Subject: B printed ~ HECA status and near term milestones

President Peevey,

Ahead of the Memorial Day weekend, I attach a summary letter that hopefully provides a useful update as to the progress, status and critical milestones for the HECA project in the near future. Overall we continue to make good progress, and I believe we are well placed to complete the HECA feasibility study and successfully deploy CCS technology at scale in California. In doing so we will demonstrate a critical GHG mitigation technology in support of the State's goals, continue to bring much needed federal funding to California and the local Kern County area, and to sustain/create valuable jobs and infrastructure associated with delivering a major project such as HECA.

Please let me know if you have any questions or would like an opportunity to discuss any of the attached.

Best regards

Jonathan Briggs
