Subject: Smart meter Question about bill calculations

Hi Dan and Sid—

As part of our review of the customer usage files, we have been re-calculating the bills ourselves, and we often come up with a result that is different from the amount in the files you have sent over. Can you help us understand what might be causing the differences?

I've copied in a simple example below—we separated the usage into tiers, and added an Energy Division tax = \$.00022 per kWh, but we must be missing something else?

Thanks--
