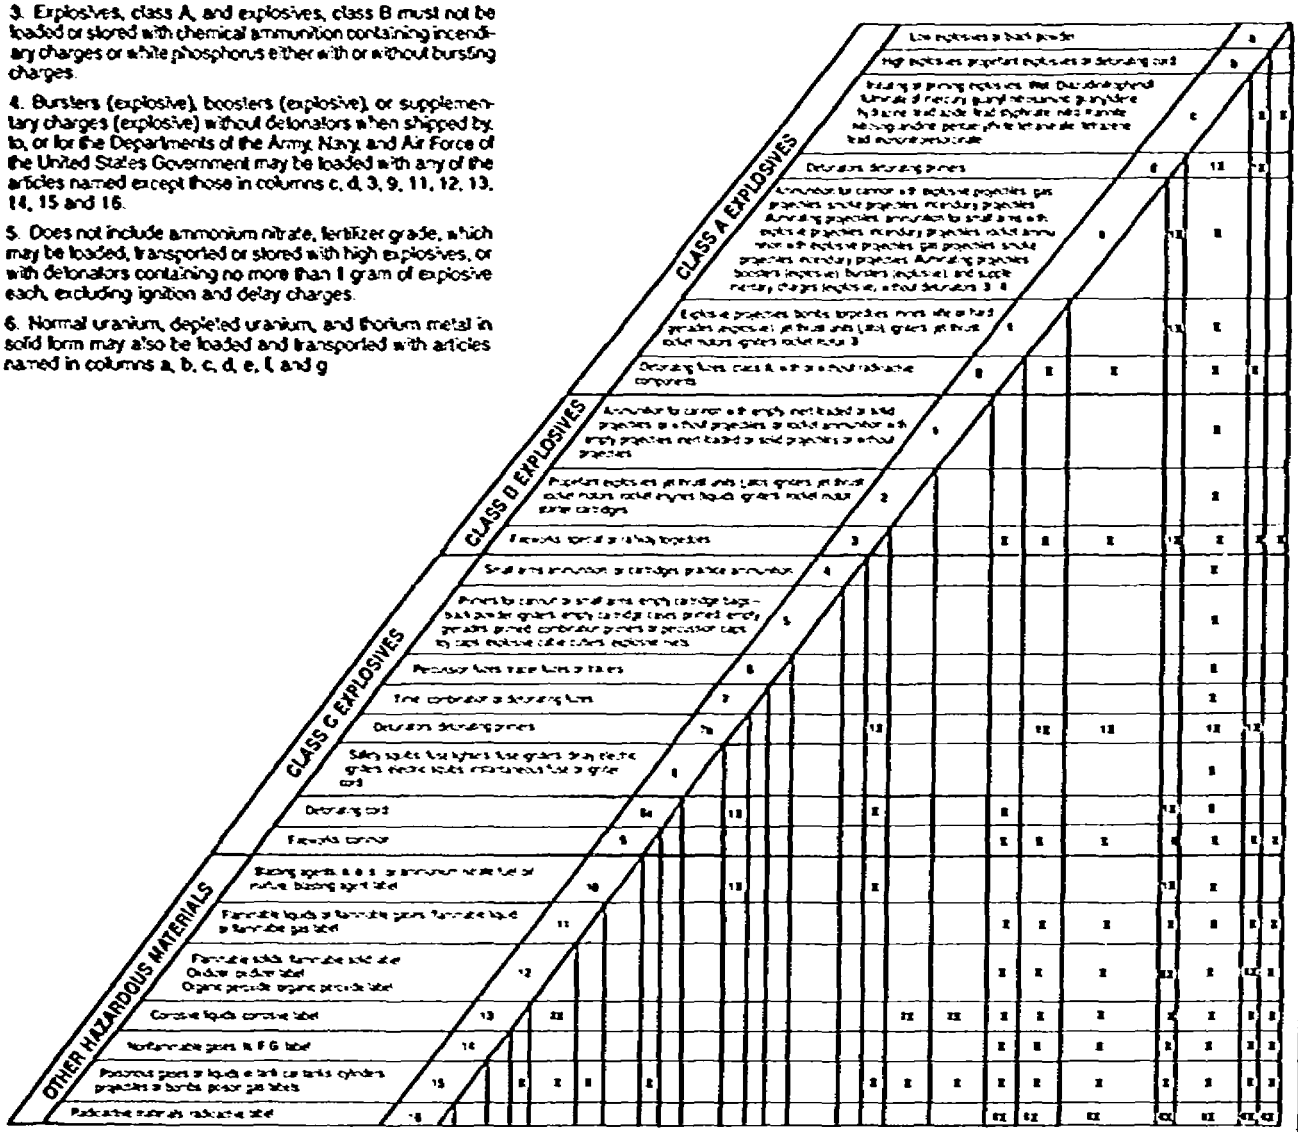
4. Bursters (explosive), boosters (explosive), or supplementary charges (explosive) without detonators when shipped by, to, or for the Departments of the Army, Navy, and Air Force of the United States Government may be loaded with any of the articles named except those in columns c, d, 3, 9, 11, 12, 13, 14, 15 and 16.

5. Does not include ammonium nitrate, fertilizer grade, which may be loaded, transported or stored with high explosives, or with detonators containing no more than 1 gram of explosive each, excluding ignition and delay charges.

6. Normal uranium, depleted uranium, and thorium metal in solid form may also be loaded and transported with articles named in columns a, b, c, d, e, f, and g.

Instructions

The letter X at an intersection shows that these materials must not be loaded or stored together. Example: Detonating fuzes class A, with or without radioactive components, (g), must not be loaded or stored with high explosives or propellant explosives, (b).



BILLING CODE 4910-60-C

For explanation of abbreviations and reference marks, see last page of this tariff.

SUBPART D

VEHICLES AND SHIPMENTS IN TRANSIT; ACCIDENTS

§ 177.853 Transportation and delivery of shipments. (a) **No unnecessary delay in movement of shipments.** All shipments of hazardous materials shall be transported without unnecessary delay, from and including the time of commencement of the loading of the cargo until its final discharge at destination.

(b) **Delivery at destination.** Shipments of hazardous materials which are refused by the consignees, or which can not be delivered within 48 hours after arrival at destination, must be promptly disposed of (1) by return to the shipper, if in proper shipping condition, or (2) by storage, provided a suitable storage place for such articles is available, or (3) by sale, or (4) when necessary to safety, by destruction: *Provided*, That charged electric batteries may be held for 30 days after arrival at destination, pending delivery or disposition.

(c) **Delivery to authorized person, or magazine.** Every shipment of dangerous explosives by motor vehicle shall be delivered only to someone authorized to receive it, except such explosives shipments as are placed in magazines which are immediately thereafter locked.

§ 177.854 Disabled vehicles and broken or leaking packages; repairs. (See also Forbidden articles, §177.821.)

(a) **Care of lading, hazardous materials.** Whenever for any cause other than necessary traffic stops any motor vehicle transporting any hazardous material is stopped upon the traveled portion of any highway or shoulder thereof, special care shall be taken to guard the vehicle and its load or to take such steps as may be necessary to provide against hazard. Special effort shall be made to remove the motor vehicle to a place where the hazards of the materials being transported may be provided against. See §§ 392.22, 392.24, and 392.25 of this title for warning devices required to be displayed on the highway.

(b) **Disposition of containers found broken or leaking in transit.** When leaks occur in packages or containers during the course of transportation, subsequent to initial loading, disposition of such package or container shall be made by the safest practical means afforded under paragraphs (c), (d), and (e) of this section.

(c) **Repairing or overpacking packages.** (1) Packages may be repaired when safe and practicable, such repairing to be in accordance with the best and safest practice known and available.

(2) Packages of hazardous materials that are damaged or found leaking during transportation, and hazardous materials that have spilled or leaked during transportation, may be forwarded to destination or returned to the shipper in a salvage drum in accordance with the requirements of §173.3(c) of this subchapter.

(d) **Transportation of repaired packages.** Any package repaired in accordance with the requirements of paragraph (c)(1) of this section, except as provided in §§177.855(c), 177.856(c), and 177.858(b), may be transported to the nearest place at which it may safely be disposed of only in compliance with the following requirements:

(1) The package must be safe for transportation.

(2) The repair of the package must be adequate to prevent contamination of or hazardous admixture with other lading transported on the same motor vehicle therewith.

(3) If the carrier is not himself the shipper, the consignee's name and address must be plainly marked on the repaired package.

(e) **Disposition of unsafe broken packages.** In the event any leaking package or container cannot be safely and adequately repaired for transportation or transported, it shall be stored pending proper disposition in the safest and most expeditious manner possible.

(f) **Stopped vehicles; other dangerous articles.** Whenever any motor vehicle transporting flammable liquids, flammable solids, oxidizing materials, corrosive materials, compressed gases, or poisons, is stopped for any cause other than necessary traffic stops upon the traveled portion of any highway, or a shoulder next thereto, the following requirements shall be complied with during the period of such stop:

(1) For motor vehicles other than cargo tanks used for the transportation of flammable liquids or flammable compressed gases and not transporting explosives, Class A, or Class B, warning devices must be set out in the manner prescribed by §392.22 of this title.

(2) For cargo tanks used for the transportation of flammable liquids or flammable compressed gases, whether loaded or empty, and vehicles transporting explosives Class A or Class B, warning devices must be set out in the manner prescribed by §392.25 of this title.

(g) **Repairs and maintenance of vehicles containing certain hazardous materials—(1) General.** No person may use heat, flame or spark producing devices to repair or maintain the cargo or fuel containment system of a motor vehicle required to be placarded, other than COMBUSTIBLE, in accordance with subpart F of Part 172 of this subchapter. As used in this section, "containment system" includes all vehicle components intended physically to contain cargo or fuel during loading or filling, transport, or unloading.

(2) **Repair and maintenance inside a building.** No person may perform repair or maintenance on a motor vehicle subject to paragraph (g)(1) of this section inside a building unless:

(i) The motor vehicle's cargo and fuel containment systems are closed (except as necessary to maintain or repair the vehicle's motor) and do not show any indication of leakage;

(ii) A means is provided, and a person capable to operate the motor vehicle is available, to immediately remove the motor vehicle if necessary in an emergency;

(iii) The motor vehicle is removed from the enclosed area upon completion of repair or maintenance work; and

(iv) For motor vehicles loaded with explosives A or B, flammable liquids or flammable gases, all sources of spark, flame or glowing heat within the area of enclosure (including any heating system drawing air therefrom) are extinguished, made inoperable or rendered explosion-proof by a suitable method. *Exception:* Electrical equipment on the vehicle, necessary to accomplish the maintenance function, may remain operational.

(h) **No repair with flame unless gas-free.** No repair of a cargo tank used for the transportation of any flammable liquid or poisonous liquid, or any compartment thereof, or of any container for fuel of whatever nature, may be repaired by any method employing a flame, arc, or other means of welding, unless the tank or compartment shall first have been made gas-free.

§ 177.855 Accidents: explosives. (a) **Vehicle disabled; warning of nearby persons; removal of explosives.** In the event of an accident involving any motor vehicle transporting any explosives, every available means shall be employed to prevent individuals, other than those employed in the protection of persons or property or in the removal of hazards or wreckage, from congregating in the vicinity; such means shall also be employed to prevent smoking, to keep flame away, and to safeguard against the aggravation of the hazard present, and to warn other users of the highway. In the event that any motor vehicle laden with or carrying dangerous explosives is entangled with another or with any other object or structure, following an accident, no attempt shall be made to disentangle either vehicle, or the laden vehicle from the object or structure, until the lading, together with any fragments thereof, be removed to a place at least 200 feet from the vehicle (and preferably 200 feet from any habitation). In the event of fire, involving a motor vehicle laden with any explosive every practicable effort shall be made to give warning of danger of explosion to habitants in the vicinity and to other users of the highway.

(b) **Disposition of spilled or leaking explosives.** In the event of any accident involving any motor vehicle transporting any explosive in which packages are broken, all unbroken packages and as much of any broken packages as possible shall be carefully gathered and removed to a place of safety, in order to prevent fire or explosion. In clearing any wreck in which a motor vehicle containing any explosive is involved, care shall be exercised not to produce sparks with tools or by other means in moving of or working about the wreckage, so as to avoid as far as possible fires or explosions.

(c) **Explosives packages in transit capable of repair.** Any package of explosives found injured or broken in transit may be repaired or recoopered when this is evidently practicable and no dangerous. When a box that contains any explosive is so damaged that it cannot be repaired it should be reinforced by stout wrapping paper and twine, placed in another strong box, and surrounded by dry, fine sawdust, or dry and clean cotton waste, or elastic wads made from dry newspapers. The box cover should then be securely attached. A ruptured can or keg should be enclosed in a grain bag of good quality, and boxed. Injured packages thus protected, and properly marked with name of contents and consignee's name and address, may be carried to destination: *Provided, however*, That the motor carrier, if himself the shipper, need not mark his own name and address on the package.

(d) **Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate.** When any liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate has been spilled on any portion of any motor vehicle it shall be washed with a suitable neutralizing agent until all of any such spillage shall have become completely neutralized.

Note 1: Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol nitrate may be destroyed by use of a solution composed of:

60 percent commercial sodium sulfide	1 ounce.
Denatured alcohol	7½ fluid ounces.
Acetone	2 fluid ounces
Water	3 fluid ounces.

(e) **Explosives other than liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate.** When particles of any explosive composition other than liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate have escaped from a damaged container to the floor of the body of the carrier's motor vehicle the floor shall be thoroughly swept and any absorbed portion removed.

(f) **Unrepairable explosives packages.** When any package of explosives in transit is found to be leaking or damaged and cannot be recoopered, it may not be transported beyond the minimum distance

necessary to reach a place where the explosive may be disposed of with safety, except as provided in §177.854(e) and paragraph (c) of this section.

§ 177.856 Accidents; flammable liquids. (a) **Accident to vehicle; warnings; no sparks or flame.** In the event of an accident involving any motor vehicle transporting any flammable liquid every available means shall be employed to prevent individuals, other than those employed in the protection of persons or property or in the removal of hazards or wreckage, from congregating in the vicinity; such means shall also be employed to prevent smoking, to keep fires or flame away, to safeguard against the hazard present, and to warn other users of the highway. (See also §177.807.)

(b) **Present leakage from spreading.** Whenever any flammable liquid is escaping from a container, all practical means shall be taken to prevent such liquid from spreading over a wide area, from flowing into sewers and streams, and from becoming ignited.

(c) **Disposition of contents of cargo tank when unsafe to continue.** In the event of a leak in a cargo tank of such a character as to make further transportation unsafe, the leaking vehicle should be removed from the traveled portion of the highway; and every available means employed for the safe disposal of the leaking liquid by preventing, so far as practicable, its spread over a wide area, such as by digging trenches to drain to a hole or depression in the ground, diverting the liquid away from streams or sewers if possible, or catching the liquid in containers if practicable. Smoking and the lighting of cigarettes, cigars, or pipes in the vicinity is prohibited, and fires or flames in the vicinity of the leaking cargo tank must be extinguished.

(d) **Transfer of flammable liquids en route.** No flammable liquid shall be transferred from one container to another, or from one motor vehicle to another vehicle, or from another vehicle to a motor vehicle, on any public highway, street, or road, except in case of emergency. In such cases warning devices must be set out in the manner prescribed by §392.25 of this title. In any event, all practicable means, in addition to those hereinbefore prescribed, shall be taken to protect and warn other users of the highway against the hazard involved in any such transfer, or against the hazard occasioned by the emergency making such transfer necessary. Nothing contained in this rule shall be so construed as to prohibit the fueling of machinery or vehicles used in road construction and maintenance.

(e) **Transportation of leaking cargo tanks.** A leaking cargo tank may only be transported the minimum distance necessary to reach a place where the contents of the tank or compartment may be disposed of with safety. Every available means must be utilized to prevent the leakage or spillage of the liquid upon the highway.

§ 177.857 Accidents; flammable solids and oxidizing materials. (a) **Dangerous articles spilled; warning of nearby persons.** In the event of any accident involving any motor vehicle in which any flammable solid or oxidizing material may have become spilled, every practicable and available means shall be taken to warn all approaching persons of the hazard of fire.

(b) **Prevent spread of fire where possible.** Care shall be exercised in the event of damage to packages of flammable solids or oxidizing materials which either have been or may be on fire, to limit the spread of the fire.

(c) **Disposition of spilled or leaking materials.** In the event of any accident involving any motor vehicle transporting any flammable solid or oxidizing material in which packages are broken, as much as possible of any broken packages shall be carefully gathered and removed to a place of safety, and if the removal of unbroken packages from the motor vehicle would decrease the hazard of fire or other hazard, they shall be removed. The handling of any such materials not contained in packages shall be such as to promote the greatest safety to other users of the highway.

(d) **Reloading of damaged packages of matches; repairs.** In the event of damage to matches or packages of matches by fire or by water in extinguishing a fire in transit, they shall be reloaded in accordance with the applicable requirements for the packing and loading of matches. Great care shall be taken, however, first to examine and repair any damage to outside containers before reloading, and all loose matches shall be destroyed. Smoking boxes of matches shall not be opened in the vicinity of the remainder of the lading. Such boxes shall be destroyed at a safe distance from the motor vehicle, preferably by burning, and shall not be left, either smoking or burning.

(e) **Calcium hypochlorite compounds, dry, involved in fires.** Calcium hypochlorite compounds, dry, packed in metal drums when involved in motor vehicles where fire has occurred from any cause must be held at least five days before forwarding. Drums showing evidence of spontaneous heating or stress from internal pressure must not be reshipped.

§ 177.858 Accidents; corrosive materials. (a) **Accident to vehicle; other lading damaged; vehicle washed.** In the event of any accident involving any motor vehicle transporting corrosive materials in which has been involved the breakage, spillage, or leakage of containers of such materials, care shall be exercised in the handling of any other lading which may have become damaged thereby so as to minimize the hazard in handling such damaged lading during the unloading process. The interior or any other parts of the motor vehicle upon which a corrosive liquid may have become spilled shall be thoroughly washed with water as soon after the unloading process as feasible and prior, in any event, to the subsequent reloading of the motor vehicle. (See also §177.807.)

(b) **Leaking cargo tanks.** In the event of leakage of liquid from any cargo tank or any compartment thereof used for the transportation of corrosive liquids, which develops or is discovered subsequent to the commencement of transportation, any one of the following means, or any means in addition to those herein prescribed, equally or more effective, shall be employed to minimize further hazard:

(1) Further to transport the cargo tank only the minimum distance to reach a place where the contents of the tank or compartment which is leaking may be disposed of with safety, meanwhile employing every available means to prevent the spillage or leaking of any liquid on the highway.

(2) In the event the leak is of such a character as to make further transportation of the cargo tank unsafe, to draw off the traveled portion of the highway, and to employ every available means for the safe disposal of the leaking liquid by preventing, so far as practicable, its spread over a wide area, as by absorbing by means of the use of noncombustible absorbent material, such as fine ashes, sand, earth, etc., or by any other practicable means; by digging trenches to drain to a hole or depression in the ground; by diverting the liquid away from streams or sewers if possible; or by catching the liquid in containers if practicable. So far as practicable, every available means shall be employed to prevent the congregation of spectators and to prevent them from coming in contact with the liquid or its fumes. All available means shall be taken to prevent injury or damage to other users of the highway, or to livestock or farm animals, which might be occasioned by the unloading of the corrosive liquid.

§ 177.859 Accidents; compressed gases. (a) **Accident to vehicle; warnings; keep fire away.** In the event of an accident involving any motor vehicle transporting any compressed gas, the release of which would constitute a hazard to other users of the highway, due care shall be taken that only persons employed in the removal of hazards or wreckage shall be allowed in proximity to the motor vehicle, and the shipper should be notified. In such cases, every practicable and available means shall be taken to warn all approaching persons of the danger involved and to caution them against the use of matches or flame-producing devices, if the gas is flammable.

(b) **Transfer of flammable gas en route; no flame or sparks.** No flammable compressed gas shall be transferred from one container to another, or from one cargo tank to another tank vehicle, or from another tank vehicle to a cargo tank, on any public highway, street, or road, except in case of emergency. In such cases every precaution shall be taken to prevent the escape of gas. Warning devices must be set out in the manner prescribed in §392.25 of this title. All cargo tanks involved in such transfer shall be grounded. The transfer shall be made only during daylight, unless the emergency occurs at night or extends into hours of darkness and the hazard would be increased by waiting until daylight. In any such event, all practicable means, in addition to those hereinbefore prescribed, shall be taken to protect and warn other users of the highway against the hazard involved in any such transfer, or against the hazard occasioned by the emergency making such transfer necessary. Every precaution shall be taken to prevent the ignition of any flammable compressed gas from any source; and when it is possible to prevent the congregation of persons not directly concerned with the emergency, this shall be done. Every practicable precaution shall be taken to keep flames or fire away from the scene of the emergency and to prevent smoking or the lighting of pipes, cigars, or cigarettes. Similarly, special care shall be exercised in the operation of any engine, whether of the motor vehicles involved or any other, and where the operation of any such engine would be likely to produce ignition of the flammable compressed gas, the transfer shall be accomplished by other means, if possible. Nothing contained in this section shall be so construed as to prohibit the fueling of machinery or vehicles used in road construction and maintenance.

§ 177.860 Accidents or leakage; poisons. (a) **Accident to vehicle; warnings; no sparks or flame.** In the event of an accident involving any motor vehicle transporting any poison which is flammable, noxious, or toxic, every available means shall be employed in the protection of persons or property or in the removal of hazards or wreckage, from congregating in the vicinity; such means shall also be employed to prevent smoking, to keep flame away, to safeguard against the aggravation of the hazard present, and to warn other users of the highway. Care shall also be taken to prevent any poison, whether flammable or nonflammable, from contaminating streams or flowing or being spilled into sewers, and poison in powdered form from being scattered by wind. (See also §177.807.)

(b) **Leakage.** A vehicle which has been used to transport material marked as or known to be poison (class A or B) must be inspected for contamination before reuse. A vehicle which has been contaminated must not be returned to service until such contamination has been

removed. This subparagraph does not apply to vehicles used solely for transporting such poisons so long as they are used in that service.

(b) Leaking cargo tanks. In the event of leakage of liquid from any cargo tank or any compartment thereof used for the transportation of any poison which is also flammable, or which would come also within the definition of a flammable liquid, or of any gas or combination of gas and liquid, or any poison which would come within the definition of a compressed gas, the requirements shall be the same as those set forth for flammable liquids and compressed gases. In addition, all possible care shall be taken to warn bystanders or other users of the highway against the hazard of inhaling vapors or coming in contact with the poison.

§ 177.861 Accidents; radioactive materials. (a) In addition to the incident reporting requirements of §§171.15 and 171.16 of this subchapter, the carrier must also notify the shipper at the earliest practicable moment following any incident in which there has been breakage, spillage, or suspected radioactive contamination involving radioactive material's shipments. Vehicles, buildings, areas, or equipment in which radioactive materials have been spilled may not be again placed in service or routinely occupied until the radiation dose rate at any accessible surface is less than 0.5 millirem per hour as there is no significant removable radioactive surface contamination (see §173.443 of this subchapter).

Note 1: In these instances, the package or materials should be segregated as far as practicable from personnel contact. If radiological advice or assistance is needed, the U.S. Department of Energy should also be notified. In case of obvious leakage, or if it appears likely that the inside container may have been damaged, care should be taken to avoid inhalation, ingestion, or contact with the radioactive material. Any loose radioactive material should be left in a segregated area and held pending disposal instructions from qualified persons.

Note 2: Details involving the handling of radioactive materials in the event of an accident can be found in Bureau of Explosives' Pamphlets 1 and 2.

(b) Cleaning vehicles. See §177.843.

SUBPART E

REGULATIONS APPLYING TO HAZARDOUS MATERIAL ON MOTOR VEHICLES CARRYING PASSENGERS FOR HIRE

§ 177.870 Regulations for passenger carrying vehicles. (a) Vehicles transporting passengers and property. In addition to the regulations in Parts 170–189 of this subchapter the following requirements shall apply to vehicles transporting passengers and property.

(b) No explosives or other hazardous materials on passenger-carrying vehicles, exceptions. No hazardous materials except small-arms ammunition, emergency shipments of drugs, chemicals and hospital supplies, and the accompanying munitions of war of the Departments of the Army, Navy, and Air Force of the United States Government, are authorized by Parts 170–189 of this subchapter to be transported on motor vehicles carrying passengers for hire where other practicable means of transportation is available.

(c) Explosives in passenger carrying space forbidden. No explosive, except small-arms ammunition, may be carried in the passenger-carrying space of any motor vehicle transporting passengers for hire.

(d) Hazardous materials on passenger-carrying vehicles; quantity. Where no other practicable means of transportation is available, the following articles in the quantities as shown may be transported in motor vehicles carrying passengers for hire in a space other than that provided for passengers: Not to exceed 100 pounds gross weight of any or all of the kinds of explosives permitted to be transported by passenger-carrying aircraft or rail car may be transported on a motor vehicle transporting passengers: *Provided, however,* That samples of explosives for laboratory examination, not to exceed two samples, or a total of no more than 100 detonators, Class C explosives at one time in a single motor vehicle, may be transported in a motor vehicle transporting passengers.

(e) Articles other than explosives on passenger-carrying vehicles. The gross weight of any given class of hazardous material other than explosives shall not exceed 100 pounds, and the aggregate weight of all such other dangerous articles shall not exceed 500 pounds. This provision does not apply to nontoxic, nonflammable refrigerants, when such refrigerant is for servicing operations of a motor carrier on whose motor vehicles the refrigerant is used. A cylinder secured against movement while in transit and not exceeding 250 pounds gross weight may be transported.

(f) Poisons on passenger-carrying vehicles. No motor carrier may transport any extremely dangerous poison, class A, any tear gas or irritating substance, class C, any less dangerous poison, class B, which is a liquid, or any paranitraniline, in any amount, in or on any bus while engaged in the transportation of passengers; or any less dangerous poison, class B, which is other than a liquid, in any amount exceeding an aggregate of 100 pounds gross weight in or on any such bus.

(g) Radioactive materials. In addition to the limitations prescribed in paragraphs (b) and (e) of this section, no person may transport any radioactive material requiring labels under §§172.436, 172.438, and 172.440 of this subchapter in or on any motor vehicle carrying passengers for hire except where no other practicable means of transportation is available. Packages of radioactive material's must be stored only in the trunk or baggage compartment of the vehicle, and must not be stored in any compartment occupied by persons. Packages of radioactive material's must be handled and placed in the vehicle as prescribed in §177.842.

APPENDIX A TO PART 177

RELATIONSHIP BETWEEN ROUTING REQUIREMENTS IN PART 177 WITH STATE AND LOCAL REQUIREMENTS

I. Purpose. This appendix is a statement of the Department of Transportation policy regarding the relationship of State and local rules with Federal rules in Part 177 of this subchapter for routing motor carriers transporting radioactive materials. The purpose of this appendix is to advise a State or local government how it can exercise authority over motor carriers under its own laws in a manner that the Department of Transportation considers to be consistent with rules in Part 177 (see 49 U.S.C. 1811(a)). This appendix and Part 177 do not delegate Federal authority to regulate motor carriers.

II. Definition. "Routing rule" means any action which effectively redirects or otherwise significantly restricts or delays the movement by public highway of motor vehicles containing hazardous materials, and which applies because of the hazardous nature of the cargo. Permits, fees and similar requirements are included if they have such effects. Traffic controls are not included if they are not based on the nature of the cargo, such as truck routes based on vehicles weight or size, nor are emergency measures.

III. Highway route controlled quantity radioactive materials.

A. State routing rules. A State routing rule which applies to large quantity radioactive materials is inconsistent with Part 177 if:

1. It prohibits transportation of highway route controlled quantity radioactive materials by highway between any two points without providing an alternate route for the duration of the prohibition; or

2. It does not meet all of the following criteria:

(a) The rule is established by a State routing agency as defined in §171.8 of this subchapter;

(b) The rule is based on a comparative radiological risk assessment process at least as sensitive as that outlined in the "DOT Guidelines";

(c) The rule is based on evaluation of radiological risk wherever it may occur, and on a solicitation and substantive consideration of views

from each affected jurisdiction, including local jurisdictions and other States; and

(d) The rule ensures reasonable continuity of routes between jurisdictions.

B. Local routing rules. A local routing rule that applies to highway route controlled quantity radioactive materials is inconsistent with this Part if it prohibits or otherwise affects transportation on routes or at locations either:

1. Authorized by Part 177, or
2. Authorized by a State routing agency in a manner consistent with Part 177.

IV. Quantities of radioactive materials required to be placarded. A State or local routing rule that applies to a radioactive material (other than a highway route controlled quantity radioactive material) for which Part 177 requires placarding, is inconsistent with Part 177 unless it is identical to §177.825(a) of this part.

V. Radioactive materials for which placarding is not required. A State or local routing rule that applies to a radioactive material for which Part 172 does not require placarding is inconsistent with this part.

VI. Other related State and local rules. A State or local transportation rule is inconsistent with Part 177 if it:

A. Conflicts with physical security requirements which the Nuclear Regulatory Commission has established in 10 CFR Part 73 or requirements approved by the Department of Transportation under §173.22(c) of this subchapter;

B. Requires additional or special personnel, equipment, or escort;

C. Requires additional or different shipping paper entries, placards, or other hazard warning devices;

D. Requires filing route plans or other documents containing information that is specific to individual shipments;

E. Requires prenotification;

F. Requires accident or incident reporting other than as immediately necessary for emergency assistance; or

G. Unnecessarily delays transportation.

PART 178—SHIPPING CONTAINER SPECIFICATIONS

§ 178.0 Purpose, scope, and applicability.

§ 178.0-1 Purpose and scope. This part prescribes the manufacturing and testing specifications for packaging and containers used for the transportation of hazardous materials in commerce.

§ 178.0-2 Applicability. (a) Any person who performs a function prescribed in this part, shall perform that function in accordance with this part.

(b) When this part requires (either expressly or by reference to §173.24 of this subchapter) a packaging or container to be marked with a DOT specification (for example, DOT-1A, DOT-17E-304HT, DOT-23G40), compliance with that requirement is the responsibility of the packaging or container manufacturer. Marking the packaging or container with the DOT specification shall be understood to certify compliance by the manufacturer, that the functions performed by the manufacturer, as prescribed in this part, have been performed in compliance with this part. (See also §173.28 of this subchapter "Reuse of containers." That section envisions the marking of containers to be performed by a person other than the original manufacturer.)

(c) Except as specifically provided in §§178.337-18 and 178.340-10, the manufacturer of a packaging or container should inform each person to whom that packaging or container is transferred of any specification requirements which have not been met at time of transfer.

§ 178.0-3 United Nations symbol and packaging identification code. (a) In addition to the markings required by this subchapter, packagings may be marked with the United Nations symbol and packaging identification code as provided in the ICAO Technical Instructions or in Annex 1 to the IMDG Code provided that the person applying these markings has established that the packaging conforms to the applicable provisions of the ICAO Technical Instructions or Annex 1 to the IMDG Code, respectively.

(1) If an indication of the State in whose territory the specified tests have been carried out or of the State authorizing the allocation of the mark is required, the letters "USA" shall be used.

(2) If an indication of "the name of the manufacturer or other identification of the packaging as specified by the competent authority" is required, the name and address or symbol of the person making the mark shall be entered. Symbols, if used, must be registered with the Director, OHMT. Duplicate symbols are not authorized.

SUBPART A

SPECIFICATIONS FOR CARBOYS, JUGS IN TUBS, AND RUBBER DRUMS

§ 178.1 Specification 1A; boxed carboys. Glass, earthenware, clay, or stoneware.

§ 178.1 Compliance. (a) Required in all details.

§ 178.1-2 Reuse of packages. (a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in §178.1-9.

§ 178.1-3 Closing devices required. (a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

§ 178.1-4 Capacity and marking of carboy. (a) Containers 5 to 13 gallons are classed as carboys. Must be embossed to indicate maker and year of manufacture; mark of maker to be registered with Director, OHMT.

§ 178.1-5 Glass carboys. (a) Thoroughly annealed; top of lip smooth and even; must contain at least 20 pounds of glass for 12-gallon carboys and 21 pounds for 13-gallon carboys. Glass in side walls should be well distributed and at least 1/16" thick. Defective carboys not authorized.

§ 178.1-6 Earthenware, clay, or stoneware carboys. (a) Of acidproof material.

§ 178.1-7 Outside containers. (a) Wooden boxes completely enclosing body of carboy or wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts, two cleats for shoes and two carrying cleats. (See paragraph (e) of this section.)

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means. Cleats for shoes to be along edges of bottom parallel to carrying cleats. (See paragraph (e) of this section.)

(d) Parts and dimensions as follows:

Nominal Carboy capacity not over	Minimum dimensions			Nails—Sides and Bottom	
	Thickness—Sides, top, bottom and ends	[1] Vertical corner posts	[1] Carrying cleats and shoes	[2] Size, not less than	[3] Spacing average not over
Gallons	Inch	Inches	Inches	Penny	Inches
5 to 7	5/8	5/8 x 2 1/2	5/8 x 1 7/8	7	2 1/2
from				6	2
7 to 13	25/32	25/32 x 3 1/8	25/32 x 2 11/32	9	2 3/4
				8	2 1/2

[1] Other dimensions with equal cross section acceptable.
[2] Screws of equal efficiency authorized.
[3] Spacing 6 inches acceptable along edge grain of bottoms.

(e) In place of bottom cleats, the following is authorized; 2 angle irons at least 1 1/4" x 1 1/4" x 1/16", applied across grain of bottom boards from corner to corner, supported by acid resistant metal corner supports securely fastened to sides and ends at each bottom corner so as to raise bottom boards of box at least 3/4" above bottom of corner supports; nailing along end grain of bottom boards not required.

(f) Special box. Must comply with this specification except as follows: Bottom of box must be nailed to 4 nailing cleats which form part of the sides and ends of box. Top of box must be reinforced by 2 cleats of 1/2-inch lumber 4 inches wide, extending the entire width of the top at right angles to the sides of the boards forming the top; a vacant space of 1 inch between outside edge of top and cleat should be allowed for nailing top to box; parts and dimensions must be as follows:

Carboy capacity, not over (gallons)	Minimum dimensions					Nails, sides, and bottom	
	Thickness of sides, top, and ends	Thickness of bottom	Thickness and width of bottom nailing cleats	Carrying cleats and shoes	Triangular vertical corner posts	Size not less than [1]	Spacing average not over [2]
	Inch	Inches	Inches	Inches	Inches	Penny	Inches
5 to 13	1/2	25/32	25/32 x 2 1/2 (short sides)	25/32 x 2 1/2	2 1/2 x 2 1/2	8 10	2 1/2 2 3/4

[1] Screws of equal efficiency authorized.
[2] Spacing 6 inches acceptable along edge grain of bottoms.

(g) Cushioning materials. Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.1–8 Marking of outside container. (a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) DOT–1A.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.1–9 Tests. (a) *Apparatus* Standard required. Detailed prints may be obtained from the Director, OHMT.

(b) Method. Fill with water to lower edge of neck; swing 55° measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock; test at least 5 carboys.

Note 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) Acceptable results. 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of § 178.1–9(b) is used.

(d) When required. By each manufacturer, at intervals not to exceed 6 months; separate tests are required for:

(1) New packages (those with new outside container).

(2) Used packages.

(3) Packages with carboys differing over 2 gallons.

(4) Packages differing in kind of cushioning.

(e) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) Reports. Required to be made to Director, OHMT on form as follows:

REPORT OF TESTS OF CARBOYS
(As required by D.O.T. Regulations and Specifications)

[1] State whether outside container is new or used.

[2] State whether glass, earthenware, etc.

[3] State whether hay, mineral wool, ground cork, excelsior, wood strips .....type, cork pads .....type, etc.

§ 178.1–10 Boxes of veneer, plywood, and laminated wood. (a) Boxes of veneer, plywood, laminated wood, or any combination thereof, which comply with this section (except § 178.1–7(a), (c), and (d)), are authorized provided:

(1) Outside containers shall completely enclose body of carboy or body and neck of carboy.

(2) That these boxed carboys pass the regular test prescribed in § 178.1–9. A copy of the most recent test report must be retained until further tests are made or for five years from the date of test.

(3) (Deleted)

§ 178.4 Specification 1D; boxed glass carboys.

§ 178.4–1 Compliance. (a) Required in all details.

§ 178.4–2 Reuse of packages. (a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or body chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in § 178.4–8.

§ 178.4–3 Closure. (a) Threaded screw cap which shall be constructed of a suitable plastic or other material resistant to lading.

(b) Gasket or lining for cap must be used and shall be resistant to lading and:

(1) Must be liquid tight or;

(2) Must be liquid tight up to venting pressure when such venting is prescribed for the material which is to be shipped.

(c) At least one complete continuous thread must be engaged with gasket in place.

§ 178.4–4 Capacity and marking of carboy. (a) Capacity. 6.5 United States gallons nominal capacity, 7.0 United States gallons overflow, tolerance plus or minus 10 fluid ounces.

(b) Marking. Each carboy bottle must be embossed in bottom as follows:

Maker's mark (to be registered with Director, OHMT)
Year of Manufacture
DOT–1D

§ 178.4–5 Glass carboy bottle. (a) Must be machine-blown thoroughly and properly annealed, with screw thread finish having at least one continuous thread to accommodate closure; lap of lip smooth and even; must contain 14 pounds of glass, tolerance minus 8 ounces plus 16 ounces. Minimum thickness to be .075 inch. Defective carboys not authorized.

§ 178.4–6 Outside containers. (a) Wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts, two cleats for shoes and two carrying cleats. An opening not exceeding 3 inches in width may be provided directly above the neck of bottle, if the top of the box is made up of not more than two pieces of lumber of ⅞ inch thickness. Bottom board of the two ends of the box must be constructed of lumber at least one inch thick, must be flush with the carrying cleats and be at least 2¼ inches in width. Cleats or other fasteners used to secure cover must not extend beyond carrying cleats.

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means (friction closure not authorized). Cleats for shoes to be along edges of bottom parallel to carrying cleats and at right angle to the direction of bottom board or boards.

(d) Parts and dimensions as follows:

Carboy, capacity, nominal not over (gallons)	Minimum dimensions			[4] Nails—Sides and bottom	
	[1] Thickness—Sides, top, bottom and ends	[2] Vertical corner posts	[3] Carrying cleats and shoes	Size	[5] Spacing average
	Inch	Square inches	Inches	Penny	Inches
6.5	½	20	½ × 2¼	6	2

[1] Except as prescribed or permitted under § 178.4–6 (a).

[2] Cross sectional area.

[3] Other dimensions with equal cross section acceptable. In lieu of separate carrying cleats, side board, at point where cleat should be located, may be constructed of lumber not less than one inch thick so that overhang will be at least ½ inch.

[4] Screws of equal efficiency authorized.

[5] Spacing 6 inches acceptable along edge grain of bottoms.

(e) Cushioning materials. Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.4–7 Marking of outside container. (a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) DOT–1D.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.4–8 Tests. (a) Apparatus. Standard required. Detailed prints may be obtained from the Director, OHMT.

(b) Method. Fill with water to lower edge of neck; swing 55° measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.
(2) Bottom shock, test at least 5 carboys.

Note 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) Acceptable results. 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of § 178.4-8(b) is used.

(d) When required. By each manufacturer, at intervals not to exceed 6 months; separate tests are required for:
(1) New packages (those with new outside container).
(2) Used packages.
(3) Packages differing in kind of cushioning.

(e) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) Reports. Required to be made to Director, OHMT on form as follows:

(g) Internal pressure test. Bottles shall be capable of withstanding a sustained internal pressure of 20 p.s.i.g. for a 15-day period.

(h) Hydrostatic pressure test. One bottle selected at random from each 200 produced on each mold shall be subjected to an instantaneous hydrostatic pressure test to bursting. Pressure at which bottle bursts must not be less than 40 p.s.i. gauge. If bottle so tested fails at a pressure less than 40 p.s.i., 12 additional samples must be selected from the same lot of 200 bottles and tested in the same manner. All 12 samples must pass required test otherwise entire lot shall be rejected.

§ 178.5 Specification 1X; boxed carboys, 5 to 6½ gallons, for export only. Glass, earthenware, clay, or stoneware. Single-trip container.

§ 178.5-1 Compliance. (a) Required in all details.

§ 178.5-2 Closing devices required. (a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

(3) For box: Two flat metal nailless straps, at least ½ inch by 0.020 inch, encircling top, sides, and bottom and securely sealed, are required.

§ 178.5-3 Capacity and marking of carboy. (a) Containers must be 5 to 6½ gallon size and embossed to indicate maker and year of manufacture.

§ 178.5-4 Glass carboys. (a) Thoroughly annealed; top of lip smooth and even. Glass in side walls should be well distributed and at least ⅛ inch thick. Defective carboys not authorized.

§ 178.5-5 Earthenware, clay, or stoneware carboys. (a) Earthenware, clay, or stoneware carboys of acidproof material.

§ 178.5-6 Outside containers. (a) Wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts. Top may consist of cap fitting snugly inside body of box and resting on corner posts.

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified; nail bottom to ends; fasten top by any efficient means.

(d) Parts and dimensions. Sides, top, and bottom at least ½ inch thick; vertical corner posts at least 2.25 square inches cross section; nails at least 6-penny at 2-inch intervals or 5-penny at 1¾-inch intervals.

(e) Cushioning materials. Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.5-7 Marking of outside container. (a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:
(1) DOT-1X.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.5-8 Marking. (a) Each outside container must also be plainly marked "FOR EXPORT ONLY, NOT RETURNABLE" and the top must be marked "THIS SIDE UP."

§ 178.5-9 Tests. (a) Apparatus. Standard required. Detailed prints may be obtained from the Director, OHMT.

(b) Method. Fill with water to lower edge of neck; swing 55° measured from wall to nearest bottom edge of basket:
(1) Side shock; test at least 10 carboys.
(2) Bottom shock; test at least 5 carboys.

(c) Acceptable results. 90 percent of carboys must not break under side shock; same for bottom shock.

(d) When required. By each manufacturer, at intervals not to exceed 6 months; separate tests are required for:
(1) New packages (those with new outside container).
(2) Packages differing in kind of cushioning.

(e) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) Reports. Required to be made to Director, OHMT on form as follows:

§ 178.6 Specification 1EX; Glass carboys in plywood drums. Single-trip container.

§ 178.6-1 Compliance. (a) Required in all details.

§ 178.6-2 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

§ 178.6-3 Closing devices required. (a) As follows except when otherwise authorized in the packing regulations:
(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.
(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

§ 178.6-4 Capacity and marking of carboy. (a) Containers must be 5 to 6½ gallons capacity and embossed to indicate maker and year of manufacture.

§ 178.6-5 Glass carboys. (a) Thoroughly annealed; top of lip smooth and even. Glass in side walls should be well distributed and at least 1/16 inch thick. Defective carboys not authorized.

§ 178.6-6 Outside containers. (a) Plywood drums completely enclosing body and neck of carboy and constructed as follows:
(1) Body shell. To be of two plies of hardwood veneer, each not less than 1/12 inch in thickness, firmly glued together, with the grain of the outside ply parallel and the inner ply vertical to the heads. The body shall be butt-jointed and shall be fastened on the outside with a 28-gauge steel strip, not less than 1½ inches in width. 17-gauge staples shall be driven on each side of the joint, spaced not more than 1½ inches apart and clinched on inside of the body.
(2) Heads. Top and bottom heads shall be of three ply hardwood veneer, each ply not less than 1/12 inch in thickness, all firmly glued together, with the grain of each outer ply at right angles to the grain of the center ply. Each head shall be circled to fit snugly inside of the body. Interior heads shall be of the same construction.
(3) Hoops. To be of hardwood veneer, not less than 1¾ inches wide by ⅛ inch thick. Hoops shall be fastened to the body by 17-gauge staples on not less than 3 inch centers and shall be overlapped not less than 3 inches.
(4) Head liners. When plywood cushioning is used the inner lining strips which support the plywood cushion shall be of hardwood veneer not less than ⅛ inch in thickness and ⅜ inch in width and shall butt or slightly gap. All other head lining strips shall be made of hardwood veneer not less than ⅛ inch in thickness and ⅝ inch in width and shall overlap not less than 3 inches. The bottom head liner and the inside liner strips for the false head and support of the top head shall be fastened by 17-gauge staples on not less than 3 inch centers. The staples shall be driven through the outer hoop and body and clinched on the inside of the veneer strips; except that the strips holding the false head shall have staples only through the body shell and liner. The top liner which forms the final closure shall be fastened to the body by 14-gauge staples driven through the head liner and body into the outer hoop on not less than 4 inch centers.
(5) Battens. A ⅝ inch by 2 inch batten shall be applied to top and bottom and shall be secured at each end by two nails driven through the hoops and shell.
(b) Cushioning materials. Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.6-7 [Reserved]

§ 178.6-8 Marking of outside container for compliance with specification. (a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:
(1) DOT-1EX.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.6-9 Marking of outside container for use. (a) Each outside container must also be plainly marked "SINGLE-TRIP CONTAINER" just above or below the mark specified in § 178.6-8(a)(1) of this section.

§ 178.6-10 Tests. (a) Apparatus. Standard required. Detailed prints may be obtained from the Director, OHMT.
(b) Method. Fill with water to lower edge of neck; swing 55° measured from wall to nearest bottom edge of basket:
(1) Side shock; test at least 10 carboys.
(2) Bottom shock; test at least 5 carboys.

Note 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) Acceptable results. 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of § 178.6-10(b) is used.
(d) When required. By each manufacturer, at intervals not to exceed 6 months; separate tests are required for:
(1) New packages (those with new outside containers).
(2) Packages differing in kind of cushioning.
(e) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.
(f) Reports. Required to be made to Director, OHMT on form as follows:

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 178.12 [Reserved]

§ 178.13 Specification 1H; polyethylene carboys in low carbon steel or other equally efficient metal crates.

§ 178.13-1 Compliance. (a) Required in all details.

§ 178.13-2 Capacity and marking of carboy. (a) Containers 5 to 13 gallons capacity are classed as carboys. Actual capacity must be marked capacity plus 5 percent minimum. Must be permanently marked to indicate marked capacity, maker (symbols, if used, must be registered with the Director, OHMT), month and year of manufacture, and DOT-2T in figures and letters at least ¼ inch high.

§ 178.13-3 Polyethylene carboys. (a) Carboys shall be made of polyethylene with no plasticisers or additives and have a maximum melt index value of 2.5 grams. Carboys must have a minimum weight and wall thickness in accordance with the following table:

Marked capacity	Minimum wall thickness	Minimum weight of bottles
Gallons	Inch	Pounds
5	1/16	3
6½	1/16	4
13	1/16	8

(b) Closing device shall be of material resistant to the lading and adequate to prevent leakage. Opening for closure shall not be over 3½ inches in diameter.

(c) Polyethylene carboys, as manufactured and filled to marked capacity with a material which remains in a liquid form, shall be capable of withstanding a 4-foot drop without leakage, after prior conditioning so that contents will be 0° Fahr. or colder, onto solid concrete on any portion of the carboy.

§ 178.13-4 Outside containers. (a) Metal crates:

(1) Specifications for each size container must be kept on file by each manufacturer.

§ 178.13-5 Marking of outside container. (a) Each outside container must be plainly marked by attachment of a metal plate, or permanent marking in contrasting color directly on the polyethylene carboy in a visible area. Marking must be in letters and figures at least ¾ inch high and must be by embossing or stamping when applied on metal plates. Marking must be as follows:

(1) DOT-1H.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.13-6 Tests. (a) One sample, taken at random and with inner container filled to marked capacity with water and closed as for use, shall be capable of withstanding prescribed tests without leakage or serious rupture of outer container. Tests shall be made of each size by each company starting production. The type tests are as follows:

(1) Complete package must be capable of withstanding 2 drops from a height of 4 feet onto solid concrete, the first drop to be made diagonally so top corner will strike the concrete; the second drop onto a 2-inch by 6-inch timber resting on the concrete with the 6-inch leg vertical, the drop being made with the package in a horizontal position and at right angles to the timber so that impact is near the center of the crate side-wall members.

§ 178.14 Specification 1K; glass carboys cushioned with expandable polystyrene in wooden wirebound box outside containers.

§ 178.14-1 Reuse of packages. (a) Top, base or side sections of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seal must be even. Packages must be capable of passing tests prescribed in § 178.14-8.

§ 178.14-2 Closing devices required. (a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened, venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

(b) For carboys with threaded closure finishes the threaded cap shall be constructed of a suitable plastic or other material resistant to lading.

(1) Gasket or lining must be used and shall be resistant to lading.

(2) Cap must be liquid tight or;

(3) Must be liquid tight up to venting pressure when such venting pressure is prescribed for the material to be shipped.

(4) At least one complete continuous thread must be engaged with gasket in place.

§ 178.14-3 Capacity and marking of carboy. (a) Containers 5 to 13 gallons are classed as carboys; must be embossed to indicate maker and year of manufacture; mark of maker to be registered with the Director, OHMT.

§ 178.14-4 Bottles. (a) 13-gallon carboys. Must be thoroughly annealed; top of lip smooth and even; must contain at least 21 pounds of glass. Glass in sidewalls should be well distributed and at least 1/16 inch thick.

(b) 6½-gallon carboys. Must be machine-blown, thoroughly and properly annealed, with screw thread finish having at least one continuous thread to accommodate closure; top of lip smooth and even; must contain 14 pounds of glass, tolerance minus 8 ounces plus 16 ounces. Minimum thickness to be 0.075 inch. Defective carboys not authorized.

§ 178.14-5 Cushions. (a) Expandable polystyrene, molded to produce a completely fused closed cell structure and designed as to provide a snug fit in all areas of contact with the inside container, in the following forms:

(1) Formed in place around the inside container; density 1.25 plus or minus 0.25 lbs. per cubic foot, minimum thickness of sidewalls 1 inch and of bottoms 1.5 inches.

(2) Preformed cushions, one top and one bottom; density 2.75 plus or minus 0.5 lbs. per cubic foot, minimum thickness of sidewalls 1 inch and of bottoms 1.37 inches.

(b) Assembled containers must be capable of passing tests prescribed in § 178.14-8.

§ 178.14-6 Outside containers. (a) Wooden wirebound boxes completely enclosing body of carboy or completely enclosing body and neck of carboy.

(b) Lumber shall be as follows:

(1) Lumber shall be well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.

(2) Authorized tolerances; cleats, battens and handles, minus 1/32 inch; single thickness veneer, minus 5 percent; resawn boards, 1/32 inch below specified thickness for boards ¼ inch or more thick.

(3) Woods authorized are in the following groups:

Group 2

Southern yellow pine	North Carolina pine	Larch (Tamarack)
Hemlock	Douglas fir	

Group 3

White elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple-soft or silver
Sycamore	Black gum	

Group 4

Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

(4) Where plywood is authorized, it must be exterior grade moisture-resistant type.

(c) Binding wires and staples shall be as follows:

(1) Galvanized coated annealed steel or other material of equal strength, Washburn and Moen sizes.

(d) Minimum construction requirements for 13-gallon carboys shall be as follows:

Wirebound boxes	Square box for preformed cushions	Octagonal box for preformed cushions	Cylindrical box for preformed cushions	Octagonal box for formed-in-place cushions
Faceboard thickness (sides only—without handle cleats)				
Group 2 woods	5/16"	5/16"	5/16"	1/2"
Groups 3 and 4 woods	1/2"	1/2"	5/16"	1/2"
Faceboard thickness (sides only—with handle cleats)				
Group 2 woods	3/8"	3/8"	5/16"	1/2"
Group 3 woods	5/16"	5/16"	5/16"	1/2"
Cleats	13/16" x 7/8"	13/16" x 3/8	13/16 x 7/8"	
Handle cleat	2½ x 7/8"	2½ x 7/8"	None	2½ x 7/8"
Binding wires				
Number and gauge over outside cleats	2-12 gauge	2-12 gauge	2-12 gauge	2-12 gauge
Number and gauge intermediate wires	3-13 gauge	3-13 gauge	2-12 gauge	2-13 gauge

Wirebound boxes	Square box for preformed cushions	Octagonal box for preformed cushions	Cylindrical box for preformed cushions	Octagonal box for formed-in-place cushions
	11⅛"-16 gauge	11⅛"-16 gauge	1"-16 gauge	11⅛"-16 gauge
Staples				
Top[1]				
Face material thickness	⅜"	⅜"	½" plywood	⅜"[2]
Battens	4-11⅛" x ⅞"	2-13⅜" x ⅞"	None	2-13⅜" x ⅞"
Base				
Face material thickness	⅜"	⅜"	⅝" plywood	⅜"[2]
Battens	4-11⅛" x ⅞"	3-13⅜" x ⅞"	2-11⅛" x ⅞"	3-13⅜" x ⅞"
Runners	3½" x ⅜"	2-11⅛" x ⅞"	2-11⅛" x ⅞"	2-11⅛" x ⅞"

[1] A hole of suitable type may be made in top of box to provide for the protruding neck of inner container. There shall be 1 inch minimum clearance between bottle and inside of hole.
[2] One half inch plywood face material authorized.

(j) Minimum construction requirements for 6½ gallon carboy shall be as follows:

Wirebound boxes	Dimensions
Faceboard thickness	⅜"
Cleats	13⅛ x ⅞"
Handle cleats	2⅛" x ⅞"
Binding wires	
Number and gauge over outside cleats	2-12 gauge
Number and gauge intermediate wires	2-13 gauge
Staples	11⅛"-16 gauge
Base	
Face material thickness	⅝" plywood
Battens	13⅜" x ⅞"
Top (hood cover)	
Side face board thickness	½"
Cleats	13⅛" x ⅞"
Binding wires	
Number and gauge over outside cleats	2-13 gauge
Top faceboard thickness	⅜" plywood

(l) Outside container closure. When prepared for shipment, top hood cover must be positively secured to body of container.

(e) Assembly:

(1) The box shall be constructed to provide a snug fit with the cushioning for the inside container. Wooden shims of correct thickness may be used to keep carboy tight in overpack.

(2) The boxes shall be closed with threaded loop fasteners using a regular clinch.

§ 178.14-7 Marking of outside container. (a) On each container with letters and figures at least ½ inch high applied by hot branding iron or colored ink with high pressure dies as follows:

(1) DOT-1K.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.14-8 Tests. (a) **Apparatus.** Standard required. Detailed prints may be obtained from the Director, OHMT.

(b) **Method.** Fill with water to lower edge of neck; swing 55 inches measured from wall to nearest bottom edge of basket:

(1) Test 10 carboys each against bottom and one side.

Note 1: Instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys or both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) **Acceptable results.** One hundred percent of carboys must not break under side or bottom shocks. If failures occur, the test is to be repeated with an additional 10 carboys for which the passing requirement shall be 100 percent.

(d) **When required.** By each manufacturer, at intervals not to exceed 6 months; separate tests required for:

(1) New packages.

(2) Used packages.

(3) Packages differing in kind or shape of cushioning.

(e) **Exception.** Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) **Reports.** Required to be made to the Director, OHMT on form as follows:

REPORT OF TESTS OF CARBOYS
(As required by D.O.T. Regulations and Specifications)

(Place) .....

(Date) .....

Test made for .....

(Give name and address of plant for which tests were made) .....

§ 178.15 [Reserved]

§ 178.16 Specification Specification 35; non-reusable molded polyethylene drum for use without overpack; removable head required.

§ 178.16-1 Compliance. (a) Required in all details.

(b) Except as otherwise provided within this section, each drum must comply with the requirements of §173.24 of this subchapter.

(c) Each drum must be capable of withstanding the performance tests prescribed in §§178.16-13 and 178.16-16 without failure.

§ 178.16-4 Material. (a) Drums shall be made of an injection-molding grade of high density polyethylene resin which has not been used previously. Regrind from the same production process may be used.

(b) Ultraviolet light protection may be provided by impregnation of polyethylene with carbon black or other equally efficient pigments or inhibitors. If used, these additives must be compatible with lading.

(c) Other materials may be added provided they do not adversely affect the physical properties specified in paragraph (a) of this section or the performance specified in §178.16-13 and are compatible with the lading.

(d) Steel used in top head of drum must be low carbon of standard commercial quality.

§ 178.16-7 Construction and capacity. (a) Rated capacity: not to exceed 7 gallons. Minimum actual capacity shall not be less than

rated capacity plus 4 percent. Maximum actual capacity shall not be greater than rated capacity plus 10 percent.

(b) Minimum thickness of drum measured at any point may not be less than 0.065 inch. If top head is constructed of steel, a minimum of 26-gauge steel must be used.

(c) The gross weight of each drum, when filled, may not exceed the maximum allowable gross weight indicated by the marking on the drum (see § 178.16-19).

§ 178.16-10 Closure. (a) Top head must be of the full removable type, and must be made of steel, polyethylene, or combination thereof. Steel top head must have no less than 16 lugs spaced no more than ¼-inch apart, or be attached to body by tin plate ring seal. Gaskets required when necessary to meet the performance tests prescribed in § 178.16-13.

(b) Openings in body of drum are not authorized.

§ 178.16-13 Design qualification tests. (a) The following tests must be performed at the start of production on each drum size and design. If any change is made to drum design, size, material used, or process, tests in this section must be repeated. Product leakage in any of the required tests will constitute a failure. No single drum will be expected to withstand more than one of the following tests:

(1) *Drop test.* Sample drums of each size and design, selected at random, must be filled to marked gross weight at normal outage with dry powder material and then topped with a minimum of one inch of sodium bicarbonate and closed as for use. Each test drum and contents must be conditioned to be at a temperature of 0°F. or below at the start of each drop test and must be observed immediately following each drop test for any evidence of leakage.

(i) Test drums must be dropped from a height of four feet onto solid concrete under the following conditions of orientation:

(A) Three drums must be dropped flat on bottom.

(B) Three drums must be dropped diagonally on top chime or edge.

(C) Three drums, oriented to impact on bail ear, must be dropped flat on side.

(ii) In event of failure, the individual orientation drop test causing the failure must be repeated with six additional drums. Failure of any of the six additional drums disqualifies that size or design from this specification until design qualification tests have been successfully repeated.

(2) *Vibration test.* Sample drums, three of each size and design, selected at random, must be filled and closed as for use as required in § 178.16-13(a)(1). The three fully loaded test drums must be placed on a platform that has a vertical double-amplitude (peak-to-peak displacement) of one inch. The drums should be constrained horizontally to prevent them from falling off the platform, but otherwise left free to move vertically, bounce and rotate. The test must be performed for one hour at a frequency that causes the drum to be raised from the vibrating platform to such a degree that a piece of material of approximately 1/16-inch thickness (such as steel strapping or paperboard) can be passed between the bottom of any drum and the platform. Immediately following the period of vibration, each drum must be removed from the platform, turned on its side and observed for any evidence of leakage. If failure (leakage) occurs, the vibration test must be repeated on three additional drums without any leakage of contents. Failure of any one of the three additional drums disqualifies that size or design from this specification until design qualification tests have been successfully repeated.

(3) *Static compression test.* Two drums must be filled and closed as for use as required in § 178.16-13(a)(1) and conditioned so that drums and contents are at a temperature of 130°F. or higher at the start of each compression test. The two drums of identical capacity, stacked two high, must withstand a static compression test applied evenly for 48 hours to the top rim of the top drum without buckling of the side walls or leakage. The compression weight load to be applied must be the greater of 300 pounds or the volume in gallons of one drum times 85 pounds. Total top to bottom deflection of both drums may not exceed one inch. At the conclusion of the 48-hour test period, each drum must be turned on its side and observed for any evidence of leakage. If leakage occurs, or deflection exceeds the limits established above, the drum size or design is disqualified from this specification until design qualification tests have been successfully repeated.

(4) *Reports and records.* The manufacturer shall prepare a report on the tests prescribed in paragraphs (a)(1), (a)(2), and (a)(3) of this section and shall retain the report on the results of these tests for at least two years from the date of tests. A copy of these reports must be retained by the manufacturer at each producing plant.

§ 178.16-16 Periodic testing. (a) At least one sample of each size and design of drum must be drop tested at each production plant from every 10,000 drums produced by each molding machine. As an alternative, the drop tests may be conducted once every 24 hours of uninterrupted production from each machine or at the resumption of production from a machine after shut down for one hour or more. No one drum will be expected to withstand more than one drop. Product leakage from drum in any of the following tests will constitute a failure. Tests must be as follows:

(1) One drum, filled and closed as for use as provided in § 178.16-13(a)(1), must be dropped onto solid concrete from a height of four feet diagonally on its top chime or edge.

(2) One drum, filled and closed as for use as provided in § 178.16-13(a)(1), must be dropped onto solid concrete from a height of four feet flat on its side. The drum must be oriented to impact on bail ear.

(b) Failure of drum when tested as described above disqualifies that size or design from this specification until design qualification tests (§ 178.16-13) have been repeated successfully.

§ 178.16-19 Markings. (a) The markings required by this section must be legible, in characters at least ½-inch in height, and embossed on the bottom of each drum. The marking requirements of § 173.24 of this subchapter, with the exception of paragraph (c)(1)(ii), are applicable.

(b) The markings must be as follows:

(1) DOT-35-*; star to be replaced by maximum allowable gross weight in pounds (for example, DOT-35-50).

(2) "NRC" located near the DOT mark to indicate "non-reusable container."

(3) Month and year of manufacture, for example, DOT-35-20-2/74, to indicate the drum specification, maximum allowable gross weight, and that the drum was manufactured in February 1974.

(4) Registration number (M * * *) of the manufacturer.

(c) A packaging may not be marked with the specification identification "DOT-35" unless:

(1) It was manufactured in compliance with the requirements of this section, and

(2) Its manufacturer has a registration number (M * * *) from the Office of Hazardous Materials Transportation, Research and Special Programs Administration, Department of Transportation, Washington, D.C. 20590.

---

§ 178.17 Specification 1M; non-reusable glass carboy in non-reusable expanded polystyrene packaging.

§ 178.17-1 General requirements. (a) Compliance is required in all details.

(b) Each glass carboy must fit snugly in its expanded polystyrene packaging.

(c) The glass carboy and expanded polystyrene packaging may not be used again after contents have been removed.

(d) A Specification 1D (§ 178.4 of this subchapter) glass carboy manufactured prior to January 1, 1979 may be used in place of the carboy described in this section, but the Specification 1D carboy must be previously unused and may not be subsequently reused after contents have been removed.

§ 178.17-2 Capacity. Carboy may not exceed 6.5 United States gallons nominal capacity, 7.0 United States gallons overflow, tolerance plus or minus 10 fluid ounces.

§ 178.17-3 Construction requirements.

(a) Glass carboy:

(1) Each carboy must be machine blown with threads in the neck of the glass carboy for closing by a screw cap.

(2) Each carboy must be annealed and have a real temper not greater than 5.

(3) The weight of each carboy must be 14 pounds or greater with a tolerance of minus eight ounces.

(b) Expanded polystyrene packaging:

(1) Expandable polystyrene must be molded to form a protective outside packaging.

(2) This packaging must consist of a top and bottom section which interlock. Each section must be molded with a cavity to maintain a snug fit with the carboy.

(3) The density of the expanded polystyrene may be no less than 1.7 pounds per cubic foot, and no greater than 2.0 pounds per cubic foot.

(4) The minimum thickness of the expanded polystyrene must be 1 inch.

§ 178.17-4 Closure.

(a) Glass carboy:

(1) A gasketed or lined threaded screw cap is required. A vented closure must be provided when prescribed in Part 173 of this subchapter.

(b) Expanded polystyrene packaging:

(1) Except as provided in paragraph (b)(2) of this section, weather resistant, pressure sensitive cloth or other suitable tape must be circumferentially applied at the mating areas of the top and bottom section to prevent separation. The tape must be at least 2½ inches in width and have a tensile strength of not less than 50 pounds per inch of width. Tape must overlap both top and bottom sections circumferentially by not less than one inch. Tape ends must overlap a minimum of three inches.

(2) The two-section expanded polystyrene packaging may be closed for shipment by means of one or more vertical non-metallic straps of at least ½ inch in width and having a tensile strength of not less than 600 pounds.

§ 178.17-5 Tests.

(a) Glass carboy

(1) **Annealing test.** After annealing, each glass carboy must have a real temper no greater than 5, when examined in accordance with the American Society for Testing and Materials publication ASTM C148-77, Method A. One carboy must be taken from each side row and one carboy from a center row of the annealing lehr at least every three hours during manufacture, and examined for temper number. If during polariscopic examination, it is determined that any carboy in a certain row has a real temper greater than 5, all carboys within that row must either be rejected or re-annealed to comply with the prescribed test specification. Production back to the last approved examination must be quarantined, resampled and examined in accordance with the prescribed test procedure, after which production may be released if in conformance, or re-annealed to comply, or rejected.

(2) **Weight test.** Each day one carboy randomly selected from each mold must be weighed. If it fails to meet the weight requirement of §178.17-3(a)(3), production back to the last successful weight test from that mold must be quarantined and tested for weight or rejected. Non-conforming carboys must be rejected.

(3) **Hydrostatic pressure test.** One carboy must be taken from each mold at least every eight hours during manufacture and subjected to a minimum internal hydrostatic pressure of 40 p.s.i.g. instantaneous or 13 p.s.i.g. for one minute. If a carboy from any mold breaks when subjected to the minimum internal pressure, four additional carboys from the same mold must be tested. If one or more of the four additional carboys breaks, all carboys from that mold produced since the last successful pressure test must be quarantined and tested for compliance or rejected.

(4) **Reports and records.** The manufacturer of the glass carboy or a person who performs these tests for the manufacturer must prepare a report on the test prescribed in paragraphs (a)(1), (2), and (3) of this section. The manufacturer of the glass carboy must retain the report on the results of each test for at least three years following the date of the test. These reports must be available for examination by representatives of the Department.

(b) Expanded polystyrene packaging:

(1) **Drop test.** Randomly selected samples of completed packages, with carboys filled with water to capacity and closed as for shipment, must be subjected to drop tests onto an unyielding surface. A minimum of six packages must be tested, each not required to be subjected to more than one drop. A complete test cycle consists of the following:

(i) Two units dropped flat on bottom from a height of four feet;

(ii) Two units dropped flat on side from a height of four feet; and,

(iii) Two units dropped flat on top from a height of four feet.

(2) **Results and testing frequency.** Each package in one test cycle must pass the test without leakage from or breakage of the glass carboy. If any package fails, the condition causing failure must be determined and corrected and additional testing conducted until a successful test cycle is obtained. Testing must be performed as follows:

(i) At the start of initial production from each mold, and upon any change in source of resin, type of resin, or process method. Tests must also be performed when any component or the design of the packaging is changed. Production may not commence until test requirements have been satisfied.

(ii) Periodically, at least every four months. If periodic testing indicates a packaging defect, packagings on hand produced subsequent to the last successful test date must be examined by appropriate means, and rejected if found defective. Users of the packagings must be advised of defects in packagings released prior to an unsuccessful test. Production may not commence until test requirements have been satisfied.

(3) **Records and testing responsibility.** The manufacturer of the expanded polystyrene packaging, or a person who performs these tests for the manufacturer, must conduct the testing prescribed in paragraphs (b)(1) and (b)(2) of this section and prepare a report on the test results. Reports must be retained by the manufacturer of the expanded polystyrene for three years from the date of test. Reports must be available for examination by representatives of the Department of Transportation.

§ 178.17-6 Markings.

(a) The marking required by this section must be legible and in characters at least one inch in height. Sections 173.24(c)(1)(ii) and (iv) do not apply to the glass carboy and expanded polystyrene packaging. The marking provisions of §172.312 apply.

(b) No person may mark any carboy or any expanded polystyrene packaging with the specification identification "DOT-1M" unless:

(1) The carboy or expanded polystyrene packaging is manufactured in compliance with this specification, and

(2) The manufacturer has a registration number (M****) from the Research and Special Programs Administration, Department of Transportation, Washington, D.C. 20590.

(c) Except for Specification 1D glass carboys marked in accordance with §178.4-4, the following markings must be embossed on the bottom of each carboy:

(1) DOT-1M;

(2) NRC;

(3) Year of manufacture; and

(4) Registration number (M****) of the manufacturer.

(d) The following markings must be embossed on the bottom of each expanded polystyrene packaging:

(1) DOT-1M;

(2) NRC;

(3) Year of manufacture; and

(4) Registration number (M****) of the manufacturer.

---

§ 178.18 [Reserved]

---

§ 178.19 Specification 34; reusable molded polyethylene drum for use without overpack. Removable head not authorized.

§ 178.19-1 Compliance. (a) Required in all details.

(b) Each drum must be capable of withstanding the performance tests prescribed in §178.19-7 without failure.

§ 178.19-2 Material. (a) Drums shall be made of a polyethylene resin which has not been used previously. Regrind from the same production process may be used.

(b) Ultraviolet light protection shall be provided by impregnation of polyethylene with carbon black or other equally efficient pigments or inhibitors. These additives shall be compatible with lading and retain their effectiveness for the life of the drum.

(c) Other materials may be added provided they do not adversely affect the structural integrity of the drum.

§ 178.19-3 Construction and capacity. (a) Container must be constructed in accordance with the following table:

Marked (rated) capacity not over (gallons)	Minimum thickness (inches) measured on any point of container
2½ thru 6½	0.045
15	075
55	.125[2]

[1] Minimum actual capacity shall not be less than rated capacity plus 4 percent. Maximum actual capacity shall not be greater than rated capacity plus 15 percent for containers up to 15 gallons and shall not be greater than rated capacity plus 10 percent for containers 15 gallons and over.

[2] A minimum thickness of 0.090 inch is authorized in corners and undercuts.

§ 178.19-4 Closure. (a) Openings shall not exceed 2.7 inches in diameter.

(b) Closures shall be of material resistant to lading and adequate to prevent leakage under tests prescribed in § 178.19-7 and under conditions incident to transportation.

(c) Vented closures where specified in Part 173 are authorized.

§ 178.19-5 Defective containers. (a) Containers with repaired bodies not authorized.

§ 178.19-6 Marking. (a) Each container must be permanently marked by embossment in letters and figures at least ½ inch in size as follows:

(1) DOT-34**; stars to be replaced by the rated capacity of the container (for example, DOT-34-5).

(2) Month and year of manufacture. For example, DOT-34-5-6 65 to indicate a container of 5 gallons capacity made in June 1965.

(3) Name or symbol of person making the marks specified in paragraphs (a)(1) and (a)(2) of this section and located just above or below those marks. Symbol, if used, must be registered with the Director, OHMT.

§ 178.19-7 Tests. (a) At least three samples taken at random, filled and prepared as specified and closed as for use, shall be capable of withstanding the tests in subparagraphs (1), (2) and (3) of this paragraph without leakage. These tests shall be performed at the start of initial production and at four-month intervals and shall be repeated on any change of type, size, materials, or process method. No single container shall be expected to withstand more than one of the following tests:

(1) The container filled to 98 percent capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part constructed to a lesser strength.

(2) The container filled to 98 percent capacity with a solution compatible with polyethylene and which remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F. Filled container shall be stored at 0° F. or lower temperature for at least 4 hours immediately preceding test.

(3) The container shall be tested by retaining for five minutes hydrostatic pressure of at least fifteen pounds per square inch at equilibrium without showing pressure drop or evidence of leakage.

(b) At least three containers taken at random from each continuous production lot of no more than 1,000 containers of each given type and size shall withstand without leakage or failure the test prescribed in § 178.19-7(a)(2).

(c) At least three containers of each size and type taken at random at start of initial production, and upon any change in materials, design, or process method shall withstand without failure or leakage the following tests. No single container shall be expected to withstand more than one test:

(1) The container filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using a vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

(2) The container filled to 98 percent capacity with water shall withstand the following static compression test without buckling of the side walls sufficient to cause damage, but in no case shall the maximum top to bottom deflection be more than one inch. Compression shall be applied to the load bearing areas of the top of the container for a period of not less than 48 hours.

Marked (rated) capacity not over (gallons)	Compression weight load pounds
2½ thru 6½	600
15	1200
30	1800
55	2400

(d) Records of test results to be maintained in current status and retained by each manufacturer at each producing plant.

SUBPART B

SPECIFICATIONS FOR INSIDE CONTAINERS, AND LININGS

§ 178.20 [Reserved]

§ 178.21 Specification 2T; polyethylene containers.

§ 178.21-1 Compliance. (a) Required in all details.

(b) Each container must be capable of withstanding the performance tests prescribed in § 178.21-3 without failure.

§ 178.21-2 Capacity and marking of container. (a) Containers of 5 to 13 gallons capacity are covered by this specification. Actual capacity of the container must be the marked capacity plus 5 percent minimum.

(b) Each container must be permanently marked with figures and letters at least ¼ inch high to show:

(1) DOT-2T.

(2) Name or symbol of person making the mark specified in paragraph (b)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.

(3) Month and year of manufacture.

§ 178.21-3 Material. (a) Containers shall be made of polyethylene resin which has not been used previously. Regrind from the same production process may be used.

(1) Container must have a minimum weight and wall thickness in accordance with the following table:

Marked capacity not over (gallons)	Minimum wall thickness (inch)	Minimum weight of container (pounds)
5	0.0625	3
6½	.0625	4
13	.0625	8

(b) Closing device shall be of material resistant to the lading and adequate to prevent leakage and not over 3½ inches in diameter.

(c) **Tests.** Samples taken at random, empty or filled, and prepared as specified and closed as for use, shall be capable of withstanding the following tests without breakage or leakage:

(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete, immediately after conditioning for at least 24 hours at 10° F.

(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.

(3) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.

(4) The polyethylene container in a prescribed outer specification container, as authorized in Part 173, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

(d) Polyethylene container must fit snugly in outside container.

§ 178.22 Specification 2C; inside containers, corrugated fiberboard cartons.

§ 178.22-1 Construction. (a) To be of double-wall board, 275 pound strength, or 2 thicknesses of double-faced board, 175-pound strength, Mullen or Cady test; sides or linings to be 1-piece with joint cloth-taped.

§ 178.22-2 Outside container. (a) Outside container must be lined throughout with, and cartons separated by, double-wall corrugated fiberboard of 275-pound strength, Mullen or Cady test.

§ 178.23 Specification 2D; inside containers, duplex paper bags.

§ 178.23-1 Construction. (a) Bags to be at least 2 thicknesses of shipping sack Kraft paper, or equivalent, and as follows:

Maximum weight of contents (pounds)	Minimum [1] weight (per 500 sheets 24" × 36")	
	One sheet	Other sheet
	Weight [1] (pounds)	Weight 1 (pounds)
2	30	30
6	50	40
12	60	50
25	70	60

[1] Weight 15 percent less authorized for rope paper containing 35 percent or more of manila rope fiber.

§ 178.23-2 Test. (a) Bags, filled and closed as for shipment, must be able to withstand drop of 4 feet onto concrete without rupture or sifting, except that 2-foot drop is acceptable for bags to contain 25 pounds.

§ 178.24 Specification 2U; molded or thermoformed polyethylene containers. Removable head containers or containers fabricated from film not authorized.

§ 178.24-1 General requirements. (a) Compliance is required in all details.
(b) Removable head containers and containers fabricated from film are not authorized.
(c) Each container must be capable of withstanding the performance tests prescribed in § 178.24-7 without failure.

§ 178.24-2 Material. (a) Containers shall be made of polyethylene resin which has not been used previously. Regrind from the same production process may be used.

§ 178.24-3 Construction and capacity. (a) Container must be constructed in accordance with the following table:

Rated capacity not over (gallons)	Minimum overall thickness (inch)[1]	Percent outage over marked capacity permitted
5	0.010	15
15	0.015	15
55	0.015	5

[1] For cubical containers, the area adjacent to and forming the opening for closure may have a minimum thickness of 0.008 inch for 5 gallons rated capacity and sizes larger than 5 gallons may have a minimum thickness of 0.010 inch.

(b) Polyethylene container must fit snugly in outside container.
(c) Minimum rated capacity is one gallon.

§ 178.24-4 Closure. (a) Shall be of material resistant to lading and adequate to prevent leakage. Vented closures where specified under Part 173 authorized. No opening over 2.7 inches in diameter authorized.

§ 178.24-5 Marking. (a) Each container must be permanently marked by embossment in figure and letters at least ¼ inch in size to show:
(1) DOT-2U.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.
(3) Month and year of manufacture.
(4) Rated capacity.

§ 178.24-7 Tests. (a) Samples taken at random must withstand prescribed tests without breakage or leakage. Tests must be made on each type and size produced at each manufacturing location starting production and repeated each four months. The type tests are as follows:
(1) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.
(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.
(3) The polyethylene container in a prescribed outer specification container, as authorized in Part 173, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

§ 178.24a Specification 2E; Inside polyethylene bottle.

§ 178.24a-1 General requirements. (a) Each bottle must meet the applicable requirements of § 173.24.

§ 178.24a-2 Rated capacity. (a) Maximum capacity not to exceed 5 quarts.

§ 178.24a-3 Materials of construction. (a) Each bottle shall be made of a blow-molding grade of polyethylene resin which has not been used previously (except for regrind from the same production process) and shall be constructed so that it will maintain its shape when standing empty and open.
(b) Wall thickness must not be less than 0.008 inch (0.2 millimeters).

§ 178.24a-4 Closure. (a) Closing devices must provide a tight seal. Vented closures are not authorized unless otherwise provided for in Part 173.

§ 178.24a-5 Tests. (a) Each bottle must be capable of withstanding the prescribed tests without breaking or leaking.
(b) The test prescribed in paragraph (d)(1) of this section must be made on at least three random sample bottles for each 1,000 bottles produced by each blow-molding machine. The test must be performed at the start of initial production from each blow-molding machine and upon any change in type of polyethylene or process method.
(c) The test prescribed in paragraph (d)(2) of this section must be made at least once each month on a minimum of three random sample bottles produced and upon any change in type of polyethylene or process method.
(d) Prescribed test:
(1) The bottle, filled to 98 percent of capacity with water, must be dropped from a height of 4 feet onto a solid unyielding surface so as to drop diagonally on the top edge or any other part which is weaker.
(2) The bottle, filled to 98 percent of capacity with a liquid which is compatible with polyethylene and which is liquid at 0° F., must be dropped from a height of 4 feet onto a solid unyielding surface, on any part of the bottle. Immediately prior to the test, the bottle and its contents must have been at a temperature of 0° F. or lower for at least 24 hours.

§ 178.24a-6 Marking. (a) Marking must be as prescribed in § 173.24 of this subchapter, except as follows:
(1) Marking must be by embossment in at least ¼ inch figures for bottles of one quart or less capacity and at least ½ inch figures for bottles of more than one quart capacity as follows: "DOT2E", the minimum thickness of the polyethylene in thousandths of inches (mils), and the year of manufacture (e.g., DOT-2E 15-69).

§ 178.25 Specification 2F; Inside metal containers and liners.

§ 178.25-1 Construction. (a) Containers over 1-gallon capacity and all lining must be at least 30 gauge, United States standard (commercial 107-pound tin plate) and sealed leakproof.

§ 178.26 Specification 2G; Inside containers, fiber cans and boxes.

§ 178.26-1 Capacity, and thickness of metal and fiber. (a) Capacity not over 6 pounds, net. Metal tops, bottoms, and connections of suitable thickness are authorized. Minimum fiber thickness as follows:
(1) Up to ¼-pound size 0.021".
(2) Up to 1-pound size: 0.026".
(3) Up to 3-pound size: 0.036".
(4) Up to 6-pound size: 0.050", provided that 0.036" fiber heads with 130-pound strength[1] are authorized; or 0.028" with 175-pound strength[1]; or 0.035" with 90-pound strength[1], provided each container is wrapped with shipping sack Kraft paper of 60-pound base weight pasted thereon.

§ 178.27 Specification 2TL; Polyethylene container.

§ 178.27-1 Material requirements. (a) Containers shall be made of polyethylene resin which has not been used previously. Regrind from the same production process may be used.
(b) Each container must be capable of withstanding the performance test prescribed in §§ 178.27-3 and 178.27-4 without failure.

§ 178.27-2 Construction, capacity and marking. (a) Container must be constructed in accordance with the following table:

Marked capacity[1] not over (gallons)	Minimum wall thickness (inches)	Minimum weight of containers (pounds)
5	0.015	1
14	0.050	5½

[1] Actual capacity must be the marked capacity plus 5 percent minimum.

(b) Closure. Closure shall be of material resistant to lading and adequate to prevent leakage. Vented closures where specified under Part 173 authorized. No opening over 3½ inches in diameter authorized.

[1] Mullen or Cady test.

(c) Marking. Each container must be permanently marked in figures and letters at least ¼ inch in size to show:
(1) DOT-2TL.
(2) Name or symbol of person making the mark specified in paragraph (c)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.
(3) Month and year of manufacture.
(4) Rated (marked) capacity.
(d) Polyethylene container must fit snugly in outside container.

§ 178.27-3 Type test. (a) Samples taken at random must withstand prescribed test without breakage or leakage. Tests must be made on each type and size produced at each manufacturing location starting production and repeated each four months. Testing may be performed at a location other than the manufacturing location. The type test are as follows:
(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete, immediately after conditioning for at least 24 hours at 0° F.

§ 178.27-4 Tests. (a) Samples taken at random, filled and prepared as specified and closed as for use, shall be capable of withstanding the following tests without leakage:
(1) The polyethylene container in a prescribed outer specification container as authorized by Part 173, filled to 98 percent capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or on any part considered weaker.
(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.
(3) The polyethylene container in a prescribed outer specification container, as authorized in Part 173, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

§ 178.28 Specification 2J; inside containers, waterproof paper bags for linings.

§ 178.28-1 Material. (a) Two sheets of paper cemented together and creped to afford 25 percent stretch; paper to be shipping sack Kraft, 30 pounds per ream *500 sheets, 24" × 36"" before creping; total weight 90 pounds per ream.

§ 178.28-2 Test. (a) Material folded into cones and filled with water to depth of 2" 70° F. must not show water on outside within 24 hours.

§ 178.28-3 Construction. (a) Form to fit the outside container without stretching; seams and closures to afford a siftproof bag.

§ 178.29 Specification 2K; inside containers, paper bags or linings.

§ 178.29-1 Paper and construction. (a) Shipping sack Kraft paper, creped; at least 45 pounds per ream (500 sheets, 24" × 36" before creping.
(b) Construction. Form to fit the outside container without stretching; seams and closure to afford a siftproof bag.

§ 178.30 Specification 2L; for lining boxes.

§ 178.30-1 Box lining. (a) Box lining must be of strong parafined paper, or other suitable material, without joints or other openings at the bottom or at sides of box and shall fully protect contents in contact with top of box.
(b) Tensile strength of material must be at least 35 pounds with the grain and 17 pounds across grain, tested by direct pull on strips measuring 3" by 1". Average results of three or more tests with the grain and three or more across grain shall be used.
(c) Material shall be impervious to water and nitroglycerin at 77° F. Test for imperviousness shall consist of folding material into cones, loosely to avoid breakage at creases. Cones tested for nitroglycerin shall be filled to 1" depth; those for water to 2". No leakage of liquid shall occur during 24 hours' exposure.
(d) Material must transmit no oily or greasy stain to unglazed paper. Test shall consist of placing one thickness of material, with two thicknesses of unglazed paper on each side, in an oven at 104° F. for 24 hours, under pressure of a lead disk 1½" thick and of 10 pounds weight resting edgewise on the paper.
(e) Saturating paraffin, when used, shall have melting point of 125° F. or above. Test shall consist of extracting paraffin from 1 ounce or more of material with ether. After evaporation of all ether, paraffin shall be melted and poured upon the surface of water contained in a hemispherical dish approximately 3¼" in diameter. Dish shall be three-fourths full of water above melting point of paraffin. Thermometer shall be placed with bulb three-fourths immersed in center of dish. Water and paraffin shall be allowed to cool until paraffin upon the surface of water commences to solidify. Temperature shall then be read and recorded as melting point of paraffin.

§ 178.30-2 Bag. (a) Bag complying with requirements of paragraphs (b), (c), and (d) of this section also authorized.
(b) Material must be: 2 sheets of shipping sack Kraft paper joined by asphaltum, or equivalent; outer sheet at least 60 pounds and inner sheet at least 30 pounds per ream (500 sheets, 24" × 36""; inner sheet coated with wax, or equivalent, with melting point at least 125° F.; compliance with § 178.30-1(b) and (c) required.
(c) Seams must be pasted with adhesive not affected by nitroglycerin.
(d) Completed bag must be formed to fit outside container without undue strain and must be impervious to seepage of nitroglycerin.

§ 178.31 Specification 2M; waterproofed paper lining.

§ 178.31-1 Waterproofed paper. (a) Waterproofed paper for box lining must be strong, folded or constructed without joints or openings at sides, bottoms, or ends, and shall fully protect contents at top of box.

§ 178.32 Specification 2N; inside containers, metal cans.

§ 178.32-1 Size. (a) Not over 14-pounds water capacity (388 cubic inches).

§ 178.32-2 Material. Each can must be made of good quality tin plate with parts and dimensions in compliance with the requirements of the following table:

Maximum diameter of can	Minimum thickness of metal (inch)	
	In body	In heads
4¾6	0.01134 (107 pound tin plate)	0.01305 (128 pound tin plate)[1]
6¹¹⁄₁₆	0.01134 (107 pound tin plate)	0.01435 (143 pound tin plate)[2]
6¹¹⁄₁₆	0.01405 (135 lb. tin plate)	0.01405 (135 lb. tin plate)[3]

[1] The minimum thickness of metal in each head may be 107 lb. tin plate provided side seams are soldered and heads are attached to body sections by full double seams internally soldered.
[2] The minimum thickness of metal in each head may be 135 lb. tin plate provided side seams are soldered and heads are attached to body sections by full double seams internally soldered.
[3] Top heads must be attached to body sections by full double seams with durable seaming compound, and bottom heads must be attached to body sections by soldering.
Note 1: Because of the present emergency and until further order of the Department, the minimum thickness of metal in heads may be 1XL-107-pound tin plate or cans of not over 4¾6 inch diameter and 1XL-135-pound tin plate for cans of not over 6¹¹⁄₁₆ inches diameter, provided side seams are soldered and heads are attached to body by full double seams internally soldered.

§ 178.32-3 Manufacture. (a) Seams soldered or full double seam. Outside surface rustproofed by lacquer or equivalent.

§ 178.32-4 Test. (a) When closed as for shipment, must be capable of standing 40-pound interior pressure without leakage.

§ 178.33 Specification 2P; inside non-refillable metal containers.

§ 178.33-1 Compliance. (a) Required in all details.

§ 178.33-2 Type and size. (a) Single-trip inside containers. Must be seamless, or with seams, welded, soldered, brazed, double seamed, or swedged.
(b) The maximum capacity of containers in this class shall not exceed 50 cubic inches (27.7 fluid ounces). The maximum inside diameter shall not exceed 3 inches.

§ 178.33-3 Inspection. (a) By competent inspector.

§ 178.33-4 Duties of inspector. (a) To inspect material and completed containers and witness tests, and to reject defective materials or containers.

§ 178.33-5 Material. (a) Uniform quality steel plate such as black plate, electro-tin plate, hot dipped tin plate, tern plate or other

commercially accepted can making plate; or non-ferrous metal of uniform drawing quality.
(b) Material with seams, cracks, laminations or other injurious defects not authorized.

§ 178.33-6 Manufacture. (a) By appliances and methods that will assure uniformity of completed containers; dirt and scale to be removed as necessary; no defect acceptable that is likely to weaken the finished container appreciably; reasonably smooth and uniform surface finish required.
(b) Seams when used must be as follows:
(1) Circumferential seams: By welding, swedging, brazing, soldering, or double seaming.
(2) Side seams. By welding, brazing, or soldering.
(c) Ends. The ends shall be of pressure design.

§ 178.33-7 Wall thickness. (a) The minimum wall thickness for any container shall be 0.007 inch.

§ 178.33-8 Tests. (a) One out of each lot of 25,000 containers or less, successively produced per day shall be pressure tested to destruction and must not burst below 240 pounds per square inch gauge pressure. The container tested shall be complete with end assembled.
(b) Each such 25,000 containers or less, successively produced per day, shall constitute a lot and if the test container shall fail, the lot shall be rejected or ten additional containers may be selected at random and subjected to the test under which failure occurred. These containers shall be complete with ends assembled. Should any of the ten containers thus tested fail, the entire lot must be rejected. All containers constituting a lot shall be of like material, size, design, construction, finish and quality.

§ 178.33-9 Marking. (a) By means of printing, lithographing, embossing, or stamping, each container must be marked to show:
(1) DOT-2P.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.

§ 178.33a Specification 2Q; inside non-refillable metal containers.

§ 178.33a-1 Compliance. (a) Required in all details.

§ 178.33a-2 Type and size. (a) Single-trip inside containers. Must be seamless, or with seams welded, soldered, brazed, double seamed, or swedged.
(b) The maximum capacity of containers in this class shall not exceed 55 cubic inches (30.5 fluid ounces). The maximum inside diameter shall not exceed 3 inches.

§ 178.33a-3 Inspection. (a) By competent inspector.

§ 178.33a-4 Duties of inspector. (a) To inspect material and completed containers and witness tests, and to reject defective materials or containers.

§ 178.33a-5 Material. (a) Uniform quality steel plate such as black plate, electrotin plate, hot dipped tinplate, tern plate or other commercially accepted can making plate; or nonferrous metal of uniform drawing quality.
(b) Material with seams, cracks, laminations or other injurious defects not authorized.

§ 178.33a-6 Manufacture. (a) By appliances and methods that will assure uniformity of completed containers; dirt and scale to be removed as necessary; no defect acceptable that is likely to weaken the finished container appreciably; reasonably smooth and uniform surface finish required.
(b) Seams when used must be as follows:
(1) Circumferential seams; by welding, swedging, brazing, soldering, or double seaming.
(2) Side seams. By welding, brazing or soldering.
(c) Ends. The ends shall be of pressure design.

§ 178.33a-7 Wall thickness. (a) The minimum wall thickness for any container shall be 0.008 inch.

§ 178.33a-8 Tests. (a) One out of each lot of 25,000 containers or less, successively produced per day, shall be pressure tested to destruction and must not burst below 270 pounds per square inch gauge pressure. The container tested shall be complete with end assembled.
(b) Each such 25,000 containers or less, successively produced per day, shall constitute a lot and if the test container shall fail, the lot shall be rejected or ten additional containers may be selected at random and subjected to the test under which failure occurred. These containers shall be complete with ends assembled. Should any of the ten containers thus tested fail, the entire lot must be rejected. All containers constituting a lot shall be of like material, size, design, construction, finish and quality.

§ 178.33a-9 Marking. (a) By means of printing, lithographing, embossing, or stamping, each container must be marked to show:
(1) DOT-2Q.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.

§ 178.34 Specification 2R; inside containment vessel.

§ 178.34-1 General Requirements. (a) Each vessel must be made of stainless steel, malleable iron, or brass, or other material having equivalent physical strength and fire resistance.
(b) Each vessel must meet all of the applicable requirements of § 173.24(c) and (d) of this subchapter. Letters and numerals at least 6 millimeters (¼-inch) in height are authorized for the marking of a vessel not exceeding 5 centimeters (2 inches) inside diameter.

§ 178.34-2 Manufacture. (a) The ends of the vessel must be fitted with screw-type closures or flanges (see § 178.34-4), except that one or both ends of the vessel may be permanently closed by a welded or brazed plate. Welded or brazed side seams are authorized.
(b) Welding or brazing must be done in a workmanlike manner and must be free from defects.

§ 178.34-3 Dimensions. (a) The inside diameter of the vessel may not exceed 30 centimeters (12 inches) exclusive of flanges for handling or fastening devices and must have wall thickness and length in accordance with the following:

Inside diameter maximum		Wall thickness minimum			Length maximum	
		Threaded closure		Flanged closure		
Inches	Centimeters	Inches	Millimeters		Inches	Centimeters
2	5	3/32	2.5	Not less than that prescribed for schedule 40 pipe	16	41
6	15	1/8	3.2		72	183
12	30	1/4	6.5		72	183

§ 178.34-4 Closure devices. (a) Each closure device must be as follows:
(1) Screw-type cap or plug; number of threads per inch must not be less than United States standard pipe threads and must have sufficient length of thread to engage at least 5 threads when securely tightened. Pipe threads must be lited with an appropriate nonhardening compound which must be capable of withstanding up to 149° C. (300° F) without loss of efficiency. Tightening torque must be adequate to maintain leak tightness with the specific luting compound.
(2) An opening may be closed by a securely bolted flange and leaktight gasket. Each flange must be welded or brazed to the body of the 2R vessel per (ANSI) Standard B16.5 or (AWWA) Standard C207-55, section 10. A torque wrench must be used in securing the flange with a corresponding torque of no more than twice the force necessary to seal the selected gasket. Gasket material must be capable of withstanding up to 149° C. (300° F) without loss of efficiency. The flange, whether of ferrous or non-ferrous metal, must be constructed from the same metal as the vessel and must meet the dimensional and fabrication specifications for welded construction as follows:
(i) Pipe flanges described in Tables 13, 14, 16, 17, 19, 20, 22, 23, 25, and 26 of ANSI B16.5.
(ii) For nominal pipe sizes 6, 8, 10, and 12 inches, AWWA Standard C207-55 Table 1, class B, may be used in place of the tables prescribed by paragraph (a)(2)(i) of this section.
(iii) Sizes under 6 inches, nominal pipe size, the following table with the same configuration as illustrated in AWWA C207-55, Table I, class B, may be used in place of paragraph (a)(2)(i) of this section.

Nominal pipe size		Flange O.D.		Number of bolts	Bolt circle diameter		Diameter of bolts		Flange thickness	
Inches	Centimeters	Inches	Centimeters		Inches	Centimeters	Inches	Centimeters	Inches	Centimeters
2	5	6	15	4	4¾	11.8	½	1.2	5/8	1.6
2½	6.2	7	17.5	4	5½	13.8	½	.....	5/8	.....
3	7.5	7½	18.8	4	6	15	½	.....	5/8	.....
3½	8.8	8½	21.3	8	7	17.5	½	.....	5/8	.....
4	10	9	22.5	8	7½	18.8	½	.....	5/8	.....
5	12.6	10	25.4	8	8½	21.3	½	.....	5/8	.....

(iv) Cast iron flanges prohibited.

§ 178.35 Specification 2S; polyethylene container.

§ 178.35-1 General requirements. (a) Compliance is required in all details.
(b) Removable head containers are not authorized.
(c) Each container must be capable of withstanding the performance test prescribed in § 178.35-5 without failure.

§ 178.35-2 Material requirements. (a) Containers shall be made of a polyethylene resin which has not been used previously. Regrind from the same production process may be used.

§ 178.35-3 Construction, capacity and marking. (a) Container must be constructed in accordance with the following table:

Marked capacity not over (gallons)[1]	Maximum capacity (gallons)	Minimum thickness: Side wall and heads (inches)[2]	Minimum weight (pounds)
5	6	0.0625	1.4
13.5	14.5	0.0625	3.25
15	16	0.0625	3.5
30	32	0.0625	5.5
55	58	0.0625	9.0

[1] Marked capacity shall be minimum capacity
[2] Side openings are not authorized

(b) Marking. Each container must be permanently marked with figures and letters at least ¼ inch in size to show:
(1) DOT-2S.
(2) Name or symbol of person making the mark specified in paragraph (b)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.
(3) Month and year of manufacture.
(4) Minimum capacity.
(c) Polyethylene container must fit snugly in outside container.

§ 178.35-4 Closures. (a) Closing devices must be of screw thread type or fastened by positive means and be of material resistant to the lading and adequate to prevent leakage.
(b) Openings over 2.3 inches in diameter not permitted.

§ 178.35-5 Tests. (a) Samples taken at random, empty or filled, and prepared as specified and closed as for use, shall be capable of withstanding the following tests without breakage or leakage:
(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete, immediately after conditioning for at least 24 hours at 0° F.
(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge of any part considered weaker.
(3) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.
(4) The polyethylene container in a prescribed outer specification container, as authorized in Part 173, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

§ 178.35a Specification 2SL; molded or thermoformed polyethylene container.

§ 178.35a-1 General requirements. (a) Compliance is required in all details.
(b) Removable head containers and containers fabricated from film are not authorized.
(c) Each container must be capable of withstanding the performance tests prescribed in §§ 178.35a-3 and 178.35a-4 without failure.
(d) Containers shall be made of polyethylene resin which has not been used previously. Regrind from same production process may be used.

§ 178.35a-2 Construction, capacity and marking. (a) Container must be constructed in accordance with the following table:

Marked capacity not over (gallons)[1]	Maximum capacity (gallons)	Minimum thickness: Side wall and heads (inches)[2]	Minimum weight (pounds)
13.5	14.5	0.030	2.0
15	15.0	0.030	2.25
30	32	0.030	3.25
55	58	0.040	5.0

[1] Marked (actual) capacity shall be minimum capacity
[2] Side openings are not authorized

(b) Closure. Closure shall be of material resistant to lading and adequate to prevent leakage. Vented closures where specified under Part 173 are authorized. No opening over 2.3 inches in diameter authorized.
(c) Markings. Each container must be permanently marked with the figures and letters at least ¼ inch in size to show:
(1) DOT-2SL.
(2) Name or symbol of person making the mark specified in paragraph (c)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.
(3) Month and year of manufacture.
(4) Minimum capacity.
(d) Polyethylene container must fit snugly in outside container.

§ 178.35a-3 Type test. (a) Samples taken at random must withstand prescribed tests without breakage or leakage. Test must be made on each type and size produced at each manufacturing location starting production and repeated each four months. Testing may be performed at a location other than the manufacturing location. The type test is as follows:
(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete immediately after conditioning for at least 24 hours at 0° F.

§ 178.35a-4 Tests. (a) Samples taken at random, filled and prepared as specified and closed as for use, shall be capable of withstanding the following tests without leakage:
(1) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.
(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 173, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.
(3) The polyethylene container in a prescribed outer specification container, as authorized in Part 173, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

SUBPART C

SPECIFICATIONS FOR CYLINDERS

§ 178.36 SPECIFICATION 3A; SEAMLESS STEEL CYLINDERS OR 3AX SEAMLESS STEEL CYLINDERS OF CAPACITY OVER 1,000 POUNDS WATER VOLUME.

§ 178.36-1 Compliance. (a) Required in all details.

§ 178.36-2 Type, size and service pressure.[1] (a) DOT-3A; seamless, not over 1,000 pounds water capacity (nominal) and service pressure at least 150 pounds per square inch.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, DOT-3A2000 indicates the service pressure as 2,000 pounds per square inch.

(b) DOT-3AX; seamless, not less than 1,000 pounds water capacity and service pressure at least 500 pounds per square inch. Cylinders shall meet the following additional conditions:

(1) Assuming the cylinder to be supported horizontally at its two ends only and to be uniformly loaded over its entire length consisting of the weight per unit of length of the straight cylindrical portion filled with water and compressed to the specified test pressure; the sum of two times the maximum tensile stress in the bottom fibers due to bending (Note 1), plus that in the same fibers longitudinal stress (Note 2), due to hydrostatic test shall not exceed 80 percent of the minimum yield strength of the steel at such maximum stress. Wall thickness shall be increased when necessary to meet the requirement.

Note 1: To calculate the maximum tensile stress due to bending the following formula shall be used

$$S = \frac{Mc}{I}$$

Note 2: To calculate the maximum longitudinal tensile stress due to hydrostatic test pressure, the following formula shall be used

$$S = \frac{A_v P}{A_s}$$

where

S = tensile stress—psi;
M = bending moment—inch pounds $\frac{wl^2}{8}$;
w = weight per inch of cylinder filled with water,
l = length of cylinder—inches,
c = radius $\frac{(D)}{(2)}$ of cylinder—inches,
I = moment of inertia 0.04909 (D^4—d^4) inches fourth,
D = outside diameter—inches,
d = inside diameter—inches,
A_v = internal area in cross section of cylinder—square inches,
A_s = area of metal in cross section of cylinder—square inches,
P = hydrostatic test pressure—psi

§ 178.36-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT in accordance with § 173.300(b) of this subchapter.

§ 178.36-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after parting and shown to be free from pipe, cracks, excessive segregation and other injurious defects.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.36-5 Steel. (a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

§ 178.36-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.36-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.36-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thickness to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

§ 178.36-9 Welding or brazing. (a) Welding or brazing for any purpose whatsoever is prohibited except as follows: (1) Welding or brazing is authorized for the attachment of neckrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, neckrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure. (2) As permitted in § 178.36-8(a).

Note 1: Cylinders used solely in anhydrous ammonia service may have a ½ inch diameter bar welded within their concave bottoms in accordance with the foregoing requirements.

§ 178.36-10 Wall thickness. (a) For cylinders with service pressure less than 900 pounds the wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where

S = wall stress in pounds per square inch,
P = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater,
D = outside diameter in inches,
d = inside diameter in inches.

§ 178.36-11 Heat treatment. (a) The completed cylinders must be uniformly and properly heat-treated prior to test.

§ 178.36-12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings. (a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.36-13 Safety devices and protection for valves safety devices, and other connections if applied. (a) Must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d) and 173.301(g).

§ 178.36-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent of 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the offical test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least ⅗ times service pressure.

§ 178.36-15 Flattening test. Between knife edges, wedge shaped 60° angle, rounded to ½" radius; test 1 cylinder,[1] taken at random out of each lot of 200 or less cylinders. Longitudinal axis of the cylinder must be at approximately a 90-degree angle to knife edges.

§ 178.36-16 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16-inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical test detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "off set" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

---

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

For explanation of abbreviations and reference marks, see last page of this tariff.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.36-17 Acceptable results for physical and flattening tests. (a) Either of the following:

(1) Elongation at least 40 percent for 2-inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2-inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

§ 178.36-18 Leakage test. (a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least ¼ of the total area of the bottom but not less than ⅜ inch in diameter, including the closure, for at least 1 minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 178.36-19.)

Note 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

Note 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

Note 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

§ 178.36-19 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

Note 1: Spun cylinders rejected under the provisions of § 178.36-18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

§ 178.36-20 Marking. (a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) When cylinders are constructed to § 178.36-2(a), they shall be marked DOT-3A followed by the service pressure (for example, DOT-3A1800, etc.)

(2) When cylinders are constructed to § 178.36-2(b), they shall be marked DOT-3AX followed by the service pressure (for example, DOT-3AX1800, etc.).

(3) A serial[2] number and an identifying symbol (letters); location[3] of number to be just below or immediately following the DOT mark; location[3] of symbol to just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-3A1800 1234 XY — DOT-3A1800-1234 XY

(4) Inspector's offical mark near serial number; date of test (such as 5-50 for May 1950), so placed that dates of subsequent tests can be easily added, and word "SPUN" or "PLUG" near DOT mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

§ 178.36-21 Size of marks. (a) At least ¼" high if space permits.

§ 178.36-22 Inspector's report. (a) Required to be clear, legible, and in following form:

(Place) .....

(Date) .....

Gas Cylinders

Manufactured for ..... Company

Location at .....

Manufactured by ..... Company

Location at .....

Consigned to ..... Company

Location at .....

Quantity .....

[WO] inches outside diameter by ..... inches long

Marks stamped into the shoulder of the cylinder are:

Specification DOT .....

Serial numbers ..... to ..... inclusive

Inspector's mark .....

Identifying symbol (registered) .....

Test date .....

Tare weights (yes or no) .....

Other marks (if any) .....

These cylinders were made by process of .....

.....

.....

The ..... permitted in § 178.36-9
(heckings—botings)

were attached by process of .....
(welding—brazing)

The material used was identified by the following .....
(heat purchase order)

numbers .....

The material used was verified as to chemical analysis and record thereof is attached hereto.

The heat numbers .....
(were—were not)

marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness ..... noted was inch. The outside diameter was determined by ..... a close approximation to be inches. The wall stress was ..... calculated to be ..... pounds per square inch under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-3A were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 3A except as follows:

§ 178.36-23 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

---

§ 178.37 Specification 3AA; seamless steel cylinders made of definitely prescribed steels or 3AAX; seamless steel cylinders made of definitely prescribed steels of capacity over 1,000 pounds water volume.

§ 178.37-1 Compliance. (a) Required in all details.

§ 178.37-2 Type, size and service pressure.[1] (a) DOT-3AA; seamless, not over 1,000 pounds water capacity (nominal) and service pressure at least 150 pounds per square inch.

(b) DOT-3AAX; seamless, not less than 1,000 pounds water capacity and service pressure at least 500 pounds per square inch. Cylinders shall meet the following additional conditions:

(1) Assuming the cylinder to be supported horizontally at its two ends only and to be uniformly loaded over its entire length consisting of the weight per unit of length of the straight cylindrical portion filled with water and compressed to the specified test pressure; the sum of two times the maximum tensile stress in the bottom fibers due to bending (Note 1), plus that in the same fibers (longitudinal stress) (Note 2), due to hydrostatic test shall not exceed 80 percent of the minimum yield strength of the steel at such maximum stress. Wall thickness shall be increased when necessary to meet the requirement.

where

S = tensile stress—psi.

M = bending moment—inch pounds $\left(\frac{wl^2}{8}\right)$.

w = weight per inch of cylinder filled with water.

l = length of cylinder—inches.

c = radius $\left(\frac{D}{2}\right)$ of cylinder—inches.

I = moment of inertia $0.04909\,(D^4-d^4)$ inches fourth.

D = outside diameter—inches.

d = inside diameter—inches.

A_1 = internal area in cross section of cylinder—square inches.

A_2 = area of metal in cross section of cylinder—square inches.

P = hydrostatic test pressure—psi.

§ 178.37-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.37-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after parting and shown to be free from pipe, cracks, excessive segregation and other injurious defects.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.37-5 Authorized steel. (a) Open-hearth, basic oxygen, or electric steel of uniform quality. The following chemical analyses are authorized (see note 1):

Designation	4130X (percent) (see note 2)	NE-8630 (percent) (see note 2)	9115 (percent) (see note 2)	9125 (percent) (see note 2)	Carbon-boron steel (percent) (see par. b)	Intermediate manganese (percent)
Carbon	0.25-0.35	0.28-0.33	0.10-0.20	0.20-0.30	0.27-0.37	0.40 max.
Manganese	0.40-0.90	0.70-0.90	0.50-0.75	0.50-0.75	0.80-1.40	1.35-1.65
Phosphorus	0.04 max.	0.04 max.	0.04 max.	0.04 max.	0.035 max.	0.04 max.
Sulphur	0.05 max.	0.04 max.	0.04 max.	0.04 max.	0.045 max.	0.05 max.
Silicon	0.15-0.35	0.20-0.35	0.60-0.90	0.60-0.90	0.3 max.	0.10-0.30
Chromium	0.80-1.10	0.40-0.60	0.50-0.65	0.50-0.65	.....	.....
Molybdenum	0.15-0.25	0.15-0.25	.....	.....	.....	.....
Zirconium	.....	.....	0.05-0.15	0.05-0.15	.....	.....
Nickel	.....	0.40-0.70	.....	.....	.....	.....
Boron	.....	.....	.....	.....	0.0005-0.003	.....

Designation	9115X (percent) (see note 2)	9125X (percent) (see note 2)	Intermediate manganese (percent)
Carbon	0.10-0.20	0.20-0.30	0.40 max.
Manganese	0.50-0.75	0.50-0.75	1.35-1.65
Phosphorus	0.04 max.	0.04 max.	0.04 max.
Sulphur	0.04 max.	0.04 max.	0.05 max.
Silicon	0.60-0.90	0.60-0.90	0.10-0.30
Chromium	0.50-0.65	0.50-0.65	.....
Molybdenum	0.10-0.20	0.10-0.20	.....
Zirconium	0.05-0.15	0.05-0.15	.....
Nickel	.....	.....	.....

Note 1: A heat of steel made under the above specifications check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances shown in the following tables are not exceeded.

Note 2—This designation shall not be restrictive and the commercial steel is limited in analysis as shown in the table.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder, for example, DOT-3AA2000 indicates the service pressure as 2,000 pounds per square inch.

CHECK ANALYSIS TOLERANCES

Element	Limit or maximum specified (percent)	Tolerance (percent) over the maximum limit or under the minimum limit	
		Under minimum limit	Over maximum limit
Carbon	To 0.15 incl.	0.02	0.03
	Over 0.15 to 0.40 incl.	0.03	0.04
Manganese	To 0.60 incl.	0.03	0.03
	Over 0.60 to 1.15 incl.	0.04	0.04
	Over 1.15 to 2.50 incl.	0.05	0.05
Phosphorus[1]	All ranges		0.01
Sulphur	All ranges		0.01
Silicon	To 0.30 incl.	0.02	0.03
	Over 0.30 to 1.00 incl.	0.05	0.05
Nickel	To 1.00 incl.	0.03	0.03
Chromium	To 0.90 incl.	0.03	0.03
	Over 0.90 to 2.10 incl.	0.05	0.05
Molybdenum	To 0.20 incl.	0.01	0.01
	Over 0.20 to 0.40	0.02	0.02
Zirconium	All ranges	0.01	0.05

[1] Rephosphorized steels not subject to check analysis for phosphorus.

(b) When a carbon-boron steel is used, a hardenability test must be performed on the first and last ingot of each heat of steel. The results of this test must be recorded on the Record of Chemical Analysis of Material for Cylinders required by §178.37-22 of this section. This hardness test must be made 1/16-inch from the quenched end of the Jominy quench bar and the hardness shall be at least Rc 33 and no more than Rc 53.

§ 178.37-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.37-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.37-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

§ 178.37-9 Welding or brazing. (a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding or brazing is authorized for the attachment of necklrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, necklrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

(2) As permitted in §178.37-8.

§ 178.37-10 Wall thickness. (a) For cylinders with service pressure less than 900 pounds the wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) For cylinders with service pressure of 900 p.s.i. or more the minimum wall shall be such that the wall stress at the minimum specified test pressure shall not exceed 67 percent of the minimum tensile strength of the steel as determined from the physical tests required in §§178.37-16 and 178.37-17 and shall be not over 70,000 p.s.i.

(c) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where—

S = wall stress, pounds per square inch.
P = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater.
D = outside diameter, inches.
d = inside diameter in inches.

§ 178.37-11 Heat treatment. (a) The completed cylinders must be uniformly and properly heat treated prior to tests. Heat treatment of cylinders of the authorized analyses shall be as follows:

(1) All cylinders must be quenched by oil, or other suitable medium except as provided in subparagraph (5) of this paragraph.

(2) The steel temperature on quenching shall be that recommended for the steel analysis, but in no case shall exceed 1750° F.

(3) All steels shall be tempered at a temperature most suitable for that steel.

(4) The minimum tempering temperature shall be not less than 1000° F. except as noted in paragraph (a)(6) of this section.

(5) Steel 4130X may be normalized at a temperature of 1650° F. instead of being quenched, and cylinders so normalized need not be tempered.

(6) Intermediate manganese steels may be tempered at temperatures not less than 1150° F., and after heat treating, each cylinder must be submitted to a magnetic test to detect the presence of quenching cracks. Cracked cylinders shall be rejected and destroyed.

(7) (Reserved).

(8) Except as otherwise provided in subparagraph (6) of this paragraph, all cylinders, if water quenched or quenched with a liquid producing a cooling rate in excess of 90 percent of the cooling rate of water, must be inspected by the magnetic particle, dye penetrant or ultrasonic method to detect the presence of quenching cracks. Any cylinder designed to the requirements for specification 3AA and found to have a quenching crack must be rejected and may not be requalified. Cylinders designed to the requirements for specification 3AAX and found to have cracks must have cracks removed to sound metal by mechanical means. Such specification 3AAX cylinders will be acceptable if the repaired area is subsequently examined to assure no defect, and it is determined that design thickness requirements are met.

§ 178.37-12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings. (a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.37-13 Safety devices and protection for valves, safety devices and other connections, if applied. (a) Must be as required by the Department of Transportation's regulations that apply (see §§173.34(d) and 173.301(g)).

§ 178.37-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 5/3 times service pressure.

§ 178.37-15 Flattening test. Between knife edges, wedge shaped, 60° angle, rounded to 1/2" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less cylinders. Longitudinal axis of the cylinder must be at approximately a 90-degree angle to knife edges.

§ 178.37-16 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction any may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.37-17 Physical and flattening tests. (a) Acceptable results for physical and flattening tests; elongation at least 20 percent for 2" gauge length or at least 10 percent in other cases; flattening required without cracking to 6 times wall thickness.

§ 178.37-18 Leakage test. (a) All spun cylinders and plugged cylinders (See Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least ⅛ of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 178.37-19.)

Note 1: A spun cylinder in one in which an end closure in the finished cylinder has been welded by the spinning process.

Note 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

Note 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

§ 178.37-19 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

Note 1: Spun cylinders rejected under the provisions of § 178.37-18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

§ 178.37-20 Marking. (a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) When cylinders are constructed to § 178.37-2(a), they shall be marked DOT-3AA followed by the service pressure (for example, DOT-3AA1800 etc.).

(2) When cylinders are constructed to § 178.37-2(b), they shall be marked DOT-3AAX followed by the service pressure (for example, DOT-3AAX1800, etc.).

(3) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below or immediately following the DOT mark; location[2] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples:	DOT-3AA1800	DOT-3AA1800-1234-XY
	1234	
	XY	

(4) Inspector's offical mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near DOT mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

§ 178.37-21 Size of marks. (a) At least ¼" high if space permits.

§ 178.37-22 Inspector's report. (a) Required to be clear, legible, and in the following form:

(Place) .....

Test date .....

Tare weights (yes or no) .....

Other marks (if any) .....

These cylinders were made by process of .....

.....

.....

The cylinders were heat treated by the process of .....

.....

.....

The ..... permitted in § 178.37-9
(neckrings—bottings)

were attached by process of .....
(welding—brazing)

The material used was identified by the following .....
(heat purchase order)

numbers .....

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers .....
(were—were not)

marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ..... inch. The outside diameter was determined by a close approximation to be ..... inches. The wall stress was calculated to be ..... pounds per square inch under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-3AA were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 3AA except as follows:

§ 178.37-23 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.38 Specification 3B; seamless steel cylinders.

§ 178.38-1 Compliance. (a) Required in all details.

§ 178.38-2 Type, size, and service pressure. (a) Type and size. Seamless; not over 1,000 pounds water capacity (nominal).

(b) Service pressure.[1] At least 150 to not over 500 pounds per square inch.

§ 178.38-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.38-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.38-5 Steel. (a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

§ 178.38-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.38-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.38-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

§ 178.38-9 Welding or brazing. (a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding or brazing is authorized for the attachment of necklrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, necklrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

(2) As permitted in § 178.38-8.

§ 178.38-10 Wall thickness. (a) The wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.090" for any cylinder over 6" outside diameter.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where—

S = wall stress, pounds per square inch,

P = at least two times service pressure or 450 pounds per square inch, whichever is the greater,

D = outside diameter, inches,

d = minimum wall thickness determined by a suitable method

§ 178.38-11 Heat treatment. (a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

§ 178.38-12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings. (a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 4 engaged threads are authorized, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.38-13 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d) and 173.301(g)).

§ 178.38-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent of 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent of 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) Each cylinder, to at least 2 times service pressure.

(2) Or, 1 cylinder out of each lot of 200 or less, to at least 3 times service pressure. Other must be examined under pressure of 2 times service pressure and show no defect.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder, for example, DOT-3E300 indicates the service pressure as 300 pounds per square inch.

§ 178.38-15 Flattening test. (a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.38-16 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1 ½ inches; or, gauge length 2 inches with width not over 1½ inches; Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 7/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or, "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.38-17 Acceptable results for physical and flattening tests. (a) Either of the following:

(1) Elongation at least 40 percent for 2-inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2-inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

§ 178.38-18 Leakage test. (a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 7/16 of the total area of the bottom but not less than 3½ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to §178.38-19.)

Note 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

Note 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

Note 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

§ 178.38-19 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

Note 1: Spun cylinders rejected under the provisions of § 178.38-18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

§ 178.38-20 Marking. (a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) DOT-3B followed by the service pressure (for example, DOT-38300, etc.).

(2) A serial[1] number and an identifying symbol (letters); locations[2] of number to be just below or immediately following the DOT mark; location[2] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-38300 1234 XY — DOT-38300-1234-XY

(4) Inspector's official mark near serial number; date of test (such as 5-50 for May 1950), so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near DOT mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

(b) Marking stamped into the sidewalls of cylinders having a service pressure of 150 psi is permitted only if all of the following conditions are met:

(1) Wall stress at test pressure shall not exceed 24,000 psi.
(2) Minimum wall thickness shall be not less than .090".
(3) Depth of stamping shall be no greater than 15% of the minimum wall thickness, but at no time shall it exceed .015".
(4) Maximum outside diameter of cylinder shall not exceed 5".
(5) Carbon content of cylinder shall not exceed 0.25%. If the carbon content exceed 0.25%, the complete cylinder must be normalized after stamping.
(6) Stamping shall be adjacent to top head.

§ 178.38-21 Size of marks. (a) At least ¼" high if space permits.

§ 178.38-22 Inspector's report. (a) Required to be clear, legible, and in following form:

(Place) .....

were attached by process of .....
(welding—brazing)
The material used was identified by the following .....
(heat-purchase order)
numbers .....
The material used was verified as to chemical analysis and record thereof is attached hereto.
The heat numbers .....
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ..... inch. The outside diameter was determined by a close approximation to be ..... inches. The wall stress was calculated to be ..... pounds per square inch under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-3B were made in the presence of the inspector and all material and

---

[1] For lots of 30 or less physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 170 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 3B except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading: Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect.

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) .....

§ 178.39-23 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.39 Specification 3BN; seamless nickel cylinders.

§ 178.39-1 Compliance. (a) Required in all details.

§ 178.39-2 Type, size and service pressure. (a) Type and size. Seamless; not over 125 pounds water capacity (nominal).

(b) Service pressure.[1] At least 150 lb not over 500 pounds per square inch.

§ 178.39-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.39-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided*, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests, verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.39-5 Nickel. (a) At least 99.0 percent pure nickel plus cobalt.

§ 178.39-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.39-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.39-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Cylinders closed in by spinning process not authorized.

§ 178.39-9 Welding or brazing. (a) Welding or brazing for any purpose whatsoever is prohibited except that welding is authorized for the attachment of neckrings and footrings which are nonpressure parts, and only to the tops and bottoms of cylinders. Neckrings and footrings must be of weldable material, carbon content of which must not exceed 0.25 percent. Nickel welding rod must be used.

§ 178.39-10 Wall thickness. (a) The wall stress shall not exceed 15,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch,
P = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater,
D = outside diameter in inches,
d = inside diameter in inches.

§ 178.39-11 Heat treatment. (a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

§ 178.39-12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings. (a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder, for example, DOT-3BN400 indicates the service pressure as 400 pounds per square inch.

(c) Straight threads having at least 6 engaged thread are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.39-13 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d) and 173.301(g)).

§ 178.39-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 2 times service pressure.

§ 178.39-15 Flattening test. (a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.39-16 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material; Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.39-17 Acceptable results for physical and flattening tests. (a) Either of the following:

(1) Elongation at least 40 percent for 2" gauge length or at least 20 percent in other cases; yield point not over 50 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2" gauge length or 10 percent in other cases; yield point not over 50 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

§ 178.39-18 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding not authorized.

§ 178.39-19 Marking (a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) DOT-3BN followed by service pressure (for example DOT-3BN400, etc.).

(2) A serial[2] number and an identifying symbol (letters); location[3] of number to be just below or immediately following the DOT mark; location[3] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-3BN400 1234 XY — DOT 3BN400-1234-XY

(3) Inspector's official mark, near serial number; date of test (such as 5-50 for May 1950), so placed that dates of subsequent tests can be easily added.

§ 178.39-20 Size of marks. (a) At least ¼" high if space permits.

§ 178.39-21 Inspector's report. (a) Required to be clear, legible, and in following form:

§ 178.39-22 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.40 (Reserved)

§ 178.41 (Reserved)

§ 178.42 Specification 3E; seamless steel cylinders.

§ 178.42-1 Compliance. (a) Required in all details.

§ 178.42-2 Type, size, and service pressure. (a) Type and size. Seamless. Must have outside diameter not greater than 2 inches nominal, length less than 2 feet.

(b) Service pressure.[1] Must be 1,800 pounds per square inch.

§ 178.42-3 Inspection by whom and where. (a) Inspection and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.42-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of steel by analysis or by obtaining certified analysis: Provided, That check analysis of samples taken from one cylinder out of each lot of 200 or less is acceptable.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.42-5 Steel. (a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

§ 178.42-6 Identification of steel. (a) Required; any suitable method.

§ 178.42-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.42-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. The thickness of the spun bottom is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thickness to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

§ 178.42-9 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings. (a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 4 engaged threads are authorized, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.42-10 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d) and 173.301(g)).

§ 178.42-11 Hydrostatic test. (a) Cylinders must be tested as follows:

(1) One cylinder out of each lot of 500 or less to be subjected to hydrostatic pressure of 6,000 pounds per square inch or higher.

(2) The cylinder referred to in subparagraph (1) of this paragraph shall burst at a pressure higher than 6,000 pounds per square inch without fragmenting or otherwise showing lack of ductility, or shall hold a pressure of 12,000 pounds per square inch for 30 seconds without bursting, in which case it shall be subjected to a flattening test without cracking to six times wall thickness between knife edges, wedge shaped, 60 degrees angle, rounded out of ½ inch radius.

Note 1: Inspector's report shall be suitably changed to show results of later alternate and flattening tests.

(3) Other cylinders must be examined under pressure of at least 3,000 pounds per square inch and not to exceed 4,500 pounds per square inch and show no defect. Cylinders tested at a pressure in excess of 3,600 pounds per square inch shall burst at a pressure higher than 7,500 pounds per square inch when tested as specified in paragraph (a)(2) of this section. The pressure must be maintained for at least 30 seconds and sufficiently longer to insure complete examination.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder, for example, DOT-3E1800 indicates the service pressure as 1,800 pounds per square inch.

§ 178.42-12 Leakage test. (a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least ¼ of the total area of the bottom but not less than ¼ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 178.42-13.)

Note 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

Note 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

Note 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

§ 178.42-13 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

Note 1: Spun cylinders rejected under the provisions of § 178.42-12 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

§ 178.42-14 Marking. (a) Marking on each cylinder by stamping plainly and permanently on the shoulder, top head, neck or sidewall as follows:

(1) DOT-3E1800.

(2) An identifying symbol (letters); location to be just following or below the DOT mark. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-3E1800
XY

§ 178.42-15 Inspector's report. (a) Required to be clear, legible, and in following form:

(Place) .....

(Date) .....

Steel Gas Cylinders

Manufactured for ..... Company

Location at .....

Manufactured by ..... Company

Location at .....

Consigned to ..... Company

Location at .....

Quantity .....

Size ..... inches outside diameter by ..... inches long

Marks stamped into the shoulder of the cylinder are:

Specification—DOT-3E1800

Serial numbers ..... to ..... inclusive (if numbered)

Identifying symbol (registered) .....

Test date .....

These cylinders were made by process of .....

.....

.....

The steel used was identified by the following ..... (heat purchase order)

numbers .....

The steel used was certified as to chemical analysis and record thereof is ..... attached hereto .....

The heat numbers ..... (were—were not)

marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness ..... noted was inch. The tare weight per cylinder without valve is ..... (approx.)

The volumetric capacity per cylinder is ..... (approx.)

Each and every cylinder was properly tapped with a taper thread, the threads were inspected and found to be clean-cut, of proper length, and correct as to gauge.

One finished cylinder out of each lot of 500 or less was taken at random and burst by interior pressure with the following results:

Date of test	Pressure at which cylinder ruptured

Each and every cylinder with bottom closed in by spinning was subjected to an interior gas pressure of at least 1,800 pounds per square inch and showed no leakage.

Each and every cylinder was subjected to an interior pressure of at least 3,000 pounds per square inch and showed no defect.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 3A except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation thereon reading. Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect.

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

(Signed) .....

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 178.42-16 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.43 [Reserved]

§ 178.44 Specification 3HT; inside containers, seamless steel cylinders for aircraft use made of definitely prescribed steel.

§ 178.44-1 Compliance. (a) Required in all details.

§ 178.44-2 Type, size and service pressure. (a) Type and size. Seamless; not over 150 pounds water capacity (nominal).

(b) Service pressure.[1] At least 900 pounds per square inch.

§ 178.44-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.44-4 Duties of inspector. (a) Inspect all materials and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. Test reports must be retained by the inspector for the authorized service life of the cylinder.

§ 178.44-5 Authorized steel. (a) Open hearth or electric furnace steel of uniform quality. Steel of the following chemical analysis is authorized (see Notes 1 and 2):

Designation	AISI 4130 (percent)
Carbon	0.25-0.33
Manganese	0.40-0.60
Phosphorus	0.040 maximum
Sulfur	0.040 maximum
Silicon	0.15-0.35
Chromium	0.80-1.10
Molybdenum	0.15-0.25

Note 1: A heat of steel made under the specifications listed in the first table, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances shown in the following table are not exceeded.

CHECK ANALYSIS TOLERANCES

Element	Limit or maximum specified (percent)	Tolerance (percent over the maximum limit or under the minimum limit	
		Under minimum limit	Over maximum limit
Carbon	Over 0.15 to 0.40 incl.	0.03	0.04
Manganese	To 0.60 incl.	0.03	0.03
Phosphorus[1]	All ranges		0.01
Sulphur	All ranges		0.01
Silicon	To 0.30 incl.	0.02	0.03
	Over 0.30 to 1.00 incl.	0.05	0.05
Chromium	To 0.90 incl.	0.03	0.03
	Over 0.90 to 2.10 incl.	0.05	0.05
Molybdenum	To 0.20 incl.	0.01	0.01
	Over 0.20 to 0.40 incl.	0.02	0.02

[1] Rephosphorized steels not subject to check analysis for phosphorus.

Note 2: Grain size 6 or finer according to ASTM Spec. E19-45.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder, for example, DOT-3HT2000 indicates the service pressure as 2,000 pounds per square inch.

§ 178.44-6 Identification of material. (a) Required; any suitable method. Steel stamping of heat identifications shall not be made in any area which will eventually become the side wall of the cylinder. Depth of stamping shall not encroach upon the minimum prescribed wall thickness of the cylinder.

§ 178.44-7 Defects. (a) Material with seams, cracks, laminations, severe inclusions, numerous or severe draw marks, or any other injurious defect not authorized.

§ 178.44-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished container appreciably; the general surface finish shall not exceed a roughness of 250 RMS. Individual irregularities such as drawmarks, scratches, pits, etc., should be held to a minimum consistant with good high stress pressure vessel manufacturing practices. If the cylinder is not originally free of such defects or does not meet the finish requirements, the surface may be machined or otherwise treated to eliminate these defects. The point of closure of cylinders closed by spinning is not to be less than two times the prescribed wall thickness of the cylindrical shell. Cylinder end contour shall be hemispherical or ellipsoidal with a ratio of major to minor axis not exceeding two to one and with concave side to pressure.

§ 178.44-9 Welding or brazing. (a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding by spinning is permitted to close the bottom of spun cylinders. Machining or grinding to produce proper surface finish at point of closure is required.

§ 178.44-10 Wall thickness. (a) Minimum wall thickness for any cylinder shall be .050 inch.

(b) Minimum wall thickness shall be such that the wall stress at the minimum specified test pressure shall not exceed 75 percent of the minimum tensile strength of the steel as determined from the physical tests required in § 178.44-18 and shall not be over 105,000 psi.

(c) Calculations must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch.
P = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater.
D = outside diameter in inches.
d = inside diameter in inches.

(d) Wall thickness of hemispherical bottoms only permitted to 90 percent of minimum wall thickness of cylinder sidewall but shall not be less than .050 inch. In all other cases, thickness to be no less than prescribed minimum wall.

§ 178.44-11 Heat treatment. (a) The completed cylinders must be uniformly and properly heated prior to tests. Heat treatment of the cylinders of the authorized analysis shall be as follows:

(1) All cylinders must be quenched by oil, or other suitable medium.

(2) The steel temperature on quenching shall be that recommended for the steel analysis, but in no case shall it exceed 1750° F.

(3) The steel shall be tempered at a temperature most suitable for the particular steel analysis but not less than 850° F.

(4) Cancelled.

(5) All cylinders must be inspected by the magnetic particle or dye penetrant method to detect the presence of quenching cracks. Any cylinder found to have a quenching crack must be rejected and may not be requalified.

§ 178.44-12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings. (a) Threads required to be clean cut, even, without cracks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for National Gas Tapered Thread (NGT) as required by American Standard Compressed Gas Cylinder Valve Outlet and Inlet Connections.[1]

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and a calculated shear stress of at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.44-13 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by applicable regulations in Part 173 (see §§ 173.34(d), 173.301(g), 173.302(a)(2), and 173.304(a)(2) Note 7).

§ 178.44-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge

[1] Available for a nominal charge from the American National Standards Institute, 1430 Broadway, New York, New York 10018 and the Compressed Gas Association, Inc., 500 Fifth Avenue, New York, New York 10036.

must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent of 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least ⅗ times service pressure.

§ 178.44-15 Cycling tests. (a) Prior to the initial shipment of any specific cylinder design, cyclic pressurization tests shall have been performed on at least three representative samples without failure as follows:

(1) Pressurization shall be performed hydrostatically between approximately zero psig and the service pressure at a rate not in excess of 10 cycles per minute. Adequate recording instrumentation shall be provided if equipment is to be left unattended for periods of time.

(b) Tests prescribed in §178.44-15(a)(1) shall be repeated on one random sample out of each lot of cylinders. Cylinder may then be subjected to burst test.

(c) A lot is defined as a group of cylinders fabricated from the same heat of steel, manufactured by the same process and heat treated in the same equipment under the same conditions of time, temperature, and atmosphere, and shall not exceed a quantity of 200 cylinders.

(d) All cylinders used in cycling tests must be destroyed.

§ 178.44-16 Burst test. (a) One cylinder taken at random out of each lot of cylinders shall be hydrostatically tested to destruction.

§ 178.44-17 Flattening test. Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius, test one cylinder taken at random out of each lot of 200 or less cylinders. Longitudinal Axis of the cylinder must be at approximately a 90° angle to knife edges.

§ 178.44-18 Physical tests. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 cylinder taken at random out of each lot of cylinders.

(b) Specimens must be: Gauge length at least 24 times thickness with width not over six times thickness. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.44-19 Magnetic particle inspection. (a) Inspection shall be performed on inside of container before closing and externally on the finished container after heat treatment. Evidence of discontinuities, which in the opinion of a qualified inspector may appreciably weaken or decrease the durability of the cylinder, shall be cause for rejection.

§ 178.44-20 Leakage test. (a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by dry gas or dry air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ⅜ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected (see Notes 1, 2, and 3 and §178.44-22).

Note 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

Note 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

Note 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable around the point of closure, and so as to use the smallest possible volume of air or gas.

§ 178.44-21 Acceptable results of tests. (a) Flattening required without cracking to ten times the wall thickness of the cylinder.

(b) Physical tests:

(1) Elongation at least 6 percent in gauge length of 24 times wall thickness.

(2) Tensile strength shall not exceed 165,000 p.s.i.

(c) Burst pressure shall be at least 4/3 times the test pressure.

(d) Cycling—at least 10,000 pressurizations.

§ 178.44-22 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

(b) For each cylinder subjected to reheat treatment during original manufacture, sidewall measurements must be made to verify that the minimum sidewall thickness meets specification requirements after the final heat treatment.

§ 178.44-23 Marking. (a) Cylinders shall be marked by low stress type steel stamping in an area and to a depth which will insure that the wall thickness measured from the root of the stamping to the interior surface is equal to or greater than the minimum prescribed wall thickness. Stamping must be permanent and legible. Stamping on side wall not authorized. The following markings shall appear:

(1) DOT-3HT followed by the service pressure (for example, DOT-3HT1800, etc.).

(2) A serial number and an identifying symbol (letters); location[1] of number to be just below or immediately following the DOT mark; location[1] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-3HT1800 1234 XY DOT-3HT1800-1234-XY

(3) Inspector's official mark near serial number; date of test such as 5-59 for May 1959, so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near DOT mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

(4) Rejection elastic expansion (REE) in cubic centimeters (cc) near the date of test. The REE for a cylinder is 1.05 times its original elastic expansion.

§ 178.44-24 Name plates. (a) Authorized, provided that they can be permanently and securely attached to the cylinder. Attachment by either brazing or welding is not permitted. Attachment by soldering is permitted provided steel temperature does not exceed 500° F.

§ 178.44-25 Inspector's report. (a) Required to be clear, legible, and in the following form:

[1] Symbol in front of or following the number with ample space between is also authorized. Other variations in location authorized only when necessitated by lack of space.

These cylinders were made by process of .....
.....
.....
The cylinders were heat treated by the process of .....
.....
.....
The material used was identified by the following ..... (Heat purchase order)
numbers .....
The material used was verified as to chemical analysis ..... and record thereof is attached hereto.
The heat numbers ..... (were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum ..... thickness noted was inch. The outside diameter was determined by a close ..... approximation to be inches. The wall stress was calculated to be pounds per square inch under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-3HT were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 3HT except as follows:

§ 178.44-26 Report retention. The maker of the cylinder under this specification must retain the test reports required by this specification for the authorized service life of the cylinder.

§ 178.45 Specification 3T; seamless steel cylinder.

§ 178.45-1 Compliance. Each cylinder must meet the applicable requirements of § 173.24 of this subchapter.

§ 178.45-2 Type, size, and service pressure. (a) Type. Each cylinder must be of seamless construction with integrally formed heads concave to pressure at both ends. The inside head shape must be hemispherical, ellipsoidal in which the major axis is two times the minor axis, or a dished shape falling within these two limits. Permanent closures formed by spinning are prohibited.
(b) Size. The minimum water capacity is 1,000 pounds.
(c) Service pressure. The minimum service pressure is 1,800 p.s.i.

§ 178.45-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.45-4 Duties of the inspector. (a) The inspector must determine that all materials are in compliance with the requirements of this specification.
(b) The inspector must verify compliance with the requirements of § 178.45-5 by making a chemical analysis or obtaining a certified chemical analysis from the material manufacturer for each heat of material. If an analysis is not provided by the material manufacturer, a sample from each heat must be analyzed.
(c) The inspector must determine that each cylinder is made and marked in compliance with this specification by:
(1) Complete internal and external inspection;
(2) Verification of proper heat treatment;
(3) Selection of samples to be tested;
(4) Witnessing all tests;
(5) Verification of threads by gage; and
(6) Preparation of required report.

§ 178.45-5 Material, steel. (a) Only open hearth, basic oxygen, or electric furnace process steel of uniform quality is authorized. The steel analysis must conform to the following:

ANALYSES TOLERANCES

Element (percent)	Ladle analysis	Check analysis	
		Under	Over
Carbon	0.35 to 0.50	0.03	0.04
Manganese	0.75 to 1.05	0.04	0.04
Phosphorus (max)	0.035	.....	0.01
Sulfur (max)	0.04	.....	0.01
Silicon	0.15 to 0.35	0.02	0.03
Chromium	0.80 to 1.15	0.05	0.05
Molybdenum	0.15 to 0.25	0.02	0.02

(b) A heat of steel made under these specifications, the ladle analysis of which is slightly out of the specified range, is acceptable if satisfactory in all other aspects. However, the check analysis tolerances shown in the above table may not be exceeded except as approved by the Department.
(c) Material with seams, cracks, laminations, or other injurious defects is not permitted.
(d) Material used must be identified by any suitable method.

§ 178.45-6 Manufacture. (a) General manufacturing requirements are as follows:

(1) Dirt and scale must be removed prior to inspection and processing.

(2) Surface finish must be uniform and reasonably smooth.

(3) Inside surfaces must be clean, dry, and free of loose particles.

(4) No defect of any kind is permitted if it is likely to weaken a finished cylinder.

(b) If the cylinder surface is not originally free from the defects described in paragraph (a) of this section, the surface may be machined or otherwise treated to eliminate these defects provided the minimum wall thickness is maintained.

(c) Welding or brazing on a cylinder is not permitted.

§ 178.45-7 Wall thickness. (a) The minimum wall thickness must be such that the wall stress at the minimum specified test pressure does not exceed 67 percent of the minimum tensile strength of the steel as determined by the physical tests required in §§178.45-14 and 178.45-15. A wall stress of more than 90,500 p.s.i. is not permitted. The minimum wall thickness for any cylinder may not be less than 0.225 inch.

(b) Calculation of the stress for cylinders must be made by the following formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch,
P = minimum test pressure at least 5/3 service pressure,
D = outside diameter in inches,
d = inside diameter in inches.

(c) Each cylinder must meet the following additional requirements which assumes a cylinder horizontally supported at its two ends and uniformally loaded over its entire length. This load consists of the weight per inch of length of the straight cylindrical portion filled with water compressed to the specified test pressure. The wall thickness must be increased when necessary to meet this additional requirement.

(1) The sum of two times the maximum tensile stress in the bottom fibers due to bending (see paragraph (c)(1)(i) of this section), plus the maximum tensile stress in the same fibers due to hydrostatic testing (see paragraph (c)(1)(ii) of this section) may not exceed 80 percent of the minimum yield strength of the steel at this maximum stress.

(i) The following formula must be used to calculate the maximum tensile stress due to bending:

$$S = \frac{Mc}{I}$$

where:

S = tensile stress in pounds per square inch,
M = bending moment in inch-pounds $\frac{wL^2}{8}$;
I = moment of inertia—0.04909 $(D^4 - d^4)$ in inches fourth,
c = radius $\frac{D}{2}$ of cylinders in inches,
w = weight per inch of cylinder filled with water,
L = length of cylinder in inches,
D = outside diameter in inches,
d = inside diameter in inches.

(ii) The following formula must be used to calculate the maximum longitudinal tensile stress due to hydrostatic test pressure:

$$S = \frac{A_1 P}{A_2}$$

where:

S = tensile stress in pounds per square inch,
A_1 = internal area in cross section of cylinder in square inches,
P = hydrostatic test pressure in pounds per square inch,
A_2 = area of metal in cross section of cylinder in square inches.

§ 178.45-8 Heat treatment. (a) Each completed cylinder must be uniformly and properly heat treated prior to testing, as follows:

(1) Each cylinder must be heated and held at the proper temperature for at least one hour per inch of thickness based on the maximum thickness of the cylinder and then quenched in a suitable liquid medium having a cooling rate not in excess of 80 percent of water. The steel temperature on quenching must be that recommended for the steel analysis, but it must never exceed 1750° F.

(2) After quenching, each cylinder must be reheated to a temperature below the transformation range but not less than 1050° F., and must be held at this temperature for at least one hour per inch of thickness based on the maximum thickness of the cylinder. Each cylinder must then be cooled under conditions recommended for the steel.

§ 178.45-9 Openings. (a) Openings are permitted on heads only.

(b) The size of any centered opening in a head may not exceed one half the outside diameter of the cylinder.

(c) Openings in a head must have ligaments between openings of at least three times the average of their hole diameter. No off-center opening may exceed 2.625 inches in diameter.

(d) All openings must be circular.

(e) All openings must be threaded. Threads must be in compliance with the following:

(1) Each thread must be clean cut, even, without any checks, and to gage.

(2) Taper threads, when used, must be the American Standard Pipe thread (NPT) type and must be in compliance with the requirements of NBS Handbook H-28, Part II, Section VII.

(3) Taper threads conforming to National Gas Taper thread (NGT) standards must be in compliance with the requirements of NBS Handbook H-28, Part II, Sections VII and IX.

(4) Straight threads conforming with National Gas Straight thread (NGS) standards are authorized. These threads must be in compliance with the requirements of NBS Handbook H-28, Part II, Sections VII and IX.

§ 178.45-10 Safety devices and protection for valves, safety devices, and other connections. Safety devices and protection arrangements for valves, safety devices, and other connections must be in compliance with § 173.34(d) of this subchapter. See also § 173.301(f) of this subchapter.

§ 178.45-11 Hydrostatic test. (a) Each cylinder must be tested at an internal pressure by the water jacket method or other suitable method. The testing apparatus must be operated in a manner that will obtain accurate data. Any pressure gage used must permit reading to an accuracy of one percent. Any expansion gage used must permit reading of the total expansion to an accuracy of one percent.

(b) Any internal pressure applied to the cylinder after heat treatment and before the official test may not exceed 90 percent of the test pressure.

(c) The pressure must be maintained sufficiently long to assure complete expansion of the cylinder. In no case may the pressure be held less than 30 seconds.

(d) If, due to failure of the test apparatus, the required test pressure cannot be maintained, the test must be repeated at a pressure increased by 10 percent or 100 p.s.i., whichever is lower or, the cylinder must be reheat treated.

(e) Permanent volumetric expansion of the cylinder may not exceed 10 percent of its total volumetric expansion at the required test pressure.

(f) Each cylinder must be tested to at least 5/3 times its service pressure.

§ 178.45-12 Ultrasonic examination. After the hydrostatic test, the cylindrical section of each vessel must be examined in accordance with ASTM Standard A-388-67 using the angle beam technique. The equipment used must be calibrated to detect a notch equal to five percent of the design minimum wall thickness. Any discontinuity indication greater than that produced by the five percent notch shall be cause for rejection of the cylinder unless the discontinuity is repaired within the requirements of this specification.

§ 178.45-13 Basic requirements for tension and Charpy impact tests. (a) When the cylinders are heat treated in a batch furnace, two tension specimens and three Charpy impact specimens must be tested from one of the cylinders or a test ring from each batch. The lot size represented by these tests may not exceed 200 cylinders.

(b) When the cylinders are heat treated in a continuous furnace, two tension specimens and three Charpy impact specimens must be tested from one of the cylinders or a test ring from each four hours or less of production. However, in no case may a test lot based on this production period exceed 200 cylinders.

(c) Each specimen for the tension and Charpy impact tests must be taken from the side wall of a cylinder or from a ring which has been heat treated with the finished cylinders of which the specimens must be representative. The axis of the specimens must be parallel to the axis of the cylinder. Each cylinder or ring specimen for test must be of the same diameter, thickness, and metal as the finished cylinders they represent. A test ring must be at least 24 inches long with ends covered during the heat treatment process so as to simulate the heat treatment process of the finished cylinders it represents.

(d) A test cylinder or test ring need represent only one of the heats in a furnace batch provided the other heats in the batch have previously been tested and have passed the tests and that such tests do not represent more than 200 cylinders from any one heat.

(e) The test results must conform to the requirements specified in §§178.45-14 and 178.45-15.

(f) When the test results do not conform to the requirements specified, the cylinders represented by the tests may be reheat treated and the tests repeated. Paragraph (e) of this section applies to any retesting.

§ 178.45-14 Basic conditions for acceptable physical testing. (a) The following criteria must be followed to obtain acceptable physical test results:

(1) Each tension specimen must have a gage length of two inches with a width not exceeding one and one-half inches. Except for the grip ends, the specimen may not be flattened. The grip ends may be flattened to within one inch of each end of the reduced section.

(2) A specimen may not be heated after heat treatment specified in §178.45-8.

For explanation of abbreviations and reference marks, see last page of this tariff.

(3) The yield strength in tension must be the stress corresponding to a permanent strain of 0.2 percent of the gage length.

(i) This yield strength must be determined by the "offset" method or the "extension under load" method described in ASTM Standard E8–78.

(ii) For the "extension under load" method, the total strain (or extension under load) corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gage length under appropriate load and adding thereto 0.2 percent of the gage length. Elastic extension calculations must be based on an elastic modulus of 30,000,000. However, when the degree of accuracy of this method is questionable the entire stress-strain diagram must be plotted and the yield strength determined from the 0.2 percent offset.

(iii) For the purpose of strain measurement, the initial strain must be set with the specimen under a stress of 12,000 p.s.i. and the strain indicator reading set at the calculated corresponding strain.

(iv) The cross-head speed of the testing machine may not exceed ⅛ inch per minute during the determination of yield strength.

(4) Each impact specimen must be Charpy V-notch type size 10 mm x 10 mm taken in accordance with paragraph 11 of ASTM Standard A-333–67. When a reduced size specimen is used, it must be the largest size obtainable.

§ 178.45–15 Acceptable physical test results. (a) Results of physical tests must conform to the following:

(1) The tensile strength may not exceed 155,000 p.s.i.

(2) The elongation must be at least 16 percent for a two-inch gage length.

(3) The Charpy V-notch impact properties for the three impact specimens which must be tested at 0° F. may not be less than the values shown below:

Size of specimen (mm)	Average value for acceptance 3 specimens	Minimum value 1 specimen only of the three
10.0 x 10.0	25.0 ft. lbs.	20.0 ft. lbs.
10.0 x 7.5	21.0 ft. lbs.	17.0 ft. lbs.
10.0 x 5.0	17.0 ft. lbs.	14.0 ft. lbs.

(4) After the final heat treatment, each vessel must be hardness tested on the cylindrical section. The tensile strength equivalent of the hardness number obtained may not be more than 165,000 p.s.i. (R-36). When the result of a hardness test exceeds the maximum permitted, two or more retests may be made; however, the hardness number obtained in each retest may not exceed the maximum permitted.

§ 178.45–16 Rejected cylinders. (a) Reheat treatment is authorized. However, each reheat treated cylinder must subsequently pass all the prescribed tests.

(b) Repair by welding is not authorized.

§ 178.45–17 Markings. (a) Marking must be done by stamping into the metal of the cylinder. All markings must be legible and located on a shoulder.

(b) Required markings are as follows:

(1) "DOT–3T," followed by the service pressure (for example: "DOT–3T1800");

(2) The appropriate serial number;

(3) The registration number of the manufacturer ("M****");

(4) The inspector's official mark near the serial number;

(5) The tare weight in pounds; and

(6) The date of the test (for example "5–72" for May 1972), so placed that dates of subsequent tests may be easily added.

(c) Markings must be at least ½ inch high.

(d) The markings prescribed by paragraphs (b)(1), (2), and (3) of this section must be displayed one immediately below the previous one as follows:

DOT–3T1800
1234
M 6789

(e) No person may mark any cylinder with the specification identification "DOT–3T" unless (1) it was manufactured in compliance with the requirements of this section and (2) its manufacturer has a registration number (M****) from the Office of Hazardous Materials Transportation, Department of Transportation, Washington, D.C. 20590.

§ 178.45–18 Inspector's report. (a) The inspector's report must be retained indefinitely by the manufacturer as long as DOT–3T cylinders are authorized for use by these regulations and a copy must be supplied the purchaser and owner of each cylinder. Upon sale by the original purchaser or owner, the seller must furnish the buyer a copy of the report. The manufacturer and owner must keep all reports available for examination upon request by representatives of the Department.

(b) Each report must be legible, and contain at least the following information:

INSPECTION REPORT COVERING THE MANUFACTURE OF SPECIFICATION DOT–3T CYLINDERS

The cylinders covered by this report were manufactured for .....

.....

located at .....

They were manufactured by .....

located at .....

The cylinders are ..... inches in diameter (OD), ...

in length, and have a minimum wall thickness of ..... inches

The calculated stress is ..... p.s.i. under a test pressure

of ..... p.s.i.

The marks stamped into shoulder of the cylinder are:

Specification DOT- .....;

Serial numbers ..... to ..... inclusive,

Inspector's mark .....;

DOT registration number M .....

Tare weight .....;

Test date .....;

Other marks (if any) .....

These cylinders were made by process of .....

.....

The cylinders were heat treated by process of .....

.....

The metal used was identified by the following .....

numbers .....

(heat purchase order)

The metal used was verified as to chemical analysis as shown in the "Record of Chemical Analysis of Metal" attached hereto.

The heat numbers ..... marked on the metal.

(were—were not)

All material was inspected visually and by ultrasonic means and all that was accepted was found free of injurious defects which might significantly affect the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were observed and found satisfactory.

The cylinder walls and outside diameter were measured and the calculated stress for the cylinder design covered herein was verified.

Hydrostatic test, physical tests of the material, and other tests as prescribed in specification DOT–3T were made in the presence of the inspector. All materials, tests results, and cylinders accepted were found to be in compliance with the requirements of that specification and records thereto are attached hereto.

I hereby certify that all these cylinders proved satisfactory in every way and are in compliance with the requirements of Department of Transportation Specification 3T.

§ 178.46 Specification 3AL; seamless cylinders made of definitely prescribed aluminum alloys.

§ 178.46-1 Compliance. Each specification 3AL seamless cylinder must comply with this section.

§ 178.46-2 Size and service pressure. (a) The maximum water capacity is 1000 pounds.
(b) The minimum service pressure is 150 psig (see § 173.300(h) of this subchapter).

§ 178.46-3 Inspection. Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT in accordance with § 173.300a of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT in accordance with § 173.300b of this subchapter.

§ 178.46-4 Duties of the inspector. (a) The inspector shall determine that all materials are in compliance with the requirements of this specification.
(b) The inspector shall verify compliance with the provisions of § 178.46-5(d)(1) by:
(1) Performing or witnessing the performance of the chemical analyses on each melt or cast lot or other unit of starting material; or
(2) Obtaining a certified chemical analysis from the material or cylinder manufacturer for each melt, or cast of material; or
(3) Obtaining a certified check analysis on one cylinder out of each lot of 200 cylinders or less, if a certificate containing data to indicate compliance with the material specification is obtained.
(c) The inspector shall verify ultrasonic inspection of all material by inspection or by obtaining the material producer's certificate of ultrasonic inspection. Ultrasonic inspection must be performed or verified as having been performed in accordance with § 178.46-5(e).
(d) The inspector shall determine that each cylinder complies with this specification by:
(1) Making a complete internal inspection before closing;
(2) Making a complete external inspection;
(3) Verifying that heat treatment was proper;
(4) Selecting the samples for all tests;
(5) Selecting the samples for check analyses performed by other than the material producer;
(6) Witnessing each test;
(7) Verifying that the prescribed minimum thickness was met by measuring or witnessing the measurement of the wall thickness;
(8) Verifying that the identification of material is proper;
(9) Verifying the threads, by gauge;
(10) Reporting volumetric capacity, tare weight, and minumum thickness noted;
(11) Determining that each cylinder is marked in compliance with the specification; and
(12) Furnishing complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.
(e) Prior to initial production of any design or design change, verify that the design qualification tests prescribed in § 178.46-6(f) have been performed with acceptable results.
(f) In this specification, a "lot" means of group of cylinders successively produced having the same:
(1) Size and configuration;
(2) Specified material of construction;
(3) Process of manufacture and heat treatment;
(4) Equipment of manufacture and heat treatment; and
(5) Conditions of time, temperature and atmosphere during heat treatment.

In no case may the lot size exceed 200 cylinders, but any cylinder processed for use in the required destructive physical testing need not be counted as being one of the 200.

§ 178.46-5 Authorized material and identification of material.
(a) Starting stock must be cast stock or traceable to cast stock.
(b) Material with seams, cracks, laminations, or other defects likely to weaken the finished cylinder may not be used.
(c) Material must be identified by a suitable method that will identify the alloy, the aluminum producer's cast number, the solution heat treat batch number and the lot number.
(d) The material must be of uniform quality. Only the following heat treatable aluminum alloys are permitted:

(1) Chemical Composition Limits[1]

Aluminum Association alloy designation No.	Chemical composition (in weight percent)										Other[2]		Al
	Si	Fe	Cu	Mn	Mg	Cr	Zn	Ti	Pb	Bi	Each	Total	
6351	0.7–1.3	0.50	0.10	0.40–0.80	0.40–0.80	.....	0.20	0.20	0.01	0.01	0.05	0.15	Remainder
6061	0.40–0.80	0.70	0.15–0.40	0.15	0.80–1.20	0.04–0.35	0.25	0.15	0.01	0.01	0.05	0.15	Co.

[1] ASTM B 221-76 Standard Specification for Aluminum-Alloy Extruded Bars, Rods, Shapes, and Tubes, Table 1 Chemical Composition Limits except for Pb and Bi. Limits are in percent maximum unless otherwise indicated.
[2] Analysis is regularly made only for the elements for which specific limits are shown, except for unalloyed aluminum. If, however, the presence of other elements is suspected to be, or in the course of routine analysis is indicated to be in excess of specified limits, further analysis is made to determine that these other elements are not in excess of the amount specified. (Aluminum Association Standards and Data—Sixth Edition 1979.)

For explanation of abbreviations and reference marks, see last page of this tariff.

(2) Mechanical Property Limits

Alloy and temper	Tensile strength—PSI		Elongation—percent minimum for 5[1] or 4D[1] size specimen
	Ultimate—minimum	Yield—minimum	
6351-T6	42,000	37,000	14[2]
6061-T6	38,000	35,000	14[2]

[1] "D" represents specimen diameters. When the cylinder wall is greater than 3/16 inch thick, a retest without reheat treatment using the 4D size specimen is authorized if the test using the 2 inch size specimen fails to meet elongation requirements.

[2] When cylinder wall is not over 3/16 inch thick, 10 percent elongation is authorized when using a 2.0 × 8" size test specimen.

(e) All starting stock must be 100 percent ultrasonically inspected, along the length at right angles to the central axis from two positions at 90° to one another. The equipment and continuous scanning procedure must be capable of detecting and rejecting internal defects such as cracks which have an ultrasonic reponse greater than that of a calibration block with a 5/64-inch diameter flat bottomed hole.

(f) Cast stock must have uniform equiaxed grain structure not to exceed 500 microns maximum.

(g) Any starting stock not complying with the above must be rejected.

§ 178.46-6 Manufacture. (a) Cylinder shells must be manufactured by the backward extrusion method and have a cleanliness level adequate to ensure proper inspection.

(b) No fissure or other defect is acceptable that is likely to weaken the finished cylinder below the design strength requirements. A reasonably smooth and uniform surface finish is required. If not originally free from such defects, the surface may be machined or otherwise conditioned to eliminate these defects.

(c) Thickness of the cylinder base may not be less than the prescribed minimum wall thickness of the cylindrical shell. The cylinder base must have a basic torispherical, hemispherical, or ellipsoidal interior base configuration where the dish radius is no greater than 1.2 times the inside diameter of the shell. The knuckle radius may not be less than 12 percent of the inside diameter of the shell. The interior base contour may deviate from the true torispherical, hemispherical or ellipsoidal configuration provided that—

(1) Any areas of deviation are accompanied by an increase in base thickness;

(2) All radii of merging surfaces are equal to or greater than the knuckle radius;

(3) Each design has been qualified by successfully passing the cycling tests in § 178.46-6(f); and

(4) Detailed specifications of the base design are available to the inspector.

(d) For free standing cylinders, the base thickness must be at least two times the minimum wall thickness along the line of contact between the cylinder base and the floor when the cylinders are in the vertical position.

(e) Welding or brazing is prohibited.

(f) Each new design and any significant change to any acceptable design must be qualified for production by testing prototype samples as follows:

(1) Three samples must be subjected to 100,000 pressure reversal cycles between zero and service pressure or 10,000 pressure reversal cycles between zero and test pressure, at a rate not in excess of 10 cycles per minute without failure.

(2) Three samples must be pressurized to destruction and failure must not occur at less than 2.5 times the marked cylinder service pressure. Each cylinder must remain in one piece. Failure must initiate in the cylinder sidewall in a longitudinal direction. Rate of pressurization must not exceed 200 psi per second.

(g) In this specification "significant change" means a 10 percent or greater change in cylinder wall thickness, service pressure, or diameter; a 30 percent or greater change in water capacity or base thickness; any change in material; over 100 percent increase in size of openings; or any change in the number of openings.

§ 178.46-7 Wall thickness. (a) The minimum wall thickness must be such that the wall stress at the minimum specified test pressure will not exceed 80 percent of the minimum yield strength nor exceed 67 percent of the minimum ultimate tensile strength as verified by physical tests in § 178.46-13.

(b) Calculations must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch.
P = prescribed minimum test pressure in pounds per square inch (see § 178.46-11(c)).
D = outside diameter in inches; and
d = inside diameter in inches.

(c) The minimum wall thickness for any cylinder with an outside diameter greater than 5 inches must be 0.125 inch.

§ 178.46-8 Openings. (a) Openings are permitted in heads only.

(b) The size of any centered opening in a head may not exceed one-half the outside diameter of the cylinder.

(c) Other openings are permitted in the head of a cylinder if:

(1) Each opening does not exceed 2.625 inches in diameter, or one-half the outside diameter of the cylinder, whichever is less;

(2) Each opening is separated from each other by a ligament; and

(3) Each ligament which separates two openings must be at least three times the average of the diameters of the two openings.

(d) All openings must be circular.

(e) All openings must be threaded. Threads must comply with the following:

(1) Each thread must be clean cut, even, without checks, and to gauge.

(2) Taper threads, when used, must conform to one of the following:

(i) American Standard Pipe Thread (NPT) type, conforming to the requirements of Federal Standard H-28 (1978), Section 7;

(ii) National Gas Taper Thread (NGT) type, conforming to the requirements of Federal Standard H-28 (1978), Sections 7 and 9; or

(iii) Other taper threads conforming to other standards may be used provided the length is not less than that specified for NPT threads.

(3) Straight threads, when used, must conform to one of the following:

(i) National Gas Straight Thread (NGS) type, conforming to the requirements of Federal Standard H-28, (1978), Sections 7 and 9;

(ii) Unified Thread (UN) type, conforming to the requirements of Federal Standard H-28, (1978), Section 2;

(iii) Controlled Radius Root Thread (UNJ) type, conforming to the requirements of Federal Standard H-28 (1978), Section 4.

(iv) Other straight threads conforming to other recognized standards may be used provided that the requirements in subparagraph (e)(4) of this section are met.

(4) All straight threads must have at least 6 engaged threads, a tight fit, and a factor of safety in shear of at least 10 at the test pressure of the cylinder. Shear stress must be calculated by using the appropriate thread shear area in accordance with Federal Standard H-28 (1978), Appendix A5, Section 3.

§ 178.46-9 Heat treatment. Prior to any test, all cylinders must be subjected to a solution heat treatment and aging treatment appropriate for the aluminum alloy used.

§ 178.46-10 Pressure relief devices and protection for valves, pressure relief devices, and other connections. Pressure relief devices and protection arrangements for valves, pressure relief devices, and other connections must comply with §§ 173.34(d) and 173.301(g) of this subchapter.

§ 178.46-11 Hydrostatic test. (a) Each cylinder must be subjected to an internal test pressure using the water jacket equipment and method or other suitable equipment and method. The testing apparatus must be operated in a manner so as to obtain accurate data. The pressure gauge used must permit reading to an accuracy of one percent. The expansion gauge must permit reading the total expansion to an accuracy of either one percent or 0.1 cubic centimeter.

(b) The test pressure must be maintained for a sufficient period of time to assure complete expansion of the cylinder. In no case may the pressure be held less than 30 seconds. If, due to failure of the test apparatus, the required test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 psi, whichever is lower. If the test apparatus again fails to maintain the test pressure, the cylinder being tested must be rejected. Any internal pressure applied to the cylinder before any official test may not exceed 90 percent of the test pressure.

(c) The minimum test pressure is the greatest of the following:

(1) 450 psi regardless of service pressure;

(2) Two times the service pressure for cylinders having service pressure less than 500 psi; or

(3) Five-thirds times the service pressure for cylinders having a service pressure of at least 500 psi.

(d) Permanent volumetric expansion may not exceed 10 percent of total volumetric expansion at test pressure.

§ 178.46-12 Flattening test. (a) The flattening test must be performed on one cylinder taken at random out of each lot of 200 or less by placing the cylinder between wedge shaped knife edges having a 60° included angle, and rounded in accordance with the following table. The longitudinal axis of the cylinder must be at an angle 90° to the knife edges during the test.

Cylinder wall thickness in inches	Radius in inches
Under .150	500
.150 to .249	875
.250 to .349	1 500
.350 to .449	2 125
.450 to .549	2 750
.550 to .649	3 500
.650 to .749	4.125

(b) An alternate bend test in accordance with ASTM E 290-77 using a mandrel diameter not more than 6 times the wall thickness is authorized to qualify lots that fail the flattening test of this section without reheat treatment. If used, this test must be performed on two samples from one cylinder taken at random out of each lot of 200 cylinders or less.

(c) Each test cylinder must withstand flattening to nine times the wall thickness without cracking. When the alternate bend test is used, the test specimens shall remain uncracked when bent inward around a mandrel in the direction of curvature of the cylinder wall until the interior edges are at a distance apart not greater than the diameter of the mandrel.

§ 178.46-13 Mechanical properties test. (a) Two test specimens cut from one cylinder representing each lot of 200 cylinders or less must be tested. The results of the test must conform to at least the minimum acceptable mechanical property limits for aluminum alloys as specified in § 178.46-5(d)(2).

(b) Specimens must be 4D bar or gauge length 2 inches with width not over 1½ inch taken in the direction of extrusion approximately 180° from each other; *provided* that gauge length at least 24 times thickness with width not over 6 times thickness is authorized, when cylinder wall is not over ¾ inch thick. The specimen, exclusive of grip ends, may not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When the size of the cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold by pressure only, not by blows. When such specimens are used, the inspector's report must show that the specimens were so taken and prepared. Heating of specimens for any purpose is forbidden.

(c) The yield strength in tension must be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength must be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard B-557-79.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations must be based on an elastic modulus of 10,000,000 psi. In the event of controversy, the entire stress-strain diagram must be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain must be set while the specimen is under a stress of 6,000 psi, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine may not exceed ⅛ inch per minute during yield strength determination.

§ 178.46-14 Rejected cylinder. Reheat treatment of rejected cylinders is authorized one time; subsequent thereto, cylinders must pass all prescribed tests to be acceptable.

§ 178.46-15 Marking. (a) Each cylinder must be plainly and permanently marked, by stamping on the cylinder shoulder, top head, or neck, in the following order:

(1) The specification marking "DOT 3AL" must appear first on the cylinder followed immediately by the service pressure (for example: DOT-3AL 1800).

(2) The serial number and an identifying symbol or letters appear next; location of the number to be just below or immediately following the DOT mark; location of the symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT. No duplication is authorized.

Examples:
DOT-3AL 1800
1234
XY

or, DOT-3AL 1800-1234-XY

(3) Inspectors official mark, near serial number, date of test (such as 5-81 for May 1981), so placed that dates of subsequent tests can be easily added.

(4) Marks must be at least ¼ inch high if space permits.

(b) Other marks are authorized provided they are made in low stress areas other than the side wall and are not of a size and depth that will create harmful stress concentrations. Such marks may not conflict with any DOT required markings.

§ 178.46-16 Inspector's report. Required to be clear, legible, and in the following form:

These cylinders were made by process of .....
.....
.....
The cylinders were heat treated by the process of .....
(alloy and temper designation).

The material used was verified as to chemical analysis and record thereof is attached hereto.

All material and each cylinder were inspected, all that were accepted were found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was at least equal to the minimum design thickness. The outside diameter was determined to be ..... inches.

The wall stress was calculated to be ..... pounds per square inch under an internal pressure of ..... pounds per square inch. The required minimum thickness is ..... inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in Specification DOT-3AL were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the Department of Transportation Specification 3AL except as follows:

§ 178.47 Specification 4DS; inside containers, welded stainless steel for aircraft use.

§ 178.47-1 Compliance. (a) Required in all details.

§ 178.47-2 Type, size and service pressure. (a) Type and size, welded stainless steel spheres (two seamless hemispheres) or circumferentially welded cylinders not over 100 pounds water capacity.

(b) Service pressure[1]. At least 500 to not over 900 pounds per square inch.

§ 178.47-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.47-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis; provided, that a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one container out of each lot of 200 or less.

(c) Verify compliance of containers with all requirements including markings; inspect inside before closing; verify heat treatment and welding procedure as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gage; report volumetric capacity and tare weight and minimum thickness of wall noted. Verify that all tests are conducted at temperatures between 60° F. and 90° F.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.47-5 Steel. (a) Types 304, 321 and 347 stainless steel are authorized with proper welding procedure and complying with the following analyses:

	Stainless steels		
	304 (percent)	321 (percent)	347 (percent)
Carbon (maximum)	0.08	0.08	0.08
Manganese (maximum)	2.00	2.00	2.00
Phosphorus (maximum)	.030	.030	.030
Sulfur (maximum)	.030	.030	.030
Silicon (maximum)	.75	.75	.75
Nickel	8.0/11.0	9.0/13.0	9.0/13.0
Chromium	18.0/20.0	17.0/20.0	17.0/20.0
Molybdenum	.....	.....	.....
Titanium	.....	[1]	.....
Columbium	.....	.....	[2]

[1] Titanium shall be not less than 5 × C and not more than 0.8 percent.

[2] Columbium shall be not less than 10 × C and not more than 1.0 percent.

Note 1: A heat of steel made under the above specifications check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances shown in the following table are not exceeded except as approved by the Department.

CHECK ANALYSIS TOLERANCES

Element	Limit or maximum specified (percent)	Tolerance (percent over the maximum limit or under the minimum limit	
		Under minimum limit	Over maximum limit
Carbon	To 0.15 incl.	0.01	0.01
	Over 1.15 to 2.50 incl.	0.05	0.05
Manganese	All ranges	.....	0.01
Phosphorus[1]	All ranges	.....	0.01
Sulphur	All ranges	0.05	0.05
Silicon	Over 0.30 to 1.00 incl.	0.05	0.05
Nickel	Over 5.30 to 10.00 incl.	0.10	0.10
	Over 10.00 to 14.00 incl.	0.15	0.15
Chromium	Over 15.00 to 20.00 incl.	0.20	0.20
Titanium	All ranges	0.05	0.05
Columbium	All ranges	0.05	0.05

[1] Rephosphorized steels not subject to check analysis for phosphorus.

§ 178.47-6 Identification of material. (a) Required; any suitable method.

§ 178.47-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized. Defects in welded joints shall not exceed the limits specified in § 178.47-16 covering radiographic inspection.

§ 178.47-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect is acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. No abrupt change in wall thickness is permitted. Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

(b) All seams of the sphere or cylinder must be fusion welded. Seams shall be of the butt type and means must be provided for accomplishing complete penetration of the joint.

§ 178.47-9 Attachments. (a) Attachments to the container are authorized by fusion welding provided that such attachments are made of weldable stainless steel in accordance with § 178.47-5.

§ 178.47-10 Wall thickness. (a) The minimum wall thickness shall be such that the wall stress at the minimum specified test pressure shall not be over 60,000 psi. Minimum wall .040 inch for any diameter container.

(b) Calculation for sphere must be made by the formula:

$$S = \frac{PD}{4tE}$$

where:

S = wall stress in pounds per square inch;
P = test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch;
D = outside diameter in inches;
t = minimum wall thickness in inches;
E = 0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat affected zones which zone shall extend a distance of 6 times wall thickness from center of weld);
E = 1.0 (for all other areas).

(c) Calculation for a cylinder must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch;
P = test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch;
D = outside diameter in inches;
d = inside diameter in inches.

§ 178.47-11 Heat treatment. (a) The seamless hemispheres and cylinders may be stress relieved or annealed for forming. Welded container shall be stress relieved at a temperature of 775° F. ± 25° after process treatment and before hydrostatic test.

§ 178.47-12 Openings in container. (a) Each opening in the container must be provided with a fitting, boss, or pad of weldable stainless steel securely attached to the container by fusion welding.

(b) Attachments to a fitting, boss, or pad must be adequate to prevent leakage. Threads must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the container; gaskets required, adequate to prevent leakage.

§ 178.47-13 Safety relief devices. (a) Safety relief devices must be as required by Department of Transportation Regulations (see § 173.34(d)).

[1] The "service pressure" limits the use of the container. It is shown by marks on container, for example DOT-4DS500 indicates the service pressure as 500 pounds per square inch.

§ 178.47-14 Process treatment. (a) Each container shall be hydraulically pressurized in a water jacket to at least 100 percent, but not more than 110 percent, of the test pressure and maintained at this pressure for a minimum of 3 minutes. Total and permanent expansion shall be recorded and included in the inspector's report.

§ 178.47-15 Hydrostatic test. (a) By water-jacket, operated so as to obtain accurate data. Pressure gage must permit reading to an accuracy of 1 percent. Expansion gage must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each container must be tested to at least 2 times service pressure.

(e) Container will then be inspected. Wall thickness lower than that required by § 178.47-10 shall be cause for rejection. Bulges and cracks shall be cause for rejection. Weld joint defects exceeding requirements of § 178.47-16 shall be cause for rejection.

§ 178.47-16 Radiographic inspection. (a) Required on all welded joints which are subjected to internal pressure, except that at the discretion of the disinterested inspector, openings less than 25 percent of the container diameter need not be subjected to radiographic inspection. Evidence of any defects likely to seriously weaken the container shall be cause for rejection.

(b) Radiographic inspection shall be performed subsequent to hydrostatic test.

§ 178.47-17 Burst test. (a) One container taken at random out of 200 or less shall be hydrostatically tested to destruction. Rupture pressure shall be included as part of the inspector's report.

§ 178.47-18 Flattening test. (a) **Flattening test for spheres.** At the weld between parallel steel plates on a press with welded seam at right angles to the plates, test one sphere taken at random out of each lot of 200 or less after hydrostatic test. Any projecting appurtenances may be cut off (by mechanical means only) prior to crushing.

(b) **Flattening test for cylinders.** Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test one cylinder taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.47-19 Acceptable results for flattening and burst tests. (a) Flattening required to 50 percent of the original outside diameter without cracking.

(b) Burst pressure shall be at least 3 times service pressure.

§ 178.47-20 Rejected containers. (a) Repair of welded seams by welding prior to process treatment authorized; subsequent thereto containers must be heat treated and pass all prescribed tests.

§ 178.47-21 Marking. (a) Marking on each container by stamping plainly and permanently only on a permanent attachment or on a metal nameplate permanently secured to the container by means other than soft solder, as follows:

(1) DOT-4DS followed by the service pressure (for example: DOT-4DS900).

(2) A serial number and an identifying symbol (letters) location of a number to be just below the DOT mark; location of symbol to be just below the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized;

Example: DOT-4DS300
1234
XY

(3) Inspector's official mark, near serial number, date of test (such as 8-61 for August 1961) so placed that dates of subsequent tests can be easily added.

§ 178.47-22 Size of marks. (a) Of sufficient size to be legible.

§ 178.47-23 Inspector's report. (a) Required to be clear legible and in the following form:

(Place) .....
(Date) .....

These containers were made by process of .....
.....
.....
The material used was verified as to chemical analysis and record thereof is attached hereto.
The heat numbers .....
(were—were not)
marked on the material.

All material, such as plates and seamless tubing, was inspected and each container was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the container. The processes of manufacture of containers were supervised and found to be efficient and satisfactory.

The container walls were measured and the minimum thickness noted was ..... inch. The outside diameter was determined by a close approximation to be ..... inches. The wall stress was calculated to be ..... pounds per square inch under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests and other tests, as prescribed in specification No. DOT-4DS were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these containers proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4DS except as follows:

§ 178.47-24 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.48 [Reserved]

§ 178.49 [Reserved]

§ 178.50 Specification 4B; welded and brazed steel cylinders.

§ 178.50-1 Compliance. (a) Required in all details.

§ 178.50-2 Type, size, and service pressure. (a) Type and size. Must be welded or brazed type; longitudinal seams must be forge lap-welded or brazed; not over 1,000 pounds water capacity (nominal). Cylinders closed in by spinning process not authorized.

(b) Service pressure:[1] At least 150 lb to not over 500 pounds per square inch.

§ 178.50-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.50-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder, for example, DOT-4B300 indicates the service pressure as 300 pounds per square inch.

§ 178.50-5 Steel. (a) Open-hearth, electric or basic oxygen process steel of uniform quality. Content percent for the following not over: carbon, 0.25; phosphorus, 0.045; sulphur, 0.050.

§ 178.50-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.50-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.50-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18" long must be protected by footrings. Seams must be made as follows:

(1) Circumferential seams: By welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) Longitudinal seams in shells: By forged lap welding, by copper brazing, by copper alloy brazing, or by silver alloy brazing. Copper alloy composition must be: Copper, 95 percent minimum; Silicon, 1.5 percent to 3.85 percent, Manganese, 0.25 percent to 1.10 percent. The melting point of the silver alloy brazing material must be in excess of 1000° F. When brazed, the plate edge must be lapped at least eight times the thickness of plate, laps being held in position, substantially metal to metal, by riveting or electric spot-welding; brazing must be done by using a suitable flux and by placing brazing material on one side of seam and applying heat until this material shows uniformly along the seam of the other side.

(b) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.50-9 Welding or brazing. (a) The attachment to the tops and bottoms only of cylinders by welding or brazing of necklings, footrings, handles, bosses, pads, and valve protection rings is authorized: Provided, That such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

§ 178.50-10 Wall thickness. (a) For outside diameters over 6" the minimum wall thickness shall be 0.090 inch. In any case the minimum wall thickness shall be such that calculated wall stress at minimum test pressure (§ 178.50-14(d)) shall not exceed the following values:

(1) 24,000 pounds per square inch for cylinders without longitudinal seam;

(2) 22,800 pounds per square inch for cylinders having copper brazed or silver alloy brazed longitudinal seam;

(3) 18,000 pounds per square inch for cylinders having forged lapped welded longitudinal seam.

(b) Calculation must be made by the formula:

$$S = \frac{(P)(1.3D^2 + 0.4d^2)}{(D^2 - d^2)}$$

where

S = wall stress in pounds per square inch,
P = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater,
D = outside diameter in inches,
d = inside diameter in inches.

§ 178.50-11 Heat treatment. (a) Body and heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

§ 178.50-12 Opening in cylinders. (a) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. Fitting, boss, or pad must be of steel suitable for the method of attachment employed, and which need not be identified or verified as to analysis, except that if attachment is by welding, carbon content must not exceed 0.25 percent. If threads are used, they must comply with the following:

Note 1: A brass fitting may be brazed to the steel boss or flange on cylinders used as component parts of hand fire extinguishers.

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

§ 178.50-13 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d), 173.301(g) and 173.124(a)).

§ 178.50-14 Hydrostatic test. (a) By water-jacket or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b), and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (d)(1) of this section must be examined under pressure of at least two times service pressure and show no defect.

§ 178.50-15 Flattening test. (a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.50-16 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 cylinder, or part thereof heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversey, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.50-17 Acceptable results for physical and flattening tests. (a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

Exception. Flattening test is required, without cracking, to 6 times wall thickness when cylinders are made of lap-welded pipe, in such case rings (loop ends) cut from each end of pipe must be tested with weld 45° or less from point of greatest stress, if a ring fails another from the same end of pipe may be tested.

§ 178.50-18 Rejected cylinders. (a) Reheat treatment authorized; subsequently thereto, acceptable cylinders must pass all prescribed tests. Repair of brazed seams by brazing and welded seams by welding is authorized.

§ 178.50-19 Marking. (a) Marking on each cylinder by stamping as follows:

(1) DOT-4B followed by the service pressure (for example, DOT-4B300, etc.).

(2) A serial number and an identifying symbol of the maker. The symbol must be registered with the Director, OHMT. Duplications are not authorized. Lot numbers, not over 500 cylinders in each lot, in place of serial numbers authorized for cylinders not over 2 inches outside diameter or for cylinders with volumetric capacity not exceeding 60 cubic inches.

(3) Inspector's official mark.

(4) Date of test (such as 6–80 for April 1980).

(5) Additional markings are permitted.

(b) *Sequence of marks.* Serial number shall be just below or immediately following the DOT mark; identifying symbol shall be just below or immediately following the serial number; inspector's official mark shall be near the serial number. Date of test shall be so placed that dates of subsequent test can easily be added. Symbol in front of or following the serial number, with space between, or symbol and serial number stamped into welded or brazed-on valve spud directly above the DOT mark located on head of cylinder are also authorized. Other variations in sequence of marks authorized only when necessitated by lack of space.

(c) *Location of markings.* Markings may be stamped plainly and permanently in the following locations on the cylinder:

(1) On shoulders and top heads when they are not less than 0.087-inch thick.

(2) On side wall adjacent to top head for wide walls which are not less than 0.090 inch thick.

(3) On a cylindrical portion of the shell which extends beyond the recessed bottom of the cylinder, constituting an integral and non-pressure part of the cylinder.

(4) On a metal plate attached to the top of the cylinder or permanent part thereof, sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must be at least 1/4-inch thick and must be attached by welding, or by brazing. The brazing rod is to melt at a temperature of 1100 F. Welding or brazing must be along all the edges of the plate.

(5) On the neck, neckring, valve boss, valve protection sleeve, or similar part permanently attached to the top of the cylinder.

(6) On the footring permanently attached to the cylinder, provided the water capacity of the cylinder does not exceed 25 pounds.

§ 178.50-20 Size of marks. (a) At least ¼" high if space permits.

§ 178.50-21 Inspector's report. (a) Required to be clear, legible, and in following form:

(neckrings—footings, etc)
were attached by process of .....
(welding—brazing)
The material used was identified by the following .....
(heat-purchase order)
numbers .....
The material used was verified as to chemical analysis and record thereof is attached hereto.
The heat numbers .....
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was .....
inch. The outside diameter was determined by a close approximation to be .....
inches. The wall stress was calculated to be ..... pounds per square inch
under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-4B were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4B except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) .....

§ 178.50-22 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.51 Specification 4BA; welded or brazed steel cylinders made of definitely prescribed steels.

§ 178.51-1 Compliance. (a) Required in all details.

§ 178.51-2 Type, size, and service pressure. (a) *Type.* Cylinders may be spherical or cylindrical in shape. Closures made by the spinning process are not authorized.

(1) Spherical type cylinders must be made from two seamless hemispheres joined by the welding of one circumferential seam.

(2) Cylindrical type cylinders must be of circumferentially welded or brazed construction.

(b) *Size.* The capacity of the cylinder must be 1,000 pounds water capacity or less.

(c) *Service pressure.* The service pressure must be at least 225 and not over 500 pounds per square inch gauge.

§ 178.51-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with §173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with §173.300(b) of this subchapter.

§ 178.51-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements of this specification. For cylinders made by the billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with specification requirements including: markings; condition of inside; tests; threads; heat treatment. Obtain samples for all tests, and check chemical analyses, witness all tests; report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.51-5 Steel. (a) Designations and limiting chemical compositions of steels authorized by this specification shall be as shown in §178.51-20, Table I.

§ 178.51-6 Identification of material. (a) Required: any suitable method except that plates and billets for hot-drawn cylinders shall be marked with the heat number.

§ 178.51-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.51-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18 inches long must be protected by footrings. Seams must be made as follows: Minimum thickness of heads and bottoms shall be not less than 90 percent of the required thickness of the side wall.

(b) Circumferential seams. By welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and must be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(c) Longitudinal seams in shells: By copper brazing, copper alloy brazing, or by silver alloy brazing. Copper alloy composition must be: Copper 95 percent minimum, Silicon 1.5 percent to 3.85 percent, Manganese 0.25 percent to 1.10 percent. The melting point of the silver alloy brazing material must be in excess of 1000° F. The plate edge must be lapped at least eight times the thickness of plate, laps being held in position, substantially metal to metal, by riveting or by electric spot-welding. Brazing must be done by using a suitable flux and by placing brazing material on one side of seam and applying heat until this material shows uniformly along the seam of the other side.

(1) Strength of longitudinal seam: Copper brazed longitudinal seam must have strength at least 3.2 times the strength of the steel wall.

(d) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.51-9 Welding and brazing. (a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon extent of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

§ 178.51-10 Wall thickness. (a) For outside diameters over 6" the minimum wall thickness shall be 0.078". In any case the minimum wall thickness shall be such that the calculated wall stress at minimum test pressure (§178.51-14) shall not exceed the lesser value of any of the following:

(1) The value shown in table I, § 178.51-20, for the particular material under consideration;

(2) One-half of the minimum tensile strength of the material determined as required in § 178.51-15;

(3) 35,000 pounds per square inch.

(4) Further provided that wall stress for cylinders having copper brazed longitudinal seams must not exceed 95 percent of any of the above values. Measured wall thickness shall not include galvanizing or other protective coating.

(b) Cylinders that are cylindrical in shape must have the wall stress calculated by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch,
P = minimum test pressure prescribed for water jacket test,
D = outside diameter in inches,
d = inside diameter in inches.

(c) Cylinders that are spherical in shape must have the wall stress calculated by the formula:

$$S = \frac{PD}{4tE}$$

where:

S = wall stress in pounds per square inch,
P = minimum test pressure prescribed for water jacket test,
D = outside diameter in inches,
t = minimum wall thickness in inches,
E = 0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat affected zones which zone shall extend a distance of 6 times wall thickness from center line of weld),
E = 1.0 (for all other areas)

(d) For a cylinder with a wall thickness less than 0.100 inch, the ratio of tangential length to outside diameter may not exceed 4.1.

§ 178.51-11 Heat treatment. (a) Each cylinder must be uniformly and properly heat treated prior to test by the applicable method shown in § 178.51-20, table I. Heat treatment must be accomplished after all forming and welding operations, except that when brazed joints are used, heat treatment must follow any forming and welding operations, but may be done before, during or after the brazing operations.

(b) Heat treatment is not required after welding or brazing weldable low carbon parts to attachments of similar material which have been previously welded or brazed to the top or bottom of cylinders and properly heat treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

§ 178.51-12 Openings in cylinders. (a) Any opening must be placed on other than a cylindrical surface.

(b) Each opening in a spherical type cylinder must be provided with a fitting, boss, or pad of weldable steel securely attached to the container by fusion welding.

(c) Each opening in a cylindrical type cylinder must be provided with a fitting, boss, or pad, securely attached to container by brazing or by welding.

(d) If threads are used, they must comply with the following:

(1) Threads must be clean-cut, even, without checks and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

§ 178.51-13 Pressure devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by the Department of Transportation's Regulations that apply. (See §§ 173.34(d), 173.124(a), and 173.301(g) and 173.301(k) of this subchapter).

[1] The welded test plate shall be of one of the heats in the lot of 200 or less which it represents, in the same condition and approximately the same thickness as the cylinder wall except that in no case shall it be of lesser thickness than that required for a one-quarter size Charpy impact specimen. The weld must be made by the same procedure and subjected to the same heat treatment as the major weld on the cylinder.

§ 178.51-14 Hydrostatic test. (a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of the total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b), and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (d)(1) of this section must be examined under pressure of at least two times service pressure and show no defect.

§ 178.51-15 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from one cylinder or part thereof having passed the hydrostatic test, and heat-treated as required, taken at random out of each lot of 200 or less. Physical test for spheres required on 2 specimens cut from flat representative sample plate of the same heat taken at random from the steel used to produce the sphere. This flat steel from which 2 specimens are to be cut must receive the same heat treatment as the spheres themselves. Sample plates to be taken for each lot of 200 or less spheres.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches, provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ¾₁₆ inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method on the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.51-16 Elongation. (a) Physical test specimens must show at least 40 percent for 2-inch gauge length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2-inch specimens and by 1 in other cases for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch to a maximum of four such increments.

§ 178.51-17 Tests of Welds. (Does not apply to brazed seams.)

(a) **Tests of welds. Tensile test.** A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimen must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C-3.

Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(b) **Guided bend test.** A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in § 178.51-17(b). Specimens must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C-3.

(c) **Alternate guided-bend test.** This test may be used and must be as required by CGA Pamphlet C-3. The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld

For explanation of abbreviations and reference marks, see last page of this tariff.

between the lightly scribed gauge lines—a to be, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in §178.51-16(a).

§ 178.51-18 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of brazed seams by brazing and welded seams by welding is authorized.

§ 178.51-19 Marking. (a) Marking on each cylinder stamped as follows:

(1) DOT-4BA followed by the service pressure (for example DOT-4BA240, etc.)

(2) A serial number and an identifying symbol of the maker. The symbol must be registered with the Director, OHMT. Duplications unauthorized. Lot numbers in place of serial numbers authorized for cylinders not over 2 inches outside diameter or for cylinders with volumetric capacity not exceeding 60 cubic inches.

(3) Inspector's official mark.

(4) Date of test (such as 4-50 for April 1950).

(5) Additional markings are permitted.

(b) Sequence of marks. Number shall be just below or immediately following the DOT mark; identifying symbol shall be just below or immediately following the number; inspector's official mark shall be near the serial number. Date of test shall be so placed that dates of subsequent test can easily be added. Symbol in front of or following the number, with space between, or symbol and serial number stamped into welded or brazed-on valve spud directly above the DOT mark located on head of cylinder are also authorized. Other variations in sequence of marks authorized only when necessitated by lack of space.

(c) Location of markings. Markings may be stamped plainly and permanently in the following locations on the cylinder:

(1) On shoulders and top heads not less than 0.087 inch thick.

(2) On side wall adjacent to top head for side walls not less than 0.090 inch thick.

(3) On a cylindrical portion of the shell which extends beyond the recessed bottom of the cylinder constituting an integral and non-pressure part of the cylinder.

(4) On a plate attached to the top of the cylinder or permanent part thereof; sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must be at least 1/16 inch thick and must be attached by welding, or by brazing at a temperature of at least 1100° F. throughout all edges of the plate.

(d) Size of marks. Space permitting, at least ¼ inch high.

(5) On the neck, necking, valve boss, valve protection sleeve, or similar part permanently attached to the top end of the cylinder.

(6) On the footring permanently attached to the cylinder, provided the water capacity of the cylinder does not exceed 25 pounds.

§ 178.51-20 Authorized steel. (a) As specified in Table I of Appendix A to this part.

RECORD OF HYDROSTATIC TESTS ON CYLINDERS

Numbered ..... to ..... inclusive

Size ..... inches outside diameter by ..... inches long

Made by ..... Company

For ..... Company

Serial numbers of cylinders tested arranged numerically	Actual test pressure (pounds per square inch)	Total expansion (cubic centimeters)[1]	Permanent expansion (cubic centimeters)[1]	Percent ratio of permanent expansion to total expansion[1]	Tare weight (pounds)[2]	Volumetric capacity[3]
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....	.....

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) .....

§ 178.51-22 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.52 [Reserved]

§ 178.53 Specification 4D; inside containers, welded steel for aircraft use.

§ 178.53-1 Compliance. (a) Required in all details.

§ 178.53-2 Type, size, and service pressure. (a) Type and size. Welded steel spheres (two seamless hemispheres) or circumferentially welded cylinders (two seamless drawn shells) not over 100 pounds water capacity. Cylinders closed in by spinning process not authorized.

(b) Service pressure.[1] At least 300 to not over 500 pounds per square inch.

§ 178.53-3 Inspection by whom and where. Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, and having a water capacity not exceeding 1,100 cubic inches, inspections may be performed by a competent inspector of the manufacturer. Chemical analyses and tests must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with §173.300(b) of this subchapter.

§ 178.53-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analysis; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.53-5 Steel. (a) Open-hearth or electric steel of uniform and weldable quality. Content percent for the following not over: carbon, 0.25; phosphorus, 0.045; sulfur, 0.050, except that the following steels commercially known as 4130X, Type 304, 316, 321, and 347 stainless steels may be used with proper welding procedure and complying with the following analyses:

	4130X	Percent
Carbon		0.25-0.35
Manganese		0.40-0.60
Phosphorus		0.04 max.
Sulfur		0.05 max.
Silicon		0.15-0.35
Chromium		0.80-1.10
Molybdenum		0.15-0.25
Zirconium		
Nickel		

	Stainless steels			
	304 (percent)	316 (percent)	321 (percent)	347 (percent)
Carbon (maximum)	0.08	0.08	0.08	0.08
Manganese (maximum)	2.00	2.00	2.00	2.00
Phosphorus (maximum)	.030	.045	.030	.030
Sulfur (maximum)	.030	.030	.030	.030
Silicon (maximum)	.75	1.00	.75	.75
Nickel	8.0-11.0	10.0-14.0	9.0-13.0	9.0-13.0
Chromium	18.0-20.0	16.0-18.0	17.0-20.0	17.0-20.0
Molybdenum	.....	2.0-3.0	.....	.....
Titanium	.....	.....	[1]	.....
Columbium	.....	.....	.....	[2]

[1] Titanium shall not be less than 5 × C and not more than 0.60 percent.

[2] Columbium shall not be less than 10 × C and not more than 1.0 percent.

Note 1: A heat of steel made under the above specifications, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances shown in the following table are not exceeded except as approved by the Department.

CHECK ANALYSIS TOLERANCES

Element	Limit or maximum specified (percent)	Tolerance (percent) over the maximum limit or under the minimum limit	
		Under minimum limit	Over maximum limit
Carbon	To 0.15 incl.	0.01	0.01
	Over 0.15 to 0.40 incl.	0.03	0.04
Manganese	To 0.60 incl.	0.03	0.03
	Over 1.15 to 2.50 incl.	0.05	0.05
Phosphorus[1]	All ranges	.....	0.01
Sulphur	All ranges	.....	0.01
Silicon	To 0.30 incl.	0.02	0.03
	Over 0.30 to 1.00 incl.	0.05	0.05
Nickel	Over 5.30 to 10.00 incl.	0.10	0.10
	Over 10.00 to 14.00 incl.	0.15	0.15
Chromium	To 0.90 incl.	0.03	0.03
	Over 0.90 to 2.10 incl.	0.05	0.05
	Over 15.00 to 20.00 incl.	0.20	0.20
Molybdenum	To 0.20 incl.	0.01	0.01
	Over 0.20 to 0.40 incl.	0.02	0.02
	Over 1.75 to 3.00 incl.	0.10	0.10
Titanium	All ranges	0.05	0.05
Columbium	All ranges	0.05	0.05

[1] Rephosphorized steels not subject to check analysis for phosphorus.

§ 178.53-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.53-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.53-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished container appreciably; reasonably smooth and uniform surface finish required.

(b) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.53-9 Wall thickness. (a) The wall stress at minimum test pressure shall not exceed 24,000 pounds per square inch, except where steels commercially known as 4130X, Type 304, 316, 321 and 347 stainless steels are used, stress at test pressures shall not exceed 37,000 pounds per square inch. Minimum wall for any container having a capacity of 1,100 cubic inches or less is 0.04 inch. Minimum wall for any container having a capacity in excess of 1,100 cubic inches is 0.095 inch.

(b) Calculation for a sphere must be made by the formula:

$$S = \frac{PD}{4tE}$$

where:

S = wall stress in pounds per square inch;
P = test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch;
D = outside diameter in inches;
t = minimum wall thickness in inches;
E = 0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat affected zones which zone shall extend a distance of 6 times wall thickness from center of weld);
E = 1.0 (for all other areas).

[1] The "service pressure" limits the use of the container. It is shown by marks on container, for example, DOT-4D300 indicates the service pressure as 300 pounds per square inch.

For explanation of abbreviations and reference marks, see last page of this tariff.

(c) Calculation for a cylinder must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where

S = unit stress in pounds per square inch,
P = test pressure prescribed for water jacket test, (i.e., at least two times service pressure, in pounds per square inch,
D = outside diameter in inches,
d = inside diameter in inches.

§ 178.53-10 Heat treatment. (a) The completed cylinder must be uniformly and properly heat-treated prior to tests.

§ 178.53-11 Openings in container. (a) Each opening in container, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to container by brazing or by welding or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the container; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

§ 178.53-12 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Devices must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d) and 173.301(g)).

§ 178.53-13 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Containers must be tested as follows:

(1) Each container to at least 2 times service pressure, or

(2) One container out of each lot of 200 or less to at least 3 times service pressure. Others must be examined under pressure of 2 times service pressure and show no defects.

§ 178.53-14 Flattening test for spheres and cylinders. (a) **Flattening test for spheres.** Between parallel steel plates on a press with welded seam at right angles to the plates; test one sphere taken at random out of each lot of 200 or less after hydrostatic test. Any projecting appurtenances may be cut off (by mechanical means only) prior to crushing.

(b) **Flattening test for cylinders.** Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test one cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.53-15 Physical test and specimens for spheres and cylinders. (a) **Physical test for spheres.** Required on 2 specimens cut from flat representative sample plate of the same heat taken at random from the steel used to produce the sphere. This flat steel from which the 2 specimens are to be cut must receive the same heat-treatment as the spheres themselves. Sample plates to be taken for each lot of 200 or less spheres.

(b) **Specimens for spheres.** Specimens must be gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when wall of sphere is not over ¾ inch thick.

(c) **Physical test for cylinders.** Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(d) **Specimens for cylinders.** Specimens must be gauge length 8 inches with width not over 1½ inches; or gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ¾ inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. Heating of specimen for any purpose is not authorized.

(e) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(i) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculation shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.53-16 Acceptable results for physical and flattening tests. (a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(b) Elongation at least 20 percent for 2 inch gauge length or 10 percent in other cases; flattening required to 50 percent of the original outside diameter without cracking.

§ 178.53-17 Rejected cylinders. (a) Reheat-treatment authorized; subsequent thereto, acceptable containers must pass all prescribed tests. Repair of welded seams by welding prior to reheat-treatment authorized.

§ 178.53-18 Marking. (a) Marking on each container by stamping plainly and permanently only where the metal is at least 0.09 inch thick, or on a metal name-plate permanently secured to the container by means other than soft solder, or by means that would not reduce the wall thickness, as follows:

(1) DOT-4D followed by the service pressure (for example, DOT-4D300, etc.).

(2) A serial[2] number and an identifying symbol (letters); location[3] of number to be just below or immediately following the DOT mark; location[3] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-4D300 1234 XY — DOT-4D300-1234 XY

(3) Inspector's official mark, near serial number; date of test (such as 8-50 for August 1950), so placed that dates of subsequent tests can be easily added.

§ 178.53-19 Size of marks. (a) Of sufficient size to be legible.

§ 178.53-20 Inspector's report. (a) Required to be clear, legible, and in the following form:

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to the same heat treatment as the finished cylinder.

[2] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[3] Symbol in front of following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

Other marks (if any) .....

These containers were made by process of .....

.....

.....

The material used was identified by the following ..... (heat purchase order)

numbers .....

The material used was verified as to chemical analysis and record thereof is attached hereto

The heat numbers ..... (were - were not)

marked on the material

All material, such as plates, billets and seamless tubing, was inspected and each container was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of containers were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was .....

inch. The outside diameter was determined by a close approximation to be .....

inches. The wall stress was calculated to be ..... pounds per square inch

under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT 4D were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

We do certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4D except as follows:

§ 178.53-21 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

---

§ 178.54 [Reserved]

§ 178.55 Specification 4B240ET; welded and brazed cylinders made from electric resistance welded tubing.

§ 178.55-1 Compliance. (a) Required in all details.

§ 178.55-2 Type, spinning process, size and service pressure. (a) Type. Cylinders must be of brazed type made from electric resistance welded tubing.

(b) Spinning process. Cylinders closed in by spinning process authorized.

(c) Size. The maximum water capacity of this type shall not exceed 12 pounds or 333 cubic inches. The maximum outside diameter of the shell shall be five inches and maximum length of shell 21 inches.

(d) Service pressure.[1] Must be 240 pounds per square inch.

§ 178.55-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.55-4 Duties of inspector. The inspector shall:

(a) Inspect all material and reject any not meeting the requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.55-5 Steel. (a) Open-hearth, basic oxygen, or electric steel of uniform quality. Plain carbon steel content percent for the following not over: Carbon, 0.25; phosphorus, 0.045; sulfur, 0.050. The addition of other elements for alloying effect is prohibited.

§ 178.55-6 Identification of material. (a) Required; any suitable method.

§ 178.55-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.55-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Heads may be attached to shells by lap brazing or may be formed integrally. The thickness of the bottom of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position. Seams must be made as follows:

(b) Circumferential seams: By brazing only. Heads attached to shells by the lap brazing method shall overlap not less than four times wall thickness. Brazing material shall have a melting point of not less than 1000° F. Heads must have a driving fit with the shell unless the shell is crimped, swedged, or curled over the skirt or flange of the head and be thoroughly brazed until complete penetration of the joint by the brazing material is secured. Brazed joints may be repaired by brazing.

(c) Longitudinal seams in shell: Electric resistance welded joints only. No repairs to longitudinal joints permitted.

(d) Welding procedures and operators must be qualified in accordance with GCA Pamphlet C-3.

§ 178.55-9 Welding or brazing. (a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent.

§ 178.55-10 Wall thickness. (a) The wall stress at two times service pressure shall not exceed 18,000 pounds per square inch. Minimum thickness shall be 0.044 inch.

(b) Calculation must be made by the formula:

$$S = \frac{(P)(1.3D^2 + 0.4d^2)}{(D^2 - d^2)}$$

where—

S = wall stress, pounds per square inch.
P = 2 times service pressure.
D = outside diameter, in inches.
d = inside diameter in inches.

§ 178.55-11 Heat treatment. (a) Heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

(b) Cylinders with integral formed heads or bases must be subjected to a normalizing operation. Normalizing and brazing operations may be combined, provided the operation is carried out at a temperature in excess of the upper critical temperature of the steel.

§ 178.55-12 Openings in cylinders. (a) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. Fitting, boss, or pad must be of steel suitable for the method of attachment employed, and which need not be identified or verified as to analysis, except that if attachment is by welding, carbon content must not exceed 0.25 percent. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

§ 178.55-13 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Devices must be as required by the Department of Transportation's regulations that apply (see §§ 173.34(d) and 173.301(g)).

§ 178.55-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b), and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (d)(1) of this section must be examined under pressure of at least two times service pressure and show no defect.

(e) Each 1,000 cylinders or less successively produced each day shall constitute a lot. One cylinder shall be selected from each lot and hydrostatically tested to destruction. If this cylinder bursts below five times the service pressure, then two additional cylinders must be selected and subjected to this test. If either of these cylinders fails by bursting below five times the service pressure, then the entire lot must be rejected. All cylinders constituting a lot shall be of identical size, construction, heat-treatment, finish, and quality.

§ 178.55-15 Flattening test. (a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.55-16 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 cylinder, or part thereof heat-treated as required, taken at random out of each lot of 200 or less in the case of cylinders of capacity greater than 86 cubic inches and out of each lot of 500 or less for cylinders having a capacity of 86 cubic inches or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight speci-

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, DOT-4B240ET indicates the service pressure as 240 pounds per square inch.

mens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.55-17 Acceptable results for physical and flattening tests. (a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test required, without cracking, to six times wall thickness with weld 90° from direction of applied load. Two rings cut from the ends of length of pipe used in production of a lot may be used for flattening test provided the rings accompany the lot which they represent in all thermal processing operations. At least one of the rings must pass the flattening test.

§ 178.55-18 Leakage test. (a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾" in diameter, including the closure, for at least 1 minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See §178.55-19(a)(1).)

Note 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

Note 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

Note 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable around the point of closure, and so as to use the smallest possible volume of air or gas.

§ 178.55-19 Rejected cylinders. (a) Repairs authorized. Leakers must be rejected, except that:

(1) Spun cylinders rejected under the provisions of § 178.55-18 may be removed from the spun cylinder category by drilling to remove defective material, tapping, and plugging.

(2) Brazed joints may be rebrazed.

(3) Subsequent to the operations noted above in subparagraphs (1) and (2) of this paragraph, acceptable cylinders must pass all prescribed tests.

§ 178.55-20 Marking. (a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, neck or valve protection collar which is permanently attached to the cylinders and forming an integral part thereof, provided that cylinders not less than 0.090 inches thick may be stamped on the side wall adjacent to top head, as follows:

(1) DOT-4B240ET.

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below or immediately following the DOT mark; location[2] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT 4B240ET 1234 XY — DOT 4B240ET-1234 XY

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 170 cubic inches.

[2] Symbol in front of or following the number with ample space between or symbol and serial number stamped into welded or brazed on valve spud directly above the DOT specification mark located on head of cylinder are also authorized. Other variations in location authorized only when necessitated by lack of space.

(3) Inspector's official mark, near serial number, date of test (such as 5-50 for May 1950), so placed that date of subsequent test can be easily added, and word "SPUN" or "PLUG" near DOT mark when an end closure in the finished cylinder has been welded by the spinning process or affected by plugging.

§ 178.55-21 Size of marks. (a) At least ½" high if space permits.

§ 178.55-22 Inspector's report. (a) Required to be clear, legible, and in following form:

(Place) .....

were attached by process of .....
(welding—brazing)
The material used was identified by the following .....
(heat-purchase order)
numbers .....
The material used was verified as to chemical analysis and record thereof is attached hereto.
The heat numbers .....
(were—were not)
marked on the material.

All material, such as plates, billets and electric resistance welded tubing, was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was .....
inch. The outside diameter was determined by a close approximation to be .....
inches. The wall stress was calculated to be ..... pounds per square inch
under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-4B-ET were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

A certificate of test on the electric resistance tubing has been obtained from the tubing manufacturer. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4B-ET except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) .....

§ 178.55-23 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

---

§ 178.56 Specification 4AA480; welded steel cylinders made of definitely prescribed steels.

§ 178.56-1 Compliance. (a) Required in all details.

§ 178.56-2 Type, size and service pressure. (a) Must be welded type, having not over 1,000 pounds water capacity (nominal). Closures welded by spinning process not permitted.

(b) Service pressure 480 pounds per square inch.

§ 178.56-3 Inspection by whom and where. (a) Inspections and certifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with §173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with §173.300(b) of this subchapter.

§ 178.56-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements of this specification. For cylinders made by the billet piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with specification requirements including markings, condition of inside, tests, threads, heat treatment. Obtain samples for all tests; check chemical analyses; witness all tests; report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.56-5 Steel. (a) The limiting chemical composition of steel authorized by this specification shall be as shown in §178.56-20, Table I.

§ 178.56-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with the heat number.

§ 178.56-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.56-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18 inches long must be protected by footrings. Minimum thickness of heads and bottoms shall be not less than 90 percent of the required thickness of the side wall. Seams must be made as follows:

(b) Circumferential seams: By welding. Brazing is not authorized.

(c) Longitudinal seams: Not permitted.

(d) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.56-9 Welding. (a) The attachment to the tops and bottoms only of cylinders by welding of necklings, footrings, bosses, pads, and valve protection rings is authorized provided that such attachments are made of weldable steel, the carbon content of which does not exceed 0.25 percent.

§ 178.56-10 Wall thickness. (a) For outside diameters over 5 inches the minimum wall thickness shall be 0.078 inch. In any case the minimum wall thickness shall be such that the calculated wall stress at minimum test pressure (§178.56-14) shall not exceed the lesser value of either of the following:

(1) One-half of the minimum tensile strength of the material determined as required in §178.56-15, or

(2) 35,000 pounds per square inch.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{(D^2 - d^2)}$$

where—

S = wall stress, pounds per square inch.
P = test pressure, pounds per square inch.
D = outside diameter, inches.
d = $D - 2t$, where t = minimum wall thickness determined by a suitable method

(c) Cylinders with wall thickness less than 0.100 inch, the ratio of tangential length to outside diameter shall not exceed 4.0.

§ 178.56-11 Heat treatment. (a) Each cylinder must be uniformly and properly heat treated prior to test. Any suitable heat treatment in excess of 1100° F., is authorized, except that liquid quenching is not permitted. Heat treatment must be accomplished after all forming and welding operations.

(b) Heat treatment is not required after welding weldable low carbon parts to attachments of similar material which have been previously welded to the top or bottom of cylinders and properly heat treated, provided such subsequent welding does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

§ 178.56-12 Openings in cylinders. (a) All openings must be in the heads or bases.

(b) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by welding or by threads. If threads are used they must comply with the following:

(1) Threads must be clean-cut, even, without checks and cut to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads having at least 6 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(c) Closure of fitting, boss or pad must be adequate to prevent leakage.

§ 178.56–13 Safety devices and protection for valves, safety devices, and other connections, if applied. (a) Must be as required by the Department of Transportation's Regulations that apply (see §§ 173.34(d), 173.124(a), and 173.301(g)).

§ 178.56–14 Hydrostatic test. (a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading to total expansion to accuracy of either 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for at least 30 seconds or sufficiently longer to assure complete expansion. Any internal pressure applied after heat-treatment and before the official test must not exceed 90 percent of the test pressure. If, due to failure of test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is lower.

(c) Permanent volumetric expansion must not exceed 10 percent of the total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less must be tested as described in paragraphs (a), (b), and (c) of this section, to at least two times service pressure. If a selected cylinder fails, then two additional specimens must be selected at random from the same lot and subjected to the prescribed test. If either of these fails the test, then each cylinder in that lot must be so tested; and

(2) Each cylinder not tested as prescribed in subparagraph (1) of this paragraph must be examined under pressure of at least two times service pressure and must show no defect. A cylinder showing a defect must be rejected unless it may be requalified under § 178.56–18(a).

§ 178.56–15 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from one cylinder having passed the hydrostatic test, or part thereof heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches, provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ½ inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–78.

(2) In using the "extension under load" method, the total strain (or "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.56–16 Elongation. (a) Physical test specimens must show at least 40 percent for 2-inch gauge length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2-inch specimens and by 1 in other cases for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch to a maximum of four such increments.

§ 178.56–17 Tests of welds. (a) Tensile test. A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimens must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C–3. Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(b) Guided bend test. A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in § 178.56–17(a). Specimens must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C–3.

(c) Alternate guided-bend test. This test may be used and must be as required by CGA Pamphlet C–3. The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gage lines—a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in § 178.56–16(a).

§ 178.56–18 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of welded seams by welding is authorized.

§ 178.56–19 Marking. (a) Marking on each cylinder stamped as follows:

(1) DOT–4AA480.

(2) A serial number and an identifying symbol of the maker. The symbol must be registered with the Director, OHMT. Duplications unauthorized.

(3) Inspector's official mark.

(4) Date of test (such as 1–54 for January 1954).

(5) Additional markings are permitted.

(b) Sequence of marks. Number shall be just below or immediately following the DOT mark; identifying symbol shall be just below or immediately following the number; inspector's official mark shall be near the serial number. Date of test shall be so placed that dates of subsequent tests can easily be added. Symbol in front of the number, with space between, or symbol and serial number stamped into welded valve spud directly above the DOT mark located on head of cylinder are also authorized. Other variations in sequence of marks authorized only when necessitated by lack of space.

(c) Location of markings. Markings may be stamped plainly and permanently in the following locations on the cylinder:

(1) On shoulders and top heads not less than 0.087 inch thick.

(2) On neck, valve boss, valve protection sleeve, or similar part permanently attached to top end of cylinder.

(3) On a plate attached to the top of the cylinder or permanent part thereof; sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must be at least ⅛ inch thick and must be attached by welding, or by brazing at a temperature of at least 1100° F., throughout all edges of the plate.

(4) Variations in location of markings authorized only when necessitated by lack of space.

(d) Size of marks. Space permitting, at least ⅜ inch high.

§ 178.56–20 Authorized steel. (a) As specified in Table I of Appendix A to this part.

§ 178.56–21 Inspector's report. (a) Required to be clear, legible and in following form:

---

§ 178.57 Specification 4L; welded cylinders insulated.

§ 178.57-1 Compliance. (a) Required in all details.

§ 178.57-2 Type, size, service pressure and design service temperature. (a) Type and size. Must be fusion welded; not over 1,000 pounds water capacity (nominal). For liquefied hydrogen service, the cylinders must be designed to stand on end, with the axis of the cylindrical portion vertical.

(b) The service pressure shall be at least 40 and not more than 500 pounds per square inch. The service pressure limits the use of the cylinder and is shown by markings on the cylinder. For example, DOT-4L200 indicates the authorized pressure is 200 pounds per square inch.

(c) The design service temperature is the coldest temperature for which a cylinder is suitable. The required design service temperatures for each cryogenic liquid is as follows:

Cryogenic liquid	Design service temperature
Argon	Minus 320°F or colder.
Helium	Minus 452°F or colder.
Hydrogen	Minus 423°F or colder.
Neon	Minus 411°F or colder.
Nitrogen	Minus 320°F or colder.
Oxygen	Minus 320°F or colder.

§ 178.57-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.57-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements of this specification.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance with all specification requirements. Obtain samples for all tests. Obtain samples for check chemical analyses.

where required. Witness all tests. Report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.57-5 Material. (a) Intercontainment vessel (cylinder) Designations and limiting chemical compositions of steel authorized by this specification shall be as shown in § 178.57-21(a), Table I.

(b) Outer jacket. Steel or aluminum may be used subject to the requirements of § 178.57-21(b).

§ 178.57-6 Identification of material. (a) Required; by any suitable method.

§ 178.57-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.57-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. The shell portion must be a reasonably true cylinder.

(b) The heads must be a seamless, concave side to the pressure, hemispherical or ellipsoidal in shape with the major diameter not more than twice the minor diameter. Minimum thickness of heads shall be not less than 90 percent of the required thickness of the sidewall. The heads must be reasonably true to shape, shall have no abrupt shape changes and the skirts must be reasonably true to round.

(c) The surface of the cylinder must be insulated. The insulating material must be fire resistant. The insulation on non-evacuated jackets must be covered with a steel jacket not less than 0.060-inch thick or an aluminum jacket not less than 0.070 inch thick, so constructed that moisture cannot come in contact with the insulating material. If a vacuum is maintained in the insulation space, the evacuated jacket must be designed for a minimum collapsing pressure of 30 psi differential whether made of steel or aluminum. The construction must be such that the total heat transfer from the atmosphere at ambient temperature to the contents of the cylinder will not exceed 0.0005 B.t.u. per hour per Fahrenheit degree differential in temperature per pound of water capacity of the cylinder. For hydrogen cryogenic liquid service, the total heat transfer, with a temperature difference of 520 Fahrenheit degrees, may not exceed that required to vent 30 standard SCF of hydrogen gas per hour.

(d) For a cylinder having a design service temperature colder than minus 320°F, a calculation of the maximum weight of contents must be made and that weight must be marked on the cylinder as prescribed in § 178.57-20(a)(4).

(e) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3. In addition, impact test of the weld shall be performed in accordance with § 178.57-17(d) as part of the qualification of each welding procedure and operator.

§ 178.57-9 Welding. (a) All seams of the cylinder must be fusion welded. Means must be provided for accomplishing complete penetration of the joint. Only butt or jogg'le butt joints for the cylinder seams are authorized. All joints in the cylinder must be in reasonably true alignment.

(b) All attachments to the sidewalls and heads of the cylinder must be by fusion welding and must be of a weldable material complying with the impact requirements of § 178.57-17(d).

(c) For welding the cylinder, each procedure and operator must be qualified in accordance with the sections of CGA Pamphlet C-3 that apply. In addition, impact tests of the weld shall be performed in accordance with § 178.57-17(d) as part of the qualification of each welding procedure and operator.

(d) Brazing, soldering and threading are permitted only for joints not made directly to the cylinder body. Threads must comply with § 178.57-12.

§ 178.57-10 Wall thickness. (a) The minimum wall thickness of the cylinder shall be such that the calculated wall stress at minimum required test pressure shall not exceed the least value of the following:

(1) 45,000 pounds per square inch.

(2) One-half of the minimum tensile strength across the welded seam determined as required in § 178.57-17(a).

(3) One-half of the minimum tensile strength of the base metal determined as required in § 178.57-15.

(4) The yield strength of the base metal determined as required in § 178.57-15.

(5) Further provided that wall stress for cylinders having longitudinal seams must not exceed 85 percent of the above value, whichever applies.

(b) Calculation must be made by the formula:

$$S = \frac{(P)(1.3D^2 + 0.4d^2)}{(D^2 - d^2)}$$

where—

S = wall stress, pounds per square inch.
P = minimum test pressure prescribed for pressure test in pounds per square inch.
D = outside diameter, in inches.
d = inside diameter in inches.

§ 178.57-11 Heat treatment. Not permitted.

§ 178.57-12 Openings in cylinder. (a) Openings permitted in heads only. They must be circular and shall not exceed 3 inches diameter or ½ of the cylinder diameter, whichever is less. Each opening in the cylinder must be provided with a fitting, boss or pad, either integral with, or securely attached to the cylinder body by fusion welding. Attachments to a fitting, boss or pad may be made by welding, brazing, mechanical attachment or threading. Threads must comply with following:

(1) Threads must be clean cut, even, without checks and cut to gauge.

(2) Taper threads to be of a length not less than that specified for NPT.

(3) Straight threads must have at least 4 engaged threads, tight fit and calculated shear strength at least 10 times the test pressure of the cylinder. Gaskets, which prevent leakage and are inert to the hazardous material, are required.

§ 178.57-13 Pressure relief devices and pressure control valves. Each cylinder must be equipped with pressure relief devices and pressure control valves as prescribed in § § 173.34(d) and 173.316 of this subchapter.

§ 178.57-14 Pressure test. (a) Each cylinder before insulating and jacketing must be examined under a pressure of at least 2 times the service pressure, maintained for at least 30 seconds without evidence of leakage, visible distortion or other defect. Pressure gauge must permit reading to accuracy of 1 percent.

§ 178.57-15 Physical test. (a) Determine yield strength, tensile strength, and elongation on 2 specimens selected from material of each heat and in the same condition as that in the completed cylinder.

(b) Specimens must be. Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; or, gauge length at least 24 times thickness with width not over 6 times thickness (authorized when cylinder wall is not over ¾ inch thick). The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic expansion of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on the elastic modulus of the material used. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

$$S = \frac{(P)(1.3D^2 + 0.4d^2)}{(D^2 - d^2)}$$

where—

S = wall stress, pounds per square inch.
P = minimum test pressure prescribed for pressure test in pounds per square inch.
D = outside diameter, in inches.
d = inside diameter in inches.

§ 178.57-16 Acceptable results for physical tests. (a) Physical properties must meet the limits specified in § 178.57-21(a), Table I, for the particular steel in the annealed condition. The specimens must show at least 20 percent elongation for 2-inch gage length except that the percentage may be reduced numerically by 2 for each 7,500 pounds per square inch increment of tensile strength above 100,000 pounds per square inch to a maximum of 5 such increments. Yield strength and tensile strength must meet the requirements of § 178.57-21(a), Table I.

§ 178.57-17 Tests of welds. (a) **Tensile test.** A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test

plate.[1] The specimen must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C–3. Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(b) Guided bend test. A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in § 178.57–17(a) and from any other seam or equivalent welded test plate if the seam is welded by a procedure different from that used for the major seam. Specimens must be taken across the particular seam being tested and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C–3.

(c) Alternate guided-bend test. This test may be used and must be as required by CGA Pamphlet C–3. The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gage lines—a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 100,000 pounds per square inch, as provided in § 178.57–16(a).

(d) Impact tests. One set of three impact test specimens (for each test) shall be prepared and tested for determining the impact properties of the deposited weld metal (1) as part of the qualification of the welding procedure, (2) as part of the qualification of the operators, (3) for each "heat" of welding rod or wire used, and (4) for each 1,000 feet of weld made with the same heat of welding rod or wire.

(1) All impact test specimens shall be of the Charpy type, keyhole or milled U-notch, and shall conform in all respects to Figure 3 of ASTM E–23–60T. Each set of impact specimens shall be taken across the weld and have the notch located in the weld metal. When the cylinder material thickness is 2.5 mm or thicker, impact specimens shall be cut from a cylinder or welded test plate used for the tensile or bend test specimens. The dimension along the axis of the notch shall be reduced to the largest possible of 10 mm, 7.5 mm, 5 mm or 2.5 mm, depending upon cylinder thickness. When the material in the cylinder or welded test plate is not of sufficient thickness to prepare 2.5 mm impact test specimens, 2.5 mm specimens shall be prepared from a welded test plate made from ½ inch thick material meeting the requirements specified in § 178.57–21(a), Table I, and having a carbon analysis of .05 minimum, but not necessarily from one of the heats used in the lot of cylinders. The test piece shall be welded by the same welding procedure as used on the particular cylinder seam being qualified and shall be subjected to the same heat treatment.

(2) Impact test specimens shall be cooled to the design service temperature. The apparatus for testing the specimens must conform to the requirements of ASTM Standard E–23–60T. The test piece, as well as the handling tongs, shall be cooled for a length of time sufficient to reach the service temperature. The temperature of the cooling device shall be maintained within a range of plus or minus 3° F. The specimen shall be quickly transferred from the cooling device to the anvil of the testing machine and broken with a time lapse of not more than six seconds.

(3) The impact properties of each set of impact specimens shall be not less than the values in the following table:

Size of specimen	Minimum impact value required for average of each set of three specimens (ft-lb)	Minimum impact value permitted on one specimen only of a set of three (ft-lb)
10 mm x 10 mm	15	10
10 mm x 7.5 mm	12.5	8.5
10 mm x 5 mm	10	7.0
10 mm x 2.5 mm	5	3.5

(4) When the average value of the three specimens equals or exceeds the minimum value permitted for a single specimen and the value for more than one specimen is below the required average value, or when the value for one specimen is below the minimum value permitted for a single specimen, a retest of three additional specimens shall be made. The value of each of these retest specimens shall equal or exceed the required average value. When an erratic result is caused by a defective specimen, or there is uncertainty in test procedure, a retest is authorized.

§ 178.57–18 Radiographic examination. (a) The techniques and acceptability of radiographic inspection must conform to the standards set forth in CGA Pamphlet C–3.

[1] The welded test plate shall be in the same condition and approximately the same thickness as the cylinder wall and shall be of material from one of the heats used in the lot of cylinders which it represents, except test plates for impact tests shall comply with § 178.57–17(d)(1). The test plate shall be welded by the same welding procedure as used on the particular cylinder seam being qualified and shall be subjected to the same heat treatment.

(b) Cylinders must be examined as follows:

(1) One finished longitudinal seam shall be selected at random from each lot of 100 or less successively produced and be radiographed throughout its entire length. Should the radiographic examination fail to meet the requirements of paragraph (a) of this section, two additional seams of the same lot shall be examined, and if either of these fail to meet the requirements, each cylinder may be examined as outlined above; only those passing are acceptable.

§ 178.57–19 Rejected cylinders. Welds may be repaired by suitable methods of fusion welding; reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.

§ 178.57–20 Marking. (a) Marking required by stamping plainly and permanently on shoulder or top head of jacket or on a permanently attached plate or head protective ring as follows:

(1) DOT–4L followed by the service pressure (for example, DOT–4L200).

(2) ST followed by design service temperature (for example, ST–423 F) on cylinders having a service temperature of colder than minus 320° F. only. Location to be just below the DOT mark.

(3) Serial number and identifying symbol; location of number to be just below or immediately following the service temperature or DOT mark; location of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

(4) Maximum weight of contents, in pounds (for example, Max. Content 51#), on cylinders having a design service temperature colder than minus 320° F. only. Location to be near symbol.

(5) Examples of required markings are:

Design service temperature minus 320° F. or warmer.	Design service temperature colder than minus 320° F.
DOT–4L 150 1234 XY	DOT–4L 150 ST–423F 1234 XY MAX CONTENT 51#

(6) Inspector's official mark, date of test (such as 10–55 for October 1955), near serial number.

(7) Size of markings at least ¼ inch high if space permits.

(8) Special orientation instructions (for example, THIS END UP), if the cylinder is used in an orientation other than vertical with openings at the top of the cylinder.

(9) If the jacket of the cylinder is constructed of aluminum, add "AL" after the service pressure marking. Example: DOT–4L150 AL.

(b) Except for serial number and jacket material designation, each marking prescribed in paragraph (a) of this section must be duplicated on each cylinder by any suitable means.

§ 178.57–21 Authorized materials of construction. (a) Inner containment vessel (cylinder). Electric furnace steel of uniform quality. Chemical analysis must conform to ASTM A–240, Type 304 Stainless Steel. The following chemical analysis and physical properties are authorized:

TABLE II—AUTHORIZED MATERIALS

Design	Chemical analysis—limits in percent
Carbon[1]	0.08 (maximum)
Manganese	2.00 (maximum)
Phosphorus	0.045 (maximum)
Sulphur	0.030 (maximum)
Silicon	1.00 (maximum)
Nickel	8.00–10.50
Chromium	18.00–20.00
Molybdenum	
Titanium	
Columbium	

[1] The carbon analysis shall be reported to the nearest hundredth of one percent.

	Physical properties (annealed)
Tensile strength, p.s.i. (minimum)	75,000
Yield strength, p.s.i. (minimum)	30,000
Elongation in 2 inch (minimum) percent	30.0
Elongation other permissible gage (lengths) percent	35.0

Note 1: A heat of steel made under the above specification is acceptable, even though its check chemical analysis is slightly out of the specified range, if it is satisfactory in all other respects, provided the tolerances shown in the following table are not exceeded.

CHECK ANALYSIS TOLERANCES

Elements	Limit or maximum specified range	Tolerance over the maximum limit or under the minimum limit
Carbon	To 0.030 inclusive	0.005
Manganese	Over 0.030 to 0.20, inclusive	0.01
	To 1.00 inclusive	0.03
	Over 1.00 to 3.00, inclusive	0.04
Phosphorus[1]	To 0.040, inclusive	0.005
	Over 0.040 to 0.20, inclusive	0.010
Sulfur	To 0.040, inclusive	0.005
Silicon	To 1.00, inclusive	0.05
Chromium	Over 15.00 to 20.00, inclusive	0.20
Nickel	Over 5.00 to 10.00, inclusive	0.10
	Over 10.00 to 20.00, inclusive	0.15

[1] Rephosphorized steels not subject to check analysis of the phosphorus.

(b) Outer Jacket. (1) Nonflammable cryogenic liquids. Cylinders intended for use in the transportation of nonflammable cryogenic liquid must have an outer jacket made of steel or aluminum.

(2) Flammable cryogenic liquids. Cylinders intended for use in the transportation of flammable cryogenic liquid must have an outer jacket made of steel.

§ 178.57-22 Inspector's report. (a) This report is required to be clear, legible and in the following form:

(Place) .....

(Date) .....

Steel Gas Cylinders

Manufactured for ..... Company

Location at .....

Manufactured by ..... Company

Location at .....

Consigned to ..... Company

Location at .....

Quantity .....

Size ..... inches outside diameter by ..... inches long

Cylinders were pressure tested at ..... pounds per square inch and found to be satisfactory

Maximum and minimum weight .....

Maximum and minimum volumetric capacity .....

Jacket material .....

Insulation type .....

Marks stamped into the ..... of the cylinder are:
(Location of marking)

Specification DOT .....

Design Service temperature ..... minus ..... °F

Maximum weight of content ..... (pounds)

RECORD OF CHEMICAL ANALYSIS OF STEEL FOR CYLINDERS

Numbered ..... to ..... inclusive.

Size ..... inches outside diameter by ..... inches long

Made by ..... Company

For ..... Company

Test No.	Heat No.	Check analysis No.	Cylinders represented (Serial Nos.)	Chemical analysis C	P	S	Si	Mn	Ni	Cr	Mo	Cu	Al	Zr

Steel was manufactured by ..... Company.

The originals of the certified mill test reports are in the files of the manufacturer.

NOTE: Any omission of analysis by heats, if authorized, must be accounted for by notation hereon reading "The prescribed certificate of the manufacturer of material has been secured, found satisfactory, and placed on file," or by attaching a copy of the certificate.

Chemical analyses were made by .....

(Signed) .....

(Place) .....

(Date) .....

All material was inspected and all that was accepted was found free from seams, cracks, laminations and other injurious defects.

The compliance of cylinders with specification requirements was verified including markings, condition of inside, tests, threads, etc. All cylinders with defects which might prove injurious were rejected. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was .....

inch. The outside diameter was determined by a close approximation to be .....

inches. The wall stress was calculated to be ..... pounds per square inch

under an internal pressure of ..... pounds per square inch.

Pressure tests, tensile tests of material, and other tests as prescribed in specification No. DOT-4L were made in the presence of the inspector and all cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

Each cylinder ..... been equipped with safety devices as follows:
(has—has not)

.....

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4L, except as follows:

§ 178.57-23 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.58 Specification 4DA; inside containers, welded steel for aircraft use.

§ 178.58-1 Compliance. (a) Required in all details.

§ 178.58-2 Type, size, and service pressure. (a) Type and size. Welded steel spheres (two seamless hemispheres) or circumferentially welded cylinders (two seamless drawn shells) not over 100 pounds water capacity.

(b) Service pressure.[1] At least 500 to not over 900 pounds per square inch.

§ 178.58-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.58-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one container out of each lot of 200 or less.

(c) Verify compliance of containers with all requirements including markings; inspect inside before closing; verify heat treatment and welding procedure as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.58-5 Steel. (a) Open-hearth or electric steel of uniform quality. The following chemical analyses are authorized, (see Note 1):

4130	Percent
Carbon	0.28-0.33
Manganese	0.40-0.60
Phosphorus	0.040 max.
Sulfur	0.040 max.
Silicon	0.15-0.35
Chromium	0.80-1.10
Molybdenum	0.15-0.25

Note 1: a heat of steel made under the above specifications, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances shown in the following table are not exceeded except as approved by the Department.

CHECK ANALYSIS TOLERANCES

Element	Limit or maximum specified (percent)	Tolerance (percent over the maximum limit or under the minimum limit	
		Under minimum limit	Over maximum limit
Carbon	Over 0.15 to 0.40 incl.	0.03	0.04
Manganese	To 0.60 incl.	0.03	0.03
Phosphorus[1]	All ranges	.....	0.01
Sulphur	All ranges	.....	0.01
Silicon	To 0.30 incl.	0.02	0.03
	Over 0.30 to 1.00 incl.	0.05	0.05
Chromium	To 0.90 incl.	0.03	0.03
	Over 0.90 to 2.10 incl.	0.05	0.05
Molybdenum	To 0.20 incl.	0.01	0.01
	Over 0.20 to 0.40 incl.	0.02	0.02

[1] Rephosphorized steels not subject to check analysis for phosphorus.

§ 178.58-6 Identification of material. (a) Required; any suitable method except that plates and billets for hot-drawn containers shall be marked with heat number.

§ 178.58-7 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized. Defects in welded joints shall not exceed the limits specified in § 178.58-17 covering radiographic inspection.

§ 178.58-8 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect is acceptable that is likely to weaken the finished container appreciably. A reasonably smooth and uniform surface finish is required. No abrupt change in wall thickness is permitted. Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

(b) All seams of the sphere or cylinders must be fusion welded. Seams shall be of the butt or joggle butt type and means must be provided for accomplishing complete penetration of the joint.

§ 178.58-9 Welding. (a) Attachments to the container are authorized by fusion welding provided that such attachments are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130 steel.

§ 178.58-10 Wall thickness. (a) The minimum wall thickness shall be such that the wall stress at the minimum specified test pressure shall not exceed 67 percent of the minimum tensile strength of the steel as determined from the physical and burst tests required and shall not be over 70,000 psi. Minimum wall .040 inch for any diameter container.

(b) Calculation for a sphere must be made by the formula:

$$S = \frac{PD}{4Et}$$

where:

S = wall stress in pounds per square inch,
P = test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch,
D = outside diameter in inches,
t = minimum wall thickness in inches,
E = 0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat affected zones which zone shall extend a distance of 6 times wall thickness from center of weld); E = 1.0 (for all other areas).

(c) Calculation for a cylinder must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch,
P = test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch,
D = outside diameter in inches,
d = inside diameter in inches.

§ 178.58-11 Heat treatment. (a) The completed containers must be uniformly and properly heat-treated prior to tests. Heat-treatment of containers of the authorized analysis shall be as follows:

(1) All containers must be quenched by oil, or other suitable medium except as provided in subparagraph (4) of this paragraph.

(2) The steel temperature on quenching shall be that recommended for the steel analysis, but in no case shall exceed 1750° F.

(3) The steel shall be tempered at the temperature most suitable for the analysis except that in no case shall the tempering temperature be less than 1000° F.

(4) The steel may be normalized at a temperature of 1650° F. instead of being quenched, and containers so normalized need not be tempered.

(5) Cancelled.

(6) All cylinders, if water quenched or quenched with a liquid producing a cooling rate in excess of 80 percent of the cooling rate of water, must be inspected by the magnetic particle or dye penetrant method to

[1] The "service pressure" limits the use of the container. It is shown by marks on container, for example DOT-4DA500 indicates the service pressure as 500 pounds per square inch.

detect the presence of quenching cracks. Any cylinder found to have a quench crack must be rejected and may not be requalified.

§ 178.58-12 Openings in container. (a) Each opening in the container must be provided with a fitting, boss, or pad of weldable steel securely attached to the container by fusion welding.

(b) Attachments to a fitting, boss, or pad must be adequate to prevent leakage. Threads must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the container, gaskets required, adequate to prevent leakage.

§ 178.58-13 Safety devices. (a) Safety relief devices must be as required by the Department of Transportation's Regulations. (See § 173.34(d)).

§ 178.58-14 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each container must be tested to at least 2 times service pressure.

§ 178.58-15 Burst test. (a) One container taken at random out of 200 or less shall be hydrostatically tested to destruction. Rupture pressure shall be included as part of the inspector's report.

§ 178.58-16 Flattening test. (a) **Flattening test for spheres.** At the weld between parallel steel plates on a press with welded seam at right angles to the plates, test one sphere taken at random out of each lot of 200 or less after hydrostatic test. Any projecting appurtenances may be cut off (by mechanical means only) prior to crushing.

(b) **Flattening tests for cylinders.** Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test one cylinder taken at random out of each lot of 200 or less, after hydrostatic test.

§ 178.58-17 Radiographic inspection. (a) Required on all welded joints which are subjected to internal pressure, except that at the discretion of the disinterested inspector, openings less than 25 percent of the sphere diameter need not be subjected to radiographic inspection. Evidence of any defects likely to seriously weaken the container shall be cause for rejection.

§ 178.58-18 Physical test and specimens for spheres and cylinders. (a) **Physical test for spheres.** Required on 2 specimens cut from flat representative sample plate of the same heat taken at random from the steel used to produce the sphere. This flat steel from which the 2 specimens are to be cut must receive the same heat-treatment as the spheres themselves. Sample plates to be taken for each lot of 200 or less spheres.

(b) **Specimens for spheres.** Specimens must be gauge length 2 inches with width not over 1½ inches: *Provided*, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when wall of sphere is not over ¾ inch thick.

(c) **Physical test for cylinders.** Required on 2 specimens cut from 1 cylinder taken at random out of each lot of 200 or less.

(d) **Specimens for cylinders.** Specimens must be gauge length 8 inches with width not over 1½ inches; or gauge length 2 inches with width not over 1½ inches: *Provided*, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ¾ inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. Heating of specimen for any purpose is not authorized.

(e) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.58-19 Acceptable results for physical, flattening, and burst tests. (a) Elongation at least 20 percent for 2 inch gauge length or 10 percent in other cases.

(b) Flattening required to 50 percent of the original outside diameter without cracking.

(c) Burst pressure shall be at least 3 times service pressure.

§ 178.58-20 Rejected containers. (a) Reheat-treatment authorized; subsequent thereto, acceptable containers must pass all prescribed tests. Repair of welded seams by welding prior to reheat-treatment authorized.

§ 178.58-21 Marking. (a) Marking on each container by stamping plainly and permanently only on a permanent attachment or on a metal nameplate permanently secured to the container by means other than soft solder, as follows:

(1) DOT-4DA followed by the service pressure (for example, DOT-4DA900).

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below or immediately following the DOT mark; location[2] of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-4DA300 1234 XY — DOT-4DA300-1234 XY

(4) Inspector's official mark near serial number; date of test (such as 8-50 for August 1950), so placed that dates of subsequent tests can be easily added.

§ 178.58-22 Size of marks. (a) Of sufficient size to be legible.

§ 178.58-23 Inspector's report. (a) Required to be clear, legible, and in the following form:

(Place) .....

(Date) .....

Gas ..... (spheres/cylinders)

NOTE: When specifications require test for only 1 out of each lot of 200 or less containers, the check on the others must be indicated by a notation hereon reading: "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

(Signed) .....

§ 178.58-24 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.59 Specification 8; steel cylinders with approved porous filling for acetylene.

§ 178.59-1 Compliance. (a) Required in all details.

§ 178.59-2 Type and service pressure. (a) Type. Seamless except that the following is authorized: Longitudinal seam if forge lap welded, attachment of heads by welding or by brazing by dipping process; welded circumferential body seam if cylinder has no longitudinal seam.

(b) Service pressure.[1] 250 pounds per square inch.

§ 178.59-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

(b) Duties of shell inspector:

(1) Inspect all material and reject any not complying with requirements; for cylinders made by billet piercing process, billets to be inspected after nick and cold break.

(2) Require certified chemical analyses of steel used, signed by manufacturer thereof; also verify by check analyses of samples taken from each heat or from 1 out of each lot of 200 or less plates, shells, or tubes used.

(3) Verify compliance of cylinder shells with all shell requirements; inspect inside before closing in both ends; verify heat treatment as proper; obtain all samples for all tests and for check analyses; witness all tests; verify threads by gauge; report volumetric capacity and minimum thickness of wall noted.

(4) Prepare report on manufacture of steel shells in form prescribed in § 178.59-20(a). Furnish one copy to manufacturer and three copies to the company that is to complete the cylinders.

(c) Duties of inspector of completed cylinders: Determine porosity of filling and tare weights; verify compliance of marking with prescribed requirements; obtain necessary copies of steel shell reports prescribed in paragraph (b) of this section; and furnish complete reports required by this specification to the person who has completed the manufacture of the cylinders and, upon request, to the purchaser. The test reports must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.59-4 Steel. (a) Open-hearth, electric or basic oxygen process steel of uniform quality. Content percent for the following not over: carbon, 0.25; phosphorus, 0.045; sulphur, 0.050.

§ 178.59-5 Identification of steel. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.59-6 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.59-7 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required.

(b) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.59-8 Exposed bottom weld. (a) Exposed bottom welds on cylinders over 18" long must be protected by foot rings.

§ 178.59-9 Heat treatment. (a) Body and heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

§ 178.59-10 Openings. (a) Standard taper pipe threads required; length not less than as specified for American Standard pipe threads; tapped to gauge; clean cut, even, and without checks.

[1] Service pressure limits the use of the cylinder to 250 pounds per square inch at 70° F.

§ 178.59-11 Safety devices and protection for valves, safety devices, and other connections. (a) If applied must be as required by the Department of Transportation's regulations that apply. (See §§ 173.34(d) and 173.301(g).)

§ 178.59-12 Hydrostatic test. (a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) One cylinder out of each lot of 200 or less must be hydrostatically tested to at least 750 pounds per square inch. Cylinders not so tested must be examined under pressure of between 500 and 600 pounds per square inch and show no defect. If hydrostatically tested cylinder fails, each cylinder in the lot may be hydrostatically tested and those passing are acceptable.

§ 178.59-13 Leakage test. (a) By interior air or gas pressure not less than the service pressure; leakers must be rejected. Required only for cylinders with bottoms closed in by spinning.

§ 178.59-14 Physical test. (a) Required on 2 specimens cut longitudinally from 1 cylinder or part thereof taken at random out of each lot of 200 or less, after heat treatment.

(b) Specimens must be: Gauge length 8" with width not over 1½"; or, gauge length 2" with width not over 1½": Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ⅜" thick.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

(d) Yield strength shall not exceed 73 percent of tensile strength. Elongation must be at least 40 percent in 2 inches or 20 percent in other cases.

§ 178.59-15 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is authorized.

§ 178.59-16 Porous filling. (a) Cylinders must be filled with a porous material in accordance with the following:

(1) The porous material may not disintegrate or sag when wet with solvent or when subjected to normal service;

(2) The porous filling material shall be uniform in quality and free of voids, except that a well drilled into the filling material beneath the valve is authorized if the well is filled with a material of such type that the functions of the filling material are not impaired;

(3) Overall shrinkage of the filling material is authorized if the total clearance between the cylinder shell and filling material, after solvent has been added, does not exceed ½ of 1 percent of the respective diameter or length, but not to exceed ⅛ inch, measured diametrically and longitudinally;

(4) The clearance may not impair the functions of the filling material;

(5) The installed filling material must meet the requirements of CGA Pamphlet C-12; and

(6) Porosity of filling material may not exceed 80 percent except that filling material with a porosity of up to 92 percent may be used when tested with satisfactory results in accordance with CGA Pamphlet C-12.

(b) When the porosity of each cylinder is not known, a cylinder taken at random from a lot of 200 or less must be tested for porosity. If the test cylinder fails, each cylinder in the lot may be tested individually and those cylinders that pass the test are acceptable.

(c) For filling that is molded and dried before insertion in cylinders, porosity test may be made on sample block taken at random from material to be used.

(d) The porosity of the filling material shall be determined; the amount of solvent at 70° F. for a cylinder:

(1) Having shell volumetric capacity above 20 pounds water capacity (nominal), shall not exceed the following:

Percent porosity of filler	Maximum acetone solvent percent shell capacity by volume
90 to 92	43.4
87 to 90	42.0
83 to 87	40.0
80 to 83	38.6
75 to 80	36.2
70 to 75	33.8
65 to 70	31.4

(2) Having volumetric capacity of 20 pounds or less water capacity (nominal), shall not exceed the following:

Percent porosity of filler	Maximum acetone solvent percent shell capacity by volume
90 to 92	41.8
83 to 90	38.5
80 to 83	37.1
75 to 80	34.8
70 to 75	32.5
65 to 70	30.2

§ 178.59-17 Tare weight. (a) Tare weight referred to in §§178.59-1 to 178.59-21 shall be the combined weight of cylinder proper, porous filling, valve, and solvent, but without removable cap.

§ 178.59-18 Marking. (a) Marking on each cylinder by stamping plainly and permanently on or near the shoulder, top head, neck or valve protection collar which is permanently attached to the cylinder and forming an integral part thereof, as follows:

(1) DOT-8.

(2) A serial number and an identifying symbol (letters); grouped[1] above, below, or immediately following the DOT mark. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-8 1234 XY DOT-8-1234 XY

(3) Date of test (such as 5-50 for May 1950), so placed that dates of subsequent tests can be easily added.

(4) Tare weight of cylinder in pounds and ounces.

(5) Cylinders, not completed, when delivered must each be marked for identification of each lot of 200 or less.

§ 178.59-19 Size of marks. (a) At least ⅛" high for cylinders less than 4" inside diameter and at least ¼" high for larger cylinders.

§ 178.59-20 Inspector's report. (a) Report to cover manufacturer of acetylene shells; required to be clear, legible, and in the following form:

§ 178.59-21 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.60 Specification 8AL; steel cylinders with approved porous filling for acetylene.

§ 178.60-1 Compliance. (a) Required in all details.

§ 178.60-2 Type and service pressure. (a) Type. Seamless except that the following is authorized: Attachment of heads by welding or by brazing by dipping process; welded circumferential body seam. Longitudinal seams not authorized.

(b) Service pressure. 250 pounds per square inch.[1]

[1] Service pressure limits the use of the cylinder to 250 pounds per square inch at 70° F.

§ 178.60-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

(b) Duties of shell inspector. Inspect all material and reject any not complying with requirements; for cylinders made by billet piercing process, billets to be inspected after nick and cold break.

(1) Require certified chemical analyses of steel used, signed by manufacturer thereof; also verify by check analyses of samples taken from each heat or from 1 out of each lot of 200 or less plates, shells, or tubes used.

(2) Verify compliance of cylinder shells with all shell requirements; inspect inside before closing in both ends; verify heat treatment as

proper; obtain all samples for all tests and for check analyses; witness all tests; verify threads by gauge; report volumetric capacity and minimum thickness of wall noted.

(3) Report percentage of each specified alloying element in the steel. Prepare report on manufacture of steel shells in form prescribed in §178.60-24(a). Furnish one copy to manufacturer and three copies to the company that is to complete the cylinders.

(c) Duties of inspector of completed cylinders. Determine porosity of filling and tare weights; verify compliance of marking with prescribed requirements; obtain necessary copies of steel shell reports prescribed in paragraph (b) of this section; and furnish complete test reports required by this specification to the person who has completed the manufacture of the cylinders and, upon request, to the purchaser. The test reports must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.60-4 Authorized steel. (a) As specified in Table I of Appendix A to this part.

§ 178.60-5 Identification of steel. (a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

§ 178.60-6 Defects. (a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 178.60-7 Manufacture. (a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required.

(b) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.60-8 Footrings. (a) Exposed bottom welds on cylinders over 18" long must be protected by footrings.

§ 178.60-9 Welding or brazing. (a) The attachment to the tops or bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protecting rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent.

(b) Heat treatment is not required after welding or brazing weldable low carbon parts to attachments, specified in paragraph (a) of this section, of similar material which have been previously welded or brazed to the top or bottom of cylinders and properly heat treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

§ 178.60-10 Wall thickness; wall stress. (a) The calculated wall stress at 750 pounds per square inch shall not exceed 35,000 pounds per square inch, or one-half of the minimum ultimate strength of the steel as determined in §178.60-16, whichever value is the smaller. Measured wall thickness shall not include galvanizing or other protective coating.

(1) Calculation of wall stress must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:

S = wall stress in pounds per square inch.
P = 750 pounds per square inch (minimum test pressure).
D = outside diameter in inches.
d = inside diameter in inches.

Either D or d must be calculated from the relation D = d + 2t, where t = minimum wall thickness.

(2) Cylinders with wall thickness less than 0.100 inch, the ratio of straight side wall length to outside diameter shall not exceed 3.5.

(3) For cylinders having outside diameter over 5 inches, the minimum wall thickness shall be 0.087 inch.

§ 178.60-11 Heat-treatment. (a) Each cylinder must be uniformly and properly heat treated, prior to tests, by any suitable method in excess of 1100° F. Heat treatment must be accomplished after all forming and welding operations, except that when brazed joints are used, heat treatment must follow any forming and welding operations but may be done before, during, or after the brazing operations. Liquid quenching not authorized.

§ 178.60-12 Openings. (a) Standard taper pipe threads required; length not less than as specified for American Standard pipe threads; tapped to gauge; clean cut, even, and without checks.

§ 178.60-13 Safety devices and protection for valves, safety devices, and other connections. (a) If applied must be as required by the Department of Transportation's regulations that apply. (See §§ 173.34(d) and 173.301(g).)

§ 178.60-14 Hydrostatic test. (a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) One cylinder out of each lot of 200 or less must be hydrostatically tested to at least 750 pounds per square inch. Cylinders not so tested must be examined under pressure of between 500 and 600 pounds per square inch and show no defect. If hydrostatically tested cylinder fails, each cylinder in the lot may be hydrostatically tested and those passing are acceptable.

§ 178.60-15 Leakage test. (a) By interior air or gas pressure not less than the service pressure; leakers must be rejected. Required only for cylinders with bottoms closed in by spinning.

§ 178.60-16 Physical test. (a) Required on 2 specimens cut longitudinally from 1 cylinder or part thereof taken at random out of each lot of 200 or less, after heat treatment.

(b) Specimens must be: Gauge length 8" with width not over 1½"; or, gauge length 2" with width not over 1½"; Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ¾" thick.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.60-17 Elongation. (a) Physical test specimens must show at least 40 percent for 2 inch gauge length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2 inch specimens and 1 in other cases for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch to a maximum of our such increments.

§ 178.60-18 Weld tests. (a) Specimens taken across the circumferentially welded seam must be cut from one cylinder taken at random from each lot of 200 or less cylinders after heat treatment and must pass satisfactorily the following tests:

(1) Tensile test. A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimen must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C-3. Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(2) Guided bend test. A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in §178.60-18(a)(1). Specimens must be taken across the major seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C-3.

(3) Alternate guided-bend test. This test may be used and must be as required by CGA Pamphlet C-3. The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gauge lines—a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in §178.60-17(a).

§ 178.60-19 Rejected cylinders. (a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is authorized.

§ 178.60-20 Porous filling. (a) Cylinders must be filled with a porous material in accordance with the following:

---

[1] The welded test plate shall be of one of the heats in the lot of 200 or less which it represents, in the same condition and approximately the same thickness as the cylinder wall except that in no case shall it be of lesser thickness than that required for a one quarter size Charpy impact specimen. The weld must be made by the same procedure and subjected to the same heat treatment as the major weld on the cylinder.

(1) The porous material may not disintegrate or sag when wet with solvent or when subjected to normal service;
(2) The filling material shall be uniform in quality and free of voids, except that a well drilled into the filling material beneath the valve is authorized if the well is filled with a material of such type that the functions of the filling material are not impaired;
(3) Overall shrinkage of the filling material is authorized if the total clearance between the cylinder shell and filling material, after solvent has been added, does not exceed ½ of 1 percent of the respective diameter or length but not to exceed ⅛ inch, measured diametrically and longitudinally;
(4) The clearance may not impair the functions of the filling material;
(5) The installed filling material must meet the requirements of CGA Pamphlet C-12; and
(6) Porosity of filling material may not exceed 80 percent except that filling material with a porosity of up to 92 percent may be used when tested with satisfactory results in accordance with CGA Pamphlet C-12.

(b) When the porosity of each cylinder is not known, a cylinder taken at random from a lot of 200 or less must be tested for porosity. If the test cylinder fails, each cylinder in the lot may be tested individually and those cylinders that pass the test are acceptable.

(c) For filling that is molded and dried before insertion in cylinders, porosity test may be made on sample block taken at random from material to be used.

(d) The porosity of the filling material shall be determined; the amount of solvent at 70° F. for a cylinder:

(1) Having shell volumetric capacity above 20 pounds water capacity (nominal), shall not exceed the following:

Percent porosity of filler	Maximum acetone solvent percent shell capacity by volume
90 to 92	43 4
87 to 90	42 0
83 to 87	40 0
80 to 83	38 6
75 to 80	36 2
70 to 75	33 8
65 to 70	31.4

(2) Having volumetric capacity of 20 pounds or less water capacity (nominal), shall not exceed the following:

Percent porosity of filler	Maximum acetone solvent percent shell capacity by volume
90 to 92	41 6
83 to 90	38 5
80 to 83	37.1
75 to 80	34 8
70 to 75	32 5
65 to 70	30 2

§ 178.60-21 Tare weight. (a) Tare weight here referred to shall be the combined weight of cylinder proper, porous filling, valve, and solvent, but without removeable cap.

§ 178.60-22 Marking. (a) Marking on each cylinder as follows:
(1) DOT-8AL.
(2) A serial number and an identifying symbol (letters); grouped above, below, or immediately following the DOT mark. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-8AL 1234 XY 1234XY

(3) Date of test (such as 5-50 for May 1950) so placed that dates of subsequent tests can be easily added.
(4) Tare weight of cylinder in pounds and ounces.
(5) Cylinders, not completed, when delivered must each be marked for identification of each lot of 200 or less.

(b) Markings shall be stamped plainly and permanently in locations in accordance with the following:
(1) On shoulders and top heads not less than 0.087 inch thick, or
(2) On neck, valve boss, valve protection sleeve, or similar part permanently attached to the top end of cylinder, or
(3) On a plate of ferrous material attached to the top of the cylinder or permanent part thereof; the plate must be at least 1/16 inch thick, and must be attached by welding, or by brazing at a temperature of at least 1,100° F. throughout all edges of the plate. Sufficient space must be left on the plate to provide for stamping at least four (4) retest dates.

§ 178.60-23 Size of marks. (a) At least ⅛" high for cylinders less than 4" inside diameter and at least ¼" higher for larger cylinders.

§ 178.60-24 Inspector's report. (a) Report to cover manufacture of acetylene shells; required to be clear, legible, and in the following form:

(Place) .....
(Date) .....

Acetylene shells

Manufactured for ..... Company
Location at .....
Manufactured by ..... Company
Location at .....
Consigned to ..... Company
Location at .....
Quantity .....
Size ..... inches outside diameter by ..... inches long
Marks stamped into the shoulder of the cylinder are:
Lot number .....
Other marks (if any) .....
These cylinders were made by process of .....
.....
.....
The ..... permitted in § 178.50-9
(neckrings—footrings)
were attached by process of .....
(welding—brazing)
The material used was identified by the following .....
(heat-purchase order)
numbers .....
The material used was verified as to chemical analysis and record thereof is attached hereto.
The heat numbers ..... (were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was .....
inch. The outside diameter was determined by a close approximation to be .....
inches. The wall stress was calculated to be ..... pounds per square inch
under an internal pressure of ..... pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-8AL were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 8AL except as follows:

Inspector

§ 178.60-25 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

§ 178.61 Specification 4BW; welded steel cylinders made of definitely prescribed steels with electric-arc welded longitudinal seam.

§ 178.61-1 Compliance. (a) Required in all details.

§ 178.61-2 Type, size and service pressure. (a) Must be welded type with longitudinal electric-arc welded seam not over 1000 pounds water capacity (nominal); service pressure at least 225 and not over 500 pounds per square inch gauge. Cylinders closed in by spinning process not authorized.

§ 178.61-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.61-4 Duties of inspector. (a) Inspect all material and reject any not complying with requirements of this specification.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: Provided, that a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with specification requirements including: markings; condition of inside; tests; threads; heat treatment. Obtain samples for all tests, and check chemical analyses, witness all tests; report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

§ 178.61-5 Authorized steel. (a) As specified in Table I of Appendix A to this part.

(b) Heads. Material for heads shall be the same as paragraph (a) of this section or shall be open hearth, electric or basic oxygen carbon steel of uniform quality. Content percent for the following not over: Carbon, 0.25; manganese, 0.60; phosphorus, .045; sulfur, .050.

(1) Heads shall be hemispherical or ellipsoidal in shape with a maximum ratio of 2:1. If low carbon steel is used thickness of such heads shall be determined by using a maximum wall stress of 24,000 psi in formula § 178.61-10(a).

§ 178.61-6 Identification of material. (a) Required; any suitable method.

§ 178.61-7 Defects. (a) Material with seams, cracks, laminations or other injurious defects, not authorized.

§ 178.61-8 Manufacture. (a) By suitable appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface required. Exposed bottom welds on cylinders over 18 inches long must be protected by footrings. Minimum thickness of heads shall be not less than 90 percent of the required thickness of the sidewall. Heads shall be concave to pressure.

(b) Circumferential seams. By electric-arc welding. Joints shall be butt with one member offset (jogg'le butt) or lap with minimum overlap of at least four times nominal sheet thickness.

(c) Longitudinal seams in shells.

(1) Longitudinal electric-arc welded seams shall be of the butt-welded type. Welds must be made by a machine process including automatic feed and welding guidance mechanisms. Longitudinal seams shall have complete joint penetration, and shall be free from undercuts, overlaps or abrupt ridges or valleys. Misalignment of mating butt edges shall not exceed 1/8 of nominal sheet thickness or 1/32 inch whichever is less. All joints with nominal sheet thickness up to and including 1/4 inch shall be tightly butted. When nominal sheet thickness is greater than 1/4 inch, the joint shall be gapped for maximum distance equal to one-half the nominal sheet thickness or 1/32 inch whichever is less. Joint design,

preparation and fit-up shall be such that requirements of § 178.61-8(d) are satisfied.

(2) Maximum joint efficiency shall be 1.0 when each seam is radiographed completely. Maximum joint efficiency shall be 0.90 when one cylinder from each lot of 50 consecutively welded cylinders is spot radiographed. In addition, one out of the first five cylinders welded following a shut down of welding operations exceeding four hours shall be spot radiographed. Spot radiographs, when required, shall be made of a finished welded cylinder and shall include the girth weld for 2 inches in both directions from the intersection of the longitudinal and girth welds and include at least 6 inches of the longitudinal weld. Maximum joint efficiency of 0.75 shall be permissible without radiography.

(d) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.61-9 Welding of attachments. (a) The attachment to the tops and bottoms only of cylinders by welding of neckrings, footrings, handles, bosses, pads and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent.

§ 178.61-10 Wall thickness. (a) For outside diameters over 6 inches the minimum wall thickness shall be 0.078 inch. In any case the minimum wall thickness shall be such that the wall stress calculated by the formula (see Note 1):

$$S = \frac{P(1.3D^2 + 0.4d^2)}{E(D^2 - d^2)}$$

Note 1. In the formula above quoted

S = wall stress in pounds per square inch,
P = service pressure, psi;
D = outside diameter, inches;
d = inside diameter, inches
E = joint efficiency of the longitudinal seam (from § 178.61-8(c)(2))

shall not exceed the lesser value of any of the following:

(1) The value shown in Table I, § 178.61-5(a) for the particular material under consideration.

(2) One-half the minimum tensile strength of the material determined as required in § 178.61-15.

(3) 35,000 pounds per square inch.

(b) For a cylinder with wall thickness less than 0.100 inch, the ratio of tangential length to outside diameter may not exceed 4.1.

§ 178.61-11 Heat treatment. (a) Each cylinder must be uniformly and properly heat treated prior to test by the applicable method shown in § 178.61-5(a), Table I. Heat treatment must be accomplished after all forming and welding operations.

(b) Heat treatment is not required after welding or brazing weldable low carbon parts to attachments of similar material which have been previously welded to the top or bottom of cylinders and properly heat treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

§ 178.61-12 Openings in cylinders. (a) All openings must be in the heads or bases.

(b) Openings in cylinders must be provided with adequate fittings, bosses, or pads, integral with or securely attached to the cylinder by welding.

(c) Threads must comply with the following:

(1) Threads must be clean cut and to gauge.

(2) Taper threads must be of length not less than as specified for American Standard Taper Pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder, gaskets required, adequate to prevent leakage.

(d) Closure of fittings; boss or pads must be adequate to prevent leakage.

§ 178.61-13 Safety relief devices and protection for valves, safety devices and other connections, if applied. (a) Must be as required by the Department of Transportation's Regulations that apply. (See §§ 173.34(d) and 173.301(g).)

§ 178.61-14 Hydrostatic test. (a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit readings to accuracy of one percent. Pressure gauge must permit readings to accuracy of one percent. Expansion gauge must permit readings of total volumetric expansion to accuracy either of one percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of the total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b) and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (d)(1) of this section must be examined under pressure of at least two times service pressure and show no defect.

(e) One finished cylinder selected at random out of each lot of 500 or less successively produced shall be hydrostatically tested to 4 times service pressure without bursting.

§ 178.61-15 Physical test. (a) Specimens must be taken from one cylinder after heat treatment and chosen at random from each lot of 200 or less, as follows:

(1) Body specimen. One specimen must be taken longitudinally from the body section at least 90 degrees away from the weld.

(2) Head specimen. One specimen must be taken from either head on a cylinder when both heads are made of the same material; however—

(i) If the two heads are made of differing materials, a specimen shall be taken from each head; and

(ii) If due to welded attachments on the top head there is insufficient surface from which to take a specimen, it may be taken from a representative head of the same heat treatment as the test cylinder.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches, provided that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ¼ inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimens for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8-78.

(2) In using the "extension under load" method, the total strain (or, "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.61-16 Elongation. (a) Physical test specimens must show at least 40 percent for 2-inch gauge length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2 inch specimens and by one in other cases for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch to a maximum of four increments.

§ 178.61-17 Tests of welds. (a) Tensile test. A specimen shall be cut from one cylinder of each lot of 200 or less. The specimen must be taken across the longitudinal seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C-3. Failure must occur in the parent metal.

(b) Guided bend test. A "root" test specimen shall be cut from the cylinder used for the tensile test specified in § 178.61-17(a). Specimens must be taken across the longitudinal seam and must be prepared and tested in accordance with and must meet the requirements of CGA Pamphlet C-3.

(c) Alternate guided bend test. This test may be used and must be as required by CGA Pamphlet C-3. The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gauge lines a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in § 178.61-16(a).

§ 178.61-18 Radiographic examination. (a) Radiographic inspection must conform to the techniques and acceptability criteria set forth in CGA Pamphlet C-3. When fluoroscopic inspection is used, permanent film records need not be retained.

(b) Should spot radiographic examination fail to meet the requirements of paragraph (a) of this section, two additional welds from the same lot of 50 cylinders or less shall be examined, and if either of these fail to meet the requirements, each cylinder shall be examined as previously outlined, only those passing are acceptable.

§ 178.61-19 Rejected cylinders. (a) Unless otherwise stated, if a sample cylinder or specimen taken from a lot of cylinders fails the prescribed test, then two additional specimens must be selected from the same lot and subjected to the prescribed test. If either of these fail the test then the entire lot must be rejected.

(b) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of welded seams by welding is authorized provided that all defective metal be cut away and joint be rewelded as prescribed for original welded joints.

§ 178.61-20 Marking. (a) Marking on each cylinder stamped as follows:

(1) DOT-4BW followed by the service pressure (for example, DOT-4BW240, etc.).

(2) A serial number and an identifying symbol of the maker. The symbol must be registered with the Director, OHMT; duplications unauthorized. Lot numbers, not over 500 cylinders in each lot, in place of serial numbers authorized for cylinders not over 2 inches outside diameter or for cylinders with volumetric capacity not exceeding 60 cubic inches.

(3) Inspector's official mark.

(4) Date of test (for example, 12-64, for December 1964).

(5) Additional markings are permitted.

(b) Sequence of marks. Serial number shall be just below or immediately following the DOT mark; identifying symbol shall be just below or immediately following the serial number; inspector's official mark shall be near the serial number. Date of test shall be so placed that dates of subsequent test can easily be added. Symbol in front of or following the serial number, with space between, or symbol and serial number stamped into welded or brazed-on valve spud directly above the DOT mark located on head of cylinder are also authorized. Other variations in sequence of marks authorized only when necessitate by lack of space.

(c) Location of markings. Markings may be stamped plainly and permanently in the following locations on the cylinder:

(1) On shoulders and top heads when they are not less than 0.087-inch thick.

(2) On a metal plate attached to the top of the cylinder or permanent part thereof; sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must be at least 1/16-inch thick and must be attached by welding, or by brazing. The brazing rod is to melt at a temperature of 1100 °F. Welding or brazing must be along all the edges of the plate.

(3) On the neck, valve boss, valve protection sleeve, or similar part permanently attached to the top of the cylinder.

(4) On the footring permanently attached to the cylinder, provided the water capacity of the cylinder does not exceed 25 pounds.

(d) Size of marks. Space permitting, at least ¾ inch high.

§ 178.61-21 Inspector's report. (a) Required to be clear, legible and in following form:

(Place) .....
(Date) .....

Steel Gas Cylinders

Manufactured for ..... Company
Location at .....
Manufactured by ..... Company
Location at .....
Consigned to ..... Company
Location at .....
Quantity .....
Size ..... inches outside diameter by ..... inches long
Marks stamped into the shoulder ..... of the cylinder are:
(location of marking)
Specification DOT .....
Serial numbers ..... to ..... inclusive
Inspector's mark .....
Identifying symbol (registered) .....
Test date .....
Tare weights (yes or no) .....
Other marks (if any) .....
These cylinders were made by process of .....
.....
.....
The material used was type ..... authorized in Table I of Spec. 4BW.
The material used was identified by the following ..... (heat purchase order) numbers .....
The material used was verified as to chemical analysis and record thereof is attached hereto.
The heat numbers ..... (were—were not) marked on the material.
All material was inspected and all that was accepted was found free from seams, cracks, laminations and other injurious defects.
Radiography ..... (type and amount)
The compliance of cylinders with specification requirements was verified including markings, condition of inside, tests, threads, etc. All cylinders with defects which might prove injurious were rejected. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.
The cylinder walls were measured and the minimum thickness noted was ..... inch. The outside diameter was determined to be ..... inches. The wall stress was calculated to be ..... pounds per square inch.
Hydrostatic tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-4BW were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.
Each cylinder ..... (has—has not) been equipped with safety devices as follows:
.....
I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4BW except as follows:

RECORD OF HYDROSTATIC TESTS OF CYLINDERS

Numbered ..... to ..... inclusive
Size ..... inches outside diameter by ..... inches long
Made by ..... Company
For ..... Company

Serial numbers of cylinders tested arranged numerically	Actual test pressure (pounds per sq. inch)	Total expansion (cubic centimeters)[1]	Permanent expansion (cubic centimeters)[1]	Permanent ratio of permanent expansion to total expansion[1]	Burst test (pounds per sq. inch)	Tare weight (pounds)[2]	Volumetric capacity[2]

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

For explanation of abbreviations and reference marks, see last page of this tariff.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.
[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) .....

§ 178.61-22 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

---

§ 178.65 Specification 39; non-reusable non-refillable cylinder.

§ 178.65-1 Compliance. Each cylinder must meet the applicable requirements of § 173.24 of this chapter.

§ 178.65-2 Type, size, service pressure, and test pressure. (a) Type: Each cylinder must be of seamless, welded, or brazed construction. Spherical pressure vessels are authorized and covered by references to cylinders in this specification.
(b) Size limitation: Maximum water capacity may not exceed:
(1) 55 pounds (1,526 cubic inches) for a service pressure of 500 p.s.i.g. or less, and
(2) 10 pounds (277 cubic inches) for a service pressure in excess of 500 p.s.i.g.
(c) Service pressure: The marked service pressure may not exceed 80 percent of the test pressure.
(d) Test pressure: The minimum test pressure is the maximum pressure of contents at 130° F. or 180 p.s.i.g. whichever is greater.
(e) The term "pressure of contents" as used in this specification means the total pressure of all the materials to be shipped in the cylinder.

§ 178.65-3 Inspection by whom and where. (a) In the case of cylinders having marked service pressure higher than 900 psig, inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter.
(b) In the case of cylinders having marked service pressures of 900 psig or lower, inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of his subchapter or, in the case of cylinders manufactured in the United States, by a competent inspector of the manufacturer.
(c) Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.65-4 Duties of inspector. (a) The inspector must determine that all material used complies with the requirements of this specification.
(b) The inspector must verify compliance with the requirements of § 178.65-5 by making a chemical analysis of obtaining a certified chemical analysis from the material manufacturer for each heat of material (ladle analysis acceptable). If an analysis is not provided by the material manufacturer, a sample from each coil, sheet, or tube must be analyzed.
(c) The inspector must determine that each cylinder is made and marked in compliance with this specification by:
(1) Complete internal and external inspection (interested inspectors authorized);
(2) Verification of proper heat treatment (if any);
(3) Selection of samples to be tested;
(4) Witnessing all tests; and
(5) By preparation of required report.

§ 178.65-5 Material; steel or aluminum. (a) Steel:
(1) The steel analysis must conform to the following:

	Ladle analysis	Check analysis
Carbon, maximum percent	0.12	0.15
Phosphorus, maximum percent	0.04	0.05
Sulfur, maximum percent	0.05	0.06

(2) For a cylinder made of seamless steel tubing with integrally formed ends, hot drawn, and finished, content percent for the following must not exceed: carbon, 0.55; phosphorus, 0.045; sulfur, 0.050.
(3) For non-heat treated welded steel cylinders, adequately killed deep drawing quality steel is required.
(4) Longitudinal or helical welded cylinders are not authorized for service pressures in excess of 500 p.s.i.g.
(b) Aluminum: Aluminum is not authorized for service pressures in excess of 500 p.s.i.g. The analysis of the aluminum must conform to the Aluminum Association standard for alloys 1060, 1100, 1170, 3003, 5052, 5086, 5154, 6061, and 6063 as specified in its publication entitled "Aluminum Standards and Data" (7th edition dated June 1982).
(c) Material with seams, cracks, laminations, or other injurious defects not permitted.
(d) Material used must be identified by any suitable method.

§ 178.65-6 Manufacture. (a) General manufacturing requirements are as follows:
(1) Dirt and scale must be removed prior to inspection and processing.
(2) The surface finish must be uniform and reasonably smooth.
(3) Inside surfaces must be clean, dry, and free of loose particles.
(4) No defect of any kind is permitted if it is likely to weaken a finished cylinder.
(b) Requirements for seams:
(1) Brazing is not authorized on aluminum cylinders.
(2) Brazing material must have a melting point of not lower than 1,000° F.
(3) Brazed seams must be assembled with proper fit to insure complete penetration of the brazing material throughout the brazed joint.
(4) Minimum width of brazed joints must be at least four times the thickness of the shell wall.
(5) Brazed seams must have design strength equal to or greater than 1.5 times the minimum strength of the shell wall.
(6) Welded seams must be properly aligned and welded by a method that provides clean, uniform joints with adequate penetration.
(7) Welded joints must have strength equal to or greater than the minimum strength of the shell material in the finished cylinder.
(c) Attachments to the cylinder are permitted by any means which will not be detrimental to the integrity of the cylinder. Welding or brazing of attachments to the cylinder must be completed prior to all pressure tests.
(d) Welding procedures and operators must be qualified in accordance with CGA Pamphlet C-3.

§ 178.65-7 Wall thickness. (a) The minimum wall thickness must be such that the wall stress at test pressure does not exceed the yield strength of the materials of the finished cylinder wall.
(b) Calculation of the stress for cylinders must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where:
S = wall stress, in p.s.i.;
P = test pressure,
D = outside diameter, in inches.

(c) Calculation of the stress for spheres must be made by the formula:

$$S = \frac{PD}{4t}$$

where:
S = wall stress, in p.s.i.;
P = test pressure,
D = outside diameter, in inches.

§ 178.65-9 Openings and attachments. (a) Openings and attachments are permitted on heads only.
(b) All openings and their reinforcements must be within an imaginary circle, concentric to the axis of the cylinder. The diameter of the circle may not exceed 80 percent of the outside diameter of the cylinder. The plane of the circle must be parallel to the plane of a circumferential weld and normal to the long axis of the cylinder.
(c) Unless a head has adequate thickness, each opening must be reinforced by a securely attached fitting, boss, pad, collar, or other suitable means.
(d) Material used for welded openings and attachments must be of weldable quality and compatible with the material of the cylinder.

§ 178.65-10 Safety devices. Safety devices must meet the requirements of § 173.34(d) of this chapter.

§ 178.65-11 Pressure tests. (a) Each cylinder must be tested at an internal pressure of at least the test pressure and must be held at that pressure for at least 30 seconds.
(1) The leakage test must be conducted by submersion under water or by some other method that will be equally sensitive.
(2) If the cylinder leaks, evidences visible distortion, or any other defect, while under test, it must be rejected (see § 178.65-13).
(b) One cylinder taken from the beginning of each lot and one from each 1,000 or less successively produced within the lot thereafter, must be hydrostatically tested to destruction. The entire lot must be rejected if (see § 178.65-13):
(1) A failure occurs at a gage pressure less than 2.0 times the test pressure.
(2) A failure initiates in a braze or a weld or the heat affected zone thereof;
(3) A failure is other than in the sidewall of a cylinder longitudinal with its long axis, or
(4) In a sphere, a failure occurs in any opening, reinforcement, or at a point of attachment.
(c) A "lot" is defined as the quantity of cylinders successively produced per production shift (not exceeding 10 hours) having identical size, design, construction, material, heat treatment, finish, and quality.

§ 178.65-12 Flattening tests. (a) One cylinder must be taken from the beginning of production of each lot (as defined above) and subjected to a flattening test.

(1) The flattening test must be made on a cylinder that has been tested at test pressure.

(2) A ring taken from a cylinder may be flattened as an alternative to a test on a complete cylinder. The test ring must not include the heat affected zone or any weld. However, for a sphere, the test ring may include the circumferential weld if it is located at a 45 degree angle to the ring, ± 5 degrees.

(3) The flattening must be between 60 degrees included-angle, wedge shaped knife edges, rounded to a 0.5 inch radius.

(4) Cylinders and test rings must not crack when flattened so that their outer surfaces are not more than six times wall thickness apart when made of steel or not more than ten times wall thickness apart when made of aluminum.

(b) If any cylinder or ring cracks when subjected to the specified flattening test, the lot of cylinders represented by the test must be rejected (see § 178.65-13).

§ 178.65-13 Rejected cylinders. (a) If the cause for rejection of a lot is determinable, and if by test or inspection defective cylinders are eliminated from the lot, the remaining cylinders must be qualified as a new lot under §§ 178.65-11 and 178.65-12.

(b) Repairs to welds are permitted. Following repair, a cylinder must pass the pressure test specified in § 178.65-11(a).

(c) If a cylinder made from seamless steel tubing fails the flattening test described in § 178.65-12, suitable uniform heat treatment must be used on each cylinder in the lot. All prescribed tests must be performed subsequent to this heat treatment.

§ 178.65-14 Marking. (a) The markings required by this section must be durable and waterproof. The requirements of § 173.24(c)(1)(ii) and (iv) of this chapter do not apply to this section.

(b) Required markings are as follows:

(1) DOT-39.

(2) NRC.

(3) The service pressure.

(4) The test pressure.

(5) The registration number (M * * * *) of the manufacturer.

(6) The lot number.

(7) The date of manufacture if the lot number does not establish the date of manufacture.

(8) The following statement: Federal law forbids transportation if refilled—penalty up to $25,000 fine and 5 years imprisonment (49 U.S.C. 1809).

(c) The markings required by paragraph (b)(1) through (5) of this section must be in numbers and letters at least ⅛ inch high and displayed sequentially. For example:

DOT-39 NRC 250 500 M1001.

(d) No person may mark any cylinder with the specification identification "DOT-39" unless (1) it was manufactured in compliance with the requirements of this section and (2) its manufacturer has a registration number (M * * * *) from the Office of Hazardous Materials Transportation, Research and Special Programs Administration, Department of Transportation, Washington, D.C. 20590.

§ 178.65-15 Inspector's report. (a) The inspector's report must be retained by the manufacturer for a period of 3 years and must be available for examination by representatives of the Department.

(b) The report must be legible, and contain at least the following information:

INSPECTION REPORT COVERING THE MANUFACTURE OF SPECIFICATION DOT-39 CYLINDERS OR SPHERES.

The cylinders (spheres) covered by this report were manufactured for _____ located at _____. They were manufactured by _____ located at _____ whose Department of Transportation registration number is M_____. The cylinders are _____ inches in diameter (OD) and _____ inches in length. They have a design test pressure of _____ p.s.i.g. and a marked service pressure of _____ p.s.i.g. Each has an internal volume of _____ cubic inches (nominal).

These containers were made by process of _____.

The metal used was identified by heat or analysis numbers as shown on the "Record of Chemical Analysis of Metal" attached hereto.

All material and each cylinder was inspected. All accepted material was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment (if any) were observed and found satisfactory.

My record of tests and inspection for each lot covered by this report is as follows:

Lot No.	Lot quantity	Lot test		All cylinders	
		Burst pressure[1]	Flattening test[2]	Pressure test[2]	Visual inspection[2]
.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....
.....	.....	.....	.....	.....	.....

[1] Enter the lowest actual failure pressure of all cylinders tested within the lot.
[2] Enter "Pass" or "Fail".

Inspector's name (print) Inspector's signature

....
Date Inspector's employer (company name)

§ 178.68 Specification 4E; welded aluminum cylinders.

§ 178.68-1 Compliance. (a) Required in all details.

§ 178.68-2 Type, size and service pressure. (a) Type and size. Must be constructed of not more than two seamless drawn shells with no more than one circumferential weld. The circumferential weld must not be closer to the point of tangency of the cylindrical portion with the shoulder than 20 times the cylinder wall thickness. Cylinders or shells closed in by spinning process and cylinders with longitudinal seams are not authorized. Authorized for not over 1,000 pounds water capacity (nominal).

(b) Service pressure.[1] At least 225 to not over 500 pounds per square inch.

§ 178.68-3 Inspection by whom and where. (a) Inspections and verifications must be performed by an independent inspection agency approved in writing by the Director, OHMT, in accordance with § 173.300(a) of this subchapter or, in the case of cylinders manufactured in the United States, a competent inspector of the manufacturer. Chemical analyses and tests as specified must be made within the United States unless otherwise approved in writing by the Director, OHMT, in accordance with § 173.300(b) of this subchapter.

§ 178.68-4 Duties of inspector. (a) Inspect all material and reject any material not complying with requirements.

(b) Verify chemical analysis of each lot of material by analysis or by obtaining certified analysis: Provided, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analysis of samples taken from one aluminum cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify properties as proper; obtain samples for all tests and check chemical analysis; witness all tests; verify threads by gauge; report volumetric capacity, tare weight (see report form) and wall thickness as approved.

(d) Furnish complete test reports required by this specification to the maker of the cylinder and, upon request, to the purchaser. The test report must be retained by the inspector for fifteen years from the original test date of the cylinder.

TABLE I—AUTHORIZED MATERIALS

Designation	Chemical analysis—Limits in percent S154[2]
Iron plus silicon	0.45 max.
Copper	0.10 max.
Manganese	0.10 max.
Magnesium	3.1/3.9
Chromium	0.15/0.35
Zinc	0.20 max.
Titanium	0.20 max.
Others, each	0.05 max.
Others, total	0.15 max.
Aluminum	Remainder

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinders, for example DOT-4E240 indicates the service pressure as 240 pounds per square inch.

[2] Analysis shall regularly be made only for the elements specifically mentioned above. If, however, the presence of other elements is indicated in the course of routine analysis, further analysis should be made to determine conformance with the limits specified for other elements.

§ 178.68-5 Aluminum. (a) Shall be of uniform quality. The following chemical analyses are authorized:

§ 178.68-6 Identification of material. (a) Required; any suitable method that will identify the alloy and manufacturer's lot number.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinders, for example DOT-4E240 indicates the service pressure as 240 pounds per square inch.

§ 178.68-7 Defects. (a) Material with seams, cracks, laminations or other injurious defects not authorized.

§ 178.68-8 Manufacture. (a) By best processes and methods; dirt and foreign particles to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required; all welding must be by the gas shielded arc process.

§ 178.68-9 Welding. (a) The attachment to the tops and bottoms only of cylinders by welding of neckrings or flanges, footrings, handles, bosses and pads and valve protection rings is authorized. Provided, That such attachments and the portion of the cylinder to which it is attached are made of weldable aluminum alloys.

§ 178.68-10 Wall thickness. (a) The minimum wall thickness of the cylinder shall be 0.140 inch. In any case, the minimum wall thickness shall be such that calculated wall stress at twice service pressure shall not exceed the lesser value of either of the following:

(1) 20,000 pounds per square inch.

(2) One-half of the minimum tensile strength of the material as required in §178.68-15.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where

S = wall stress in pounds per square inch.
P = minimum test pressure prescribed for water jacket test.
D = outside diameter in inches
d = inside diameter in inches

(c) Minimum thickness of heads and bottoms shall not be less than the minimum required thickness of the side wall.

§ 178.68-11 Opening in cylinder. (a) All openings must be in the heads or bases.

(b) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by welding by insert gas shielded arc process or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean-cut, even, without checks and cut to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(c) Closure of fitting, boss, or pad must be adequate to prevent leakage.

§ 178.68-12 Safety devices and protection for valves, safety devices, and other connections if applied. (a) Must be as required by the Department of Transportation Regulations that (see §§ 173.34(d), 173.124(a)(2), and 173.301(g)).

§ 178.68-13 Hydrostatic test. (a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure of 2 times service pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent over the pressure otherwise specified.

(c) Permanent volumetric expansion must not exceed 12 percent of total volumetric expansion at test pressure.

(d) Cylinders having a calculated wall stress of 18,000 pounds per square inch or less at test pressure may be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested in accordance with paragraphs (a), (b) and (c) of this section.

(2) All cylinders not tested as provided in subparagraph (d)(1) of this section must be examined under pressure of at least two times service pressure and show no defect.

(e) One finished cylinder selected at random out of each lot of 1,000 or less shall be hydrostatically tested to 4 times the service pressure without bursting. Inability to meet this requirement shall result in rejection for the lot.

§ 178.68-14 Flattening test. (a) After hydrostatic testing, a flattening test is required on one section of a cylinder, taken at random out of each lot of 200 or less as follows:

(1) If the weld is not at midlength of the cylinder, the test section must be no less in width than 30 times the cylinder wall thickness. The weld must be in the center of the section. Weld reinforcement must be removed by machining or grinding so that the weld is flush with the exterior of the parent metal. There must be no evidence of cracking in the sample when it is flattened between flat plates to no more than 6 times the wall thickness.

(2) If the weld is at midlength of the cylinder, the test may be made as specified in subparagraph (1) of this paragraph or must be made between wedge shaped knife edges (60° angle) rounded to a ½-inch radius. There must be no evidence of cracking in the sample when it is flattened to no more than 6 times the wall thickness.

§ 178.68-15 Physical test. (a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from one cylinder or part thereof taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or gauge length 2 inches with width not over 1½ inches. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by the "offset" method as prescribed in ASTM Standard E8-78.

(2) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

§ 178.68-16 Acceptable results for physical tests. (a) Elongation at least 7 percent; yield strength not over 80 percent of tensile strength.

§ 178.68-17 Weld tests. (a) Reduced section tensile test. A specimen shall be cut from the cylinder used for the physical tests specified in §178.68-15. Specimen shall be taken across the seam, edges shall be parallel for a distance of approximately 2 inches on either side of the weld. The specimen must be fractured in tension. The apparent breaking stress calculated on the minimum wall thickness must be at least equal to 2 times the stress calculated under §178.68-10(b), and in addition must have an actual breaking stress of at least 30,000 pounds per square inch. Should this specimen fail to meet the requirements, specimens may be taken from 2 additional cylinders from the same lot and tested. If either of the latter specimens fails to meet requirements, the entire lot represented shall be rejected.

(b) Guided bend test. A bend test specimen shall be cut from the cylinder used for the physical tests specified in §178.68-15. Specimen shall be taken across the seam, shall be 1½ inches wide, edges shall be parallel and rounded with a file, and back-up strip, if used, shall be removed by machining. The specimen must be bent to refusal in the guided bend test jig illustrated in paragraph 6.10 of CGA Pamphlet C-3. The root of the weld (inside surface of the cylinder) shall be located away from the ram of the jig. No specimen shall show a crack or other open defect exceeding ⅛ inch in any direction upon completion of the test. Should this specimen fail to meet the requirements, specimens may be taken from each of 2 additional cylinders from the same lot and tested. If either of the latter specimens fail to meet requirements, the entire lot represented shall be rejected.

§ 178.68-18 Rejected cylinders. (a) Repair of welded seams is authorized. Acceptable cylinders must pass all prescribed tests.

§ 178.68-19 Marking. (a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, neck or valve protection collar which may be permanently attached to the cylinder and forming an integral part thereof, as follows:

(1) DOT-4E followed by the service pressure (for example, DOT-4E240).

(2) A serial number and an identifying symbol (letters); location of the number to be just below or immediately following the DOT mark; location of symbol to be just below or immediately following the number. The symbol and numbers must be those of the maker. The symbol must be registered with the Director, OHMT; duplications are not authorized.

Examples: DOT-4E240 1234 XY — DOT-4E240-1234 XY

(3) Inspector's official mark, near serial number, date of test (such as 5-50 for May 1950), so placed that date of subsequent test can be easily added.

(4) Size of marks. Shall be at least ¼ inch high.

§ 178.68-20 Inspector's report. (a) Required to be clear, legible, and in following form:

(Place) .....

(Date) .....

Gas Cylinders

Manufactured for ..... Company

Location at .....

Manufactured by ..... Company
Location at .....
Consigned to ..... Company
Location at .....
Quantity .....
Size ..... inches outside diameter by ..... inches long
Marks stamped into the shoulder of the cylinder are:
Specification DOT .....
Serial numbers ..... to ..... inclusive
Inspector's mark .....
Identifying symbol (registered) .....
Test date .....
Tare weights (yes or no) .....
Other marks (if any) .....
These cylinders were made by process of .....
.....
.....
The ..... permitted in § 178.68-9
(nockings—footings, etc.)
were attached by process of .....
(welding—brazing)
The material used was identified by the following .....
numbers .....
The material used was verified as to chemical analysis and record thereof is attached hereto.
All material, such as plates, billets and seamless tubing was inspected and each cylinder was inspected both before and after closing in the ends, all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.
The cylinder walls were measured and the minimum thickness noted was .....
inch. The outside diameter was determined by a close approximation to be .....
inches. The wall stress was calculated to be ..... pounds per square inch
under an internal pressure of ..... pounds per square inch.
Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. DOT-4E were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.
I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Department of Transportation specification No. 4E except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading: "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) .....

§ 178.68-21 Report retention. The maker of cylinders under this specification must retain the test reports required by this specification for fifteen years from the original test date of the cylinder.

SUBPART D

SPECIFICATIONS FOR METAL BARRELS, DRUMS, KEGS, CASES, TRUNKS AND BOXES

§ 178.80 Specification 5; steel barrels or drums. Removable head containers which will pass all required tests are authorized.

§ 178.80-1 Compliance. (a) Required in all details.

§ 178.80-2 Rated capacity. (a) Rated capacity as marked, see § 178.80-11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.80-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel. Stainless steel, when used

For explanation of abbreviations and reference marks, see last page of this tariff.

must be, except for rolling hoops and chime reinforcement, an austenitic 18 and 8 chrome nickel alloy with carbon content not over 0.08 percent, or other equivalent grades.

§ 178.80-5 Seams. (a) Body seams welded.

§ 178.80-6 Chime reinforcement. (a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 178.80-7 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
		Body sheet	Head sheet	Type[1]	Minimum size (gauge or inch)	Minimum weight (pounds per foot)
5	Straight side	22	22	None		
10	do	20	20	do		
30	do	14	14	do		
30	do	18	18	U	16	
55	do	16	16	U[2]	14	
110	do	14	14	U[2]	12	
30	do	18	18	I-bar	3/8 × 1 1/8	1.25
55	do	16	16	I-bar[3]	3/8 × 1 1/8	1.25
110	do	14	14	I-bar[3]	3/8 × 1 1/8	1.25
30	do	16	16	(1)		
55	do	14	14	(1) (2)		
30	Bilge	14	16	None		
55	do	13	14	do		

[1] Rolling hoops may be of pliable solid rubber, metal or other suitable material provided that equivalent protection to drum integrity is afforded.

[2] Rolled or swedged in hoops.

[3] In addition to the normal rolling hoops, the body of each removable head drum must have a rolled or swedged in hoop the center line of which shall be not more than 3 inches from the top curl.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[4] (inch)	Minimum thickness[4] (inch)
13	0.0897	0.0617
14	0.0747	0.0577
16	0.0598	0.0533
18	0.0478	0.0428
20	0.0359	0.0324
22	0.0299	0.0269

[4] Thickness shall be measured at any point on the sheet not less than ¾ inch from an edge.

§ 178.80-8 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I bar type directly to body of drum in any manner not permitted.

§ 178.80-9 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over 7/64 inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place.

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ½ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.80-10 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.80-11 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footing on drums equipped with footings, or on metal plates securely attached by drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-5.

(2) If the drum is manufactured of stainless steel, the type of steel used in body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of the body indicated first. (For example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.80-12 [Reserved]

§ 178.80-13 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.

(3) Periodic drop and hydrostatic tests are not required when containers fabricated of stainless steel have satisfactorily withstood prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. In instances where manufacturers have suspended production for an interval of 12 months or more, drop and hydrostatic tests must be again conducted as prescribed in subparagraphs (1) and (2) of this paragraph as for original start of production. Samples last tested to be retained until further tests are made or for one year, whichever period is shorter.

§ 178.80-14 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure. Removable head containers need not be tested with heads in place, except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples last tested must be retained until further tests are made or for one year.

---

§ 178.81 Specification 5A; steel barrels or drums. Removable head containers not authorized.

§ 178.81-1 Compliance. (a) Required in all details.

§ 178.81-2 Rated capacity. (a) Rated capacity as marked see § 178.81-11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity, actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.81-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.81-5 Seams. (a) Body seams welded.
(b) Head and chime seams welded or double-seamed.
(c) Flanges for closures welded in place.

§ 178.81-6 Chime reinforcements. (a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 178.81-7 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
		Body sheet	Head sheet	Type[1]	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
19	Straight side	16	16	None		
30	do	16	16	I-bar	3/4 × 1/4	1.25
55	do	14	14	do	1 × 1/4	1.60
110	do	12	12	do	1 × 1/4	1.60
30	Bilge	14	16	None		
55	do	13	14	do		

[1] Rolling hoops may be of pliable solid rubber, metal or other suitable material provided that equivalent protection to drum integrity is afforded.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
12	0.1046	0.0945
13	0.0897	0.0817
14	0.0747	0.0677
16	0.0598	0.0533

[1] Thickness shall be measured at any point on the sheet not less than ½ inch from an edge.

§ 178.81-8 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or welding of the rolling hoops directly to the body of the drum in any manner is not permitted.

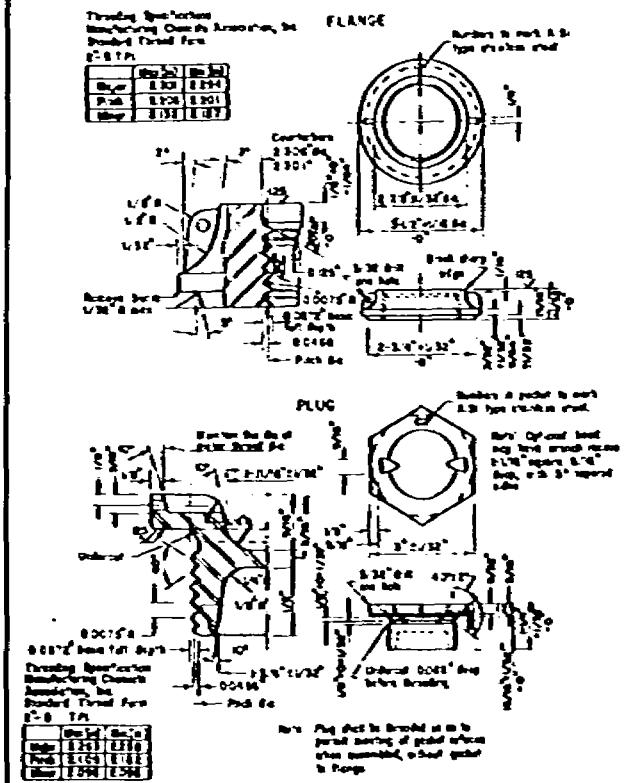
§ 178.81-9 Closures. (a) Adequate to prevent leakage; gasket required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

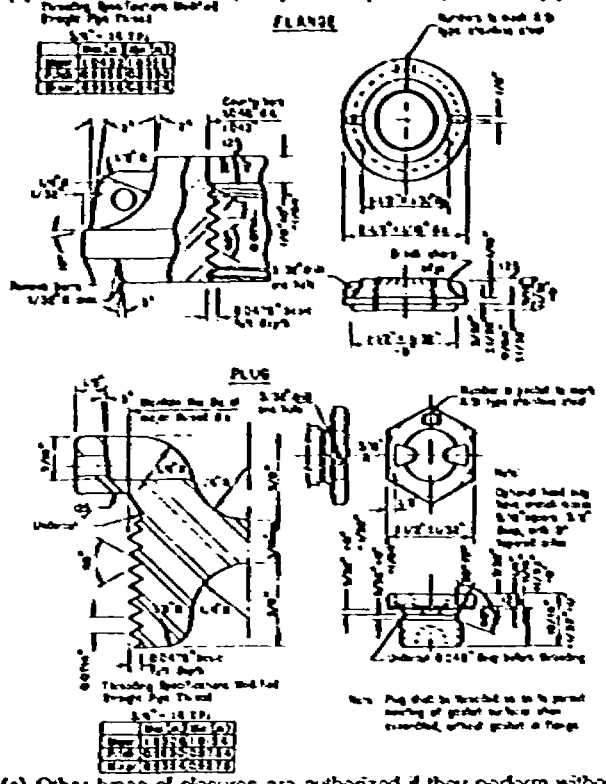
Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 5/16" diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place.

(d) Openings over 2.3" diameter not permitted. Threads for plug or cap must be 8 or less per inch when over ¾" standard pipe size. Flanges with inside threads and plugs must conform with the thread diameter and thread form shown in the following drawing; other details shown on the drawing are recommended.



(2) Eleven and one-half (11½) threads per inch, standard pipe size.



(e) Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.81-10 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.81-11 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-5A.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMIT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between and with the gauge of body indicated first (for example, 18/16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.81-12 [Reserved]

§ 178.81-13 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 178.81-14 Leakage test. (a) Each container shall be tested with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

---

§ 178.82 Specification 5B; steel barrels or drums.

Removable head containers which will pass all required tests are authorized.

§ 178.82-1 Compliance. (a) Required in all details.

§ 178.82-2 Rated capacity. (a) Rated capacity as marked, see § 178.82-11(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent of rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater. Actual capacity of bilge type containers must be not less than rated (marked) capacity, nor greater than rated (marked) capacity plus 2 percent plus 2 quarts.

§ 178.82-3 Composition. (a) Sheets or body and heads to be low carbon, open hearth or electric steel.

§ 178.82-5 Seams. (a) Body seams welded.

§ 178.82-6 Chime reinforcement. (a) Containers, over 25 gallons, capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 178.82-7 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
		Body sheet	Head sheet	Type[1]	Minimum size (gauge or inch)	Minimum weight (pounds per foot)
5	Straight side	24	24	None		
10	do	22	22	do		
15	do	20	20	(2)		
33	do	18	18	(2)		
55	do	16	16	(2), (3)		
110	do	13	14	(2), (3)		
33	Bilge	16	16	None		
55	do	14	14	do		

[1] Rolling hoops may be of pliable solid rubber, metal or other suitable material provided that equivalent protection to drum integrity is afforded.
[2] Rolled or swedged in hoops.
[3] Each removable head drum body must have three rolled or swedged in hoops with the center line of one not more than 3 inches from the top curl.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
13	0.0897	0.0617
14	0.0747	0.0677
16	0.0598	0.0533
18	0.0478	0.0428
20	0.0359	0.0324
22	0.0299	0.0269
24	0.0239	0.0209

[1] Thickness shall be measured at any point on the sheet not less than ¾ inch from an edge.

§ 178.82-8 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

§ 178.82-9 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal (see paragraph (c) of this section) as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over ⅛ inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when tightened with gasket in place. Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ½ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Other types of closures are authorized if they perform without failure under the tests required by this section and a record of such tests is retained during the period the closure is in use.

§ 178.82-10 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.82-11 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-5B.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between and with the gauge of body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.82-12 [Reserved]

§ 178.82-13 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam, also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.

§ 178.82-14 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure. Removable head containers need not be tested with heads in place, except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples last tested must be retained until further tests are made or for one year.

---

§ 178.83 Specification 5C; steel barrels or drums.

Removable head containers not authorized.

§ 178.83-1 Compliance. (a) Required in all details.

§ 178.83-2 Rated capacity. (a) Rated capacity as marked, see § 178.83-11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.83-3 Composition. (a) Steel must be, except for rolling hoops and chime reinforcement, as follows:

(b) All sheet metal, welding rod, closing devices, and samples taken from the welded portion of the finished container must be of Type 304, 18 chrome 8 nickel alloy with 0.08 percent carbon maximum, 18–20 percent chromium, 8–11 percent nickel, or other types of stainless steel of equivalent corrosion resistance and physical properties.

(c) Type 304 or other grades of equivalent corrosion resistant steels in the as-welded condition are permissible for nitric acid concentrations up to and including 78 percent. For all concentrations of nitric acid the following are permissible:
(1) Type 304 heat-treated (quenches from 1900° F.), or
(2) Stabilized Type 347 in the as-welded condition, or
(3) Stabilized Type 347 stress-relieved (1550°–1650° F.), or
(4) Stabilized Type 347 heat-treated (quenches from 1900° F.), or
(5) Other grades of equivalent corrosion resistance.
(d) All parts of any completed container exposed to lading must comply with the standard 65 percent boiling nitric acid test in that the limit of inches per month penetration in accordance with corrosion test as used in American Society of Testing Materials Standard A-262-44-T shall be 0.0015 inch, this figure to be an average of five 48-hour tests.

§ 178.83-5 Seams. (a) Body seams welded.
(b) Chime seams welded or double-seamed and welded.
(c) Flanges for closures welded in place.

§ 178.83-6 Chime reinforcement. (a) Containers of 10 gallons capacity or over, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 178.83-7 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
		Body sheet	Head sheet	Type[1]	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
15	Straight side	20	20	None		
30	do	18	18	I-bar	¾ x 1⅛	1.25
55	do	16	16	do[2]	1 x 1½	1.60
110	do	14	14	do[2]	1 x 1½	1.60
15	Bilge	16	16	None		
30	do	14	16	do		
55	do	13	14	do		

[1] Rolling hoops may be of pliable solid rubber, metal or other suitable material provided that equivalent protection to drum integrity is afforded.
[2] Stainless steel I-bar hoops ¾ x 1⅛ inch, weighing not less than 1.27 pounds per foot, are authorized.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
13	0.0897	0.0817
14	0.0747	0.0677
16	0.0598	0.0533
18	0.0478	0.0428
20	0.0359	0.0324

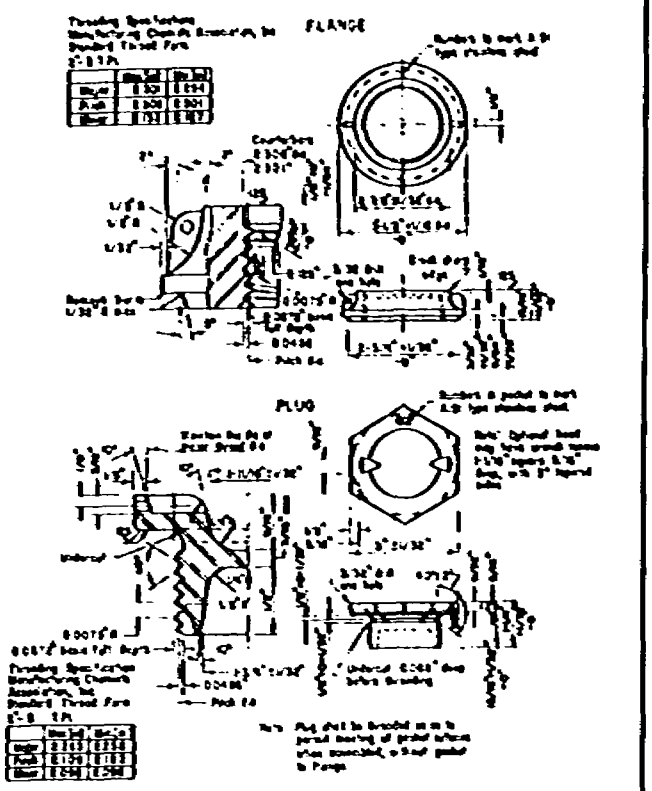
[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.83-8 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

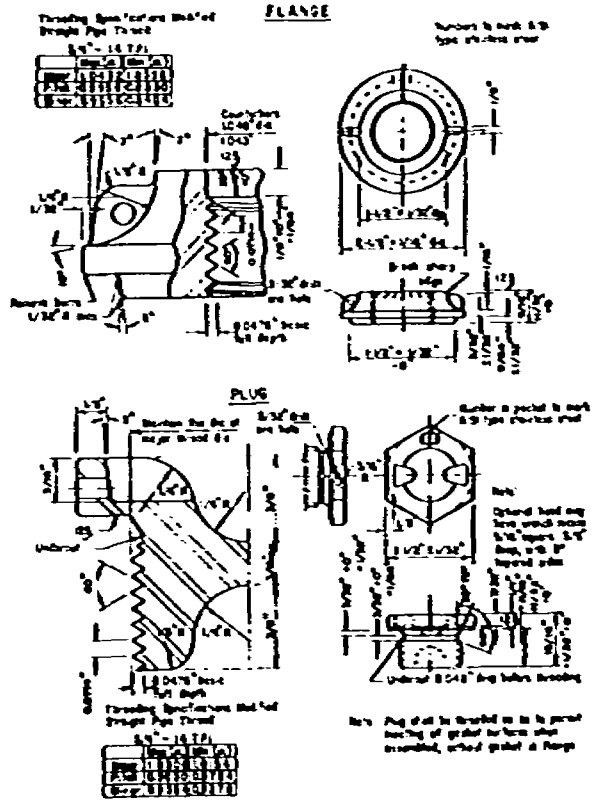
§ 178.83-9 Closures. (a) Adequate to prevent leakage; gaskets required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.
(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 7/16 inch diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place. Except that for containers not over 15 gallons marked capacity the seat (flange, etc.) for plug or cap may have at least 3 complete threads and plug or cap sufficient length of thread to engage 3 threads when securely tightened with gasket in place.
(d) Openings over 2.3 inches are not permitted. Threads for plug or cap must be 8 or less per inch when over ¾ inch standard pipe size.
(1) Flanges with inside threads and plug must conform with the thread diameter and thread form shown in the following drawing (other details shown on the drawing are recommended):



or (2) Eleven and one-half (11½) threads per inch, standard pipe size.



For explanation of abbreviations and reference marks, see last page of this tariff.

(e) Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.83-10 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.83-11 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footing on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-5C.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between and with the gauge of body indicated first (for example, 18 16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.83-12 [Reserved]

§ 178.83-13 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained until further tests are made or for one year, whichever period is shorter.

§ 178.83-14 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.84 [Reserved]

§ 178.85 [Reserved]

§ 178.87 [Reserved]

§ 178.88 Specification 5K; nickel barrels or drums.

Removable head containers not authorized.

§ 178.88-1 Compliance. (a) Required in all details.

§ 178.88-2 Rated capacity. (a) Rated capacity as marked, see §178.88-10(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.88-3 Composition. (a) Material must be, except for rolling hoops and chime reinforcements, nickel at least 99.0 percent pure.

§ 178.88-4 Seams. (a) Body seams welded.
(b) Head and chime seams welded or double-seamed.
(c) Flanges for closures welded in place.

§ 178.88-5 Chime reinforcement. (a) Containers over 25 gallon capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 178.88-6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness in the black (gauge, United States standard)		Rolling hoops	
		Body sheet	Head sheet	Type[1]	Minimum size (gauge or inch)
10	Straight side	16	16	None	
30	do	16	16	Bar	¾ × 1½
55	do	14	14	do	1 × 1½
110	do	12	12	do	1 × 1½
30	Bilge	14	16	None	
55	do	13	14	do	

[1] Rolling hoops may be of pliable solid rubber, metal or other suitable material provided that equivalent protection to drum integrity is afforded.

§ 178.88-7 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

§ 178.88-8 Closures. (a) Adequate to prevent leakage; gaskets required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

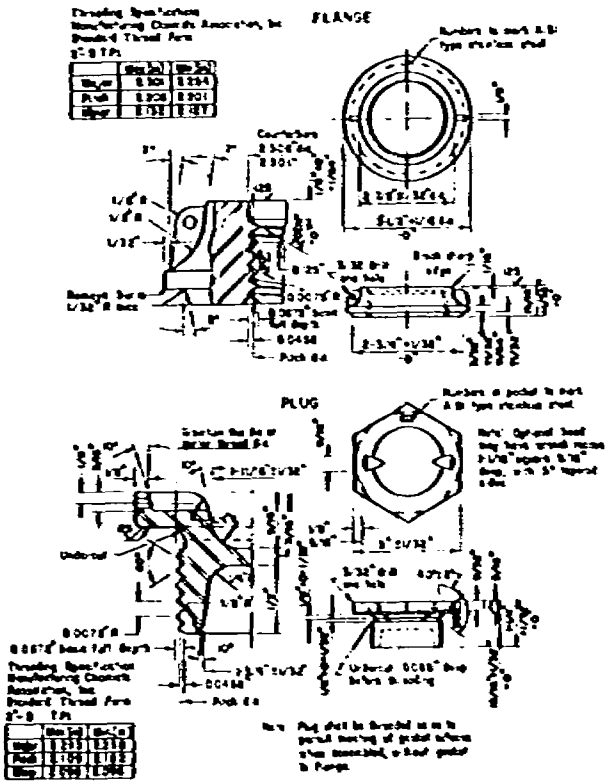
(b) Closing part (plug, cap, plate, etc. see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

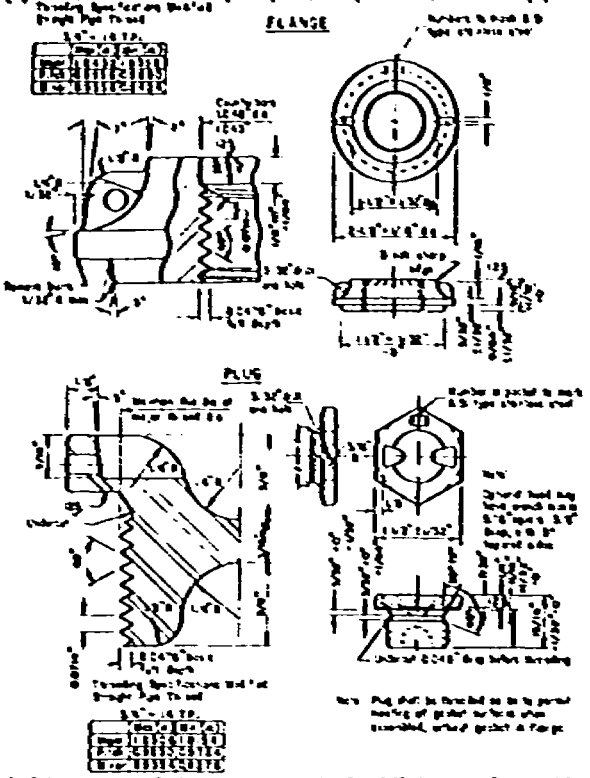
(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 7/64 inch diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place.

(d) Openings over 2.3 inches in diameter are not permitted. Threads for plug or cap must be 8 or less per inch when over ¾ inch standard pipe size.

(f) Flanges with inside threads and plug must conform with the thread diameter and thread form shown in the following drawing (other details shown on the drawing are recommended):



or (2) Eleven and one half (11½) threads per inch, standard pipe size.



(c) Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.88–9 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.88–10 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footing on drums equipped with footings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT–5K.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18–55–83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between and with the gauge of body indicated first (for example, 18 16–55–83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.88–11 [Reserved]

§ 178.88–12 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 12 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 2 years, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained until further tests are made or for two years, whichever period is shorter.

§ 178.88–13 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.89 Specification 5L; steel barrels or drums. Removable head containers not authorized.

§ 178.89–1 Compliance. (a) Required in all details.

§ 178.89–2 Rated capacity. (a) Rated capacity as marked, see § 178.89–9(a)(3). Actual capacity shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart.

§ 178.89–3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.89–5 Seams. (a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanged spout for filling and emptying container welded in place or attached in a manner approved by the Director, OHMT.

§ 178.89–6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness in the black (gauge, United States standard)		Rolling hoops		
		Body sheet	Head sheet	Type	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
5	Rectangular	20	20	None		

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
20	0.0359	0.034

[1] Thickness shall be measured at any point on the sheet not less than ¾ inch from an edge.

§ 178.89–7 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Closing part must be of sufficient strength to withstand the drop test prescribed in § 178.89–11(a)(1).

(c) Closure must be of screw-thread type or fastened by screw-thread device.

(d) Openings over 2.5 inches diameter not permitted.

§ 178.89–8 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.89–9 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footing on drums equipped with footings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT–5L.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18–55–83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between and with the gauge of body indicated first (for example, 18 16–55–83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.89–10 [Reserved]

§ 178.89–11 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thick-

For explanation of abbreviations and reference marks, see last page of this tariff.

ness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.

§ 178.89-12 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 5 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT.

---

§ 178.90 Specification 5M; monel drums. Removable head containers not authorized.

§ 178.90-1 Compliance. (a) Required in all details.

§ 178.90-2 Rated capacity. (a) Rated capacity as marked, see § 178.90-10(a)(3). Actual capacity of containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.90-3 Composition. (a) Material must be, except for rolling hoops and chime reinforcements, monel.

§ 178.90-4 Seams. (a) Body seams welded.
(b) Head and chime seams welded or double-seamed.
(c) Flanges for closures welded in place.

§ 178.90-5 Chime reinforcement. (a) Containers to have chime reinforcement adequate for its protection.

§ 178.90-6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness in the black (gauge, United States standard)		Rolling hoops		
		Body sheet	Head sheet	Type[1]	Minimum size (gauge or inch)	Minimum weight (pounds per foot)
10	Straight side	14	14	None		
55	do	14	14	Bar	1 × 1½	1.60

[1] Rolling hoops may be of pliable solid rubber, metal or other suitable material provided that equivalent protection to drum integrity is afforded.

§ 178.90-7 Rolling hoops. (a) Separate hoops if used, to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

§ 178.90-8 Closures. (a) Adequate to prevent leakage. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

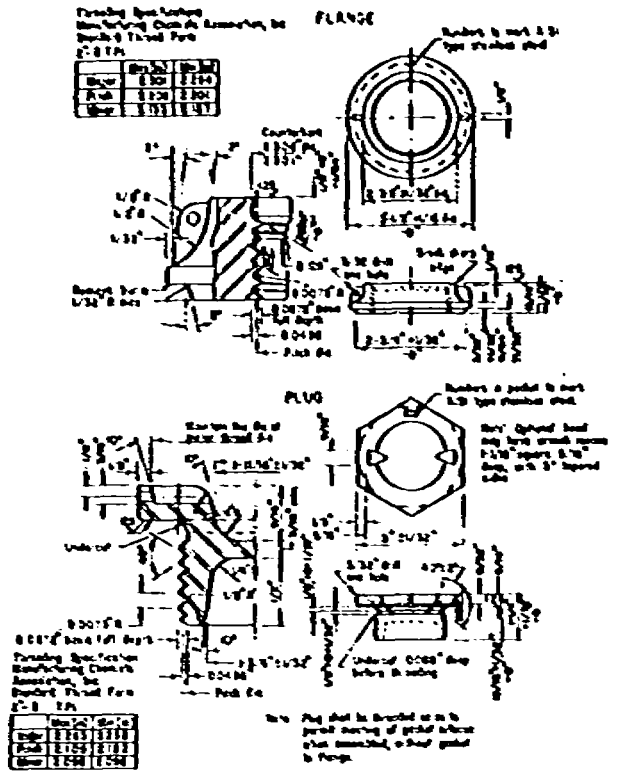
(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

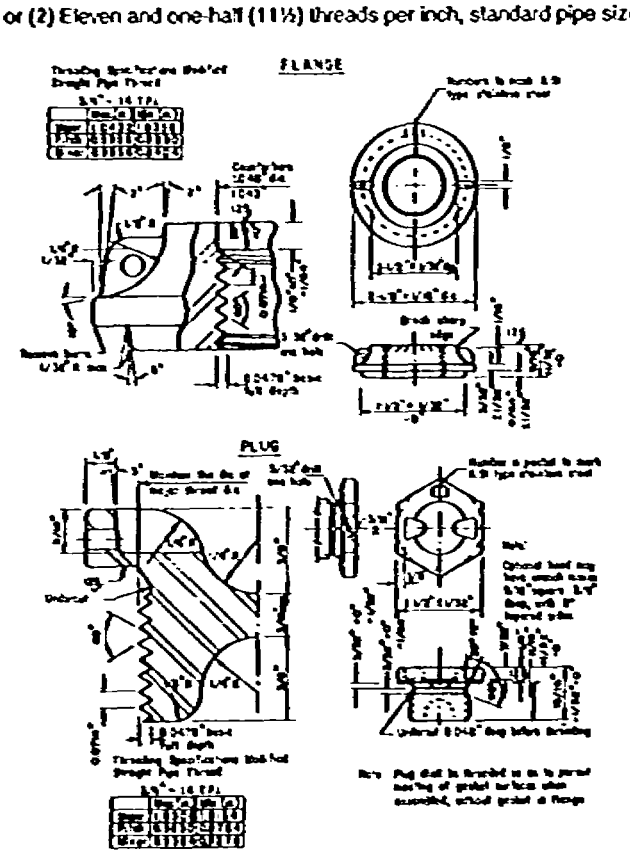
(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 3/16 inch diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place.

(d) Openings over 2.3 inches diameter are not permitted. Threads for plug or cap must be 8 or less per inch when over 3/4 inch standard pipe size.

(f) Flanges with inside threads and plug must conform with the thread diameter and thread form shown in the following drawing (other details shown on the drawing are recommended):



or (2) Eleven and one-half (11½) threads per inch, standard pipe size.



(e) Other types of closures are authorized if they perform without failure under the test required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.90-9 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.90-10 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-5M.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(3) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between and with the gauge of body indicated first (for example, 18 16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.90-11 [Reserved]

§ 178.90-12 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 12 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained until further tests are made or for two years, whichever period is shorter.

§ 178.90-13 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.91 [Reserved]

§ 178.92 Specification 5P; lagged steel drums. Removable head containers not authorized.

§ 178.92-1 Compliance. (a) Required in all details.

§ 178.92-2 Rated capacity. (a) Rated capacity not over 61 gallons, see § 178.92-12(a)(3). Actual capacity shall be not less than rated capacity plus two percent nor greater than rated capacity plus two percent plus one and one-half gallons.

§ 178.92-3 Composition. (a) Sheets for body and heads of inside container to be low carbon or austenitic stainless, open hearth or electric steel. Sheets for body and heads of outside shell may be of any weldable steel suitable for the purpose.

§ 178.92-5 Construction. (a) Container shall consist of a straight sided inside steel drum which must be lagged with a suitable fire-resistant lagging material of such insulating properties and thickness that the drum charged with the commodity to be shipped will not rupture in a fire when it is equipped with safety devices as required by § 178.92-9. The entire insulation must be covered with a metal shell so constructed that moisture cannot come in contact with lagging.

(b) Brazing is not permitted.

(c) All seams of drum and shell must be fusion welded.

(d) Flanges or bosses for closures in the inner container must be fusion welded in place to the inside drum and the metal shell.

(e) Means for testing inside drum for leaks must be provided in outside shell.

§ 178.92-6 Parts and dimensions. (a) Parts and dimensions as follows:

(1) Steel sheets used for body and head sheets for inside drum must have nominal thickness of at least 0.0747 inch and minimum thickness of 0.0677 inch, uncoated sheets, which shall be designated 14 gauge.

(2) Steel sheets used for body sheets for outside shell must have nominal thickness of at least 0.1046 inch and minimum thickness of 0.0946 inch, uncoated sheets, which shall be designated 12 gauge.

(3) Steel sheets used for head sheets for outside shell must have nominal thickness of at least 0.0747 inch and minimum thickness of 0.0677 inch, uncoated sheets, which shall be designated 12 gauge.

§ 178.92-7 Rolling hoops. (a) Rolling hoops are required and these may be rolled or swedged in the outside shell or consist of separate hoops having a tight fit on shell and securely held in place.

§ 178.92-8 Closures. (a) All closures must be of screw-thread type adequate to prevent leakage and be of a material which will not react dangerously in contact with the commodity.

(b) All openings in inside drums must be located in the top head.

(c) Openings over 2 3 inches screw thread size not permitted.

(d) Plugs, caps, or other fittings must have sufficient length of thread to engage 5 threads when screwed home with gasket in place.

(e) Gaskets which are not affected by lading are required for closures having straight threads.

§ 178.92-9 Safety devices. (a) Each drum must have safety devices approved as to type and location by the Director, OHMT. See § 173.124(a)(4) of this subchapter.

§ 178.92-10 Closure protection. (a) Construction must be such as to afford adequate protection to valves and safety devices.

§ 178.92-11 Defective containers. (a) Leaks and other defects to be repaired only by processes used in constructing container.

§ 178.92-12 Marking. (a) Each drum must be marked by embossing on a permanent head or by steel stamping on the top head of the outside shell or on a permanently attached head protection ring with clearly legible raised characters as follows:

(1) DOT-5P.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designated on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Associate Director for HMR.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18 16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.92-13 Tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 12 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping filled with water to 98 percent capacity, from height of 4 feet on to solid concrete so as to strike diagonally on chime (foot ring), or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker.

(2) Hydrostatic pressure test of 100 pounds per square inch sustained for five minutes. This test shall be applied to the finished inner container before lagging material and outer shell are assembled.

(3) Samples last tested to be retained until further tests are made.

§ 178.92-14 Leakage test. (a) Each container shall be subjected to a pressure test of at least 125 pounds per square inch sustained for at least 30 seconds. Test shall be applied to inner container before lagging material or outer shell is assembled. Failures shall be rejected or repaired and retested.

Note 1: If air or other gas is the pressurizing medium, the test should be conducted in a pit or equivalent means of safeguarding personnel.

(b) Subsequent to the test specified in paragraph (a) each container shall be tested with seams under water or covered with soapsuds or other suitable material by interior air pressure of at least 75 pounds per square inch. Leakage test shall be applied to finished inner container before lagging or outer shell is assembled. Leakers shall be rejected or repaired and retested.

§ 178.97 [Reserved]

§ 178.98 Specification 6B; steel barrels or drums. Removable head containers which will pass all required tests are authorized.

§ 178.98-1 Compliance. (a) Required in all details.

§ 178.98-2 Rated capacity. (a) Rated capacity as marked, see §178.98-9(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.98-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.98-5 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Authorized gross weight (pounds)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
			Body sheet	Head sheet	Type	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
5 to 10	150	Straight side	18	18	None		
5 to 30	430	do	16	16	U[1]	16	
5 to 55	830	do	14	14	U	12	
5 to 30	430	do	16	16	I-bar[1]	3/4 x 1/16	1.25
5 to 55	880	do	14	14	do	3/4 x 1/16	1.25
5 to 110	1,750	do	12	12	do	1 x 1/16	1.60
5 to 33	430	Bilge	15	16	None		
5 to 55	830	do	13	14	do		

[1] Rolled or swedged in hoops.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
12	0.1046	0.0945
13	0.0897	0.0817
14	0.0747	0.0677
15	0.0673	0.0603
16	0.0598	0.0533
18	0.0478	0.0428

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from an edge.

§ 178.98-6 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I bar type directly to body of drum in any manner not permitted.

§ 178.98-7 Closures. (a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

§ 178.98-8 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.98-9 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footing on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-6B * * *; stars to be replaced by the authorized gross weight (for example, DOT-6B880, etc.).

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.98-10 [Reserved]

§ 178.98-11 Type tests. (a) Samples taken at random and closed as for use shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

§ 178.98-12 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure. Removable head containers need not be tested with heads in place, except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples last tested must be retained until further tests are made or for one year.

§ 178.99 Specification 6C; steel barrels or drums.

Removable head containers which will pass all required tests are authorized.

§ 178.99-1 Compliance. (a) Required in all details.

§ 178.99-2 Rated capacity. (a) Rated capacity as marked, see §178.99-9(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.99-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.99-5 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Authorized gross weight (pounds)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
			Body sheet	Head sheet	Type	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
5	80	Straight side	22	22	None		
5 to 10	160	do	20	20	do		
5 to 30	430	do	18	18	U	16	
5 to 55	830	do	15	16	U	14	
5 to 110	1,760	do	14	14	U	12	
5 to 30	430	do	18	18	I-bar	3/4 x 1/16	1.25
5 to 55	850	do	16	16	do	3/4 x 1/16	1.25
5 to 110	1,760	do	14	14	do	1 x 1/16	1.60
5 to 33	430	Bilge	16	18	None		
5 to 55	830	do	15	16	do		

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
14	0.0747	0.0677
15	0.0673	0.0603
16	0.0598	0.0533
18	0.0478	0.0428
20	0.0359	0.0324
22	0.0299	0.0269

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from an edge.

§ 178.99-6 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I bar type directly to body of drum in any manner not permitted.

§ 178.99-7 Closures. (a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1 This does not apply to cap seal over a closure which complies with all requirements

§ 178.99-8 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container; not by soldering.

§ 178.99-9 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-6C* * *; stars to be replaced by the authorized gross weight (for example DOT-6C880, etc.).

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.99-10 [Reserved]

§ 178.99-11 Type tests. (a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested to be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

§ 178.99-12 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure. Removable head containers need not be tested with heads in place, except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples last tested must be retained until further tests are made or for one year.

---

§ 178.100 Specification 6J; steel barrels and drums.

Removable head containers which will pass all required tests are authorized.

§ 178.100-1 Compliance. (a) Required in all details.

§ 178.100-2 Rated capacity. (a) Rated capacity as marked, see § 178.100-9(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.100-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.100-5 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Authorized gross weight (pounds)	Type of container	Minimum (thickness, uncoated sheets (gauge)		Rolling hoops		
			Body sheet	Head sheet	Type	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
5 to 30	260	Straight side	19	19	(1)		
5 to 55	430	do	18	18	(1)		
5 to 55	880	do	15	18	U	14	
5 to 55	880	do	16	16	I bar	3/4 × 1/4	1.25
5 to 33	430	Bilge	16	18	None		
5 to 55	880	do	15	16	do		

[1] Rolled or swedged in hoops

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
15	0.0673	0.0603
16	0.0598	0.0533
18	0.0478	0.0428
19	0.0418	0.0378

[1] Thickness shall be measured at any point on the sheet not less than ½ inch from an edge.

§ 178.100-6 Rolling hoops. (a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I bar type directly to body of drum in any manner not permitted.

§ 178.100-7 Closures. (a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used, it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1 This does not apply to cap seal over a closure which complies with all requirements

§ 178.100-8 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.100-9 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-6J* * *; stars to be replaced by the authorized gross weight (for example, DOT-6J880, etc.).

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.100-10 [Reserved]

§ 178.100-11 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

---

§ 178.101 [Reserved]

§ 178.102 Specification 6D; cylindrical steel overpack, straight sided, for inside plastic container.

§ 178.102-1 Material requirements. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.102-2 Construction requirements. (a) Construction requirements are as follows:

Rated capacity of inside plastic container not over (gallons)	Minimum thickness, uncoated sheets (gauge)		Body seams	Rolling hoops	Top or bottom head	Closures, when full removable head is used (gaskets not required)
	Body sheet	Head sheet				
5	24	24	Welded	None required	Double seamed or welded	Lug or plain ring seal
15	20	20	Welded	Rolled or swedged	Double seamed or welded	Lug or plain ring seal
30	19	19	Welded	Rolled or swedged	Double seamed or welded	Bolted type ring closure 18 gauge
55	18	18	Welded	Rolled or swedged, or I-Bars, 2½" × 1¼"	Double seamed or welded	Bolted type ring closure 16 gauge

(b) Steel sheets or parts of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
16	0.0598	0.0533
18	0.0478	0.0428
19	0.0418	0.0378
20	0.0359	0.0324
24	0.0239	0.0209

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

(c) Two holes not exceeding ¼ inch each are permitted diametrically opposite each other in the overpack body immediately below the top chime or immediately above the double seam of the bottom chime or three holes not exceeding ¾₁₆ inch in diameter on centers 120 degrees apart in the bottom head.

(1) Overpack interior shall be free of projections, burrs, or any edges that might cause damage to inside plastic container and shall be free of lubricants, oils, or any foreign matter.

(2) Top head may have not more than two holes of suitable size to provide for protruding closures.

(3) Overpack shall be constructed to provide a snug fit for inside plastic container.

§ 178.102-3 Tests. (a) Steel overpack when assembled as for use, shall withstand the tests prescribed in specifications for inside plastic containers as detailed in Part 178 when authorized as combination packages in Part 173. The completed package must withstand these tests without producing a condition of the overpack that could result in potential damage to the inside container.

§ 178.102-4 Markings. (a) Each new steel overpack must be marked by embossing on a permanent head. *Altered drums.* Drums which have been altered to Specification 6D from an all 18-gauge tight head drum may be embossed on the body of the drum, no more than six inches from the top curl. Embossment must be with clearly legible raised characters as follows:

(1) DOT-6D.

(2) If the steel overpack is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge to the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18-16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is revised.

§ 178.103 Specification 6L; metal packaging.

§ 178.103-1 General requirements. Each packaging must meet the applicable requirements of § 173.24 of this subchapter.

§ 178.103-2 Rated capacity. (a) Rated capacity as marked (see § 178.103-6). Not less than 55 gallons nor more than 110 gallons for the outer steel drum. Not more than 17.74 liters for the inner vessel.

(b) The authorized maximum gross weight of the package is 160 kilograms (350 pounds) for sizes not over 210L (55 gallons) or 220 kilograms (480 pounds) for sizes over 210L (55 gallons) but not over 420L (110 gallons).

§ 178.103-3 General construction requirements. (a) The outer shell must be of straight sided steel, with welded body seams and at least 18-gauge body and bottom head sheets, and 14-gauge removable head sheets (unless there are one or more corrugations in the cover near the periphery, in which case 16-gauge is authorized). The shell may be either a single sheet of steel or may be fabricated by welding together two appropriate lengths of 210L (55-gallon) drums, such as a DOT Specification 6J or 17H, with rolled or swedged in hoops as prescribed for either of those specifications. The head must be convex (crowned), not extending beyond the level of the chime, with a minimum convexity of 1 centimeter (⅜-inch). The inside diameter of the shell must be at least 57 centimeters (22.5 inches).

(b) Inner containment vessel must conform to specification 2R (except that cast iron is not authorized), with a maximum usable inside dimension of 13.3 centimeters (5.25 inches) maximum height of 127 centimeters (50 inches) (with caps in place) and minimum wall thickness of 6 millimeters (0.25 inch).

(c) Inner containment vessel must be fixed within the outer shell by one of the following types of centering devices:

(1) At least 8 steel rod spacers, of at least 6 millimeters (0.25-inch) diameter (for packages of 210 liters (55-gallon) capacity) or 1 centimeter (0.375-inch) diameter (for packages with greater than 210 liters (55-gallon) capacity) cold rolled steel, welded to the vessel at each end by minimum 5 centimeter (2-inch) continuous weld. Each rod must be welded to the vessel at radial positions not exceeding 45 degrees as not to interfere with closure of the inner vessel. Each spacer rod must extend at least 5.6 centimeters (2.25 inches) beyond the inner vessel at each end, then radially to the wall of the outer drum (to provide a springlike snug fit) and along the entire length of the wall of the outer drum. For a packaging of more than 210 liters (55-gallon) capacity, each spacer rod must be braced by welding a 6 millimeter (0.25-inch) by 5 centimeter (2-inch) steel plate to the spacer rod and the pipe with a continuous weld at each joint, the joints being located approximately half way along the length of the drum. For containers manufactured prior to March 31, 1975, this requirement is effective December 31, 1975.

(2) At least three steel "spiders," not more than 24 inches apart, with each spider having at least four legs. Each leg must be constructed of materials having dimensions not less than those listed in this subparagraph, welded by continuous weld at each joint to inner and outer steel bands of at least ¼-inch by 1-inch steel. The inner steel band must be welded to the inner vessel by at least six 2-inch welds on both edges of the band. The outer steel band must be welded to the outer drum by at least six 2-inch welds on both edges of the top outer band, such that the inner vessel is at least 2¼ inches from the top and bottom of the drum. Authorized construction materials are:

(i) 2.5 centimeters (1 inch) by 2.5 centimeters (1 inch) by 6 millimeters (¼ inch) steel angle iron.

(ii) 3 centimeters (1¼ inches) by 3 centimeters (1¼ inches) by 5 millimeters (³⁄₁₆ inch) steel angle iron.

(iii) 2.5 centimeters (1 inch) schedule 40 steel pipe.

(3) There must not be less than 2 spacer mechanisms for a packaging of 210 liters (55-gallon) capacity nor less than 3 spacer mechanisms for a packaging greater than 210 liters (55-gallon) capacity. Each spacer mechanism must consist of not less than 6 steel angles, pipe, or rod radial supports of at least 2.7 square-centimeters (0.42 square inch) cross-section. Each radial support must be welded at one end to the containment vessel by a continuous weld or to an inner steel band of at least 6 millimeters (¼-inch) by 2.5 centimeters (1 inch) by a continuous weld at radial positions not exceeding 60 degrees from the center of the package. The inner band, when used, must be welded to the inner containment vessel by at least 6 equally spaced 5 centimeter (2-inch) welds on each edge of the band. The opposite end of the radial support must be welded by a continuous weld to an outer steel band of at least 6 millimeters (¼-inch) by 2.5 centimeters (1 inch). The outer steel band must be welded to the outer shell by at least 6 equally spaced welds on each edge of the top band, such that the inner vessel is fixed at least 5.7 centimeters (2.25 inches) from the top and bottom of the drum. The spacer mechanism must be welded as specified near each end of the containment vessel so as not to interfere with the vessel closure. For a packaging greater than 210L (55-gallon) capacity, the additional spacer mechanism must be located at approximately mid-point along the length of the inner vessel.

(d) The void between the inner containment vessel and the outer shell must be completely filled with bagged or tamped vermiculite (expanded mica), with a density of at least 0.072 g/cc (4.5 pounds per cubic foot). Loose, untamped vermiculite is not authorized.

§ 178.103-4 Welding. Welding must be of material having a melting point in excess of 800°C (1475° F.) except that for packages constructed prior to March 31, 1975, this temperature may be 540°C. (1000° F.), with a joint efficiency of at least 0.85. This requirement applies to welding used in adding spacer rods to comply with § 178.103(3)(c)(1).

§ 178.103-5 Closure. (a) The outer drum closure must be at least a 12-gauge bolted ring with drop forged lugs, one of which is

threaded, and having at least a 1.6 centimeter (⅝-inch) diameter steel bolt and a lock nut, or equivalent device.

(b) The closure device must have a means for the attachment of a tamperproof lock wire and seal, or equivalent.

§ 178.103–6 Markings. (a) Markings on each container, by die stamping on a metal place attached to the outside of the outer container by spot welding, or other equally efficient method, in letters and figures of at least ½ inch in height, as follows:

(1) "DOT–6L".

(2) "FISSILE RADIOACTIVE MATERIAL".

(3) Name or symbol of person making the marks specified in paragraph (a)(1) of this section. Symbol, if used, must be registered with the Director, OHMT.

(4) Gauge of metal of the outer steel drum in the thinnest part, rated capacity of the outer steel drum in gallons, and the year of manufacture of the assembled package (e.g., 18–110–68). When the gauge of the metal in the drum wall differs from that in the head, both must be indicated with a slanting line between, and with the gauge of the body indicated first (e.g., 18.16–110–68 for 18-gauge body and 16-gauge head).

§ 178.104 Specification 6M; metal packaging.

§ 178.104–1 General requirements. (a) Each package must meet the applicable requirements of § 173.24.

§ 178.104–2 Rated capacity. (a) Rated capacity as marked (see § 178.104–5). Not less than 10 gallons nor more than 110 gallons for the outer steel drum. Not less than 1.24 liters for the inner containment vessel.

§ 178.104–3 General construction requirements. (a) The outer shell must be of straight-sided steel, with welded body seams, and may be either a single sheet of steel, or may be fabricated by welding together two appropriate lengths of drums, such as a DOT Specification 6C or 17C, with each length to contain 3 swedged or rolled rolling hoops as prescribed for either of these specifications. A removable head for a packaging of 210 liters (55 gallons) or larger volume must have one or more corrugations in the cover near the periphery. For a packaging exceeding 57 liters (55 gallons) volume, the head must be crowned (convexed), not extending beyond the level of the chime, with a minimum convexity of 1 centimeter (⅜-inch).

(1) The maximum authorized gross weight, metal thickness, and minimum end insulation thickness for the marked volume is as follows:

Marked capacity		Maximum authorized gross weight		Minimum thickness of uncoated sheets and heads (gauge)	Minimum thickness of end insulation	
Gallons not over	Liters	Pounds	Kilograms		Inches	Centimeters
15	57	160	73	20	1.88	4.7
30	114	480	219	18	3.75	9.5
55	210	640	292	16	3.75	9.5
110	420	640	292	16	3.75	9.5

(2) Each drum must have at least four 1.2 centimeter (0.5-inch) diameter vents near the top, each covered with a weatherproof tape or fusible plug; or equivalent device.

(b) Inner containment vessel must conform to specification 2R or equivalent (cast iron or brass are prohibited), with maximum usable inside diameter of 13.3 centimeters (5.25 inches), minimum usable inside diameter of 10 centimeters (4 inches), and minimum height of 15 centimeters (6 inches).

(c) Inner containment vessel must be fixed within the outer shell by one of the following types of solid centering media, with the sides of the inner vessel protected by at least 9.5 centimeters (3.75 inches) of insulation media, and the ends with at least the thickness as prescribed in § 178.104–3(a)(1).

(1) Machined discs and rings made of solid industrial cane fiberboard having a density of at least 0.24 g/cc (15 pounds per cubic foot) fitted such that the radial clearances between the fiberboard, inner vessel, and shell do not exceed 6 millimeters (¼-inch); or

(2) Hardwood or plywood at least 1.2 centimeter (½-inch) thick, having a density of at least 0.45 g/cc (28 pounds per cubic foot). There must be no gap or direct heat path from the shell to the inner vessel.

(d) Any radiation shielding material used must be placed within the inner containment vessel, or must be protected in all directions by at least the thickness of the thermal insulating material prescribed in paragraph (a) of this section.

(e) For a packaging having an authorized gross weight in excess of 219kg (480 pounds), a steel bearing plate, at least 6 millimeters (0.25-inch) thick or a plywood disc, at least 2.5 centimeters (1 inch) thick, and at least 25 centimeters (10 inches) in diameter must be provided at both ends and adjacent to the specification 2R inner containment vessel, to provide additional load-bearing surface against the insulation-centering medium.

§ 178.104–4 Closure. (a) The outer drum closure must be at least 16-gauge bolt-type locking ring having at least a ⅜-inch steel bolt for drum sizes not over 15 gallons, or a 12-gauge bolted ring with drop-forged lugs, one of which is threaded, and a ½-inch steel bolt for drum sizes over 15 gallons. Each bolt must be provided with a lock nut or equivalent device.

(b) The closure device must have means for the attachment of a tamperproof lock wire and seal, or equivalent.

§ 178.104–5 Markings. (a) Marking must be as prescribed in § 173.24.

(b) Marking on the outside of each package must be as follows: "DOT–6M Type B," "Radioactive Materials," or "Fissile Radioactive Materials," as appropriate; and the gauge of metal of the outer drum in the thinnest part, rated capacity of the outer drum in gallons, and year of manufacture (for example, 18–30–69). When the gauge of the metal in the drum wall differs from that in the head, both must be indicated with a slanting line between, and with the gauge of the body indicated first (e.g., 18.16–55–69 for 18-gauge body and 16-gauge head).

§ 178.107 Specification 42B; aluminum drums.

§ 178.107–1 Compliance. (a) Required in all details.

§ 178.107–2 Rated capacity. (a) Rated capacity as marked see § 178.107–9(a)(3). Not less than 5 gallons; actual capacity shall be rated capacity plus at least 2 percent.

§ 178.107–3 Composition. (a) Body and heads of aluminum at least 99 percent pure, or an aluminum base alloy of equivalent corrosion resistance and physical properties.

§ 178.107–4 Outage. (a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

§ 178.107–5 Seams. (a) Welded, including attachment of flanges for closures and other devices. Circumferential seams at least 3" from top of chime; chime seams not permitted.

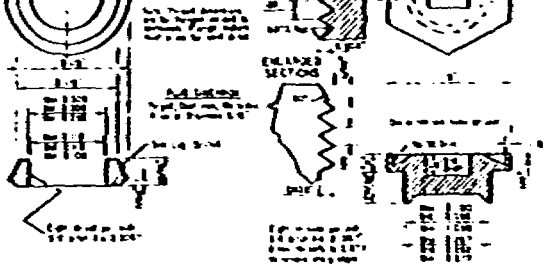
§ 178.107–6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Minimum thickness of material (inch)	Rolling hoops required, type authorized, and minimum dimensions	
		I-bar size (inch)	U-type, aluminum, thickness (inch)
10	0.110	⅜ × 1¼	0.139
30	.154	⅜ × 1¼	.193
55	.187	⅜ × 1¼	.234
110	.230	⅜ × 1¼	.....

(b) Rolling hoops must be firmly secured in place and not over 19 inches apart; beading under hoops not permitted. If welding is employed, the welding must be continuous on each edge of hoop.

§ 178.107–7 Closures. (a) Of screw-thread type or secured by screw-thread device; openings over 2.3" not authorized; suitable gaskets required.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 8 threads per inch, with 5 complete threads engaged when gasket is in place, or not over 4 threads per inch, with 2 complete threads similarly engaged; two ¾ inch drainage holes are authorized in flange. Thread form must conform to that shown by drawing below or be of a form that shall provide an equally efficient closure.



§ 178.107-8 Projections. (a) Closing devices and other parts must not project beyond chime or rolling hoops.

§ 178.107-9 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:
(1) DOT-42B.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.
(3) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18/16-55-83 for body 18 gauge and head 16 gauge).
(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.107-10 [Reserved]

§ 178.107-11 Type test. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:
(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional test on any other parts which might be considered weaker than the chime.
(2) Hydrostatic pressure test of 60 pounds per square inch sustained for 5 minutes.

§ 178.107-12 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.107-13 Defective containers. (a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

§ 178.108 [Reserved]

§ 178.109 Specification 42D; aluminum drums.

§ 178.109-1 Compliance. (a) Required in all details.

§ 178.109-2 Rated capacity. (a) Rated capacity as marked, see § 178.109-9(a)(3). Not less than 5 gallons; actual capacity shall be rated capacity plus at least 2 percent.

§ 178.109-3 Composition. (a) Body and heads of aluminum at least 99 percent pure, or an aluminum base alloy of equivalent corrosion resistance and physical properties.

§ 178.109-4 Outage. (a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

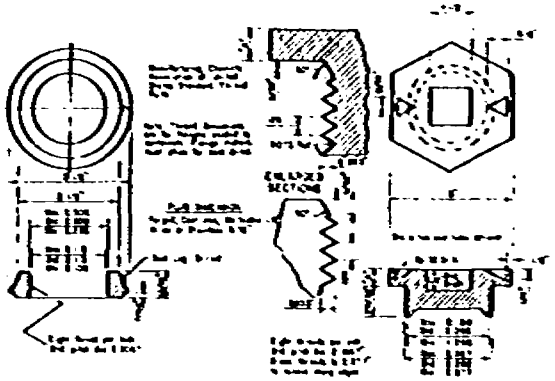
§ 178.109-5 Seams. (a) Welded, including attachment of flanges for closures and other devices. Circumferential seams at least 3" from top of chime; chime seams not permitted.

§ 178.109-6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Minimum thickness of material (inch)	Rolling hoops required, type authorized, and minimum dimensions	
		I-bar size (inch)	U-type, aluminum, thickness (inch)
10	0.093	3/4 × 1/4	0.092
30	.102	3/4 × 1/4	.128
55	.123	3/4 × 1/4	.154
110	.154	3/4 × 1/4	.....

(b) Rolling hoops must be firmly secured in place and not over 19 inches apart; beading under hoops not permitted. If welding is employed, the welding must be continuous on each edge of hoop.

§ 178.109-7 Closures. (a) Of screw-thread type or secured by screw-thread device; openings over 2 3" not authorized; suitable gaskets required. Vented closing devices must be approved by the Director, OHMT.
(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket, they must have not over 8 threads per inch, with 5 complete threads engaged when gasket is in place, or not over 4 threads per inch, with 2 complete threads similarly engaged; two 9/16 inch drainage holes are authorized in flange. Thread form must conform to that shown by drawing below or be of a form that shall provide an equally efficient closure.



§ 178.109-8 Projections. (a) Closing devices and other parts must not project beyond chime or rolling hoops.

§ 178.109-9 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:
(1) DOT-42D.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.
(3) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18/16-55-83 for body 18 gauge and head 16 gauge).
(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.109-10 [Reserved]

§ 178.109-11 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:
(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional test on any other parts which might be considered weaker than the chime.
(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes.

§ 178.109-12 Leakage test. (a) Each drum shall be tested with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 10 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.109-13 Defective containers. (a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

§ 178.110 [Reserved]

§ 178.111 [Reserved]

§ 178.112 [Reserved]

§178.115 Specification 17C; steel drums. Single trip container. Removable head containers which will pass all required tests are authorized.

§ 178.115-1 Compliance. (a) Required in all details.

§ 178.115-2 Rated capacity. (a) Rated capacity as marked, see § 178.115-10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

§ 178.115-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.115-5 Seams. (a) Body seams welded.

§ 178.115-6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
				Type	Minimum	
		Body sheet	Head sheet		Size (gauge or inch)	Weight (pounds per foot)
5[3]	Straight side	24[1]	24[1]	None		
10	do	20	20	do		
30	do	18	18	(2)		
55	do	16	16	(2), (2)		

[1] Rolled or swedged in hoops.
[2] Each removable head drum body must have three rolled or swedged in hoops with the center line of one not more than 3 inches from the top curl.
[3] A drum of 5½ gallons marked capacity is authorized for shipment of the commodity specified in § 173.353(d).

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
16	0.0598	0.0533
18	0.0478	0.0428
20	0.0359	0.0324
24	0.0239	0.0209

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.115-7 Convex heads. (a) Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over; minimum convexity of ⅜ inch required.

§ 178.115-8 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over 1/16 inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when tightened with gasket in place. Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

(1) (Deleted)

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ⅝ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.115-9 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.115-10 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-17C and the letters STC located near the DOT mark to indicate a single-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18/16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.115-11 [Reserved]

§ 178.115-12 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.

§ 178.115-13 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure. Removable head containers need not be tested with heads in place, except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples last tested must be retained until further tests are made or for one year.

---

§ 178.116 Specification 17E; steel drums. Single trip container. Removable head containers not authorized.

§ 178.116-1 Compliance. (a) Required in all details.

§ 178.116-2 Rated capacity. (a) Rated capacity as marked, see § 178.116-10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

§ 178.116-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.116-5 Seams. (a) Body seams welded.

§ 178.116-6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
				Type	Minimum	
		Body sheet	Head sheet		Size (gauge or inch)	Weight (pounds per foot)
5	Straight side	24	24	None		
10	do	22	22	do		
30	do	[2]19	[2]19	(1)		
55	do	[2]18	18	(1)		

[1] Rolled or swedged in hoops.
[2] 20 gauge authorized.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
18	0.0478	0.0428
19	0.0418	0.0378
20	0.0359	0.0324
22	0.0299	0.0269
24	0.0239	0.0209

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.116-7 Convex heads. (a) Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over. Convexity to be minimum of ⅛".

§ 178.116-8 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container: Provided, That thinner metal closures or closures of other material are authorized for containers of 12 gallons capacity or less when opening to be closed is not over 2.7 inches in diameter and closures, except threaded metal closures, are fitted with outside sealing devices which cannot be removed without destroying the closure or sealing device (see paragraph (d) of this section).

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seal (flange, etc.) for plug, or cap, must have 3 or more threads; two drainage holes of not over ⅛ inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place. Provided, That for containers having a capacity of 12 gallons and less the seal (flange, etc.) for plug, or cap, must have two or more complete threads and plug, or cap, must have sufficient length of thread to engage two threads when screwed home with gasket in place.

(d) Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.116-9 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.116-10 Marking. (a) Each barrel or drum must be marked by embossing on a permanent head (or by embossing or die stamping on lootring on drums equipped with lootrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-17E and the letters STC located near the DOT mark to indicate a sing'e-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18 16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.116-11 [Reserved]

§ 178.116-12 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samp'es last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.

§ 178.116-13 Leakage test. (a) Each drum shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 7 pounds per square inch for containers over 12 gallons capacity and at least 5 pounds for others. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.117 Specification 17F; steel drums. Single trip container. Removable head containers not authorized.

§ 178.117-1 Compliance. (a) Required in all details.

§ 178.117-2 Rated capacity. (a) Rated capacity as marked see § 178.117-11(a)(3). Actual capacity of containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.117-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel. Steel to be as high as practicable in tensile strength, having no loose oxide or scale.

§ 178.117-5 Seams. (a) Body seams welded.
(b) Head and chime seams welded or double-seamed.
(c) Flanges for closures welded in place.

§ 178.117-6 Chime reinforcement. (a) Chime reinforcement required and to be not less than 12 gauge.

§ 178.117-7 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)		Rolling hoops		
		Body sheet	Head sheet	Type	Minimum Size	Minimum Weight
55	Straight side	16	16	(1)		

[1] Rolled or swedged in hoops authorized.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
12	0.1046	0.0945
16	0.0598	0.0533

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.117-8 Rolling hoops and convex heads. (a) Rolling hoops to be expanded. Alternate use of I-bar hoops authorized.

(b) Convex heads. Convex (crowned) heads; minimum convexity to be ⅜ inch, with minimum chime height of ⅞ inch.

§ 178.117-9 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note: This does not apply to cap seal over a closure which complies with all requirements.

(c) Closure must be of screw-thread type or fastened by screw-thread device.

(d) One opening not over 2.3 inches and one opening not over ¾ inch allowed; both openings to be welded in one head only. Threads to be standard pipe thread of 11 threads per inch for the larger opening and 14 threads per inch for the ¾-inch opening.

(e) Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.117-10 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.117-11 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on lootring on drums equipped with lootrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-17F and the letters STC located near the DOT mark to indicate a sing'e-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.117-12 [Reserved]

§ 178.117-13 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

§ 178.117-14 Leakage test. (a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure.

§ 178.118 Specification 17H; steel drums. Single trip container. Removable head required.

§ 178.118-1 Compliance. (a) Required in all details.

§ 178.118-2 Rated capacity. (a) Rated capacity as marked, see § 178.118-10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

§ 178.118-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.118-5 Seams. (a) Body seams welded.

§ 178.118-6 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, uncoated sheets (gauge)			Rolling hoops		
		Body sheet	Bottom head sheet	Removable head sheet	Type	Minimum Size (gauge or inch)	Minimum Weight (pounds per foot)
5	Straight side	24	24	20	None	.....	.....
30	... do ...	18	18	18	[1]	.....	.....
55	... do ...	18	18	[2][3]14	[1]	.....	.....

[1] Rolled or swedged in hoops.

[2] Each drum must have three rolled or swedged in hoops, one to be placed in the body near the top curl.

[3] 16-gauge authorized provided there is at least one corrugation in the removable head near the periphery. 18-gauge authorized provided (1) there are at least two corrugations in the removable head near the periphery, (2) the manufacturer or assembler provides to the Director, OHMO, evidence of satisfactory performance of testing of the complete package design conducted in accordance with this section, and (3) the Director issues a registration number which the manufacturer or assembler concerned durably marks on the removable head and its corresponding ring-closure device.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
14	0.0747	0.0677
16	0.0598	0.0533
18	0.0478	0.0428
20	0.0359	0.0324
24	0.0239	0.0209

[1] Thickness shall be measured at any point on the sheet not less than ¾ inch from an edge.

§ 178.118-7 Convex heads. (a) Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over; minimum convexity of ⅜ inch required.

§ 178.118-8 Closures. (a) Adequate to prevent leakage; gaskets required.

(b) Drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ½ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more threads; two drainage holes of not over 1/16 inch diameter allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place. Provided, That for containers having a capacity of 12 gallons and less the seat (flange, etc.) for plug, or cap, must have two or more complete threads and plug, or cap, must have sufficient length of thread to engage two threads when screwed home with gasket in place.

(1) Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

§ 178.118-9 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.118-10 Marking. (a) Marking requirements for new or altered drums are as follows: *New drums.* Marking on each drum by embossing on the permanent head, with raised marks, or by embossing or die stamping on bodring, (if equipped), or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter. *Altered drums.* Drums which have been altered to Specification 17H from an all 18-gauge tight head drum may be embossed on the body of the drum, no more than six inches from top curl.

(1) DOT-17H and the letters STC located near the DOT mark to indicate single-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the marks specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.118-11 [Reserved]

§ 178.118-12 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ form the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.

§ 178.118-13 Leakage test. (a) Each drum shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 7 pounds per square inch for containers over 12 gallons capacity and at least 5 pounds for others. Equally efficient means of testing may be authorized upon approval by the Director, OHMT. Leakers shall be rejected or repaired and retested without failure. Drums need not be tested with heads in place, except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples last tested must be retained until further tests are made or for one year.

§ 178.119 [Reserved]

§ 178.120 Specification 20PF; phenolic-foam insulated, metal overpack.

§ 178.120-1 General requirements. (a) Each overpack must meet all of the applicable requirements of § 173.24 of this subchapter.

(b) The maximum gross weight of the package, including the inner cylinder and its contents, must not exceed the following:

(1) Specification 20PF-1 — 138 kilograms (300 pounds).
(2) Specification 20PF-2 — 320 kilograms (700 pounds).
(3) Specification 20PF-3 — 455 kilograms (1000 pounds).

(c) The general configuration of the overpack must be a right cylinder, consisting of an insulated base section, a steel liner lid, and an insulated top section. The inner liner and outer shell must be at least 16-gauge and 18-gauge steel, respectively with the intervening cavity filled with a molded in-place, fire-resistant, phenolic-foam insulation interspersed with wooden members for bracing and support. Wood pieces must be securely attached to both the liner and shell. No hole is permitted in the liner. Each joint between sections must be stepped a minimum of 5 centimeters (2 inches) and gaps between mating surfaces must not exceed 5 millimeters (0.2-inch). Gaps between foam surface of top section and liner lid must not exceed 1 centimeter (0.4-inch) or 5 centimeters (2-inches) where taper is required for mold stripping. For the specification 20PF-1, the top section may consist of a plug of foam insulation and a steel cover. The liner and shell closures must each be gasketed against moisture penetration. The liner must have a bolted flange closure. Shell closure must conform to § 178.118-8(b).

(d) Drawings in CAPE-1662, which include bills of material are a part of this specification.

§ 178.120-2 Materials of construction and other requirements. (a) Phenolic foam insulation must be fire-resistant and fabricated in accordance with USDOE Material and Equipment Specification SP-9, Rev. 1 and Supplement, which is a part of this specification. (Note: Packagings manufactured under USAEC Specification SP-9 and Rev. 1 thereto are authorized for continued manufacture and use.) A 5.4 inch (13.7 centimeter) minimum thickness of foam must be provided over the entire liner except:

(1) Where wood spacers replace the foam; or
(2) At protrusions of liner or shell, such as flanges, baffles, etc., where minimum insulation thickness is 9 centimeters (3.5 inches); or
(3) Where alternate top section (specification 20PF-1) is used. Foam must not interfere with proper seating of screws in inner liner flange assembly. Average density of insulation must be 0.13g/cc (8 pounds per cubic foot (pcf)) minimum for bottom section and 0.16g/cc (10 pcf) minimum for top section, except 0.1g/cc (6.5 pcf) for the specification 20PF-1 top section.

(b) Gaskets must be as follows:

(1) Inner liner flange—Neoprene rubber of 30 to 60 type A durometer hardness or other equivalent gasket material which is compatible with the specific contents.
(2) Outer shell—Synthetic rubber conforming to MIL-R-6855 (available from the Naval Publications Form Center, 5801 Tabor Avenue, Philadelphia, Pennsylvania 19120) class 2, grade 60.
(3) Support and pressure pads for inner liner top and bottom must be sponge rubber or equivalent.

(c) Alternate top section (specification 20PF-1 only). Average insulation density must be 0.16g/cc (10 pcf minimum). Thickness of plug must be 11 centimeters (4.3 inches) minimum, except thickness may be reduced to 10 centimeters (4 inches) to clear bolt heads. A flush mounted top lifting device must be securely fastened to a wood block encapsulated by the foam.

(d) Vent holes 5 millimeters (0.2 inch) diameter must be drilled in the outer shell to provide pressure relief during the insulation foaming and in the event of a fire. These holes, which must be drilled in all areas of the shell which mate with the foam insulation, must be spaced in accordance with CAPE-1662.

(e) Welding must be by a fusion welding process in accordance with American Welding Society Codes B-3.0 and D-1.0. Body seams and joints for the liner or shell must be continuous welds.

(f) Waterproofing—Each screw hole in the outer shell must be sealed with appropriate resin-type sealing material or equivalent during installation of the screw. All exposed foam surfaces, including any vent hole, must be sealed with waterproofing material as prescribed in USDOE Material and Equipment Specification SP-9, Rev. 1, and Supplement or equivalent.

§ 178.120-3 Tests. (a) Leakage test—Each inner liner assembly must be tested for leakage prior to installation. Seam welds of the liner must be covered for a distance of at least 15 centimeters (6 inches) on either side of the seam, with soapsuds, heavy oil, or equivalent material, and interior air pressure applied to at least 776mm Hg (15 p.s.i.g.) above atmospheric pressure must be held for at least 30 seconds. Liners failing to pass this test may not be used until repairs are made, and retests successfully passed.

§ 178.120-4 Required markings. (a) Marking must be as prescribed in § 173.24 of this subchapter.

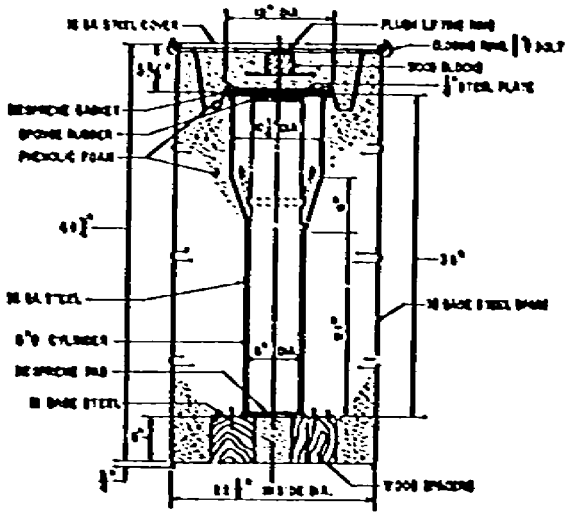
(b) Marking on the outside of each overpack must be as follows:

(1) "USA-DOT-20PF-1" or "-2," as appropriate, and if the entire liner is made of stainless steel, additional marking such as "3041-SS" to indicate the type of stainless steel used.

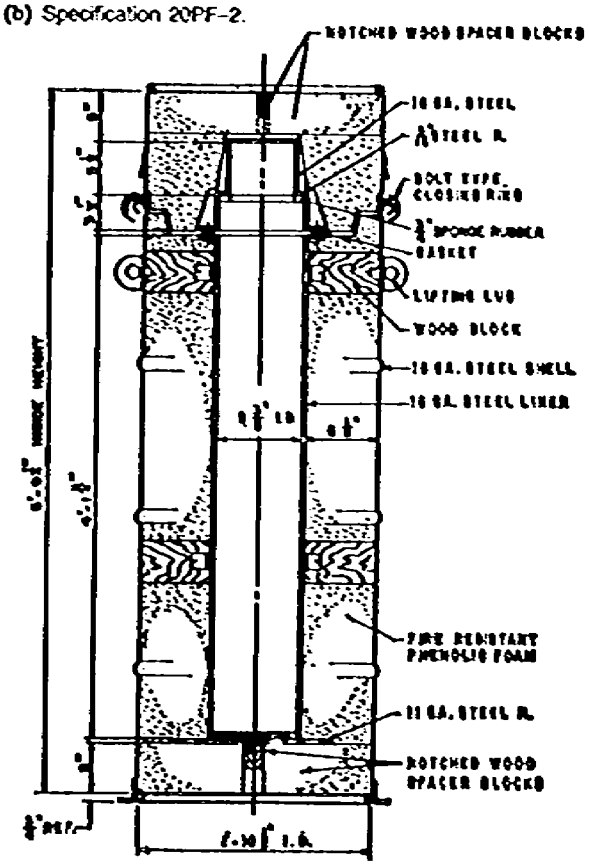
(2) "TARE WT: xxx lbs." where xxx is the tare weight of the assembled overpack without the inner container.

(3) Year of manufacture.

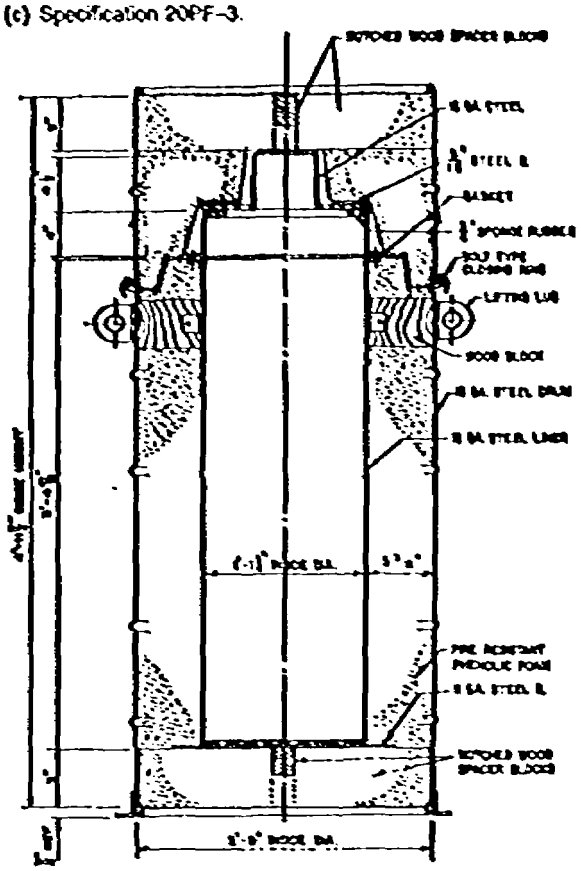
§ 178.120-5 Typical assembly detail. (a) Specification 20PF-1.



(b) Specification 20PF-2.



(c) Specification 20PF-3.



§ 178.121 Specification 21PF; fire and shock resistant, phenolic-foam insulated, metal packover.

§ 178.121-1 General requirements. (a) Each overpack must meet all of the applicable requirements of § 173.24 of this subchapter.

(b) Each overpack is authorized for use in applications where the maximum gross weight of the package, including the inner container and contents does not exceed 3725 kilograms (8200 pounds) (horizontally-loaded specification 21PF-1 unit), or 3900 kilograms (8600 pounds) (end-loaded specification 21PF-2 unit).

(c) The general configuration of the overpack must be a right cylinder, consisting of a steel inner liner (at least 18-gauge) and steel outer shell (at least 14-gauge) with the intervening cavity filled with a molded-in-place, fire-resistant, phenolic foam insulation and interspersed wooden members for bracing and support. Two specific configurations are authorized: a horizontal loading unit (specification 21PF-1) consisting of insulated base and top sections joined in a longitudinal peripheral closure joint; or an end-loading unit (specification 21PF-2), consisting of an insulated main section, a steel plate liner lid, and an insulated end cap. For either type each joint between sections must be stepped at least 1.8 centimeters (0.75 inch) and gaps between mating surfaces may not exceed 5 millimeters (0.2 inch). Bolted closures, which must each be gasketed against moisture penetration, must be in accordance with CAPE-1662. Each bolt must be equipped with a locking device to prevent loosening from vibration. Outer steel bracing and support framework must be attached to the shell to facilitate normal handling.

(d) Drawings in CAPE-1662, which include bills of materials, are a part of this specification.

§ 178.121-2 Materials of construction and other requirements. (a) Phenolic foam insulation must be fire resistant and fabricated in accordance with USDOE Material and Equipment Specification SP-9, Rev. 1, and Supplement which is a part of this specification. (Note: Packagings manufactured under USAEC Specification SP-9, and Rev. 1 thereto are authorized for continued manufacture and use.) A 5.5 inch (14 centimeters) minimum thickness of foam must be provided over the entire liner, except where:

(1) Wood spacers replace the foam material; or

(2) At protrusions of liner or shell, such as flanges, baffles, etc., where the minimum thickness of foam, wood, or a combination of these is 10 centimeters (4 inches).

(3) Solid wood or laminated wood solidly glued may be used to replace the foam between liner and shell (i.e., in ends of overpack). In this case, minimum wood thickness is 10 centimeters (4 inches). Average density of insulation must be 0.1 g/cc (6.75 pounds per cubic foot (pcf) minimum, except that 0.13 g/cc (8 pcf) is required in the removable end cap of the specification 21PF-2, which must have a minimum foam thickness of 12.7 centimeters (5 inches).

(b) Gaskets for inner liner, outer shell, or where otherwise specified in CAPE-1662, must be of vinyl foam tape, single coated, or 6 millimeters (¼-inch) thick expanded rubber, per ASTM D1056 type R or S, grades 41 to 43, with adhesive backing, or equivalent.

(c) Support and pressure pads for the inner liner must be of neoprene, sponge rubber, or equivalent.

(d) Fire retardant (intumescent) paint must be applied to any wood blocking which is located at any joint in the shell.

(e) Vent holes 5 millimeters (0.2 inch) diameter must be drilled in the outer shell to provide pressure relief during the insulation foaming and in the event of a fire. These holes, which must be drilled in all areas of the shell which mate with the foam insulation, must be spaced in accordance with CAPE-1662.

(f) Welding must be by a fusion process in accordance with the American Welding Society Code. Body seams and joints for the liner and shell must be continuous welds.

(g) Waterproofing. Each screw hole in the outer shell must be sealed with appropriate resin-type sealing material or equivalent during installation of the screw. All exposed foam surfaces, including any vent hole, must be sealed with waterproofing material as prescribed in USDOE Material and Equipment Specification SP-9 Rev. 1 and Supplement, or equivalent.

§ 178.121-3 Required markings. (a) Markings must be as prescribed in § 173.24 of this subchapter.

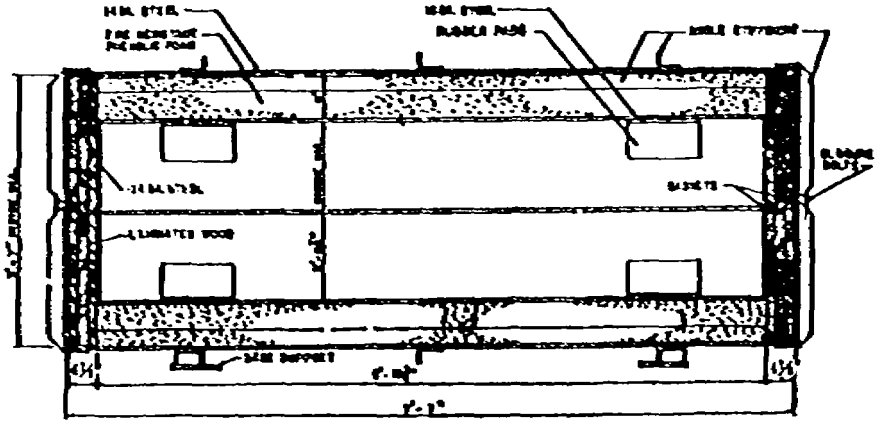
(b) Marking on the outside of each overpack must be as follows:

(1) "USA-DOT-21PF-1" or "2", as appropriate, and, if the inner shell is of stainless steel, additional marking such as "304L-SS" to indicate the type of stainless steel used.

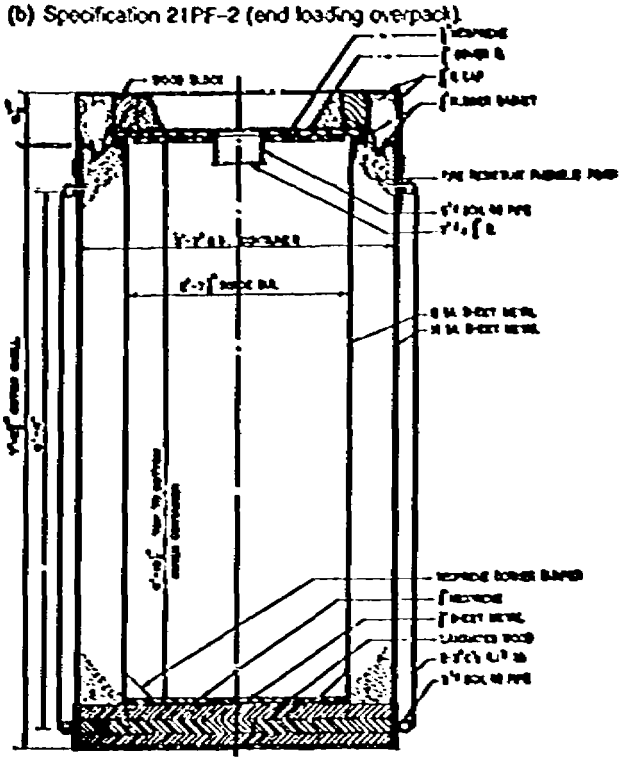
(2) "TARE WT: xxx lbs. (or kg.)" where xxx is the tare weight of the assembled overpack without the inner container.

(3) Year of manufacture.

§ 178.121-4 Typical assembly detail. (a) Specification 21PF-1 (horizontal loading overpack).



(b) Specification 21PF-2 (end loading overpack).



§ 178.130 Specification 37K; steel drums. Single trip container. Removable head containers which will pass all required tests are authorized.

§ 178.130-1 Compliance. (a) Required in all details.

§ 178.130-2 Rated capacity. (a) Rated capacity as marked, see § 178.130-8(a)(3). Actual capacity not less than rated (marked) capacity plus 2 percent, not greater than rated capacity plus 2 percent plus 1 quart.

§ 178.130-3 Composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.130-5 Parts and dimensions. (a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Authorized gross weight not over (pounds)	Type of container	Welded side seam required	Minimum thickness, uncoated sheets (gauge)	
				Body sheet	Head sheet
55	275	Straight side	Yes	22	22

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
22	0.0299	0.0269

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.130-6 Closure required. (a) Adequate to prevent leakage; to be of bolted ring or lever lock ring types only; sponge rubber gaskets required; flowed-in gaskets not permitted.

§ 178.130-7 Defective containers. (a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.130-8 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring or drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT-37K and the letters STC located near the DOT mark to indicate a sing'e-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of the body indicated first (for example, 18-16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.130-9 [Reserved]

§ 178.130-10 Type test. (a) Samples, taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type test is as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

§ 178.131 Specification 37A; steel drums. Sing'e-trip container. Removable head required.

§ 178.131-1 Compliance. (a) Required in all details.

§ 178.131-2 Rated capacity. (a) Rated capacity as marked, see § 178.131-9(a)(2). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent for containers not over 12 gallons capacity. Maximum actual capacity of containers not over 12 gallons capacity shall be not greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater; for others, minimum actual capacity shall be not less than rated (marked) capacity plus 2 percent and maximum actual capacity shall not be greater than rated (marked) capacity plus 3 percent or rated (marked) capacity plus 2 percent plus 1 quart whichever is the greater.

§ 178.131-3 Composition. (a) Sheets for body and heads to be hot-rolled or cold-rolled, low carbon, open-hearth or electric steel of standard commercial quality.

§ 178.131-5 Seams. (a) Side seams must be welded; or locked and soldered when 28-gauge tin plate is used for containers of 2-gallon capacity or less.

§ 178.131-6 Capacities, weights, type, and gauges. (a) Capacities, weights, type, and gauges must be as follows:

Marked capacity not over (gallons)	Authorized gross weight not over (pounds)	Type of container	Minimum thickness uncoated sheets[1] (gauge)		Minimum ring gauge bolted type[2]
			Body sheet[3]	Head sheet	
2	40	Straight side	28	28	Lug
5	60	do	26	26	Lug or plain ring seal
5	80	do	24	24	
10	150	do	24	24	
55	150	do	26	26	18, plain
55	275	do	24	24	18, plain
55	350	do	24	24	16, 2" overlap
55	450[4]	do	22	22	16, 2" overlap

[1] All gauges specified are minimum except as provided by Part 173. Heavier (but not lighter) gauges may be specified if shipper so desires.

[2] Other types of closures are authorized if they perform without failure under the tests required by this section and a record of the tests is retained during the period the closure is in use.

[3] Containers of 16 gallons capacity and over must have 2 swedged or corrugated rolling hoops of sufficient height to clear the closing device when the drum is rolled.

[4] A gross weight of 490 pounds is authorized when defined by Part 173 (see § 173.164(a)(2)).

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
22	0.0299	0.0269
24	0.0239	0.0209
26	0.0179	0.0159
28	0.0149	0.0129

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.131-7 Closures. (a) Closures of the type specified in the above table adequate to prevent leakage; gaskets required, all closures to be of the full-removable head type. Curl at top of shell for all drums 30 gallons capacity and larger must have a minimum diameter of ¾ inch, and so made as to form a circular section with the under portion substantially in

contact with the vertical shell. The removable head must have a minimum depth of ¾ inch and the cover lab must be large enough to extend to the horizontal center line of the top curl when the drum is sealed with the gasket in place. Drums of less than 30 gallons capacity may be made with an outside curl diameter of ⅜ inch minimum and a head depth of ½ inch minimum; except that for drums less than 16 gallons capacity the outside curl diameter may be 5/16 inch and the cover depth may be ⅜ inch minimum.

(b) The closing ring must be so constructed that the bottom leg will extend well inside the vertical center line of the shell curl but must not touch the shell (recommended clearance is 1/16 inch minimum, 3/16 inch maximum) when sealed for usage. The top leg of the locking ring must have sufficient length to extend well inside the vertical center line of the curl on the shell. Closing rings must have a 2 inch overlap at joint when gross weight of drum exceeds 275 pounds. Overlap is not required for drums of 275 pounds or less gross weight. The clearance between ends of rings without overlap should be a minimum of ⅛ inch and a maximum of ½ inch.

(c) Closures or fittings in the removable head of any type capable of withstanding test prescribed by §178.131-11 are authorized.

§ 178.131-8 Defective containers. (a) Defective containers to be repaired by method used in constructing container. Soldering not authorized, except for tin plated steel as authorized by §178.131-5.

§ 178.131-9 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT–37A * * *. Stars to be replaced by the authorized gross weight, or less, at which the drum was type tested (for example, DOT–37A150, etc.) and the letters STC located near the DOT mark to indicate a single-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18–55–83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18/16–55–83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.131-10 [Reserved]

§ 178.131-11 Type tests. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type test is as follows:

(b) Test by dropping on top chime, or other part considered to be weaker, with drum filled to normal loading depth and to the gross weight at which container is marked with dry powdered material, and topped with at least two inches of a finely divided, dry, free-flowing powder of the following sieve analysis:

% retained on 42 mesh—Trace (max.)
% retained on 50 mesh—3% (max.)
% retained on 100 mesh—88% (min.)

A material such as sodium bicarbonate is recommended. Container shall be dropped from a height of 4 feet onto solid concrete so as to strike diagonally on the chime and so positioned when equipped with bolted ring type closure that crush pattern will terminate at closure joint. Closing devices and other parts projecting beyond chime or rolling hoops must be capable of withstanding this test. No disc or material other than regular gaskets in closure part is permitted for test purposes.

§ 178.132 Specification 37B; steel drums. Single-trip container. Removable head not authorized.

§ 178.132-1 Compliance. (a) Required in all details.

§ 178.132-2 Rated capacity. (a) Rated capacity as marked, see §178.132-9(a)(2). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent for containers not over 12 gallons capacity. Maximum actual capacity of containers not over 12 gallons capacity shall be not greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater; for others, minimum actual capacity shall be not less than rated (marked) capacity plus 2 percent and maximum actual capacity shall not be greater than rated (marked) capacity plus 3 percent or rated (marked) capacity plus 2 percent plus 1 quart whichever is the greater.

§ 178.132-3 Composition. (a) Sheets for body and heads to be hot-rolled or cold-rolled, low carbon, open hearth, or electric steel of standard commercial quality.

§ 178.132-5 Seams. (a) Side seams may be welded, Gordon lock, or other equally efficient construction.

§ 178.132-6 Capacities, weights, type and gauges. (a) Capacities, weights, type and gauges must be as follows:

Marked capacity not over (gallons)	Authorized gross weight not over (pounds)	Type of container	Minimum thickness, uncoated sheets (gauge)	
			Body sheet[1]	Head sheet
5	50	Straight side	28	28
55	275	do	26	26
55	450	do	24	24
55	650	do	22	22[2]

[1] Containers of 16 gallons capacity and over must have small or series corrugations rolled into the shell or two swedged or corrugated rolling hoops.
[2] Twenty four (24) gauge top head and cover authorized.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
22	0.0299	0.0269
24	0.0239	0.0209
26	0.0179	0.0159
28	0.0149	0.0129

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.132-7 Closures. (a) Closures shall be of any type that will withstand prescribed drop tests without leakage, see §178.132-11 of this section. Openings shall not exceed 9 inches in diameter in containers of 16-gallon capacity and larger nor 6½ inches in diameter in containers less than 16-gallon capacity. Larger openings may be used when approved by the Director, OHMT.

§ 178.132-8 Defective containers. (a) To be repaired by method used in constructing container except that Gordon lock, or other similarly constructed seam must be welded. Soldering not authorized.

§ 178.132-9 Marking. (a) Each drum must be marked by embossing on a permanent head (or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter of the plate) with clearly legible raised characters as follows:

(1) DOT–37B * * *. Stars to be replaced by the authorized gross weight, or less, at which the drum was type tested (for example, DOT–37B450, etc.) and the letters STC located near the DOT mark to indicate a single-trip drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18–55–83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18/16–55–83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.132-10 [Reserved]

§ 178.132-11 Type test. (a) Samples taken at random and closed as for use, shall withstand the prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. The type test is as follows:

(b) Test by dropping on top chime, filled with dry finely powdered material to the gross weight at which container is marked, from a height of 4 feet onto solid concrete so as to strike diagonally on the chime and so positioned as to strike, in the case of offset openings, at the point on the chime nearest the opening. Closing devices and other parts projecting beyond chimes must also be capable of withstanding this test.

§ 178.133 Specification 37P; steel drums with polyethylene liner. Nonreusable containers.

§ 178.133-1 Compliance. (a) Required in all details.

§ 178.133-2 Rated capacity of assembled composite containers. (a) Rated capacity as marked, see §178.133-9. Maximum

actual capacity of containers shall be not less than rated (marked) capacity, plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity, plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

§ 178.133-3 Steel composition. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.133-4 Seams. (a) Side seams welded.
(b) Chime of permanent head, double seamed.

§ 178.133-5 Parts and dimensions for steel drums. (a) Parts and dimensions for steel drums shall be as follows:

Drums for plastic liner of rated capacity not over (gallons)	Type of container[1,2]	Body sheet (gauge)	Bottom head sheet (gauge)	Removable head sheet (gauge)	Type of removable head closure
5	Straight side, single bead[3]	26	26	24	Ring seal, bolted ring, lug cover
6½	Straight side, single bead[3]	24	24	24	Ring seal, bolted ring, lug cover
15	Straight side[3]	22	22	18[4]	Ring seal, bolted ring, lug cover

[1] Drum interior shall be free of projections, burrs, or any edges that will cause damage to liners and shall be free of lubricants, oil, or other foreign matter. Drum shall provide a snug fit for the plastic liner.
[2] One hole not over 1¼ inch in diameter permitted in body or a head, or two ¾ inch holes in bottom head near the chime.
[3] For containers up to 10 gallons capacity a single rolled or swedged bead in body near top curl required, for containers of 10 gallons and greater capacity, 2 rolled or swedged rolling hoops in drum body required.
[4] Twenty (20) gauge authorized.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
18	0.0418	0.0378
20	0.0359	0.0324
22	0.0299	0.0269
24	0.0239	0.0209
26	0.0179	0.0159

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from edge.

§ 178.133-6 Liner. (a) Each metal drum shall contain a contour fitting polyethylene liner having heat-sealed seams or a one-piece seamless molded polyethylene unit, attached to the pour opening in the removable head so as to provide a container that is completely resistant to lading when closed as for use.
(b) Polyethylene liner or molded unit shall be fabricated throughout of virgin polyethylene tubing or mold material, which may include a low percentage of elastomeric polymer having minimum thickness of 0.010 inch and having the following physical properties:
(1) Resin should have a maximum melt index value of 1.8 plus 0.4 per 10 minutes, and shall have a minimum average molecular weight of 21,000.

§ 178.133-7 Closure. (a) Closure shall be resistant to lading and adequate to prevent leakage. Openings in removable head shall not be over 2.85 inches in diameter. Venting closures are permitted when required by Part 173.

§ 178.133-8 Defective containers. (a) Repaired polyethylene liners are not authorized.

§ 178.133-9 Marking. (a) Each drum must be marked by embossing on a permanent head with clearly legible raised characters as follows:
(1) DOT-37P and the letters NRC located near the DOT mark to indicate a nonreusable drum.
(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.
(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.
(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18-16-55-83 for body 18 gauge and head 16 gauge).
(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.133-10 [Reserved]

§ 178.133-11 Type tests. (a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made or for one year, whichever period is shorter. No single container shall be expected to withstand more than one of the following:
(1) Diagonal drop on top chime.
(2) Diagonal drop on bottom chime.
(3) Flat drop on side of drum.
(b) Completely assembled composite containers of each size manufactured, filled to 98 percent of actual capacity with water, shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using vertical double-amplitude (peak-to-peak displacement) of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

§ 178.133-12 Test. (a) Each assembled container shall be tested by retaining at least 1½ pounds per square inch air pressure at equilibrium without showing pressure drop on a suitable gauge.

---

§ 178.134 Specification 37M; cylindrical steel overpack, straight sided for inside plastic container. Nonreusable containers.

§ 178.134-1 Material requirements. (a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 178.134-2 Construction requirements. (a) Construction requirements are as follows:

Rated capacity of inside plastic container not over (gallons)	Minimum thickness, uncoated sheets (gauge)		Body seams	Rolling hoops	Top or bottom head	Closures, when full removable head is used (gaskets not required)
	Body sheet	Head sheet				
5	26	26	Welded	None required	Double seamed	Lug or plain ring seal
15	24	24	Welded	Rolled or swedged	Double seamed	Lug or plain ring seal
30	24	24	Welded	Rolled or swedged	Double seamed	Bolted type ring closure, 18 gauge
55	24	24	Welded	Rolled or swedged	Double seamed	Bolted type ring closure, 16 gauge

(b) Steel sheets or parts of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
16	0.0598	0.0533
18	0.0478	0.0428
24	0.0239	0.0209
26	0.0179	0.0159

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

(c) Two holes not exceeding ¼ inch each are permitted diametrically opposite each other in the overpack body immediately below the top chime or immediately above the double seam of the bottom chime or three holes not exceeding ¾ inch in a diameter on centers 120 degrees apart in the bottom head.
(1) Overpack interior shall be free of projections, burrs, or any edges that might cause damage to inside plastic container and shall be free of lubricants, oils, or any foreign matter.
(2) Top head may have not more than two holes of suitable size to provide for protruding closures.
(3) Overpack shall be constructed to provide snug fit for inside plastic container.

§ 178.134-3 Tests. (a) Steel overpack when assembled as for use, shall withstand the tests prescribed in specifications for inside plastic containers as detailed in Part 178 when authorized as combination packages in Part 173. The completed package must withstand these tests without producing a condition of the overpack that could result in potential damage to the inside container.

§ 178.134-4 Marking. (a) Each steel overpack must be marked by embossing on a permanent head with clearly legible raised characters as follows:
(1) DOT-37M and the letters NRC located near the DOT mark to indicate a nonreusable overpack.
(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.135 Specification 37C; steel drums. Non-reusable container. Removable head required.

§ 178.135-1 Compliance. (a) Required in all details.

§ 178.135-2 Rated capacity. (a) Rated capacity as marked (see § 178.135-8). Maximum actual capacity of containers shall be not greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

§ 178.135-3 Composition. (a) Sheets for body and heads to be hot-rolled or cold-rolled, low carbon, open-hearth or electric steel of standard commercial quality.

§ 178.135-4 Seams. (a) Side seams must be welded.

§ 178.135-5 Capacities, weights, type and gauges. (a) Capacities, weights, type and gauges must be as follows:

Marked capacity not over (gallons)	Authorized gross weight not over (pounds)	Type of container	Minimum thickness, uncoated sheets (gauge)		
			Body sheet	Bottom head sheet[1]	Removable head sheet[2,3]
5	80	Straight Side ...	28	28	26

[1] Bottom head must have three inwardly embossed circumferential beads.
[2] Removable head must have two inwardly embossed circumferential beads.
[3] Removable head must have not less than 16 lugs spaced not more than 1¼ inch apart.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness[1] (inch)	Minimum thickness[1] (inch)
26	0.0179	0.0159
28	0.0149	0.0129

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

§ 178.135-6 Closures. (a) Closures shall be capable of withstanding test prescribed by § 178.135-10. Removable head may be equipped with leakproof fittings for filling.

§ 178.135-7 Defective containers. (a) Defective containers to be repaired by method used in constructing container.

§ 178.135-8 Marking. (a) Each drum must be marked by embossing on a permanent head with clearly legible raised characters as follows:

(1) DOT-37C*** and the letters NRC, located near the DOT mark to indicate a nonreusable drum. Stars are to be replaced by the authorized gross weight, or less, at which the container was type tested (for example, DOT-37C80).

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of the body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.135-9 [Reserved]

§ 178.135-10 Type test. (a) Samples taken at random and closed as for use, shall withstand the prescribed test without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(b) Test by dropping on top chime, or other part considered to be weaker, with drum filled to normal loading depth and to the gross weight at which container is marked with dry powdered material, and topped with at least two inches of a finely divided, dry, free-flowing powder of the following sieve analysis:

% retained on 42 mesh—Trace (maximum)
% retained on 50 mesh—3% (maximum)
% retained on 100 mesh—68% (minimum)

A material such as sodium bicarbonate is recommended. Container shall be dropped from a height of 4 feet onto solid concrete so as to strike diagonally on the chime. Closing devices and other parts projecting beyond chime or rolling hoops must be capable of withstanding this test. No disc or material other than regular gaskets in closure part is permitted for test purposes.

§ 178.136 [Reserved]

§ 178.137 Specification 37D; steel drum. Non-reusable container. Open-head not authorized.

§ 178.137-1 General requirements. Each drum must meet the applicable requirements of § 173.24.

§ 178.137-2 Rated capacity. (a) Rated capacity is 55 gallons, as marked (see § 178.137-6).

(b) Actual capacity must be the rated capacity plus 4-5 percent.

§ 178.137-3 General construction requirements. (a) Chime reinforcement. The top and bottom chimes must be reinforced with a steel band that is an integral part of the double seam and which provides a chime cross section containing at least eight layers of steel. The reinforcing band must follow and support the knuckle radius of the head with the inside edge upturned so that the edge does not contact the adjacent portions of the head.

(b) Seams. The body side seam must be welded.

(c) Sidewall construction. A continuous series of parallel, geometrically similar circumferential beads must be expanded in the drum sidewall so that the surface length of the steel in the axial direction does not change more than 1 per cent during forming.

(d) Steel thickness. (1) The thickness of the body and heads of the finished drum must be at least 23-gauge.

(2) The chime reinforcement must be made of at least 18-gauge steel.

(e) Heads. Heads must be flat. Openhead drums are not authorized.

§ 178.137-4 Closure. (a) The closing part (plug, cap, plate, etc.) must be of steel at least 23-gauge thickness, or other material of equivalent strength. Gaskets are required. Cap seals may be placed over the closure.

(b) For closures with threaded plug or cap, the seat (e.g., flange) for the plug or cap must have three or more threads. Two drainage holes of not over ⅜-inch diameter are authorized. The plug or cap must have a sufficient length of thread to engage at least three threads when securely tightened with the gasket in place.

(c) The maximum permitted closure opening is 2.7 inches in diameter.

§ 178.137-5 Defective drums. Defects or damage must be repaired by the method used in constructing the drum. Soldering is not authorized.

§ 178.137-6 Marking. (a) Each drum must be marked by embossing on a permanent head with clearly legible raised characters as follows:

(1) DOT-37D and the letters NRC located near the DOT mark to indicate a nonreusable drum.

(2) If the drum is manufactured of stainless steel, the type of steel used in the body and head sheets as identified by the American Iron and Steel Institute type number, and also the letters HT following the steel designation on barrels or drums subjected to stress relieving or heat treatment during manufacture (for example, 304, 316, 304 HT). This mark should be near the DOT mark.

(3) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(4) The gauge of the metal in the thinnest part, the rated capacity in gallons, and the year of manufacture (for example, 18-55-83). When the gauge of the metal in the body differs from that in the heads, both must be indicated with a slanting line between them and with the gauge of the body indicated first (for example, 18.16-55-83 for body 18 gauge and head 16 gauge).

(b) For the purpose of this subchapter, the minimum character size specified in § 173.24(c)(1)(iv) is waived.

§ 178.137-7 Tests. (a) [Reserved]

(b) Samples taken at random and closed as for use, shall withstand the prescribed test without leakage. Each packaging design type must successfully pass the tests before the packaging is used. The tests must be repeated every 4 months. A packaging design type is defined by the design, size, material, thickness, and manner of construction, but may include various surface treatments. A type may also include packagings which differ from the design type only in their lesser design heights. The samples last tested must be retained until further tests are made, or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Drop test. Test by dropping, filled with water to 98 percent capacity, from a height of 4 feet onto a solid unyielding surface (e.g.,

concrete or steel) so as to strike the surface diagonally on the chime. Additional similar drops must be made on any other parts of the drum which might be considered weaker than the chime. Closing devices and other parts projecting beyond the chime or sidewall beads must also be capable of withstanding this test.

(2) **Pressure test.** Hydrostatic pressure test of at least 15 pounds per square inch, sustained without pressure drop for at least 5 minutes.

(c) **Leakage test.** Each drum must be tested for leakage with seams under water, or covered with soapsuds or heavy oil, or equivalent material. Interior air pressure of at least 7 pounds per square inch must be applied, and the seams and chimes examined for evidence of leakage. Leaking drums must be rejected, or repaired (see §178.137-5) and retested.

§ 178.140

§ 178.140 Specification 13; metal kegs.

§ 178.140-1 Compliance. (a) Required in all details.

§ 178.140-2 Composition. (a) To be open-hearth or electric steel, annealed dead soft; carbon not over 0.14 percent.

§ 178.140-3 Parts and dimensions. (a) Parts and dimensions as follows:

	Gross weight of kegs and contents			Over 75 pounds but not over 150 pounds
	Not over 15 pounds	Not over 30 pounds	Over 30 pounds but not over 75 pounds	
Thickness of material				
Body	30 gauge	28 gauge	24 gauge	24 gauge
Head	... do ...	... do ...	26 gauge	26 gauge
Width of lap for side seam[1]	5/16 inch	7/16 inch	7/16 inch	1/2 inch
Number of corrugations in each end of body	3	3	5	7
Minimum depth of corrugations	1/16 inch	3/32 inch	3/32 inch	3/32 inch
Width of laps on body and head seams[1]	3/16 inch	3/16	3/16 inch	5/16
Width of laps on head for head seams[1]	5/16	3/8 inch	3/8 inch	3/4 inch
Head seams	Double lap	Double lap	Double lap	Single lap

[1] Dimension requirements do not apply for kegs manufactured with double seamed, compound-lined chime seams and lapped and soldered side seam.

Note: Dimensions of materials specified are minimum requirements. Corrugations not required in body of kegs for gross weights not over 7 pounds.

§ 178.140-4 Seams. (a) For gross weight over 75 pounds, all seams welded, brazed, soldered, or riveted, rivets at not over 5" centers.

§ 178.140-5 Closures. (a) *Slide type.* Metal holder, for slide, securely fastened to head; washer of suitable material 0.025" thick; metal drop with depression to fit into bunghole and hold washer in place; metal slide to cover the foregoing. Positive fastening required between slide and slide holder to prevent leakage in transit; friction fastening not authorized.

(b) *Cap or plug type.* Metal holder, for cap or plug, securely fastened to head; metal cap or plug, with gasket when necessary to prevent sifting. Positive fastening required between cap, or plug, and holder to prevent leakage in transit; friction fastening not authorized.

§ 178.140-6 Marking. (a) Each metal keg must be marked by embossing on a permanent head with clearly legible raised characters as follows:

(1) DOT-13.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.140-7 [Reserved]

§ 178.140-8 Type test.

(a) Keg filled with fine, dry sand in weight equal to that of shipment must be capable of withstanding, without leakage, four successive drops of 4 feet on the head onto solid concrete. Tests to be made of each type and size by each company manufacturing this type of container and to be repeated every 6 months while in production. If production is discontinued and is resumed, this requirement will also apply if prescribed tests have not been made within the previous 6-month period. Samples last tested to be retained until further tests are made or for 1 year, whichever period is shorter.

§ 178.140-9 Filling with contents.

(a) **Lining.** Cloth bag lining required for a gross weight over 32 pounds; neck of bag to be securely tied.

§ 178.140-10 Additional keg.

(a) **Stove-pipe keg.** Authorized only for shipments loaded by the shipper and to be unloaded by consignee and for a gross weight of not over 30 pounds. Must comply with all requirements, except §178.140-5, and also with the following:

(1) Length to be about 4 times diameter; cap (slip cover) to have snug fit over body with 3" overlap.

(2) Contents to be enclosed in double paper tubes, with pasted seams, not over 2½" diameter and made of tough manila paper weighing at least 50 pounds per 480 sheets 24" x 36"; outside tube to be waxed. Ends of tubes to be folded and tucked between folds of tube to prevent leakage.

§ 178.141 Specification 13A; metal drums.

§ 178.141-1 Compliance. (a) Required in all details.

§ 178.141-2 Type. (a) Straight sided; authorized only for material cast solid and with filling end head applied after material is loaded and closed in the manner prescribed in §178.141-6. No other openings permitted.

§ 178.141-3 Composition. (a) To be low carbon, open-hearth or electric steel.

§ 178.141-4 Heads and body. (a) **Heads.** To be not less than 28 gauge United States standard.

(b) **Body.** To be not less than 28 gauge United States standard.

§ 178.141-5 Seams. (a) Must be welded.

§ 178.141-6 Heads. (a) To be attached by means of double lapped-seam.

§ 178.141-7 Marking. (a) Each drum must be marked by embossing on a permanent head with clearly legible raised characters as follows:

(1) DOT-13A.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section. A symbol, if used, must be registered with the Director, OHMT.

(b) For the purpose of this subchapter, the minimum character size specified in §173.24(c)(1)(iv) is waived.

§ 178.141-8 Type tests. (a) Drum filled and closed as for shipment must be capable of withstanding, without rupture, 4 successive drops of 4 feet on the head onto solid concrete.

(b) Drum must be capable of withstanding hydrostatic pressure test of 30 pounds per square inch, sustained for 5 minutes.

(c) Tests to be made of each type and size by each company manufacturing this type of container and to be repeated every six months while in production. If production is discontinued and is resumed, this requirement will also apply if prescribed tests have not been made within the previous six-month period. Samples last tested to be retained until further tests are made or for one year whichever period is shorter.

§ 178.146 Specification 32A; metal cases, riveted or lock-seamed.

§ 178.146-1 Compliance. (a) Required in all details.

§ 178.146-2 Gauge standards. (a) United States standard for sheet metal; American or Brown and Sharpe for wire.

§ 178.146-3 Covers. (a) To have at least 1" lap on body and to fit with clearance not over 1/32"; lapped corners to be welded.

§ 178.146-4 Edge protection. (a) Open edges of body must be turned or rolled inward, front open edge of cover must be turned or rolled outward. Not required for material at least 20-gauge thick or for "trailer" cases.

§ 178.146-5 Bottom protection. (a) Face on which case will ordinarily rest must be reinforced with continuous angle strips, or be fitted with truck corners, or be double thickness along edges. Not required for cases of at least 20-gauge metal or of not over 1 reel capacity or for "trailer" cases.

§ 178.146-6 Hinges. (a) To be of continuous loop type with loops of steel wire at least 7-gauge, welded; hinge straps at least 18-gauge securely welded or riveted.

§ 178.146-7 Carrying handles. (a) Any type of adequate strength.

§ 178.146-8 Closing devices. (a) To be of sufficient strength and efficiency to prevent injury or unfastening in tests (§178.146-14) or in transit.

§ 178.146-9 Rivets. (a) At least 3/32" diameter; length to furnish efficient heads; split rivets not authorized except for attachment of lining.

§ 178.146-10 Rivet reinforcement. (a) Hinges, fastening devices, and handles, when riveted in place, must have additional inside reinforcement of steel, at least as thick as in case, through which rivets must pass. Not required when case is made of at least 20-gauge material throughout.

§ 178.146-11 Lining. (a) Required throughout; to be hard-surfaced fiberboard at least 0.125" thick and with strength of 800 pounds, Mullen or Cady test, or wooden lining at least 0.25" thick.

§ 178.146-12 Metal partitions. (a) Metal partitions (when used) to be as thick as body of case, permanently fastened to the case, and lined the same as the case.

§ 178.146-13 Protective coating. (a) Steel cases must be of galvanized material or protected from corrosion by paint, lacquer or other adequate coating.

§ 178.146-14 Type tests. (a) Cases completely filled as for shipment must be capable of withstanding 4 successive drops onto solid concrete from a height of 6 feet without rupture of case or permanent damage to or unfastening of closing device. Tests to be made by dropping on cover, seam, or any corner.

§ 178.146-15 Marking. (a) Marking on each container by the maker with plain and permanent marks at least ½" high as follows:
(1) DOT-32A.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.146-16 Cases with capacity (approx.) not over 9,000 feet of 1¾" film. (a) Compliance with §§178.146-1 to 178.146-15 required. Seams to be lockseams or riveted. Material to be steel, at least 20-gauge. 2 hinges, 1 fastening device, and 1 carrying handle required.

§ 178.146-17 Cases with capacity (approx.) not over 8,000 feet of 1¾" film or 4,500 feet of 2½" film. (a) Construction as in §178.146-16, except: 22-gauge material authorized; 1 hinge authorized for single-reel cases.

§ 178.146-18 Cases with capacity not over 1 reel of 10" diameter. (a) Construction as in §178.146-16, except: 24-gauge material and 1 hinge authorized.

§ 178.146-19 Cases with capacity not over 500 feet of film: "Trailer Cases." (a) Construction as in §178.146-16, except, 26-gauge material and 1 hinge of any type authorized.

---

§ 178.147 Specification 32B; metal cases, welded or riveted.

§ 178.147-1 Compliance. (a) Required in all details.

§ 178.147-2 Gauge standards. (a) United States standard for sheet metal; American or Brown and Sharpe for wire.

§ 178.147-3 Covers. (a) To have at least 1" lap on body and to fit with clearance not over 5/32"; lapped corners to be welded.

§ 178.147-4 Edge protection. (a) Open edges of body must be turned or rolled inward, front open edge of cover must be turned or rolled outward. Not required for material at least 20-gauge thick or for "trailer" cases.

§ 178.147-5 Bottom protection. (a) Face on which case will ordinarily rest must be reinforced with continuous angle straps, or be fitted with trunk corners, or be double thickness along edges. Not required for cases of at least 20-gauge metal or of not over 1 reel capacity or for "trailer" cases.

§ 178.147-6 Hinges. (a) To be of continuous loop type with loops of steel wire at least 7-gauge, welded; hinge straps at least 18-gauge securely welded or riveted.

§ 178.147-7 Carrying handles. (a) Any type of adequate strength.

§ 178.147-8 Closing devices. (a) To be of sufficient strength and efficiency to prevent injury or unfastening in tests (§178.147-14) or in transit.

§ 178.147-9 Rivets. (a) At least 5/32" diameter; length to furnish efficient heads; split rivets not authorized except for attachment of lining.

§ 178.147-10 Rivet reinforcement. (a) Hinges, fastening devices, and handles, when riveted in place, must have additional inside reinforcement of steel, at least as thick as in case, through which rivets must pass. Not required when case is made of at least 20-gauge material throughout.

§ 178.147-11 Lining. (a) Required throughout; to be hard-surfaced fiberboard at least 0.125" thick and with strength of 800 pounds, Mullen or Cady test, or wooden lining at least 0.25" thick.

§ 178.147-12 Metal partitions. (a) Metal partitions (when used) to be as thick as body of case, permanently fastened to the case, and lined the same as the case.

§ 178.147-13 Protective coating. (a) Steel cases must be of galvanized material or protected from corrosion by paint, lacquer, or other adequate coating.

§ 178.147-14 Type tests. (a) Cases completely filled as for shipment must be capable of withstanding 4 successive drops onto solid concrete from a height of 6 feet without rupture of case or permanent damage to or unfastening of closing device. Tests to be made by dropping on cover, seam, or any corner.

§ 178.147-15 Marking. (a) Marking on each container by the maker with plain and permanent marks at least ½" high as follows:
(1) DOT-32B.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.147-16 Cases with capacity (approximate) not over 12,000 feet of 1¾" film or 6,000 feet of 2½" film. (a) Compliance with §§178.147-1 to 178.147-15 required. Seams to be welded or riveted. Material to be steel, or aluminum-manganese alloy, at least 18-gauge. 2 hinges, 2 fastening devices spaced as for hinges, and 2 carrying handles required.

§ 178.147-17 Cases with capacity (approximate) not over 9,000 feet of 1¾" film. (a) Compliance with §§178.147-1 to 178.147-16, except: 1 fastening device and 1 carrying handle authorized.

§ 178.147-18 Cases with capacity (approximate) not over 8,000 feet of 1¾" film or 4,500 feet of 2½" film. (a) Construction as in §178.147-16, except: 20-gauge material, 1 fastening device, and 1 carrying handle authorized; 1 hinge authorized for single-reel cases. Detachable covers (no hinges) with ¾" lap on body and efficiency to prevent displacement in tests, are authorized. Trailer cases, capacity not over 500 feet of film, no handle required. Cover lap not less than full one-half inch.

---

§ 178.148 Specification 32C; metal trunks.

§ 178.148-1 Design. (a) To be designed to contain film in film-reel cans and projecting apparatus only; other articles not authorized therein.

§ 178.148-2 Strength. (a) To be of strength and efficiency to carry contents in ordinary handling without damage to trunk or contents.

§ 178.148-3 Compartments. (a) Separate compartments required for each reel of film and for projecting apparatus; each compartment to be constructed so that, in closing, it will have no cracks or openings.

§ 178.148-4 Compartment linings. (a) Each film compartment to be made of, or lined throughout with, sheet metal; this metal to be protected against contact with film-reel can by a substantial interlining of fiberboard or equivalent.

§ 178.148-5 Marking. (a) Marking on each container by the maker with plain and permanent marks at least ½" high applied on 2" by 4" metal plate securely riveted to top of cover of trunk as follows:
(1) DOT-32C.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

---

§ 178.149 Specification 32D; metal boxes for old and worn-out motion-picture film no longer exhibitable.

§ 178.149-1 Compliance. (a) Required in all details.

§ 178.149-2 Gauge standards. (a) United States standard for sheet metal; American or Brown and Sharpe for wire.

§ 178.149-3 Material. (a) Material to be steel; body and bottom at least 16-gauge; cover at least 18-gauge.

§ 178.149-4 Joints and seams. (a) All joints and seams to be welded or riveted.

§ 178.149-5 Cover. (a) Cover must be tight-fitting, to prevent entrance of sparks, with provision for secure fastening to be locked or sealed.

§ 178.149-6 Type tests. (a) Cases completely filled as for shipment must be capable of withstanding 4 successive drops onto solid concrete from a height of 4 feet without rupture of case or permanent damage to or unfastening of closing device. Tests to be made by dropping on cover, seam, or any corner.

§ 178.149-7 Marking. (a) Marking on each container by the maker with plain and permanent marks at least ½" high as follows:
(1) DOT-32D.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.150 Specification 33A; polystyrene cases. Nonreusable containers.

§ 178.150-1 Material requirements. (a) Expandable polystyrene, molded to produce a completely fused closed cell composition having a minimum density of 1.25 pounds per cubic foot.

§ 178.150-2 Design. (a) The case is to consist of two parts, a bottom section with pockets for the inside containers and a top section that covers, and interlocks with, the bottom section. Both the bottom and top sections shall be designed to provide a snug fit for the inside containers.

§ 178.150-3 Construction. (a) The case shall be constructed in accordance with the following minimum thicknesses:

(1) Multiple bottle cases, not more than 4 individual bottles per case:

	Nominal capacity of individual inside containers	
	5 pints	1 gallon
Side wall and bottom, inches	3/4	1
Between inside containers, inches	5/8	5/8
Top, inches (see Note 1)	3/4	1

Note 1: In recess for closure cap for inside container, one fourth inch thickness is permissible; closure cap shall not be in contact with inside of top section.

(2) Single bottle cases:

	Nominal capacity of inside containers			
	Pint	Quart	5 Pints	Gallon
Side wall, inches	5/8	5/8	3/4	1 1/2
Top wall, inches (See Note 1)	3/4	3/4	3/4	1
Bottom wall, inches	1	1	3/4	1 1/2

Note 1: In the recess for the closure cap for the inside container, 1/4 inch thickness is permissible, the closure cap shall not be in contact with the inside of the top wall.

§ 178.150-4 Closing for shipment. (a) Cases shall be closed for shipment with a pressure-sensitive tape having a tensile strength of not less than 55 pounds per inch of width or tape of equivalent strength. The tape shall completely encircle the case, with overlap of not less than one inch, in one direction so as to transverse the joint of the two sections perpendicularly. If the design of the case is such that the tape is subject to abrasion in transportation and handling, tape shall also be applied similarly on the same axis, but at 90°.

(b) Each case shall be closed for shipment with pressure-sensitive tape, non-metallic strapping, or other efficient means if they perform without failure under the tests prescribed by this section.

§ 178.150-5 Gross weight authorized. (a) Multiple bottle case, 60 pounds maximum.

(b) Single bottle case, 20 pounds maximum.

§ 178.150-6 Test for completed package. (a) Cases, with inside containers filled with water enclosed as for shipment, shall be capable of withstanding 4-foot flat drops onto solid concrete without leakage from or breakage of any inside container, and without producing any condition that would result in potential damage to the inside container. A minimum of 4 cases shall be tested, each case not being subjected to more than one test. Each test is to consist of six 4-foot drops once each side, bottom and top.

(b) Tests prescribed by paragraph (a) of this section must be conducted by the shipper assembling the completed package prior to initial use, and each 6 months thereafter. The tests must also be repeated on the change of any components or design of the package. Records of tests and results must be maintained for at least one year.

§ 178.150-7 Marking. (a) Each container must be marked as follows:

(1) DOT-33A.

(2) The letters "NRC", located just above or below the DOT mark, to indicate a nonreusable container.

(3) Name or symbol of person making the other marks specified in this section and located on the same face as those other marks. Symbol, if used, must be registered with the Director, OHMT.

(4) Size or markings: Specification markings prescribed in this section must be at least 1/4 inch high. All markings must be legible.

SUBPART E

SPECIFICATIONS FOR WOODEN BARRELS, KEGS, BOXES, KITS, AND DRUMS

§ 178.156 Specification 10B; wooden barrels and kegs (light).

§ 178.156-1 Compliance. (a) Required in all details.

§ 178.156-2 Staves and headings. (a) To be of white oak, chestnut oak, red oak, black cherry, Douglas fir, beech, sweet birch, yellow birch, sugar (hard) maple, or Scandinavian pine; quarter sawed with the grain, from straight-grained timber, so no annual ring shall slope over half the thickness of stave or head; thoroughly kiln dried, moisture content 7 percent to 11 percent; free from rotten sap, checks, pitch pockets, cat faces, seed and worm holes in excess of 15 in one container, and other defects that show through on both sides.

§ 178.156-3 Hoops. (a) To be of cooperage-grade hoop steel.

§ 178.156-4 Staves. (a) Staves to be sawed evenly and circular; croze center to be within 1/16" of end of stave; stave end to have 1/8" free from bevel.

§ 178.156-5 Heading. (a) Heading of uniform thickness and properly circled; planed on outside and properly jointed and glued, or doweled and flagged; dowel diameter not over 1/3 thickness of head.

§ 178.156-6 The barrel. (a) Stave joints reasonably flush on outside. Lathing is forbidden.

(b) Worm and seed holes to be plugged; over 15 not authorized in one container.

§ 178.156-7 Parts required and dimensions. (a) Parts required and dimensions as follows (10 percent excess capacity authorized):

(1) Staves, when finished on outside:

Capacity of container, not over	Maximum			Minimum	
	Length	Width	Bilge circle	Staves	Thickness
Gallons	Inches	Inches	Inches	Number	Inch
50	34	6	84	19	11/16
30	30	5	74	16	5/8
15	24	4 1/2	54	14	9/16
10	22	4 1/4	50	12	1/2
5	18	4	40	10	1/2

Foregoing thicknesses are of staves finished on one side. One-sixteenth inch must be added for unfinished staves.

Foregoing maximum lengths are authorized to be increased 6 percent or less provided the thickness of stave is increased at least one-sixteenth inch for each increase of 1 inch in length or fraction thereof.

(2) Heading, after planing:

Capacity of container, not over	Maximum		Minimum	
	Pieces	Diameter	Thickness	Width
Gallons	Number	Inches	Inch	Inches
50	6	21	3/4	2 1/2
30	6	18	5/8	2 1/2
15	5	14	9/16	2
10	5	13	1/2	2
5	4	11	1/2	2

NOTE 1: Until further order of the Department, for barrels of not over 50 gallons capacity, maximum number of pieces may be 7 provided they have a minimum thickness of 7/8 inch.

(3) Hoops, number and size:

Capacity of container, not over (gallons)	Minimum number of hoops	Minimum size of hoops (inches in width and Birmingham gauge)							
		Head		First quarter		Second quarter		Bilge	
		Inch	Gauge	Inch	Gauge	Inch	Gauge	Inch	Gauge
50	8[1]	[3] 1¾	[3] 17	1½	18	1½	18	[3] 1¾	[3] 17
30	6	1½	18	1¼	19	.....	.....	1½	18
15	6	1¼	19	1¼	19	.....	.....	1¼	19
10	6	1¼	19	1	19	.....	.....	1¼	19
5	6[2]	1	19	1	19	.....	.....	1	19

[1] Until further order of the Department, the minimum number of hoops is authorized to be reduced to 6 by eliminating second quarter hoops.
[2] Until further order of the Department, the minimum number of hoops is authorized to be reduced to 4 by eliminating first quarter hoops if head and bilge hoops of 1¾ inch by 17 gauge are used.
[3] 2 inch by 18 gauge hoops are also authorized.

§ 178.156-8 Closures. (a) To be such as to prevent leakage in transit. Bung holes in staves must be not over 2" diameter.

§ 178.156-9 Lining. (a) To be as prescribed in Part 173 or otherwise appropriate for the contents.

§ 178.156-10 Type test. (a) Sample container at least 2 days old shall not increase more than 10 percent on diameter of head when all hoops above bilge are removed.

§ 178.156-11 Leakage test. (a) Required for each lined container, by pressure at time of sizing or air pressure of at least 5 pounds per square inch; leakers to be repaired and retested.

§ 178.156-12 Marking. (a) Marking on each container by the maker. By hot branding iron on head as follows:
(1) DOT-10B.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.
(3) Date of manufacture (for example 7-50 for July 1950) located near the maker's mark.

Note 1: Until further order of the Department, date of manufacture may be omitted.

§ 178.156-13 Size of markings. (a) Size of markings (minimum): ¾" high for over 30-gallon size, ½" for others.

---

§ 178.165 Specification 14; wooden boxes, nailed.

§ 178.165-1 Compliance. (a) Required in all details.

§ 178.165-2 Lumber. (a) White pine or wood of at least equal strength, well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

§ 178.165-3 Nails. (a) Cement coated, except as otherwise authorized, or screws of equal efficiency.

§ 178.165-4 Ends, sides, tops, and bottoms. (a) Ends, sides, tops, and bottoms, as follows:
(1) Parts of 1-piece.
(2) Parts Linderman-joint glued.
(3) Parts tongued, grooved, and glued.
(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing so as to assure full contact. After immersion in water for 24 hours at 70° F., the part must not fail at the joint when it is broken.
(b) Tongued, grooved and glued joints in uncleated ends must also be fastened with corrugated fasteners not over 8" apart, within 3" of each end of joint and having penetration ⅞ thickness of end.

§ 178.165-5 Cleated ends. (a) Double cleated, 2 vertical and 2 horizontal. Nails staggered at 2" intervals and clinched; cement coating not required.

§ 178.165-6 Sides, tops, and bottoms. (a) Of size to extend out over cleats, if any.

§ 178.165-7 Lock and dovetail corners. (a) Glued.

§ 178.165-8 Parts and dimensions. (a) Parts and dimensions as follows:

Authorized gross weight (maximum) (pounds)	Type of box	Thickness of lumber (minimum)				Nails (minimum size)[4]	
		Ends[1]	Sides	Tops and bottoms[2]	Cleats	Into ends or cleats	Into sides
		Inches	Inch	Inch	Inches	Penny	Penny
35	Lock[3] Corner	⅜	⅜	⅜	.....	5d	5d
65	Lock[3] Corner	½	½	⅜	.....	5d	5d
75	Plain Nailed	⅞	½	½	.....	7d	5d
75	Double Cleat	⅜	⅜	⅜	½ x 1½	5d	
140	Plain Nail	1⅛	⅝	⅝	.....	8d	7d
140	Lock[3] Corner	⅝	⅝	⅝	.....	7d	7d
140	Double Cleat	⅜	⅝	⅝	⅜ x 1⅞	7d	7d

[1] Or dowel.
[2] Tops and bottoms may be made of paper covered veneer board of good quality Douglas fir, or lumber of equal quality, having minimum thickness of ⅛" and free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength. Paper covering shall be at least Kraft untreated linerboard having a basis weight of 42 pounds per 1000 square feet and shall be secured to veneer core by adhesive in such manner as to form a satisfactorily laminated board. Board ends must be provided with such reinforcement as may be necessary to provide strength for nailing.
[3] As provided by § 173.65(a)(1), Note 1, boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅝ inches from top edge of end of box.
[4] Coated wire staples are authorized in lieu of nails when used for fastening tops to boxes. Staples must be of such size and spaced and driven as to provide closure efficiency equivalent to that in §§ 178.165-11 and 178.165-12.

§ 178.165-9 Joints in sides and ends. (a) Staggered; except for ends cleated as prescribed.

§ 178.165-10 Tops and bottoms. (a) Must fit evenly on frame of box.

§ 178.165-11 Cleated boxes. (a) Sides, top, and bottom must be secured to ends by nails driven into cleats, not into end boards.

§ 178.165-12 Nails in each nailing edge (minimum number). (a) At least equal to length of edge in inches divided by 2; when number of nails is at least equal to length of edge divided by 1¾, 4d nails are authorized where 5d nails are prescribed.

Exception: Eight inch spacing authorized for nailing tops and bottoms to sides.
Note 1: Until further order of the Department, the following exception is authorized for nailing tops to boxes. When 7d and 8d nails are required by § 178.165-8, 6d nails are authorized if number of nails used is at least equal to length of end edge divided by 1¾ and length of side edge divided by 6.

§ 178.165-13 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-14

(b) Each box must also be marked with the name or symbol of person making the mark specified in paragraph (a) of this section. Symbol, if used, must be registered with the Director, OHMT.

---

§ 178.168 Specification 15A; wooden boxes, nailed.

§ 178.168-1 Compliance. (a) Required in all details.

§ 178.168-2 Closed[1] box. (a) Parts and pieces to be in close contact.

§ 178.168-3 Ends. (a) One-piece, or equivalent (see § 178.168-5), or cleated as prescribed; joints tongued, grooved, and glued. Style 1 or style 6 boxes may have milled depressions in each end of box for hand-holds, of not more than ⅜ inch in depth and not exceeding one-third of the width of the box, only when ends are of lumber at least ⅞ inch in thickness.
(b) As provided by § 173.65(a)(1), Note 1, wooden boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅝ inches from top edge of end of box.

---

[1] Openings for filling device of inside container authorized if device is properly protected.

§ 178.168-4 Sides, top, and bottom. (a) Joints tongued, grooved, and glued, or one-piece equivalent, except that boxes for shipment of high explosives may have tops and bottoms made of paper-covered veneer board or good quality Douglas fir, or lumber of equal quality, having minimum thickness of ⅛ inch and free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength. Paper covering shall be at least Kraft untreated linerboard having a basis weight of 42 pounds per 1000 square feet and shall be secured to veneer core by adhesive in such manner as to form a satisfactorily laminated board. Board ends must be provided with such reinforcement as may be necessary to provide strength for nailing, and when used lumber thicknesses specified by § 178.168-12 do not apply.

§ 178.168-5 One-piece equivalents. (a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents): 1" wide; penetration ⅔ thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

§ 178.168-6 Gluing efficiency. (a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

§ 178.168-7 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

§ 178.168-8 Nails. (a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

§ 178.168-9 Grouping of principal woods. (a) Grouping as follows:

Group 1		
White pine	Sugar pine	Cedar
Norway pine	Cypress	Redwood
Aspen (popple)	Basswood	Butternut
Spruce	Willow	Cucumber
Western (yellow) pine	Noble fir	Alpine fir
Cottonwood	Magnolia	Lodgepole pine
Balsam fir	Buckeye	Jack pine
Yellow poplar	White fir	Mediterranean pine
Chestnut		

Group 2		
Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	

Group 3		
White Elm	Pumpkin ash	Tupelo
Red gum	Black gum	Maple—soft or silver
Sycamore	Black ash	

Group 4		
Hard maple	Hackberry	Hickory
Beech	Birch	White ash
Oak	Rock elm	

§ 178.168-10 Width of pieces. (a) At least 2½".

§ 178.168-11 Width of cleats. (a) Twice the prescribed thickness plus ¾".

§ 178.168-12 Thickness of lumber. (a) Nailed boxes not cleated (Style 1). Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6). Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; end as in Table 4.

(c) Single-cleated boxes (Style 4 or 5). Authorized gross weight not over 200 pounds, see Note 2. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3). Authorized gross weight not over 500 pounds, see Note 3. Sides as in Table 1; top and bottom as in Table 1A; end and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A; cleats as in Table 3B; ends not thinner than thickest side or top.

Note 1: When group II woods are used the gross weight may be increased to 110 pounds.

Note 2: When group II woods are used the gross weight may be increased to 220 pounds.

Note 3: When group II woods are used the gross weight may be increased to 550 pounds.

(e) Tables are as follows (dimensions of materials finished or resawed):

100	1	15/16	7/8	13/16	3/4	11/16

§ 178.168-13 Reduced thicknesses. (a) Reduction in thicknesses is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum 5/16" for boxes up to 35 pounds authorized gross weight and 3/8" above that weight.

(2) Ends or cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top and bottom when to be strapped as per §178.168-19(b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

Specified thickness (inches)	Reduced thickness corresponding to percent reduction		
	12½	20	35
1/32	1/16	1/16	1/16
3/64	1/32	1/16	1/16
1/16	3/64	1/32	1/16
3/32	1/16	3/64	1/16
1/8	3/32	1/16	3/32
5/32	1/8	3/32	5/64
3/16	5/32	1/8	3/32
7/32	3/16	5/32	5/64
1/4	7/32	3/16	3/32
9/32	1/4	7/32	3/16
5/16	9/32	1/4	7/32
11/32	5/16	9/32	7/32
3/8	5/16	5/16	1/4
25/32	11/32	5/16	1/4
13/16	11/32	5/16	1/4
7/8	3/8	11/32	9/32
15/16	13/32	3/8	5/16
1	7/8	13/32	5/16
1 1/16	15/16	7/8	11/32
1 1/8	1	7/8	3/8
1 3/16	1 1/16	15/16	25/32
1 1/4	1 1/8	1	13/16
1 5/16	1 1/8	1 1/16	7/8

§ 178.168-14 Assembly. (a) By nailing; screws, hinges and hasp, or other device of equal efficiency are authorized, nails should be driven flush.

§ 178.168-15 Nails and nailing. (a) Cement coated nails of size and with spacing detailed in §§ 178.168-16 and 178.168-17.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to the staggered and clinch 1/16"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

§ 178.168-16 Nails; kind and dimensions. (a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[2] in "penny" as follows:

Species of wood holding points of nails	Thickness of material holding points of nails (inches)										
	3/4 or less	13/16	7/8	15/16	1	1 1/16	1 1/8	1 3/16	1 1/4	1 5/16	1 3/8 or more
Group 1	4	5	5	6	7	7	8	8	8	9	10
Group 2	4	4	5	5	6	6	7	7	7	8	9
Group 3	3	4	4	5	5	6	6	7	7	7	8
Group 4	3	3	4	4	4	5	5	6	6	7	7

§ 178.168-17 Nail spacing[3]. (a) Nail spacing as follows:

Nails (size)	Maximum spacing when driven into end and cleats	
	Side grain	End grain
	Inches	Inches
Threepenny	1 1/2	1
Fourpenny	1 1/2	1 1/2
Fivepenny	1 3/4	1 1/2
Sixpenny	2	1 3/4
Sevenpenny	2 1/4	2
Eightpenny	2 1/2	2 1/4
Ninepenny	2 3/4	2 1/2
Tenpenny	3	2 1/2

§ 178.168-18 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-15A***

(1) The stars must be replaced by authorized gross weight (for example, DOT-15A100, etc.).

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 178.168-13(d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

DOT-15A

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(d) Each box must also be marked with the name or symbol of person making the other marks specified in this section. Symbol, if used, must be registered with the Director, OHMT.

(1) The "X's" must be replaced by authorized gross weights as authorized for the strapping conditions.

§ 178.168-19 Closing for shipment. (a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 178.168-16 and 178.168-17.

(b) Metal straps, as specified by marks on box, must encircle sides, top and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about 1/6 of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

Authorized gross weight (pounds)	Cross-section size when number of straps is—		
	1	2	3
	Inch	Inch	Inch
50	1/2 x 0.020	3/8 x 0.015	
100	3/4 x 0.020	1/2 x 0.018	
200	3/4 x 0.023	3/8 x 0.020	1/2 x 0.018
300		5/8 x 0.023	1/2 x 0.020
400		3/4 x 0.020	1/2 x 0.023
500		3/4 x 0.023	5/8 x 0.023

(5) Wires, Washburn and Moen gauge, authorized as follows:

Authorized gross weight (pounds)	Cross-section size when number of straps is—		
	1	2	3
50	12	14	
100	11	12	
200	9	11	12
300		10	11
400		10	11
500		9	10

§ 178.169 Specification 15B; wooden boxes, nailed.

§ 178.169-1 Compliance. (a) Required in all details.

§ 178.169-2 Closed[4] box. (a) Parts and pieces to be in close contact.

§ 178.169-3 Ends. (a) One-piece or equivalent (see § 178.169-5) or cleated as prescribed with joints tongued and grooved.

§ 178.169-4 Sides, top, and bottom. (a) Joints tongued and grooved, or one-piece equivalent.

§ 178.169-5 One-piece equivalents. (a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts at least ½" thick, tongued and grooved and fastened with 3 or more corrugated fasteners on each joint.

(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents): 1" wide; penetration 4/5 thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

§ 178.169-6 Gluing efficiency. (a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed ⅓ of thickness of material holding points of nails.

[3] To determine number of nails, divide length of nailing edge by spacing. Fractions greater than ½ are considered as whole numbers.

[4] Openings for filling device of inside container authorized if device is properly protected.

§ 178.169-7 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ⅓ its length.

§ 178.169-8 Nails. (a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

§ 178.169-9 Grouping of principal woods. (a) Grouping as follows:

Group 1

White pine	Sugar pine	Cedar
Norway pine	Cypress	Redwood
Aspen (popple)	Basswood	Butternut
Spruce	Willow	Cucumber
Western (yellow) pine	Noble fir	Alpine fir
Cottonwood	Magnolia	Lodgepole pine
Balsam fir	Buckeye	Jack pine
Yellow poplar	White fir	Mediterranean pine
Chestnut		

Group 2

Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	

Group 3

White Elm	Pumpkin ash	Tupelo
Red gum	Black gum	Maple—soft or silver
Sycamore	Black ash	

Group 4

Hard maple	Hackberry	Hickory
Beech	Birch	White ash
Oak	Rock elm	

§ 178.169-10 Width of pieces. (a) At least 2½".

§ 178.169-11 Width of cleats. (a) Twice the prescribed thickness plus ¾".

§ 178.169-12 Thickness of lumber. (a) Nailed boxes not cleated (Style 1). Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6): Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; ends as in Table 4.

(c) Single-cleated boxes (Style 4 or 5): Authorized gross weight not over 200 pounds, see Note 2. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3): Authorized gross weight not over 500 pounds, see Note 3. Sides as in Table 1; top and bottom as in Table 1A; end and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A; cleats as in Table 3B; ends not thinner than thickest side or top.

Note 1: When group II woods are used the gross weight may be increased to 110 pounds.

Note 2: When group II woods are used the gross weight may be increased to 220 pounds.

Note 3: When group II woods are used the gross weight may be increased to 550 pounds.

(e) Tables are as follows (dimensions of materials finished or resawed).

TABLE 1

Depth of box (inches)	Not over 8"	Not over 9"	Not over 10"	Not over 12"	Not over 14"	Over 14"

100	1	15/16	7/8	13/16	3/4	11/16

§ 178.169-13 Reduced thicknesses. (a) Reduction in thicknesses is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum 5/16" for boxes up to 35 pounds authorized gross weight and 3/8" above that weight.

(2) Ends or cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per §178.169-19(b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

Specified thickness (inches)	Reduced thickness corresponding to percent reduction		
	12½	20	35
5/32	1/8	1/8	1/8
5/16	5/32	1/8	1/8
11/32	5/16	5/32	1/8
3/8	5/16	5/16	1/8
7/16	3/8	11/32	5/32
1/2	7/16	3/8	5/16
9/16	1/2	7/16	3/8
5/8	9/16	1/2	7/16
11/16	5/8	9/16	7/16
3/4	5/8	5/8	1/2
25/32	11/16	5/8	1/2
13/16	11/16	5/8	1/2
7/8	3/4	11/16	9/16
15/16	13/16	3/4	5/8
1	7/8	13/16	5/8
1 1/16	15/16	7/8	11/16
1 1/8	1	7/8	3/4
1 3/16	1 1/16	15/16	25/32
1 1/4	1 1/8	1	13/16
1 5/16	1 1/8	1 1/16	7/8

§ 178.169-14 Assembly. (a) By nailing; screws, hinges and hasp, or other device of equal efficiency are authorized; nails should be driven flush.

§ 178.169-15 Nails and nailing. (a) Cement coated nails of size and with spacing detailed in §§178.169-16 and 178.169-17.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch 1/4"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

§ 178.169–16 Nails; kind and dimensions. (a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[2] in "penny" as follows:

Species of wood holding points of nails	Thickness of material holding points of nails (inches)										
	½ or less	9/16	⅝	11/16	¾	13/16	⅞	15/16	1	1⅛	1¼ or more
Group 1	4	5	5	6	7	7	8	8	8	9	10
Group 2	4	4	5	5	6	6	7	7	7	8	9
Group 3	3	4	4	5	5	6	6	7	7	7	8
Group 4	3	3	4	4	4	5	5	6	6	7	7

§ 178.169–17 Nail spacing[3]. (a) Nail spacing as follows:

Nails (size)	Maximum spacing when driven into end and cleats	
	Side grain	End grain
	Inches	Inches
Threepenny	1½	1
Fourpenny	1½	1½
Fivepenny	1¾	1½
Sixpenny	2	1¾
Sevenpenny	2¼	2
Eightpenny	2½	2¼
Ninepenny	2¾	2½
Tenpenny	3	2½

§ 178.169–18 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT–15B***

(1) The stars must be replaced by authorized gross weight (for example, DOT–15B125, etc.).

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 178.169–13(d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

DOT–15B

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(d) Each box must also be marked with the name or symbol of person making the other marks specified in this section. Symbol, if used, must be registered with the Director, OHMT.

(1) The "Xs" must be replaced by authorized gross weights as authorized for the strapping conditions.

§ 178.169–19 Closing for shipment. (a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 178.169–16 and 178.169–17.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about ⅛ of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

Authorized gross weight (pounds)	Cross-section size when number of straps is—		
	1	2	3
	Inch	Inch	Inch
50	½ × 0.020	⅜ × 0.015	
100	⅝ × 0.020	½ × 0.018	
200	¾ × 0.023	⅝ × 0.020	½ × 0.018
300		¾ × 0.023	½ × 0.020
400		¾ × 0.020	½ × 0.023
500		¾ × 0.023	⅝ × 0.023

(5) Wires, Washburn and Moen gauge, authorized as follows:

Authorized gross weight (pounds)	Cross section size when number of straps is—		
	1	2	3
50	12	14	
100	11	12	
200	9	11	12
300		10	11
400		10	11
500		9	10

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed ½ of thickness of material holding points of nails.

[3] To determine number of nails, divide length of nailing edge by spacing. Fractions greater than ½ are considered as whole numbers.

§ 178.170 Specification 15C; wooden boxes nailed.

§ 178.170–1 Compliance. (a) Required in all details.

§ 178.170–2 Closed[4] box. (a) Parts and pieces to be in close contact.

§ 178.170–3 Ends. (a) One-piece, or equivalent (see § 178.170–4); or cleated as prescribed.

§ 178.170–4 One-piece equivalents. (a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts at least ½" thick fastened with 3 or more corrugated fasteners on each joint.

(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents): 1" wide; penetration ⅝ thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

§ 178.170–5 Gluing efficiency. (a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

§ 178.170–6 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ⅓ its length.

§ 178.170–7 Nails. (a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

§ 178.170–8 Grouping of principal woods. (a) Grouping as follows:

Group 1

White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (popple)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine

Group 2

Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	

Group 3

White Elm	Pumpkin ash	Tupelo
Red gum	Black gum	Maple—soft or silver
Sycamore	Black ash	

Group 4

Hard maple	Hackberry	Hickory
Beech	Birch	White ash
Oak	Rock elm	

[4] Openings for filling device of inside container authorized if device is properly protected.

§ 178.170-9 Width of pieces. (a) At least 2½".

§ 178.170-10 Width of cleats. (a) Twice the prescribed thickness plus ¾".

§ 178.170-11 Thickness of lumber. (a) Nailed boxes not cleated (Style 1): Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6): Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; ends as in Table 4.

(c) Single-cleated boxes (Style 4 or 5): Authorized gross weight not over 200 pounds, see Note 2. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3): Authorized gross weight not over 500 pounds, see Note 3. Sides as in Table 1; top and bottom as in Table 1A; end and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A; cleats as in Table 3B; ends not thinner than thickest side or top.

Note 1: When group II woods are used the gross weight may be increased to 110 pounds.

Note 2: When group II woods are used the gross weight may be increased to 220 pounds.

Note 3. When group II woods are used the gross weight may be increased to 550 pounds.

(e) Tables are as follows (dimensions of materials finished or resawed):

TABLE 1

Depth of box (inches)	Not over 8"	Not over 9"	Not over 10"	Not over 12"	Not over 14"	Over 14"

§ 178.170-12 Reduced thicknesses. (a) Reduction in thickness is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum ¼" for boxes up to 150 pounds authorized gross weight and ⅜" above that weight.

(2) Ends of cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per §178.170-18(b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

Specified thickness (inches)	Reduced thickness corresponding to percent reduction		
	12½	20	35
9/32	1/4	1/4	1/4
5/16	9/32	1/4	1/4
11/32	5/16	9/32	1/4
3/8	5/16	5/16	1/4
7/16	3/8	11/32	9/32
1/2	7/16	3/8	5/16
9/16	1/2	7/16	3/8
5/8	9/16	1/2	7/16
11/16	5/8	9/16	7/16
3/4	5/8	5/8	1/2
25/32	11/16	5/8	1/2
13/16	11/16	5/8	1/2
7/8	3/4	11/16	9/16
15/16	13/16	3/4	5/8
1	7/8	13/16	5/8
1 1/16	15/16	7/8	11/16
1 1/8	1	7/8	3/4
1 3/16	1 1/16	15/16	25/32
1 1/4	1 1/8	1	13/16
1 5/16	1 1/8	1 1/16	7/8

§ 178.170-13 Assembly. (a) By nailing; screws, hinges and hasp, or other device of equal efficiency are authorized; nails should be driven flush.

§ 178.170-14 Nails and nailing. (a) Cement coated nails of size and with spacing detailed in §§178.170-15 and 178.170-16.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch ⅛"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

§ 178.170-15 Nails; kind and dimensions. (a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[2] in "penny" as follows:

Species of wood holding points of nails	Thickness of material holding points of nails (inches)										
	¾ or less	7/8	1/2	9/16	5/8	11/16	3/4	25/32	13/16	7/8	15/16 or more
Group 1	4	5	5	6	7	7	8	8	8	9	10
Group 2	4	4	5	5	6	6	7	7	7	8	9
Group 3	3	4	4	5	5	6	6	7	7	7	8
Group 4	3	3	4	4	4	5	5	6	6	7	7

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1 penny smaller authorized when spaced as for 2-penny smaller. Nails 2 penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed ½ of thickness of material holding points of nails.

For explanation of abbreviations and reference marks, see last page of this tariff.

§ 178.170-16 Nail spacing[3]. (a) Nail spacing as follows:

Nails (size)	Maximum spacing when driven into end and cleats	
	Side grain	End grains
	Inches	Inches
Threepenny	1½	1
Fourpenny	1½	1½
Fivepenny	1¾	1½
Sixpenny	2	1¾
Sevenpenny	2½	2
Eightpenny	2½	2½
Ninepenny	2¾	2½
Tenpenny	3	2½

§ 178.170-17 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-15C***

(1) The stars must be replaced by authorized gross weight (for example, DOT-15C100, etc.).

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see §178.170-12(d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

DOT-15C

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(d) Each box must also be marked with the name or symbol of person making the other marks specified in this section. Symbol, if used, must be registered with the Director, OHMT.

(1) The "Xs" must be replaced by authorized gross weights as authorized for the strapping conditions.

§ 178.170-18 Closing for shipment. (a) Box to be securely closed. Nails, if used, to be as prescribed in §§178.170-15 and 178.170-16.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about ¼ of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

Authorized gross weight (pounds)	Cross-section size when number of straps is—		
	1	2	3
	Inch	Inch	Inch
50	½ x 0.020	⅜ x 0.015	.....
100	⅝ x 0.020	½ x 0.018	.....
200	¾ x 0.023	⅝ x 0.020	½ x 0.018
300	.....	⅝ x 0.023	½ x 0.020
400	.....	¾ x 0.020	½ x 0.023
500	.....	¾ x 0.023	⅝ x 0.023

(5) Wires, Washburn and Moen gauge, authorized as follows:

Authorized gross weight (pounds)	Gauge of wires when number of straps is—		
	1	2	3
50	12	14	.....
100	11	12	.....
200	9	11	12
300	.....	10	11
400	.....	10	11
500	.....	9	10

§ 178.171 Specification 15D; wooden boxes, nailed.

§ 178.171-1 Compliance. (a) Required in all details.

[3] To determine number of nails, divide length of nailing edge by spacing. Fractions greater than ½ are considered as whole numbers.

§ 178.171-2 Spaces between boards. (a) Space 4" wide authorized except that bottom pieces must be in close contact with each other and with sides and ends.

§ 178.171-3 Ends. (a) One-piece, or equivalent (see §178.171-5); or cleated as prescribed.

§ 178.171-4 Handles. (a) Containers may be provided with suitable handles at discretion of shipper. Handles must be of dimensions specified herein, consisting of horizontal strips or cleats extending across top of each side or each end; handles which do not project 3 inches beyond the vertical edges of the container must be mounted to leave at least ⅛ inch open space between handle and box, or be at least ¾ inch thick, or be of cross section at least equal to cleats required for single-cleated boxes of corresponding size and gross weight. Extension of cleats or side boards is acceptable for projecting handles.

Authorized gross weight, maximum (pounds)	Handles, minimum cross section (inches)
100	½ x 1¾
150	½ x 2¼
200	⅝ x 2½
300	⅝ x 3½
400	13/16 x 3½

§ 178.171-5 One-piece equivalents. (a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts at least ½" thick fastened with 3 or more corrugated fasteners on each joint.

(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents), 1" wide; penetration ⅝ thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

§ 178.171-6 Gluing efficiency. (a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

§ 178.171-7 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

§ 178.171-8 Nails. (a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

§ 178.171-9 Grouping of principal woods. (a) Grouping as follows:

Group 1		
White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (popple)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine
Group 2		
Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	
Group 3		
White Elm	Pumpkin ash	Tupelo
Red gum	Black gum	Maple—soft or silver
Sycamore	Black ash	
Group 4		
Hard maple	Hackberry	Hickory
Beech	Birch	White ash
Oak	Rock elm	

§ 178.171-10 Width of pieces. (a) At least 2½".

§ 178.171-11 Width of cleats. (a) Twice the prescribed thickness plus ¾".

§ 178.171-12 Thickness of lumber. (a) Nailed boxes not cleated (Style 1): Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6): Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A;

ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; ends as in Table 4.

(c) Single-cleated boxes (Style 4 or 5): Authorized gross weight not over 200 pounds for boxes with vertical cleats nor over 400 pounds for boxes with horizontal cleats. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3): Authorized gross weight not over 500 pounds. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A, cleats as in Table 3B; ends not thinner than thinnest side or top.

Exception: For containers consisting of an inner wooden crate of at least ½" thickness throughout, with or without top, and an outside double cleated box without the openings permitted by § 178.171-2, the thickness of all parts of the outside box may be reduced to not less than ¾".

(e) Tables are as follows (dimensions of materials finished or resawed).

§ 178.171-13 Reduced thicknesses. (a) Reduction in thicknesses is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum 3/16" for boxes up to 35 pounds authorized gross weight and 1/4" above that weight.

(2) Ends of cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent. In battery boxes reinforced with separate pieces in the form of extension-handles, not extension of side boards or cleats, having cross section at least equal to cleats required for single-cleated boxes of corresponding size and gross weight, 20 percent in sides or ends so reinforced.

(c) Any part of cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per §178.171-18(b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

Specified thickness (inches)	Reduced thickness corresponding to percent reduction		
	12½	20	35
9/32	1/4	1/4	1/4
5/16	9/32	1/4	1/4
11/32	5/16	9/32	1/4
3/8	5/16	5/16	1/4
7/16	3/8	11/32	9/32
1/2	7/16	3/8	5/16
9/16	1/2	7/16	3/8
5/8	9/16	1/2	7/16
11/16	5/8	9/16	7/16
3/4	5/8	5/8	1/2
25/32	11/16	5/8	1/2
13/16	11/16	5/8	1/2
7/8	3/4	11/16	9/16
15/16	13/16	3/4	5/8
1	7/8	13/16	5/8
1 1/16	15/16	7/8	11/16
1 1/8	1	7/8	3/4
1 3/16	1 1/16	15/16	25/32
1 1/4	1 1/8	1	13/16
1 5/16	1 1/16	1 1/16	7/8

§ 178.171-14 Nails and nailing. (a) Cement coated nails of size and with spacing detailed in §§ 178.171-15 and 178.171-16.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch 1/4"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

§ 178.171-15 Nails; kind and dimensions. (a) Cement coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size in "penny" as follows:

Species of wood holding points of nails	Thickness of material holding points of nails (inches)										
	5/8 or less	11/16	3/4	13/16	7/8	15/16	1	25/32	13/16	7/8	15/16 or more
Group 1	4	5	5	6	7	7	8	8	8	9	10
Group 2	4	4	5	5	6	6	7	7	7	8	9
Group 3	3	4	4	5	5	6	6	7	7	7	8
Group 4	3	3	4	4	4	5	5	6	6	7	7

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny when thickness of material nailed through does not exceed 1/4 of thickness of material holding points of nails.

§ 178.171-16 Nail spacing[3]. (a) Nail spacing as follows:

Nails (size)	Maximum spacing when driven into end and cleats	
	Side grain	End grain
	Inches	Inches
Threepenny	1⅛	1
Fourpenny	1½	1⅛
Fivepenny	1¾	1½
Sixpenny	2	1¾
Sevenpenny	2⅛	2
Eightpenny	2½	2⅛
Ninepenny	2¾	2½
Tenpenny	3	2½

§ 178.171-17 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-15D'''

(1) The stars must be replaced by authorized gross weight (for example, DOT-15D125, etc.).

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 178.171-13(d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

DOT-15D

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(d) Each box must also be marked with the name or symbol of person making the other marks specified in this section. Symbol, if used, must be registered with the Director, OHMT.

(1) The "Xs" must be replaced by authorized gross weights as authorized for the strapping conditions.

§ 178.171-18 Closing for shipment. (a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 178.171-15 and 178.171-16.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about 1/6 of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

Authorized gross weight (pounds)	Cross-section size when number of straps is—		
	1	2	3
	Inch	Inch	Inch
50	½ × 0.020	⅜ × 0.015	.....
100	⅝ × 0.020	½ × 0.018	.....
200	¾ × 0.023	⅝ × 0.020	½ × 0.018
300	.....	⅝ × 0.023	½ × 0.020
400	.....	¾ × 0.020	½ × 0.023
500	.....	¾ × 0.023	⅝ × 0.023

(5) Wires, Washburn and Moen gauge, authorized as follows:

Authorized gross weight (pounds)	Gauge of wires when number of straps is—		
	1	2	3
50	12	14	.....
100	11	12	.....
200	9	11	12
300	.....	10	11
400	.....	10	11
500	.....	9	10

§ 178.171-19 Boxes for shipment of wet electric storage batteries. (a) Boxes over 500 pounds gross weight are authorized for shipments of wet electric storage batteries when the batteries are contained in a rigid cradle or box, or are securely fastened together so as to form a single unit, and not more than one such cradle, box, or unit is packed in the outside container. Skids required: runners to be at least 2 inches by 4 inches commercial thickness, minimum of three, except that two runners are authorized when width of case does not exceed 24 inches; or two runners may be used, minimum of 4 inches by 4 inches commercial thickness, when case does not exceed 36 inches in width. Runners to be beveled at ends to facilitate use of rollers. Bottom boards, minimum of 1 inch commercial thickness to be nailed across runners; bracing of parts and thickness of lumber to be sufficient to protect contents in transit.

[3] To determine number of nails, divide length of nailing edge by spacing. Fractions greater than ½ are considered as whole numbers.

§ 178.172 Specification 15E; wooden boxes, fiberboard lined.

§ 178.172-1 Compliance. (a) Required in all details.

§ 178.172-2 Closed box. (a) Parts and pieces to be in close contact.

§ 178.172-3 Ends. (a) Butt-joint glued to fiberboard. Plywood not authorized.

§ 178.172-4 Sides, top and bottom. (a) Butt-joint or plywood glued to fiberboard.

§ 178.172-5 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

(b) Plywood, if used, shall be free of knots, decay, and other visible defects that interfere with the nailing. Plywood used must be of good commercial box or sheathing grade veneer.

§ 178.172-6 Grouping of principal woods. (a) Grouping as follows:

Group 1		
White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (popple)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine
Group 2		
Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	
Group 3		
White Elm	Pumpkin ash	Tupelo
Red gum	Black gum	Maple—soft or silver
Sycamore	Black ash	
Group 4		
Hard maple	Hackberry	Hickory
Beech	Birch	White ash
Oak	Rock elm	

§ 178.172-7 Width of pieces. (a) At least 2½".

§ 178.172-8 Thickness of wood parts. (a) Thickness as follows:

Authorized gross weight of box not over (pounds)	Style of box (see Notes 2 and 3)	Minimum thickness (see Note 1) of sides, top and bottom in inches		Minimum thickness of ends and cleats in inches		Minimum width of cleats in inches	Size of nails in ends (penny)	
		Group 1 and 2	Group 3 and 4	Group 1 and 2	Group 3 and 4		Group 1 and 2	Group 3 and 4
150	1 2, 2½ 3 or 4	3/16	1/8	1/2	1/2	1¾	4	4
250	2½, 3 or 4	7/32	3/16	5/8	9/16	1⅞	5	4
350	2½ or 3	1/4	7/32	3/4	11/16	2¼	6	5
450	2½ or 3	5/16	1/4	25/32	25/32	2¼	6	5
530	2½ or 3	3/8	5/16	13/16	13/16	2½	7	6

Note 1: Plywood or paper covered wood veneer board of equal thickness and efficiency is permitted. Paper covered veneer board shall be of good quality Douglas fir core of at least 3/16 inch thickness, or lumber of equal quality, and free of breaks, gaps, holes, or knots. Paper covering shall be at least Kraft untreated fiberboard having a basis weight of 42 pounds per 1,000 square feet and shall be secured to veneer core by adhesive in such manner as to form a satisfactorily laminated board.

Note 2: Thickness of ends in style 1 boxes shall be not less than 25/32" and load limit shall be not more than 100 pounds.

Note 3: Style 4 boxes shall have load limit of 200 pounds.

§ 178.172-9 Assembly. (a) By nails, screws, staples or other devices of equal efficiency. Nails, screws and staples must be driven flush.

§ 178.172-10 Nails and nailing. (a) Cement coated nails of size and with spacing detailed in §§178.172-8, 178.172-11 and 178.172-12.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to ends be staggered and clinch ⅛"; uncoated nails authorized.

§ 178.172-11 Nails; kind and dimensions. (a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size in penny as prescribed in § 178.172-8.

§ 178.172-12 Nail spacing[SS]2. (a) Nail spacing as follows:

Nails (size)	Maximum spacing when driven into end and cleats	
	Side grain	End grain
	Inches	Inches
Fourpenny	1½	1¼
Fivepenny	1¾	1½
Sixpenny	2	1¾
Sevenpenny	2¼	2

§ 178.172-13 Classification of board. (a) Fiberboard is hereby classified by strength[3] of completed board as in first column of the following table; weights specified in the table are the minimum authorized:

Authorized gross weight of box not over (pounds)	Classified strength[3] of completed board	Solid fiberboard minimum combined weight of component plies exclusive of adhesives (pounds per 1,000 sq. ft.)	Facings for corrugated fiberboard double-faced minimum combined weight of facings (pounds per 1,000 sq. ft.)
150	200	130	84
250	275	237	138
350	325	237	138
450	350	283	180
550	375	283	180

§ 178.172-14 Solid fiberboard. (a) To be 3-ply or more; both outer plies water resistant.

§ 178.172-15 Corrugated fiberboard. (a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1000 square feet; all parts must be securely glued together throughout all contact areas.

§ 178.172-16 Test. (a) Acceptable board must have prescribed strength, Mullen, or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

§ 178.172-17 Assembly. (a) The sheet of fiberboard to which are glued the boards forming the sides, top and bottom box sections, shall be properly scored to form a tube. The joint shall be on a side, top or bottom, near the center of the face, and located under one of the wood boards of the face.

(1) A water resistant glue shall be used to attach the fiberboard to the wood. The glue shall be applied in ribbons (lines) at right angles to the scores of the tube. The ribbons of glue shall be not less than 1¼" wide and shall be spaced sufficiently close so that glue will cover not less than 25 percent of the surface of the fiberboard. The ribbons of glue shall be equally spaced on the length of the box with the outside ribbons flush with the ends of the tube. Glue shall be applied to the fiberboard on the ends of the box in like amount as on the tube.

(2) For styles 2, 2½, and 3, all faces of the tube shall extend over the end boards and cleats. For style 4, all faces shall extend over the end boards, but only the side sections shall extend over the cleats.

(3) The boards between score lines shall butt against each other when placed on the fiberboard, and the combined widths of the boards shall be approximately equal to the inside dimension of the respective box section so that the boards completely cover the fiberboard between the inside edges of adjacent scores.

(4) A sheet of fiberboard shall be attached to each end as provided in paragraph (a)(1) of this section and shall completely cover the inside of the end.

§ 178.172-18 Closing for shipment. (a) Box shall be securely closed. Nails, if used, shall be as prescribed in §§178.172-9, 178.172-10, 178.172-11, and 178.172-12.

§ 178.172-19 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-15E***

(1) The stars must be replaced by authorized gross weight (for example, DOT-15E100, etc.).

(b) Each box must also be marked with the name or symbol of person making the mark specified in paragraph (a) of this section. Symbol, if used, must be registered with the Director, OHMT.

---

§ 178.176 Specification 15L; wooden boxes with inside containers for desensitized liquid explosives.

§ 178.176-1 Compliance. (a) Required in all details.

§ 178.176-2 Size and capacity. (a) Each outside wooden container shall contain not more than one inside metal container having a capacity not to exceed 10 quarts.

§ 178.176-3 Outside containers. (a) Wooden boxes cleated as prescribed. Parts must be in close contact and completely enclose inside containers. Lumber must be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with assembly, or other defects that materially lessen the strength.

(b) Assembly. Use brass screws throughout. Assemble sides and ends with grain of wood vertical. Fasten bottom securely with edges flush with sides and ends of box. Cleats must extend around entire perimeter of box. Apply top and bottom cleats horizontally. Bottom cleats must be flush with bottom surface of the box. Top cleats must extend above top of box to provide a ¾-inch recess for cover projections (see § 178.176-5). Cover must be flush with outside surface of top cleats and must be cleated on the outside at all edges. Cleats may be mitered but must butt at all corners.

(c) Parts and dimensions as follows:

Minimum dimensions in inches

Thickness, sides, top, bottom, and ends	Top cleats	Bottom cleats	Cover cleats
¾"	⅝" × 3½"	⅝" × 2¾"	¾" × 2"

§ 178.176-4 Inside containers. (a) Inside containers must be as follows:

(1) Metal containers. Double seamed, of copper weighing not less than 16 ounces per square foot, or other non-sparking material of equivalent strength. All seams must be closed by welding, brazing, or soldering so as to be tight against leakage. Handles must be fastened to top of container and be of copper weighing not less than 48 ounces per square foot, or other nonsparking material of equivalent strength. Each side of the container must be strengthened vertically by at least three equally spaced indented crimps. Each container must have two pouring spouts in the top securely closed by rubber stoppers.

(2) Rubber liners. Each inside metal container must be inserted in a two-piece rubber liner or boot, consisting of a cover and body, into which it must fit snugly and which in turn shall fit snugly the outside wooden container. This liner must be watertight and of such size as to fully protect the inside container. Sides of liner must be at least ⅛ inch in thickness and bottom at least ⅛ inch in thickness. Top edge of boot must be flanged to fit the recess provided by the top cleats on the outside wooden container and such flange must be at least ⅜ inch thick exclusive of any channels or indentations necessary to effect satisfactory closure because of projections on cover. Cover must be not less than ⅛ inch in thickness including projections for securing rubber stoppers in metal containers, and must have a formed molding around its entire perimeter to match and tightly fit channels or indentations in the body flange.

(b) Tests. Each inside metal and rubber container must be adequately tested and inspected during manufacture to insure against leakage.

---

[1] Uncoated nails authorized when increased 25 percent in number.

[2] To determine number of nails, divide length of nailing edge by spacing; fractions greater than ½ are considered as whole numbers. Each piece of sides, top and bottom shall be nailed to the ends with at least two nails through each end of the piece.

[3] Mullen Cady test (minimum).

§ 178.176–5 Closure. (a) Top of rubber liner must be firmly fastened to wooden cover of outside container so as to fit securely into ¾ inch recess provided by top cleats on box. Top of liner must have projections on the inside which bear directly on rubber stoppers of metal containers to secure them in place. When closure is effected the liner must provide a positive seal against interior leakage. Cover of wooden outside container must be securely fastened to body of container by means of trunk clasps affixed to each face of the box. The trunk clasps must be recessed into cover and top cleats to furnish a smooth bearing surface on all faces of the box.

§ 178.176–6 Marking. (a) Marking on each box with letters and figures at least ½-inch high in rectangle as follows:

DOT–15L

(b) Each box must also be marked with the name or symbol of person making the mark specified in paragraph (a) of this section. Symbol, if used, must be registered with the Director, OHMT.

§ 178.177 Specification 15M; wooden boxes, metal lined, with inside containers for desensitized liquid explosives.

§ 178.177–1 Compliance. (a) Required in all details.

§ 178.177–2 Size and capacity. (a) Each outside wooden container shall contain not more than 6 inside metal containers having nominal capacity of 10 quarts each.

§ 178.177–3 Outside containers. (a) Wooden boxes cleated as prescribed. Parts must be in close contact and completely enclose inside containers. Lumber must be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with assembly, or other defects that materially lessen the strength.

(1) The box shall be lined with copper or other nonsparking metal having suitable strength. All seams must be soldered, welded, or brazed to produce a liquid-tight container having no openings in the bottom, sides, or ends.

(b) Assembly. Use brass screws throughout, countersunk and with heads covered with suitable wood filling compound. Any screw used to secure a metal attachment shall be soldered, welded, or brazed thereto. Metal parts used in the construction of or attached to the box or cover must be of nonsparking type. Fasten bottom securely with edges flush with sides and ends of box. Cleats must extend around entire perimeter of box. Apply top and bottom cleats horizontally. Bottom cleats must be flush with bottom surface of the box. Top cleats must extend above top of box to provide a ¾" recess for cover projections (§178.177–5). Cover must be flush with outside surface of top cleats. Cleats may be mitered but must butt at all corners.

(c) Cellular construction. The interior of the box shall be divided into cells by means of removable, nonmetallic, nonsparking dividers, into which the rubber boots or secondary containers fit snugly. The cells shall be of such size as to extend from the bottom to near the top of the rubber boots or secondary containers.

(d) Parts and dimensions as follows:

Minimum dimensions in inches

Thickness, sides, top, bottom, and ends	Top cleats	Bottom cleats	Cover cleats
¾"	⅝" × 3½"	⅝" × 2¾"	¾" × 2"

§ 178.177–4 Inside containers. (a) Inside containers must be as follows:

(1) Metal containers. The individual inside containers shall be made in a workmanship manner, of copper or other nonsparking material of suitable strength, with all seams soldered, welded, or brazed to be liquid tight. The top shall be fitted with a securely attached carrying handle of copper or other nonsparking material of suitable strength. Each inside container must have a filling and pouring spout in the top, which shall be securely closed with rubber stoppers, paraffin or oil-treated corks or other nonmetallic, nonsparking closures which are resistant to absorption of the contents and which provide a leakproof seal. The closures shall be secured in such manner as to prevent loosening, displacement, and leakage of contents during transit. Each inside container may have sufficient capacity in excess of 10 quarts to provide for outage requirements. Each side of the container must be strengthened vertically by at least 3 equally spaced indented crimps.

(2) Rubber boots or secondary containers. Each inside metal container must be contained in a rubber boot or other similar suitable leakproof, nonmetallic, nonabsorbent outer container, which must fit snugly in cellular structure provided in §178.177–3(c). The rubber boot or secondary container must be liquid tight and shall be so constructed as to have an inside height approximately that of the inside metal container plus closure and otherwise so constructed that the bottom will provide cushioning for the inner container.

(b) Tests. Each inside metal and rubber or secondary container must be adequately tested and inspected during manufacture to insure against leakage.

§ 178.177–5 Closure. (a) The box cover must be securely fastened to the box in a manner to prevent movement of the inside containers. The inner surface of the box cover must be lined with suitable coating material or sheathed with nonsparking metal to provide a nonabsorbent surface. The cover must be secured to the box by means of nylon, or other suitable straps, and be so positioned to furnish a smooth bearing surface on all faces of the box. There shall be no protruding parts on the box or cover which would result in metal-to-metal contact.

§ 178.177–6 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT–15M

(b) Each box must also be marked with the name or symbol of person making the mark specified in paragraph (a) of this section. Symbol, if used, must be registered with the Director, OHMT.

§ 178.181 Specification 15X; wooden boxes for two five-gallon cans.

§ 178.181–1 Compliance. (a) Required in all details.

§ 178.181–2 Closed box. (a) Parts and pieces to be in close contact.

§ 178.181–3 Ends. (a) To be of Group I, II, or III wood not over 2-piece.

§ 178.181–4 Sides, top and bottom. (a) To be of Group I, II, or III wood, not over 3-piece.

§ 178.181–5 Two-piece ends and corrugated fasteners. (a) Two-piece ends. Joints must be fastened with at least 3 corrugated fasteners.

(b) Corrugated fasteners. To be 1" wide and with penetration of ½ inch.

§ 178.181–6 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

§ 178.181–7 Groupings of principal woods. (a) Grouping as follows:

Group I		
White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (poppie)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine
Group 2		
Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	
Group 3		
White Elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple—soft or silver
Sycamore	Black gum	
Group 4		
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

§ 178.181–8 Width of pieces. (a) At least 2" for sides, top and bottom if in two pieces, or 2⅜" for tops and bottom and at least 4" for sides if in three pieces.

§ 178.181–9 Thickness of lumber. (a) Thickness as follows:

(1) Ends. Thickness to be not less than ¾" for Group I or II lumber and 11/16" for Group III lumber.

(2) Side, top and bottom. Thickness to be not less than ⅜".

§ 178.181–10 Assembly. (a) By nailing with either bright or cement-coated nails, size and spacing as follows:

(1) Top to each end: 5 nails (1½" by 12½ gauge).
(2) Bottom to each end: 6 nails (1¾" by 12 gauge).
(3) Sides to each end: 6 nails (1½" by 12½ gauge).

§ 178.181-11 Marking. (a) Marking on each box in letters and figures at least ½" high in a rectangle as follows:

DOT-15X

(b) Each box must also be marked with the name or symbol of person making the mark specified in paragraph (a) of this section. Symbol, if used, must be registered with the Director, OHMT.

§ 178.181-12 Inside can. (a) Size: Approximate dimensions 9 ⅜ x 9⅛ x 13 1/16 inches.
(b) Approximate capacity: 1,188 cu. in.
(c) Top: Embossed.
Seams: Crimped and soldered.
Closure: Airtight and leakproof.
Handles: Wire.
(d) Bottom: Embossed.
Seams: Crimped and soldered.
(e) Body: Paneled on 4 sides.
Two seams: Clinched and soldered.
(f) Material: IC (107 lb.) tin or terne-plate.
(g) Average weight: 2 pounds 8 ounces.
(h) Marking: No specification marking required.

---

§ 178.182 Specification 15P; glued plywood, or wooden box for inside containers.

§ 178.182-1 Material requirements. (a) Lumber or plywood must be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength and in accordance with the following:
(1) Lumber must be of good commercial grade.
(2) Plywood sections shall be firmly glued together with waterproof glue. A section of plywood from any part when immersed in water at room temperature for 48 hours shall show no delamination or separation of plies to qualify glue as waterproof.

§ 178.182-2 Construction requirements. (a) Box shall be constructed of wood or of plywood not less than three-ply fabrication and shall be constructed so as to completely and snugly enclose body of the inside container, and so formed that inside container cannot permanently change position and be of sufficiently strong wood or plywood to withstand prescribed tests without serious rupture of or damage to box that would cause failure or lead to impending failure of inside container.

Note 1: Vertical openings not exceeding ⅜ inch in width and extending to a thin 3 inches of top or bottom on two opposite sides of box are permitted.

§ 178.182-3 Tests. (a) One sample, taken at random and with inner container filled to marked capacity with water and closed as for use, shall be capable of withstanding prescribed tests without leakage. Tests shall be made of each size by each company starting production. The type tests are as follows:
(1) Complete package must be capable of withstanding two drops from a height of 4 feet onto solid concrete, the first drop to be made diagonally so top corner will strike the concrete; the second drop onto a 2 inch by 6 inch timber resting on the concrete with the 6 inch leg vertical, the drop being made with the box in a horizontal position and at right angles to the timber so that impact is near the center of the box side-wall.
(2) Additional tests as required by inside container specification.
(b) Records of tests performed under this specification must be retained by the manufacturer for a period of one year following discontinuance of production.

§ 178.182-4 Marking. (a) Each outside container must be plainly marked with letters and figures at least ¾ inch high applied by hot branding iron or dark colored printing ink with pressure dies as follows:
(1) DOT-15P.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

---

§ 178.185 Specification 16A; plywood or wooden boxes, wire-bound.

§ 178.185-1 Compliance. (a) Required in all details. Authorized tolerances. Cleats, battens, and handles, minus 1/32"; single thickness, veneer, minus 5 percent; resawn boards, 1/64" below specified thickness for boards up to 7/32" thick and 1/32" below specified thickness for boards ¼" or more thick.

§ 178.185-2 Lumber or plywood. (a) Lumber shall be well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.
(b) Plywood shall be made from veneer which has been rotary cut, sliced, or sawed. Plywood shall be good commercial box or sheathing grade and shall be moisture-resistant; free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength.
(1) Moisture-resistant plywood shall be fabricated with either synthetic or protein type glue. Specimens for testing shall be not less than 5 in number, measuring 6" x 6", and shall withstand 10 cycles of 4 hours immersion in water at room temperature and drying for 20 hours at a temperature not over 100° F. After 10 cycles, 4 of the 5 samples are to show not more than a sum total of 2-inch delamination of the edges, with depth delamination no greater than ⅛ inch.

§ 178.185-3 Wires. (a) Of annealed steel, or other metal of equal strength, Washburn and Moen sizes.

§ 178.185-4 Staples. (a) Wire size, Washburn and Moen.

§ 178.185-5 Grouping of principal woods. (a) Grouping as follows:

Group 1		
White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (popple)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine
Group 2		
Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	
Group 3		
White Elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple—soft or silver
Sycamore	Black gum	
Group 4		
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

§ 178.185-6 Closed box. (a) Parts and pieces with edges in close contact to give completely closed box.

§ 178.185-7 Top, sides, and bottom. (a) Each cleated at both ends; intermediate rows of cleats authorized.

§ 178.185-8 Cleats. (a) Ends mitered or with mortise and tenon joints.
(b) Cleats for plywood boxes shall be Group 4 woods.

§ 178.185-9 Ends. (a) Battened when prescribed. Wired ends authorized provided wires run cross grain and terminate in loops with ends of wire driven through end board and clinched. Grain of wood and outside ply of plywood shall be perpendicular to sides except for wired ends.
(b) As provided by § 173.65(a)(1), Note 1, wooden boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅜ inches from top edge of end of box.

§ 178.185-10 Wires. (a) One wire over each row of cleats; intermediate wires as prescribed.

§ 178.185-11 Stapling. (a) Staples for wires over cleats driven through boards into cleats and anchored; others through boards and clinched.

§ 178.185-12 Thickness of boards or plywood (sides, tops, bottoms, and ends). (a) Thickness as follows except that, for thicknesses prescribed as 9/16" or less, resawn boards must be 1/16" thicker for each resawn surface.

Group of wood	Minimum thickness of boards (inch)						
	1/8 (0.125)	9/72 (0.143)	5/32 (0.167)	3/16 (0.188)	7/32 (0.219)	¼ (0.250)	5/16 (0.313)
	Authorized gross weight, box and contents, not over (pounds)						
1	25	35	50	75	100	150	200
2	35	50	75	100	150	200	315
3	50	75	100	150	200	315	400
4	75	100	150	200	315	400	.....

(1) For boxes with 3 or more rows of cleats, boards of the next lower thickness prescribed in the table are acceptable.

(b)

Group of wood	Minimum thickness of plywood (inch)[1]		
	1/8 (0.125)	3/16 (0.150)	3/16 (0.184)
	Authorized gross weight, box and contents, not over (pounds)		
4	150	300	400

[1] Minimum tolerance of 5% permitted for specified thicknesses

§ 178.185-13 Size of cleats. (a) At least 13/16" by 13/16" when thickness required for boards exceeds 1/7"; otherwise at least 9/16" by 13/16".

§ 178.185-14 Binding wires (sides, top, bottom). (a) Spacing not over 8".

Exception: When each binding wire is stapled to a row of cleats, 11" spacing is authorized

(b) Number and size of binding wires as follows:

Number of wires	Minimum gauge of wires, Washburn and Moen				
	16	15	14	13	12
	Authorized gross weight, box and contents (pounds)				
2	35	50	75	100	150
3	50	75	100	150	200
4	75	100	150	200	315
5	100	150	200	315	400
6	.....	200	315	400	.....
7	.....	.....	400	.....	.....

§ 178.185-15 Wires for wired ends. (a) At least 2 wires on each end, size not less than as specified for binding wires in § 178.185-14, and spaced as follows:

Thickness of end (inch)	Maximum spacing	
	Between wires (inch)	Wire to cleats (inch)
0.125	6	4
.143	6	4
.167	6½	4
.187	6½	4
.219	7	4
.250	7	4
.313	7	4

(b) Ends less than 10 inches deep are authorized with 1 wire provided they are reinforced by 2 strips (liners), at least 1½" wide and as thick as ends, securely stapled along edges of the end parallel to the wires.

§ 178.185-16 Staple spacing (approximate) and minimum size. (a) Staples into cleats 16 gauge, Washburn and Moen, and:

(1) One and one-fourth inches long with 1½" spacing, or 1¼" long with 1" spacing, when boards are over ¼" thick.

(2) One and one-eighth inches long with 1½" spacing, for boards ¼" thick or less; except that staples ⅞" long with 1½" spacing are authorized when boards are 1/7" thick or less.

(b) Other staples 18 gauge, Washburn and Moen.

§ 178.185-17 End supporting battens.[1] (a) End supporting battens at least 1⅛" wide and same thickness as cleats; fastened securely across ends parallel to side cleats; required so that unsupported distance between cleats, battens, and between cleats and battens will be not greater than as follows.

Thickness of ends (inch)	Maximum spacing (inches)
0.125	10
0.143	11
0.167	12
0.187	13
0.219	14
0.250	15
0.313	16

§ 178.185-18 Side cleat battens and wired end supports. (a) **Side cleat battens.** At least 13/16" by 13/16"; fastened securely to ends so as to be adjacent to side cleats when box is set up; required, in addition to any other battens, when authorized gross weight exceeds the following:

Group of wood in cleats:	Authorized gross weight, box and contents over (pounds)
1	100
2	150
3	200
4	200

[1] Not required for wired ends less than 20 inches long

(b) **Wired end supports.** Wired ends, for boxes for authorized gross weight exceeding the foregoing, must be reinforced by 2 strips (liners), at least 1¼" wide and as thick as ends, securely stapled along edges of the end parallel to the wires; side cleat battens not required.

§ 178.185-19 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-16A***

(1) Stars must be replaced by maximum authorized gross weight (for example, DOT-16A150, etc.).

(b) The name or symbol of person making the marks specified in paragraph (a) of this section must be located just above, below, or following those marks. Symbol, if used, must be registered with the Director, OHMT.

§ 178.185-20 Setting up and closing. (a) Nail or staple unwired ends to side cleats at intervals not over 2½"; fasten wired ends securely by means of loop fasteners.

(b) Twist ends of binding wires or bend loops to give tight closure.

(c) Nail at least 2 nails through side cleats into each side-cleat batten at not over 4" intervals; nail through top and bottom cleats with one 7-penny nail into each end of end-supporting battens.

§ 178.185-22 Special box authorized only when used in conjunction with Inside spec. 2U polyethylene 5- and 15-gallon cubical containers. (a) The boxes shall comply with spec. 16A requirements using the table for a gross weight of 200 pounds for construction purposes only, except as follows:

(1) The top section of boxes may have a hole not over 4⅛ inches in diameter midway between the cleats, and centered not less than 3⅛ inches from either the back or front edge of boxes.

(2) Five-gallon capacity—ends. Ends may be made from ⅛ inch or thicker veneer and have only one 14-gauge wire across face. One-eighth inch veneer liners, at least 1¼ inches wide, must be stapled across the top and bottom of the ends.

(i) Fifteen-gallon capacity—ends. Ends must be made with same thickness faceboard material as the sides, top, and bottom and must have two liners of the same thickness, at least 3 inches wide, fastened by two rows of staples. Ends may have one 13-gauge wire across face.

(3) Paper overlaid veneer having veneer core of group 3 or 4 wood and completely covered on each side with 42 pound basis weight Kraft paper securely adhered thereto by moisture resistant adhesive, is authorized. Total combined thickness of finished board shall be not less than 0.160 inch.

(4) Wire spacing for 5-gallon capacity containers. Binding wires stapled to a row of cleats may be spaced not more than 13 inches apart.

(b) Wirebound wooden or paper overlaid veneer board boxes must be provided with full size double-faced corrugated liners of at least 125-pound test (Mullen or Cady) for bottom and sides. Full area top pad is required for 5-gallon capacity containers and must be a minimum of 200-pound test (Mullen or Cady). Full area top pad is required for the 15-gallon capacity container and must be a minimum of 275-pound test (Mullen or Cady).

(c) Marking required:

(1) Marking on each box with letters and figures at least ½ inch high in rectangle as follows:

DOT-16A-C

(2) The name or symbol of person making the mark specified in paragraph (c)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

---

§ 178.186 Specification 16B; wooden boxes, wirebound.

§ 178.186-1 Compliance. (a) Required in all details. Authorized tolerances: Cleats, battens, and handles, minus 1/32"; single thickness veneer, minus 5 percent; resawn boards, 1/64" below specified thickness for boards up to 3/32" thick and 1/32" below specified thickness for boards ¼" or more thick.

§ 178.186-2 Lumber. (a) Well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.

§ 178.186-3 Wires. (a) Of annealed steel, or other metal of equal strength, Washburn and Moen sizes.

§ 178.186-4 Staples. (a) Wire size, Washburn and Moen.

§ 178.186-5 Grouping of principal woods. (a) Grouping as follows:

Group 1		
White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (poplar)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine
Group 2		
Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	
Group 3		
White Elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple—ash or silver
Sycamore	Black gum	
Group 4		
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

§ 178.186-6 Closed box. (a) Parts and pieces with edges in close contact to give completely closed box except that spaces 1⅛" are authorized between side boards and between top boards when boards are at least 3½" wide.

(b) Handles: Containers may be provided with suitable handles at discretion of shipper. When used, they must be securely fastened along tops of sides under wires and project 3 inches or be mounted on end cleats; extensions of side boards acceptable; dimensions as follows:

Authorized gross weight not over (pounds):	Handles[1] minimum cross section (inches)
150	½ × 2½
200	⅝ × 2½
315	⅝ × 3½
400	11/16 × 3½

[1] Also ridge reinforcing battens when prescribed.

§ 178.186-7 Top, sides, and bottom. (a) Each cleated at both ends; intermediate rows of cleats authorized.

§ 178.186-8 Cleats. (a) Ends mitered or with mortise and tenon joints.

§ 178.186-9 Ends. (a) Battened when prescribed. Wired ends authorized provided wires run cross grain and terminate in loops with ends of wire driven through end board and clinched. Grain of wood perpendicular to sides except for wired ends. Ridge-top containers, authorized as follows:

(1) Ends must be at least 2 times as thick as prescribed in §178.186-12.

(2) Unsupported distance as prescribed in §178.186-17 must not exceed 10" in any case.

(3) Ridge over 30" long must be reinforced on the outside, from end to end, by 2 battens with abutting edges and of cross section as prescribed for handles.

(4) Vertical grain unwired ends are authorized.

§ 178.186-10 Wires. (a) One wire over each row of cleats; intermediate wires as prescribed.

§ 178.186-11 Stapling. (a) Staples for wires over cleats driven through boards into cleats and anchored; others through boards and clinched.

§ 178.186-12 Thickness of boards (sides, tops, bottoms, and ends). (a) Thickness as follows except that, for thicknesses prescribed as 3/16" or less, resawn boards must be 1/64" thicker for each resawn surface:

Group of wood	Minimum thickness of boards (inch)						
	1/8 (0.125)	9/64 (0.143)	3/16 (0.187)	11/64 (0.188)	7/32 (0.219)	1/4 (0.250)	5/16 (0.313)
	Authorized gross weight, box and contents, not over (pounds)						
1	25	35	50	75	100	150	200
2	35	50	75	100	150	200	315
3	50	75	100	150	200	315	400
4	75	100	150	200	315	400	.....

(b) For boxes with 3 or more rows of cleats, boards of the next lower thickness prescribed in the table are acceptable.

§ 178.186-13 Size of cleats. (a) At least 13/16" by 13/16" when thickness required for boards exceeds ½"; otherwise at least 11/16" by 13/16".

§ 178.186-14 Binding wires (sides, top, and bottom). (a) Spacing not over 8".

Exception: When each binding wire is stapled to a row of cleats, 11" spacing is authorized.

(b) Number and size of binding wires as follows:

Number of wires	Minimum gauge of wire, Washburn and Moen				
	18	15	14	13	12
	Authorized gross weight, box and contents (pounds)				
2	35	50	75	100	150
3	50	75	100	150	200
4	75	100	150	200	315
5	100	150	200	315	400
6	.....	200	315	400	.....
7	.....	.....	400	.....	.....

§ 178.186-15 Wires for wired ends. (a) At least 2 wires on each end, size not less than as specified for binding wires in §178.186-14, and spaced as follows:

Thickness of end (inch)	Maximum spacing	
	Between wires (inch)	Wire to cleats (inch)
0.125	6	4
.143	6	4
.187	6½	4
.187	6½	4
.219	7	4
.250	7	4
.313	7	4

(b) Ends less than 10 inches deep are authorized with 1 wire provided they are reinforced by 2 strips (liners), at least 1¼" wide and as thick as ends, securely stapled along edges of the end parallel to the wires.

§ 178.186-16 Staple spacing (approximate) and minimum size. (a) Staples into cleats 16 gauge, Washburn and Moen, and:

(1) One and one-fourth inches long with 1⅛" spacing, or 1⅝" long with 1" spacing, when boards are over ⅛" thick.

(2) One and one-eighth inches long with 1⅛" spacing, for boards ⅛" thick or less; except that staples ⅞" long with 1½" spacing are authorized when boards are 1/7" thick or less.

(b) Other staples 18 gauge, Washburn and Moen.

§ 178.186-17 End supporting battens.[1] (a) At least 1⅛" wide and same thickness as cleats; fastened securely across ends parallel to side cleats; required so that unsupported distance between cleats, battens, and between cleats and battens will be not greater than as follows:

Thickness of ends (inch):	Maximum spacing (inches)
0.125	10
0.143	11
0.167	12
0.187	13
0.219	14
0.250	15
0.313	16

§ 178.186-18 Side cleat battens and wired end supports. (a) **Side cleat battens.** At least 13/16" by 13/16"; fastened securely to ends so as to be adjacent to side cleats when box is set up; required, in addition to any other battens, when authorized gross weight exceeds the following:

Group of wood in cleats:	Authorized gross weight, box and contents over (pounds)
1	100
2	150
3	200
4	200

(b) **Wired end supports.** Wired ends, for boxes for authorized gross weight exceeding the foregoing, must be reinforced by 2 strips (liners), at least 1¼" wide and as thick as ends, securely stapled along edges of the end parallel to the wires; side cleat battens not required.

§ 178.186-19 Marking. (a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

DOT-16B***

(1) Stars must be replaced by maximum authorized gross weight (for example, DOT-16B315, etc.).

[1] Not required for wired ends less than 20 inches long.

(b) The name or symbol of person making the marks specified in paragraph (a) of this section must be located just above, below, or following those marks. Symbol, if used, must be registered with the Director, OHMT.

§ 178.186-20 Setting up and closing. (a) Nail or staple unwired ends to side cleats at intervals not over 2½"; fasten wired ends securely by means of loop fasteners. Provided, That ends at least ⅞" thick may be nailed with cement-coated nails through sides, top, and bottom of box into the ends at 3" intervals.

(b) Twist ends of binding wires or bend loops to give tight closure.

(c) Nail at least 2 nails through side cleats into each side-cleat batten at not over 4" intervals; nail through top and bottom cleats with one 7-penny nail into each end of end-supporting battens.

§ 178.186-21 Special box. (a) Gross weight not over 500 pounds. Must comply with this specification except as follows: Sides, top, bottom, and ends, to be of group 2 or 3 wood having minimum thickness of ¼" for boxes not over 315 pounds gross weight, ⅜" for boxes not over 400 pounds gross weight, and ½" for boxes not over 500 pounds gross weight. Side or end cleats must be at least 1⅜" × ⅞" and ends must have horizontal supporting battens at least 1⅜" × 1⅜". One batten is required for boxes not over 200 pounds gross weight and three battens for others. Ends must be held in place by one metal strap at least ⅝" × 0.020" completely around the box stapled to the middle end battens. When size of box will not permit the application of all prescribed binding wires during manufacture, the additional binding wires of prescribed number and size, or metal straps of equal number and strength, must be applied after closing. At least three binding wires must be applied to boxes not over 200 pounds gross weight and at least four to boxes over 200 pounds gross weight by the box manufacturer. Binding wires for boxes over 400 pounds gross weight must be of size and number prescribed for boxes not over 400 pounds gross weight.

§ 178.187 Specification 16D; wooden wirebound overwrap for inside containers.

§ 178.187-1 Material requirements. (a) Lumber shall be as follows:

(1) Lumber shall be well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.

(2) Authorized tolerances; cleats, battens and handles, minus 1/32 inch; single thickness veneer, minus 5 percent; resawn boards, 1/64 inch below specified thickness for boards up to 7/32 inch thick and 1/32 inch below specified thickness for boards ¼ inch or more thick.

(3) Woods authorized are in the following groups:

	Group 2	
Southern Yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	
	Group 3	
White elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple—soft or silver
Sycamore	Black gum	
	Group 4	
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

(b) Binding wires and staples shall be as follows:

(1) Of annealed steel or other material of equal strength, Washburn and Moen sizes.

§ 178.187-2 Construction requirements. (a) Wirebound overwrap for drum type inside container shall be constructed in accordance with the following:

Wirebound containers	Marked capacity of inside containers			
	Not over 5 gallons	Not over 15 gallons	Not over 30 gallons	Not over 55 gallons
Facebard thickness (sides only)				
Group 2 woods	⅛" Veneer	¼" Resawn	⅜" Resawn	⅜" Resawn
Group 3 or 4 woods	⅛" Veneer	¼" Resawn	¼" Resawn	⅜" Resawn
Cleats inlaid outside cleats				
Group 2, 3 or 4 woods	1⅜" × ⅞"	1⅜" × ⅞"	1⅜" × ⅞"	1⅜" × ⅞"
Binding wires				
Number and gauge over outside cleats	2-14 gauge	2-12 gauge	2-11 gauge	2-11 gauge
Number and gauge intermediate wires	1-14 gauge	3-12 gauge	4-12 gauge	3-12 gauge 2-11 gauge
Staples (length, gauge and spacing)				
In outside cleats	1⅛"-16 gauge	1⅛"-16 gauge	1⅛"-16 gauge	1⅛"-16 gauge
Wirebound containers	Marked capacity of inside containers			
	Not over 5 gallons	Not over 15 gallons	Not over 30 gallons	Not over 55 gallons
Over intermediate wires	3½"-18 gauge	3½"-18 gauge	3½"-18 gauge	3½"-18 gauge
Maximum space between staples	13"	13"	13"	13"
Tops and Bases (Groups 2, 3 or 4 woods)				
Facebard thickness	⅛" Resawn	⅜" Resawn	⅜"	½"
Battens (2 required)	1⅜" × 1⅜"	1⅜" × ⅞"	1⅜" × ⅞"	1⅜" × ⅞"
Staples or cement coated nails	1¼"-18 gauge	1¼"-18 gauge	22-43 nails	1¼"-18 gauge

(1) Staples for wires over cleats driven through boards into cleats and anchored; others through boards and clinched.

(2) Container shall be closed with threaded loop fastener with "Z" clinch for all capacities except 5 gallon for which regular clinch is authorized.

(3) Where binding wire closure clinches contact inner container, 1½ inches wide water-resistant fabric cloth with plastic coated backing and pressure-sensitive adhesive or other suitable means shall be applied in a single strip across clinches, or other equally efficient methods may be used.

(b) Wirebound overwrap for bottle-type inside container shall be constructed in accordance with the following:

Wirebound containers	Marked capacity of inside containers		
	Not over 6½ gallons (rectangular overwrap)	Not over 13 gallons (rectangular overwrap)	Not over 13 gallons (cylindrical overwrap)
Facebard thickness (sides only)			
Group 2 woods	⅜"	⅜"	⅜"
Group 3 woods	¼" Resawn	⅜"	⅜"
Group 4 woods	¼" Resawn	⅜"	⅜"
Cleats			
Outside and interrupted cleats	1⅜" × ⅞"	1⅜" × ⅞"	1⅜" × ⅝"
Intermediate cleats	5½" × ⅜"	5½" × ⅜"	Outside cleats only
Binding wires			
Number and gauge over outside cleats	2-13 gauge	2-12 gauge	2-12 gauge
Number and gauge over intermediate cleats (or intermediate wires)	2-14 gauge (not over 5 gallons) 4-14 gauge (not over 6½ gallons)	4-13 gauge	2-12 gauge
Staples			
In outside and interrupted cleats	1⅛"-16 gauge	1¼"-16 gauge	1⅛"-16 gauge
Intermediate cleats	⅞"-16 gauge	⅞"-16 gauge	None
Over intermediate wires	⅞"-18 gauge	1½"-18 gauge	
Note. A 2" gap between staples must be provided in the center of each line of staples over the intermediate cleats			No 2" gap in staples required
Top [1,2]			
Face material thickness	⅜"	½"	⅜"
Battens	1⅜" × ⅜"	1⅜" × 1⅜"	⅞" × 1⅜"
Base			
Face material thickness	⅜"	⅜"	⅜"
Edge Strips	1⅛" × ⅜"	3½" × ⅜"	⅞" × 1⅜"
Center strips	3½" × ⅜"	3½" × ⅜"	(Battens)

[1] A hole of suitable type may be left in top of box to provide for protruding neck of inner container.

[2] Exterior grade plywood ½" thick with no battens is authorized.

(1) Containers shall be closed with threaded loop fasteners using a regular clinch.

§ 178.187-3 Assembly. (a) Overwrap shall be constructed to provide a snug fit for the inside container.

(b) Overwrap inside surfaces shall be reasonably smooth and free from projections which would damage inside container.

§ 178.187-4 Tests. (a) Wirebound overwrap; when assembled as for use, shall withstand the tests prescribed for specified inside containers. The completed package must withstand these tests without serious rupture of the overwrap and without producing a condition of the overwrap that could result in potential damage to the inside container.

§ 178.187-5 Marking authorized. (a) Marking on each overwrap with letters and figures at least ½ inch high in rectangle as follows:

DOT-16D

For explanation of abbreviations and reference marks, see last page of this tariff.

(b) The name or symbol of person making the marks specified in paragraph (a) of this section must be located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.190 Specification 19A; wooden boxes, glued plywood cleated.

§ 178.190-1 Compliance. (a) Required in all details.

§ 178.190-2 Three-way corners. (a) Three-way corners (when specified in §§ 178.190-3 to 178.190-13) shall be of type so nailing will be into edge grain of cleats, unless otherwise specified.

§ 178.190-3 Lumber. (a) Well seasoned and commercially dry; free from decay, loose knots, knots that would interfere with nailing and other defects that would materially lessen the strength. Cleats to be free from knots and grain of wood must not cross cleat in less than one-half its length.

(b) To be at least 3-ply; except for cleats; each ply glued in place with grain at right angles to the one next.

§ 178.190-4 Nails. (a) Cement coated and of size specified for "sinkers", "coolers", and "3-ply-veneer nails" as generally known to the trade.

§ 178.190-5 Grouping of principal woods. (a) Grouping as follows:

Group 1

White pine	Chestnut	White fir
Norway pine	Sugar pine	Cedar
Aspen (popple)	Cypress	Redwood
Spruce	Basswood	Butternut
Western (yellow) pine	Willow	Cucumber
Cottonwood	Noble fir	Alpine fir
Balsam fir	Magnolia	Lodgepole pine
Yellow poplar	Buckeye	Jack pine

Group 2

Southern yellow pine	North Carolina pine	Larch (tamarack)
Hemlock	Douglas fir	

Group 3

White Elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple—ash or silver
Sycamore	Black gum	

Group 4

Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

§ 178.190-6 Three-way corners. (a) Three-way corners required; except for authorized gross weight not over 75 pounds.

§ 178.190-7 Cleats required. (a) Two on each face at opposite edges; others as necessary so that cleats are not over 12" apart. These to extend full length of face.

(b) Others, if necessary, to provide nailing surface at each box edge.

§ 178.190-8 Parts and dimensions. (a) Parts and dimensions as follows:

Authorized gross weight	Plywood minimum thickness[1]	Cleats of group		Cleats of group 3 or 4 woods[1]	
		Minimum thickness	Minimum width	Minimum thickness	Minimum width
Pounds	Inch	Inch	Inches	Inch	Inches
50	3/20	1/2	1 1/2	1/2	1 1/2
75	3/20	9/16	1 11/16	1/2	1 1/2
100	3/16	5/8	1 7/8	1/2	1 1/2
150	3/16	11/16	2 1/16	1/2	1 1/2
200	3/12	3/4	2 1/4	9/16	1 11/16
300	3/12	13/16	2 7/16	5/8	1 7/8
400	3/12	7/8	2 5/8	11/16	2 1/16

[1] Variation authorized of 1/8 prescribed thickness of any part not to exceed 10 percent of its area. Cleats at least 1/2" thick, of cross section equivalent to prescribed cleats are authorized.

§ 178.190-9 Marking. (a) Marking on each container with letters and figures at least 1/2" high in rectangle as follows:

DOT-19A***

(1) The stars must be replaced by authorized gross weight (for example, DOT-19A200).

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.190-10 Setting up and closing all boxes. (a) Each edge of each plywood section secured with 3-ply-veneer cement coated nails, or staples, at 3" intervals as follows:

(1) To face of cleat; clinching required; cement coating optional.

(2) To edge of cleat; except when nailing through a cleat in which case nail as in § 178.190-13.

§ 178.190-11 Boxes with 3-way corners. (a) Each cleat forming 3-way corner to be nailed with 2 nails at each end into edge of adjoining cleat.

§ 178.190-12 Boxes without 3-way corners. (a) Each edge cleat to be nailed to cleat on adjoining face.

§ 178.190-13 Nails and nailing under §§ 178.190-11 and 178.190-12. (a) To be cement coated and as follows:

Cleats—thickness (inch)	Nails—cement coated			
	Group 1 or 2 woods		Group 3 or 4 woods	
	Size (penny)	Spacing (inches)	Size (penny)	Spacing (inches)
1/2	5	1 3/4	4	1 1/2
9/16	6	2	5	1 3/4
5/8	6	2	5	1 3/4
11/16	7	2 1/4	6	2
3/4	7	2 1/4	6	2
13/16	8	2 1/2	7	2 1/4
7/8	9	2 3/4	8	2 1/2

§ 178.191 Specification 19B; wooden boxes, glued plywood, nailed.

§ 178.191-1 Compliance. (a) Required in all details.

§ 178.191-2 Authorized gross weight. (a) Authorized gross weight not to exceed 150 pounds.

§ 178.191-3 Plywood. (a) Plywood shall be made from veneer which has been rotary cut, sliced or sawed. It shall be well seasoned and commercially dry; free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength. Plywood shall be of good commercial box or sheathing grade.

(b) Plywood shall be at least 5 ply; each ply alternately glued with the grain at right angles to the one next.

§ 178.191-4 Nails. (a) Cement coated and of size specified for "sinkers" or "coolers" as generally known to the trade.

(b) Nail spacing as follows:

Nails (size) in penny	Maximum spacing when driven into end and corner posts	
	Side grain	End grains
	Inches	Inches
Threepenny	1 1/2	1
Fourpenny	1 1/2	1 1/2
Fivepenny	1 3/4	1 1/2
Sixpenny	2	1 3/4
Sevenpenny	2 1/4	2
Eightpenny	2 1/2	2 1/4
Ninepenny	2 3/4	2 1/2
Tenpenny	3	2 1/2

§ 178.191-5 Corner construction. (a) Boxes exceeding 35 pounds gross weight must have 4 vertical corner posts, or other equally suitable devices or fasteners; nailed lap-joint permitted for others.

§ 178.191-6 Assembly. (a) Assemble with grain of outer plywood face in the direction of the longest faces of the box and securely nail or fasten to corner posts or ends as provided in §§ 178.191-4 and 178.191-5.

§ 178.191-7 Special tests. (a) Samples of each type and size manufactured, taken at random, and filled with dummy contents the shape and size of expected contents, or with sand or sawdust, to the gross weight at which container is marked, closed as for use, must be capable of withstanding the following tests without serious rupture or exposure of contents:

(1) 8 drops from height of 1 foot, one on each corner, onto solid concrete.

§ 178.191–8 Closing for shipment. (a) Box to be securely closed. Nails, if used, must be as prescribed in § 178.191–3; hinges and hasps or other equally efficient device authorized.

§ 178.191–9 Marking. (a) Marking on each container with letters and figures at least ½" high in rectangle as follows:

DOT-19B'''

(1) The stars must be replaced by authorized gross weight (for example DOT–19B150).

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.193 Specification 18B; wooden kits.

§ 178.193–1 Compliance. (a) Required in all details.

§ 178.193–2 Tops and bottoms. (a) Pieces to be glued together.

§ 178.193–3 Parts required and dimensions. (a) Parts required and dimensions as follows:

Authorized gross weight (pounds)	Thickness (minimum)		Hoops (minimum)		
	Top and bottom (inch)	Staves inch	Number	Width (inch)	Gauge[1]
25	½	⅜	3	⅝	23
45	½	½	3	⅝	23

[1] Birmingham wire gauge (number).

§ 178.193–4 Middle hoop. (a) Middle hoop of No. 11 gauge wire authorized.

§ 178.193–5 Type test. (a) Sample, filled with dry, finely powdered material to authorized gross weight and closed as for use, shall withstand, without leaking, a drop from height of 4 feet onto solid concrete so as to strike diagonally on top chime.

§ 178.193–6 Marking. (a) Marking on each container plainly as follows:

(1) DOT–18B; followed by the authorized gross weight (for example, DOT–18B25).

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.193–7 Size of mark. (a) Size of mark (minimum), ½" high.

§ 178.194 Specification 20WC; wooden protective jacket.

§ 178.194–1 General requirements. (a) Each jacket must meet the applicable requirements of § 173.24 of this subchapter.

(b) Maximum gross weight of the jacket plus the contents may not exceed the following:

(1) Specification 20WC–1: 225 kilograms (500 pounds).
(2) Specification 20 WC–2: 225 kilograms (500 pounds).
(3) Specification 20WC–3: 455 kilograms (1000 pounds).
(4) Specification 20WC–4: 910 kilograms (2000 pounds).
(5) Specification 20WC–5: 1820 kilograms (4000 pounds).
(6) Specification 20WC–6: 2230 kilograms (6000 pounds).

§ 178.194–2 Materials of construction. (a) The general configuration of the wooden protective jacket must be a hollow cylindrical shell constructed of one-piece discs and rings of plywood or solid hardwood reinforced with steel rods.

(1) The specification 20WC–2 must be additionally completely encased, snugly fit, within an 18-gauge steel shell. The steel shell must be provided with at least four 6 millimeter (0.25 inch) diameter vent holes. Each hole must be covered with durable weather-proof tape, or equivalent device.

(2) The specification 20WC–6 jacket must be additionally completely encased, snugly-fit, within a 12-gauge steel shell. The steel shell must be provided with at least twelve 1.2 centimeters (0.5-inch) diameter vent holes, located in 3 rows of 4 holes each, spaced at 90 degree intervals near the top, middle, and bottom of the drum. Each hole must be covered with durable weatherproof tape, or equivalent device.

(b) Plywood must be exterior-grade, void-free, Douglas fir (or equivalent) not more than 2.5 centimeters (1 inch) thick. Solid hardwood is authorized for specification 20WC–2 only.

(c) Discs and rings must be glued together with a strong, shock-resistant adhesive, such as either of the following:

(1) A resorcinol-formaldehyde adhesive, which has been bonded under both heat and pressure; or

(2) A polyvinyl-acetate emulsion, which has been reinforced with cement-coated nails. The nails must be randomly spaced and must be at least 2.5 times as long as the minimum thickness of the plywood discs or rings.

(d) Full-length steel rods are required for reinforcement and lid closure.

(1) The minimum number of rods and the minimum rod diameter are as shown in the following table:

Specification	Minimum number of rods	Minimum rod diameter	
		Inches	Millimeters
20WC-1	8	0.25	6.0
20WC-2	8	.25	6.0
20WC-3	12	.375	9.5
20WC-4	16	.375	9.5
20WC-5	16	.50	12.0
20WC-6	16	.50	12.0

(2) For specifications 20WC–1 and 20WC–2, steel rods must be equally spaced around the circumference to the rings and discs, midway between the O.D. and I.D. of the rings. For specifications 20WC–3 and 20WC–4, bolts may be staggered alternately in two rows, at ± 1.2 centimeters (0.5 inch) from the line midway between the O.D. and I.D. of the rings. For specifications 20WC–5 and 20WC–6, bolts may be staggered alternately in two rows at ± 2.5 centimeters (1 inch) from the line midway between the O.D. and I.D. of the rings.

(3) Rod ends must be threaded and secured with lock nuts and steel washers, or equivalent device, to provide at least a 2.5 centimeters (1 inch) diameter bearing surface on each end. Ends of the rods must terminate 1.4 centimeters (0.75 inch) below the surface of the plywood for specifications 20WC–1 and 20WC–2. For specifications 20WC–3, 20WC–4, 20WC–5 and 20WC–6, the ends of the rods must terminate 3.7 centimeters (1.5 inches) below the surface of the plywood, and that portion of each end disc which extends beyond the rod ends must be further held in place with lag screws at least 10 centimeters (4 inches) long.

(e) Thickness of wooden shell:

(1) Specification 20WC–1: At least 10 centimeters (4 inches) thick.
(2) Specification 20WC–2: At least 7.5 centimeters (3 inches) thick.
(3) Specification 20WC–3: At least 13 centimeters (5 inches) thick for the jacket wall, and at least 15 centimeters (6 inches) thick for the end discs. In addition, at least 3 plywood chines, 5 centimeters (2 inches) wide and protruding 5 centimeters (2 inches) beyond the outer surfaces, must be located at each end and midway along the length of the jacket.
(4) Specification 20WC–4: At least 15 centimeters (6 inches) thick for the jacket wall, and at least 15 centimeters (6 inches) thick for the end discs. In addition, at least 3 plywood chines, 5 centimeters (2 inches) wide and protruding 5 centimeters (2 inches) beyond the outer surfaces, must be located at each end and midway along the length of the jacket.
(5) Specifications 20WC–5 and 20WC–6: At least 15 centimeters (6 inches) thick for the jacket wall, and at least 20 centimeters (8 inches) thick for the end discs. In addition, at least 5 plywood chines, 5 centimeters (2 inches) wide and protruding 5 centimeters (2 inches) beyond the outer surfaces, must be located at each end and equally spaced along the length of the jacket.

§ 178.194–3 Closure. (a) Closure for the wooden protective jacket is provided by the steel reinforcing rods. The end cap (lid) must fit tightly to the body of the jacket to prevent a heat path to the inside of the jacket. The lid joint for specifications 20WC–3, 20WC–4, 20WC–5, and 20WC–6, may not be coplanar with the end of the inner containment vessel.

(b) Specifications 20WC–2 and 20WC–6. Locking ring closure if used, must conform to § 178.104–4. Flanged closure, if used, must have at least 3 steel bolts (at least 6 millimeters (0.25 inch) diameter for 20WC–2 or 1.2 centimeters (0.50 inch) diameter for 20WC–6) and lock nuts (or equivalent device), spaced not more than 13 centimeters (5 inches) between centers.

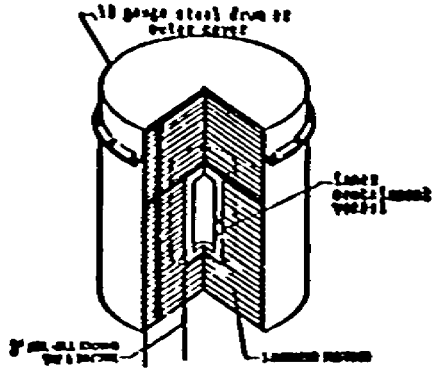
§ 178.194–4 Tests. Prior to each use, each jacket must be visually inspected for defects such as improper bonding, cracking, corrosion of steel rods, and improperly fitting closure lid, or other manufacturing defects. Particular attention must be given to any separation of the plywood discs and rings which would provide a heat path to the inside of the jacket.

§ 178.194–5 Painting. Each jacket (other than 20WC–2 and 20WC–6) must be completely painted with a high quality exterior weather resistant paint.

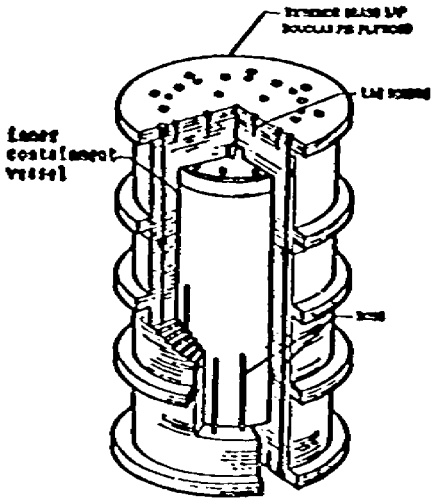
§ 178.194-6 Marking. (a) Each jacket must be marked on the external surface as follows: "USA-DOT-20WC-( ) TYPE B." The appropriate numeral must be inserted in the marking to indicate the appropriate specification 20WC category; e.g., "20WC-2."

(b) Each jacket must also be marked with the name or symbol of person making the marks specified in paragraph (a) of this section. Symbol, if used, must be registered with the Director, OHMT.

§ 178.194-7 Typical assembly sketches. (a) Spec. 20WC-2.



(b) Specification 20WC-5.



§ 178.195 Specification 21WC; wooden-steel protective overpack.

§ 178.195-1 General requirements. (a) Each jacket must meet all the applicable requirements of § 173.24 of this subchapter.

(b) The maximum authorized gross weight of the overpack, including its inner container and contents may not exceed 1360 kilograms (3000 pounds).

§ 178.195-2 Materials of construction and other requirements. (a) The general configuration of the protective overpack must be a combination of two nested plywood boxes, each 2.5 centimeters (1 inch) thick, nested within a third wooden box of nominal 5 centimeters (2 inch) thickness solid hardwood. The three nested boxes must be enclosed within a welded framework constructed of mild steel strap, nominally 1 centimeter (⅜-inch) thick by 8–10 centimeters (3–4 inches) wide. All outer surfaces of each box must be coated with intumescent paint.

(b) Plywood must be exterior-grade, void-free, Douglas fir, or equivalent, at least 2.5 centimeters (1 inch) thick. Solid hardwood must be maple, or equivalent.

(c) All box joints and interior surfaces must be glued with a strong, shock-resistant adhesive such as polyvinyl-acetate emulsion, or equivalent.

(d) All hardwood joints must be mitered, or equivalent, reinforced with No. 10 cement-coated nails spaced on nominal 15 centimeters (6 inch) centers.

(e) All plywood joints must be butt-type, or equivalent, reinforced with No. 10 cement-coated nails spaced on nominal 15 centimeters (6 inch) centers.

(f) The angles and strapping of the metal frame must be spaced such that separation distances do not exceed 15 centimeters (6 inches).

(g) The lid must be of the same material as the box and fabricated in such a manner that closure forms a mitered joint with the hardwood box and 2 stepped-joints with the plywood boxes.

§ 178.195-3 Closure. Closure for the protective overpack must be provided by at least 4 mild steel hinges formed from minimum 2.5 centimeter (1 inch) x 5 millimeter (3/16-inch) bar stock. Hinge pins must be minimum 6 millimeter (¼-inch) diameter by 13.3 centimeters (5¼-inches) long mild steel rod drilled at both ends for cotter pins.

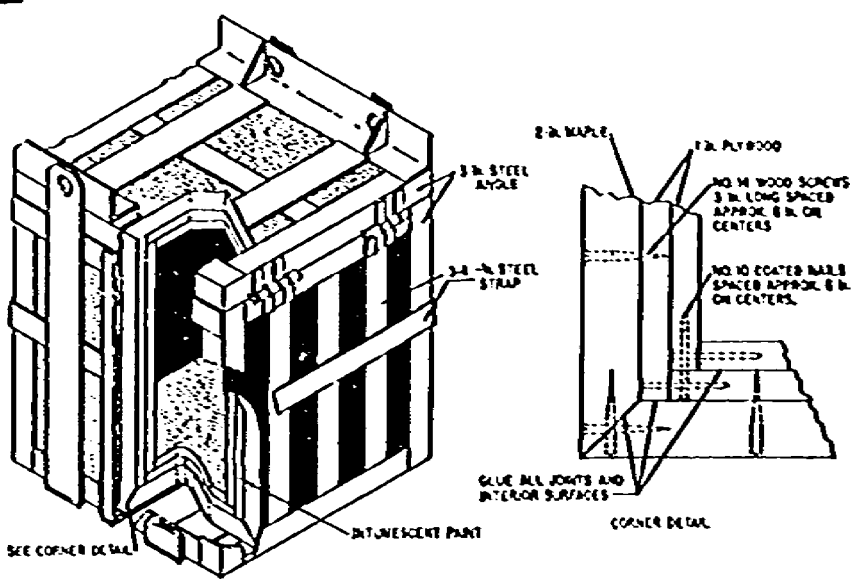
§ 178.195-4 Tests. Prior to each use, each overpack must be visually inspected for defects such as wood checking or splintering, weld cracking, corrosion of steel parts, improper joint bonding, or improperly fitting closure lid.

§ 178.195-5 Required marking. (a) Marking must be as prescribed in § 173.24 of this subchapter.

(b) Marking on the outside of each overpack must include the following:

(1) "USA-DOT 21WC" and "TYPE B" as appropriate.

§ 178.195-6 Typical assembly detail.



RADIOISOTOPE SHIPPING CASK FIRE AND IMPACT SHIELD

§ 178.196 Specification 22A; wooden drums, glued plywood.

§ 178.196-1 Compliance. (a) Required in all details.

§ 178.196-2 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

§ 178.196-3 Woods required for plywood. (a) As follows:

	Group 3	
White elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple - soft or silver
Sycamore	Black gum	
	Group 4	
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

§ 178.196-4 Plywood. (a) At least 2-ply for body and 3-ply for heads; all plies glued together cross grain.

§ 178.196-5 Hoops and battens. (a) Grain of wood must not cross piece within ½ of its length. Hoops to be of elm.

Exception: Plywood hoops 0.28" thick are authorized.

§ 178.196-6 Parts and dimensions. (a) Parts and dimensions as follows:

Maximum net weights authorized	Thickness (minimum)		Size of hoops (minimum)		Head liners (minimum)
	Body	Heads	Wooden	Metal[1]	
Pounds	Inch	Inch	Inch	Inch	Inch
33	0.16	⅜	⅞ × 2	0.023 × 1⅜ [2]0.015 × 2⅜	⅞ × ⅝
56	.18	⅜	⅞ × 2	.023 × 1⅜ [2]0.015 × 2⅜	⅞ × ⅝
115	.20	⅜	⅞ × 2¼	.023 × 1⅜ [2]0.015 × 2⅜	⅞ × ¾
200	.28	0.43	1⅛ × 3	.028 × 1⅜	1⅛ × ¾

[1] Authorized only when metal hoop is between body of drum and wooden hoop as described in § 178.196-8.

[2] On drums of not over 10½ gallons capacity having authorized maximum net weights not over 115 pounds, additional outside headliners may be used in lieu of metal hoops provided containers will pass prescribed tests. (See § 178.196-14)

§ 178.196-7 Body joints. (a) To be made by steel strip 0.015" x 1½" secured by staples, clinched, at 1⅛" centers, or by other method giving equivalent strength; also to be made siftproof by 2 thicknesses of 3" paper tape 60-pound strength, Mullen or Cady test, or other equivalent protection.

Note 1: Until further order of the Department, tape 2½" wide may be used.

§ 178.196-8 Hoops. (a) One wooden and 1 metal required at each chime; wooden hoops secured by staples, clinched, at 3" centers; metal hoops to be outside wooden hoops and secured by punching, or other equivalent method, at 6" centers.

§ 178.196-9 Head battens. (a) Required for heads over 15" diameter; ¾" x 3", minimum; ends rounded to fit chime.

§ 178.196-10 Head liners. (a) Required inside and outside for full circumference of heads. To be securely fastened by staples or nails, clinched.

§ 178.196-11 Head lining paper. (a) Required for each head; 1 ½" larger than head diameter; of No. 1 Kraft paper 90 pounds per ream (480 sheets 24" x 36") or equivalent.

Note 1: Until further order of the Department, a ream may consist of 500 sheets.

§ 178.196-12 Bung openings. (a) Bung and bunghole authorized provided head lining paper is glued around hole.

§ 178.196-13 Insertion of head. (a) As in § 178.196-16.

§ 178.196-14 Tests. (a) Samples of each type and size taken at random, filled with dry, fine powder to the authorized net weight and closed as for use, must be capable of withstanding, without leakage, 2 drops diagonally on either end chime onto solid concrete from height of 4 feet.

§ 178.196-15 Marking. (a) Marking on each container by marks ½" high, as follows:

(1) DOT-22A, followed by authorized gross weight (authorized net weight plus approximate tare weight, for example, DOT-22A115).

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.196-16 Closing for shipment. (a) Closing heads. Insert head lining paper, head, and head liner; nail with 15 gauge nails, clinched, at 2" centers through head liner, body and wooden hoop; equivalent stapling authorized. Nail through steel hoop with two 7-penny nails into each end of head batten, if any.

§ 178.196-17 Bung closures. (a) Bung closures (if any) must be well driven and secured sufficiently to prevent leakage in transit.

---

§ 178.197 Specification 22B; wooden drums, glued plywood.

§ 178.197-1 Compliance. (a) Required in all details.

§ 178.197-2 Lumber. (a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

§ 178.197-3 Woods required for plywood. (a) Woods required as follows:

	Group 3	
White elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple - soft or silver
Sycamore	Black gum	
	Group 4	
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

§ 178.197-4 Plywood. (a) At least 2-ply for body and 3-ply for heads; all plies glued together cross grain.

§ 178.197-5 Hoops and battens. (a) Grain of wood must not cross piece within ½ of its length. Hoops to be of elm. Exception: Plywood hoops 0.28" thick are authorized.

§ 178.197-6 Parts and dimensions. (a) Parts and dimensions as follows:

Maximum net weights authorized	Thickness (minimum)		Size of hoops (minimum)		Head liners (minimum)
	Body	Heads	Wooden	Metal[1]	
Pounds	Inch	Inch	Inch	Inch	Inch
33	0.16	⅜	⅞ × 2	0.023 × 1⅜ [2]0.015 × 2⅜	⅞ × ⅝
56	.18	⅜	⅞ × 2	.023 × 1⅜ [2]0.015 × 2⅜	⅞ × ⅝
115	.20	⅜	⅞ × 2¼	.023 × 1⅜ [2]0.015 × 2⅜	⅞ × ¾
200	.28	0.43	1⅛ × 3	.028 × 1⅜	1⅛ × ¾

[1] Authorized only when metal hoop is between body of drum and wooden hoop as described in § 177.196-8.

[2] On drums of not over 10½ gallons capacity having authorized maximum net weights not over 115 pounds, additional outside headliners may be used in lieu of metal hoops provided containers will pass prescribed tests. (See § 178.196-13.)

§ 178.197-7 Body joint. (a) Joint to be made by steel strip 0.015" x 1⅛" secured by staples, clinched, at 1⅛" centers, or by other method giving equivalent strength.

§ 178.197-8 Hoops. (a) One wooden and 1 metal required at each chime; wooden hoops secured by staples, clinched, at 3" centers; metal hoops to be outside wooden hoops and secured by punching, or other equivalent method, at 6" centers.

§ 178.197-9 Head battens. (a) Required for heads over 15" diameter, ¾" x 3", minimum; ends rounded to fit chime.

§ 178.197-10 Head liners. (a) Required inside and outside for full circumference of heads. To be securely fastened by staples or nails, clinched. Inside head liners not required when close fitting inside metal drum or strong container is used.

§ 178.197-11 Bung or other openings in head. (a) Bung and bung hole authorized provided head lining paper is glued around hole. Holes are permitted in heads to provide for closing devices of inside metal drums or other strong inside containers when plywood drum is so equipped.

§ 178.197-12 Insertion of head. (a) As in § 178.197-15.

§ 178.197-13 Tests. (a) Samples of each type and size taken at random, filled with dry, fine powder to the authorized net weight and closed as for use, must be capable of withstanding, without leakage, 2 drops diagonally on either end chime onto solid concrete from height of 4 feet.

§ 178.197-14 Marking. (a) Marking on each container by marks ½" high, as follows:

(1) DOT-22B, followed by authorized gross weight (authorized net weight plus approximate tare weight, for example, DOT-22B235).

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above, below, or following that mark. Symbol, if used, must be registered with the Director, OHMT.

§ 178.197-15 Closing for shipment. (a) Closing heads. Insert head lining paper, head, and head liner; nail with 15 gauge nails, clinched, at 2" centers through head liner, body and wooden hoop; equivalent stapling authorized. Nail through steel hoop with two 7-penny nails into each end of head batten, if any.

§ 178.197-16 Bung closures. (a) Bung closures (if any) must be well driven and secured sufficiently to prevent leakage in transit.

---

§ 178.198 Specification 22C; plywood drum for plastic inside container.

§ 178.198-1 Material requirements. (a) Plywood shall be as follows:

(1) Plywood for body and heads shall be of good commercial or sheathing grade hardwood veneer. Veneer plies shall be firmly glued together with waterproof glue. A section of plywood from any part when immersed in water at room temperature for 48 hours shall show no delamination or separation of plies to qualify glue as waterproof.

(2) Plywood shall be well seasoned, commercially dry, and free from decay, loose knots that interfere with assembly, and other defects that would materially lessen the strength.

§ 178.198-2 Construction requirements. (a) Plywood drum shall completely and snugly enclose body of inside container, or shall completely and snugly enclose body and neck of inside container. Top head of drum may have a hole of suitable size to provide for protruding neck of plastic container; bottom head may have drainage holes of suitable size. The following are required:

(1) Body shall be constructed of 2 shells, (see Note 1), butt-jointed, telescoped one within the other; outer shell shall be fastened on the outside with wire staples of not less than 17-gauge metal driven through a metal strip not less than 28-gauge by 1½ inches width and each side of body joint. Staples shall be spaced not more than 1½ inches apart and clinched on the inside. The grain of outside ply shall be paralleled and the grain of inner ply shall be vertical to plane of the heads.

Note 1: Each shell shall be of two-ply construction having minimum wall thickness of ⅛ inch for inside container not over 6½ gallons marked capacity and ¼ inch for inside container not over 14 gallons marked capacity.

(2) Body heads shall be of at least three-ply construction with grain of alternate plies at right angles, circled to fit snugly within the body shell. Each head shall have a minimum thickness of ⅜ inch for inside container not over 6½ gallons marked capacity and ⅞ inch for inside container not over 14 gallons marked capacity. As an alternate, ½ inch thick pine bottom heads are authorized.

(3) Hoops shall be of at least three-ply construction with grain of alternate plies at right angles. Hoops shall be fastened to body shell so that ends butt or slightly gap by driving wire staples of at least 17-gauge metal through hoop and body and be clinched on the inside; staples spaced on not less than 3 inch centers. Each hoop shall be not less than ⅝ inch thickness by 2½ inches width for inside container not over 6½ gallons marked capacity, and not less than ⅜ inch thickness by 3 inches width for inside container not over 14 gallons marked capacity.

(4) Head retaining rings shall be of hardwood veneer not less than ¼ inch thickness by ⅝ inch width for inside container not over 6½ gallons marked capacity, and not less than ¼ inch thickness by ¾ inch width for inside container not over 14 gallons marked capacity. The head retaining rings shall be fastened to the body shell with wire staples clinched on the inside of not less than 17-gauge metal spaced on 3 inch centers, except that bottom ring may be fastened by 14-gauge wire staples spaced on 4 inch centers.

(b) Plywood drum for plastic inside container not over 5 gallons marked capacity shall comply with requirements of §178.198-1(a)(1) and (2) and §178.198-2(a).

(1) Body shells shall be of two-ply construction having a minimum thickness of ⅜ inch and with grain of outside ply parallel and grain of inner ply vertical to plane of the heads. Body shall be butt-jointed and fastened on the outside with wire staples of not less than 17-gauge metal driven through a metal strip not less than 28-gauge by 1½ inches width and each side of body joint. Staples shall be spaced not more than 1½ inches apart and clinched on the inside.

(2) Body heads shall be of at least three-ply construction with grain of alternate plies at right angles circled to fit snugly within the body shell. Each head shall have a minimum thickness of ⅜ inch.

(3) Hoops shall be of hardwood veneer, not less than 2¼ inches wide by ⅛ inch thick. Hoops shall be fastened to the body by 17-gauge staples on not less than three-inch centers and shall be overlapped not less than 3 inches.

(4) Head retaining rings shall be of hardwood veneer of ¼ inch thickness by ⅝ inch width except bottom rings may be two thicknesses, each ⅛ inch thickness by 1¾ inches width. Rings shall be fastened to body shell with wire staples of 17-gauge metal on not less than 3-inch centers and clinched on inner surface.

§ 178.198-3 Tests. (a) Samples taken at random with inner plastic container filled to marked capacity with water and closed as for use, shall be capable of withstanding prescribed tests without leakage from inside container or breakage of outside container that would be of such a nature as to contribute to potential failure of inner container. Tests shall be made of each size by each company starting production. The type test is as follows:

(1) One 4-foot drop onto solid concrete so as to strike diagonally on either chime.

(2) Additional tests as required by inside container specification.

§ 178.198-4 Marking on outside container. (a) Each outside container must be plainly marked with letters and figures at least ½ inch high applied by hot branding iron or dark colored printing ink with high pressure dies as follows:

(1) DOT-22C.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

SUBPART F

SPECIFICATIONS FOR FIBERBOARD BOXES, DRUMS, AND MAILING TUBES

§ 178.205 Specification 12B; fiberboard boxes.

§ 178.205-1 Compliance. (a) Required in all details.

§ 178.205-2 Definitions. (a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box, except recessed flanged heads, are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

§ 178.205-3 Classification of board. (a) Fiberboard is hereby classified by strength[1] of completed board as in first column of the following table; weights specified in the table are the minimums authorized.

Classified strength[1] of completed board	Solid fiberboard—Minimum combined weight of component plies exclusive of adhesives (pounds per 1,000 sq. ft.)	Facings for corrugated fiberboard	
		Double-faced—Minimum combined weight of facings (pounds per 1,000 sq. ft.)	Double-wall—Minimum combined weight of facings including center liner (pounds per 1,000 sq. ft.)
175	143	75	
200	190	84	92
275	237	138	110
325	237	138	110
350	283	180	126
375	283	180	180
400	283	180	180
450	283	180	180

[1] Mullen or Cady test (minimum).

§ 178.205-4 Solid fiberboard. (a) To be 3-ply or more; both outer plies water resistant.

§ 178.205-5 Corrugated fiberboard. (a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1000 square feet, all parts must be securely glued together throughout all contact areas.

§ 178.205-6 Stitching staples. Stitching staples must be made in such a configuration that their holding capability as installed will not be less than that of flat steel staples ⅝ x 0.019 inch in a cross section and not less than 7/16 inch wide.

§ 178.205-7 Tape. (a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24" x 36"); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape, except as provided in § 178.205-11(d). Other tapes of equal strength and efficiency are authorized.

(b) Tape for closure of slotted containers complying with the following requirements is authorized when applied as prescribed in § 178.205-17(a)(3):

(1) Tape must be not less than 3 inches wide and shall be made of two sheets of 100 percent sulfate Kraft each not less than 30 pounds basis weight, reinforced with glass, sisal, or rayon fiber, combined with a laminant of asphalt or other material not affected by temperature extremes any more than would standard 180° F. to 200° F. softening point asphalt.

(2) Tape must be reinforced by lengthwise fibers spaced not more than an average of ½ inch apart, and by crosswise fibers spaced not less than an average of 2 per inch except that when a diamond pattern is employed for crosswise reinforcement, the spacing between the parallel sides of the diamond measured in the machine direction must be not more than 1 inch.

(3) Glass or sisal reinforced tape must have a minimum tensile strength in the machine direction of 75 pounds per inch of width and a minimum tensile strength in the cross direction of 45 pounds per inch of width; rayon reinforced tape must have a minimum tensile strength in the machine direction of 57 pounds per inch of width and a minimum tensile strength in the cross direction of 27 pounds per inch of width with elongation not exceeding 15 percent. Tensile tests on the finished product shall be made on a 3-inch width sample.

§ 178.205-8 Test. (a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

§ 178.205-9 Types authorized. (a) To be of solid or corrugated fiberboard of the following types, or as specifically provided for in § 178.205-19 to § 178.205-37.

(1) Slotted box; three-piece box without recessed ends; three-piece box of solid fiberboard with recessed ends; double-slide box; triple-slide box; telescope box, with sections of equal depth, or with covers, top or bottom or both, with 3 inches overlap. (See § 178.205-14(d) for boxes with single-flap closures.)

§ 178.205-10 Forming. (a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

§ 178.205-11 Joints. (a) For solid and corrugated fiberboard slotted containers: Lapped 1½" from center of scoreline except as in § 178.205-12; stitched at 2½" intervals and within 1" of each end of joint; body joint must be double-stitched (2 parallel stitches) at each end of joint over 18" long.

(b) For corrugated fiberboard slotted containers only: One butt joint taped (see § 178.205-7) is authorized; 3 inch tape required for boxes over 30 pounds authorized gross weight and 2 inch tape for others.

(c) For triple and double slide boxes: Joints of all sides must be taped (see 178.205-7) or stitched; 3-inch tape required for boxes over 30 pounds authorized gross weight and 2-inch for others.

(d) For corrugated fiberboard only: One butt joint taped inside and outside with strips of one thickness of sulphate paper not less than 2 inches wide extending entire length of joint and firmly glued to box. For boxes not exceeding 65 pounds gross weight, outside strip of sulphate paper to be of basis weight not less than 60 pounds testing not less than 60 pounds and inside strip of sulphate paper to be of basis weight not less than 40 pounds testing not less than 40 pounds. For boxes exceeding 65 pounds gross weight, outside and inside with strips of sulphate paper which must each be of basis weight not less than 90 pounds testing not less than 90 pounds. Basis weight of paper shown is for 500 sheets, 24 x 36 inches.

(1) For glued lap joint, the sides of box forming joint must lap not less than 1½" and be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

§ 178.205-12 Flanged heads. (a) Must have 4 flanges, at least 1" long above fillet, on each head. Recessed flanged heads not authorized for boxes of corrugated fiberboard.

§ 178.205-13 Seams which are to be stitched. (a) Overlap, if any, required to be at least 1½" from center of scoreline except as in § 178.205-12.

§ 178.205-14 Flap closures. (a) Fill-in pieces, of the same type fiberboard as used in construction of the container, are required where it is necessary to prevent an opening between the inner flaps, unless otherwise provided by paragraphs (b) and (c) of this section or by Part 173.

(b) If to be closed by adhesive, each inner flap must cover at least ⅓ of face; inner flaps must butt or have full overlap, or fill-in pieces must be used, unless otherwise provided by Part 173, except that fill-in pieces are not required when outer flaps have full overlap. Outer flaps must butt or have full overlap.

(c) In lieu of fill-in pieces between inner flaps which do not butt, the following is authorized when linings are not prescribed in § 178.205-16:

(1) Top and bottom pads the same dimensions as interior of container of solid or corrugated fiberboard at least 125 pound test (Mullen or Cady).

(2) Minimum combined weight of facings for corrugated fiberboard pads must be at least 52 pounds per thousand square feet.

(3) Minimum combined weight of component plies for solid fiberboard pads must be at least 114 pounds per thousand square feet, exclusive of adhesives.

(4) Complete inner box or boxes.

(d) Single-flap closures are authorized for boxes with one dimension not over 2"; each flap must be scored and form one of the small faces of the box and lap at least 5" on one of the largest faces.

§ 178.205-15 Linings (when prescribed by § 178.205-16). (a) Of 1-piece to extend around 4 faces with joint at center of 1 face and with 4 flanges, at least 1½" long, on each end (corners may be mitered) to bend over the other 2 faces; also 2 pads to cover the other 2 faces. Pads may be omitted if closing flaps afford 3 thicknesses throughout face. For boxes with 1 dimension not over 3", one of the widest flanges may be lengthened to cover entire face and lap 6" on the adjoining face and the other flanges and the pads may then be omitted.

§ 178.205-16 Authorized gross weight and parts required. (a) The authorized gross weight (when packed) and the parts required are as follows:

Authorized gross weight (pounds)	Strength of fiberboard (minimum) Mullen or Cady test						
	Solid board			Double-faced corrugated		Double-wall corrugated	
	Box	Lining[2]	Heads[1]	Box	Lining[2]	Box	Lining[2]
15	175	.....	[3]	175	.....	200	.....
30	200	.....	275	200	.....	200	.....
40	275	.....	350	275	.....	200	.....
	.....	.....	.....	200	175	.....	.....
55	325	.....	[3]	325	.....	275	.....
65[4]	375	.....	[3]	375	.....	.....	.....
	.....	.....	.....	275	175	275	.....
	275	175	350	200	200	.....	.....

[1] For recessed heads when used. In other cases same as for box.
[2] As prescribed in § 178.205-15. A complete box is acceptable in place of the lining.
[3] Recessed heads are not authorized.
[4] Except as otherwise authorized herein or by Part 173 of this chapter.

(b) Triple slide boxes authorized for gross weights as follows: Of board at least 175-pound test for 40 pounds; of board at least 200-pound test for 65 pounds.

§ 178.205-17 Closing for shipment. (a) Slotted container, by coating with adhesive the entire contact surfaces of closing flaps and fill-in pieces where required or as prescribed in subparagraphs (1), (2), or (3) of this paragraph.

(1) By stitching with staples as prescribed by § 178.205-6 at 2½" intervals along all seams (one 5" space allowed when necessary to permit use of stitching device); or with staples made of flat wire of hardness not less than equivalent of Rockwell B90, and not less than .037 inch thick and not less than .074 inch wide, with not less than 1¼ inch crown, may be spaced not more than 5 inches apart. Such staples may be used across center seam where outside flaps meet in lieu of on

For explanation of abbreviations and reference marks, see last page of this tariff.

both sides of center seam but need only be used where outside flaps overlay inner flaps; or staples made of acuate wire of hardness not less than equivalent of Rockwell B90, and not less than .027 inch thick and not less than .095 inch wide, with not less than 1 inch crown, may be spaced not more than 5 inches apart. Such stitches when spaced not more than 2½ inches apart may be used across center seam where outside flaps meet in lieu of on both sides of center seam but need only be used where outside flaps overlay inner flaps.

(2) For fiberboard boxes containing not more than 1 inside metal can not exceeding 1 gallon nominal capacity, and as otherwise authorized by Part 173, by application of 2 strips of pressure-sensitive tape not less than ½ inch in width, 1 strip to be placed approximately equal distance over the seam of abutting outer flaps, the other at a right angle to the first and spaced approximately equal distance on the closure face; strips must be of sufficient length to extend not less than 1 inch beyond score lines on side and end panels. Tape shall have a minimum tensile strength of 160 pounds per inch of width, minimum adhesion value of 18 ounces per inch of width; and minimum elongation of 12 percent at break, or having a minimum longitudinal tensile strength of not less than 240 pounds per inch of width, minimum adhesion value of 18 ounces per inch of width and a minimum elongation of 3 percent at break.

(3) For slotted containers only, reinforced tape complying with the requirements of § 178.205-7(b) is authorized for application over the center seam only. Tape must extend over the ends of box not less than 2 ½ inches.

(4) All closing flaps may be firmly glued with a hot-melt adhesive of 100 percent solid content of thermoplastic material which will maintain bond at temperature ranging from 20° F. below zero to 165° F. above zero. Adhesive must be applied in not less than eight stripes (except as specified below) on each inner flap, each stripe having a minimum width of 1/16-inch after compression. Stripes may not be more than 1½ inches apart and not less than four stripes must be applied on each side of center seam on each inner flap for full length of flap overlap area with one stripe not more than ½-inch from each side of center seam. If less than eight such stripes are applied on each inner flap, adhesive must cover and securely bond not less than 25 percent of flap contact area with bonded areas extending to within ½-inch or less of center seam.

(5) For regular slotted containers, pressure-sensitive tape is authorized for application over the center seams only and extending not less than two inches over the ends of the box. Tape must be not less than 2 inches wide and have a plastic film backing of polyester, polypropylene, or equivalent material. Tape must have a minimum tensile strength of 45 pounds per inch of width in the machine direction and not less than 55 pounds per inch of width in the cross direction and may not be affected by temperature extremes normally encountered during transportation. Boxes closed by means of this pressure-sensitive tape must be capable of passing performance tests prescribed in § 178.210-10.

(b) Double side boxes or triple side boxes, by coating the inner sides with adhesive, or by closing with reinforced tape capable of withstanding test prescribed by subparagraph (1) of this paragraph; for single-flap closures as authorized for boxes with one dimension not over 2 inches, the flaps must be fastened to the body with adhesive.

(1) Boxes selected at random, containing dummy contents similar to that to be shipped and packed to authorized gross weight, closed with reinforced tape across the ends and onto opposite side panels at least 2 inches, must be capable of withstanding a drop of each end from a height of 4 feet onto solid concrete without closure failure.

(c) Fiberboard boxes with covers extending over sides but not to bottom, covers resting on walls of box, or telescope boxes of equal depth section, covers extending to bottom, must be secured by one of the following methods:

(1) By not less than three metal straps, one length wise and others at right angles thereto.

(2) When cover extends not less than 3" over the walls of the box, by coating with adhesive the entire contact area of the cover.

(3) Telescope boxes having equal depth sections may be closed by application of reinforced water activated tape or pressure sensitive tape under conditions and for commodities as prescribed in Part 173.

(d) When metal straps are specified, boxes must be strapped with the required number; size at least ⅝" x 0.015".

§ 178.205-18 Marking. (a) On each container. Symbol in rectangle as follows:

DOT-12B***

(1) Stars to be replaced by authorized gross weight (for example DOT-12B40, etc.).

(2) Name and address or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the Director, OHMT.

(3) When metal straps are prescribed, boxes must be marked "..... (number) METAL STRAPS REQUIRED" just above or below the mark specified in paragraph (a)(1) of this section.

(4) Size of markings: Specification markings prescribed in paragraph (a)(1) in § 178.205-18 must be at least ½" high; other markings must be legible.

§ 178.205-19 Special box; authorized only for contents in 1-gallon rectangular metal cans or cylindrical metal cans of 26 gauge material. (a) Must comply with this specification except as follows: Must be 1-piece type, of double-wall corrugated fiberboard at least 400-pound test with all three facings at least 135-pound test; to be marked "FOR 1-GAL. CYLINDRICAL OR RECTANGULAR CANS ONLY" near the D.O.T. specification mark; authorized gross weight 84 pounds.

§ 178.205-20 Special box; authorized only for pyroxylin in sheets, rods, or tubes. (a) Must comply with this specification except as follows: Must be of board at least 275-pound test with lining at least 200-pound test, all being double-faced corrugated fiberboard, 3 metal straps required (see §§ 178.205-17 and 178.205-18); authorized gross weight 90 pounds.

§ 178.205-21 Special box; authorized only for pyroxylin in sheets, rods, or tubes. (a) Must comply with this specification except as follows: Must be telescope type with wooden frame between the parts that telescope; authorized gross weight 90 pounds.

(b) Frame of group 3 or 4 wood ⅞" thick with lock corners glued.

	Group 3	
White elm	Pumpkin ash	Tupelo
Red gum	Black ash	Maple—soft or silver
Sycamore	Blackgum	
	Group 4	
Hard maple	Hackberry	White ash
Beech	Birch	Hickory
Oak	Rock elm	

(c) Telescoping parts of double-faced corrugated fiberboard at least 400-pound test with facings at least 180 pound per thousand square feet; each part of same depth as frame; outer part to have corners overlapped and securely fastened.

(d) Four metal straps required. Glued or stitched closure not required. (See §§ 178.205-17 and 178.205-18.)

§ 178.205-22 Special box; authorized only for motion-picture film in metal cans or strong cardboard or fiberboard boxes each containing not over 2,000 feet (approx.) of film. (a) Must comply with this specification except as follows:

(1) For one inside container. Must be of board at least 275-pound test for a 2,000-foot film and of board at least 200-pound test for a 1,000-foot film; lining and pads not required; closure by taping with strong paper tape authorized.

(2) For more than one inside container. Must be of 1-piece type; authorized gross weight 55 pounds when made of 325-pound test board, 65 pounds when made of 375-pound test board, and 75 pounds when made of 450-pound test board; interior packing required, of fiberboard at least 175-pound test, adequate to support inside containers in center of outside container; lining and top and bottom pads not required.

§ 178.205-23 Special box; authorized only for poisonous solids, class B, in 1-gallon metal cans. (a) Must comply with this specification except as follows: Must be 1-piece type, of double-wall corrugated fiberboard at least 400-pound test with all three facings at least 135-pound test; authorized gross weight 84 pounds.

§ 178.205-24 Special box; authorized only for fusees. (a) Must comply with the specification except that the box must be constructed of double faced corrugated fiberboard at least 400-pound test or solid fiberboard of same strength. Lining and pads are not required. Authorized gross weight is 75 pounds. For fusees equipped with spikes, box-end protection as required in § 173.154a(a)(2) of this chapter must be provided.

§ 178.205-25 Special box; authorized only for wet electric storage batteries of the glass cell type or synthetic resin (plastic) type. (a) Must comply with this specification except as follows: Must be one-piece type of double wall corrugated fiberboard at least 275-pound test; must have linings to extend around four faces with joint in center of or at end of one face but at no time may joint of box and joint of liner coincide; lining to be of sufficient height to support vertical scorings of box; lining to be made of double wall corrugated board with minimum test of 275 pounds, top of battery or batteries to be protected by trays or scored sheets of corrugated fiberboard having minimum test of 200 pounds; bottom of batteries to be protected by minimum of one excelsior pad or one double wall corrugated fiberboard pad; when one or more batteries are packed in same carton, batteries must be separated by a minimum of one thickness of double wall corrugated fiberboard having minimum test of 275 pounds; authorized gross weight 95 pounds.

§ 178.205-26 Special box; authorized only for one 5-gallon rectangular metal can, spec. 2F; gross weight not to exceed 65 pounds. (a) Must comply with this specification except as follows: Must be 1-piece type of double-wall corrugated fiberboard at least 350-

pound test, must have top and bottom pads of double-wall corrugated fiberboard at least 350-pound test, pads to be double-flanged with flanges extending down the inside of carton at least four inches.

§ 178.205-27 Special box; authorized only for not more than two square inside metal cans each containing not over 200 feet (approx.) motion-picture film; gross weight not to exceed 15 pounds. (a) Must comply with this specification except as follows: Must be double-slide type, both sides of double-faced corrugated fiberboard at least 200-pound test, closure by taping with strong paper tape authorized.

§ 178.205-28 Special box; authorized only for wet electric storage batteries of aluminum-case type, asphaltum composition impregnated rubber, synthetic resin (plastic), or wooden-battery-box type, having a net weight greater than 75 pounds. (a) Must comply with this specification except as follows: Must be one-piece type of double wall corrugated fiberboard at least 400-pound test, or solid fiberboard testing at least 400 pounds; boxes may or may not have hand holes provided for in ends of box provided same will not materially weaken box; top of battery to be protected by wood frame, corrugated trays or scored sheets of corrugated fiberboard having minimum test of 200 pounds, top protection must bear evenly on connectors of battery to facilitate stacking of batteries; bottom of batteries to be protected by minimum of one excelsior pad or double wall corrugated fiberboard pad; sides and ends to be cushioned between batteries and walls of box; combined thickness of cushioning material and walls of box must be not less than ½", cushioning to be of excelsior pads, corrugated fiberboard or other suitable cushioning material; no more than one battery to be packed per box, authorized gross weight 190 pounds.

§ 178.205-29 Special box; authorized only for ship distress signals in inside metal containers of not less than 24 gauge metal. (a) Must comply with this specification except as follows: Must be one-piece type of double faced corrugated board at least 350-pound test, with top and bottom pads of the same material. Gross weight not to exceed 95 pounds.

§ 178.205-30 Special box; authorized only for toy torpedoes. (a) Must comply with this specification and the following: Must be one-piece type fabricated of double-wall corrugated fiberboard having minimum strength of 350 pounds per square inch, Mullen or Cady test. Box shall be provided with double-face lining on all sides and top and bottom pads. Gross weight not to exceed 25 pounds.

§ 178.205-31 Special box; authorized only for commodities where spec. 12B is prescribed in Part 173. (a) Box shall have not more than 1 inside glass container having screw cap closure or metal container not exceeding 32 ounces or 2 pounds net weight, which must fit snugly or be adequately cushioned to prevent movement. Box shall comply with this specification and be of one-piece folder type, so designed as to form double thickness of corrugated board on top, bottom, and ends. Fiberboard used in construction of the box shall have a minimum strength of 200 pounds per square inch, but for gross weight exceeding 8 pounds, the box must be constructed of at least 275-pound per square inch test fiberboard (Mullen or Cady). Closure must be equal in efficiency to that prescribed in § 178.205-17.

§ 178.205-32 Special box; authorized only for electrolyte (acid), corrosive battery fluid, hydrochloric acid mixtures of not over 28 percent strength, or cleaning compounds, liquid, containing not over 28 percent hydrochloric (muriatic) acid. (a) Box shall have not more than 12 inside glass bottles, with acid-proof closures, of not over 32 ounces capacity each. Box shall comply with this specification and be constructed of at least 275-pound test (Mullen or Cady) double-wall corrugated fiberboard and be equipped with at least 125-pound test (Mullen or Cady) double-faced corrugated fiberboard scored sheets so designed as to provide two thicknesses of corrugated fiberboard between each bottle and one thickness between bottles and sides and ends of box. Top and bottom pads of the same size as the top and bottom area of the box and of at least 125-pound test (Mullen or Cady) double-faced corrugated board are required or box shall comply with this specification and be constructed of at least 325-pound test (Mullen or Cady) double-faced corrugated board and be equipped with at least 200-pound test (Mullen or Cady) corrugated fiberboard ½ inch extended cell slotted partitions so designed as to provide a void space between the ends and sides of outside box and the inside cell partition and shall be provided with top and bottom pads, of the same area as the box, of at least 200-pound test (Mullen or Cady) double-faced corrugated fiberboard.

§ 178.205-33 Special box; authorized only for electrolyte (acid) and alkaline corrosive battery fluid packed with storage batteries. (a) Box shall be constructed of corrugated fiberboard having strength of not less than 200 pounds per square inch, Mullen or Cady test for maximum authorized gross weight not over 65 pounds. Top and bottom pads and fill-in pieces are not required when inner flaps do not meet. Box must otherwise comply with this specification. (See § 173.258(a)(3).)

§ 178.205-34 Special box; authorized only for a polyethylene, or other suitable plastic, tight-fitting inside container having a minimum wall thickness of 0.015 inch and so designed as to maintain its configuration when standing empty and open. (a) Box shall comply with this specification except that top of box shall be closed by means of slotted flaps so arranged as to provide protection for the neck of the inside container and be fitted with fill-in pieces as necessary; equally efficient closures and container neck protectors are authorized. Complete package, closed as for shipment with inside container filled to rated capacity with water, must be capable of withstanding 2 drops from a height of 4 feet onto solid concrete without leakage or serious rupture of box. Authorized gross weight not over 65 pounds.

§ 178.205-35 Special box; authorized only for aircraft type wet electric storage batteries. (a) Box shall comply with this specification and shall be constructed of at least 275-pound test double-faced corrugated fiberboard. Inside corrugated fiberboard cushioning shall be provided as necessary to prevent short-circuits, breakage under normal conditions of transportation, and superimposed weights on tanks, covers, or other parts weaker than the battery case. Not more than one wet electric storage battery shall be packed in a box and gross weight shall not exceed 85 pounds.

§ 178.205-36 Special box; authorized only for an inside polyethylene container, spec. DOT-2U, not over 5 gallons capacity. (a) Box shall comply with this specification except as provided herein, and shall have glued closure flaps only. Inner and outer top closure flaps may have suitably sized holes for access to the closure of the polyethylene container. The diameter of these holes must be less than the diameter of a metal plate inserted between the flaps to which polyethylene closure shall be attached.

§ 178.205-37 Special box; authorized polyethylene or other suitable plastic bags for packaging of electrolyte (acid) or alkaline corrosive battery fluid only. (a) Box must comply with this specification except as follows: Box must be one-piece construction of slotted style and may have die-cut areas of minimum size to provide access to an inside closure part. Box must contain one multiwall bag made of polyethylene or other suitable plastic of sufficient size and capacity to be capable of coming into contact with all of the interior surfaces of the box when filled. Each ply of the bag must be formed from virgin film not less than 0.003 inch thick. Joints must be heat sealed and not less than ¼-inch wide.

(b) Boxes must be center special slotted style, or regular slotted style. If any metal is used in the box construction, full liners and top and bottom pads are required. Any metal closure for a discharge tube must be installed so as to prevent contact with the polyethylene bag. Discharge tubes must be plugged or heat sealed. Maximum volumetric capacity must not exceed 5 gallons (nominal).

(1) For boxes having capacities of 6 quarts (nominal) or less, fiberboard of at least 200-pound test is required for construction.

(2) For boxes having capacities in excess of 6 quarts, fiberboard of at least 350-pound test is required. Pads are required for regular slotted style boxes and must be of fiberboard of at least 350-pound test or other material that will provide equivalent protection.

(c) Representative samples of completely assembled boxes, with all parts closed as for shipment, must be capable of withstanding the following tests without leakage or serious damage to boxes. No one box shall be expected to withstand more than one of the following tests:

(1) Box with inside container filled to shipping capacity with a solution which is compatible with the plastic bags must be dropped twice from a height of 4 feet onto concrete, one drop to be made with the box positioned so as to strike flat on the box bottom, the other drop to be made so box will strike flat on the largest face.
