Subject: RE: PG&E's 2010-2012 HVAC Quality Maintenance Program (QM) update
Brian,

Thanks for the recap. I think you captured it well. Just one clarifying point: Jeff Hirsch is an ED consultant, not staff. Peter Lai is the ED staff point of contact.

Best,
Simon Eilif Baker

Subject: PG&E's 2010-2012 HVAC Quality Maintenance Program (QM) update

Simon:

Thank your for making time yesterday to provide feedback on PG&E's 2010-2012 HVAC Quality Maintenance Program (QM) update. This note is to briefly recap the discussion and summarize our follow up items.

Discussion Points

- Based on field testing performed in 2010, HVAC QM program opportunities exist. TRC and PAC are likely to be higher than the existing form of QM program -- looking even better than initially expected.
- PG&E is redesigning the QM program to leverage the field study learnings. During redesign PG&E is placing a hold on the existing form of QM program that has focused on core QM RCA measures. The enhanced redesigned program will expand the QM savings opportunity at each customer.
- The existing channel with 4 VSPs does not support long-term market transformation. PG&E is moving to a centralized implementer approach for HVAC QM in 2011 (consistent with statewide approach).
- Non-residential program launch remains targeted for the second quarter of 2011.

Feedback and Follow-Up Items

- Explore the feasibility of accelerating the residential QM program roll out target (currently targeted for roll out in Q3 2011).

- Ensure HVAC program updates are communicated to Energy Division staff involved in EM&V efforts (e.g., Peter Lai, as well as Jeff Hirsch, ED Consultant) and that HVAC EM&V efforts are coordinated.

- Follow-up on any possible issues with Codes & Standards case effort regarding the Winter Refrigerant Charging Protocol.

Please let us know if you need more information or if you have additional feedback.
