Subject: Re: Smart Mater Messaging (CPUC request)

Mr. Clanon,

We'd be delighted to meet with your team. I don't have your number but you can reach me at [Redacted] [Redacted]. One option is for our RF expert could come to your offices early next week to make a brief but informative presentation on this subject.

Best,

Paul

Don't I know it!

Paul, we're trying to improve our standard messaging on smart meters (we get phone calls, letters, contacts at public hearings, media, the same kinds of things you're dealing with) and I have a small group of senior people at the PUC on it. If you have some time the next day or two I'd love to have them call you and pick your brains a little.

Absolutely. And thanks [Redacted] rarely gets positive feedback for his yeoman's work in this area and it is much appreciated.

Subject: Smart Meter Messaging

Your spokesperson Redacted is doing a nice job on smart meters -- he's quoted a lot in our clips this morning. Any chance I could have him meet with the people at the PUC who are working on our messaging on the issue? We're still struggling with RF/EMF especially.
