Subject: Data Requests posed from you in last 24 hours

Raffy Stepanian :

Based on the instructions from your voice mail, I am sending this response to your personal e-mail due to the CPUC system currently not being active.

We have had several conversations over the last 24 hours and I wanted to ensure that I close the loop and ensure that your needs are being met.

Request #1 – Receive a copy of PG&E’s response to the 12/9 media request of 4 questions posed by the SF Chronicle (**response is included below**)

<<...>>

Request #2a – Has PG&E experienced any Overpressurization (110+% of MAOP) events within the last 5 years on Transmission Low frequency ERW or Lap welded pipe? (reference to 192.917 (4) of code) – The response for this item will obviously be coordinated with Request#3 below

Request #2b – If so, how did PG&E account for this in their selection of integrity assessment method? PG&E will not be able to provide until results of 2a are tabulated.

Request #3 – Provide a listing of all Transmission and Distribution Overpressurization (110+% of MAOP) events that have occurred within the PG&E system over the last 5 year period. – I will enter this request into the Data Request log for response with an ASAP date. To ensure a timely response, I will split this response into two segments, readily available query of Gas Event reporting tool data since inception in 2008 and a manual research of prior events recorded which will obviously take longer to provide.

Request #4 -- Has the CPUC ever stopped PG&E from performing ECDA due to an overpressurization event? As we discussed, this would seem to be better responded to from the CPUC, but PG&E will research and respond for the record.

If hope I have adequately captured our discussions and trust that if not, you will redirect my efforts ASAP.

I will proceed with entering these four questions into our database for a formal

response

Thank you for continuing to keep the communication lines open and seeking clarity of the requests.

Glen
