Yes. Regarding the GRC, I'd love to make a showing that we spent \$800 million more in capital as a result of the bonus depreciation. We said that originally and you folks at the PUC said no - you wanted a memo account. We are made the formal commitment at the hearing the other day. I'm happy to put it in writing or have you guys issue a statement that confirms it. Just not crazy accounting that creates so much uncertainty that we decide to forego spending because of it.

so, for 80 cents the ratepayer gets a dollar worth of benefit because of the bonus depreciation? so, why not just propose or rather commit that in your next GRC you will show how the dollars from bonus depreciation is spent? I think if a utility makes a formal commitment to show that the dollars were spent back on ratepayers then we won't need this Resolution at all, right?

Summary

We WANT to spend the \$800 million in incremental money because it effectively gives customers \$1 in purchasing power for every 80-9-cents they spend. BUT we need a simple and clear process (no interference or funny accounting) to capture that spend.

No. Wrong. Spending \$800 in cap ex will absorb the cash impact of bonus depreciation, which I believe is less. How much bonus effects the bottom line is much less (but I don't have the calculation of that). If we get all tied up in resolutions and we don't spend the money, the amount going back to the customer as a direct result of bonus depreciation is much less due to lack of manufacturers discount, other tax liabilities, etc.

Economic Stimulus Spending Summary

oh okay, so the impact of the bonus depreciation for PG&E is about \$800 million, right? so, you're expecting to get \$800 million from the Federal government as a result of your capital investment and you are saying that you will in turn turn around and use that to make additional capital investments rather than pocket it or pay dividends or do something else? sorry for my use of regular language but that's the only way I understand things.

Subject: RE: Estimated Incremental Economic Stimulus Spending Summary

If we get the current resolution withdrawn, voted down, or revised to reflect what was said in Resolution Version 2, we are committed to spending \$800 in incremental capital investment to capture the impact of bonus depreciation.

hi there,

so, I don't really understand what the attachment is saying... is PG&E going to spend \$800 million in the next two years on those projects regardless of the bonus depreciation or as a result of the bonus depreciation??
