Subject: conceptual summary of June 8 discussion on gaining compliance with Calif. law while promoting high EE appliances

I thought I'd put together a one-page conceptual diagram and take-away list of issues that we discussed last week. These pertain to achieving

- legal compliance with Calif. EE Appliance law,
- EnergyStar meaningful certification, and
- hopefully actual levels of high-efficiency appliance performance.

I hope the attached page might be useful as we ponder how to tackle these issues.
