Mike, et al - Heads up. Tomorrow, PG&E will be issuing a statement about Pipeline 2020 - a new, 5-point program to strengthen PG&E's natural gas transmission

system through a combination of target investment, R&D, improved processes and procedures and closer cooperation with first responders.

We haven't finalized a lot of the details on next steps, but the plan will cover 5 major areas:

- 1) modernize critical pipeline infrastructure
- 2) install automatic shut-off or remotely operated valves
- 3) spur development of next-generation inspection technologies
- 4) improve internal procedures to industry leading levels
- 5) enhance public safety awareness outreach and training.

I've attached a draft copy of the press release which is still a work in progress. When the press release is finalized, I will send you the final copy.
