Dede Hapner
Vice President, FERC and ISO Relations
Pacific Gas and Electric Company

Dear Ms. Hapner:

The ISO has reviewed information and documents related to the resource adequacy ("RA") validation process it performed of PG&E's RA quantities for the months of March, April, and July 2010, which are the subject of the CPUC's investigation in Docket No. I.11-06-011. Our documentation does not show an RA procurement deficiency once all of the discrepancies the ISO noted between PG&E's RA Plans and the resources' Supply Plans for these months were cleared.

The purpose of the ISO's validation process is to compare the amount of RA capacity that a load serving entity lists in its monthly RA Plan against the amount of RA capacity the resources that provide the capacity list in their monthly Supply Plans, in order to determine if there are any discrepancies in the monthly RA capacity values. The ISO then generates a report to the CPUC Energy Division that indicates whether each validation passed or failed. In the event a validation fails, the ISO will also notify the load serving entity in an attempt to resolve the deficiency. Further information about the validation process is available in the ISO's Business Practice Manual for Reliability Requirements.

The ISO has prepared the attached chronology that briefly summarizes the steps taken by the ISO and PG&E during the validation process for the months of March, April, and July 2010. The ISO has also attached, as supporting documentation, the PG&E portion of the validation reports and notifications the ISO provided to the CPUC for those three months.

Sincerely,

Beth Ann Burns
Senior Counsel
