Rich:

This is a representation of almost all of the first 152 miles. I am going to pass your note on to the person who created the map to get an exact description of what is in the map and what is not. I get that to you as soon as he responds.

Also, I was able to talk with the mapper who produced your large format maps. I may be able to get you tomorrow the large scale key to the 62 maps as well as the index that Julie asked for and which will correlate the line numbers with each map.

Bill

So, thanks again Bill. Question on the Google Earth map - Does this map represent only the 95 hydro-tests within the first 152 miles, as reflected on page 16 of the March 15th submission, or is this all of the hydro-testing of all of the segments PG&E anticipates will be necessary including the first 152 miles and the other 435 miles of HCA pipelines as referred to on page 18 of the March 15th ?

Rich & Julie:

Here are a summary of what we talked about yesterday as well as most of the follow up items.

For the map of the segments that will be hydro tested I have included a Google Earth flyover that

provides an approximation of where the segments are that will be hydro tested. You need to have Google Earth on your computer to view that but you can download that application for free from the Google website. Generating a table correlating the pipeline numbers with your set of large format maps will take some time. I am going to schedule a call between Julie, me and the person who can help generate more detailed hydro test location documents as well as the pipeline correlation to make sure he understands exactly what you need.

Please call me if need any more information in the interim.
