Paul -

There was an incident on Line 131. We are going to notify CPSD in writing that Line 131 experienced pressure last Thursday in excess of the 20% lowered Max Operating Pressure ordered by the CPUC back in December. We can do this in one of two ways: 1) a formal letter, similar to the format we have used in other pressure exceedance notifications; or 2) update a past data request regarding pressure exceedances. We are looking to see whether there is an appropriate data request to update with this information, but absent finding one we think a formal letter is appropriate given that this is one of the lines subject to an explicit CPUC order to reduce pressure.

What is your preference for communication ?
