Michelle:

Following the receipt Friday of Julie's letter seeking information on the hydro testing program there were a number of discussions over the weekend and one result was Rich Clark saying that we should meet with CPSD as soon as possible to discuss the program. We are going to try to do that today and will invite you too. As far as the first test goes my understanding is that the construction work is planned to begin on 4/14 with the test perhaps a week after that. I will get you an exact date and I'm sure we will be going over schedule details when we meet to brief you.

Bill

Thank you Bill.

I spoke this morning with CPSD about setting up a time to meet with your team to go over the schedule and protocols in advance of the tests later this months. As you might expect, they are anxious to see the schedule and fully understand the protocols. I have asked Deputy Director Julie Halligan to send a letter to her counterparts at PG&E laying out areas of particular concern that they would like to see addressed in the plan and covered when we meet so that we are all on the same page. I expect that that should occur today or at the latest Monday morning.

It was my understanding that the plan was expected to be finished early next week, so we were anticipating a meeting probably in the later half of next week, unless the date of the first test was imminent.

Can you let me know the exact date expected at this point for the first test?

Many thanks,

Michelle Cooke

Paul, Frank and Michelle:

Here is the paper I mentioned yesterday on hydrostatic testing. It is quite a good primer. John Keifner is one of (if not the) experts on pipeline safety. He is helping us develop our testing protocols. I am going to set up a briefing for you as well as CPSD for as soon as possible on our testing schedule and protocols.

Bill
